Environmentalists Urge EPA to Test All Pesticide Ingredients

Posted July 11, 2017, 02:25 P.M. ET

By Tiffany Stecker

The EPA must assess environmental and health effects for all pesticide ingredients, not just the active ingredients that kill pests, the Center for Food Safety argued in a July 10 petition to the agency.

The petition is the latest attempt by environmental groups to bring more attention to "inert" ingredients, the chemicals added to pest-killing ingredients to improve a product's consistency, fragrance, or volatility. Many of these ingredients are listed as hazardous under federal laws, including the Emergency Planning and Community Right-to-Know Act and the Federal Insecticide, Fungicide and Rodenticide Act.

CFS's petition asks that the Environmental Protection Agency revise pesticide regulations to take into account all pesticide chemicals, not just the active ingredients. The organization also asks that the agency do more to address possible "synergistic" effects—the compounded potency of chemicals when mixed—of pesticides.

"While the old toxicology adage states that the 'dose makes the poison,' it is increasingly clear that instead the 'formulation makes the poison,'" the petition said.

Pesticide ingredient registrations and reviews take many years to complete. Considering the impacts of inert ingredients would likely add time and cost to the process.

The petition also presses the EPA to consider the potential repercussions for endangered and threatened species based on the whole formulation of the pesticide, instead of only the active ingredients.

The EPA's Inspector General told the agency in June that it was falling behind in collecting information on interactions between pesticides, and needed to do more to track the effects of mixing

chemicals.

The EPA did not immediately provide comment to Bloomberg BNA.

The agency removed 72 inert ingredients from a list of approved chemicals for pesticides last December. A federal judge ruled last year that the agency is not legally required to disclose the chemicals.

Colorado Vows Carbon Cuts in Support of Paris Climate Deal

Posted July 11, 2017, 02:29 P.M. ET

By Tripp Baltz

Colorado vowed to slash statewide greenhouse gas emissions by a quarter from 2005 levels by 2025 as Gov. John Hickenlooper (D) announced plans to join a multi-state alliance to meet the goals of the international Paris climate change agreement.

The governor's July 11 executive order aims to reduce statewide greenhouse gas emissions more than 26 percent by 2025, cut carbon dioxide emissions from the electricity sector by 25 percent by 2025, and achieve electricity savings of two percent of total electricity sales per year by 2020.

The order includes strategies to:

• work with interested utilities and electric cooperatives on a voluntary basis to maximize use of renewable energy without increasing costs to taxpayers,

• create a statewide electric vehicle plan by Jan. 1, 2018, and

• develop a greenhouse gas emissions tracking rule through the Colorado Department of Public Health and Environment.

Dow Soybean Draws Objection From EU Environment Panel

Posted July 11, 2017, 01:30 P.M. ET

By Stephen Gardner

The European Parliament environment committee July 11 signaled to EU regulators that they shouldn't authorize use of a Dow AgroSciences genetically modified soybean.

In a 40 to 24 vote with 1 abstention, environment committee lawmakers said the authorization shouldn't be granted because of fears over 2,4-D, a herbicide to which the soybean is resistant, and because of shortcomings and blockages in the EU's system for approving genetically modified food and animal feed.

If the authorization is granted, it would allow imports of the Dow AgroSciences soybean into the European Union for inclusion in food products or animal feed.

The vote came a day before a European Union regulatory committee meeting, where a vote was expected on whether to approve or deny the authorization. If the regulators can't decide, the decision would go to the European Commission.

The European Food Safety Authority had assessed the soybean, DAS-68416-4, "to be as safe as a conventional soybean," EuropaBio director of agricultural biotechnology Beat Spath told Bloomberg BNA. Filip Cnudde, Dow AgroSciences EU government affairs and science policy leader, had referred a request for comment to EuropaBio, which represents biotechnology companies.

Broken System?

EU authorizations can be granted to genetically modified crops on the basis of a positive safety evaluation from the food safety authority, unless a regulatory committee of EU country representatives vetoes the authorization. However, regulatory committees are commonly deadlocked on genetically modified crop approvals, leaving the European Commission—the EU's executive arm—to make authorization decisions.

The EU authorization system "is clearly not fit for purpose," because the commission "repeatedly struggles to find majority support" from EU member countries for authorizations, Bart Staes, a Belgian Green member of the European Parliament, said in a statement.

Spath said the Dow AgroSciences soybean had already been subject to one inconclusive regulatory committee vote, and if the July 12 regulatory committee meeting produces a similar outcome, the commission would by EU law be obliged to adopt the authorization because the soybean has been assessed as safe.

Tesla's Australian Battery Fix Comes at 'Big Price,' Analyst Says

Posted July 11, 2017, 8:59 A.M. ET

By Perry Williams

Billionaire Elon Musk's plan to install a giant battery to help fix a power crisis in South Australia will come at a "big price" with installation costing 60 percent more than alternative open cycle gas plants, according to Wood Mackenzie Ltd.

Musk's Tesla Inc. won a tender July 7 to build what the entrepreneur said is the world's largest lithium-ion battery system capable of providing enough power for more than 30,000 homes. Little guidance or estimates were given on the cost of supplying the unit, sparking debate over the appropriate mix of power generation in the mainland state with the highest levels of clean energy.

Given current costs "the reality is South Australians are paying a big price to stabilise their energy supply, after a rapid build-up in solar and wind power generation," Wood Mackenzie analyst Saul Kavonic said in an email. Solar and wind account for about 40 percent of the state's power generation.

A spokesman from Tesla's Australian office declined to comment.

Batteries will be cost-competitive around 2025, according to Wood Mackenzie. The consultancy estimates the fixed cost of batteries in 2017 at $81 a megawatt-hour compared with fixed costs of $9 a megawatt-hour for an open-cycle gas plant. The charging cost for batteries is estimated at $57 a megawatt-hour compared with the cheapest gas seen at about $59 a megawatt-hour. By 2025 gas could be more expensive than batteries given the rising cost of the fuel.

More Diesel Generation

Tesla's battery plan will still leave the state's blackout-plagued power grid vulnerable, Bloomberg New Energy Finance analysts led by Kobad Bhavnagri said in a July 10 report. While the 100 megawatt battery storage project would reduce its import dependency at peak energy use to 126 megawatts, the resulting shortfall will still need to be met by electricity interconnectors with neighboring Victoria, BNEF said.

A plan by the South Australian government to procure 200 megawatts of diesel generators for the 2018 summer and a 250-megawatt gas-fired generator will ultimately be needed to shore up supply, BNEF said.

Tesla's battery plan "is a lot of sizzle for very little sausage," Federal Resources Minister Josh Frydenberg said in an interview with Sky News July 11. "Let's focus not necessarily on celebrity. Let's focus on what is needed to stabilize South Australia's system which unfortunately today has not had a very good record."

The state's search for new forms of energy storage started after a severe thunderstorm triggered a state-wide blackout last September raising questions over the stability of its electricity supply. South Australia's power market disconnected from Victoria with transmission towers and lines badly damaged, sparking calls for a second interconnector to be built with the state of New South Wales.

Musk has promised to build the battery and get it working within 100 days of a contract being signed or the California-based company would provide it for free.

EU Panel Backs 'Stop-the-Clock' Emissions Exemption for Airlines

Posted July 11, 2017, 01:29 P.M. ET

By Stephen Gardner

Long-haul flights that arrive in or leave European Union airports would continue to be exempted from a requirement to participate in the bloc's greenhouse gas emissions trading system, under a legislative proposal backed by the European Parliament's environment committee July 11.

However, the exemption would run only until the end of 2020, and the possibility of re-including intercontinental flights in the EU emissions trading system should be kept open if the International Civil Aviation Organization's emissions-capping scheme falls short, according to the committee's vote.

Aviation industry representatives criticized the environment committee's position July 11, saying that it could lead to double regulation and an overlap with the ICAO scheme, which is known as CORSIA (Carbon Offsetting and Reduction Scheme for International Aviation).

Aage Dunhaupt, spokesman for Airlines For Europe, which represents the main European carriers including Air France-KLM and Lufthansa, told Bloomberg BNA July 11 that EU lawmakers had a skeptical view of CORSIA that "we do not share."

It was a "united position of all our airlines" that "when CORSIA kicks in, we make sure we do not

have a double-charge system," Dunhaupt said.

Sylviane Lust, director general of Airlines International Representation in Europe, which represents holiday operators such as Monarch Airlines and Thomson Airways, told Bloomberg BNA July 11 that "we would like to be part of the CORSIA agreement and nothing else. We can't afford to have regional systems duplicating the global system."

Lufthansa and International Airlines Group, the holding company for Aer Lingus, British Airways and Iberia, did not respond to requests for comment July 11.

Carbon-Neutral CORSIA

Under CORSIA—which ICAO agreed to in October 2016—any emissions from aviation above the 2019–2020 level will after 2020 be compensated for by credits from projects that reduce emissions in other sectors, making growth in flights between countries theoretically carbon-neutral.

Until 2027, participation in CORSIA is voluntary, but many of the main aviation countries—including the EU countries and the United States—will take part. Some large countries, including India and Russia, will not participate in the voluntary stage, however.

Currently, because of CORSIA, intercontinental flights are exempted from the EU emissions trading system (ETS) under an arrangement known as "stop-the-clock." However, Intra-EU flights are included in the ETS.

The stop-the-clock exemption expires at the end of 2017. The European Commission, the EU's executive, proposed in February to extend the exemption at least until the details of CORSIA become clear. If CORSIA is seen to be failing to prevent rising global warming emissions from aviation, the EU could act to bring intercontinental flights into the ETS, meaning airlines' emissions would be subject to a cap, and airlines would have to buy carbon credits for any emissions above the cap.

Julie Girling, a British center-right lawmaker who is responsible for preparing the European Parliament's position on the stop-the-clock continuation, said in a statement July 11 that the exemption for intercontinental flights should be continued only through the end of 2020.

"I believe this exemption must be time-limited so that we can be sure that the CORSIA will deliver its objectives," Girling said.

'Fair Contribution'

Andrew Murphy, aviation manager at environment group Transport & Environment, said in a July 11 statement that aviation "must make a fair contribution to global climate efforts," and until more detail about CORSIA is available, lawmakers' "skepticism is well justified."

Environment committee lawmakers backed the draft EU regulation by which the continuation of the stop-the-clock exemption would be implemented on a 57-3 vote, with 6 abstentions.

The full European Parliament will vote on the measure during a Sept. 11-14 session. To be finalized, it must then be agreed to between the parliament and the Council of the EU, which represents the governments of the bloc's member countries.

If no agreement is reached on the extension of the stop-the-clock measure after the end of 2017, all airlines flying into and out of EU airports would be required during spring 2018 to surrender carbon allowances to cover their emissions during 2017.

China Likely to Extend Tax Break on Electric Cars, Auto Group Says

Posted July 11, 2017, 9:35 A.M. ET

By Yan Zhang and Tian Ying

China is likely to extend a purchase-tax exemption on electric cars to promote the vehicles, whose sales have outpaced broader industrywide deliveries, according to the state-backed auto association.

The exemption on the 10 percent purchase tax is due to expire at the end of this year and is "highly likely" to be renewed, Xu Yanhua, deputy secretary-general of the China Association of Automobile Manufacturers, said at a briefing in Beijing July 11. An extension to a levy exemption would probably benefit electric-car manufacturers like BYD Co. and BAIC Motor Corp., which produce some models qualifying for the exemption.

Sales of passenger new-energy vehicles, including plug-in hybrids and battery-electric cars, rose 36 percent to 164,000 units in the first six months of this year. That compares with a 1.6 percent gain in overall auto sales, according to data released by CAAM. A separate set of figures from the China Passenger Car Association July 11 showed first-half retail sales of vehicles falling for the first time since 2005.

China has given subsidies for companies and consumers to promote the development and sale of electric vehicles as part of its strategy to reduce a reliance on imported oil and cut air pollution. The country is the biggest electric-car market, accounting for more than 40 percent of such cars sold in the world, according to a report by the International Energy Agency.

London's Iconic Black Cabs Go Electric; Bound for Amsterdam

Posted July 11, 2017, 9:32 A.M. ET

By Jessica Shankleman

Hundreds of London's black cabs will start appearing on the roads of Amsterdam next year, powered by batteries instead of diesel fuel, marking the first international sale for Geely Automobile Holdings Ltd.'s new electric taxi.

Rotterdam Mobility Center agreed a 225-vehicle deal for the new all-electric hackney cab that will meet new pollution rules in the Dutch capital. It will be delivered from a factory near Coventry, England, in the first quarter of 2018, the companies said Tuesday.

The sale marks a new phase for London Taxi Co., which is planning to expand its reach beyond the U.K. with its new battery powered model called the TX that was designed in Barcelona and unveiled July 11.

From September, LTC will be renamed London EV Co. to reflect the 325 million-pound ($419 million) electrification investment by its Chinese owner Geely. That's paid for new manufacturing equipment for taxis and vans that will meet pollution rules being introduced in London and other cities worldwide.

The cab's trademark turning circle and roomy interior suits the narrow streets of Amsterdam as well as requirements for wheelchair users, said Albert Donlou, director of services at RMC, in an interview.

Designers were keen to ensure the "face" of the new cab conveyed a message that the driver was reliable and serious yet friendly, and was neither too cute nor too aggressive or retro, said David Ancona, managing director of Geely Design Barcelona. The interior can fit six passengers compared to five of the current model and features a large sunroof, as well as a large touch screen for driver navigation.

Geely wants to tap into the global market for low emissions vehicles. More than half of new cars sold globally will come with a plug by 2040, led by cities in Europe, China and the U.S., according to Bloomberg New Energy Finance.

"The launch of LEVC marks Britain's leadership as a first mover in creating the world's only dedicated electric vehicle company for the urban commercial market," Chief Executive Officer Chris Gubbey said a statement July 11.

LEVC unveiled the first version of the new cab, named TX. It retains key elements of the classic model, including doors that open backwards to 90 degree angles and will be powered by a battery and a small gasoline generator, known as a range extender. That will allow drivers to travel from London to Edinburgh, or even Paris, without needing to refuel, according to the statement.

The price tag of the new TX model will be announced on Aug. 1, when order books open for individual drivers, a spokesman for LEVC said by email. The new taxi will go on sale in London in the fourth quarter, and in the first quarter of 2018 in the rest of the world. Steep declines in the cost of batteries, that account for about a third of the cost of the vehicle, stopped the company from determining the price earlier.

London's Mayor Sadiq Khan decreed that all new taxis in the city need to be capable of operating with zero emissions from 2018, either by pure electric or hybrid motors. As well as targeting London's 23,000 diesel-powered taxis, Geely has toured European cities from Paris to Berlin, seeking to drum up interest for a potential export market.

World's Biggest Wind Turbine Maker Sets Sights on New Markets

Posted June 23, 2017, 8:08 A.M. ET

By Christian Wienberg

The chief executive officer of Vestas Wind Systems A/S says the world's biggest wind turbine maker wants to expand in the Middle East and the Asia Pacific region as it taps into growing demand for renewable energy in new markets.

Vestas intends to be a "pioneer in new markets," CEO Anders Runevad said in a phone interview June 22.

"There are markets in the Middle East which we hope will open up, and in Asia Pacific there are markets opening up now or that we have high hopes for when they open up," he said. "These markets have growing energy needs." Vestas this week even introduced a new turbine that will be able to operate during the kinds of typhoons and tropical storms that can hit the Philippines and Japan.

The comments follow an announcement earlier this week that Vestas expects to start operating in Russia, where the Danish company is planning facilities after winning contracts to supply turbines to Fortum.

"Russia has a lot of potential," Runevad said. "We have always been good at pioneering wind in new markets and have been good when we come in early." He estimates the country "can become a good mid-sized market."

The company is moving into new regions as the political landscape grows less certain. Investors sold Vestas shares earlier this month after President Donald Trump announced he was pulling the U.S. out of the Paris climate accord. Vestas has since said the move won't prompt it to alter its North American strategy as the all-important production tax credit, which provides an incentive for renewable energy producers, stays in place for the foreseeable future.

"The U.S. will continue to be the second-biggest market globally for the foreseeable future," Runevad said. "You could argue that looking very long ahead, India could challenge."

"In China there's an increase in electricity demand," he said. "It continues to be the biggest market

not only for wind, but also for other forms of energy. We're definitely getting traction and we definitely improve our position."

Runevad said Vestas wants to be the biggest foreign wind company in China, but acknowledged it probably won't be able to dominate that market in the same way it does other regions.

To chase growth, the company also is focusing heavily on generating revenue from servicing turbines, which Vestas expects to continue to outgrow the market for new turbines.

"That's why we've put a lot of focus on the service segment," Runevad said.

Over the past two years, Vestas has bought German service provider Availon for 88 million euros ($98 million) and UpWind in the U.S. for $60 million.

"The two acquisitions we've done were the biggest independent service providers that existed in the market," Runevad said. "If we can find something similar that has a reasonable scale, we are definitely interested in looking at that."

"Integration is going well, we're a bit ahead of our internal plan," he said. "We feel now the integration is well in place. It's definitely part of the strategy if we can find bolt-on strategies in that space."

Mexico Shelves Oil Plans in Birthplace of Zapatistas Amid Outcry

Posted June 23, 2017, 9:50 A.M. ET

By Adam Williams

Indigenous outcry against Mexico's oil development plans in the birthplace of the Zapatista movement has claimed its first victory.

Two exploration areas in the southern Chiapas state were excluded from a July 12 bidding round, with the National Hydrocarbons Commission citing the government's need to prolong dialog with native groups. The decision is the first time indigenous opposition has prevented oil prospects from being auctioned since Mexico ended a state monopoly in 2014.

The Zoque and Tzotziles groups have escalated protests in the state known for the Zapatista rebel movement and resistance to the passage of the North American Free-Trade Agreement. That included the burning of a City Hall in the town of Tecpatan. In marches against oil developments, they often chant "Viva Zapata," in a reference to Emiliano Zapata Salazar, a peasant leader who inspired the movement.

"This is a triumph for the Zoque community because it not only means the auction was stopped, but also demonstrates the importance of defending the natural riches of the territory that belongs to the people," Juan Guerrero, a representative of the Movement of Indigenous Communities in Resistance, wrote in an emailed message. "It is also a victory for the indigenous communities that oppose the energy reform and serves as an example for other groups across Mexico."

More Dialog

In a June 21 statement, the Energy Ministry said additional time was needed to continue dialog with the indigenous communities in northern Chiapas in order to obtain the consent needed to carry out the oil exploration activities. The ministry added that the areas, with the consent of the communities, could be included in future hydrocarbons auctions.

At least 12 exploratory wells were planned to be drilled in the two Chiapas blocks, which span an area of around 845 square kilometers (326 square miles), according to the National Hydrocarbons Commission.

Mexico, which has signed dozens of onshore and offshore development contracts in the past two years with oil producers such as Exxon Mobil Corp., Chevron Corp. and BP Plc, is planning a December auction to lease onshore shale fields in the Veracruz state, also home to several indigenous communities.

Tembo Power Proposes New Hydro Solution for Congo Copper Mines

Posted June 23, 2017, 9:27 A.M. ET

By Tom Wilson

Africa-focused energy company Tembo Power Ltd. is proposing a new approach to address the electricity shortfall in the Democratic Republic of Congo.

The Mauritius-registered company will develop five small hydropower sites, linking them together to provide 100 megawatts to the country's power-hungry copper industry, Chief Executive Officer Raphael Khalifa said.

"This is I think the only way to unlock the small hydropower potential in Africa," Khalifa said in an interview Jund 22 in Lubumbashi in southeastern Congo. The close proximity of each hydro site and the willingness of the Congolese government to award rights on all five sites to one company have made it possible, he said.

Congo, Africa's biggest copper producer, has installed power-generating capacity of 2,442 megawatts, but only about half of that is operational after years of mismanagement and under-investment.

State-owned power utility SNEL estimates that demand from copper miners outstrips supply by 750 megawatts, a shortfall that has been one of the biggest constraints on output growth in the past three years. Congo produced a record 1.03 million metric tons in 2014, but output has been little changed since then, falling to 995,805 tons in 2015 before climbing back to 1.02 million tons last year.

Critical Mass

Combining small hydropower sites in a single project provides a critical mass of electricity required to sign power-purchase agreements with the mining industry and helps with bankability, Khalifa said.

Tembo will seek to raise $300 million for the project from lenders by the end of 2018 and is already in early talks with mining companies about potential off-take agreements when power comes online in 2021, Khalifa said.

The hydropower sites are in Lualaba province, about 50 miles north of Freeport-McMoRan Inc.'s Tenke Fungurume copper-cobalt mine, acquired last year by China Molybdenum Co. Other mining companies with large copper projects in the province include Glencore Plc and Eurasian Resources Group.

Tembo also has hydropower projects in Kenya, Burundi and Tanzania.

U.K. Told Nuke Plant Subsidies May Spiral Past $38 Billion

Posted June 23, 2017, 8:29 A.M. ET

By Jessica Shankleman

Britain's first new nuclear plant in a generation may cost consumers 30 billion pounds ($38 billion) or more in higher electricity costs, five times more than ministers had expected, the government's auditor warned.

The National Audit Office urged the government to come up with a "Plan B" for electricity supplies in case of a collapse of the the Hinkley Point C project, to be built by Electricite de France SA and China General Nuclear Power Group. An investigation by the audit office said ministers failed to consider cheaper options for delivering the plant.

The report adds to concerns that Hinkley is becoming increasingly expensive, both for the government of Prime Minister Theresa May, who approved it, and for consumers who will ultimately have to pay for it. May locked in future prices for the plant's electricity that are above both the current wholesale cost of power and renewable energy technologies.

"The department has committed electricity consumers and taxpayers to a high cost and risky deal in a changing energy marketplace," Amyas Morse, head of the National Audit Office, said in a June 23 statement. "Time will tell whether the deal represents value for money. We cannot say the department has maximized the chances that it will be."

Under a contract the prime minister signed in September, EDF will invest about 18 billion pounds to build the plant with China General. In order to receive a guaranteed return on investment, May fixed the power price the plant will earn at 92.50 pounds a megawatt-hour. The government will pay the difference between the market value of the electricity sold and EDF's contracted rate.

Cheaper Power

Wholesale power prices have slid in the U.K. to about 40 pounds a megawatt hour from 50 pounds when the contract was initially agreed with EDF in 2013. This change in the market outlook would mean consumers shouldering bigger subsidy payments to support the project -- an estimated 30 billion pounds instead of the 6 billion pounds expected at the time, the watchdog said.

The report also highlighted a series of concerns over whether EDF will ultimately complete the

decade-long project:

EDF's financial position has weakened since 2013, marked by persistent negative cash flow, higher spending than expected, and earnings below the forecasts.

The unproven design for the new reactors at Hinkley Point mean EDF may need to seek further financial support from the government if the project runs into trouble.

Rapidly falling renewable energy costs mean that wind and solar power can now be purchased more cheaply than officials had predicted five years ago, making Hinkley look less attractive.

"It is EDF Energy and CGN who will take the risk and responsibility of delivering " the project, the French utility said in an emailed statement. "The project is having a major impact on the U.K.'s industrial capacity, jobs and skills. Relaunching the U.K. nuclear new build industry at Hinkley Point C will enable costs for future projects, in particular Sizewell C, to be lower."

Ministers Faulted

The NAO faulted ministers for not considering means of funding that could have made the project cheaper. A public-private partnership of the kind that delivered the Channel Tunnel railway, or an "engineer, procure and construct" model similar to what was used to buy F-35 Joint Strike Fighter aircraft could have significantly cut costs, it said.

"They didn't even do this kind of consideration of what these alternative approaches mean," Simon Bittlestone, one of the report's main authors, said in a phone interview.

Ministers agreed to pay a premium for Hinkley's power to speed up work on the project and to signal that further nuclear investments would be welcome. Atomic power offers energy without greenhouse gases associated with damage to the climate, and the government wants to maintain its fleet of reactors as most of its older plants close within the next decade.

A spokeswoman for the U.K. Department for Business, Energy and Industrial Strategy, said: "This was an important strategic decision to ensure that nuclear is part of a diverse energy mix. Consumers won't pay a penny until Hinkley is built."

The report also criticizes officials for:

• Negotiating bilaterally with EDF instead of running a competition that could have reduced the contract's costs.

• Paying LeighFisher Inc. 1.2 million pounds to advise on costs even though the firm admitted it had a conflict of interest through work its parent company did with EDF on Hinkley Point.

• Prioritizing diplomatic relations with France over value for money.

No new nuclear plants have progressed since Hinkley's approval. The financial woes of Toshiba Corp. casts doubt on one potential development at Moorside in Northwest England.

Caroline Lucas, a lawmaker for the Green Party, which opposes nuclear power, said the government should seek to undo the contract and invest more in renewable energy instead.

"Not only are consumers and taxpayers going to be ripped off by this absurd project, but it will also

divert resources away from building the clean energy infrastructure," Lucas said in a statement.

Driving the Day

Good Saturday morning.

TWO THINGS YOU NEED TO KNOW ...

TRUMP'S FIRST INFRASTRUCTURE PRIORITY IN TROUBLE: House Republicans have been scrambling to find enough votes for President Donald Trump's first infrastructure initiative: privatizing the country's air traffic control system. Despite Speaker Paul Ryan's supportive public comments this week and whipping by House Transportation Chairman Bill Shuster, Transportation Secretary Elaine Chao and the FAA's legislative affairs team, the bill won't come up next week. The whip count was close to a few dozen votes short as of the time lawmakers left town Friday afternoon.

Several lawmakers we spoke to yesterday afternoon said it simply wasn't a vote they wanted to take, because it gains them nothing back home. In many cases local leaders are against the legislation. Roads are in disrepair, bridges are crumbling and no one really cares about modernizing air traffic control, as one lawmaker put it to us. **THIS WOULD BE A BIG EMBARRASSMENT** for Trump and GOP leaders, however. The inability to push a priority through one chamber shows how difficult D.C. is.

ABOUT THE DEBT CEILING ... Even though the Wall Street Journal buried it on their homepage, Rich Rubin, Nick Timiraos and Kristina Peterson's debt ceiling story from yesterday afternoon is very important. They report: "Republicans are considering tying a must-pass increase in the federal debt limit to funding for a program that lets military veterans get medical care outside of Veterans Affairs facilities, people familiar with the idea said." A vet bill is a decent sweetener, but consider this: John Boehner coupled a

debt ceiling increase with massive spending cuts when he was the speaker! In an all-GOP Washington, all they might get is the renewal of a veterans program that was already going to be renewed! ***Read Rubin, Timiraos and Peterson's story*** http://on.wsj.com/2utSHbz

LAWMAKERS ... THEY ARE JUST LIKE US EDITION: Several members of the Michigan delegation were grounded on a Delta plane for hours at DCA headed to Detroit yesterday. One traveler on the plane, which felt like it had no air conditioning, estimated that it was at least 85 to 90 degrees inside the cabin. The plane, which was originally scheduled to take off at 12:45 p.m., finally took off around 7:30 p.m. **SPOTTED:** Archbishop of Detroit Allen Vigneron and Reps. John Conyers, Jim Sensenbrenner, Dave Trott, Tim Walberg, Mike Bishop, Debbie Dingell, Dan Kildee, Brenda Lawrence, Marcy Kaptur, Jackie Walorski, Andy Barr, Sandy Levin, Bill Huizenga and John Moolenaar, among others.

PRIORITIES IN TROUBLE? WHITE HOUSE IN CHAOS? JARED AND IVANKA IN SUN VALLEY! -- THE DAILY MAIL: "Mark Zuckerberg arrives in Sun Valley for showdown with Ivanka and Jared amid rumors the self-made billionaire is planning 2020 run against Trump" -- *34 pix* http://dailym.ai/2t1WsRc

WHAT PRESIDENT DONALD TRUMP IS UP TO TODAY -- at 11:02 p.m.: "I will be at the @USGA #USWomensOpen in Bedminister, NJ tomorrow. Big crowds expected & the women are playing great-should be very exciting!"

-- THE PRESIDENT attending the U.S. Women's Open will draw exponentially more attention to the tournament, which is being hosted at a Trump property.

THE TWO FACES OF FOX NEWS -- SHEP SMITH: "The deception, Chris, is mind-boggling ... why are we getting told all these lies?" **CHRIS WALLACE:** "I don't know what to say." http://wapo.st/2uuloW2 ... **FOX NEWS CONTRIBUTOR LISA BOOTHE:** Hillary Clinton would "literally sell her daughter ... literally sell her only child to be president." http://bit.ly/2tVVV4x

IMPORTANT FOR NEXT WEEK -- "GOP leaders plead with senators to hold their fire on Obamacare repeal," by Jen Haberkorn and Burgess Everett: "Republicans say McConnell will force a vote to start debate even if he knows it would be unsuccessful, which would force Republicans to decide which might be worse: Democratic attack ads for repealing Obamacare or anger from the conservative base and President Donald Trump if they abandon the cause. McConnell canceled a scheduled vote on the bill last month when it became clear the votes weren't there. But this time, Republicans say, McConnell wants to get people on the record and bring some finality to the Obamacare debate that has hung up Senate action for nearly two months." http://politi.co/2vo9IAy

-- "Republicans use state payoffs to win votes for repeal bill," by Paul Demko: http://politi.co/2v3bUhg

-- "White House launches aggressive push to flip GOP governors opposed to Senate health bill," by WaPo's Sean Sullivan, Juliet Eilperin and Dan Balz: http://wapo.st/2upJu32

TRUMP, WHO? -- "Governors steer clear of Trump," by Gabe Debenedetti and Megan Cassella in Providence, Rhode Island: "Vice President Mike Pence spent much of his afternoon address to the nation's governors on Friday making sure they know how much Donald Trump loves them. But a majority of the state leaders gathered here this week spent much of their three-day summer meeting pretending the president doesn't exist. When a group of seven Democratic governors stood in front of a cramped hotel meeting room Friday morning to decry the GOP's health care plan, for all 30 minutes they avoided saying the polarizing words 'Donald Trump. ...

"At the tail end of the National Governors Association's three-day summer meeting, the lengths to which the country's state executives went to sidestep the issue of the disruptive president underscored just how much the current Oval Office occupant has rewired the political environment, confounded its participants and upended their usual way of doing business. For many of them, the safest play is to avoid the matter altogether." http://politi.co/2te5tLf

-- "Insurers Oppose Cruz Amendment to Republican Health-Care Bill," by WSJ's Anna Wilde Mathews: "In a letter sent Friday night to the Senate Republican and Democratic leadership, the two major associations representing health insurers, which don't typically send such missives jointly, said the amendment 'is simply unworkable in any form and would undermine protections for those with pre-existing medical conditions, increase premiums and lead to widespread terminations of coverage for people currently enrolled in the individual market.'" http://on.wsj.com/2tUvdL4 ... ***The letter*** http://bit.ly/2tWayov

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. UNRAVELING THE DON JR. MEETING -- MICHAEL ISIKOFF in Yahoo, "Russian-American lobbyist: I just strolled into Trump Jr. meeting": Rinat "Akhmetshin said he was not expecting to attend any meeting at Trump Tower that day. In fact, he was dressed in jeans and a T-shirt when [Natalia] Veselnitskaya told him that she had a meeting scheduled and asked him to come along. Although Trump Jr. has insisted that Vesenikstaya mainly wanted to talk about Russian adoptions, Akhmetshin said she brought a folder with information about an American hedge fund operating in Russia that she believed was funneling money to the [DNC].

"'She spent years researching this stuff,' he said. She left the folder with her hosts at Trump Tower, Akhmetshin said, adding that he had never seen its contents and doesn't

know the details of what was in it. 'I didn't prepare the document,' he said. Akhmetshin cut the interview short, saying he had to have dinner with his daughter. Knowing of his work with Veselnitskaya, Yahoo News had originally reached him by phone in Moscow on Monday, not long after stories about the lawyer's meeting at Trump Tower first broke. When asked why he didn't tell a reporter then that he had also attended the meeting with Trump Jr., he replied: 'You didn't ask me.'" https://yhoo.it/2vnKeDp

-- "U.S. officials probing Russian lobbyist who met Trump team," by Ali Watkins: "Among the questions investigators are trying to answer, one U.S. official told POLITICO, is whether Veselnitskaya was sent to meet with Trump Jr. on direct orders from the Kremlin. ... Akhmetshin - whose lobbying tenure has included several high-profile efforts to promote the Kremlin's agenda in Washington - has run afoul of Congress in recent weeks. In a March letter to the Justice Department, Senate Judiciary Committee Chairman Chuck Grassley accused Akhmetshin of failing to register properly under the Foreign Agents Registration Act." http://politi.co/2t1HbzO

-- "Also At Trump Jr.-Russia Meeting: An Ex-U.S. Government Worker With Liberal Views," by HuffPost's Jessica Schulberg and Paul Blumenthal: Interpreter Anatoli "Samochornov's presence at the meeting is key because he appears to be the only witness to the event who does not have close ties to either the Trump campaign or the Russian government. He wouldn't tell HuffPost whether he had been contacted by investigators probing the Trump campaign's relationship with Russia. ...

"Samochornov has worked as an interpreter on dozens of government assignments, including for the U.S. State Department, Defense Department, Securities and Exchange Commission and Drug Enforcement Administration, and for a G-8 foreign ministers dinner at the United Nations, according to his resume. He helped facilitate exchange programs for the Meridian International Center ... He has worked with periodically with the State Department as a contract interpreter for exchange programs. His wife also works for the State Department." http://bit.ly/2v2SJUR

-- @juliaioffe: "Wait, he was the interpreter at a panel I moderated in Jan at the Brooklyn Library. He was very pro-Trump and pro-Putin." ***Pic*** http://bit.ly/2ukG2XW

-- "Trump Tower Russia meeting: At least eight people in the room" -- CNN.com: http://cnn.it/2tUMwM2

COMING ATTRACTIONS -- "Pence will join GOP leaders for fundraiser benefiting his PAC," by Alex Isenstadt: "Senate Majority Leader Mitch McConnell, House Speaker Paul Ryan and House Majority Leader Kevin McCarthy are slated to headline a July 25 fundraiser for Pence's Great America Committee. The event is to take place in Washington, according to an invitation, and attendees are being asked to pony up $5,000 apiece. ... While vice presidents usually focus on raising money for presidential reelection bids or for their party generally, they typically do not launch their own fundraising vehicles. He is expected to use the PAC to reward candidates up for election in 2018." http://politi.co/2uudbRB

-- "In memo, Trump administration weighs expanding the expedited deportation powers of DHS," by WaPo's Abigail Hauslohner and David Nakamura: "The Trump administration is weighing a new policy to dramatically expand the Department of Homeland Security's powers to expedite the deportations of some illegal immigrants. Since 2004, the agency has been authorized to bypass immigration courts only for immigrants who had been living in the country illegally for less than two weeks and were apprehended within 100 miles of the border. Under the proposal, the agency would be empowered to seek the expedited removal of illegal immigrants apprehended anywhere in the United States who cannot prove they have lived in the country continuously for more than 90 days, according to a 13-page internal agency memo obtained by The Washington Post." http://wapo.st/2ul2zE7

THE JUICE ...

OUT AND ABOUT IN MARTHA'S VINEYARD - POOL REPORT from a Playbooker who attended the opening dinner last night of the DSCC's annual Martha's Vineyard retreat weekend -- the dinner, which featured a traditional lobster boil, was held at the Harbor View Hotel in Edgartown: "DSCC Chair Sen. Chris Van Hollen opened things up with a joke about how Democrats have higher standards than Republicans and Russian agents are prohibited from attending. Remarks included 2018 incumbent Sens. Tammy Baldwin, Sherrod Brown, Chris Murphy, and Debbie Stabenow. All of them railed against Republican attempts to take health care away from millions of Americans and highlighted personal stories of their constituents.

"Massachusetts host Sen. Ed Markey closed with an impromptu imitation of the Kennedy accent that won plaudits from the crowd -- as well as impassioned remarks against climate change that pointed out Martha's Vineyard would have been wiped out if Hurricane Katrina landed a few degrees differently. ... The setting looked like a party from a Hollywood movie with a fire pit, colored lights in the pool, and a giant pair of balls floating in the pool saying Love. ... A highlight of the night was the after-party at the home of Democratic donor Connie Milstein." 2018 incumbent Sens. Heidi Heitkamp (D-N.D.), Tim Kaine (D-Va.), Joe Donnelly (D-Ind.) and Elizabeth Warren (D-Mass.) spoke this morning at the DSCC breakfast at the same hotel.

SPOTTED: Sens. Mark Warner (D-Va.) (who also spoke), Amy Klobuchar (D-Minn.), Al Franken (D-Minn.), Maggie Hassan (D-N.H.), Catherine Cortez Masto (D-Nev.), Bob Casey (D-Pa.), and Gary Peters (D-Mich.), Jeff Merkley (D-Ore.), and Tom Carper (D-Del.), former Sen. John Breaux (D-La.), Heather Podesta, Tony Podesta, and various other big Democratic donors.

QUOTE OF THE DAY: "It's almost an embarrassment being an American citizen traveling around the world and listening to the stupid s--- we have to deal with in this country," JPMC's Jamie Dimon said responding to a question on an earnings call Friday. "Since the Great Recession, which is now 8 years old, we've been growing at 1.5 to 2 percent in spite of stupidity and political gridlock, because the American

business sector is powerful and strong," he said. "What I'm saying is it would be much stronger growth had we made intelligent decisions and were there not gridlock." http://cnb.cx/2vkwadN

Playbook Reads

PHOTO DU JOUR: French President Emmanuel Macron shakes hands with President Donald Trump with their wives, Brigitte Macron and Melania Trump, by their sides after the Bastille Day military parade on the Champs Elysees avenue in Paris on July 14. | Christophe Archambault/Pool/AP Photo

WHAT JAKE SULLIVAN IS UP TO THESE DAYS - "Lessons in disaster: A top Clinton adviser searches for meaning in a shocking loss," by WaPo's Greg Jaffe: "If all had gone as planned, and as most in Washington had expected, Jake Sullivan would be hard at work just steps from the Oval Office. ... Instead, Donald Trump won the presidency ... On a recent evening, he was pushing open a battered orange door, climbing stairs covered with fraying carpet and striding into a dimly lit apartment where two dozen Yale Law School students were waiting to hear from him. Most of them were desperate for some version of the life he had led in Washington.

"Sullivan, though, has never felt less certain about where both he and his country are headed. He divides his time between an empty think-tank office in Washington and Yale, where he lectures one day a week on law and foreign policy. Almost everything about his professional life is transitory, uncertain, unsettled. 'I feel a keen sense of responsibility for the outcome,' he told friends in the immediate aftermath of Clinton's defeat. Months later, the feeling had not faded." http://wapo.st/2vobEcb

THE LATEST ON THE TRAVEL BAN -- "Justice Department appeals latest travel ban setback to Supreme Court," by Ted Hesson: "The Justice Department on Friday appealed to the Supreme Court a federal judge's decision to allow grandparents, grandchildren, aunts, uncles and other relatives of people in the U.S. to circumvent the Trump administration's travel ban policy. The order, issued Thursday evening local time in Honolulu by Judge Derrick Watson in Hawaii, deals a temporary blow to one of the president's signature initiatives. It also prohibits the administration from blocking refugees with a commitment from a resettlement agency in the U.S., a move that could revive the flow of refugee admissions this year.

"In its appeal to the High Court, the Justice Department argues that Watson's interpretation 'empties the Court's decision of meaning,' because it includes 'not just "close" family members, but virtually all family members.' 'Treating all of these relationships as close familial relationship[s]' reads the term "close" out of the Court's decision.'" http://politi.co/2ug5EoL

WASHINGTON, INC. - "Is the most powerful lobbyist in Washington losing its

grip?" by WaPo's Steven Mufson: "This should be the U.S. Chamber of Commerce's moment. A businessman occupies the White House. ... Yet in recent months, the U.S. Chamber - historically one of the cornerstones of Washington politicking and policymaking - has been deeply shaken. Members are divided over the border-adjustment tax, health care and climate change. Some want the Chamber to more vigorously stand up to President Trump to protect free trade. ...

"General Electric ... has considered pulling out of the Chamber because it views the group as part of an antiquated Washington influence establishment, too exclusively aligned with the Republican Party, and no longer an effective advocate for GE's interests or views, according to people familiar with the company's thinking." http://wapo.st/2vnQIC5

MEDIAWATCH -- "WHCA elects ABC's Karl as '19-20 president," byCristiano Lima: "The White House Correspondents' Association announced Friday that ABC News' Jonathan Karl had been elected as their president for 2019-20. Karl, who received 104 of 265 votes on the way to sealing his victory, was also appointed to a 3-year term as an at-large member of the WHCA's board of directors, according to a White House press pool report from the group. ... Karl edged-out Todd Gillman of the Dallas Morning News, who earned 87 votes, for the role of president, but Gillman also notched a position on the board as a newspaper representative. The New York Times' Doug Mills, meanwhile, was elected to fill the photography seat on the board." http://politi.co/2tr2zOh

- "Trump Jr.'s Russia meeting a Democratic plot? Pro-Trump media wants you to think so," by CNN's Oliver Darcy: "Was the Russian lawyer who met with Donald Trump Jr., Jared Kushner and Paul Manafort in June of last year the first evidence of possible Trump campaign collusion with Russia -- or was she part of a sinister Democratic plot to entrap the Trump campaign? Over the past three days, members of the pro-Trump media have settled on their answer, characterizing the lawyer, Natalia Veselnitskaya, as a leftist with ties to the Obama administration. The idea quickly drifted upward to some of the most influential figures in right-wing media, and then ultimately to President Trump himself." http://cnnmon.ie/2uulfBS

-- NEW YORK MAGAZINE's cover story on climate change this week, "The Uninhabitable Earth," by David Wallace-Wells, is now the most-read article in the magazine's history, with 2.5 million readers so far: http://nym.ag/2tdMwYO... The magazine has published a new, annotated version, with 7k+ words of footnotes: http://nym.ag/2v0jA3T ... The magazine's 2nd most-read feature article was a May 2016 Andrew Sullivan piece, "Democracies end when they are too democratic. And right now, America is a breeding ground for tyranny": http://nym.ag/1X42nzY

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are

required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. -- "1917: The Year of the Century," by Jeremy Black in Imperial and Global Forum - per The Browser's summary: "The greatest single event of the 20th century was arguably the overthrow of the Manchu dynasty in 1910-11, opening the way to China's modernisation. But 1917 was the pivotal year, bringing the Russian Revolution, America's entry into World War I, and the Balfour Declaration reshaping the Middle East. Hard to say now which was more consequential: The communist experiment, the assertion of America as world power, or the entailing of the West in the founding of modern Israel." http://bit.ly/2tVBzZb

Playbookers

OVERHEARD AT REAGAN -- Rep. Joe Courtney (D-Conn.), with a backpack, on the bus yesterday heading to Gate 35X at DCA to catch an American flight to Hartford (which got delayed an hour), talking to fellow airplane passengers about how the lobster catch in New England has declined because of climate change. He also said he was going to Fenway Park today to catch the Red Sox-Yankees game. Rep. John Larson (D-Conn.) was next to him on the bus wearing a green tie and talking on his cell phone.

SPOTTED: Justice Merrick Garland last night at the James Taylor concert at Nats Park ... Kellyanne Conway on the 6 a.m. Delta DCA to DTW flight -- former Rep. Mike Rogers was also on the flight ... former Delaware Gov. Jack Markell biking yesterday in Mitchell, South Dakota -- earlier this week he went through Badlands National Park. He's on a 3,680 mile cross-country bike ride from Oregon to Delaware (***map and pix:*** http://bit.ly/2upwfj0), his first big effort since leaving office. ***He's blogging about his trip on his Facebook page*** http://bit.ly/2uunWmY

WEEKEND WEDDING -- COLORADO POWER COUPLE: Brittany Pettersen, Colorado State Rep. and Democratic candidate for Colorado's 7th congressional district, recently married ProgressNow Colorado executive director **Ian Silverii** at the Colorado Governor's Mansion. Pool report from Gigi Sukin of Colorado Biz: "Pettersen and Silverii were wed by former speaker of the Colorado House of Representatives Dickey Lee Hullinghorst. Their wedding party included State Reps. Chris Kennedy and Faith Winter, and State Rep. Janet Buckner read EE Cummings' 'I carry your heart with me.' ... They met in Denver while Pettersen was clipboard-canvassing for nonprofit organizations on the corner of 13th and Sherman, one block south of the Capitol where they would then work together for four years." ***Pic*** http://bit.ly/2tUnkpd

SPOTTED: Sen. Michael Bennet (D-Colo.), Rep. Ed Perlmutter (D-Colo.), former Denver Mayor Wellington Webb, former Lt. Gov. Barbara O'Brien, current Lt. Gov. Donna Lynne, Colorado House Speaker Crisanta Duran, both of Pettersen's Democratic

primary opponents State Sens. Dominick Moreno and Andy Kerr, and Gordon Bronson.

BIRTHDAYS: Chris LaCivita is 51 ... WaPo's Paul Kane ... Gareth Rhodes, running for Congress against Rep. John Faso (R-N.Y.) and a former deputy press secretary to NY Gov. Cuomo, is 29 ... Arianna Huffington is 67 ... Jim Merrill of New Hampshire ... Jeremy Bird, 270 Strategies CEO and 2012 Obama for America field director (hat tip: Lynda Tran) ... Cecile Richards, president of Planned Parenthood Federation of America and Planned Parenthood Action Fund ... Penn Staples ... Liana Balinsky-Baker, Reuters tech, media and telecom M&A reporter and deals team leader in SF (h/t Emily Stephenson) ... Karin Johanson, the pride of New Jersey and Wisconsin (h/t Jon Haber) ... Zach Wahls ... Dan Hewitt, VP at Entertainment Software Association, is 41 (h/t Alex Slater) ... Svetlana Legetic, co-founder of Brightest Young Things ... Dr. David Lippman, a travel aficionado who also loves crosswords and playing tennis, soccer, ping pong and croquet, is 72 (h/t son Daniel) ... Amanda Fernandez, senior manager with development organization Palladium, visiting from Bogotá and celebrating this weekend with her parents, husband and kids at Rehoboth Beach (h/t Ben Chang) ...

... Heather Higginbottom, COO of CARE and former Obama deputy secretary of state ... Elliot Gerson, EVP at the Aspen Institute, is 65 ... Wallis Annenberg, president and chairman of the board of the Annenberg Foundation, is 78 (h/ts Jewish Insider) ... Andrew Usyk ... Rep. Ileana Ros-Lehtinen (R-Fla.) is 65 ... Rep. Mac Thornberry (R-Texas) is 59 ... Rep. David Cicilline (D-RI) is 56 ... Rep. Daniel Lipinski (D-Ill.) is 51 ... Rep. Chris Stewart (R-Utah) is 57 ... Chris Duffner ... Michael Francisco ... Taylor Lindman ... Seth Grossman ... Bloomberg's Jodi Schneider, now in Hong Kong ... Jackie Spinner ... Hilary Leighty ... Jason Wheeler ... Helen Hare ... Gwendolyn Ward ... Allison Steil ... Bekah Geffert ... Campbell Roth ... HFA alum Marisa McAuliffe ... Deb Rosen (h/t Teresa Vilmain) ... Erica Fein ... Babak Talebi is 38 ... Brunswick Group partner Mark Palmer ... Linda Ronstadt is 71 ... actor Brian Austin Green is 44 ... actress Diane Kruger is 41 (h/ts AP)

THE SHOWS, by @MattMackowiak, filing from Austin:

--**NBC's "Meet the Press":** Jay Sekulow ... Senate Majority Whip John Cornyn (R-Texas) ... Sen. Mark Warner (D-Va.). Panel: Tom Brokaw, Al Cardenas, Doris Kearns Goodwin and Danielle Pletka

--ABC's "This Week": Jay Sekulow ... Rep. Adam Schiff (D-Calif.) ... Sen. Susan Collins (R-Maine) ... HHS Secretary Tom Price. Panel: Matthew Dowd, Michael Caputo, Megan Murphy and Abby Phillip

--CBS's "Face the Nation": Sen. Mark Warner (D-Va.) ... Sen. Rand Paul (R-Ky.) ... Jay Sekulow ... author and TIME Magazine editor-at-large Jeffrey Kluger ("Apollo 8"). Panel: Jeffrey Goldberg, Ed O'Keefe, Susan Page and Ramesh Ponnuru

--CNN's "State of the Union": Jay Sekulow ... Sen. Mark Warner (D-Va.) ... Sen. Susan Collins (R-Maine). Panel: Bakari Sellers, CNN political commentator Alice

Stewart, CNN legal commentator and former Attorney General Ken Cuccinelli (R-VA) and Rep. Eric Swalwell (D-Calif.)

--"Fox News Sunday": Jay Sekulow ... Sen. Rand Paul (R-Ky.). Panel: Brit Hume, Julie Pace, Michael Needham and Dr. Ezekiel Emanuel

--CNN's "Reliable Sources": Jeff Mason, Tara Palmeri and Ken Kurson ... Carl Bernstein and Len Downie ... David Zurawik

--CNN's "Inside Politics": Margaret Talev, Karoun Demirjian, Jeff Zeleny and Manu Raju (substitute host: CNN's Nia-Malika Henderson)

--Fox News' "Sunday Morning Futures": Sen. Lindsey Graham (R-S.C.) ... former U.S. Attorney Bud Cummins ... Corey Lewandowski. Panel: Ed Rollins and James Freeman

--Fox News' "MediaBuzz": Gillian Turner ... Katie Pavlich ... Joe Trippi ... Anthony Scaramucci ... Ari Fleischer ... Carley Shimkus

--CNN's "Fareed Zakaria GPS": Iranian foreign minister Mohammad Javad Zarif

--Univision's "Al Punto": Sen. Tim Kaine (D-Va.) ... report from Univision News correspondent Luis Megid on how ICE conducts immigration raids ... Venezuelan human rights activist and Leopoldo Lopez's wife Lilian Tintori ... Mexican Senator (PAN) and presidential candidate Juan Carlos Romero Hicks ... singer-songwriter Natalia Lafourcade

--C-SPAN: "The Communicators": CTIA - The Wireless Association president & CEO Meredith Attwell Baker, questioned by Politico's Margaret Harding McGill ... **"Newsmakers":** Rep. Elliot Engel (D-N.Y.), questioned by Politico's Elana Schor and CQ Roll Call's Rachel Oswald ... **"Q&A":** Author and Saudi Arabian women's rights activist Manal Al-Sharif

--Washington Times' "Mack on Politics" weekly politics podcast with Matt Mackowiak (download on iTunes, Google Play, or Stitcher or listen at http://bit.ly/2omgw1D): former U.S. Sen. Jim DeMint (R-S.C.).

Subject: POLITICO's Morning Score: Montana GOP Senate primary heats up post-special election — Gibbons kicks off Senate primary against Mandel in Ohio — Trump to hold reelection fundraiser in June

By Elena Schneider | 06/01/2017 10:00 AM EDT

With Daniel Strauss, Scott Bland and Bianca Padró Ocasio

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

UP NEXT - "Montana GOP turns to next task: Taking on Tester," by Campaign Pro's Elena Schneider: "The moment Montana's controversial and expensive special House election finished, state Republicans refocused on their original 2017 to-do list: finding a candidate to take down Democratic Sen. Jon Tester next year. But Interior Secretary Ryan Zinke's departure for President Donald Trump's Cabinet not only set off the House special but 'threw a grenade' into the GOP's 2018 planning, said one national Republican who's worked in Montana and, like many, expected Zinke to run against Tester. Republicans are quick to tout their deep bench in the state, but the fallout from Zinke's decision to leave his House seat continues to affect his party. Attorney General Tim Fox is at the top of many Republicans' wish list - but it's also the worst-kept secret in Helena that he wants to run for governor in 2020, a door that appeared to open wider when Rep.-elect Greg Gianforte was charged with assaulting a reporter. Troy Downing, the CEO of AC Storage Solutions, recently started a campaign after encouragement from Zinke, a fellow veteran - but he has some of the same out-of-state liabilities that hampered Gianforte for the past year." **Full story.**

PRIMARY WATCH - "Gibbons kicks off Senate primary against Mandel in Ohio," by Campaign Pro's Daniel Strauss: "Ohio investment banker Michael Gibbons is jumping into the 2018 Senate race in his state, he told POLITICO on Wednesday. 'I have a pretty nice life and I have it easy. I looked at my kids and my grandkids and I said I gotta do this for them,' said Gibbons, who added that he will announce his campaign on Thursday." Gibbons will face "state Treasurer Josh Mandel, who was Republicans' 2012 nominee against Democratic Sen. Sherrod Brown. Mandel recently has been endorsed by Sens. Rob Portman and Ted Cruz, and he also has the backing of major conservative groups including the Club for Growth. But Gibbons was adamant that he has a clear path to the nomination. ... Gibbons said he was in contention for a job at the Department of Commerce in the Trump administration, but he is closing the door on that opportunity to run for Senate." **Full story.**

2020 FORESIGHT - "Trump to hold reelection fundraiser in June," by POLITICO's Alex Isenstadt: "President Donald Trump continues to prepare for his next election - in 2020. Trump is slated to headline a Washington, D.C. fundraising dinner on June 28 that will benefit Trump Victory, a joint fundraising agreement between Trump's campaign and the Republican National Committee, according to an invitation obtained by POLITICO. Funds raised at the event will be

split between the two accounts." **Full story.**

Days until the 2017 election: 158.

Days until the 2018 election: 522.

BIDEN HIS TIME? - "Biden launches PAC, keeping options open," by POLITICO's Edward-Isaac Dovere: "Former Vice President Joe Biden will launch a new PAC on Thursday, American Possibilities, giving him a way of supporting candidates and keeping his own options open for a potential 2020 presidential run. Officially, the group will be 'dedicated to electing people who believe that this country is about dreaming big, and supporting groups and causes that embody that spirit,' according to the PAC's launch materials. Biden has hired Greg Schultz, his political director during his second term as vice president, as the executive director of the PAC." **Full story.**

RUH ROH - "J.B. Pritzker sought political office from Blagojevich, 2008 FBI wiretaps show," by the Chicago Tribune's Todd Lighty, Jeff Coen and David Heinzmann: "J.B. Pritzker, a billionaire businessman with political ambitions, told Illinois Gov. Rod Blagojevich he was 'really not that interested' in the U.S. Senate seat the governor was dealing in late 2008. Instead, Pritzker offered his own idea: Would Blagojevich make him Illinois treasurer? ... Phone calls secretly recorded by federal agents - never before publicly revealed - captured that exchange and other conversations between the influential Democratic donor and the then-governor discussing politics, their futures and the ramifications of Blagojevich's authority to fill the Senate seat being vacated by President-elect Barack Obama. Although Blagojevich raised the idea of appointing Pritzker to the Senate, Pritzker expressed his preference for being state treasurer, a post he believed might soon be vacated by its occupant, Alexi Giannoulias, who was rumored to be in the running for a post in the Obama White House. In one conversation, Blagojevich asked Pritzker for a significant campaign contribution as the two discussed the possible treasurer's appointment." **Full story.**

TECH BEAT - "Hillary Clinton has harsh words for Democratic Party's 'horrible data deficit,'" by POLITICO's Nancy Scola and Li Zhou: "Hillary Clinton strongly criticized the data operation of the Democratic National Committee she encountered upon becoming the party's presidential nominee, saying today, 'I inherit nothing from the Democratic party. I mean, it was bankrupt, it was on the verge of insolvency. Its data was mediocre to poor, non-existent, wrong. I had to inject money into it to keep it going.'" **Full story.**

AIR WAR - New Northam radio ad stars Rep. Bobby Scott: "Thirteen-term Rep. Bobby Scott, one of Virginia's two black members of Congress, is starring in a new radio advertisement for Lt. Gov. Ralph Northam in the state's Democratic gubernatorial primary." **Full story.**

- New NRCC ad attacks Ossoff as soft on ISIS, Iran: "The NRCC's latest TV ad in the Georgia special election says "ISIS is infiltrating America," criticizes Democrat Jon Ossoff's support for the Iran nuclear deal, and ties Ossoff to national Democrats on the issue of Syrian refugees." **Full story.**

- Republican challenger to Warren airs radio ads: State Rep. Geoff Diehl, a GOP challenger to Massachusetts Sen. Elizabeth Warren, is out with new radio spot where he attacks Warren and promises to "make Massachusetts great again." **Watch it here.**

BUSH ON THE TRAIL - "Former President George W. Bush on Friday is attending a Jackson fundraiser for U.S. Sen. Roger Wicker," the Clarion-Ledger reports.

IN THE CROSSOVER DISTRICTS - Republican businessman John Chrin launched a campaign against Democratic Rep. Matt Cartwright in PA-17, PoliticsPA reported. President Donald Trump carried the seat with 53 percent of the vote in 2016 after former President Barack Obama won 53 percent there in 2012. "Chrin, a Easton native, has spent most of his career in the financial services industry. He became a Managing Director at JP Morgan Chase before spending three years teaching at Lehigh University. After teaching at Lehigh, Chrin joined his wife's investment advisory company Circle Wealth Management." **Full story .**

2018 WATCH - Sutton enters South Dakota race: Billie Sutton, the minority leader of the South Dakota Senate, entered the governor's race Wednesday. Sutton was an professional rodeo rider who was paralyzed from the waist down in an accident when he was 23. The GOP field includes Rep. Kristi Noem and Attorney General Marty Jackley. **Watch Sutton's announcement video here**.

ADMINISTRATION SPEED READ - "Comey Expected to Testify Before Senate, if He Isn't Blocked," by The New York Times's Matt Apuzzo and Michael S. Schmidt: "Senators expect the former F.B.I. director, James B. Comey, to testify next week about his conversations with President Trump, congressional officials said on Wednesday, setting up a test of the White House's willingness to cooperate with investigations into Mr. Trump's associates. Putting the highly anticipated hearing on the calendar would force Mr. Trump to decide whether to invoke executive privilege and try to prevent Mr. Comey from testifying. Mr. Comey is expected to be asked about several conversations he had with the president, including one in which he says Mr. Trump encouraged him to stop investigating his former national security adviser, Michael T. Flynn." **Full story.**

CODA - QUOTE OF THE DAY: "People in covfefe houses shouldn't throw covfefe." - Hillary Clinton, capping off a bizarre day on the internet, via POLITICO.

Subject: EPA task force recommends steps to streamline Superfund program

By Alex Guillén

07/25/2017 03:29 PM EDT

An EPA task force today released a list of 42 recommendations for the agency's Superfund program, part of Administrator Scott Pruitt's focus on the long-criticized clean-up initiative.

Pruitt has been critical of what he called indecisiveness on Superfund issues by earlier administrations, although the White House's budget would slash funding from those clean-ups along with most other parts of the agency.

Topline proposals from the task force include creating a "top ten" list of sites to get "weekly attention" from the administrator; finding more third parties to act as investors in sites that could be reused for future projects; several steps to speed up ongoing remediation at Superfund sites; using new technologies to speed up site assessments; streamlining dispute resolution; and requiring "strict adherence to project deadlines."

Pruitt also signed a memo directing EPA leaders to adopt several specific actions immediately. They include prioritizing sites "where the risk of human exposure is not fully controlled," focusing more on sites with higher potential for new uses, and identifying as many sites as possible for deletion from the National Priorities List.

The task force was chaired by Albert Kelly, the former chairman of Oklahoma-based SpiritBank.

Transportation Officials Move to Scrap Obama Climate Rule

Posted October 04, 2017, 10:59 A.M. ET

By Abby Smith

The Trump administration is working to roll back another Obama-era climate regulation—this time a provision that would require state transportation planners to account for greenhouse gas emissions.

The Federal Highway Administration is quickly moving to repeal the greenhouse gas provision, tucked into a broader Obama administration rule that sets new requirements for tracking the performance and conditions of roads. Trump officials previously suspended the measure, then reinstated it late last month after environmental groups and a coalition of eight states sued, arguing that the administration couldn't suspend without taking notice and comment.

The provision at issue would require state transportation officials to track on-road greenhouse gas emissions and set "locally appropriate" emissions targets on national highways. State officials face an Oct. 1, 2018, reporting deadline.

The Oct. 5 notice seeking the provision's repeal notes Transportation Department officials reviewed existing and pending regulations and "identified the [greenhouse gas] measure ... as being potentially duplicative of existing efforts in some States, and burdensome" (RIN: 2125-AF76).

The Federal Highway Administration will accept comments for 30 days on the provision's repeal.

Will Paris Without the U.S. Scuttle Climate Change Measures?

Posted October 04, 2017, 8:19 A.M. ET

By Chisaki Watanabe

Will the U.S.'s decision to pull out of the groundbreaking Paris climate change deal deflate efforts by governments, the private sector and investors to combat global warming?

Members of a panel at a conference hosted by Japan's Ministry of Economy, Trade and Industry Oc.t 4 discussed various policy options, trends, and what each party can do:

• Hiromichi Mizuno, chief investment officer for Japan's Government Pension Investment Fund, the world's largest pension fund, said the financial sector is committed to tackling climate change even after President Donald Trump said he'll pull the U.S. out of Paris. "So far, the impact of the decision has been zero or could be positive. Since his announcement, we received significantly more inquiries from other global asset owners including U.S. public pension funds. They want to work together with us to make sure the investor community continues to work in the same direction."

• Nobuo Tanaka, former executive director of the International Energy Agency, who moderated the panel, said of Trump's support for coal power, "I don't think that is feasible because there's so-cheap natural gas."

• Anneli Pauli, an adviser on climate action to the European Commission, said that coal has no future in Europe. "I think we go from low carbon to no carbon."

• Michael Liebreich, founder of Bloomberg New Energy Finance, said that Japan's private sector has enormous strength in technology related to electric vehicles, while he also questioned the outlook for hydrogen fuel cell vehicles. "Hydrogen for vehicles, I am not optimistic at all. Thinking about hydrogen when everybody else has already chosen the correct solution is a problem," Liebreich said. "If you do electrification of vehicles, it will free up the transformation of your electrical systems so Japan has an enormous amount to offer and I am also convinced Japan will be in the front row."

Perry's Coal Proposal Seen Unlikely to Reverse Historic Decline

Posted October 04, 2017, 8:35 A.M. ET

By Tim Loh

U.S. Energy Secretary Rick Perry's plan to reward coal-fired power plants that keep large stockpiles of fuel won't be enough to reverse the industry's long-term decline, analysts say.

Perry has proposed extra payments for power generators with at least 90 days' worth of supplies on site, arguing that will make America's electric grid more "resilient" in the face of major supply disruptions.

While the measure will probably keep some coal plants open that would otherwise be forced to retire, it doesn't address the industry's core problem: namely, that overall U.S. electricity demand has flattened while natural gas, wind and solar power are stealing market share. To that end, industry experts doubt it'll be enough to make good on President Donald Trump's repeated vows to bring back coal.

"It doesn't solve some of the largest underlying structural challenges to coal demand in this country," Lucas Pipes, an analyst at FBR Capital Markets & Co., said in a phone interview. "We're in a no-growth market."

While any measure that prevents the further erosion of coal's market share would help the industry, Perry's proposal poses some complications for power generators. For one thing, utilities haven't been in the business of hoarding coal. With the U.S. coal sector oversupplied in recent years, power plant operators have preferred, when possible, to buy the fossil fuel "on-demand" rather than maintain large stockpiles, said Andrew Cosgrove, an analyst at Bloomberg Intelligence.

Environmental Costs

That's because stockpiling coal costs money. If left untreated, coal piles can spontaneously catch fire, something that's especially problematic for high-moisture coal from Wyoming and Montana's Powder River Basin, said Andy Blumenfeld, head of market analytics at Doyle Trading Consultants. There are also environmental costs associated with suppressing coal dust and handling runoff. Finally, the quality of stored coal degrades over time, Blumenfeld said.

For utilities participating in Perry's program, costs would go up as it "might require more personnel and equipment," Blumenfeld said.

In July, coal accounted for 32 percent of U.S. electricity generation, down from 47 percent a decade earlier, according to the U.S. Energy Information Administration. Gas was king, at 36 percent, up from 25 percent in July 2007.

In order to qualify, most power plants would also have to go out and buy coal. As of August, power plants holding Powder River Basin coal had an average of 75 days of supplies. Those with Illinois Basin coal had 91 days and those with Northern Appalachian coal had inventories in the low 70s, according to Pipes.

As long as the coal plants aren't expected to run all out, every day, then getting those stockpiles back over 90 days should be doable, said Matt Preston, a coal analyst at Wood Mackenzie Ltd. As recently as early 2016, America's coal plants had, on average, more than that on site.

It'd be much harder, though, if the plants were expected to have enough coal to run full-blast, around-the-clock, for three months straight. That would "require a significant increase in storage area at almost all plants," Preston said. "Some would definitely have to consider offsite storage which may or may not be economically feasible."

Storms Spur $22 Billion Investment in Battery-Backed Grids

Posted October 04, 2017, 8:47 A.M. ET

By Christopher Martin

Growing demand for more resilient power supplies will spur $22.3 billion of global investment in battery-backed local energy systems over the next decade, according to Navigant Research.

Villages and homes in far-flung places will drive the expansion of microgrids, small-scale solar systems with batteries that can retain power until it's needed. Navigant expects 14.9 gigawatts to be in operation in 2026, up from 238 megawatts this year, according to a report Oct. 3.

North America and the Asia-Pacific region will get about three-quarters of the investment as developers find ways to use microgrids more efficiently, including providing energy-management services to utilities. North America will have 5.85 gigawatts of microgrid storage in operation by 2026 and Asia-Pacific will have 5.57 gigawatts. Declining battery costs and new financing methods will also boost deployment in areas like coastal communities in Florida and Texas exposed to flooding and frequent storms, said researcher Alex Eller.

"The storms helped raise awareness of what's available," Eller said in an interview. "For the next

couple years, remote microgrids will make up about half of global installations."

Puerto Rico, where the utility grid was knocked out by Hurricane Maria Sept. 20, has become a target for developers eager to showcase microgrid designs. These include solar panels, small wind turbines and backup diesel or propane generators that may be needed if a string of cloudy days reduces solar production and doesn't fully charge the batteries.

Suppliers including Tesla Inc., battery-maker Sonnen GmbH, and solar rooftop supplier Sunnova Energy Corp. have each begun shipping micro-grid equipment to Puerto Rico to help re-power the island following the storm.

Dawn of Solar Age Declared as Sun Power Beats All Others

Posted October 04, 2017, 8:49 A.M. ET

By Anna Hirtenstein

Solar power blossomed faster than for any other fuel for the first time in 2016, the International Energy Agency said in a report suggesting the technology will dominate renewables in the years ahead.

The institution established after the first major oil crisis in 1973 said 165 gigawatts of renewables were completed last year, which was two-thirds of the net expansion in electricity supply. Solar grew by 50 percent, with almost half new plants built in China.

"What we are witnessing is the birth of a new era in solar PV," Fatih Birol, executive director of the IEA, said in a statement accompanying the report published Oct. 4 in Paris. "We expect that solar PV capacity growth will be higher than any other renewable technology through 2022."

This marks the sixth consecutive year that clean energy has set records for installations. Mass manufacturing and a switch by governments away from fixed payments for renewables forced down the cost of wind and solar technology.

The IEA expects about 1,000 gigawatts of renewables will be installed in the next five years, a milestone that coal only accomplished after 80 years. That quantity of electricity surpasses what's consumed in China, India and Germany combined.

The surge of photovoltaics in China is largely due to government support for renewables, which are being demanded by a population concerned about air pollution and environmental degradation that has led to deadly smogs. The country is seeking to reduce its reliance on coal and has become the world's largest market for renewables, particularly solar.

"The solar PV story is a Chinese story," said Paolo Frankl, head of the IEA's renewable energy division. "China has been for a long time the leader in manufacturing. What's new is the share in the market. This year, it was equivalent to the total installed capacity of PV in Germany."

The U.S. and India are among other nations pushing renewables. They along with China are projected to make up two-thirds of the clean-energy expansion worldwide. Despite President Donald Trump's vow to bolster coal's position in the power market, the U.S. is expected to be the second-

largest market for renewables.

The IEA also expects biofuels to take a larger role in the transportation industry, surpassing gains by electric vehicles.

"A lot of attention has been given in recent months to electric vehicles, and rightly so. They are increasingly globally, exponentially," Frankl said. "But I have to say, we should not forget the biofuels, which at the end of 2016 represented 96 percent of total renewable transport."

Electric vehicles numbers will double by 2022, but biofuels will still make up 93 percent of renewables consumed in the transport industry, the IEA estimates. The fuels are needed especially for heavier vehicles including planes and ships.

The organization recommends that governments put incentives in place to spur the development of biofuels made from non-edible plants, which would avoid diverting food crops into fuel tanks. The cost of biofuels currently is about double the global price of gasoline, Frankl said.

Japan Regulator Clears Restart of World's Largest Nuclear Plant

Posted October 04, 2017, 9:07 A.M. ET

By Stephen Stapczynski

Tokyo Electric Power Co. Holdings Inc. moved a step closer to resuming operations of the world's biggest nuclear facility after Japan's atomic regulator gave its tacit approval, delivering a much-needed boost for a company still strapped with the cost to clean up its wrecked Fukushima plant.

Japan's Nuclear Regulation Authority Oct. 4 approved a preliminary report saying Tokyo Electric's No. 6 and 7 reactors at its Kashiwazaki-Kariwa power plant in Niigata prefecture meet post-Fukushima safety rules. Tepco, as the utility is known, must still get the endorsement of the prefecture's government, which currently opposes the restart.

Resuming operations at the two reactors "should displace a lot of coal and LNG, and hence impact the bottom line," Tom O'Sullivan, founder of Tokyo-based energy consultant Mathyos, said by email ahead of the decision. "The restarts would have additional significance as they improve the energy security of the east of Japan and Tokyo."

This is the first time Tepco has been cleared to operate a nuclear reactor since its Fukushima Dai-Ichi facility suffered a triple meltdown in 2011.

Under a turnaround plan released in May, Tepco said it expected the two units at Kashiwazaki-Kariwa to resume operations as soon as the fiscal year ending in March 2020. The No. 1 and 5 reactors at the plant could restart in 2022, while the No. 3 and 4 units could come online in 2025. The utility is aiming to restart the No. 2 unit a year later.

The Niigata plant, 220 kilometers (137 miles) northwest of Tokyo, consists of seven reactor units ranging from 20 years to 32 years in age, according to the NRA. The plant has a total operating capacity of about 8 gigawatts.

Four of Japan's 42 operable reactors are currently online.

Operating a single unit at Kashiwazak-Kariwa would cut costs by as much as 90 billion yen ($800 million) a year by reducing fuel imports, Tepco said in May.

The utility is seeking partnerships in its nuclear and electricity transmission and distribution operations to boost profitability as part of its latest 10-year turnaround plan.

After a 30-day public comment period, the report will then be subject to formal approval.

Here's the Hot Canadian Oil Play You Probably Never Heard About

Posted October 04, 2017, 10:00 A.M. ET

By Robert Tuttle

There's a land grab quietly taking place in a little-known corner of the Canadian oil sands.

Just 200 kilometers (125 miles) southwest of the Fort McMurray oil-sands hub in northern Alberta, investors are rushing to secure rights to land that produces crude at much lower costs than the massive operations the region's known for. That's because beneath the area's characteristic oil-rich soil, which requires expensive extraction and refining techniques, there's crude trapped between layers of rock that can be pumped with conventional gear.

"It's definitely an emerging play," said Roger Tang, chief executive officer Deltastream Energy Corp., one of the companies that's producing oil in the area. "It's new and the production is quite respectable at this price."

The race to acquire drilling rights near the remote Slave Lake community comes as development of Canada's oil-sands, the world's third-largest crude reserves, grinds to a near halt with prices too low to justify the billions of dollars required to build new mines or steam-assisted production sites.

Located roughly between Alberta's Nipisi Lake and an area called Marten Hills, the drilling rights going for sale fall within the Clearwater shale and sandstone formation, with pockets of oil 600 to 700 meters (1,970-2,300 feet) below the ground, Tang said. Crude from the area can be produced for about C$10 ($8) a barrel.

The purchases have been flying under the radar because most of the buyers are closely held companies like Deltastream, which aren't required to disclose what they're up to like listed companies. But one purchase recently stood out.

Under the name Stomp Energy Ltd., the land company Scott Land & Lease Ltd. paid C$10.15 million, or C$1,101 per hectare, in a Sept. 13 provincial land offering for the rights to explore for hydrocarbons near Marten Hills for 15 years, along the far western edge of the Athabasca Oil Sands region.

While that may seem like very little when compared to the prohibitive prices paid for rights in the Permian Basin in Texas, it was the most paid for a single section of exploration land in Alberta since December 2011, provincial data show. And it came amid a flurry of other purchases in the same

area by other companies.

Companies including Deltastream, Cenovus Energy Inc. and Spur Petroleum Ltd. have begun drilling in the area over the past year.

Cenovus controls about a third of the play after acquiring drilling rights in the area over recent years, Harbir Chhina, executive vice president of oil-sands development, said in a conference call last June. While Cenovus has drilled a well in the area that produces about 300 barrels a day and plans to drill four or five wells in total, the company lists Marten Hills as a potential divestiture as it seeks to sell C$4 billion to C$5 billion by year end to help cover the cost of buying oil-sands assets from ConocoPhillips.

"We continue to assess what our drilling plans may look like for this property in the coming months," Reg Curren, a Cenovus spokesman, said in an email. "No decision has been made at this time."

Backed by a C$100 million equity line of credit led by ARC Financial Corp. and Wells Fargo & Co., Calgary-based Deltastream has drilled nine wells there since the second quarter, three of which are producing between 150 and 200 barrels a day, Tang said. The company plans to continue drilling new wells into next year.

Well Costs

The advent of multilateral drilling, in which multiple bores are drilled out of a single well hole, has made exploiting the Clearwater formation economically viable, Tang said. Each well costs C$1.1 million to C$1.5 million to drill and produces as much as four times more crude as a conventional horizontal well, he said. That makes the play viable at today's oil price of just over $50 a barrel, Tang said. By contrast, wells in Alberta's Duvernay Formation cost C$6 million to C$7 million.

Land companies such as Scott typically buy rights in oil-sands areas on behalf of energy producers who want to shield their names from the transaction. Scott declined to comment on the purchase when contacted by phone.

In addition to Scott and Deltastream, Synergy Land Services Ltd. also bought rights to a plot during the Sept. 13 bidding round. It payed C$1,571 per hectare, the most per hectare in the province in more than two years. In July, land company Britt Resources Ltd. paid C$2.99 million for three parcels in the same immediate area, and Scott bought three parcels nearby for C$4.97 million in June of last year.

The drilling rights sales "show you that quiet acquisitions can get hot very quickly," said Mark Oberstoetter, lead analyst for upstream research at Wood Mackenzie in Calgary.

But development of the Clearwater formation in the Marten Hills area is in its infancy and its full potential won't be known until more drilling takes place, Tang said. The Lesser Slave Lake River area that includes Marten Hills pumped just 1.46 million barrels in all of 2015, according to the most recent Alberta government data. But Tang says he's optimistic.

Well results are "looking very good," he said. "Although it's still early stage, you get some indication that it's very exciting."

Army of Women Tackles Electricity Thieves in Indian Slums

Posted October 04, 2017, 10:42 A.M. ET

By Bhuma Shrivastava

India's power companies have a problem largely responsible for $10 billion a year in losses. Slum dwellers steal electricity and refuse to pay their bills. But company officials often can't go in without being chased by mobs—and sometimes beaten, tied up, urinated on, even murdered.

So officials at Tata Power Co.'s joint venture with the Delhi state government came up with a solution that's turning out to be a model, not just for the rest of India, but for the world: It hired women living in the 223 slums it serves in the northern and northwest parts of the capital and called them "Abhas," from the Sanskrit word for light.

Tata Power Delhi Distribution Ltd.'s force of now 841 wives, mothers, and women as young as 20 go around the slums, knocking on neighbors' doors and persuading, coaxing, cajoling and nagging them to pay their power bills.

The result is a 183 percent increase in revenue over five years from the slums where Tata operates the project, with minimal cost to the company. Active power connections have risen 40 percent to 196,000—meaning that 56,000 previously freeloading homes have become active, bill-paying power customers.

"This gave us a way to get into these neighborhoods, rife with mafia and political influences," said Praveer Sinha, chief executive officer and managing director at Tata Power-DDL, which had started out operating literacy campaigns for slum women in 2010 as a way into the communities. "We thought educated women would give us a much better buy-in."

The success of Tata Power-DDL's initiative is inspiring imitation. Rival BSES Delhi, co-owned by the Delhi state government and Anil Ambani-controlled Reliance Infrastructure Ltd., engaged 40 women earlier this year in a pilot project in a west Delhi slum. Having resident women distribute bills and collect payment from neighbors produced "very encouraging results" that will now be used to expand the program, according to BSES spokesman Deepak Shankar.

The World Bank is trying out similar initiatives in Jamaica and Kenya, and is considering adapting it to other African countries. So far, Kenya Power & Lighting Co. has improved connection rates by doing more community engagement based on the Tata model that "has provided a lot of learning, which we are incorporating," Sunita Chikkatur Dubey, a Ghana-based World Bank consultant, said via email.

The slum in north Delhi known as Sanjay Basti, home to 4,000 people just 2 miles (3 kilometers) away from Tata Power-DDL headquarters, was once notorious for harassing power inspectors. Residents would threaten to pull away ladders when company officials climbed electricity poles to disconnect illegal hookups, said Amarjeet Kaur, who used to be an illiterate housewife before she was hired as an Abha in 2013.

"Residents would ask me: 'Why did you become a 'company person' when you are one of us?'" said Kaur, 39, as she walked through the slum's serpentine lanes filled with low-slung electricity cables that these days connect to almost all the brightly painted brick dwellings. "Now, women are in a

queue to take up this job. Even the boys want to become Abhas."

Abhas, whose numbers are expected to swell to 1,000 by next year, do more than just hand-deliver electricity bills and collect payments. They advise slum dwellers on power conservation and safe practices: Use LED bulbs, don't use old motors to pump underground water or it will spike your electricity bill, and most importantly, don't use power cables as clotheslines. The Abhas' newest mandate, Tata Power-DDL's Sinha says, is to encourage slum residents to make mobile payments, which reduces the need to handle and safeguard large amounts of cash.

Abhas make about 4,000 rupees ($60) a month on average, which is what some part-time domestic helpers can make. It includes a base salary plus extra pay based on securing full bill payment, partial payment or new meter installation. Abha managers, 25 in total, can make as much as 12,000 rupees a month—about the equivalent of a bus or van driver in Delhi.

Residents say they prefer dealing with women from their own communities—who personally deliver bills when they know neighbors are home and accept partial payment when money is tight—rather than outsiders. If their repeated cajoling and nagging doesn't result in payment, then power is disconnected. The Abhas have the support of the community leaders, known as pradhans, who weigh in if needed.

"Earlier if we weren't home when the company official came to deliver the bill, we'd miss paying and become defaulters," said Usha, 38, who goes by one name and lives in a 90-square-foot room with six other family members. She likes the convenience of dealing with people she knows, and laughs off any questions about feeling nagged. "If we consume electricity, we're supposed to pay for it!"

The scarcity of resources in slums ensures an interdependence among residents that means they're more likely to listen to one of their own, said Purnima Singh, a psychology professor at the Indian Institute of Technology in New Delhi.

"The social fabric is much tighter in slum clusters," said Singh. "An outsider will never match up in having this level of influence."

Tata Power-DDL started zeroing in on slums in 2009, considering them the last hurdle to paring losses. India's power companies lose revenue on about a fifth of the electricity they supply, or about $10.2 billion annually, due to problems including theft, meter tampering, billing issues and leakage due to faulty equipment, according to PricewaterhouseCoopers India estimates.

To thaw the hostility that Tata Power-DDL officials were encountering, it set up a special consumer group to start drug rehabilitation, provide medical vans, install drinking water stations and launch the women's literacy program. The idea to hire women surfaced in 2012 when, Sinha said, the women who had been studying to read and write started asking how to put their education to use.

"These women weren't allowed to go out and work by their families," said Manisha Wadhwa who now heads the group. "But they could always work in their own communities, choose their own hours and still give us better reach in their neighborhoods."

Wadhwa's group is still trying to tame 39 slums Tata Power-DDL serves that remain crime-prone and mafia-ridden, where the few Abhas the company has been able to hire haven't made much headway.

People pelt stones and pour hot water from the roofs" in one of the areas, Wadhwa said. "We are still trying to befriend them."

Still Tata Power-DDL has come a long way from the days before 2012 when officials had to remove their badges to keep from being identified when visiting slums. Now women like Kaur insist on having Tata Power identity cards, as it gives them status.

"We have learned from this initiative that we can work closely with communities to improve economic outcomes," said Sinha. "We don't need to do charity."

Private Oil Made a Big Find in Mexico, Now State Oil Wants a Cut

Posted October 04, 2017, 10:37 A.M. ET

By Adam Williams

When private drillers struck oil off Mexico's coast this year, they didn't anticipate sharing it with the state oil company. It looks like they'll have to.

The discovery of as much as 2 billion barrels in July, by a group led by Houston-based operator Talos Energy LLC, grabbed the oil world's attention. Mexico's energy reformers celebrated. It was the first big find since the government opened the industry to investors in 2014—a controversial move in a country that kicked out foreign oil companies in the 1930s, and had mixed feelings about letting them back in.

The reformers were vindicated: Private capital could get results where Pemex, the cash-strapped state operator, couldn't. More would surely follow. Then a problem emerged. The crude deposit found by Talos, it turned out, spread beyond the boundary of the company's exploration bloc and into a neighboring one—owned by Pemex.

Now the government is rushing to put together a rulebook for how this find, and subsequent ones, get shared out. It could shape the future of the whole energy plan. The group—which includes Sierra Oil & Gas S de RL de CV and Premier Oil PLC—is said to be holding off on further investment pending the decision. Other drillers who bought exploration rights also want to see the government ruling before making financial commitments. The rush of enthusiasm that followed the July find has turned into a nervous wait.

'Most Important Issue'

"This is the single most important outstanding issue in the sector," said Raymundo Pinones, director of Mexico's Association of Hydrocarbon Companies. "It could delay activity until there is clarity. In place of drilling or continuing with development, the industry is waiting for this to be resolved."

Almost 70 companies have been given leases to explore for crude in Mexico. One of them, Italy's Eni SpA, reported a shallow-water find of at least 1.4 billion barrels this year, located beneath an existing Pemex well.

The field discovered by Talos, Sierra and Premier may be even bigger. From the start, in its July 12 press statement, the consortium said that the oil "could extend into a neighboring block." Weeks

later, in an interview with El Financiero newspaper, Pemex Chief Executive Jose Antonio Gonzalez Anaya said that his company, which has rights to that block, would fight for a share of the proceeds.

The Talos-led consortium already has to pay 83 percent of profits from its field, known as Zama-1, to the Mexican government, according to the Energy Ministry. Sharing with Pemex could push the figure even higher. So the group has temporarily halted investment and development of the massive find, according to a person familiar with the plans.

The entire industry in Mexico is affected by the delay in establishing the rules, Pinones said. "All the companies that need to plan investment, all those that need to have certainty when they go to their boards to respond to questions, in order for the approval of hundreds of millions of dollars."

'Global Standards'

Like BHP Billiton Ltd, which won rights to operate the Trion field near Mexico's maritime border with the U.S., estimated to hold the equivalent of about 485 million barrels. The Australian driller has identified at least four locations on the block that have exploration potential.

The new rules on sharing "would be of key interest to us there," Tim Callahan, BHP's Mexico president, said in an Oct. 2 interview. Mexican officials have already circulated a draft version to oil companies, and discussions are ongoing, he said. "We've been working very hard to try to help influence the secretary of energy to come up with a proposal that's more in accordance with global standards."

Even if the government is inclined to cut the Talos-led group some slack, there's a political obstacle. Mexico has a presidential election next year, and the early frontrunner is a fiery populist, Andres Manuel Lopez Obrador, who's campaigning against the energy reforms. Last month he reiterated a promise to review oil contracts if he wins. Concessions to foreign capitalists will be grist to his mill.

Deputy Energy Minister Aldo Flores points out that the problem confronting his government isn't unique to Mexico. The process of dividing up an oil find that spans different jurisdictions is known in the industry as unitization, and there are plenty of international precedents.

'Rule of Capture'

"In Mexico, we don't have a rule of capture as they do in Texas. It's not first-come, first-served," Flores said in an interview last month. "If there's enough evidence and certainty that the discovery extends into Pemex's block, then it would have to be shared."

But the legislation won't be written just for the state company's benefit, he said. Future finds will likely require collaboration between private companies with neighboring blocks, and the same rules will apply to them.

Still, since the first case does involve Pemex, it's extra-sensitive.

The industry has already flagged concerns about preferential treatment. Pemex missed a three-year deadline to meet minimum investment or work requirements in some of the 108 fields that it operated. But in August it was granted a two-year extension for 101 of them - including the one next-door to Talos's patch - by the Energy Ministry, which cited low oil prices as reasoning for granting additional time.

So if the international oil community thinks the sharing deal isn't fair, it could spook investors hoping to tap Mexico's 9 billion barrels of reserves.

"This isn't going to be a one-off situation," said John Padilla, managing director of energy consulting firm IPD Latin America. "If they don't get this right, they are going to jeopardize a lot."

Senate Takes First Steps in Uphill Battle to Delay Ozone Limits
Senate Republicans May 23 took what they hope was at least one small step forward in their uphill battle to delay the EPA's revision of its ozone standards to 2025, arguing that 10 years isn't much of a change for an agency that has repeatedly failed to meet a five-year statutory deadline for updating the pollution limits.

Air Pollution
U.S. Sues Fiat Chrysler for Diesel Emissions Test Violations
The U.S. Justice Department sued Fiat Chrysler Automobiles NV over claims its diesel-powered pickups and SUVs were outfitted with illegal software that allowed them to pass laboratory emissions tests (U.S. v Fiat Chrysler Automobiles N.V., E.D. Mich., No. 17-cv-11633, 5/23/17).

Budget

Budget Seeks Shutdown of 'Duplicative' Chemical Safety Board

The Trump administration kept its earlier promise to propose eliminating the U.S. Chemical Safety Board, describing the independent federal agency as "largely duplicative" of other government departments in its proposed budget released May 23, even as the board sent its own request for a small funding increase.

Budget

Civil, Criminal Environmental Enforcement Cut in Trump Budget Plan

President Donald Trump's proposed budget would reduce the EPA's civil enforcement program by 18 percent, criminal enforcement by 16.5 percent, and the forensics support that makes many of those cases possible by nearly 44 percent.

Budget

Cleanup Research of Contaminated Sites Gets Boost in Trump Plan

Toxin-eating bacteria and other remediation research projects would get a bump in funding under President Donald Trump's proposed budget, contrasting with agency-wide slashes in research and cleanup spending.

Budget

Climate Spending 'Crazy Stuff' Targeted in Trump Budget

President Donald Trump's first budget request to Congress would cut or eliminate a range of programs designed to reduce greenhouse gas emissions, as well those helping communities prepare for more intense flooding or hurricanes expected to result from climate change.

Budget

EPA Requests More Chemicals Staff, Paid in Part by Industry Fee

The staffing levels and appropriations for the EPA's chemicals office would get a boost under President Trump's fiscal year 2018 budget request—due, in part, to fees that chemical makers are expected to pay.

Budget

Hanford Nuclear Cleanup Budget Slashed in Energy Proposal

Washington state's Hanford Nuclear Reservation, scene of a recent collapse of a tunnel containing nuclear waste, would see its funding slashed under President Donald Trump's new budget proposal.

Budget

Proposed Interior Budget Boosts Onshore, Offshore Energy

Oil, natural gas and coal development would get a boost in the White House's proposed fiscal 2018 budget, despite a substantial 12 percent cut to the Interior Department's overall funding.

Budget

Trump Dumps 'Clean Coal' Research Despite Lauding Its Potential

President Donald Trump promised his administration would bring about "clean coal," but his budget proposed slashing research the industry says it needs to make that a reality.

Budget

Trump Proposes Selling Off Half the U.S. Strategic Oil Reserve

The White House plan to trim the national debt includes selling off half of the nation's emergency oil stockpile, part of a broad series of changes proposed by President Donald Trump to the federal government's role in energy markets.

Budget

Trump Seeks Pesticides Law Fix to Plug Budget Gap With Fees

President Donald Trump wants to trim the EPA's pesticide licensing budget by about 18 percent and have industry fees cover the shortfall.

Budget

Voluntary EPA Programs Get Ax in Budget Plan as Climate Work Halts

Voluntary EPA programs that encourage businesses to improve energy efficiency and curb greenhouse gas emissions would get the ax from a Trump administration that has already pledged to roll back climate change regulations.

Budget

White House Seeks $150M for Yucca, Nuclear Waste Storage

President Donald Trump's first budget proposal would provide $30 million for the Nuclear Regulatory Commission to restart work on licensing Yucca Mountain as a permanent repository for nuclear waste.

Chemicals

Composite Wood Makers Get More Time to Comply With EPA Rule

Companies making, importing, supplying and selling composite wood would get more time to comply with the Environmental Protection Agency's formaldehyde emissions limits under a direct final rule the agency is scheduled to publish May 24.

Subject: Energy lobbyist: DOE should reject Vogtle loan guarantee increase

By Eric Wolff

09/14/2017 11:32 AM EDT

Mike McKenna, president of the lobbying firm MWR Strategies, says the Department of Energy should reject a request from Southern Co.'s Georgia Power to increase the loan guarantees for the long-delayed and over-budget nuclear reactor project at the Vogtle power station.

"There comes a time in every administration when you have to look your friends, and even not your friends, in the eye and say, 'bank's closed,'" he told the POLITICO Pro Policy Summit.

Under the Obama administration, DOE approved loan guarantees totaling $8.33 billion for the project's three owners, including $3.4 billion for Southern. The company is awaiting a DOE decision on its request to hike that amount.

But an official from Exelon Corp, which operates the biggest fleet of nuclear power plants in the U.S., defended its utility peer.

"I see Southern as a pretty good risk to invest in, in terms of loan guarantee," said David Brown, senior vice president for government affairs for Exelon.

Subject: May 30 PRG Energy Update: We will always have Paris...or Not

Friends,

Happy unofficial beginning of Summer… Pardon my grogginess, but I stepped off a red eye from LAX this morning Ex. 6 - Personal Privacy

Ex. 6 - Personal Privacy

I hope everyone enjoyed the holiday weekend. Not much happening this week here, but the biggest news is the focus on President Trump's decision on the Paris Climate Agreement. Our friend Amy Harder reported over the weekend that some sources are saying Trump will back out. But after last week's international pressure from the G7 Leaders, it seems clear that much of the activity from the Senate, AGs and internal sources may be trying to counter some of that momentum. Andrew Light, a U.S. negotiator at the Paris deliberations, said of Trump's direction: "I really don't think you can tell from media reports now where Trump is on this or whether he is in fact telling different people different things." Industry leaders continue to suggest staying in will be an important factor to staying engaged international on the Paris process but also on how we are perceived in the world on other Issues as well. We are hearing a lot of different things so we are happy to discuss and find you some great resources.

Congrats to our friend Dino Grandoni, who is launching the *Washington Post's* Energy 202, a deeper dive on energy and environmental policy fashioned after the Post's mega-popular politics newsletter, The Daily 202. The Energy 202 will deliver scoops and smart analysis on energy and environmental policy while also highlighting Post and others quality reporting. You can sign up HERE.

The 2017 hurricane season officially begins on Thursday and while no one ever really seems to know what will happen, some say we may have a more active season. SEJ's TipSheet has sources and tools to help address questions about hurricane season.

Congrats to Indy 500 winner, 40-year-old Takuma Sato, who becomes the first Japanese driver ever to win the Memorial Day race classic. 11 days remaining before the 149th Belmont Stakes

at Belmont Park in Elmont, N.Y. Preview next week, but already Derby winner *Always Dreaming* and Preakness winner *Cloud Computing* are both out.

Finally, the *National Law Journal* has a great piece on my colleague Josh Zive and the new Bracewell podcast, the Lobby Shop. Check it out and sign up to receive it each week.

Call with questions…

Best,

Frank Maisano

FRANKLY SPOKEN

"With the University of Chicago's long-time commitment to economics and public policy, EPIC plays an important role in developing creative, market-based solutions to today's most important energy and environmental challenges. I'm eager to learn from the dedicated faculty and students at EPIC, and to share the lessons I have learned from more than 25 years of working on environmental and energy issues. I hope that this collaboration will lead to better informed regulations and policies that will allow us to reach our environmental goals and preserve access to affordable, reliable energy."

Bracewell's Jeff Holmstead regarding his new policy fellow appointment at the University of Chicago's Energy Policy Institute.

IN THE NEWS

ITC to Review Solar Petition – The U.S. International Trade Commission has initiated an investigation into the request by U.S.-based solar cell manufacturer Suniva for temporary trade tariffs to protect the manufacturing sector from lower-cost imports. The move, announced today, clears the first hurdle in the process.

SEIA Raises Questions about Petition – SEIA CEO Abby Hopper fired back on the ITC decision by the regarding Suniva's Section 201 filing: "The International Trade Commission's decision to consider Suniva's petition for a lifeline could be bad news for hundreds of thousands of American workers in the solar industry and may jeopardize billions of dollars in investment in communities across the country. Setting high price floors and exorbitant tariffs is a blunt instrument that would cripple one of the brightest spots in America's economy. While we respect the ITC's decision to evaluate this claim on its merits, SEIA will remain at the forefront of the opposition to Suniva's requested remedies. We encourage all members of the solar industry to assist the ITC if asked for information and to work with us to ensure your voice is heard. Our goal throughout this proceeding will remain focused on developing more equitable and sustainable ways to boost American solar manufacturing that benefit many companies instead of just a few and allows the entire solar industry to continue to grow in this country."

EPIC Launches Visiting Fellows Program with Holmstead, Tierney – The Energy Policy Institute at the University of Chicago (EPIC) announced that my colleague Jeff Holmstead, former Assistant Administrator of the U.S. Environmental Protection Agency (EPA) for Air and Radiation, and Susan Tierney, former Assistant Secretary for Policy at the U.S. Department of Energy (DOE), as EPIC's inaugural Visiting Fellows in Policy Practice. In this role, the two will provide invaluable perspectives and expertise in a series of events, workshops and public discussions, as well as serve as resources for students and the Institute. Earlier, Holmstead served on the White House Staff of President George H.W. Bush. As Associate Counsel to the President, he was involved in the passage and implementation of the Clean Air Act Amendments of 1990 and the creation of the United Nations Framework Convention on Climate Change (UNFCCC). Tierney is a highly-regarded expert on energy policy and economics, specializing in the electric and gas industries. As a former Assistant Secretary for Policy at DOE under President Bill Clinton among other roles, Tierney has deep and varied experience that allows her to provide invaluable knowledge on energy markets, as well as on economic and environmental regulation and strategy.

The National League of Cities Releases Autonomous Vehicle Guide –The National League of Cities, a nonprofit group of municipal leagues, recently released a guide on -- autonomous vehicles (AVs) – "Autonomous Vehicles: A Policy Preparation Guide" – for state and local

planners. It provides a rundown of different types of autonomous vehicles, public policy considerations, recommendations and other topics of interests to cities and companies dealing with the new technology. Topics covered include:

- Privacy concerns – the Alliance of Automobile Manufacturers and the Association of Global Automakers published ' Privacy Principles for Vehicle Technologies and Services' in 2014, but the guide recommends that cities should consider their own safety and privacy concerns that are not reflected in these principles;
- Anonymous data sharing – if properly developed and managed, the vast amounts of data received could be used for traffic control, public utilities monitoring, road safety evaluation, and identifying infrastructure needs;
- Public policy considerations – safety, insurance requirements and local approval of any proposed AV testing in a city;
- Municipal coordination and public outreach – assessment of existing laws and municipal codes that will impact any deployment of AV technology, coordination between city departments, and working with regional agencies;
- Infrastructure investment – policies should be considered that ensure diversified approaches to funding future infrastructure needs;
- Broadband needs – cities should be proactive in reaching out to the dominant provider in their region to plan the growth of infrastructure, so that future needs can be met.

The report recommends that cities begin planning now, as AV's are already a reality. Policies need to be developed, federal and state policy and legislative developments should be tracked so that cities can ensure they have input, and, plans for future infrastructure needs and building data and computing capacity need to be in place.

OMB Gets Coal Ash Rule – EPA has sent draft guidance for how states should craft permit programs for coal ash disposal to the White House for pre-publication review. OMB received the coal ash guide for review last Thursday. Interagency review of agency rules ahead of their publication in the *Federal Register* typically takes 90 days, but can take much more or much less time depending on the action under review.

ON THE SCHEDULE THIS WEEK

WRI to Host Forests Discussion – Today at 12:30 p.m., the World Resources Institute held a forum on political and policy issues surrounding forests. Efforts to achieve the Paris Agreement will not succeed if tropical deforestation continues business as usual. Protecting forests is among one of the most affordable, efficient strategies to curb greenhouse gas emissions and advance sustainable development. Frances Seymour, author of *Why Forests? Why Now?* and land rights expert Peter Veit will discuss the benefits and limitations of REDD+, the international

community's role in financing forest protection, and the challenges that Indigenous Peoples still face when registering their land.

WCEE May Happy Hour Set – The Women's Council on Energy and the Environment is hosting its May Happy Hour on tomorrow at 5:30 p.m. at Penn Commons. WCEE is a non-partisan, policy-neutral organization that focuses on women, energy and the environment.

Author to Discuss Cybersecurity Grid Issues – Leaders in Energy will host a forum Thursday in Arlington to discuss cybersecurity and power grid issues with Berlin-based author, Marc Elsberg, who is visiting the DC area to showcase his techno-thriller, "Blackout" and hear from other cyber and other energy specialists in these exciting and fast-moving fields. Reviewed as "fast, tense, thrilling – and timely", "Blackout" has been "highly recommended" by Lee Child, author of the bestselling Jack Reacher series. Other speakers include Arlington County Energy Manager John Morrill and former MISO chairman Paul J. Feldman.

SEIA Tax Forum Set for NYC – SEIA will hold a forum on June 1st and 2nd in New York City to navigate this very complicated and multi-faceted process in an effort to foster a strong solar industry. As the 115th Congress kicks into high gear, the event will feature an in-depth examination of where tax reform is going, and issues including tax rates, the Investment Tax Credit, and depreciation, and a discussion of how any potential revisions to federal tax policies such as these will affect tax equity markets.

IN THE FUTURE

-

Forum to Look at Security Implications of Climate – The Environmental and Energy Study Institute (EESI) and the Center for Climate and Security (CCS) will hold a forum next Monday at 2:00 p.m. discussing the role of climate change as a "threat multiplier" in the geopolitical landscape and the implications that has for U.S. national security. The briefing will explore the risk management and planning considerations facing the Department of Defense (DOD) as it seeks to maintain force readiness and bolster infrastructure resilience. The panel will also discuss the need for investments in preventive measures today to prepare for future needs concerning disaster assistance, the Arctic, and the displacement of vulnerable populations due to climate change. The speakers for this forum are US Army Brigadier General Gerald Galloway (former Dean of the Academic Board at West Point), former Deputy Undersecretary of Defense for Environmental Security Sherri Goodman, USAF General Ron Keys, US Navy Rear Admiral Ann Phillips, United States Navy and former Principal Deputy Undersecretary of Defense John Conger.

Forum to Host Fireside Chat With Ford – Next Monday at 2:00 p.m., the Atlantic Council hosts a fireside chat on the future of mobility and its global implications, featuring Executive Chairman of Ford Motor Company Bill Ford.

Forum to Look at Infrastructure – The Hudson Institute will host a timely conversation on June 8 at Noon about the importance of modernizing America's infrastructure to spur sustained economic growth and job creation and improve the quality of life for all Americans. U.S. Senator John Boozman will offer his perspective in opening remarks drawing on his experiences serving on the Committee on the Environment and Public Works and the Committee on Appropriations Subcommittee on Transportation, Housing and Urban Development. A panel discussion will follow the senator's remarks featuring the Aubrey Layne, Virginia's Secretary of Transportation;, former Federal Transit Administration chief counsel David Horner; former senior deputy mayor and COO of Indianapolis under Mayor Steve Goldsmith Skip Stitt, author of Hudson's recent report Infrastructure Spending and Public-Private Partnerships and Jennifer Aument, a commissioner for the Virginia Port Authority and Group General Manager, North America at Transubran.

Caucus to Host Building Efficiency Week – High Performance Building Week is next week on Capitol Hill from June 6th-9th. The week is an annual event sponsored by the High-Performance Buildings Caucus of the U.S. Congress. The Caucus was formed to heighten awareness and inform policymakers about the major impact buildings have on our health, safety and welfare and the opportunities to design, construct and operate high-performance buildings that reflect our concern for these impacts. Fundamental to these concerns include protecting life and property, developing novel building technologies, facilitating and enhancing U.S. economic competitiveness, increasing energy efficiency in the built environment, assuring buildings have minimal climate change impacts and are able to respond to changes in the environment.

Forum to Look at Europe Energy Issues – The Atlantic Council's Global Energy Center will hold a half-day conference on Wednesday June 7th at 8:45 a.m. looking at the implications of the changing global LNG market, progression of the European Energy Union concept, and priorities of the new administration in Washington, DC for Central and Eastern European energy security. Among the speakers will be Cheniere's Robert Fee, former State Department official Melanie Kenderdine, current State official Mary Warlick, Lithuanian Energy minister Simonas Šatūnas and Foreign Policy editor Keith Johnson, among others.

Security Experts to Address Methanol Policy Forum – The Institute for the Analysis of

Global Security (IAGS), the U.S. Energy Security Council (USESC) and the Methanol Institute will hold a Methanol Policy Forum on June 13th at the National Press Club. The Forum will include a special luncheon discussion: Energy Security through Fuel Choice, which features a conversation with the U.S. Energy Security Council experts like former National Security Advisor Robert C. McFarlane, former CIA Director James Woolsey, former President of Shell Oil Company John Hofmeister, former White House Counsel and Ambassador to the EU C. Boyden Gray and former Louisiana Senator and Senate Energy Bennett Johnston. Our friend Joe Cannon and other will speak on panels as well.

Senate to Look at RFS – The Senate Environment Committee Is expected to hold a hearing on the Renewable Fuels Standard in June 15th. More of this as it gets closer

CA Energy Forum Set – Advanced Energy Economy's (AEE) annual California energy policy event, Pathway to 2050, will be held on June 21st in Sacramento. The event brings together an influential group of advanced energy business leaders and state policy-makers to discuss opportunities to accelerate California's economy through the growth of advanced energy. Speakers will include our friends Caroline Choi of SoCalEd, Dan Morain of the *Sacramento Bee* and Greentech's Katie Fehrenbacher. Other speakers include SoCal Ed CEO Kevin Payne, GE's Deb Frodl, Cal Assembly Speaker Kevin de Leon, CPUC President Michael Picker, Cal Energy Commissioner Janea Scott and Tom Steyer.

EIA Energy Conference Set – The 2017 EIA Energy Conference is scheduled for June 26-27 in Washington, DC.

Smart Cities Conference Headed for Austin – The 2017 Smart Cities Connect Conference will be in Austin, TX at the Convention Center. The event convenes more than 200 global city leaders to prospect and partner with innovative technology and service providers.

Global Security Forum Set – The Center for a New American Security hosts its 2017 Annual Conference in partnership with The Washington Post on Wednesday, June 28th at The Mayflower Hotel. This year's conference will bring together U.S. national security policymakers and experts to highlight major divides and identify potential bipartisan solutions. CNAS is an independent and nonpartisan research institution that develops strong, pragmatic and principled national security and defense policies.

Congressional Renewable Expo Set – The 20th annual Congressional Renewable Energy and Energy Efficiency EXPO and Policy Forum will be held on Tuesday, July 11th from at 9:30 a.m. to 4:30 p.m. In Rayburn.

Community Solar Forum Set for Denver – The Coalition for Community Solar Access will host the first annual National Community Solar Summit in Denver on July 26 – 28. A few highlights for Denver include energy company CEOs including Tom Matzzie of CleanChoice Energy, Jesse Grossman of Soltage, Zaid Ashai of Nexamp, Rick Hunter of Microgrid Energy and Steph Spiers of Solstice. Other speakers include energy company leaders Hannah Masterjohn of Clean Energy Collective, Dan Hendrick of NRG Energy, Adam Altenhofen of US Bank, Adam Capage of 3 Degrees and Lori Singleton of Salt River Project.

Good Wednesday morning. TODAY begins the most anticipated pair of Capitol Hill hearings in recent memory. Director of National Intelligence Dan Coats will testify today, and former FBI Director James Comey tomorrow. Additionally, the Coats hearing also features Deputy Attorney General Rod Rosenstein, NSA Director Michael Rogers and acting FBI Director Andrew McCabe. Start time: 10 a.m. Reporters are dying to get in. TV networks are expected to broadcast live. These 48 hours are certain to be a big part of the story of the Trump presidency. **THERE HAS ALSO BEEN AN UNCANNY** amount of news in the lead up to the Comey and Coats hearings.

A NEW PLOT TWIST -- WHAT WILL COME UP TODAY -- "Top intelligence official told associates Trump asked him if he could intervene with Comey on FBI Russia probe," by WaPo's Adam Entous: "The nation's top intelligence official told associates in March that President Trump asked him if he could intervene with then-FBI Director James B. Comey to get the bureau to back off its focus on former national security adviser Michael Flynn in its Russia probe, according to officials.

"On March 22, less than a week after being confirmed by the Senate, Director of National Intelligence Daniel Coats attended a briefing at the White House together with officials from several government agencies. As the briefing was wrapping up, Trump asked everyone to leave the room except for Coats and CIA Director Mike Pompeo.

"The president then started complaining about the FBI investigation and Comey's handling of it, said officials familiar with the account Coats gave to associates. Two days

earlier, Comey had confirmed in a congressional hearing that the bureau was probing whether Trump's campaign coordinated with Russia during the 2016 race. After the encounter, Coats discussed the conversation with other officials and decided that intervening with Comey as Trump had suggested would be inappropriate, according to officials who spoke on condition of anonymity to discuss sensitive internal matters." http://wapo.st/2rTQxjk

-- ONE THING TO REMEMBER: Yes, Coats is going to be forced to answer for this. But he's a former senator. So he probably will get a touch more deference than anyone else in his position would.

UPPING THE ANTE -- "Sessions offered to resign before Trump's trip abroad," by Tara Palmeri, Eliana Johnson, and Josh Dawsey: "Attorney General Jeff Sessions offered his resignation to President Donald Trump amid Trump's rising frustration with the series of events that culminated in the appointment of a special counsel to investigate his campaign's contacts with Russian officials during last year's election.

"Trump ultimately refused Sessions' offer, which came just before Trump embarked on his first international trip in late May, according to a person who regularly speaks with Sessions. This person said the attorney general offered to resign out of a sense of obligation because he was aware of how angered Trump was about his decision to recuse from the Russia investigations in March. ...

"Trump has continuously -- sometimes publicly -- expressed his frustration with Sessions' decision to formally step back from any investigation of Russian election interference. Sessions has said his decision came after he consulted extensively with Justice Department lawyers about what was appropriate. A second source close to Sessions described Trump as 'obsessed' with Sessions' recusal, describing it as an ongoing flashpoint ever since Sessions made the decision. 'I guess it's finally gotten out that Trump is pissed at Jeff,' this person said." http://politi.co/2r4vdDl

SIREN -- THE COMEY HEARING, 10 A.M. THURSDAY -- "Comey Told Sessions: Don't Leave Me Alone With Trump," by NYT's Mike Schmidt and Matt Apuzzo: "The day after President Trump asked James B. Comey, the F.B.I. director, to end an investigation into his former national security adviser, Mr. Comey confronted Attorney General Jeff Sessions and said he did not want to be left alone again with the president, according to current and former law enforcement officials. Mr. Comey believed Mr. Sessions should protect the F.B.I. from White House influence, the officials said, and pulled him aside after a meeting in February to tell him that private interactions between the F.B.I. director and the president were inappropriate. But Mr. Sessions could not guarantee that the president would not try to talk to Mr. Comey alone again, the officials said." http://nyti.ms/2qVsmxS

JOSH DAWSEY SCOOP: "Comey talked with Mueller's team ahead of testimony": "Former FBI Director Jim Comey's testimony Thursday is one of the most highly anticipated hearings in recent memory -- but his words are unlikely to surprise special

counsel Robert Mueller, whose team has been in contact with Comey, according to two of his associates. Friends of Comey say they expect the testimony to largely stick to his conversations with President Donald Trump and is unlikely to break ground on the investigation into potential collusion with Russia and any of Trump's associates. That is not surprising, legal experts say, because of the ongoing investigation that Mueller took over last month.

"These people say Comey is trying to be careful 'to just describe what happened with the president and how he felt about it,' in the words of one associate. But this person said Comey 'wants to correct the record, from his point of view, on certain things the president and his aides have said.' One Comey friend said 'there had been conversations' between Comey and Mueller's team before the testimony and 'Mueller won't be surprised.'" http://politi.co/2r4AhYU

THE COUNTER ATTACK -- "White House looks for ways to undermine Comey's credibility," by AP's Julie Pace and Julie Bykowicz: "Both White House officials and an outside group that backs Trump plan to hammer Comey in the coming days for misstatements he made about Democrat Hillary Clinton's emails during his last appearance on Capitol Hill. An ad created by the pro-Trump Great America Alliance - a nonprofit 'issues' group that isn't required to disclose its donors - casts Comey as a 'showboat' who was 'consumed with election meddling' instead of focusing on combating terrorism. The 30-second spot is slated to run digitally on Wednesday and appear the next day on CNN and Fox News.

"The Republican National Committee has been preparing talking points ahead of the hearing, which will be aired live on multiple TV outlets. An RNC research email Monday issued a challenge to the lawmakers who will question Comey. There's bipartisan agreement, the email says, that Comey 'needs to answer a simple question about his conversations with President Trump: If you were so concerned, why didn't you act on it or notify Congress?'" http://apne.ws/2r0RGX9 ... ***The ad*** http://bit.ly/2rKTD7l

INSIDE THE WEST WING -- WAPO'S BOB COSTA, ASHLEY PARKER AND PHIL RUCKER, "Trump, furious and frustrated, gears up to punch back at Comey testimony": "Alone in the White House in recent days, President Trump - frustrated and defiant - has been spoiling for a fight, according to his confidants and associates. Glued even more than usual to the cable news shows that blare from the televisions in his private living quarters, or from the 60-inch flat screen he had installed in his cramped study off the Oval Office, he has fumed about 'fake news.' Trump has seethed as his agenda has stalled in Congress and the courts. He has chafed against the pleas for caution from his lawyers and political advisers, tweeting whatever he wants, whenever he wants." http://wapo.st/2r0Nu9L

-- PERSONNEL NUGGETS: "The White House recently approached **Geoff Morrell** ... about coming inside the administration and overhauling the communications operation, according to three people with knowledge of the overture. Morrell declined to comment, but BP announced last month that Morrell would be moving to London this summer to

run government relations and communications for the company globally. **Scott Reed,** senior political strategist at the U.S. Chamber of Commerce, was also approached about taking a communications role within the White House ... In addition, Laura Ingraham ... discussed joining the White House but made clear to officials that she is more comfortable remaining outside as a vocal Trump ally because of her many broadcasting and media commitments."

THE DAWSEY DOWNLOAD: **WEST WING COUNTDOWN CLOCK DREAD --** "TVs are always on cable news in President Trump's West Wing, and several aides say they have watched the countdown clock to James Comey's nationally-televised testimony with dread.

"Inside the White House, some want to mount a forceful pushback to Comey's testimony if it's damaging to the president. Some strategies have been drawn up, and surrogates readied. Trump has mentioned the looming testimony to associates on several occasions and has told at least one person he might respond forcefully. But others are concerned that a forceful fight may only lead Comey to 'make it even worse,' one person said. There is a widespread belief in the White House that Trump poked Comey and started this whole thing by tweeting about 'tapes' of his conversations and saying the former FBI director told him he wasn't under investigation, according to several officials.

"So while Trump is traveling to Cincinnati -- and the White House is trying at all costs to show momentum for its beleaguered legislative agenda -- the clocks ticking on the TV are a reminder that 'nothing we do this week is going to matter,' in the words of one Trump adviser."

TRUMP AND PENCE'S DAY -- TRUMP will meet with "Obamacare victims" and speak about infrastructure in Cincinnati and **PENCE** is going to Houston to speak at the "2017 Astronaut Selection Announcement at the Lyndon B. Johnson Space Center."

COVERING THE COVERAGE: COMEY HEARING EDITION -- C-SPAN, which is pool for the Comey hearing, will be broadcasting the main event Thursday live in its entirety on the C-SPAN networks.

BIG PLAYBOOK SCOOP **-- BEHIND THE SCENES OF THE DISCUSSIONS ABOUT NEW HIGH-TECH VISA RULES** (with Morning Shift's Ted Hesson) -- The White House has been quietly working with the Justice Department on overhauling the H-1B program to better adhere to the administration's "Buy American, Hire American" order, sources told Playbook.

THE FEDERAL GOVERNMENT is considering forcing companies seeking employees under the H-1B visa program to advertise the jobs online first and hire U.S. workers before foreigners -- even for these high-tech roles. The Trump administration is also discussing reducing the cap and duration for these visas -- which would, in effect, make it more costly for companies to bring foreign workers from overseas.

OTHER REGULATIONS include forcing H-1B employers to submit a report every six months on duties performed by the foreign worker. The administration could also seek to cut back "optional practical training," which currently allows STEM graduates to work in the U.S. for three years after graduation. Justice and the White House did not respond to a request for comment.

****** **A message from Samsung:** Samsung is committed to creating high-skilled jobs, investing in cutting-edge manufacturing and R&D, and forming trusted partnerships nationwide. Samsung's footprint in the U.S. has been growing for nearly 40 years, with 18,500 employees across the country. Our Austin, TX semiconductor facility is one of the single-largest U.S. FDI's. Visit Samsung.com/VisionForTomorrow for more. ******

BUZZ -- THE NEW DEMOCRATIC STRATEGY -- Democrats are outraged over the Trump administration's policy to ignore information requests unless it comes from Republican committee or subcommittee chairs. So they are trying to find ways to publicly put pressure on Trump and congressional Republicans to cough up information. Under discussion: they might post all information requests to the administration for the public. Democrats are also considering sending each inquiry to Republican committee and subcommittee chairs and explicitly asking them to sign onto the requests.

-- HOMELAND SECURITY SECRETARY JOHN KELLY testified Tuesday that DHS will respond to all congressional inquiries. "We're leaning forward," Kelly told members of the Senate Homeland Security and Governmental Affairs Committee. "Regardless of who the letter comes from, and it doesn't have to just come from a ranking member or chairman, we'll respond to any congressional inquiry." http://politi.co/2r4SBRt

THE NEW DEBT CEILING REALITY -- House Republican leaders said yesterday that Treasury Secretary Steven Mnuchin will handle debt ceiling negotiations. **WHAT'S THAT MEAN?**: That Congress is going to need to pass a clean debt-ceiling hike, which was an anathema to the party when they took the House majority in 2011, and remains an anathema to the conservative House Freedom Caucus. Many senators are more open to it. **WHAT SHOULD HAPPEN** : Republican leaders should make sure President Trump knows that he should push a quick debt-ceiling hike -- and be perfectly happy when it's passed with dozens of Democrats in the House. **BE AWARE**: The House Freedom Caucus is NOT going to like this and it could harm legislating for the rest of the year. **THE CASE TO DO IT SOON** : Democrats are much less likely to support a clean debt-ceiling hike as it gets closer to the end of the year. Even now, Democrats are going to make noise about Republicans needing to pass this on their own.

THINK OF THIS (h/t our former colleague, CNN's **@mkraju**): "Real chance this Congress could pass a clean debt ceiling hike, keep Planned Parenthood money, fail to repeal ACA, fail to reform tax code" ... **AND** fail to pass an infrastructure package.

OBAMACARE SPLIT -- "GOP Senators' Medicaid Clash Jeopardizes Health Deal," by WSJ's Kristina Peterson, Stephanie Armour and Louise Radnofsky: "Republican

senators left their first decision-making meeting on overhauling the nation's health-care system Tuesday deeply divided over the fate of Medicaid, a fissure that threatens to thwart their ambitions to dismantle the Affordable Care Act. The divide among Senate Republicans over Medicaid was wide enough that some GOP lawmakers and aides said they now believe it may be impossible to broker a deal to unwind the health law known as Obamacare. Some senators are already preparing to move to another goal, an overhaul of the tax code. 'It's more likely to fail than not,' Sen. Lindsey Graham (R., S.C.) said of the health bill, citing the GOP's hardening factions over how to handle the expansion of Medicaid ushered in by former President Barack Obama's 2010 health law. 'We need to bring this to an end and move to taxes.'" http://on.wsj.com/2r4NMHV

NEVER GONNA HAPPEN, BUT GOOD POLITICS -- "Freedom Caucus: Cancel August recess," by Rachael Bade: "The House Freedom Caucus on Tuesday night called on Republican leadership to cancel the August recess to continue work on tax reform and other GOP priorities. The group of several dozen conservative hardliners during their weekly meeting took the official position to work through the break, which is quickly drawing near as Republicans scramble to pass President Donald Trump's agenda. 'We need to work through August recess to get everything done,' said Freedom Caucus Chairman Mark Meadows (R-N.C.), coming out of the meeting. 'We believe that we need to stay through August to get through tax reform... and get our appropriations done.'" http://politi.co/2r4ClzT

-- REALITY CHECK: The House isn't even staying in town this whole **WEEK**. House Republicans canceled their Friday session. Convenient: it allows them to skip talking about Comey!

COMING ATTRACTIONS -- "Texas Democrat intensifies Trump impeachment push," by Heather Caygle and John Bresnahan: "Rep. Al Green is drafting articles of impeachment against President Donald Trump, saying the president should be forced from office for firing FBI Director James Comey in the middle of the bureau's ongoing Russia investigation. The articles of impeachment, which Green will officially announce Wednesday, follow increasing calls from some rank-and-file Democrats for Trump to be booted from office. 'Obstruction of justice by the president is the problem,' Green (D-Texas) said in a statement announcing his plan late Tuesday. 'Impeachment by Congress is the solution.'" http://politi.co/2r0spfS

-- "Talks heat up on Senate vote to sanction Russia," by Elana Schor: "Senior senators in both parties are making headway in a push for a vote on sanctioning Russia when the upper chamber takes up a bipartisan Iran sanctions bill later this week, according to a Senate source. ... Talks are ongoing over the details of the Senate's potential Russia sanctions amendment, which could include additional punitive measures against Vladimir Putin's government or a conversion of existing sanctions into law to make it harder for Trump to roll them back, the Senate source said." http://politi.co/2rzYQ3e

SUSAN B. "SCOOP" GLASSER in POLITICO Magazine, "The 27 Words Trump

Wouldn't Say: Here's the commitment the president refused to deliver at NATO headquarters": "'We face many threats, but I stand here before you with a clear message: the U.S. commitment to the NATO alliance and to Article 5 is unwavering.' This was what President Donald Trump was supposed to say in his May 25 address to NATO leaders in Brussels as a way of reassuring them about his evolving views toward the European collective-security pact that he once dismissed as 'obsolete.' A senior administration source today provided me the language from the deleted sentence, which was part of the final version of the speech signed off on by the Pentagon on May 23; the National Security Council and State Department approved similar language." http://politi.co/2sRYqTN

FOR YOUR RADAR -- "Islamic State claims attacks on Iran parliament, shrine," by AP's Amir Vahdat and Nasser Karimi in Tehran: "The Islamic State group claimed a pair of attacks Wednesday on Iran's parliament and the shrine of Ayatollah Ruhollah Khomeini, which have killed two security guards and wounded more than 30 people, with the siege at the legislature still underway. It marks the first attack in Iran claimed by the extremist group, which is at war with Iranian-backed forces in Syria and Iraq. In a message posted through its Aamaq News Agency, the IS group claimed its fighters were behind the assaults." http://apne.ws/2r1andu

NEW POLITICO/MORNING CONSULT POLL -- "Voters have a clear message for President Donald Trump: Stop tweeting," by Steven Shephard: "A new POLITICO/Morning Consult poll shows the vast majority of voters, 69 percent, say Trump uses Twitter too much. Fifty-nine percent say the president's use of Twitter is a bad thing, and even a majority of voters say Trump's tweets hurt U.S. national security.

"Even Trump's own base wants him to curb his Twitter use. A 53-percent majority of GOP voters say Trump tweets too much - though slightly more Republicans say Trump's use of Twitter overall is a good thing (41 percent) than a bad thing (37 percent)." http://politi.co/2rUjDis

THE JUICE ...

-- FIRST IN PLAYBOOK: A number of prominent Democratic strategists are starting a group called the CHORUS Agency to provide pro-bono help for progressives looking to run for Congress or statehouse. The group, started by Kate Catherall, will attempt to help candidates who are committed to values of "equity, opportunity, inclusion, and justice." Senior advisers for the group include Marlon Marshall, Betsy Hoover, Reggie Cardozo, Lisa Conn, Max Wood, Luis Avila, Gabby Seay, Amy Chiou, Geoff Berman, and Saumya Narechania. ***The new group's website*** http://bit.ly/2sSjn0C

JOSH MEYER: "What Mueller's NFL probe means for Trump: Critics say former FBI

director let Commissioner Roger Goodell off the hook in his domestic violence investigation" http://politi.co/2s3nY3Y

TOM DeLAY IS BACK! Per Theo Meyer's Politico Influence: "Former House Majority Leader Tom DeLay has returned to lobbying, nearly four years after shedding his last lobbying client. DeLay's firm, First Principles, has registered to lobby for the HAPPE Corporation, a firm based in rural Coolin, Idaho, not far from the Canadian border, that has never hired a lobbyist before. ... DeLay will lobby on the American Health Care Act as the Senate takes up the bill. The firm is DeLay's first lobbying client since he stopped lobbying for Argus Global in 2013."

WEST COAST WATCH -- "Jimmy Gomez wins Los Angeles congressional election to replace Xavier Becerra," by L.A. Times' Christine Mai-Duc: "State Assemblyman Jimmy Gomez was elected as Los Angeles' newest member of Congress on Tuesday, defeating attorney Robert Lee Ahn in a sharply contested battle for the 34th Congressional District. Gomez will take the seat vacated by Xavier Becerra, who became state attorney general earlier this year, and will represent one of the poorest, most immigrant-heavy districts in the state, where the effects of President Trump's policies on immigration and healthcare will be acutely felt." http://lat.ms/2sCrTSe

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years. Today, we employ more than 18,500 people across the country, covering nearly every state. Samsung Austin Semiconductor (SAS) hosts 6,000+ manufacturing and engineering jobs and has become a $17bn investment - making it one of the largest single FDI's in the U.S. We're also committed to building strong communities through citizenship and support of programs for children's health, STEAM education, veterans and military families. Visit Samsung.com/VisionForTomorrow for more. ******

THE RESISTANCE -- "Cuomo and Pelosi rally in push for House seats," by New York Playbooker Jimmy Vielkind: "House Democratic leader Nancy Pelosi said she is targeting eight seats in New York in next year's midterm elections, urging several thousand people at a Manhattan rally with Gov. Andrew Cuomo Tuesday to organize for 2018. 'Republicans in Washington are trying to drag our country back, but New York Democrats will lead us forward, armed with the strength of our values,' Pelosi said during an event at the Javits Center. 'There are eight Republican seats we can and must win in November 2018. Defeating in 2018 means laying the foundation for victory right now, and we have a powerful ally in this fight with Governor Andrew Cuomo.'" http://politi.co/2rTJBD0

-- THE JOINT APPEARANCE came out of "a desire to bring people together around a common mission statement and give direction on how to mobilize. For the party to be successful in the future, it isn't enough to just put up a resistance, we need to unify around the common goal of taking the House as a first step in 2018. That is concrete and attainable," a Cuomo ally emails.

FUN STORY -- "Vice president's wife installs beehive at official residence," by AP's Darlene Superville: "The new hive has between 15,000 and 20,000 honeybees, said Larry Marling of Eco Honeybees, the Virginia-based company that was hired to install the beehive. The bee population could grow to between 40,000 and 50,000 bees by the end of the season, he said. The bees at the Pence's residence will help the flower and vegetable gardens on the property, where kale, lettuce, tomatoes, herbs and radishes grow. The honey they produce will be given away as gifts." http://apne.ws/2r0Lcra

WOMEN RULE PODCAST: In an interview with former presidential candidate and business woman, Carly Fiorina sits down with POLITICO editor Carrie Budoff Brown to discuss the unique challenges women face when running for public office. "I was scrutinized, caricatured, criticized differently than a man would be." Fiorina also shares her thoughts on Hillary Clinton's loss, "...as much as I did not want her to be president of the United States because of her policy positions, I have empathy for Hillary Clinton." And she has one message to President Trump: Stop tweeting. http://politi.co/2qW6NNo ... ***Listen and subscribe*** http://apple.co/2p6Tp8I

Subject: House appropriators release Interior and EPA funding measure

By Annie Snider

07/11/2017 03:15 PM EDT

The House Appropriations Committee has released its spending bill for the Interior Department and EPA, which would provide the agencies $31.4 billion — $824 million less than fiscal 2017, but $4.3 billion more than the president's budget request.

The measure is here.

WHAT'S NEXT: The House Appropriations Committee's subpanel overseeing the agencies' budgets meets Wednesday to mark up the measure.

Today's Playbook Power Briefing presented by the Peter G. Peterson Foundation

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Wednesday afternoon. SPOTTED: Interior Secretary Ryan Zinke wearing jeans in coach on an Alaska Airlines flight this morning from DCA to LAX. He was carrying a copy of "Rough Riders: Theodore Roosevelt, His Cowboy Regiment, and the Immortal Charge Up San Juan Hill," and is on his way to "float on a boat" in Santa Barbara, he told us. ... **Sen. Ted Cruz** (R-Texas) hanging out in the lounge area of the Avila Bay Athletic Club in Avila Beach, California.

MUST READ -- HUGH HEWITT interviews **HILLARY CLINTON -- *Transcript and audio*** http://bit.ly/2jNUcgC **HUGH** tried to end the interview, and Clinton said: "Well you know, Hugh, I'm really enjoying this. I can go for a few more minutes, if you want to."

VALLEY TALK -- "Facebook to inform users of content they saw from Russian trolls," by John Hendel: "Facebook announced Wednesday it will unveil a tool by year's end allowing users to learn of any Facebook or Instagram contact they may have had with Russian internet trolls leading up to and following the 2016 U.S. election.

"The social media giant 'will soon be creating a portal to enable people on Facebook to learn which of the Internet Research Agency Facebook Pages or Instagram accounts they may have liked or followed between January 2015 and August 2017,' it said in a blog post Wednesday. 'This tool will be available for use by the end of the year in the Facebook Help Center.' The Internet Research Agency is a St. Petersburg, Russia-based firm with ties to that country's government." http://politi.co/2iG2HqP

-- FCC Chair Ajit Pai's full order on dismantling Obama-era net neutrality rules http://bit.ly/2iHGWXr

PROGRAMMING NOTE: Power Briefing will be off tomorrow and Friday. As always, expect Playbook in your inbox in the morning.

NEW POLITICO/MORNING CONSULT POLL -- "Poll: Half think Franken should resign," by Steve Shepard: "A majority of voters think the Senate Ethics Committee

should investigate Sen. Al Franken (D-Minn.), and half think Franken should resign from the Senate, according to a new POLITICO/Morning Consult poll.

"The poll was conducted after radio personality Leeann Tweeden alleged that Franken groped her in 2006, prior to his Senate tenure -- but before a second woman, Lindsay Menz, said that Franken touched her inappropriately while he was a senator in 2010. Still, 66 percent of voters said the ethics panel should probe Franken's conduct, while only 15 percent think the committee should not look into the matter. Fully 50 percent of voters think Franken, who has served in the Senate since 2009, should resign, and 22 percent think he should not resign.

"The Franken results, though, underscore a partisan divide in how voters view allegations of sexual misconduct against political figures. Democratic voters are more likely to find allegations against Democrats credible and endorse significant punishments than Republican voters are when it comes to allegations against GOP lawmakers and candidates." http://politi.co/2iHLtt1

-- "Poll: Plurality supports House tax plan, but many expect to pay more," by Toby Eckert: "A plurality of voters supports the tax overhaul the House passed last week, though many also believe it will raise their taxes, according to a new POLITICO/Morning Consult poll. Based on what they've seen, read or heard about the bill, 39 percent of those surveyed said they 'strongly' or 'somewhat' support it, while 31 percent oppose it and the rest are undecided. Support ticked up to 41 percent and opposition dropped to 29 percent after respondents were told about key details of the plan.

"However, 36 percent expect to pay more federal, state and local taxes under the plan, despite Republicans touting it as a tax cut for most Americans. Twenty percent say it would lower their taxes and 19 percent say they would stay about the same. Twenty-five percent weren't sure what affect it would have on them or offered no opinion." http://politi.co/2iH3pUq

BIG STORY -- CNN's John D. Sutter, Leyla Santiago and Khushbu Shah: **"We surveyed 112 Puerto Rican funeral homes to check the accuracy of the hurricane death toll. This is what we found":** In general, 'indirect' hurricane deaths -- in which a person likely would be alive if not for the storm and its aftermath -- should be part of the official death toll, according to Puerto Rico's Department of Public Safety, which oversees the count. The list of 55 deaths attributed to the hurricane includes ones from heart attacks and suicides that were precipitated by a storm that shook even the sturdiest of the 3.4 million American citizens who live on this Caribbean island. ...

"Those funeral homes identified 499 deaths in the month after the storm -- September 20 to October 19 -- which they say were related to Hurricane Maria and its aftermath. That's nine times the official death toll. And, again, it represents only about half of funeral homes." http://cnn.it/2hKjKa4

HUH? -- @DavidWright_CNN: ".@JohnBerman: 'Are you saying Gary Cohn faked a

bad connection to get the president off the phone?' @SenatorCarper: 'Well, I wouldn't -- I don't want to throw him under the bus, but yes.' (@CNNnewsroom)" ... "White House spokesperson tells @CNN: 'Senator Carper's claim is completely false. Gary Cohn left the room and continued to speak with the President privately for several minutes before they concluded the call.'" ***Video*** http://bit.ly/2B35DEE

DETROIT NEWS -- "Nassar pleads guilty to raping underage gymnasts," by Kim Kozlowski: "For the first time, a disgraced Michigan State University and USA Gymnastics doctor admitted Wednesday that he sexually assaulted girls under the guise of a medical treatment.

"Larry Nassar, 54, made the admission when he pleaded guilty to seven counts of first-degree criminal sexual conduct in Ingham County Circuit Court as many of his other alleged victims stood in the courtroom and watched. Nassar plans to plead guilty to three counts of first-degree criminal sexual conduct in Eaton County court next Wednesday, avoiding a trial that was set for Dec. 4, Michigan Assistant Attorney General Angela Povilaitis said Wednesday. This brings the the total to 10 first-degree criminal sexual conduct counts involving nine victims.

"Each of the counts is punishable by 25 to 40 years in prison. All victims can give impact statements at Nassar's sentencing, including 125 victims who reported incidents to Michigan State University. Nassar agreed to lifetime electronic monitoring as part of the plea deal." http://detne.ws/2jNYZyG

PRESIDENT TRUMP is at the Trump International Golf Club in West Palm Beach today, per pooler Ali Schmitz of USA Today Network.

POOL REPORTS DU JOUR -- From WaPo's Jenna Johnson **at 7:56 a.m.**: "Lindsay Walters briefly addressed the pool and said that the president has been briefed on the Navy aircraft crash. She also said that the president plans to make a number of calls his week, especially related to tax reform, and that the White House will provide readouts of those calls. Otherwise, she expects a 'low-key day.' ... **at 8:06 a.m.:** "A correction to the earlier pool report: While the White House communications staff expects the press pool to have a 'low-key day,' the president will NOT have a low-key day and has a full schedule of meetings and phone calls."

****** **A message from the Peter G. Peterson Foundation:** As Washington debates tax reform, there's talk of tax cuts that will give trillions of dollars back to American taxpayers. That sounds great. But if these tax cuts aren't paid for, future generations will be stuck with the bill. Congress, tax reform should grow the economy. Not the debt. www.pgpf.org/tax-reform. ******

DAILY MAIL -- "Steve Bannon's Navy Seal security guard lunged at 5ft 2in author and had to be 'calmed down by the ex-Trump strategist' after she snipped 'I hope you get what you deserve' as they rode in a hotel elevator together" http://dailym.ai/2mRM4Nb

ON THE WORLD STAGE -- "U.S. declares 'ethnic cleansing' against Rohingya in Myanmar," by the AP's Josh Lederman: "The United States declared the ongoing violence against Rohingya Muslims in Myanmar to be 'ethnic cleansing' on Wednesday, putting more pressure on the country's military to halt a brutal crackdown that has sent more than 600,000 refugees flooding over the border to Bangladesh. Secretary of State Rex Tillerson blamed Myanmar's security forces and 'local vigilantes' for what he called 'intolerable suffering' by the Rohingya. Although the military has blamed Rohingya insurgents for setting off the crisis, Tillerson said that 'no provocation can justify the horrendous atrocities that have ensued.'" http://bit.ly/2B2Wzzy

-- "'Butcher Of Bosnia' Ratko Mladic Guilty Of Genocide, Crimes Against Humanity," by NPR's Teri Schultz: "On Wednesday morning, judges at the International Criminal Tribunal for the former Yugoslavia (ICTY) in The Hague handed down a guilty verdict for one count of genocide, five counts of crimes against humanity and four counts of violations of the laws or customs of war, out of the 11 counts against 74-year-old Ratko Mladic, for his role as a general in the Yugoslav army and chief of staff of the Army of Republika Srpska, the ethnically Serb entity in Bosnia.

"The three-judge panel found him not guilty on one of the two counts of genocide and sentenced him to life imprisonment. ... In a summary of the verdict, Judge Alphons Orie said the crimes 'rank among the most heinous known to humankind, and include genocide and extermination as a crime against humanity.'" http://n.pr/2iGCqsb

ATTENTION TRAVELERS -- "With TSA on the ropes, holiday travel may be a bear," by Stephanie Beasley: "The Transportation Security Administration has bad news for tens of millions of Thanksgiving holiday travelers: Lines at airports may be even longer than usual as the agency tries once again to plug security holes in its baggage screening.

"TSA is scrambling to respond to yet another damning investigation of its screening effectiveness, for the second time in little more than two years. And the agency is already phasing in revised security procedures -- including those for passengers' electronic devices -- that could cause 'a slight increase in wait times,' new TSA Administrator David Pekoske said in an interview. 'The procedure is new,' Pekoske said. 'It's new to passengers. It's somewhat new to our screeners.'" http://politi.co/2ildVev

-- FOR WHAT IT'S WORTH: DCA was pretty easy this morning.

PROTECTING THE PRESIDENT -- "Coast Guard encountered more than 1,200 boats during Trump's 2017 stays," by the Palm Beach Post's Eliot Kleinberg: "More than 1,200 boaters off Palm Beach County had their day interrupted earlier this year by an encounter with a Coast Guard boat letting them know they'd gotten a little too close to the president of the United States. As President Trump returned to South Florida on Tuesday evening for the long Thanksgiving weekend, the first of potentially several winter visits, the Coast Guard activated its security zones, which stay in place through

late Sunday." http://bit.ly/2B2aUMs

IT BEGINS ... -- "Congressional Black Caucus member: Conyers should step down as top Dem on House panel," by CNN's Juana Summers: "Rep. Gregory Meeks, a New York Democrat and a member of the Congressional Black Caucus, said Wednesday that his colleague Rep. John Conyers of Michigan should leave his post as the top Democrat on the House Judiciary Committee as he is the subject of a House Ethics Committee investigation.

'"No one is exempt from bad behavior, and I think that he's agreed and I clearly see where Leader Pelosi has said there will be an immediate ethics committee, a review,' Meeks told CNN's John Berman and Poppy Harlow. 'I really think that probably the appropriate thing right now is that he should step down as the ranking member of the Judiciary Committee and be subject to this ethics investigation.'" http://cnn.it/2B3jTNv

MARK YOUR CALENDAR -- POLITICO is partnering with women-led businesses in the D.C.-metro area to offer a full week of exclusive perks in conjunction with the 5th annual Women Rule Summit! Join the fun at participating businesses during Women Rule Week (Nov. 27 - Dec. 1) for exclusive deals (http://politi.co/2zbbyXM) and tweet using #WomenRule for a chance to win two free tickets to the Summit on Dec. 5.

-- NEW WOMEN RULE PODCAST -- Anna talks with Cindi Leive who is in her 16th and final year at the helm of Glamour, which has been consumed with discussion of sexual misconduct. And even as she leaves her post, Leive is still talking about it: from Joe Biden's handling of Anita Hill's testimony to Leive's own desire to interview President Trump about "his history -- or non-history -- of sexual assault." Hear Leive weigh in on her legacy at the helm of Glamour, what she wishes she'd done differently and what's next for the departing editor-in-chief in this week's Women Rule podcast. http://politi.co/2iH7ZlH

AFTERNOON READS -- "Anita Hill and her 1991 congressional defenders to Joe Biden: You were part of the problem," by WaPo's Annys Shin and Libby Casey: " Now, in the wake of the Harvey Weinstein sexual-assault scandal, Biden has faced renewed scrutiny over Hill's treatment during the 1991 hearings. At an event hosted by Glamour magazine on Nov. 13, he said he was 'so sorry' for what she went through. A few days later, at our gathering -- which was set up for a forthcoming issue of The Washington Post Magazine, in which we're asking a number of political and cultural figures to revisit their roles in seminal Washington moments -- Hill said 'some part of' Biden's recent remarks was a real apology, 'but I still don't think it takes ownership of his role in what happened.' ... Over the course of a 90-minute conversation moderated by Post reporter Libby Casey, Hill spoke about her experiences testifying, and the lawmakers talked about their advocacy for Hill." http://wapo.st/2B3TnDV

-- JUST POSTED: JASON ZENGERLE in the N.Y. Times Magazine, **"The Voices in Blue America's Head:** For years, liberals have tried, and failed, to create their own version of conservative talk radio. Has Crooked Media finally figured it out?": "More than

1,600 political podcasts -- most of them anti-Trump - have appeared since the 2016 election, according to RawVoice, a podcast hosting and analytics company. 'Pod Save America,' with nearly 120 million downloads to date, is the undisputed king of the field. ... With a shoestring budget and no organizational backing, its hosts seem to have created something that liberals have spent almost two decades, and hundreds of millions of dollars, futilely searching for: the left's answer to conservative talk radio.

"... [A]ssuming standard industry rates, Crooked Media is most likely bringing in at least $50,000 in advertising revenue for each episode of 'Pod Save America' -- which at two episodes a week is about $5 million a year. That has allowed the company to turn away the many investors who have approached it." http://nyti.ms/2B2u05e

FUN VIDEO -- The Senate Republican Conference has released a Thanksgiving-themed video titled "The Pardoned Turkey" featuring Sen. Tim Scott (R-S.C.) and Senate Republican Conference Chair Sen. John Thune (R-S.D.). ***1-min. video*** http://bit.ly/2zbK3x7

Dailer's deputy **Carrie Brown** will be promoted to national field director

WELCOME TO THE WORLD - Abby McCloskey, an economist and founder of McCloskey Policy and a Rick Perry, Jeb and AEI alum, and **David McCloskey,** an engagement manager at McKinsey, email friends and family: "We are thrilled to announce the arrival of Leo David McCloskey, born on a beautiful November 20th in Dallas and weighing in at 7 lbs 3 oz. Leo and Abby are doing great. Miles was also excited by his little brother's arrival and enjoyed some quality time with him [Monday] night at the hospital." ***Pic*** http://politi.co/2AncGM1

****** **A message from the Peter G. Peterson Foundation:** Washington is debating tax reform. There's talk of substantial tax cuts that will give trillions of dollars back to American taxpayers. That sounds great. But if these tax cuts aren't paid for, future generations will be stuck with the bill. Congress is right to pursue tax reform - the code is outdated, complex and unfair. Tax reform done right should be permanent, because

businesses and individuals need certainty to plan and invest. It should be based on realistic, independent projections and assumptions about the effect on our economy and our fiscal outlook. And it should enjoy bipartisan support, so that it's durable over time. Lawmakers should use the valuable opportunity presented by tax reform both to improve our fiscal outlook and strengthen the economy at the same time. Congress, tax reform should grow the economy. Not the debt. Learn more at www.pgpf.org/tax-reform.

Leading the News

Climate Regulation
Trump Administration Set to Argue Clean Power Plan Rule Violates Law
The Trump administration will formally propose repealing former President Barack Obama's sweeping plan for curbing greenhouse gas emissions from power plants by arguing it went beyond the bounds of federal law, according to documents obtained by Bloomberg News.

EPA
Trump Taps Former Inhofe Staffer For EPA's No. 2 Slot
Another former member of Oklahoma Sen. James Inhofe's (R-Okla.) team could soon be joining the EPA's leadership.

Endangered Species
Interior Sets Stage for Revisiting Sage Grouse Protections
The Interior Department will not go ahead with a proposal to block new mining claims in 10 millions acres of prime habitat for greater sage grouse.

Water Pollution
Sewer Spills into Niagara River After Storm Draw Probe
The millions of gallons of raw sewage and stormwater that a treatment plant spilled into the Niagara River after a recent storm was "wholly unacceptable," according to New York officials probing violations of state water quality standards.

News

Air Pollution
China's Steel Curbs for Pollution Risk Too Bullish Outlook

Moves by China to limit air pollution over winter by curbing steel to aluminum production threaten to create a distorted impression of true demand as market seasonality becomes more intense, according to Australia's government.

Air Pollution

EPA Could Do More to Address Delaware's Ozone Concerns: Judge

Federal regulators have not done enough to address Delaware's concern that giving the areas surrounding Philadelphia more time to clean up their air pollution will burden the state, a federal appeals court judge says.

Biotechnology

Monsanto Doubles Down on Soy Seeds After Herbicide Crop Loss

As unhappy farmers lodge complaints about crop damage associated with a new generation of soybean seeds being sown in the U.S., Monsanto Co. is ramping up its marketing push for the genetically altered product by offering growers more training and incentives, including some free equipment.

Chemicals

Bayer-Monsanto Merger Review Delayed as EU Hunts for Deal Data

Bayer AG's takeover of Monsanto Co. risks further delays as European Union regulators stopped the clock on their probe to hunt for more information on how it will affect competition for key products used by farmers.

Chemicals

Chemours Knew N.C. Discharges Toxic, Landowner Charges in Suit

DuPont Co. and the Chemours Co. knew they were discharging toxic substances into the water at their Fayetteville, N.C., facility, a North Carolina property owner alleges.

Chemicals

Rhode Island Joins States to Ban Flame Retardants in Furniture

Furniture suppliers have two years to stop delivering products to Rhode Island that contain flame retardants banned by a new state law.

Climate Change

Dutch Regulator Tasks Banks and Insurers on Climate-Change Risk

Banks, insurers, and other financial institutions must do more to take into account the risks posed by climate change to their business, a Dutch Central Bank study said.

Energy

Eighty-Two-Year-Old Glassmaker Eyes Future in Next-Gen Batteries

Ohara Inc. sees batteries playing a bigger role in its future.

Energy

Energy East Death Pins Oil Sands Hopes on Two Troubled Pipelines

TransCanada Corp.'s cancellation of the Energy East pipeline leaves Canadian oil producers more dependent than ever on the Keystone XL and Trans Mountain proposals, two projects facing ardent opposition in their own right.

Energy

Federal Regulators Criticize Energy Rule for Distorting Markets

Two of the three members of the Federal Energy Regulatory Commission have publicly criticized an Energy Department proposal that aims to subsidize nuclear and coal plants in the wholesale markets, suggesting it could "destroy" the markets.

Energy

How Energy-Rich Australia Ended Up With World's Priciest Power

A bungled transition from coal to clean energy has left resource-rich Australia with an unwanted crown: the highest power prices in the world.

Energy

Obama's Energy Chief Sees Hard Path Ahead for Perry's Coal Plan

Former U.S. Energy Secretary Ernest Moniz doubted whether the nation's top energy regulator will be able to satisfy a government request to craft new rules to prop up struggling coal and nuclear power generators.

Energy

Utilities Rebuke Theresa May's Plan to Cap Power Tariffs

Britain's utilities hit back at Prime Minister Theresa May's vow to cap energy costs, saying the measures would unsettle the industry at a time when government is seeking investment to replace aging power plants.

Food

Whiskey Fungus Claims Against Kentucky Distiller Revived

A Kentucky distiller can't rely on the Clean Air Act to dismiss state-law tort claims that its bourbon-aging plant fouled a neighbor's property with fungus, the Kentucky Supreme Court ruled (Brown-Forman Corp. v. Miller, Ky., No. 2014-SC-000717-DG, 9/28/17).

Insurance

Trump's Bid to Slash Flood Insurance Debt Faces Conservative Opposition

Conservative public policy groups and some congressional Republicans are objecting to the Trump administration's proposal to forgive $16 billion of debt estimated to be incurred by the National Flood Insurance Program as a result of recent hurricanes.

Oil & Gas

Norway Takes Hard Look at Climate Risk for Oil, Gas Riches

What is 47 billion barrels in oil and gas really worth in an age where renewable sources are increasingly filling the world's energy needs?

Oil & Gas

Oil Drillers May See Big U.S. Tax Cut—If Deductions Survive

U.S. oil explorers could see a multibillion-dollar benefit from a move to slash the U.S. corporate tax rate but some of the industry's biggest tax breaks could also be under fire.

Oil & Gas

TransCanada Ends Pipeline Project, Sees $801 Million Charge

TransCanada Corp. has scrapped its Energy East Pipeline and Eastern Mainline projects, oil and natural gas conduits that have faced regulatory hurdles in Canada and stiff opposition from environmental groups.

Oil & Gas

Trump Administration Illegally Delayed Methane Rule: Court

A federal court ruled the Trump administration illegally froze Obama-era requirements aimed at reducing the amount of natural gas from federal land wasted through venting, flaring, and leaking.

Regulatory Policy

20 Chemicals Added to Washington Kids' List Reporting

Manufacturers of children's products sold in Washington state will have to report the presence of 20 more compounds, many of them flame retardants linked to cancer that are used in furniture, baby carriers and car seats.

Regulatory Policy

Energy Department, Pipeline Nominees Sail Through Senate

The Energy Department's reliability office will get new leadership as Secretary Rick Perry pushes a plan to reward power plants—particularly coal and nuclear—that keep 90 days' worth of fuel on site.

Renewable Energy

U.K. Power Grid Trials Real-Time Data to Deal with Renewables

National Grid Plc for the first time measured the stability of the U.K.'s power network in real time, allowing it to more confidently manage the system as intermittent renewable energy generation jumps.

Renewable Energy

U.K. Seeks Brexit Boost for Renewables, but Onshore Wind Taboo

Britain wants a slice of the $30 trillion needed to clean up the world's energy supply—so long as those funds don't go into wind farms in the countryside.

Renewable Energy

U.S. Trade Dispute Scaring Companies From Buying Solar Power

A trade dispute over solar imports has stalled clean-energy projects across the U.S.

Renewable Energy

Wind in Land of Oil Prompts Surprise Boost in Renewable Spending

Seven giant wind-power projects, including one in the oil-rich U.S. state of Oklahoma, prompted a surprise investment increase for renewable energy in the third quarter.

Solid Waste

Local Control of Garbage Handling Trashed in North Carolina

Local governments in North Carolina will have limited ability to manage the flow of garbage in their communities thanks to a new state law enacted over the governor's veto.

Leading the News

Emissions Trading
Carbon Allowance Prices Jump as Cap to Tighten in Northeast
Power companies saw a 72 percent jump in the price of greenhouse gas emissions allowances in the first auction after the Northeast's trading program announced plans to ratchet down the emissions cap.

Emissions Trading
New Jersey Eyes Rejoining Northeast's Carbon Trading Program
New Jersey is on the cusp of rejoining the Northeastern greenhouse gas trading program it spurned in 2011, which could be a boon for power companies such as Consolidated Edison Inc. and Public Service Enterprise Group Inc. that have utilities across the region.

News

Chemicals
Hurricane Irma's Chemical Fallout Could Be Worse Than Harvey's
Before flames and smoke leaped into the sky over the Arkema chemical plant in Crosby, Texas, last week, Jolyn Masters was hunkered down at home on a Hurricane Harvey-flooded street a mile away. Then came a knock. A National Guard evacuation boat was waiting because of what was expected at Arkema.

Climate Policy
Merkel Warned That Failure to Hit Climate Goal May Hurt Germany
Chancellor Angela Merkel's ambition to lead Europe's fight against global warming is at risk of backfiring and tarnishing Germany's climate credentials, according to researchers.

Congress

EPA Bill Restoring Trump Cuts Nears House Passage

The EPA would see its budget trimmed but avoid the deep 31 percent spending cut sought by President Donald Trump in fiscal year 2018 under a spending bill the House expects to wrap up the week of Sept. 11.

Dumping/Countervailing Duties

Chinese Solar Products to Face Lowered Anti-Subsidy Duties

Imports of solar products from China will, for the most part, face lower countervailing duties, the Court of International Trade affirmed Sept. 8 (Changzhou Trina Solar Energy Co. v. United States, Ct. Int'l Trade, No. 15-00068, 9/8/17).

EPA

Air Office Nominee Could Help EPA Rewrite Obama Rules

President Donald Trump's pick to lead the EPA's air office would bring a deep knowledge of the agency, which former Bush-era officials say could help advance the administration's efforts to rewrite Obama-era regulations.

EPA

Trump Plans to Cut EPA Programs Could Hurt Post-Storm Rebuilding

Residents of Florida and other states in the path of Hurricane Irma may have a rude awakening after the winds die down and the rain and storm surge stop.

Emergency Response

U.K. Amec Sees Hurricane Changing Design of U.S. Chemical Plant

Amec Foster Wheeler Plc, the U.K. company helping to build a $604 million methanol plant for Yuhuang Chemical Inc. in Louisiana, expects the damage wrought by Hurricane Harvey to alter the planning and design of chemical facilities in regions at risk from natural catastrophes.

Energy

Turf Battle Looms as House Energy Leaders Plan DOE Overhaul

Plans by a key House Republican to retool the Energy Department's core functions are in for a turf battle.

Enforcement

California Window Plant Sued for Illegal Stormwater Discharges

Runoff from JELD-WEN's window and door manufacturing plant in Vista, Calif., is illegally polluting downstream creeks that empty into the Pacific Ocean, a San Diego environmental group said in a lawsuit.

Forests

Forest Management Bills Wander Through Political Woods

Wildfires scorching the West may put the heat on lawmakers to revamp management of federal forests and funding of wildfire suppression.

Hazardous Waste

EPA Chief Pledges to Secure Toxic Sites in Irma's Storm Path

The Trump administration is applying lessons from Hurricane Harvey's drenching of southeast Texas as it secures toxic waste sites in the path of Hurricane Irma, U.S. environmental chief Scott Pruitt said.

Oil & Gas

Montana Rule on Radioactive Oil Waste Disposal Criticized as Weak

Oil and gas companies in the Bakken Formation of western North Dakota routinely truck their radioactive drilling waste to a disposal facility roughly three hours away in Montana.

Pesticides

Monsanto Gets Home Court Advantage in Dicamba Lawsuit

Monsanto won home court advantage in a lawsuit over damages caused by its weedkiller dicamba which was sent to St. Louis where the company is headquartered.

Pesticides

Monsanto Seeks to Block Arkansas Pesticide Ban

Monsanto Co. called on the Arkansas governor to reject a recommendation to curb spraying of the herbicide dicamba during a key part of crop-growing season, saying the proposal is backed by "unsubstantiated" theories.

TCE

GE Wins Match in Golf Course Groundwater Contamination Claim

General Electric Co. won't be required to conduct further investigation of contamination that is already the subject of a state cleanup agreement, the Northern District of Illinois ruled (Lajim, LLC v. Gen . Electric Co., 2017 BL 315015, N.D. Ill., No. 13-CV-50348, 9/7/17).

Water Resources

Florida's Largest Lake Likely to Flood Over Dike From Irma

Hurricane Irma could cause a dike holding back Florida's largest lake to spill over, spreading rock and debris from three construction sites at the site, a U.S. Army Corps of Engineers official said.

By ANNA PALMER (anna@politico.com; @apalmerdc) and JAKE SHERMAN (sherman@politico.com; @JakeSherman) with DANIEL LIPPMAN (daniel@politico.com; @dlippman)

Driving the Day

Good Saturday morning. THE BELMONT STAKES is 6:37 p.m. tonight on NBC.

WE HEAR ... PRESIDENT DONALD TRUMP is going to roll back some of Barack Obama's changes to Cuba policy next week. He discussed the changes at a dinner with members of Congress earlier this week -- the dinner included Florida Sen. Marco Rubio, who was sharply critical of Obama's policy change. The White House didn't respond to a request for comment, but Marc Caputo and Sergio Bustos -- our POLITICO colleagues in Florida -- report he'll make the announcement in Miami and also note: "Many expect that Trump will not reverse Obama's decision to open a U.S. embassy in Havana or reinstate the 'wet-foot/dry-foot' policy that allowed Cuban immigrants who touched U.S. shores to become legal residents." http://politi.co/2rX4B9K

YOUR DAILY HEAD SNAP -- "Trump seems to undercut Tillerson's remarks on Qatar," by WaPo's Karen DeYoung and Sudarsan Raghavan: "Secretary of State Rex Tillerson called on a Saudi Arabia-led bloc of Arab nations Friday to immediately ease their blockade of Qatar and urged all involved in the week-long Persian Gulf dispute to quickly resolve their differences, remarks that President Trump seemed to undercut less than an hour later.

"Trump began a Rose Garden news conference with the visiting president of Romania by saying that the Saudi-led action against Qatar was 'hard but necessary.' He said he had been consulted in advance by nations that 'spoke to me about confronting Qatar,' a country he said historically has been a 'funder of terrorism at a very high level.' He said he had decided, along with Tillerson and 'our great generals and military people, the time had come to call on Qatar to end that funding ... and its extremist ideology.'

"Earlier, in a brief, formal statement at the State Department, Tillerson had called on Saudi Arabia, the United Arab Emirates, Bahrain and Egypt to ease their blockade, warning that it was causing humanitarian hardship in Qatar, harming U.S. and international business, and hindering U.S. military actions against the Islamic State." http://wapo.st/2r549oV

-- ANOTHER STRANGE MOMENT from Friday's press conference with**TRUMP** and Romanian President Klaus Iohannis. **REPORTER:** "Thank you. Mr. President, were there any discussion about the Visa Waiver Program for Romania? Is there a time frame for including our country in this program? Thank you." **TRUMP:** "We didn't discuss it --" **IOHANNIS:** "Yes --" **TRUMP:** "We didn't discuss it. But there would be certainly -- it would be something we will discuss. Mr. President." **IOHANNIS:** "I mentioned this issue, and I also mentioned it during other meetings I had, because this is important for us, it's important for Romanians who want to come to the United States. And you see more and more people come, President Trump, from Romania to the United States. Some come as tourists. Some come for business. And those who come for business should be encouraged."

FOR MARC KASOWITZ -- "James Comey is a 'leaker' - but that doesn't make him a criminal," by WaPo's Matt Zapotosky: "'He can fairly be criticized for whether that was the best way for him to address his discomfort with his conversation with the president,' said Barry J. Pollack, a white-collar criminal-defense attorney at Miller & Chevalier who has been involved in leak cases. 'But that's all a matter of how he conducts his job, and what his relationship is with the president is not a legal question.'

"Prosecutors who bring charges against people for sharing informationwith the public can do so only when classified or other national security material is at issue. Material cannot be classified to conceal legal violations or prevent embarrassment, according to an executive order from President Barack Obama. Telling a reporter nonclassified information of public interest is not only legal, but it's often the right thing to do." http://wapo.st/2rcaqTH

-- JOSH GERSTEIN: "The FBI's standard employment agreement reads: 'I will not reveal, by any means, any information or material from or related to FBI files or any other information acquired by virtue of my official employment to any unauthorized recipient without prior official written authorization by the FBI.'" http://politi.co/2rgDRip

-- A DEFIANT TRUMP , via Julie Hirschfeld Davis and Glenn Thrush: "President Trump on Friday accused James B. Comey, the fired F.B.I. director, of lying under oath to Congress, saying he would gladly provide sworn testimony disputing Mr. Comey's charge that the president forced him out because of his handling of the investigation into the Trump campaign's possible collusion with Russia. ... Asked whether he would be willing to provide his version under oath, Mr. Trump responded, '100 percent.' He said of Mr. Mueller, 'I would be glad to tell him exactly what I just told you.'" http://nyti.ms/2rXgFrP

-- WHAT'S NEXT: "Comey associate has been in contact with Senate Judiciary about memos," by Kyle Cheney: "Dan Richman, a longtime friend and adviser to former FBI director James Comey, has been in contact with the Senate Judiciary Committee regarding a series of memos that Comey authored about his private conversations with President Donald Trump from January through April. A source familiar with the discussions says Richman connected with the Senate panel via the office of special counsel Robert Mueller ... The source says the matter will be addressed on Monday." http://politi.co/2sovUMU

-- BLOCKBUSTER RATINGS: "More than 19 million saw Comey testimony on TV," by Hadas Gold: "According to Nielsen ratings, ABC topped all networks, bringing in 3.295 million overall viewers, with CBS close behind with 3.286 million viewers. Fox News was next with 3.096 million viewers, followed by CNN with 3.049 million, NBC with 2.723 million viewers and MSNBC with 2.719 million viewers. ... Twitter, which partnered with Bloomberg to stream the hearing, said 2.7 million viewers tuned in." http://politi.co/2s7XFce

--PER FACEBOOK: There were 89 million views of videos related to Comey's testimony. Those videos had nearly 8 million comments, reactions and shares. There were also 26 million views of Comey-related live video on Facebook.

ABOUT THOSE TAPES -- @tripgabriel: "Personal anecdote: Candidate Trump once said he had taped a call with me, after disputing how he was quoted. I asked to hear it. Never did." ... **@mikiebarb** replies: "This happened to me as well. He always acted as if he was recording it."

****** **A message from Samsung:** Samsung has announced more than $10 Billion in US Growth since 2016, including our March 2017 acquisition of HARMAN International, a commitment of $1.2 Billion in U.S.-based IoT Investment and R&D, and a $1B expansion of our Austin, TX Semiconductor Manufacturing Facility. Visit Samsung.com/VisionForTomorrow for more. ******

THROWING SHADE -- @lloydblankfein: "Just landed from China, trying to catch up.... How did 'infrastructure week' go?"

FIRST IN PLAYBOOK -- WHO MNUCHIN MET WITH IN CANADA - Treasury Secretary Steven Mnuchin made his first official solo foreign trip yesterday to Canada. Mnuchin, who met with Canadian Finance Minister Bill Morneau on the one-day trip to Ottawa, was seeking to highlight the importance of the U.S.-Canada strategic and economic alliance, according to Treasury. Deputy national security advisor Dina Powell and Treasury chief of staff Eli Miller accompanied Mnuchin. They also met Canadian foreign minister Chrystia Freeland, Canadian Ambassador to the U.S. David Mac Naughton and attended a cabinet meeting with top ministers. They discussed a variety of topics including the upcoming G-20 agenda, trade and economic issues and national security challenges. Mnuchin also met with a group of more than 20 CEOs who do

business in both the U.S. and Canada, including the heads of Ford Canada, GE Canada and TD Bank. More foreign trips by Mnuchin are in the works, according to our Treasury source.

DAVID A. FAHRENTHOLD in WaPo, "New York attorney general 'looking into' Eric Trump's foundation": "New York Attorney General Eric Schneiderman is 'looking into' a charitable foundation founded by Eric Trump, a spokesman for Schneiderman said, after Forbes magazine raised questions about whether President Trump's son had made misleading statements about how the foundation spent its money. ... One item at issue, the attorney general's office said, was that the Eric Trump Foundation has rebranded itself 'Curetivity' and held a fundraiser under that name. But, after a query from The Washington Post on Friday morning, the attorney general's office said the charity had not officially changed its name with New York charity regulators." http://wapo.st/2t5KuWr

ROMNEYSTOCK - ALEX ISENSTADT'S HARDSHIP ASSIGNMENT to Deer Valley, Utah: "Romney reveals that Clinton nudged him to consider Trump's secretary of state overture": "Romney, appearing before a group of major Republican Party donors here, said that he reached out to Clinton last year after getting a phone call from then-Vice President-elect Mike Pence informing him that he was on the shortlist for secretary of state. ... Romney ... was golfing in Hawaii when he received the call ... He then turned to former secretaries of state, including the just-defeated Clinton, to ask whether he should consent to the offer. 'In each case, each of them said, "Please, please take that job if it's offered to you. We'd very much like to see you serve in that capacity,"' Romney said." http://politi.co/2seggUP

--"Biden encourages 2012 foe Romney to run for the Senate": "During a closed-door appearance with Romney here on Friday evening, Biden said Romney should consider a Senate bid. The remark came during the second day of the E2 Summit, an annual Romney-hosted donor conference. Attendees were gathered to hear a dialogue between the two men, who were on opposite sides of the 2012 election. Romney, according to two sources present, offered little by way of response other than to smile. ... There has been considerable speculation that Romney may seek the seat of longtime Utah Sen. Orrin Hatch should he forego reelection. Neither Romney ... nor his aides have denied interest in the seat should it become open." http://politi.co/2s7YMbU

MITCH MCCONNELL'S LATEST HEADACHE -- "Conservatives near revolt on Senate health care negotiations," by Burgess Everett: "As Obamacare repeal talks enter crunchtime with a vote as soon as this month, the Senate bill continues to tilt toward more moderate members of the GOP on keeping some of Obamacare's regulatory structure and providing a more generous wind-down of the law's Medicaid expansion. The movement has made Republicans increasingly pessimistic that two critical conservative senators, Mike Lee of Utah and Rand Paul of Kentucky, will be able to vote for the GOP's ultimate agreement on healthcare, according to senators and aides." http://politi.co/2s7Z42l

COMING ATTRACTIONS -- "Trump Will Meet With Tech Leaders To Talk About Emerging Tech Like Drones," by BuzzFeed's Ryan Mac: "The White House is planning a second gathering of technology leaders later this month, in which President Donald Trump is expected to meet with venture capitalists and entrepreneurs from emerging tech firms. Three sources confirmed to BuzzFeed News that the Office of Science and Technology Policy (OSTP) is organizing the event, scheduled for June 22 - three days after Trump is expected to meet with the likes of Apple CEO Tim Cook, Amazon CEO Jeff Bezos, Oracle co-CEO Safra Catz and technology executives in Washington. ... [T]he second meeting ... will address emerging technologies trends including the Internet of Things, commercial drones and the funding of those companies." http://bzfd.it/2rgABUf

REMEMBERING ZBIGNIEW BRZEZINSKI -- "Washington Remembers Brzezinski, and a Very Different Era," by NYT's Matt Flegenheimer: "One after another, the mourners filed into the stately Cathedral of St. Matthew -- ambassadors, cabinet secretaries, television hosts, a president -- hunkering together behind the grand doors, at least for a little while, to consider a man and a capital from a bygone political moment most seemed to prefer. The occasion was the funeral of Zbigniew Brzezinski ... 'He was a realistic optimist,' one eulogizer, the former Secretary of State Madeleine Albright, said of Mr. Brzezinski, recalling his commitment to human rights, his belief in the power of considered diplomacy and his fierce wariness of Russia. The crowd nodded. ... [F]or two hours on Friday, the city's beleaguered establishment seemed to revel in a collective embrace, capping a week in which it rallied to defend some treasured Washington traditions -- congressional oversight, the independence of the F.B.I. -- in the face of persistent executive chaos." http://nyti.ms/2s8bvLr

-- Hundreds of people attended the funeral, at St. Matthew's Roman Catholic Cathedral in Washington. President Jimmy Carter, Madeline Albright, John Hamre, and Ian, Mark and Mika Brzezinski all gave remarks. Albright read a note from John Kerry and Hamre read a note from Henry Kissinger. **SPOTTED:** Jonathan Capehart, Chris Licht, Robin Wright, Andrew Schwartz, Al Hunt, Bob Gates, Ambassadors from Finland, China, Japan, Sweden, Italy, and UAE, Carl Bernstein, Kathy Kemper, Maureen Orth, Bob Schieffer, Margaret Carlson, Boyden Gray, Katty Kay, House Minority Leader Nancy Pelosi, Susan Rice, Chuck Todd, Ernest Moniz, and Margaret Warner.

TRUMP'S WEEKEND -- The president is at his golf club in Bedminster, New Jersey. **PENCE** is in Milwaukee, where he'll talk to small businesses with Gov. Scott Walker and give a speech about Obamacare. He'll return to D.C. and speak at the Faith & Freedom Coalition's Patriot's Gala.

THE JUICE ...

-- @rchammond: "The President has announced his intent to nominate Eric Ueland of Oregon to serve as Under Secretary of State for Management. @StateDept". Ueland is Republican staff director of the Senate Budget Committee, worked on the Trump transition and earlier in his career was chief of staff to former Senate Majority Leader Bill

Frist.

-- FIRST IN PLAYBOOK: FROM HADAS GOLD: KELLYANNE CONWAY was overheard Thursday night talking about her West Wing co-workers to fellow revelers at a party. Conway was having an off-the-record conversation with a group of reporters and other attendees at the British Embassy at their election-night watch party. She said President Donald Trump told her to "go out there and say 'Jim Comey is going to have to wait and see about the tapes.'"

"I mean, that's basically the same thing as 'no comment,'" she said. Conway also mimicked Reince Priebus urging White House aides to stop leaking, and wondered aloud what Marc Short -- the legislative director -- does all day. She also said she is "the one catching the slings and arrows in the West Wing." The source who heard Conway created a Twitter account about the evening, naming it @kellyanneleaks and posting photos and tweets from the event. Two other sources confirmed Conway's remarks.

White House Press Secretary Sean Spicer said Conway disputed the account, explaining that she is very close to Short. Spicer said Conway was not mocking Priebus, but rather reporters for palace intrigue stories "and how wrong they've been." Spicer disputed that Conway had pushed back on the presidents request on how to comment about Comey, saying that she was simply explaining what the lawyers said the White House can say.

Playbook Reads

PHOTO DU JOUR: President Donald Trump is pictured with Romanian President Klaus Werner Iohannis during their joint news conference in the Rose Garden of the White House on June 9. | Pablo Martinez Monsivais/AP Photo

JOHN ASHCROFT'S FIRM HIRED BY QATAR - "Singled Out by Trump, Qatar Hires Former Top Law Man to Lobby," by Bloomberg's Bill Allison: "Qatar hired Ashcroft Law Firm, LLC for 90 days, agreeing to pay it $2.5 million to help the Persian Gulf nation comply with U.S. money laundering and counterterrorism financing regulations and to stress its efforts to combat global terrorism, according to disclosures filed under the Foreign Agents Registration Act. ... The contract cites the 'urgent need to commence work immediately' which will be 'a top priority' for the firm. ...

"Aschroft's firm promised to provide crisis response and management, program and system analysis, media outreach and advocacy, stressing Qatar's efforts to combat global terror, according to the contract. As part of that effort, the firm plans 'a comprehensive legal and government relations strategy,' one that will communicate broadly and to 'certain domestic agencies and leaders.'" https://bloom.bg/2rcumWs

WHAT DAN SCAVINO IS READING -- "Inside The Chaotic Battle To Be The Top Reply To A Trump Tweet," by BuzzFeed's Charlie Warzel: "[S]econds after the president sounds off to his 31 million-plus followers, he's bombarded with replies -- almost all of them extreme. There are breathless condemnations of Trump policy; cries for his speedy impeachment; furious demands for his administration to admit its role in any number of global and political conspiracies; #Resist-ers; #TrumpTrain conductors and passengers; impassioned defenses of his character; praise for Trump as chessmaster-in-chief, 10 steps ahead and constantly outwitting enemies. There are comedians, actors, doctors, scientists, admirers, goons, politicos, activists, journalists, and trolls. ... And within seconds they're all just a few pixels below the president's missive - yelling, arguing, and looking to be the one Donald Trump sees when he checks his Twitter feed." http://bzfd.it/2r57m7T

-- "Dan Scavino is the other @realdonaldtrump," by Eliana Johnson: "The White House is brimming with aides, lawyers, and communications gurus who are begging President Donald Trump to stop tweeting. The lone exception is Dan Scavino, the president's former golf caddy who now oversees the White House's messaging on social media. Scavino is in many ways the president's mini-me, a man whose bombast, impulse control, and instinct for a good punch match those of his boss.

"After Trump last weekend blasted London Mayor Sadiq Khan after a terror attack that killed eight people, Scavino posted a message citing Khan's own 2016 criticism of Trump's rhetoric on Muslims and terrorism-complete with a Trumpian, all-caps 'WAKE UP!!!!' And like his boss, Scavino has ignored warnings from high-level White House officials to tone down his tweets. Scavino was reprimanded on Friday for violating the Hatch Act, which prohibits senior executive branch officials from using their authority to interfere with elections, by calling in April for the ouster of Michigan Republican Justin Amash." http://politi.co/2s7Uz7X

TRUMP INC. -- "Trump Can Take Payments From Foreign Governments, U.S. Says," by Bloomberg's Bob Van Voris: "George Washington did it, so Donald Trump can too. That's the Justice Department's take on why the 45th president isn't violating the U.S. Constitution by accepting payments for goods and services from foreign governments without congressional approval. The foreign emoluments clause of the Constitution doesn't apply to fair-market commercial transactions, such as hotel bills, golf club fees, licensing payments and office rent, the Justice department argued Friday in a filing." https://bloom.bg/2sNKISx

--@EricLiptonNYT: "Among DOJ's arguments why Trump emoluments suit should be dismissed. 'Ten Facts about the Gristmill, George Washington's Mount Vernon'"

NEW POLITICO SERIES - "5 things Trump did while you weren't looking: Behind the scandal-of-the-day news, the White House really is changing American policy. A new series from The Agenda explains how," by Danny Vinik: "1. A boost for Uber and McDonald's. ... 2. A trade war with Mexico averted-for now. ... 3. The end of a DOJ 'slush fund.' ... 4. A win for nursing homes. ... 5. Get THAAD out of here."

http://politi.co/2rWYsum

2018 WATCH -- "Senate Democrats try to spark rural comeback in 2018," by Maggie Severns: "While many voters in rural areas complained that Democrats forgot them in 2016, and party strategists rush this year to find a new message to bring them back in the fold, Democratic senators up for reelection in 2018 have little time to spare to fix their party's issues. These battleground-state Democrats are quick to note that they got elected in the first place by tending to voters outside their states' biggest population centers. And they are focused this year on winning back voters their party has failed to connect with since the last time they appeared on the ballot." http://politi.co/2rWX22Z

LUNCH WITH THE FT -- BERNIE SANDERS in DUBLIN! -- by Simon Kuper: "Sanders' car pulls up (brilliantly, his Irish driver is called Bernie Saunders) and the senator clambers out, his shoulders hunched, his suit crumpled, his strands of white hair unkempt, not the standard American politician with Botox and a hair transplant. Today he is tieless, too: he has been assured that Irish president Michael D Higgins won't mind. The tiny Higgins appears, dispensing handshakes and hugs.

"'I think Trump is actually quite smart -- in his own way and for his own reasons. He may not know a lot about foreign policy or healthcare, but he is not a dumb man by any means. I think what Trump is doing is filling the agenda of people like the Koch brothers: essentially doing away with every major programme passed since Franklin D Roosevelt that would help working people, the elderly, children, the sick and the poor, and at the same time providing massive tax breaks to the rich and large corporations. In this budget, Trump did not propose cuts to social security [the American retirement programme], but I have zero doubt that will be coming down the pike.'" http://on.ft.com/2sobq70

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years, and we announced more than $10 Billion in US Growth since 2016. This year, we're proud to have added HARMAN International and its 3,500 U.S. employees to the Samsung workforce in America, and just as enthusiastic about our common vision, the similarities in our culture of innovation, and the added value we can create for customers. Learn more about our partnership at Samsung.com/VisionForTomorrow for more. ******

KATY TUR PROFILE -- AND SHE'S A PHISH FAN! -- COVER OF NYT SUNDAY STYLES -- "Katy Tur Is Tougher Than She Looks: The NBC correspondent's swift and surprising rise at the network mirrored that of the presidential candidate she covered and occasionally battled with," by Luisita Lopez Torregrosa: "Mr. Trump's sudden rise mirrors that of Ms. Tur's. Just two years ago she was a foreign correspondent for NBC, living in London. But she happened to be in New York when the future president announced his candidacy, on June 16, 2015. 'How would you like to spend the summer in New York?' an NBC News executive asked her. 'We want you on Trump's campaign. It will be six weeks, tops. But hey, if he wins, you'll go to the White

House.'

"A year or so later, she had captured national attention. Colleagues rallied around her, thousands tweeted #iamwithtur, magazines came calling, and HarperCollins engaged her to write a book on the 2016 campaign; 'Unbelievable' is due out in September. Then there is the afternoon anchor slot, which MSNBC gave her in January. In April, she received a Walter Cronkite Award for excellence. And this month she will become a contributor to the much publicized new NBC News program 'Sunday Night With Megyn Kelly.'" http://nyti.ms/2t5S6Z4

MEDIAWATCH -- "10 months ago, Univision bought Gawker in a fire sale, and it's been messy ever since," by Business Insider's Maxwell Tani: "CEO Raju Narisetti ... is leading GMG through the media company's merger with Fusion Media Group, which is owned by the Spanish-language juggernaut Univision. According to the CEO, the transition has been a success. But conversations with over a dozen current and former employees painted a starkly different picture. Since the deal, the six former Gawker Media sites -- Gizmodo, Jezebel, Deadspin, Kotaku, Jalopnik, and Lifehacker -- have struggled with indecision, a dysfunctional bureaucracy, and an exodus of top leadership and institutional knowledge that gave Gawker Media its editorial bite." http://read.bi/2rLXwKQ

-- DANIEL HALPER, former D.C. bureau chief for the N.Y. Post who recently was hired by Matt Drudge, quietly joined the Washington Free Beacon as a contributing editor recently, Hadas Gold tells us. Halper and the Free Beacon did not respond to requests for more details.

CLICKER - "The nation's cartoonists on the week in politics," edited by Matt Wuerker -- ***14 keepers*** http://politi.co/2sbxstY

DESSERT -- HOW MANY HAVE YOU SEEN? - "The 25 Best Films of the 21st Century So Far," by NYT's Manohla Dargis and A.O. Scott: "1. There Will Be Blood ... 2. Spirited Away ... 3. Million Dollar Baby ... 4. A Touch of Sin ... 5. The Death of Mr. Lazarescu ... 6. Yi Yi ... 7. Inside Out ... 8. Boyhood ... 9. Summer Hours ... 10. The Hurt Locker." ***With in-depth discussions of each film on the list*** http://nyti.ms/2t5lkG7

GREAT WEEKEND READS, curated by Daniel Lippman:

--"Why Men Don't Live as Long as Women," by Richard G. Bribiescas in Nautilus Magazine - per The Browser's description: "Are we at peak male testosterone? Testosterone raises the sex drive, builds muscle and burns fat. It also shortens the lifespan by encouraging recklessness, weakening the immune system, and raising the risk of prostate cancer. The reproductive payoff favoured high testosterone in ancient times: More children meant more surviving children. But now, thanks to monogamy and medicine, the trade-off is less clear. The evolutionary advantage may be passing to fathers who live longer." http://bit.ly/2sKN0lp

--"America's Hidden H.I.V. Epidemic," by Linda Villarosa in the NYT Magazine: "Why do America's black gay and bisexual men have a higher H.I.V. rate than any country in the world?" http://nyti.ms/2sLamrg (h/t Longreads.com)

--"The Real Story Behind Elon Musk's $2.6 Billion Acquisition Of SolarCity And What It Means For Tesla's Future-Not To Mention The Planet's," by Fast Company's Austin Carr: "The Tesla CEO's merger with his cousins' sustainable-energy company, SolarCity, is totally logical-and hugely risky. With eyes now on the private sector for environmental leadership, can Musk pull off another miracle?" http://bit.ly/2scvObB

--"Soccer for Intellectuals," by Bécquer Seguín in Public Books: "Any baseball or boxing narrative can be easily embodied in the momentary struggle between two individuals. Soccer, on the other hand, isn't wedded to the fate of individuals. Its beauty is most often in the battle between two ideas, two philosophies, two tactical approaches." http://bit.ly/2t2yox5

--"Challenging Mainstream Thought About Beauty's Big Hand in Evolution," by NYT's James Gorman: "Are aesthetic judgments about mates invariably tied to traits we see as adaptive and worth passing on? Or, does beauty just 'happen'?" http://nyti.ms/2s4QxNz (h/t ALDaily.com)

--"Bill Maher Knows Exactly What He's Doing: Just Ask Him," by Stephen Rodrick in Esquire: "Real Time's format is a throwback to a seventies talk show -- with a monologue, an interview, a panel discussion, some jokes, and a closing argument -- but here everything is done without the benefit of breath-catching commercial breaks. This setup sometimes leads to what can feel, in the moment, like a random car wreck, but Maher's been doing comedy for forty years. He's addicted to provocation, and more often than not, he's driving his show into a brick wall by design." http://bit.ly/2s52a7h

--"Proust and Dreyfus," by Joachim Kalka in Tablet Magazine: "In an excerpt from the newly translated 'Gaslight,' by German writer Joachim Kalka, an examination of how the scandal that rocked France bled into European literature." http://bit.ly/2rJ7bl6

--"Who Do You Want Elisabeth Moss to Be?" by Emily Gould in Elle Magazine: http://bit.ly/2rlYAyU

--"Welcome to the Green Machine," by John Nova Lomax in the June issue of Texas Monthly: "My son was jobless, directionless, and apartmentless. So when he decided to join the Army, we were just glad he was out of the house. What we didn't know was just how much the military would change him-and us." http://bit.ly/2sL0TAb (h/t Longform.org)

--"The horrors of getting hit by a pitch," by Tim Kurkjian in ESPN on Aug 3, 2012: "When that baseball is flying directly at a hitter at 95 mph, and that batter can hear the ball spinning, like the sound of a giant bee attacking, and then it hits that batter and those red seams bore into the skin like the teeth of a buzz saw, well, the elegance and

romance of that pearl is replaced by piercing, pulsating, primal pain. It is pain that can last for weeks, it can leave a hideous mark that can last for months and it can instill a fear that can last forever." http://es.pn/2t2UsI6

--"The Impossible Profession," by Janet Malcolm in the November 24th, 1980 issue of The New Yorker: What it's like to be a psychoanalyst in NYC. http://bit.ly/2smxM8L

--"Athens, Sparta and Rome: the Ancient election," by Mary Beard in The Times Literary Supplement: "Voters individually picked out their ballot slips (wax on wood, probably) from a basket as they walked across some form of bridge, then wrote the name of their candidate in the wax as they walked, and finally dropped it into the ballot box." http://bit.ly/2sbKsQt

--"The White Wedding Dress Industrial Complex," by Helena Fitzgerald in Racked: "A fantasy of wealth beyond reality or responsibility is built into the details of these dresses, all the way down to the tiny rows of covered buttons. Mostly when we spend too much money, we pretend that the money isn't real. This is why part of the point of the dress is that you can't wear it again - it becomes a perfect object, distilled and frozen in time, lifted out of the ordinary cycles of use and value and repetition." http://bit.ly/2r2ZS5k

--"How 'Eureka' Moments in Science Happen," by Cathy Newman in NatGeo: "From bathtubs to falling apples, find out what really drives some of the iconic tales of 'light bulb' moments in science." http://bit.ly/2r3tYFR

Playbookers

SPOTTED: Sen. Rand Paul (R-Ky.) last night watching the Cavs/Warriors game at the Trump Hotel.

OUT AND ABOUT - PATRICK STEEL and LEE SATTERFIELD's 50th birthday celebration last night at the Meridian International Center: Virginia Gov. Terry McAuliffe, Robert and Elena Allbritton, Dan and Rhoda Glickman, Nancy Bagley and Soroush Shehabi, Rob and Capricia Marshall, Ann Stock, Tony Blinken and Evan Ryan, Elizabeth Bagley, Jonathan Capehart and Nick Schmit, Kiki McLean, Melissa Moss, Adam and Tracy Bernstein, H.P. Goldfield and Kristin Mannion, Kim Cubine, Joel Johnson and Sara Latham, Debbie Fine, Erick Mullen and Kelly Craighead, Karen Finney, Stuart and Gwen Holliday, Kimball Stroud, Dan and Aviva Rosenthal, Linda Moore, Neal Wolin and Nicole Elkon

BIRTHDAYS: Jeff Zeleny, CNN's senior Washington correspondent and the pride of

Exeter, Nebraska, celebrating with a 29-hour birthday: breakfast in London and dinner in DC ... Sasha Obama is 16 ... Louisiana Gov. Bobby Jindal is 46 ... John Edwards is 64 ... Eliot Spitzer is 58 ... Jeff Greenfield is 74 ... F. Lee Bailey is 84 ... Sidewire's Meredith Carden, a Michelle Obama alum, the pride of Chicago and a birthday bride today! (h/ts Herbie Ziskend and boss Tucker Bounds) ... Joe Trippi, political consultant, Fox commentator, author, digital strategist, believer ... Stef Weiss (h/ts Jon Haber) ... John DiBiase ... Rep. Lynn Jenkins (R-Kans.) is 54 ... NBC's Kate Snow ... Carlos Elizondo (h/t Marc Adelman) ... Joe Nolan ... Chad Rhoades, general counsel for Sen. Tillis ... Politico Europe's Simon Marks ... AAJ's Paula J. Burris, the pride of Arlington, Va., and the best office manager in the USA (h/t Randy White) ... Politico's Javier Ruiz ... Nicole Hager, Sen. Inhofe's press assistant (h/t Daisy Letendre) ... Jennifer Donnelly, a senior associate on the organizing and campaign management team at Precision Strategies (h/t Tom Zigo) ... Rob Morello, Romney and RNC alum, now co-founder of Fraym, is 3-0 (h/t wife Rachel Sorensen) ...

... David O'Brien, senior comms manager at CRAFT, is 31 ... Google's Cameron Foxgrover ... John Yoo ... Daryn Iwicki ... Obama DOJ alum Shirlethia Franklin ... Thomas Showalter ... Al Mottur, shareholder of Brownstein Hyatt, is 5-0 (h/t Stewart Verdery) ... Semonti Mustaphi Stephens, a Michelle Obama alum and the pride of Crystal, MN ... Charmion Kinder, director of comms at My Brother's Keeper Alliance ... WSJ's Corinne Ramey ... Suzy Vilmain ... Louisa Wachs ... Jim Wisley (h/ts Teresa Vilmain) ... John Pearson ... Courtney Pearson Drake ... Jan Ruckman ... Pete Slover (h/t Dick Keil) ... Chris Merriman ... Teryn Norris ... Prince Philip is 96 ... Elizabeth Hurley is 52 ... Kate Upton is 25 (h/ts AP)

THE SHOWS by @MattMackowiak, filing from Austin:

--**ABC's "This Week":** Former U.S. Attorney Preet Bharara ... Alan Dershowitz ... Sen. Mike Lee (R-Utah) ... Sen. Joe Manchin (D-W.Va.). Panel: Alex Castellanos, Matthew Dowd, Donna Brazile, Rep. Keith Ellison (D-Minn.) and Sara Fagen

--**CBS's "Face the Nation":** Sen. Lindsey Graham (R-S.C.) ... Senate Minority Leader Chuck Schumer (D-N.Y.) ... Sen. James Lankford (R-Okla.). Panel: Julie Pace, David Ignatius, Susan Page and Ed O'Keefe

--**"Fox News Sunday":** Sen. Jack Reed (D-R.I.) ... RNC Chairwoman Ronna Romney McDaniel. Panel: Karl Rove, former Rep. Donna Edwards (D-Md.), Newt Gingrich and Charles Lane

--**CNN's "State of the Union":** Sen. Dianne Feinstein (D-Calif.) ... Sen. Susan Collins (R-Maine). Panel: Rep. Luis Gutierrez (D-Ill.), former Rep. Mike Rogers (R-Mich.), Neera Tanden and David Urban. ***Dana Bash is anchoring***

--**NBC's "Meet the Press":** Preempted for French Open coverage

--CNN's "Reliable Sources": Panel: Jeff Greenfield, Clara Jeffrey and Matt Lewis ...

Adam Goldman ... Andy Borowitz ... Tim O'Brien

--**CNN's "Inside Politics"** with John King: Panel: Jackie Kucinich, Carl Hulse, Manu Raju and Sara Murray

--**Fox News' "Sunday Morning Futures":** Rep. Peter King (R-N.Y.) ... House Majority Whip Steve Scalise (R-LA) ... Texas Attorney General Ken Paxton ... Steve Hilton ... Bud Cummins. Panel: The Daily Beast's Betsy Woodruff and Rich Lowry

--**Fox News' "MediaBuzz":** Former Bush and Obama national security council staffer Gillian Turner ... Mollie Hemingway ... Juan Williams ... Ed Henry ... Amy Holmes ... Jessica Tarlov ... Carley Shimkus

--**CNN's "Fareed Zakaria GPS":** R. James Woolsey ... Elizabeth Foley and Laurence Tribe ... Canadian foreign affairs minister Chrystia Freeland

--Univision's "Al Punto": Panel: Former Treasurer of the U.S. Rosario Marin and Adolfo Franco ... journalist and independent Mexican presidential hopeful Pedro Ferriz de Con ... "Compassion & Choices" national Latino communication manager Patricia Gonzalez-Portillo and mother of a child with a deadly form of brain cancer Nilsa Centero ... actress Salma Hayek

--C-SPAN: "The Communicators": Part 1 of discussion with Recode editor at large and columnist and The Verge executive editor and columnist Walt Mossberg ... **"Newsmakers":** NRCC chairman Rep. Steve Stivers (R-Ohio), questioned by The Hill's Scott Wong and Politico's Scott Bland ... **"Q&A":**Franklin D. Roosevelt Presidential Library & Museum director Paul Sparrow

-- **Hearst / Sony's "Matter of Fact"** with Soledad O'Brien: Sen. Jerry Moran (R-Kan.) ... Sen. Al Franken (D-Minn.) ... report on the Trump administration's $200 billion infrastructure proposal ... author and Auschwitz survivor Michael Bornstein ... discussion about ISIS internet recruitment efforts with RAND Center for Applied Network Analysis and System Science co-director and Rand Corporation engineer Elizabeth Bodine-Baron ... a tribute to journalists who give their lives covering conflicts around the world

--Washington Times' "Mack on Politics" weekly politics podcast with Matt Mackowiak (download on iTunes, Google Play, or Stitcher or listen at http://bit.ly/2r37J6h): Sen. Mike Lee (R-Utah).

Subject: Draft EPA strategic plan drops all reference to climate change

By Alex Guillén

10/04/2017 04:26 PM EDT

The Trump administration has dropped all mention of climate change or rules to reduce carbon emissions from a strategic plan outlining EPA's priorities for the next four years, according to a draft obtained by POLITICO.

The draft was circulated around EPA for comment earlier today along with an accompanying one-page graphic.

The document creates a new framework for EPA's mission that reflects the management style of Administrator Scott Pruitt. It defines EPA's "core mission" as ensuring clean air, water and land. It calls for more "cooperative federalism" to empower state governments. And it touts the "rule of law and process," which is meant to "refocus the Agency on its statutory obligations under the law."

The draft was released to EPA employees just days after Pruitt missed a key statutory deadline to implement the 2015 ozone standard. EPA has offered no update on that issue.

"I believe this draft Plan provides the foundation for a more efficient and effective agency, enabling us to accelerate progress and deliver real, tangible results for the American people," Pruitt wrote in an email to EPA staff today.

The previous strategic plan released by the Obama administration in 2014 listed climate change as "goal one," along with broader air quality issues. The new draft plan makes no mention of climate change, though it does address non-climate air issues, as well as a litany of other regulatory, permitting and administrative goals for EPA.

WHAT'S NEXT: EPA will publish the draft plan in Thursday's Federal Register and take comments through Oct. 31.

Lorraine Woellert contributed to this report.

Energy and Climate Report

May 23, 2017 - Number 98

News

Budget
Civil, Criminal Environmental Enforcement Cut in Trump Budget Plan
President Donald Trump's proposed budget would reduce the EPA's civil enforcement program by 18 percent, criminal enforcement by 16.5 percent, and the forensics support that makes many of those cases possible by nearly 44 percent.

Budget
Climate Spending 'Crazy Stuff' Targeted in Trump Budget
President Donald Trump's first budget request to Congress would cut or eliminate a range of programs designed to reduce greenhouse gas emissions, as well those helping communities prepare for more intense flooding or hurricanes expected to result from climate change.

Budget
Hanford Nuclear Cleanup Budget Slashed in Energy Proposal
Washington state's Hanford Nuclear Reservation, scene of a recent collapse of a tunnel containing nuclear waste, would see its funding slashed under President Donald Trump's new budget proposal.

Budget
Proposed Interior Budget Boosts Onshore, Offshore Energy
Oil, natural gas and coal development would get a boost in the White House's proposed fiscal 2018 budget, despite a substantial 12 percent cut to the Interior Department's overall funding.

Budget
Trump Dumps 'Clean Coal' Research Despite Lauding Its Potential
President Donald Trump promised his administration would bring about "clean coal," but his budget proposed slashing research the industry says it needs to make that a reality.

Budget
Trump Proposes Selling Off Half the U.S. Strategic Oil Reserve
The White House plan to trim the national debt includes selling off half of the nation's emergency oil stockpile, part of a broad series of changes proposed by President Donald Trump to the federal government's role in energy markets.

Budget
Voluntary EPA Programs Get Ax in Budget Plan as Climate Work Halts
Voluntary EPA programs that encourage businesses to improve energy efficiency and curb

greenhouse gas emissions would get the ax from a Trump administration that has already pledged to roll back climate change regulations.

Budget

White House Seeks $150M for Yucca, Nuclear Waste Storage

President Donald Trump's first budget proposal would provide $30 million for the Nuclear Regulatory Commission to restart work on licensing Yucca Mountain as a permanent repository for nuclear waste.

Climate Change

'Everything on the Table' to Save Great Barrier Reef: Australian Official

Unprecedented damage to the Great Barrier Reef caused by climate change and cyclones means that previously untried methods should be considered to protect it, the official charged with the reef's management told Australian lawmakers.

Climate Change

Trillions on Yearly Infrastructure Spending Would Help Climate Goals: OECD

The world's biggest economies have to spend about $6.9 trillion a year on "smart" infrastructure through 2030 to be on track to keep global warming to safe levels, a new OECD report said.

Climate Policy

Merkel to Confront Climate-Change 'Doubters' Among G-20 Peers

German Chancellor Angela Merkel said she won't give up trying to persuade doubters among her global peers that climate change is real, signaling her message for a Group of Seven summit starting May 26.

Climate Regulation

EPA Applies Brakes on Landfill Methane Rules

The EPA took its first step toward reconsidering methane limits for landfills set by the Obama administration by freezing implementation of the rules for 90 days.

EPA

Budget Calls for 30-Year Low in EPA Staff Levels

EPA staffing would plummet to its lowest levels since the mid-1980s, according to the Trump administration's proposed fiscal year 2018 budget.

Energy

Clean Car Rules Lead to Jobs From Technology, Equipment

More than a quarter million U.S. jobs are tied to the use of technology and production of materials used to improve vehicle fuel economy, according to a report released May 23 by environmental groups.

Energy

David Jonas Tapped as Energy Department General Counsel

David S. Jonas, an expert in nuclear nonproliferation law, will be nominated by President Donald Trump as general counsel at the Department of Energy, the White House announced May 23.

Energy

Two Energy Professionals Chosen for Nuclear Commission

A former utility commission chairman and a Senate energy staffer were named by the Trump administration to fill two vacant Republican seats on the Nuclear Regulatory Commission.

Energy

Video: Advanced Energy Research Office Would Be Cut in Trump Budget

The Trump White House is proposing to eliminate a small Energy Department advanced energy research office under a fiscal 2018 budget proposal.

International Climate

China Joins EU, Canada in Backing Climate Deal Before Trump Plan

China, Canada and the European Union are joining forces to advance the Paris Agreement while President Donald Trump is still deciding whether the U.S. should stick with the landmark deal on climate change.

Motor Vehicles

Toyota, Nissan, Honda to Lead Japan's Hydrogen Station Coalition

Eleven leading Japanese companies including Toyota, Nissan and Honda said they will collaborate to build more hydrogen stations to accommodate fuel cell motor vehicles in Japan.

Natural Gas

Federal Energy Regulator Wins in Pennsylvania Pipeline Challenge

The Federal Energy Regulatory Commission did not violate federal laws by granting a conditional permit for a pipeline expansion in Pennsylvania before the state had completed its permits, a federal court said May 23.

Oil & Gas

'Gas Apocalypse' Looms Amid Power Plant Construction Boom

The glut of cheap natural gas from a single, gigantic, shale basin that straddles the Northeast, mid-Atlantic and Midwest has sparked a massive construction boom of power plants. Dozens have been built in the past two years alone.

Renewable Energy

Renewable Energy Powers Jobs for Almost 10 Million People

Renewable energy employed 9.8 million people last year, up 1.1 percent from 2015, led by solar photovoltaic at 3.09 million jobs, according to the International Renewable Energy Agency's annual report on the industry.

Sustainability

Smart-Beta Shoppers Going Green, Not Just for the Environment

Getting a gold star for saving the world isn't the top motivation for asset managers who are looking to become more socially conscious. Instead, they're hoping to avoid long-term risk, according to a study by FTSE Russell.

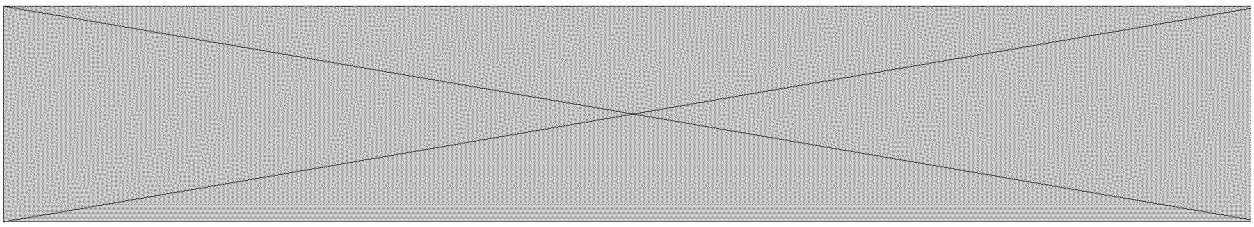
Speed Up Offshore Wind Projects, Industry Says

Massachusetts' timeline for building an offshore wind industry in the state over the next 10 years is too slow and should be cut in half, energy developers said May 23.

Practitioner Insights

Science Policy

Practitioner Insights: Taking the Science out of Federal Science Advisory Boards



Andrew Rosenberg: The Trump administration has given new definition to the term "conflict of interest," from political meetings at Trump-owned businesses to cabinet members who may financially benefit from hamstringing the agencies they now lead.

AEI

This week's shot to undo the harm of Dodd-Frank

Peter J. Wallison | AEI

The Choice Act, a bill that would repeal or substantially modify large portions of the 2010 Dodd-Frank Act, is on the House floor this week. There are good reasons for every one of the dozens of provisions in the bill, but first it's important to understand two significant things about the ideologically driven Dodd-Frank law: It is primarily responsible for the historically slow recovery of the US economy since 2008, and, most important, it was completely unnecessary.

Twenty20

The ultimate bipartisan compromise for paid family leave

Aparna Mathur and Isabel Sawhill | Time

Last year, a group of bipartisan experts joined forces under the umbrella of AEI and the Brookings Institution to explore paid family leave in the United States. The group, comprised of many people with government experience in both Democratic and Republican administrations, didn't agree on every question, such as how generous benefits should be. But everyone agreed on one key point: A paid family leave policy is needed in America.

Reuters

Republicans, ignore the CBO at your own political peril

James C. Capretta | Real Clear Health

The Congressional Budget Office (CBO) has been criticized often by both parties since it began issuing cost estimates for legislation in the 1970s. So it was not surprising to hear the Trump administration complain when the agency released an unflattering assessment of the American Health Care Act. The CBO has gotten plenty of things wrong over the years, but you would be hard-pressed to find an agency with more useful feedback on the GOP's path to reform.

Reuters

5 things to watch in tomorrow's British general election

Dalibor Rohac | AEIdeas

Tomorrow, British citizens will vote in a snap election called by UK Prime Minister Theresa

May. When she called the election in April, the decision looked like a masterstroke: The Labour Party was hitting historic lows in the polls, losing constituencies it had dominated since the 1930s. But a month and a half is a long time in politics, and the picture days ahead of the vote looks far less certain — in no small part because of the latest attack in London.

Subject: Star Tribune: EPA's Pruitt signals welcome support for Great Lakes restoration project

The Minneapolis Star-Tribune

EPA's Pruitt Signals Welcome Support for Great Lakes Restoration Project

Editorial
July 21, 2017
http://www.startribune.com/epa-s-pruitt-signals-welcome-support-for-great-lakes-restoration-project/435922323/

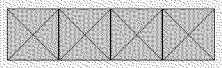
Environmental Protection Agency Secretary Scott Pruitt's visit to Minnesota last week yielded an unexpected boon for those who care about clean water. In an interview with a Star Tribune reporter, Pruitt affirmed his support for federal funding of the Great Lakes Restoration Initiative, which provides landmark protections for Lakes Huron, Erie, Michigan, Ontario and, most treasured by Minnesotans, Superior.

The work that went into creating the multistate compact was years in the making, uniting governors and legislators of both parties in an unprecedented and legally binding pledge to preserve the interconnected freshwaters that touch the borders of eight states and Canada.

Republican Gov. Tim Pawlenty signed the compact for Minnesota in 2007, and DFL Gov. Mark Dayton continued the work. Republican President George W. Bush made it federal law, with bipartisan support in Congress, and Democratic President Barack Obama committed the necessary federal funding.

It's fitting that the EPA recognize and support the work and goals of those state and U.S. leaders. Pruitt, who made a mission out of suing the EPA in his home state of Oklahoma, was expected to come in as something of an anti-EPA warrior. And some of his actions have given cause for concern, including planned agency layoffs, rejection of climate change and rollbacks on some regulations.

But there also are glimmers of recognition that states face daunting environmental problems that cannot be wished away. The Great Lakes compact is significant in large measure because states from here to Pennsylvania set aside partisan differences, found common ground and committed to long-term, mutual cooperation.



A U.S. House appropriations committee also has recognized the compact's worth. It voted for a budget that, while unfortunately trimming overall EPA funding, would preserve the $300 million for the Great Lakes. Pruitt's support for the compact is especially notable because the Trump administration's budget would have essentially zeroed out funding for the project.

Pruitt, who met with Dayton while he was here, is touring other states. Let's hope he'll gain an even greater appreciation for the environmental challenges ahead. Interestingly, he has said that upon arriving in Washington he found a "lack of urgency" at the agency on fighting major pollution. He said

40 percent of Americans live in areas that fail to meet air quality standards, a percentage he calls “unacceptable.”

Subject: POLITICO's Morning Energy, presented by ExxonMobil: Energy big focus for Trump in Poland — Proposed RFS has something for everyone — Perry tours West Virginia coal site today

By Anthony Adragna | 07/06/2017 10:00 AM EDT

With help from Sara Stefanini, Anca Gurzu and Eric Wolff

TRUMP'S LNG PITCH: President Donald Trump is in Warsaw, Poland, this morning, where he said in a press conference alongside Polish President Andrzej Duda that the U.S. "stands ready to help Poland and other European nations diversify their energy supplies so that you can never be held hostage to a single supplier, or as we sometimes we call it, a monopoly."

Poland received its first shipment of U.S. LNG last month and Trump said there are "many more coming." Asked when more LNG shipments should be expected to arrive in Poland, the U.S. president said the two nations could sign a contract "within the next 15 minutes." Duda, however, pointed out that the contract won't be signed by the Polish and U.S. presidents, but by companies.

Trump later used a meeting of the 12 countries on the Baltic, Adriatic, and Black Seas to make a pitch for U.S. gas exports, saying the U.S. would be a "faithful and dependable partner" in helping the nations achieve energy security. "We are sitting on massive reserves of energy and we are now an exporter of energy, so whenever you need energy just give us a call," he told the Three Seas Initiative conference.

He took another shot at Russia there, though he never mentioned the country by name. "Let me be very clear about one crucial point: The United States will never use energy to coerce your nations, and we cannot allow others to do so. You don't want to have a monopoly or a monopolistic situation," he said. Trump then reiterated that theme during an outdoor speech in Warsaw: "We are committed to securing your access to alternate sources of energy, so Poland and its neighbors are never again held hostage to a single supplier of energy," he said.

Thomas Wright, a senior fellow at the Brookings Institution, writes in POLITICO Agenda the Three Seas meeting is an effort by those nations to figure out how to create the regional infrastructure to reduce their energy dependence on Russia, and that there are hopes for a deal on exports of LNG that could undermine the proposed Nord Stream 2, the controversial German-Russian energy pipeline.

After he finishes up his whirlwind 16 hour-trip to Poland, Trump heads over to Hamburg where he'll meet with German Chancellor Angela Merkel ahead of the two-day G-20 summit that starts Friday. Both leaders held an "extensive" conversation earlier this week on topics including climate change, and Merkel has warned previously that the gathering will "not be easy talks," a not-so-veiled jab at the U.S.

EU reaffirms Paris commitment: The EU will reassure its G-20 partners it "remains steadfastly

determined" to implement the Paris Accords and speed up efforts to cut emissions and move toward green energy, the heads of the European Council and Commission said in a letter to EU heads of state and government Wednesday. For the EU, the Paris deal is a "corner stone" of global efforts to fight climate change and implement the U.N.'s Sustainable Development Goals, and "cannot be renegotiated," Council President Donald Tusk and Commission President Jean-Claude Juncker said. The EU will also support an ambitious joint action plan on climate and energy that was prepared in the run-up to the summit, and welcome further work on green finance and ways to improve resource efficiency.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and the Bagley Group's Jack Bagley was the first of many to identify Columbia as the state capital that shares its name with a NASA space shuttle. For today: Which state capital shares its name with a tunnel underneath the Hudson River, an American luxury automobile brand, and a DC restaurant? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy , and @POLITICOPro.

SOMETHING FOR EVERYONE TO CHEER/WORRY ABOUT RFS PROPOSAL: EPA gave a little bit to everyone when it proposed how much biofuel would go into the nation's fuel system in 2018 on Wednesday. Big RFS backer Iowa Sen. Chuck Grassley called the proposal "a mixed bag" in his statement. Pro's Eric Wolff breaks down who got what.

Ethanol gets...15 billion gallons! All ethanol producers wanted for Independence Day was a continuation of the Obama administration's requirement that 15 billion gallons of ethanol go into the nation's fuel system, and EPA Administrator Scott Pruitt gave it to them. "It's a strong signal to the marketplace, and it reaffirms the commitment the president made on ethanol," Growth Energy's Chris Bliley told ME. Team Ethanol is banking on a major market opening up in China, so a stable domestic market promises to keep it on stable footing.

Oil gets... a 40 million gallon reduction!: Pruitt, a long time ally of the oil industry, made one change since June when the volumes were supposed to go out: Instead of increasing the required volume of advanced biofuels, he decided to cut them by 40 million gallons, reducing the overall amount of biofuel required under the program. Oil interests decided to score that shift (of about four days' worth of gasoline consumption) as a win. "We are pleased the Environmental Protection Agency has, for the first time in the history of the RFS, proposed a reduction in the amount of biofuels that must be used in the U.S.," Chet Thompson, CEO of American Fuel and Petrochemical Manufacturers, said in a statement.

Advanced biofuels get... rocks: Pruitt reduced overall advanced biofuels in 2017, kept advanced biodiesel steady in 2019, and cut by about a quarter the cellulosic ethanol mandate for fuels from agricultural products that have a much smaller carbon footprint. That set off alarm bells for advanced biofuel promoters like Brooke Coleman, who said EPA risked "fumbling the cellulosic ball."

Shadows on the horizon: Eric reports that Pruitt also opened the door to significant changes down the road, launching an analysis for a "reset" of the volumes allowed under the law, asking for comment on imported ethanol and biodiesel, and for an examination of the market for zero

percent ethanol.

It's only a proposal: EPA often modifies its proposed volumes when it issues a final rule. Now the agency has until Nov. 30 to take comment and produce a final rule. The clock is ticking.

TAKING THE LONGVIEW: Energy Secretary Rick Perry makes his first official to West Virginia today where he'll tour the 700-megawatt Longview power plant and the National Energy Technology Laboratory in the Morgantown area. But he won't be alone on his tour: West Virginia Sens. Joe Manchin (D) and Shelley Moore Capito (R), as well as Rep. David McKinley (R), are expected to participate as well.

Manchin previewed the visit on West Virginia radio Tuesday. "We will show him a clean power plant and what it can do and why it works so well with the energy mix that we need," he told MetroNews Talkline with Hoppy Kercheval. Manchin added that while the Trump administration has been "very good on energy, trying to find a pathway forward," the U.S. has "got to be careful to find that balance between the environment and economy. You can't throw caution to the wind with either one." (Discussion occurs around 55:30 mark of the recording here).

TWO STATES SUE OVER BLM'S METHANE STAY: The attorneys general of California and New Mexico sued Interior Wednesday over what they said is the "illegal" postponement by BLM earlier in June of certain portions of its methane waste rule. Both states argue the Trump administration violated the Administrative Procedure Act in delaying certain compliance dates associated with the rule indefinitely because the overall regulation had already taken effect in January 2017. The Senate came up short in its bid to block the regulation using the Congressional Review Act back in May.

** **Presented by ExxonMobil**: Biofuel refined from algae could transform how we power automobiles and jet planes. It's energy-rich and emits significantly less CO_2 than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're actively researching this technology to move it from the petri dish to the fuel tank: EnergyFactor.com**

ME FIRST - LAWSUIT FILED FOR NOAA RECORDS: Cause of Action Institute, a non-profit that advocates for limited government, is filing a lawsuit this morning seeking NOAA guidance on retention of instant messaging records, as well as specific employee communications during an April New England Fishery Management Council meeting. The group argues the agency has failed to adequately respond to two FOIA requests within statutory deadlines. "NOAA appears to have created an internal messaging platform to hide records from public disclosure," Julie Smith, the group's vice president, said in a statement. "Any directive to make certain communications be considered 'off-the-record' clearly violates transparency laws."

ZINKE'S SCHEDULE RELEASED: Glancing through Interior Secretary Ryan Zinke's calendar shows a bevvy of meetings with fossil fuel industry groups and companies, members of Congress and governors, Pro's Esther Whieldon reports. Among the highlights: a half-hour May 22 meeting with officials from the American Petroleum Institute and sessions with nearly a dozen lawmakers, including Senate Environment and Public Works Chairman John Barrasso (R-

Wyo.), House Energy and Commerce Chairman Greg Walden (R-Ore.). Zinke also met with Oregon Gov. Kate Brown, a Democrat, and Sens. Angus King (I-Maine), Susan Collins (R-Maine) and Catherine Cortez Masto (D-Nev.), among others.

LCV HITS GOP ON MONUMENT REVIEW: The League of Conservation Voters is launching a $75,000 campaign across various media, including Snapchat, Instagram and Facebook, urging Republican Sens. Dean Heller, Jeff Flake, Jim Risch and Mike Crapo to reject efforts to alter national monuments in their states. Samples of the Instagram and Facebook ads here and here.

MAIL CALL! GROUPS URGE CLEAN SPENDING BILLS: A broad coalition of 173 groups, including environmental advocates Oceana, Defenders of Wildlife, Clean Water Action and Union of Concerned Scientists, sent a letter to members of Congress Wednesday urging them to pass spending bills without policy riders. "Contentious poison pill riders are intended to advance the priorities of special interest donors and supporters and should not be included in funding bills," they wrote.

HAPPY BIRTHDAY! The National Renewable Energy Laboratory celebrates its 40th anniversary this week. "Your work shows it's possible to grow our economy and protect natural resources at the same time," Perry tweeted Wednesday. NREL released a list of its accomplishments in honor of the anniversary.

SHOULD I STAY OR SHOULD I GO NOW? New York Magazine published an interesting look from six federal employees, including one from EPA, about how they're handling their duties and whether they've considered leaving in the Trump era. "Kind of surprisingly, nobody has said, 'I can't take it,' and left," the EPA employee involved in research and policy matters said. "I really love my job, and I thought I would just stay. But now that I've started interviewing for stuff, it just feels like, if I don't really sell myself and get out sooner rather than later, I might be stuck." A DOE employee described the situation as "quite depressing" and warned of "hearing about the potential for losing the next generation of scientists and engineers."

EXPLORING CASE STUDIES ON COAL'S DECLINE: The Wilderness Society is out with a report this morning examining four cases studies of what it says are the social and environmental costs of burning publicly owned coal and why it's unlikely the industry can ever recover. The report looks at the Reid Gardner Generating Station in Nevada, the Valley Power Plant in Milwaukee, the J.T. Deely Station in San Antonio, and C.P. Crane Generating Station in Baltimore. "The reduction in demand for coal from plants like these, coupled with cost competitiveness from alternative forms of energy like solar, wind and natural gas, propels an inevitable decline in coal mining on our public lands," it concludes.

MOVERS, SHAKERS: David Asmus has joined Sidley Austin LLP as co-leaders of the firm's energy practice. He's past president of the Association of International Petroleum Negotiators and a past chair of the Institute for Energy Law. Also joining the firm as a partner is Brian Bradshaw. "Their reputations in the energy field globally bring an important added dimension to our energy practice," Kevin Lewis, co-managing partner of Sidley's Houston office, said in a statement.

Subject: Murkowski pushing for energy bill action this work period

By Anthony Adragna

07/11/2017 03:08 PM EDT

Senate Energy and Natural Resources Chairwoman Lisa Murkowski told reporters today she's hoping a broad energy package S. 1460 (115) can secure some floor time during the current work period — which Senate Majority Leader Mitch McConnell says will extend into the middle of next month.

McConnell announced this afternoon that the Senate would cancel the first two weeks of its August recess to give Republican lawmakers more time to work through their daunting to-do list, which includes repealing Obamacare and raising the debt limit.

"We have a bipartisan product that's ready to go, and why wouldn't you want to take it up?" Murkowski said, urging lawmakers to consider the package "in these spaces that we have."

She acknowledged she'd need Democratic cooperation to prevent the legislation — which is largely unchanged from a version that passed the Senate 85-12 in April 2016 — from being bogged down by procedural hurdles.

Subject: Today on Climate Beat

September 8, 2017

Today on Climate Beat . . .

. . . we got prepared, reporting that Senate environment committee ranking member Tom Carper (D-DE) is urging President Donald Trump to take numerous steps to manage the consequences of climate change, including reinstating a recently revoked flood management standard and funding climate resiliency efforts.

Speaking of Congress, eight Democratic senators are pressing EPA to explain its plans for enforcing the agency's rule governing methane emissions from new oil and gas facilities, raising concerns that EPA's pledge for "case-by-case" enforcement might be an "attempt to circumvent" a court ruling that reinstated a key June deadline to spot methane leaks.

In personnel news, the White House tapped Bill Wehrum, an industry attorney who was acting EPA air chief during the Bush administration, to lead the office again amid ongoing efforts to target Obama-era climate and air rules.

In litigation updates, EPA is again asking an appellate court to delay litigation challenging its rule updating refrigerant management guidelines to include "substitute" chemicals that are potent greenhouse gases, continuing to signal a possible agreement with rule challengers to reduce or eliminate the need for litigation.

And we also highlighted some of the must-read stories from this past week, including reports on California's plans for passenger vehicle greenhouse gas rules, as well as FERC's GHG analysis, heavy-duty truck GHG rules and congressional pushback on flood policy.

Subject: EPA Weekly Round-Up For 06/23/17

The EPA's Weekly Round-Up ...

From announcing TSCA framework chemical rules, saving the taxpayers $1 million a year by ending the lucrative subsidy for EPA gyms, to a must-read editorial from the Oklahoman that sets the record straight about EPA Administrator Pruitt, it was another winning week at the EPA.

NATIONAL COVERAGE …

The Wall Street Journal reports that the EPA released new chemical testing rules that will protect the environment and provide certainty to businesses. "The Environmental Protection Agency on Thursday released rules enabling the agency to prioritize the testing of certain chemicals used in consumer goods and other products while forgoing the testing of others, overturning more sweeping Obama-era procedures that the chemicals industry deemed overly burdensome. Under the new rules, the agency will have more discretion to determine which chemicals and uses are evaluated for environmental and public health risks and which aren't."

The San Francisco Chronicle reports these rules will regulate toxic chemicals found in everyday products. "The rules, issued on the one-year anniversary of the law's signature by President Barack Obama, set standards for how the EPA will identify and evaluate high-priority chemicals and impose reporting requirements for industry. The new law regulates tens of thousands of toxic chemicals found in everyday products, from household cleaners to clothing and furniture."

Click Here To Watch The Video

CNN reports that the EPA has ended the taxpayer subsidy for gym memberships for employees. "The Trump administration is ending a program which subsidizes gym memberships for Environmental Protection Agency employees."

Additionally, the Washington Free Beacon reports that this move will save taxpayers $1 million. "The Environmental Protection Agency has ended a nearly $1 million program that provided gym memberships for employees. The new administration under EPA administrator Scott Pruitt identified the gym memberships as an abuse of taxpayer dollars. Examples of the program's misuse included $15,000 for gym memberships for 37 EPA scientists in Las Vegas last year."

TO THE STATES …

In Oklahoma, the editorial board at the Oklahoman writes that despite an effort by some to sensationalize, there is nothing nefarious about Pruitt dealing with the No. 1 industry in his state. "The disdain that some in the media have for President Trump and members of his administration is evident regularly. Recent coverage related to EPA administrator Scott Pruitt provides an example of interest to locals because of Pruitt's Oklahoma ties. … An Associated Press

story from Washington last week about emails Pruitt sent and received as attorney general did what it could to further establish Pruitt as a minion for the oil and gas industry — which environmentalists see as dead set on ruining the earth as we know it. The AP, a wire service used by media outlets around the world including The Oklahoman, said the emails 'underscore just how closely' Pruitt 'coordinated with fossil fuel companies' as Oklahoma's AG, 'a position in which he frequently sued to block federal efforts to curb planet-warming carbon emissions.' That's quite an opening paragraph. Pruitt didn't just work with energy companies while attorney general — he worked 'closely' with 'fossil fuel companies' (the ultimate bogey men) to essentially keep global warming from abating. … The fact Pruitt regularly corresponded and dealt with energy industry officials as attorney general of a state where energy is the No. 1 industry should not be surprising nor should it, by itself, be considered nefarious."

In Pennsylvania, the Pittsburgh Tribune reports that the EPA is working to clean-up communities in the Keystone State. "Monroeville, Penn Hills, Plum and other east suburban communities may benefit from a federal grant designed to identify and analyze brownfields. The Turtle Creek Valley Council of Governments recently was awarded $300,000 from the federal Environmental Protection Agency to continue its site assessments, develop clean-up plans and support community outreach as part of a partnership with Steel Rivers Council of Governments.

In Vermont, Vermont Public Radio reports that the EPA is working to clean-up three communities in the southern part of the state. "Brattleboro, Bellows Falls and Bennington will share $700,000 in Environmental Protection Agency cleanup funding to redevelop former industrial properties. The EPA Brownfields Program supports the first stages of hazardous cleanup on former industrial sites."

In Wisconsin, WQOW-TV reports that the EPA is working to cleanup an area near UW-Eau Claire's campus. "On Wednesday, News 18 reported on the $500,000 EPA grant the Sonnentag Complex Project was set to receive from the Wisconsin Economic Development Corporation. On Thursday, officials behind the project revealed how that money will be spent."

Military Climate Study Survives With Crucial House GOP Votes

Language directing the Defense Department to focus on national security threats climate change poses survived in the fiscal 2018 defense bill. The House passed July 14 the National Defense Authorization Act, which retains the climate-related national security provisions, by a vote of 344-81. That vote came a day after Republicans suffered a rare defeat in trying to kill a climate measure.

Energy

Renewable Energy Not a Threat to Grid, Draft of U.S. Study Finds

Wind and solar power don't pose a significant threat to the reliability of the U.S. power grid, Energy Department staff members said in a draft report, contradicting statements by their leader Rick Perry.

General Policy

Week Ahead: N.J. Republican Lawmaker Boosting EPA's Budget

Rep. Rodney Frelinghuysen (R-N.J.) will get an initial public crack at boosting EPA spending as House Appropriations Committee chairman at a Tuesday committee markup of the fiscal 2018 budget bill, one of numerous environment and energy events scheduled for the week of July 17.

News

Air Pollution

Germany to Test More Daimler Vehicles in Diesel Emissions Probe

The German government said it will test additional vehicles made by Daimler AG, a day after

company executives were summoned to Berlin for an extraordinary meeting about the ongoing probe into the carmaker's diesel emissions.

Climate Change

Asia at Risk of Deeper Poverty Due to Climate Change, Bank Says

Asia and the Pacific, home to two thirds of the world's poor, are at the highest risk of suffering deeper poverty and disaster due to unabated climate change, reversing current development gains, according to the Asian Development Bank.

Climate Policy

Carbon from L.A. to Paris Jumps as Lawmakers Plan Tightening

Carbon prices from California to New Zealand are soaring as lawmakers across the globe seek more stringent rules for their greenhouse-gas markets.

Endangered Species

Correction

The July 13 article, "Interior Picks Hint at Lesser Focus on Endangered Species," incorrectly reported Todd Willens' title at the Interior Department. He is the assistant deputy secretary. The online version of the story has been corrected.

Energy

Federal Judge Upholds Safety Net for Midwest Nuclear Reactors

A U.S. district judge in Illinois ruled July 14 to uphold subsidies to support two of Exelon Corp.'s nuclear plants in the state.

Energy

Jones Day Lawyer Tapped to Chair Federal Energy Regulator

Energy attorney Kevin McIntyre, co-head of the energy practice at the Jones Day law firm, was tapped to be chairman of the Federal Energy Regulatory Commission, which has been without a quorum since February.

Energy

Solar Eclipse Could Wipe Out 9,000 Megawatts of Power

The eclipse set to darken skies next month threatens to sideline solar farms and rooftop panels in a wide swath of the U.S., wiping out enough power generation to supply about 7 million homes.

Energy

Trump Picks Lawyer for Energy Regulator Without Quorum

President Donald Trump named attorney Kevin McIntyre as his pick for chairman of the Federal Energy Regulatory Commission, paving the way for the agency to regain its authority to rule on natural gas pipelines and contested utility mergers.

Environmental Reviews

Local Planners Get Boost in California Climate Decision

Local planning agencies have discretion in how they evaluate the climate impacts of infrastructure projects, the California Supreme Court said in a highly anticipated decision. But the ruling leaves unclear whether those environmental reviews must be consistent with greenhouse gas goals set out in a governor's executive order.

International Issues

China Counts Costs of Tackling Its 'Grave' Pollution Problem

Xie Shuijuan, a lifelong textile seller in Shaoxing, eastern China, says a clampdown by

zealous officials on pollution caused by the local dyeing industry has boosted prices, squeezed her margins, and bankrupted some of her friends.

Motor Vehicles

Daimler Says It's Ready to Fight Emissions Cheating Accusations

Daimler AG said it would push back against allegations that it manipulated emissions in its Mercedes-Benz engines, as a German government probe into the luxury-car maker deepens.

Oil & Gas

U.S. Said to Stymie Japan's Plan to Explore for Russian Oil

A Japanese group's plans to explore for Russian oil with state-run Rosneft PJSC have been stymied by U.S. intervention over sanctions, according to people familiar with the matter.

Oil & Gas

U.S. Says Energy Transfer's Rover Gas Project Violated Rules

U.S. regulators are accusing Energy Transfer Partners LP of violating federal rules by failing to disclose information about a historic house it razed to make way for the controversial Rover natural gas pipeline.

Renewable Energy

Brazil Projects Rapid Growth in Wind and Solar by 2026

Brazil's latest 10-year energy expansion plan sees wind power doubling to a 13 percent share of the electricity matrix, while solar power stands to also gain a foothold.

Superfund

Soil Removal Necessary at Colorado Smelter Site, EPA Says

Eighteen inches of soil contaminated with lead and arsenic need to removed to protect residents near a Pueblo, Colo., which is typical for similar Superfund sites, the EPA said.

Trade Policy

U.S.-China Trade Deals Expected as 100-day Plan Concludes

China and the U.S. are poised to advance new trade deals and may discuss resuming bilateral investment treaty talks, a source close to the government told Bloomberg BNA July 14.

Vehicle Fuels

Big Oil Just Woke Up to Threat of Rising Electric Car Demand

The world's biggest oil producers are starting to take electric vehicles seriously as a long-term threat.

Water Pollution

Brazil to Loan $625M to States, Cities to Upgrade Sanitation

Brazil will provide 2 billion reais ($625 million) in low-cost loans to states and municipalities that most urgently need to upgrade basic sanitation, in particular water and sewage treatment, a ministry official told Bloomberg BNA.

EPA's Scott Pruitt Drains The Swamp Like No One Else In Washington

The Hill
November 16, 2017
Emmett McGroarty And Erin Tuttle
http://thehill.com/opinion/energy-environment/360763-epas-scott-pruitt-drains-the-swamp-like-no-one-else-in-washington

EPA Administrator Scott Pruitt is a man who gets things done. Despite resistance from within his own agency and an environment lobby bent on stopping him, he's doing his part to drain the swamp and return government to the people. He's bringing what citizens demand of a federal agency: Transparency and reasoned, fact-based decision-making resting on sound statutory footing.

Take the contentious issue of global warming. Pruitt called for a reasoned debate. But his critics mocked the suggestion, claiming it would be an outrage to place "fringe" views on an even platform with "established, peer-reviewed research." But it is tyrants and mobs — not reasonable policymakers intent on serving the public — who ridicule debate and discussion. It undercuts arbitrary rule and fear, their chief weapons.

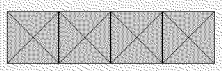
Consider Pruitt's recent directive prohibiting scientists from serving on one of the agency's three main advisory panels while they are receiving EPA grant funding. It applies to the three main advisory boards at the EPA: The Science Advisory Board, the Clean Air Scientific Advisory Committee (CASAC), and the Board of Scientific Counselors (BOSC).

Pruitt made the case that the directive is necessary to ensure the agency's research programs are informed by independent experts with no financial ties to the programs. As he noted, advisory board members have received $77 million in grant money over the past three years — half of the total amount allotted.

"When we have members of those committees that received tens of millions of dollars in grants at the same time that they are advising this agency on rulemaking, that is not good," Pruitt said. His directive is prudent, and it is the type of common-sense safeguard that citizens expect in a self-governed republic.

In contrast, the resistance of the EPA's bureaucracy and its apologists shows arrogant contempt for the citizen. Board member and chair of BOSC, Deborah Swackhamer, seemingly unfazed by these relationships, labeled Pruitt's directive as "clearly political" and suggested it is an attempt to effectively stack the committees with members who disagree with her (although she didn't put it quite that way).

What's really going on at EPA is the swamp draining that needs to happen across the federal bureaucracy. It is a death-fight (meant figuratively) for bureaucrats intent at reshaping society according to their world-view. To do so, they need to maintain an appearance that scientific consensus supports their views.



...

But, as Pruitt commented, the focus at EPA should be "sound science, not political science." His approach should be emulated by the other agencies.

Climate Regulation
Clean Power Plan Review Tests EPA's Climate Change Obligations
Whether the EPA has an obligation to address climate change will be central as the agency begins its efforts to roll back Obama-era limits on carbon dioxide pollution from power plants.

Enforcement
Who Will Justice Let Cash in on Environmental Settlements?
The National Fish and Wildlife Foundation received a check for $7 million from Princess Cruise Line in April, but not as a typical act of charity. Rather, the payment was part of a $40 million settlement the cruise line made with the federal government to resolve allegations that it violated the Clean Water Act by illegally dumping oil waste and falsifying oil spill records.

General Policy
Week Ahead: Pruitt Meets the Purse-String Holders
EPA Administrator Scott Pruitt will explain to Congress why he believes cutting his agency's budget by 31 percent is a good idea, one of numerous energy and environment events during the week of June 12.

News

Air Pollution
Poor Data, Lax Enforcement Mar EPA's Oversight of Benzene Rule
Benzene emissions from gasoline may be higher than the EPA estimates because poor data quality and inconsistent enforcement are hampering the agency's efforts, the inspector

general said.

Budget

Expect GOP Plaudits for Pruitt But Not EPA Budget at Hearing

EPA chief Scott Pruitt will likely get a warm welcome from Republican appropriators next week despite bipartisan opposition to the agency's fiscal year 2018 budget, a GOP lawmaker told Bloomberg BNA.

Chemicals

Webinar: Reviewing New Chemicals Under Amended TSCA

Bergeson & Campbell, P.C. and Bloomberg BNA present a free webinar Monday, June 12, "Reviewing New Chemicals Under Amended TSCA: Impact on Innovation." Speakers include Lynn Bergeson, managing partner of Bergeson & Campbell; Richard Engler, senior chemist at Bergeson & Campbell; Charlie Auer, senior regulatory and policy adviser at Bergeson & Campbell; Jeffery Morris, director of the Office of Pollution Prevention and Toxics at the EPA; Beth Bosley, president of ...

Climate Change

EPA's Pruitt Could Face Tough Crowd at G-7 Environment Meeting

Climate-related issues are just one part of the agenda for this weekend's meeting in Italy of environment ministers from the leading industrial nations, but EPA Administrator Scott Pruitt can expect an earful on the decision of the U.S. to withdraw from the Paris climate change agreement, environmental groups said.

Climate Change

Paris Pullout Pits Chamber Against Some of Its Biggest Members

As President Donald Trump mulled whether to exit the Paris climate accord, companies as varied as Dow Chemical Corp., Exxon Mobil Corp., and Citigroup Inc. prodded him to stay in.

Climate Policy

Trump Climate Critics Wrong on Pulling Out of Paris, Perry Says

Critics of President Donald Trump's move to withdraw the U.S. from the Paris climate change agreement are acting more for political reasons than for the reality of what the accord may achieve, U.S. Energy Secretary Rick Perry said June 9 in an interview where he defended the president's move.

Coal Mining

Concern Raised About Peabody Mine Cleanup on Navajo, Hopi Land

Arizona residents and environmentalists are growing increasingly worried about the cleanup of a large coal mine that's moving swiftly toward closure. Peabody Energy Corp., the mine's operator, promises that the reclamation will be done right.

EPA

EPA Failed to Update Science Advisory Board Policies, GAO Says

The Environmental Protection Agency failed to adequately update policies for diversifying the scientists who advise the agency on policy matters, the U.S. Government Accountability Office said in a report on June 8. The GAO found that the agency did not adequately develop an updated policy statement on its Science Advisory Board, a group of scientific experts that advise the agency. The Federal Advisory Commission Act requires the EPA to establish guidelines for the advisory board.

Emissions Trading

Carbon Prices Continue to Drop in Northeast

The cost for electricity generators to comply with the Regional Greenhouse Gas Initiative sank to a four-and-a-half-year low in RGGI's latest auction, driven by an oversupplied market and uncertainty over a longstanding program review by the nine states in the initiative.

Energy

'Game-Changer' Electricity Goal May Cut Australia's Emissions

Australia should introduce a Clean Energy Target program for electricity generators to help lower its greenhouse gas emissions, the country's chief scientist said in a report.

Energy

German Clean Power Surges Risk Grid Blackouts, Instability

Germany's electricity grid was pushed to the limit of stability last year and blackout risks will remain as long as network infrastructure fails to keep up with surging clean power, according to operator Amprion GmbH.

Energy

HIKO Mulling Appeal on $1.8M Fine for Overcharging

HIKO Energy LLC may appeal a court's decision to uphold a $1.8 million fine against the company, an attorney for the East Coast electric generation supplier told Bloomberg BNA June 9.

Energy

India Power Plants Stranded as 50 Million Homes Left in the Dark

India is scaling back expectations for power demand growth as it struggles to electrify millions of homes despite a glut in generation capacity.

Enforcement

Exxon Says N.Y. Attorney General Distorts Company's Climate Data

Exxon Mobil Corp. accused New York Attorney General Eric Schneiderman of wildly distorting in court how the company calculates the long-term financial impact of climate change on its assets.

Enforcement

Hogan Lovells Attorney Named to EPA Enforcement Role

Patrick Traylor, a partner at Hogan Lovells who represented clients on Clean Air Act enforcement and other matters, has started a new job as the EPA's deputy assistant administrator in the Office of Enforcement and Compliance Assurance.

Forests

Lawmakers Aim for Fewer Wildfires, Healthier Forests

A reintroduced bill that would make disaster funding available for the largest wildfires garnered support from both sides of the aisle June 8, just one week before another bill addressing forest management issues is set for discussion in the House.

Hazardous Waste

General Electric Challenges EPA on $613 Million Cleanup

General Electric says the Environmental Protection Agency's orders for cleaning up chemical pollution along the Housatonic River are too expensive and too demanding.

Infrastructure

Slashing Permit Wait Time Key to Fixing Infrastructure: Trump

President Donald Trump called for major changes to the infrastructure approval process, vowing to ease the "excruciating wait time" for federally funded projects.

International Climate

Macron Said to Push for Franco-German Carbon Emissions Price Floor

Emmanuel Macron reached out to Germany to establish a common price floor for carbon dioxide emitted by power utilities as the French president seeks to strengthen his alliance with Angela Merkel after the U.S. decided to exit the Paris climate accord, according to people familiar with the matter.

International Climate

Merkel Says Trump's Climate Stance Is Lowering G-20 Expectations

German Chancellor Angela Merkel said Group of 20 leaders "won't get everything we wished for" at a summit next month after U.S. President Donald Trump's decision to exit the Paris climate accord.

Motor Vehicles

Study of VW's Cheating on Diesels Examines Role of Bosch Code

A study alleges that Robert Bosch Gmbh created the software that enabled Volkswagen AG to evade diesel emissions standards for years.

Solid Waste

Biosolids Ash Can't Be Used on Farm, Virginia Court Rules

Ash from the incineration of biosolids at a Virginia wastewater treatment plant cannot be used to raise the ground level of a flood-prone agricultural field in the tidewater, the state appeals court ruled.

Stormwater

Mimic Nature to Harness Stormwater Runoff at Parks, EPA Says

Harness stormwater at parks by planting rain gardens with native plants and grasses and installing porous pavements, the EPA recommends in a new guidance.

Toxic Substances

EU Panel Classifies Titanium Dioxide as Cancer Risk

Titanium dioxide, which is widely used in the manufacture of paints, paper, and plastics, should be classified as carcinogenic in the European Union, the European Chemicals Agency said June 9.

Vehicle Fuels

Biofuel Revamp Debate Powers Up, Includes Higher Ethanol Blends

Long-awaited efforts to modify biofuel policy are entering the limelight across Capitol Hill.

Water Pollution

Colorado's Water Permit Fees Going Up for Businesses, Utilities

Colorado companies, such as MillerCoors and Newmont Mining, a host of oil and gas operations, and public and private utilities will pay higher clean water permitting fees under a bill signed by Gov. John Hickenlooper (D).

Water Pollution

Dental Mercury Discharge Rule Freed Up by Lawsuit, Group Says

Limits on the amount of mercury from dental fillings that can be discharged by dentists into the sewer system were re-posted on the EPA's website June 9, after being put on hold by the Trump administration in January.

May 23, 2017

Today on Climate Beat . . .

. . . we hit the pause button, reporting that EPA has formally issued a 90-day stay of its methane standards for new and existing landfills while it reconsiders several provisions, targeting portions of the regulations it says were added "without the benefit of public comment" and that it intends to revise to enhance flexibility.

In Congress, two GOP House members are urging EPA Administrator Scott Pruitt to open the agency's planned, invitation-only scientific integrity stakeholder meeting next month to the public after discovering that the agency had not provided industry and state representatives with adequate representation at the meeting.

And our daily news roundup offered an early look at the Trump administration's fiscal year 2018 budget proposal, while also noting a report about California pushing ahead on climate efforts despite a federal retrenchment.

Subject: BREAKING NEWS: Sessions calls suggestion he colluded with Russia a 'detestable lie'

Attorney General Jeff Sessions testified at a Senate hearing on Tuesday that he did not have a third undisclosed meeting with Russian ambassador Sergey Kislyak as he denied any notion that he colluded with Russian officials during President Donald Trump's campaign.

"The suggestion that I participated in any collusion or that I was aware of any collusion with the Russian government to hurt this country, which I have served with honor for over 35 years, or to undermine the integrity of our democratic process, is an appalling and detestable lie," Sessions said before the Senate Intelligence Committee.

Sessions had been forced to clarify remarks from his confirmation hearing in January that he did not have communications with Russian officials when two previous meetings with Kisylak surfaced earlier this year. But the Justice Department has repeatedly denied that a third meeting took place, reportedly at the Mayflower Hotel in April 2016.

"I did not have any private meetings nor do I recall any conversations with any Russian officials at the Mayflower Hotel," Sessions said on Tuesday.

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Chevron

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BULLETIN -- AP at noon: "NEW YORK (AP) - Richard Cordray, Obama-appointed director of Consumer Financial Protection Bureau, says he will resign at month's end."

Good Wednesday afternoon. JAKE'S FAULT -- WE REPORTED in Playbook this morning that the debt limit and government funding need to be resolved in the next 23 days. The debt limit does not need to be lifted next month. It will need to be lifted sometime in early- to mid-2018. Another fight! In an election year!

NEW -- HEALTH CARE PROVIDERS AGAINST INDIVIDUAL MANDATE REPEAL -- America's Health Insurance Plans, American Academy of Family Physicians, American Hospital Association, American Medical Association, Blue Cross Blue Shield Association, and Federation of American Hospitals -- wrote a letter to congressional leaders urging the Hill to not cut the individual mandate during the tax cut deliberations. ***The letter*** http://politi.co/2hCIhSj

BREAKING -- CLEVELAND PLAIN DEALER: "Ohio Rep. Wes Goodman resigns over 'inappropriate behavior,'" by Jackie Borchardt: "Rep. Wes Goodman resigned his seat after House leaders confronted the Cardington Republican about 'inappropriate behavior.' House Speaker Cliff Rosenberger said he was alerted Tuesday afternoon to Goodman's involvement in 'inappropriate behavior related to his state office.' Rosenberger met with Goodman later Tuesday, and the representative confirmed the allegations.

"'It became clear that his resignation was the most appropriate course of action for him, his family, the constituents of the 87th House District and this institution,' Rosenberger said in a statement Wednesday. Later Wednesday morning, cleveland.com interviewed Rosenberger after an event in Wilmington, Ohio where he endorsed Attorney General Mike DeWine for governor. Rosenberger said there had been an inappropriate interaction in Goodman's office between Goodman and a person not employed by the legislature. Rosenberger wouldn't say when the incident happened or provide any more details." http://bit.ly/2ikC8ay

-- **GOODMAN** worked for Ohio Rep. Jim Jordan in Washington and was a well-known figure in conservative moment politics. He was known to be eyeing a run for retiring Rep. Pat Tiberi's seat.

HEADACHE FOR PELOSI -- "Six Democrats demand Trump impeachment hearings," by Nolan McCaskill: "Rep. Steve Cohen (D-Tenn.) told reporters that five other Democrats have signed on to his resolution to introduce five articles of impeachment against the president. The Democrats charge that Trump obstructed justice when he fired FBI Director James Comey; that he has violated the Constitution's emoluments clause by continuing to frequent and profit from his businesses; and that he has undermined the federal judiciary and freedom of the press." http://politi.co/2hBuBXu

TRUMP INC. -- "The Trump Organization sees fortunes fall," by Crain's New York's Aaron Elstein: "Not only are the Trump Organization's plans to develop a hotel here going nowhere, but prices are slumping for condos at Trump Tower and the Trump International Hotel and Tower. And golfers are shunning the Trump Golf Links at Ferry Point in the Bronx, where revenue through mid-September had fallen by more than $1.1 million in the past two years, to $5.7 million, amid a 16% drop in rounds played.

"In addition, the Trump Organization, a perennial leader on the Crain's list of largest privately held companies, has fallen steeply in the rankings, to No. 40 from No. 3 last year, following the president's disclosures to federal regulators that revealed the organization's revenue is less than a 10th of what the firm had reported since at least 2010." http://bit.ly/2juZyx7

BIG ONLINE -- "Net neutrality fight is about to flare again," by Margaret Harding McGill: "The FCC, under Trump-appointed Chairman Ajit Pai, is readying a final order that will spell out how thoroughly it intends to roll back the 2015 net neutrality order, which requires internet service providers like Verizon and Comcast to treat all web traffic equally. The release could come as early as next week, teeing up a possible commission vote in December.

"So far, Pai has said he wants to scrap the legal foundation that the FCC's old Democratic majority adopted to tighten federal oversight of ISPs, a move he contends has deterred the industry from investing in broadband networks. But he could also opt to eliminate the FCC's core net neutrality rules altogether -- which would in theory allow ISPs to block or throttle some types of web traffic, or charge websites for 'fast lanes' to consumers." http://politi.co/2juiAnl

PRESSURE ON COLLINS -- "Small-business group launches pro-tax reform ad campaign in Maine," by Colin Wilhelm: "The Job Creators Network, a conservative small business organization, will launch a pro-tax reform ad campaign in Maine, a move that could pressure moderate Republican Sen. Susan Collins to vote yes on the bill. ... [A release] said the ad campaign purchase is 'six-figure' and will air on cable news in the Bangor-area media market in addition to online." ***More for Pros***

http://politico.pro/2hzeauQ

PAGING HARRY REID -- "Trump's budget chief says funding for Yucca Mountain was his idea," by the Las Vegas Review-Journal's Debra Saunders: "President Donald Trump's top budget man, Mick Mulvaney, solved a mystery Tuesday. Asked who put $120 million into Trump's spending plan to restart licensing for a Yucca Mountain nuclear waste repository and other interim storage, Mulvaney said he did. 'Whose idea was to put it in there?' the Office of Management and Budget director replied. 'I wrote the budget and I am very interested in seeing that issue explored further. We have to put this stuff someplace. So the $120 million you saw, it was actually very minor. I'm surprised it got that much attention as it did. It's only to explore the possibility of licensing.'" http://bit.ly/2AIrLny

NOT SUBTLE AT ALL -- @MSNBC: "Roy Moore's Attny. Trenton Garmon suggests Ali Velshi's 'background' would help him understand why Moore would date underage women -- @AliVelshi is from Canada". *Video* http://bit.ly/2hBrTkM

****** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat- buckwheat. Watch the video: http://politi.co/2ArlBXv ******

TRUMP VS. NYT -- @realDonaldTrump at 11:35 a.m.: "The failing @nytimes hates the fact that I have developed a great relationship with World leaders like Xi Jinping, President of China....." ... **at 11:39 a.m.:** "...They should realize that these relationships are a good thing, not a bad thing. The U.S. is being respected again. Watch Trade!" ... **at 11:52 a.m.:** "It is actually hard to believe how naive (or dumb) the Failing @nytimes is when it comes to foreign policy...weak and ineffective!"

RICK STENGEL in **POLITICO Magazine -- "What Hillary Knew About Putin's Propaganda Machine":** "On a Saturday morning after I'd been in the job for two months -- about four weeks after Vladimir Putin's troops invaded Crimea -- I got a call from the State Department operations center saying they had the secretary on the line. Only it wasn't Secretary John Kerry, my boss, but former Secretary Hillary Clinton. I had known, liked and admired Clinton for a long time, and I assumed she was calling belatedly to say congratulations. I was wrong. After a perfunctory hello, she launched right into it: We're losing the information war with Russia.

""**She urged me to stand up** a much stronger and more robust messaging machine to compete with the firehose of Russian propaganda and disinformation that was besmirching America's image and undermining democracy around the world. 'They're using the old techniques of repeating lies over and over but doing so on 21st century platforms,' she said. You need to fact-check what they are saying and expose Russian disinformation in real time, she continued. We need to do much more. I remember how she ended the call: 'The State Department is still issuing press releases while Putin is rewriting history.' She was right." http://politi.co/2jsjgtw

NOT DEAD YET -- "Defying gloomy predictions, Obamacare enrollment surges," by Paul Demko: "Doomsday headlines about Obamacare enrollment may be having an unforeseen consequence: booming sign-ups in the troubled insurance marketplaces. Obamacare's fifth open enrollment season, the first under President Donald Trump, is off to a surprisingly robust start despite the brutal developments of the past year -- skyrocketing premiums, dwindling competition, unremitting Republican efforts to eradicate it.

"Sign-ups surged as soon as enrollment opened Nov. 1, easily surpassing the number of Americans getting coverage during the opening days of the final two sign-up periods under the Obama administration. CMS on Wednesday reported nearly 1.5 million people had selected plans through Nov. 11. In other words, there might be no such thing as bad news for Obamacare." http://politi.co/2jqAIhQ

SPORTS BLINK -- "How Trump Helped Liberate U.C.L.A. 'Knuckleheads' From China," by NYT's Mark Landler and Mike Shear: "The alleged offense was hardly life or death. But what begun as a simple accusation of celebrity shoplifting [from three UCLA basketball players] threatened to escalate into a full-blown international incident just as Mr. Trump arrived in China on a 12-day mission through Asia, his first foreign trip to the region. 'These are law and order guys; they have pretty swift justice,' John Kelly, the president's chief of staff, said of the Chinese authorities in an telephone interview later. 'An awful lot of American kids don't realize that the kinds of things that in United States society we tolerate with a slap on the wrist, a lot of countries they take very seriously.' ...

"Mr. Kelly, who arrived back in the United States with Mr. Trump Tuesday night aboard Air Force One, provided details about the president's diplomatic outreach on behalf of the U.C.L.A. players. 'Our president said to Xi, "Do you know anything about these knuckleheads that got caught allegedly stealing?"' Mr. Kelly said. Unaware of the episode, the Chinese president dispatched an aide to get more information. 'The president was saying, 'It's not too serious. We'd love to see this taken care of in an expeditious way," Mr. Kelly added." http://nyti.ms/2hCMcOJ

-- @realDonaldTrump at 10:11 a.m.: "Do you think the three UCLA Basketball Players will say thank you President Trump? They were headed for 10 years in jail!"

MEDIAWATCH -- "'Unsafe and Just Plain Dirty': Women Accuse Vice of 'Toxic' Sexual Harassment Culture," by Brandy Zadrozny in the Daily Beast: "The Daily Beast spoke with more than a dozen former and current Vice employees in recent weeks about the culture for women inside Vice Media -- and they painted a picture of harassing behavior and company indifference. ... Vice founders Gavin McInnes and Shane Smith have been open about the fact that the Vice brand was built, at least in part, on the objectification of women. In the 90's-era magazine (mostly written by McInnes) naked women graced the magazine's covers and sexual exploitation filled its pages via fact-free articles and features ...

"But their brand expanded quickly. The once humble hipster bible has turned into a

major media player by answering the prayers of old guard media companies vying for millennials -- an audience Vice executives claim to have cornered. Today, Vice is valued at $5.7 billion, thanks to some major investments from Disney and 21st Century Fox. Meanwhile, the men in charge claim to have grown up alongside their company, evolving from 'ignorant, disrespectful and juvenile boors' to leaders of an empire, and purging the most noxious-- namely McInnes -- from their ranks. ...

"While that transformation may be true in terms of reach and wealth, several former employees told The Daily Beast the company is far from the woke media giant it claims to be -- especially in its dealings with the women it employs. In a post-Harvey Weinstein world, where allegations of sexual harassment and assault have ended the careers of powerful journalists like Mark Halperin and Leon Wieseltier, insiders say the spotlight may soon be turning on Vice." http://thebea.st/2hCxoQb

AFTERNOON READ -- "Hate in America: Where it comes from and why it's back," by Yahoo News' Andrew Romano and Lisa Belkin: "Today's haters -- the white-nationalist radicals of the so-called alt-right -- are not nearly as powerful as Adolf Hitler's Nazis, or as pervasive as the small-town bigots of the Jim Crow South. But that doesn't mean they're harmless. Like all waves of hate, this newest one comes with distinct origins and unique challenges.

"Specifically, the rise of the alt-right has been enabled by changing norms and technology that make it easier to become radicalized in the first place. In fact, the rise of hate within America shares roots with the rise of hate toward America; the same tools and trends are helping to facilitate both terrorism and nativism. Hate, in short, is becoming more accessible than ever before -- and that poses a distinctive, and particularly insidious, threat." https://yhoo.it/2juCKh9

CONGRATS -- Matt Friedman, the author of the New Jersey Playbook, who was named to POLITICKER NJ's annual Power List http://bit.ly/2hBxEyQ

TRANSITIONS -- OBAMA ALUMNI -- AVRIL HAINES , former deputy director of the CIA and former deputy national security adviser to President Obama, joined the faculty of the Columbia Law School.

WELCOME TO THE WORLD - Joy Swain, director of corporate research at the U.S. Chamber and a VOX Global alum, and **John Baker,** branch chief of personnel, administration, and travel for the Military Commissions Defense Organization, on Sunday welcomed Samaira Rose Baker, born 6 lbs, 9 oz. *Pic* http://bit.ly/2hCYuqD

****** **A message from Chevron:** This is a story about DOERS, butterflies, and buckwheat. In '75, the endangered El Segundo Blue butterfly was found near a Chevron refinery. We protected the habitat and planted the only thing they eat-buckwheat. We're still planting and keeping an eye on our littlest neighbor. Watch the video: http://politi.co/2ArIBXv ******

Subject: Morning Energy: Pruitt, Zinke join Trump in Ohio today — EPA delays implementation of tightened ozone standard — Clark picked for top DOJ environmental job

By Anthony Adragna | 06/07/2017 05:44 AM EDT

With help from Eric Wolff, Annie Snider and Alex Guillén

TRUMP INFRASTRUCTURE TRAIN ROLLS ON: Both EPA Administrator Scott Pruitt and Interior Secretary Ryan Zinke are expected to be on hand today as President Donald Trump heads down to the banks of the Ohio River. With an Ingram coal barge as a backdrop, Trump is expected to tout the role that inland waterways play in America's agricultural and energy exports. Infrastructure advocates often point out that it's the U.S.'s ability to get goods to market cheaply that allow us to beat out competitors. Zinke is expected to speak about energy dominance during the event as well.

Literally just tossing this out: Because why not, Trump floated the idea of installing solar panels on his proposed Mexican border wall to cover the billions in construction costs during a meeting with congressional leaders Tuesday, POLITICO's Josh Dawsey and Rachael Bade report . It's... not exactly clear just how this would work. ME did some digging, and using 28-inch wide solar panels available at Home Depot (Buy American!), you'd need 4,364,434 panels to run the entire 1,989 miles of the proposed border wall. What's more, you'd create the biggest solar array in the world at 1.25 gigawatts of total capacity (the largest currently is 850 megawatts)! That's before we even get to the issue of how Trump would install the transmission needed to carry all the power and where it would go! One company, Gleason Partners LLC of Las Vegas, actually proposed a similar idea back April, according to the Las Vegas Journal-Review.

OZONE DECISIONS PUSHED: Pruitt announced late Tuesday he would delay deciding which areas of the U.S. do not meet the 2015 ozone standard, saying he needs another year to "consider completely" the states' suggestions "and to rely fully on the most recent air quality data," Pro's Alex Guillén reports. In letters to governors, Pruitt said "there is insufficient information" to act at this time.

In response, Sen. Shelley Moore Capito hailed Pruitt's decision: "State and local governments and employers across the country have had insufficient time to comply with the latest revisions to the ozone standards," she said. But environmental advocates hinted at litigation over the move. "The delay is flagrantly illegal as well as a direct assault on our right to breathe safe, clean air," John Walke, director of NRDC's clean air program, said in a statement.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and Kansas, Mississippi and Tennessee are the three states that are entirely dry by default. (Individual counties can specifically authorize the sale of alcohol.) For today: How many members of the Senate lack a four-year degree? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter: @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

CLARK PICK FOR TOP DOJ ENVIRONMENTAL JOB: Trump has selected veteran Washington attorney Jeffrey Bossert Clark to run DOJ's Environment and Natural Resources Division, Pro's Alex Guillén reports. Clark is involved in the lawsuits challenging EPA's Clean Power Plan and will likely have to recuse himself from that ongoing litigation, if confirmed. He's been a partner at Kirkland & Ellis since 1996, except between 2001 to 2005, when he was the deputy assistant attorney for ENRD.

Blast from the past: Clark has been involved in some other key litigation in recent years. He represented the Alliance of Automobile Manufacturers and National Automobile Dealers Association in lawsuits challenging EPA's 2009 decision to reject a waiver to set more stringent vehicle emissions standards than the federal level. The Obama administration later reversed course and granted that waiver to California, but the Trump administration now is weighing whether to revoke it, a contentious issue. Clark also represented the U.S. Chamber of Commerce in challenges to EPA's greenhouse gas endangerment finding and several early climate rules. And he represented ethanol group Growth Energy in successfully fending off oil industry challenges to an early EPA Renewable Fuel Standard rule.

Also: If you were thinking about protesting his confirmation hearing, Clark is on record as not being a huge fan of protesters who step over the line. In a 1986 piece in the Harvard Crimson, where according to his LinkedIn profile he was editorial page editor, Clark argued that the school "justly" prosecuted political protesters because they "obstructed freedom of movement and violated trespassing laws."

AUDACITY OF (CONTINUED) HOPE: Former President Barack Obama remains optimistic about the chances of tackling climate change despite what he called a "temporary lack of U.S. leadership" on that issue, POLITICO's Jake Lahut reports. "In Paris, we came around to the most ambitious agreement in history to combat climate change, an agreement that even with a temporary lack of U.S. leadership will still give our kids a fighting chance against climate change," Obama said in remarks to Montreal's Chamber of Commerce.

THAT WAS FAST: Mere hours after the Senate EPW Committee scrapped their confirmation hearings due to a lack of paperwork, the White House formally sent nominations for three NRC picks over to Congress, Pro's Darius Dixon reports. The panel now plans to hold a hearing on the nominations of Annie Caputo and David Wright, and the reappointment of Chairwoman Kristine Svinicki, on June 13 at 10 a.m.

REGULATORY CZAR PICK IN THE HOT SEAT: The Senate Homeland Security and Governmental Affairs Committee today hears from Trump's pick to serve as the nation's regulatory gatekeeper, law professor Neomi Rao. The George Mason University's Antonin Scalia Law School professor has previously argued judicial deference has created a "significant expansion" of executive branch authority at the cost of Congress's power and urged lawmakers to pass more specific laws. Trump tapped her to run OMB's Office of Information and Regulatory Affairs in April.

In response, Public Citizen President Robert Weissman said: "It is clear that Trump appointed her to defang regulatory agencies, gut regulatory protections and give corporations a free hand to

pollute and pilfer, poison and profiteer."

MOVE ALONG: Lawmakers on the House Energy and Commerce Committee are expected today to advance 11 energy-related bills, including those addressing energy efficiency and infrastructure permitting. Most of them are fairly minor, and arguably the most consequential is a bill (H.R. 1109) that would amend the Federal Power Act to set $10 million as the minimum threshold for mergers and acquisitions subject to FERC jurisdiction. A full list of bills up for consideration at the markup, which kicks off at 10 a.m. in Rayburn 2123, is available here.

ME FIRST — RFA SAYS RFS HAS WORKED OUT GREAT! The Renewable Fuels Association is out with a report today providing data that the Renewable Fuel Standard is working out just fine, thank you. It shows that gas prices and dependence on foreign oil imports are down since the RFS was signed in 2005, while ethanol jobs grew 121 percent over the same period. The report comes as the E15 debate heats up, with EPW Chairman John Barrasso planning to schedule a hearing and markup on a bill that would allow year-round sales of the E15, a major goal of ethanol producers.

Flag Day for E15?: Mike Lorenz, executive vice president for gasoline retailer Sheetz, said he plans to testify before EPW on Deb Fischer's E15 bill on June 14 at 10 a.m. The committee wouldn't confirm that date, but we'll assume it's set. Lorenz, who lives in Pittsburgh, said he plans to be in town next Tuesday to prepare for the hearing the following day. Sheetz is the largest retailer of 15 percent ethanol fuel in the country. The hearing and eventual markup is part of an agreement between Barrasso and Fischer to win support from corn-state senators for a vote against an Obama-era methane regulation. The bill, which would allow year-round sales of E15, has been long-sought by of ethanol producers.

NEW PUSH AGAINST ROVER PIPELINE: Oil Change International released a new analysis today finding the Rover pipeline (and the natural gas it would transport) would produce as much greenhouse gas pollution as 42 coal-fired power plants — some 145 million metric tons per year — if completed. The $4.2 billion high-pressure natural gas pipeline that would transport natural gas through Pennsylvania, West Virginia, Ohio and Michigan.

Meanwhile, indigenous and green groups are urging 28 major banks not to fund the Trans Mountain pipeline expansion project. In a letter Tuesday, they say the "expansion project is no minor expansion of an existing pipeline; it is a proposal for a new pipeline that would triple Trans Mountain's capacity ... We urge you to avoid the reputational and financial risk of supporting this destructive project."

WHY THE DELAY? Top House Natural Resources Democrat Raul Grijlava wants to know why Interior postponed a scheduled meeting of the Extractive Industries Transparency Initiative, which requires governments to disclose payments they receive for extracting minerals, gas and oil, to an undetermined date later this year. Grijalva asked Zinke in a letter to clarify the administration's position on the group by June 30 and commit to holding a meeting no later than the end of August.

PRUITT FEARS 'QUESTIONABLE' CLIMATE MODELS: Speaking Tuesday on Fox

Business, Pruitt acknowledged human activity contributed to climate change but questioned the validity of modeling on the impacts of the problem. "The modeling that has been used over the last several years has absolutely been questionable," he alleged. "What we do know is human activity contributes to warming, what we do know is it's very difficult to measure with precision the amount of human activity contributing to the warming."

MAIL CALL! NOT SO FAST, MR. SECRETARY: The American Public Power Association and the National Rural Electric Cooperative Association sent a letter to Energy Secretary Rick Perry expressing concern over the administration's proposal to sell off transmission assets of three federal power marketing administrations. "There is no factual evidence that selling the transmission assets of the PMAs would result in a more efficient allocation of resources," the groups wrote. "Rather, it is much more likely that any sale of these assets to private entities would result in attempts by the new owners to charge substantially increased transmission rates to the PMA customers for the same service they have historically received."

NEW PUSH FOR REGULATORY OVERHAUL: Sixteen Republican attorneys general, led by Texas' Ken Paxton, released a letter to Trump Tuesday urging Congress to pass a law saying that no federal agency regulations, interpretations, guidance documents, bulletins, circulars or any other administrative statement are enforceable in federal courts. Instead, those entities would send their actions to Congress for review. "In this way, the lawmaking power would return to where it belongs — Congress — and the judiciary would reemerge as an independent adjudicator of lawsuits between the federal government and the people," they wrote.

MAINE CAN MANAGE ITS OWN PARK: Rep. Bruce Poliquin sent a letter to Zinke arguing Maine could best manage the Katahdin Woods and Waters National Monument while vowing to continue efforts to revamp the president's authority to use the Antiquities Act to designate national monuments. "Whatever your final recommendation, I ask you to convey to the President my continued strong opposition to this unchecked executive power and my request that he supports my long-term solution for local control of monument designations," Poliquin wrote. He notably stopped short of calling for full repeal of the national monument.

Separately, 260 former and current employees of the National Park Service are sending a letter to Zinke today expressing opposition to Trump's order calling for the review of the designation of more than two dozen national monuments under the Antiquities Act.

REPORT: ENERGY DEVELOPMENT ENDANGERS NATIONAL PARKS: The National Parks Conservation Association is out with a report warning of negative consequences from improperly sited oil and gas leases at seven national parks.

REPORT: DIVESTMENT WOULD COST PENSIONS BIG: Divesting from fossil fuels would cost 11 of the biggest public pension funds $4.9 trillion over 50 years due to reduced portfolio diversification, according to a report released today through the Independent Petroleum Association of America's Divestment Facts program.

VITTER LANDS A SIDE HUSTLE: Former Sen. David Vitter has a new gig. The Louisiana Republican, who joined Mercury in February after retiring from the Senate, has joined the New

Orleans office of the law firm Butler Snow as of counsel. The news was first reported by the Associated Press. He will continue to work full-time as a lobbyist in Washington for Mercury, where his clients include Morris & Dickson, Cabot Corporation, the Atlantic Development Group, the American Chemistry Council, Morganza Action Coalition and the Air-Conditioning, Heating and Refrigeration Institute, according to disclosure records. "This doesn't change his role or work at Mercury," a Mercury spokeswoman wrote in an email. (h/t POLITICO Influence)

SIERRA CLUB FURTHER BACKS OSSOFF: Ahead of the June 20 runoff election, the Sierra Club is launching a new campaign targeting some 41,000 voters with two pieces of mail backing Democrat Jon Ossoff, who faces Karen Handel in the race for HHS Secretary Tom Price's old seat in Georgia.

WORKING ON YOUR FITNESS? Rep. Jared Huffman is teaming up with three Olympians in holding a public lands-themed interval workout on the Capitol Grounds this morning at 8 a.m. across from the Reflecting Pool.

Stories from POLITICO Pro

Trump floats idea of using solar panels to pay for Mexico wall Back

By Josh Dawsey and Rachael Bade | 06/06/2017 05:51 PM EDT

President Donald Trump floated putting solar panels on his planned Mexican border wall in a meeting with legislative leaders Tuesday afternoon, according to White House and Capitol Hill officials.

It was unclear why Trump brought up the topic, but he presented the panels as a way to fund the wall, which is expected to cost billions of dollars, according to three people familiar with the conversation.

He didn't express certainty that it would happen — but that he'd heard it as a possible idea and wanted to see what others thought, said a senior official familiar with the White House meeting.

Trump has insisted that Mexico will pay for the wall's construction — something Mexican officials have repeatedly denied — but has acknowledged that taxpayers may need to initially foot the bill before being repaid.

The president's interest in a potential solar panel solution comes as he's received intense criticism from world leaders for his decision to pull out of the Paris climate agreement.

Pruitt delays next step in implementing 2015 ozone standard Back

By Alex Guillén | 06/06/2017 07:14 PM EDT

EPA Administrator Scott Pruitt is delaying a deadline for deciding which areas of the U.S. do not meet the 2015 ozone standard, saying "there is insufficient information" to act at this time.

In letters to governors sent today, Pruitt says he needs the extra year to "consider completely" the states' suggestions "and to rely fully on the most recent air quality data." Determining which areas do not comply with the new standard is the first step toward requiring states to form plans to reduce ozone levels.

June 9 had been the target date for EPA to publish state proposals and take public comment, with a final decision coming by Oct. 1 of this year, according to a February 2016 memo from EPA.

Pruitt said he is also reviewing "a host of complex issues" regarding the standard, including background ozone, international sources and "exceptional events" like wildfires or volcanic eruptions that can spike ozone levels. The letter says Pruitt has also created an Ozone Cooperative Compliance Task Force "to develop additional flexibilities for states to comply with the ozone standard."

EPA has paused legal challenges to the standard while it reviews the rule requiring states to limit ozone to 70 parts per billion. It is not yet clear whether Pruitt will seek to repeal it and return to the 2008 standard of 75 ppb.

Trump picks lawyer involved in carbon rule challenge for DOJ enviro chief Back

By Alex Guillén | 06/06/2017 06:38 PM EDT

President Donald Trump plans to nominate longtime Washington lawyer Jeffrey Bossert Clark, who is involved in the lawsuits challenging EPA's Clean Power Plan, to run DOJ's Environment and Natural Resources Division, the White House announced today.

Clark has been a partner at Kirkland & Ellis since 1996, except between 2001 to 2005, when he was the deputy assistant attorney for ENRD.

Clark is involved in the litigation over EPA's Clean Power Plan, and likely will have to recuse himself from that lawsuit while running ENRD. He represented Consumers' Research, a self-described "independent educational organization," in filing a "friend of the court" brief along with the state of Nevada that urged the D.C. Circuit Court of Appeals to strike down the carbon rule.

He previously successfully argued on behalf of the Bush EPA before the D.C. Circuit in *Massachusetts v. EPA*, though that ruling was later overturned by the Supreme Court and ultimately established EPA's mandate to regulate greenhouse gases.

Clark has testified before Congress several times recently, including last year, when he supported legislation that would end Chevron deference, the doctrine in which courts are supposed to accept an agency's reasonable interpretation of ambiguous statutes.

Coincidentally, Jeffrey Wood, the Trump appointee currently acting as head of ENRD who has had to recuse himself from the Clean Power Plan lawsuit because he represented Republican lawmakers in a filing, will testify on Thursday at a House Judiciary oversight hearing.

Obama optimistic despite 'temporary lack of U.S. leadership' on climate Back

By Jake Lahut | 06/06/2017 07:06 PM EDT

Former President Barack Obama critiqued what he said was a "temporary lack of U.S. leadership" on climate change and urged his audience to resist a global trend toward nationalism during remarks Tuesday to Montreal's Chamber of Commerce.

Obama refrained from directly criticizing President Donald Trump, but he expressed confidence in the Paris deal to combat climate change, from which Trump recently announced the United States would withdraw.

"In Paris, we came around to the most ambitious agreement in history to combat climate change, an agreement that even with a temporary lack of U.S. leadership will still give our kids a fighting chance against climate change," Obama said.

The former president said he recognized that the "unrelenting pace" of globalization and technological change has not been beneficial for everyone. Hearkening back to the onset of industrialization in the Western world, Obama acknowledged "a great temptation to fall into the politics of nationalism and of tribe, of us vs. them."

"It can seem that the international order we've created is constantly being tested and that the center may not hold," Obama said. "That can lead people to call for isolationism and nationalism, and the reduction in the rights of others. Or they can retreat, and argue that we have no obligations beyond our borders, beyond our tribe."

The former president did not mention Trump by name in his prepared remarks, even though Quebecois dignitaries teed him up to take a swing at the current president in their introductions. Obama's comments were optimistic, centering around an assertion that not all progress is linear.

"In times of disruption, we may go backward instead of forward," he said.

White House sends NRC nominations to the Senate Back

By Darius Dixon | 06/06/2017 05:06 PM EDT

The White House officially sent the nominations for President Donald Trump's three picks for the Nuclear Regulatory Commission to the Senate today, according to a White House notice.

On May 22, the White House announced Trump's intent to nominate Annie Caputo and David Wright to a pair of vacant seats on the NRC, while reappointing agency Chairwoman Kristine Svinicki. But the White House hadn't formally shipped the nominations to the Senate until today. Similar delays have prevented numerous other positions from being filled across the Trump administration.

Svinicki's term expires at the end of the month.

The Senate Environment and Public Works Committee initially scheduled a hearing on the NRC nominees for Wednesday morning, even though it had not received the paper, and it ultimately postponed that hearing.

WHAT'S NEXT: EPW's rescheduled hearing will take at 10 a.m. June 13 to review the NRC nominations.

Trump picks law professor for OIRA post Back

By Alex Guillén | 04/07/2017 05:10 PM EDT

President Donald Trump plans to nominate law professor Neomi Rao to run the Office of Management and Budget's Office of Information and Regulatory Affairs, putting her in charge of government-wide regulatory efforts.

Rao is a law professor at George Mason University's Antonin Scalia Law School, with a focus on constitutional and administrative law.

Previously, Rao was an associate White House counsel for George W. Bush and an aide on the Senate Judiciary Committee. She also clerked for Justice Clarence Thomas.

Rao testified last year at a Senate hearing on judicial deference, including the Chevron doctrine, under which judges are supposed to defer to reasonable agency interpretations of ambiguous laws. She argued that judicial deference has created a "significant expansion" of executive branch authority at the cost of Congress's power. She called on Congress to pass more specific laws.

Rao also wrote a blog post in December suggesting the White House should exercise greater control over independent agencies such as FERC.

Subject: POLITICO's Morning Score: Hatch raised $1 million, slew of House Dem challengers report Q2 fundraising totals — Democratic challengers jump into elusive IL-12 and IL-13 — Kobach defends election commission

By Daniel Strauss | 07/06/2017 10:00 AM EDT

With Elena Schneider and Burgess Everett

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

FULL STEAM AHEAD - Hatch raised $1M in second quarter: Orrin Hatch turned 83 earlier this year and still has not made a final decision on whether to run for his 8th term. But the Utah senator is still raising money in case he does and still has an imposing warchest that could scare off any Republicans still eyeing his seat. (Mitt Romney and Jon Huntsman, Jr. have been discussed as potential successorsl) Hatch raised $1 million in the second quarter and has $4.1 million on hand, according to numbers first provided to POLITICO. He raised about $1.5 million in the first quarter. The Senate Finance chairman seems unlikely to make a final decision until the GOP's agenda shakes out further.

HOUSE Q2 FUNDRAISING - FIRST IN SCORE - CA-45: Democrat Dave Min, who's one of three looking to take on GOP Rep. Mimi Walters next year, raised over $303,000 in the second quarter and has about a quarter-million dollars in the bank.

- FIRST IN SCORE - AZ-02: Democrat Matt Heinz (who is running for GOP Rep. Martha McSally's seat but may face ex-Rep. Ann Kirkpatrick in a primary) raised $200,000 in the last two weeks in his repeat bid against McSally. In a statement, the campaign touted Heinz's average donation as $15.

- CA-10: Democrat Josh Harder announced raising over $400,000 and finishing the second quarter with $370,000 in the bank in GOP Rep. Jeff Denham's district.

- CA-48: Democrat Phil Janowicz's campaign announced raising over $180,000 since he jumped into the race in April.

- NY-19: Democratic Army veteran Pat Ryan, part of the crowded Democratic field to take on GOP Rep. John Faso, announced raising over $210,000 in the second quarter, after jumping into the race in June.

- NM-01: Democrat Antoinette Sedillo Lopez's campaign announced raising over $200,000 in Q2. (Democratic Rep. Michelle Lujan Grisham is running for governor.)

VET VISIT - "Democrats Court Military Veterans in Effort to Reclaim House," by The New York Times' Emmarie Huetteman : "Democratic Party leaders are aggressively seeking former members of the military in hopes of increasing their appeal among the sort of frustrated voters who electedPresident Trump - and winning back the 24 seats they need to regain the Republican-controlled House...In many cases, those veterans say they feel called to run for public office in response to Mr. Trump himself, whose policies they see as a threat to the country's values and security...In addition to the nearly 20 veterans who have announced they are running as Democrats in Republican-held House districts, about 15 more are expected to make announcements by the end of the summer, according to the Democratic Congressional Campaign Committee." **Full story**.

- FOR EXAMPLE - In IL-12 this morning: St. Clair's County State's Attorney Brendan Kelly, a Democrat, is announcing his campaign for Congress. According to a release from his campaign: "Kelly, a prosecutor, Navy veteran, and proud father of two, said people in Southern Illinois and throughout the country are right to be frustrated with a government that hasn't worked for their best interests for a generation."

- In IL-13: Betsy Dirksen Londrigan is announcing her campaign for Congress as well. Per a release from Londrigan's campaign this morning: "I knew I had to run when Congressman Davis cheered and celebrated with Donald Trump on the White House lawn after passing a healthcare bill that could devastate our district." IL-12 was drawn in 2011 to preserve then-Rep. Jerry Costello's district, but he retired and Democrats held it with trouble in 2012 and lost it in 2014 and 2016. In IL-13, GOP Rep. Rodney Davis survived a close race in 2012, his first campaign, and has since held the seat more comfortably.

SENATE WATCH - In addition to Rep. Kevin Cramer, state Sen. Tom Campbell and former Rep. Rick Berg, keep an eye out for State Board of Higher Education member Kathy Neset, reports Rob Port of the SayAnything blog.

- And in NV-03: Republican state Sen. Scott Hammond filed FEC papers to run for Democratic Rep. Jacky Rosen's seat, with Rosen running for Senate, the Las Vegas Review Journal reports.

Days until the 2017 election: 124.

Days until the 2018 election: 488.

Thanks for joining us. You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com and dstrauss@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin and @danielstrauss4.

GUBERNATORIAL FUNDRAISING - Georgia: Republican Secretary of State Brian Kemp raised $1.7 million in the March-to-June fundraising period, the Atlanta Journal Constitution reported. State Sen. Hunter Hill's "campaign said hehas raised more than $1 million during the March-to-June fundraising period. [Lt. Gov. Casey] Cagle is likely to top the $1 million mark as

well,"

- Florida: Republican Agriculture Commissioner Adam Putnam has raised over $2 million in each of the last two months, FloridaPolitics.com reported. (Meanwhile, so did a committee formed by GOP state House Speaker Richard Corcoran.)

THAT'S...*AN* ARGUMENT - All the rage on Twitter Wednesday: A DCCC fundraising email sent that offered recipients the opportunity to vote for which sticker the committee should print for supporters next. One choice out of four: "Democrats: 2018, I mean have you seen the other guys?" A few journalists snarked that the slogan isn't exactly inspiring.

- "Dems' new pitch to voters: A 'Better Deal,'" by POLITICO's Elana Schor and Heather Caygle: "Democratic leaders are zeroing in on a new mantra for their long-promised economic agenda: a 'Better Deal.' The rebranding attempt comes as Democrats acknowledge that simply running against President Donald Trump wasn't a winning strategy in 2016 and probably won't work in 2018 either. The slogan, which is still being polled in battleground House districts, aims to convince voters that Democrats have more to offer than the GOP and the self-proclaimed deal-maker in the White House. ... Several moderate Democrats facing reelection next year told POLITICO that no matter what leadership does, they're preparing to craft their own pitch to voters. The ideological and political divides that gripped the party during the Hillary Clinton-Bernie Sanders primary wars are far from healed, and leadership may not find universal support for the left-leaning platform, particularly from those trying to defend seats in Trump-friendly states." **Full story.**

STAFFING UP - FIRST IN SCORE - FP1 Strategies' Lauren Zelt is signing on as campaign manager for Independent Women's Voice, a 501(c)(4), per a release obtained by Score. The group describes itself as "the thought leader advocating for free-market policies, which support and improve the lives of all women and their families, and explaining how big government often backfires on American society." In a statement, IWV president and CEO Heather Higgins described Zelt as "a knowledgeable and experienced communicator who will help us bring information to new audiences on critical policy issues, like health care, regulations, and taxes." Zelt serves as a senior vice president at FP1.

REDISTRICTING WATCH - Maryland AG argues Republicans not harmed in redistricting case, by the Baltimore Sun's John Fritze: "Attorney General Brian E. Frosh asked a federal court Friday to dismiss a lawsuit that claims state lawmakers violated Republicans' constitutional rights when they redrew Maryland's congressional boundaries six years ago. The state's response in the redistricting case - the first since the litigation forced several state Democrats to explain under oath the motivation behind Maryland's contorted congressional districts - asserts the plaintiffs have offered no evidence voters were targeted simply because they are registered Republicans. ... Brought by a group of GOP voters in the 6th Congressional District, the case is one of several pending in federal courts that rely on new legal arguments to challenge the constitutionality of political gerrymandering. ... The plaintiffs contend the map violated the First Amendment by retaliating against people who voted Republican." **Full story.**

THE SILICON VALLEY WAY - "Mark Pincus and Reid Hoffman are launching a new group to rethink the Democratic Party," by Recode's Tony Romm: "Mark Pincus and Reid Hoffman want to hack the Democratic Party. ...Pincus, the co-founder of Zynga, and Hoffman, the brains behind LinkedIn, want to force Democrats to rewire their philosophical core, from their agenda to the way they choose candidates in elections ... That's the guiding principle behind Win the Future, a new project by the tech duo that's launching in time for July 4. ...Think of WTF as equal parts platform and movement. Its new website will put political topics up for a vote - and the most resonant ideas will form the basis of the organization's orthodoxy. To start, the group will query supporters on two campaigns: Whether or not they believe engineering degrees should be free to all Americans, and if they oppose lawmakers who don't call for Trump's immediate impeachment." **Full story.**

VOTER FRAUD FIGHT- "Kris Kobach defends election commission voter data request," by POLITICO's Maddie Conway: Kris Kobach, the vice chair of President Donald Trump's controversial election integrity commission, defended the committee's request for state voter roll data on Wednesday and dismissed reporting about it as "fake news." The commission, which is tasked with investigating cases of alleged voter fraud, came under criticism from dozens of state officials last week when it asked states to provide it with voter roll data, including details as personal as the last four digits of registered voters' Social Security numbers. The commission indicated that it planned to publish the data...Responding to news reports that 44 states had declined to cooperate with the commission's request, Kobach called that figure "patently false, more 'fake news'" and said 14 states and D.C. had done so, while 36 others "either agreed or are considering participating," with 20 of those agreeing outright." **Full story**.

ADMINISTRATION SPEED READ - "Trump looks for a lovefest in Poland," by POLITICO's Michael Crowley: "The story of President Donald Trump's early relationship with Europe is already a tortured one. But that's not true in Poland, where Trump enjoys a sort of political kinship. Warsaw's right-wing Law and Justice party rose to power as its officials manipulated the news media, threatened judicial independence, refused to accept refugees and stoked ethnic nationalism...It's still possible Trump's visit here won't be the lovefest the Polish government is betting on: Trump may praise the former Polish President Lech Wa????sa, a harsh critic of the Law and Justice party's governing style, who may be seated in the audience Thursday. But few observers expect a full-fledged rebuke." **Full story**.

CODA - QUOTE OF THE DAY: "As I sit here today, there hasn't been anything presented to me that would alleviate that concern" - Gov. Brian Sandoval on his opposition to Senate Republicans' healthcare bill, via The Las Vegas Review-Journal.

New Jersey Eyes Rejoining Northeast's Carbon Trading Program

Posted September 08, 2017, 8:39 A.M. ET

By Gerald B. Silverman

New Jersey is on the cusp of rejoining the Northeastern greenhouse gas trading program it spurned in 2011, which could be a boon for power companies such as Consolidated Edison Inc. and Public Service Enterprise Group Inc. that have utilities across the region.

The Garden State is expected to rejoin the Regional Greenhouse Gas Initiative sometime after electing a new governor in November. Both the Democratic candidate for governor, Phil Murphy, and the Republican candidate, Lt. Gov. Kim Guadagno, support rejoining the program that Gov. Chris Christie (R) abandoned six years ago.

New Jersey would be the third-largest source of carbon dioxide emissions in the trading program should it rejoin the initiative. That would mean a larger marketplace for power companies to buy and sell emissions allowances and give utilities more options for making the necessary emissions reductions, Marjorie B. Kaplan, associate director of the Rutgers Climate and Environmental Change Institute at Rutgers University, told Bloomberg BNA in an email.

"But perhaps even more importantly, it would send a signal to the RGGI states that New Jersey is serious about addressing carbon emissions and a signal outside of the region that the Northeast region is uniting on addressing carbon emissions," she said.

Electric power companies are expected to have a relatively smooth transition if New Jersey takes the expected step of rejoining the trading program. The state's electricity generators participated in 14 RGGI auctions between 2008 and 2011. There were 40 electricity generators required to purchase carbon allowances when the state exited the program, according to RGGI data.

The trading program requires power plants with 25 megawatts of capacity or more in Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island, and Vermont to purchase one allowance for each short ton of carbon dioxide they emit. The allowances are sold in quarterly auctions, with proceeds returned back to the states for use on renewable energy, energy efficiency and certain other program.

Utilities Back Rejoining

"We will support their decision and will work with the new administration to make sure that the transition back into RGGI goes smoothly," Paul Rosengren, a spokesman for PSEG, told Bloomberg BNA in an Aug. 31 email.

Mike Donovan, a spokesman for Orange & Rockland Utilities Inc., which provides transmission service in the northern part of New Jersey, said its parent company, Consolidated Edison, has been a supporter of RGGI.

The market could grow even larger if Virginia also joins the initiative. Virginia is considering joining RGGI, as part of Gov. Terry McAuliffe's (D) May directive that the commonwealth develop a trading-ready program to reduce carbon emissions.

Virginia, with a relatively large number of coal plants, would be second only to New York in terms of carbon dioxide emissions if it joined RGGI.

'Politically Motivated Tax Increase'

Christie withdrew his state from RGGI in 2011 and vetoed three bills from the Democratic legislature to rejoin the program. In his latest veto message July 13, he said the bill "is nothing more than an unnecessary, politically motivated tax increase."

But his own lieutenant governor has taken a more moderate position on RGGI and other issues in her bid to win election in the largely Democratic state. Ricky Diaz, a spokesman for Guadagno, declined to elaborate on her position, but confirmed that she supports rejoining RGGI.

Murphy, the Democratic candidate, plans to immediately rejoin RGGI if elected, according to his campaign's policy statement on climate change. He also supports developing a plan to eventually make New Jersey's power sector carbon-free.

"Gov. Christie's decision to pull out not only slowed progress on lowering emissions, but it also cost New Jerseyans tens of millions of dollars that should have been used to further reduce greenhouse gas emissions, increase energy efficiency, and improve air quality in urban communities," the policy statement said.

The New Jersey power sector produced 16.7 million metric tons of carbon dioxide emissions in 2014, while the nine current RGGI states had 78 million metric tons of emissions that year, according to Energy Information Administration data.

Carbon Price Boosts Nuclear, Renewables

Putting a price on carbon in the state would help recognize the value of nuclear generation in producing carbon-free electricity, according to Rosengren. About half the state's electricity comes from nuclear power, he said.

New Jersey also would benefit from a new sources of revenues for renewables and energy efficiency because RGGI auction proceeds are returned to states for those types of programs, Rosengren said.

Though some utilities back rejoining the emissions trading program, other businesses fear the move will only drive up electricity bills.

"In order for businesses to remain competitive in our region, we need to control electric costs," Bob Considine, a spokesman for the New Jersey Business & Industry Association, told Bloomberg BNA in an email.

"About 24 percent of our electric bill is government-imposed taxes and fees," he said. "Increasing generation costs through cap-and-trade would only increase that portion on the ratepayers of New Jersey."

Carbon Allowance Prices Jump as Cap to Tighten in Northeast

Posted September 08, 2017, 12:40 P.M. ET

By Gerald B. Silverman

Power companies saw a 72 percent jump in the price of greenhouse gas emissions allowances in the first auction after the Northeast's trading program announced plans to ratchet down the emissions cap.

Carbon allowances for the Regional Greenhouse Gas Initiative sold for $4.35 each in the Sept. 8 auction, up from $2.53 in June, according to auction results announced today. Despite the increase, that's still slightly down from $4.54 in the September 2016 auction. The latest auction raised $62.5 million for the nine states in the program.

The price increase can be attributed to RGGI's recent proposal to tighten its emissions cap after 2020 and create mechanisms to control the oversupply of allowances.

Turf Battle Looms as House Energy Leaders Plan DOE Overhaul

Posted September 08, 2017, 7:41 A.M. ET

By Brian Dabbs

Plans by a key House Republican to retool the Energy Department's core functions are in for a turf battle.

Rep. Joe Barton (R-Texas), a top Energy and Commerce Committee member and former chairman of the panel, plans to float legislation by the end of the year to overhaul the department, he told Bloomberg BNA, confirming statements he's made in recent months.

But beyond the general deadlock on Capitol Hill, there's one big problem: Barton isn't looping in Republican colleagues on another committee that controls the lion's share of department's non-military policy. The leader of that committee, in fact, said he didn't even know about the plans.

"I haven't heard anything about that," Science Committee Chairman Lamar Smith (R-Texas) told Bloomberg BNA Sept. 6. "I haven't heard anything about Barton or E&C [Energy and Commerce] at all."

Reauthorizations are a way for lawmakers to update the missions of federal departments and agencies. Without input from the science committee, the retooling effort could sputter or degenerate into a jurisdictional fight.

The House Science, Space, and Technology Committee is tasked with directing department action on research and laboratories, which play a vital role in innovative energy technologies, some of which are commercialized in the private sector. That research, some of it under the Advanced Research Projects Agency-Energy, and the agency's loan programs are a critical asset to energy companies of all sizes. The loan programs also fall under the science committee.

The E&C Committee is a juggernaut on Capitol Hill, competing with only the Ways and Means Committee for the broadest policy influence. Members covet seats on the two committees, and each of the bodies is known to throw around its weight in jurisdictional battles.

Meanwhile, business representatives are pining for collaboration.

"Ultimately it would be extremely helpful for both committees to team up to get this done," Christopher Guith, senior vice president of the U.S. Chamber of Commerce's Global Energy Institute, told Bloomberg BNA. "Anytime you're going to do [Energy Department] reauthorization, you're going to have to go through multiple committees." Guith served served as deputy assistant secretary for nuclear energy at the department during the George W. Bush administration.

E&C Forges Ahead

Barton suggested the Energy and Commerce Committee is comfortably in the driver's seat.

"We are primary. Depending on how energetic we want to be, we could conceivably have the science committee and the Natural Resources Committee" contribute, he told Bloomberg BNA Sept. 6.

Energy Committee Chairman Greg Walden (R-Ore.) tapped Barton for the task earlier this year, and Walden is committed to seeing the process move forward.

"Chairman Walden wants the committee to take a strategic look at a broad range of Department of Energy activities and responsibilities," Dan Schneider, a spokesman for Walden, told Bloomberg BNA. "He wants to identify where mission and management reforms make the most sense, in light of today's energy landscape, energy security—including cybersecurity—challenges, and national security interests."

Barton didn't disclose details of his priorities for the overhaul, saying only that he'd "like to see a realignment of the [Environmental Protection Agency] and its interaction with the Department of Energy." A spokesman for Barton, Daniel Rhea, said the former chairman plans to release his framework for the overhaul later in September.

The department, created in 1977, has never been fully reauthorized. Congress regularly reauthorizes the Defense Department and Federal Aviation Administration.

Science Committee Headway Made

A partial reauthorization of the Energy Department, a bipartisan bill (H.R. 589) authored by Smith, soared through the House in January.

Smith's bill also gives arcane new directions to the department to administer its 17 national labs and extends the Commercializing Technology pilot program, which aims to ease negotiations between

the labs and the private sector over technology transfer, through Sept. 30, 2019. And further, the legislation revises the department's policy on advanced nuclear research, directing, for instance, an assessment of the need for a reactor-based fast neutron source.

Nuclear proponents have praised that language.

"The new bill also includes important reforms allowing the national labs to work more closely with private industry, and establishes new research programs around solar fuels, exascale computing and electricity storage," said a statement from the conservative group ClearPath Foundation in January. "Altogether, this bill establishes research programs focused on several key areas of clean energy development, while giving the national labs greater flexibility."

But the bill's supporters tout its reauthorization of the department's Office of Science as a major achievement, calling it the first comprehensive overhaul of the office to date. The Office of Science accounts for nearly a sixth of the department's budget in fiscal year 2017.

The House rules on committee jurisdiction, which offers succinct descriptions of those authorities within a sprawling document, show the science committee holds sway over nearly all department research.

E&C has jurisdiction over "energy policy generally," but is charged largely with regulations.

Much of the department's budget is dedicated to nuclear weapons and other military functions, and that authorization is controlled by the armed services committee in the House and Senate. Barton said he doesn't expect an overhaul to touch on the military side.

Committee Still in the Dark

Thea McDonald, a spokeswoman for Smith and the science committee, told Bloomberg BNA Barton will have to reach out to the committee if he wants to achieve a real overhaul.

"Any comprehensive [Energy Department] reauthorization would have to include significant input from the science committee, as upwards of one-third of DOE is under our jurisdiction," she said.

Barton also hasn't reached out to Democrats, who may be needed in striking a deal. Nor has he reached out to Senate Energy and Natural Resources Committee Chairman Lisa Murkowski (R-Alaska), who would take up the mantle on the Senate side, she told Bloomberg BNA Sept. 7.

Merkel Warned That Failure to Hit Climate Goal May Hurt Germany

Posted September 08, 2017, 10:50 A.M. ET

By Brian Parkin

Chancellor Angela Merkel's ambition to lead Europe's fight against global warming is at risk of backfiring and tarnishing Germany's climate credentials, according to researchers.

Germans will likely reduce their carbon dioxide emissions by about 30 percent in 2020 compared to 1990 levels, missing the 40 percent reduction goal set by the government in 2012, according to a report by Berlin-based climate researcher Agora Energiewende.

German emission reductions “won’t be a near miss but a booming failure,” Agora researchers wrote. They urged Germany to refocus on emission cuts after this month’s federal election, in which Merkel is seeking a fourth term as chancellor.

Climate protection is getting short shrift in campaigning by Germany’s biggest parties even though polls show it’s important to voters. More than seven of 10 Germans worry about the impact of climate change, even more than the 65 percent of voters concerned with war, according to a July survey by Kantar Emnid.

The Environment Ministry in Berlin responded to the Agora report, rejecting its forecast for carbon dioxide output to 2020 in a statement on Thursday. The ministry expects Germany to cut emissions by as much as 37 percent.

Sent: Thur 11/16/2017 10:08:58 PM
Subject: Today on Climate Beat

November 16, 2017

Today on Climate Beat . . .

. . . we went to Congress, where EPA Administrator Scott Pruitt has agreed to testify before a House energy panel Dec. 7 and the Senate environment committee Jan. 31 to discuss his priorities for the agency, his first appearances before Congress since testimony to two appropriations committees in June and before that his Senate confirmation hearing in January.

On the other side of the Capitol, seven Senate Democrats are asking Pruitt to restore climate-related web pages to the agency's website that were removed earlier in the administration, including recent changes to a site that had been focused on climate and energy resources for state and local governments.

In grid news, a new assessment from the North American Electric Reliability Corporation states that outages due to natural gas infrastructure are becoming less common, potentially aiding opponents of the Department of Energy's controversial proposed coal and nuclear subsidies a way to boost grid resilience.

In personnel news, Alexandra Dunn, the executive director of the Environmental Council of the States (ECOS), which represents most state environmental agencies, will become regional administrator for EPA Region 1 covering six New England states.

And our daily news roundup looked at a group of 20 countries – not including the United States – that has pledged to phase out coal power by 2030.

Regulatory Update

WATER
General Discharge Permit for Marinas
Maryland WATER

Notice of the Department of the Environment announces a final determination to reissue the state National Pollution Discharge Elimination System (NPDES) general discharge permit to authorize stormwater and wastewater discharges from marinas, including boat yards and yacht basins. The permit requires quarterly visual examinations of stormwater discharges, comprehensive annual inspections and an electronic version of a stormwater pollution prevention plan containing specific control measures. The permit also requires electronic submittal of monitoring reports and additional information regarding permit conditions in the notice of intent. In addition, the permit implements best management practices-based compliance options to comply with chlorine limits for dock washing at marinas. Finally, the permit clarifies eligible discharge types

and revises various permit conditions. Petitions for judicial review are due June 26, 2017. Contact: Robert Pudmericky; MDE, Water Management Administration; 410-537-3323; rob.pudmericky@maryland.gov

WATER
Susquehanna River Basin Commission Hearing
Maryland WATER

Notice of the Susquehanna River Basin Commission announces a meeting on the proposed Water Resources Program for fiscal years 2018 and 2019 and the proposed FY2018 regulatory program fee schedule. The agenda also includes rulemakings regarding application requirements, standards for project review, mitigation of consumptive uses, registration of grandfathered projects, and hearings and enforcement actions. In addition, the agenda includes requests by specified parties for project waivers, an amendment to the Comprehensive Plan for the Water Resources of the Susquehanna River Basin, a report on delegated settlements, and regulatory program projects and requests for extension of emergency certificates, including for Susquehanna Nuclear LLC. The meeting is scheduled for June 16, 2017, in Entriken, Pa. Comments on certain agenda items were subject to a prior comment period that closed May 22, 2017. Comments on other agenda items are due June 9, 2017. Contact: Jason Oyler; SRBC; 717-238-0423

News

Budget

Expect GOP Plaudits for Pruitt But Not EPA Budget at Hearing

EPA chief Scott Pruitt will likely get a warm welcome from Republican appropriators next week despite bipartisan opposition to the agency's fiscal year 2018 budget, a GOP lawmaker told Bloomberg BNA.

Climate Change

EPA's Pruitt Could Face Tough Crowd at G-7 Environment Meeting

Climate-related issues are just one part of the agenda for this weekend's meeting in Italy of environment ministers from the leading industrial nations, but EPA Administrator Scott Pruitt can expect an earful on the decision of the U.S. to withdraw from the Paris climate change agreement, environmental groups said.

Climate Change

Paris Pullout Pits Chamber Against Some of Its Biggest Members

As President Donald Trump mulled whether to exit the Paris climate accord, companies as varied as Dow Chemical Corp., Exxon Mobil Corp., and Citigroup Inc. prodded him to stay in.

Climate Policy

Trump Climate Critics Wrong on Pulling Out of Paris, Perry Says

Critics of President Donald Trump's move to withdraw the U.S. from the Paris climate change agreement are acting more for political reasons than for the reality of what the accord may achieve, U.S. Energy Secretary Rick Perry said June 9 in an interview where he defended the president's move.

Climate Regulation

Clean Power Plan Review Tests EPA's Climate Change Obligations

Whether the EPA has an obligation to address climate change will be central as the agency begins its efforts to roll back Obama-era limits on carbon dioxide pollution from power plants.

Coal Mining

Concern Raised About Peabody Mine Cleanup on Navajo, Hopi Land

Arizona residents and environmentalists are growing increasingly worried about the cleanup of a large coal mine that's moving swiftly toward closure. Peabody Energy Corp., the mine's operator, promises that the reclamation will be done right.

Emissions Trading

Carbon Prices Continue to Drop in Northeast
The cost for electricity generators to comply with the Regional Greenhouse Gas Initiative sank to a four-and-a-half-year low in RGGI's latest auction, driven by an oversupplied market and uncertainty over a longstanding program review by the nine states in the initiative.

Energy
'Game-Changer' Electricity Goal May Cut Australia's Emissions
Australia should introduce a Clean Energy Target program for electricity generators to help lower its greenhouse gas emissions, the country's chief scientist said in a report.

Energy
German Clean Power Surges Risk Grid Blackouts, Instability
Germany's electricity grid was pushed to the limit of stability last year and blackout risks will remain as long as network infrastructure fails to keep up with surging clean power, according to operator Amprion GmbH.

Energy
HIKO Mulling Appeal on $1.8M Fine for Overcharging
HIKO Energy LLC may appeal a court's decision to uphold a $1.8 million fine against the company, an attorney for the East Coast electric generation supplier told Bloomberg BNA June 9.

Energy
India Power Plants Stranded as 50 Million Homes Left in the Dark
India is scaling back expectations for power demand growth as it struggles to electrify millions of homes despite a glut in generation capacity.

Enforcement
Exxon Says N.Y. Attorney General Distorts Company's Climate Data
Exxon Mobil Corp. accused New York Attorney General Eric Schneiderman of wildly distorting in court how the company calculates the long-term financial impact of climate change on its assets.

General Policy
Week Ahead: Pruitt Meets the Purse-String Holders
EPA Administrator Scott Pruitt will explain to Congress why he believes cutting his agency's budget by 31 percent is a good idea, one of numerous energy and environment events during the week of June 12.

International Climate
Macron Said to Push for Franco-German Carbon Emissions Price Floor
Emmanuel Macron reached out to Germany to establish a common price floor for carbon dioxide emitted by power utilities as the French president seeks to strengthen his alliance with Angela Merkel after the U.S. decided to exit the Paris climate accord, according to people familiar with the matter.

International Climate
Merkel Says Trump's Climate Stance Is Lowering G-20 Expectations
German Chancellor Angela Merkel said Group of 20 leaders "won't get everything we wished for" at a summit next month after U.S. President Donald Trump's decision to exit the Paris climate accord.

Subject: Murkowski pressing to have FERC nominees approved this week

By Darius Dixon

10/04/2017 04:17 PM EDT

Sen. Lisa Murkowski is aiming to have President Donald Trump's two pending FERC nominees confirmed before the Senate flies off for its recess at the end of the week.

"I was talking with our leadership today about it. I want to try to get it shook loose before we take a break," the Alaska Republican, who chairs the Senate Energy and Natural Resources Committee, said of the nominees. The Senate is not scheduled to be in session next week.

Kevin McIntyre, Trump's pick to chair the agency, and Rich Glick, who serves as general counsel to energy committee Democrats, were approved by Murkowski's committee on a voice vote last month to become FERC members.

Sen. Maria Cantwell, the top Democrat on the energy committee, has said she was "favorably impressed" by McIntyre who, when confirmed by the full Senate with Glick, will bring FERC's leadership board back to full strength for the first time since late 2015.

WHAT'S NEXT: The Senate is scheduled to be on recess for the week of Columbus Day and is rarely in session on Friday, suggesting that the FERC nominees could be confirmed in the next day or so.

Subject: U.S. trade commission launches investigation into Suniva solar trade complaint

By Esther Whieldon

05/23/2017 06:10 PM EDT

The U.S. International Trade Commission has initiated an investigation into the request by U.S.-based solar cell manufacturer Suniva that the Trump administration create temporary trade tariffs to protect the manufacturing sector.

The move, announced today, clears the first first hurdle in the process.

In April, Suniva filed a petition with the USITC asking the agency to recommend Trump grant for temporary relief under Section 201 of the Trade Act of 1974 and to impose trade restrictions for four years on imported solar cells and modules. Suniva is going through a bankruptcy proceeding and agreed to file the Section 201 petition in exchange for an additional line of credit.

The company contends that an influx of cheaper solar panel modules and cells largely from China are putting it out of business.

WHAT'S NEXT: The commission said it will accept pre-hearing briefs on the case through Aug. 8. It hopes to determine the extent to which the cheaper solar panels are causing injury by Sept. 22 and to send recommendations to Trump by Nov. 13.

Doug Palmer contributed this report.

AIR
Consolidated Air Rule for the Synthetic Organic Chemical Manufacturing Industry
AIR

Notice of the EPA announces the submission of a continuing information collection request to the OMB concerning the NSPS and NESHAP standards for synthetic organic chemical manufacturing facilities under the Consolidated Air Rule. The collection addresses requirements for facilities subject to NSPS requirements to notify the EPA of construction, modification, startups, shutdowns, dates and results of initial performance tests, and excess emissions and to submit semiannual reports. The collection also addresses requirements for facilities subject to NESHAP requirements to submit one-time reports of any physical or operational changes and the results of initial performance tests; maintain records of periods of startup, shutdown, malfunction, or when the monitoring system is inoperative; and submit periodic reports. Comments are due July 27, 2017. Contact: Patrick Yellin; EPA, Office of Compliance; 202-564-2970; yellin.patrick@epa.gov. Citation: 40 CFR 65

AIR
NSPS for Petroleum Refinery VOCs
AIR

Notice of the EPA announces the submission of a continuing information collection request to the OMB regarding the NSPS for equipment leaks of volatile organic compounds in petroleum refineries. The collection addresses requirements for refinery owners and operators to identify leaking equipment and document repair methods and dates of such repairs. The recordkeeping is periodic and depends on equipment type and leak history. Owners and operators must submit semiannual reports, which are used by the agency to determine compliance with NSPS. Comments are due July 27, 2017. Contact: Patrick Yellin; EPA, Office of Compliance; 202-564-2970; yellin.patrick@epa.gov. Citation: 40 CFR 60, Subparts GGG and GGGa

Regulatory Update

AIR
Vermont SIP/Infrastructure Requirements
AIR

Final rule of the EPA approves portions of revisions to the Vermont SIP regarding infrastructure requirements for the 1997 fine particulate matter (PM-2.5), 1997 ozone, 2006 PM-2.5, 2008 lead, 2008 ozone, 2010 nitrogen dioxide and 2010 sulfur dioxide (SO2) NAAQS. State demonstrations concerning the infrastructure requirements are approved and certain elements related to the prevention of significant deterioration requirements are conditionally approved. The rule also updates the classification for two air quality control regions for SO2, which will grant the state an exemption from the infrastructure SIP contingency plan obligation for SO2. The rule is effective July 27, 2017. Contact: Alison Simcox; EPA Region 1, Air Programs Branch; 617-918-1684; simcox.alison@epa.gov. ENDANGERED SPECIES
Florida/Audubon's Crested Caracara
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces an incidental take permit application and the availability of a proposed low-effect habitat conservation plan for the Audubon's crested caracara. Atlantic Coast Paladin Estates LLC and Micco Road Investments LLC, both of Hallandale, Fla., seek a 10-year incidental take permit for take of 100 acres of nesting and foraging habitat for the species incidental to the construction of the Lakes at St. Sebastian Preserve residential project in Brevard County, Fla. The applicants would mitigate for impacts by providing a $10,000 management endowment and protecting 20 acres within the Allen Broussard Conservancy. USFS has made an initial determination that the proposed activity is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement. Comments are due July 27, 2017. Contact: Tera Baird; USFWS; 904-731-33196; Tera_Baird@fws.gov

GENERAL ENVIRONMENT AND SAFETY
Connecticut/Clean Water Act, Oil Pollution Act Joint Stipulation
GENERAL ENVIRONMENT AND SAFETY

Notice of the Justice Department announces a proposed stipulation, settlement agreement, order, and final judgment in Evergreen Power LLC and Asnat Realty LLC v. United States (Civil Action No. 3:14-cv-01537-WWE), lodged on June 19, 2017, in the U.S. District Court for the District of Connecticut. If approved, the stipulation would resolve claims against the U.S. and claims under the Clean Water Act and Oil Pollution Act against the counterclaim defendants regarding a 2014 response action at the English Station site in New Haven, Conn. The stipulation would require the counterclaim defendants to pay $454,000 to reimburse the U.S.'s oil removal costs with interest

and $246,000 in civil penalties. The stipulation also would require the U.S. and the counterclaim defendants to dismiss their claims and provide mutual releases of liability and would restrict the counterclaim defendants' right to sue or assert any claims against the U.S. in connection with the 2014 response action. Comments are due July 27, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

HAZARDOUS MATERIALS TRANSPORTATION

Sleeper Berth Time Pilot Program

HAZARDOUS MATERIALS TRANSPORTATION

Notice announces the intention of the FMCSA to seek OMB approval for a new information collection request concerning a pilot program for temporary relief from sleeper berth requirements for licensed commercial drivers who regularly use a sleeper berth to accumulate their required hours of nonduty work status. The program would allow a limited number of commercial drivers to split the required 10 hours of nonduty work status. The agency is seeking to compile driver metrics and to assess safety performance and fatigue levels. The collection would include applications, questionnaires, daily field studies, weekly phone briefings, and use of instrumented vehicles concerning safety performance and fatigue levels. The agency also would compile electronic logging device data, onboard monitoring system data, roadside violation data, wrist actigraphy data, Psychomotor Vigilance Test data, subjective sleepiness ratings, and sleep logs data. Comments are due Aug. 28, 2017. Contact: Nicole Michel; Federal Motor Carrier Safety Administration, Research Division; 202-366-4354; Nicole.michel@dot.gov. Citation: 49 CFR 395.1

OCCUPATIONAL SAFETY AND HEALTH

Occupational Exposure to Beryllium and Beryllium Compounds/Construction and Shipyards
OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of OSHA would revoke certain ancillary provisions for occupational exposure to beryllium and beryllium compounds for the construction and shipyard sectors adopted under a Jan. 9, 2017, final rule (82 FR 2470). Provisions concerning exposure monitoring, regulated areas, written exposure control plans, protective equipment and work clothing, hygiene areas and practices, housekeeping, medical surveillance, medical removal, and worker training would be removed. OSHA specifies that standards for ventilation and mechanical paint removers exist for the construction and shipyard sectors and that exposure to beryllium is limited to abrasive blasting in construction, abrasive blasting in shipyards, and welding in shipyards operations. General industry standards under the previous final rule would be maintained, as would the lower eight-hour, time-weighted average permissible exposure limit for beryllium of 0.2 micrograms per cubic meter of air (µg/m3) and the 15-minute, short-term exposure limit of 2.0 µg/m3. Comments are due Aug. 28, 2017. Contact: Frank Meilinger; OSHA; 202-693-1999; meilinger.francis2@dol.gov. Citation: 29 CFR 1915.1000; 29 CFR 1915.1024; 29 CFR 1926.1124; 29 CFR 1926.55

Subject: EPA's Pruitt huddles with Trump on Paris pact

By Matt Daily

05/30/2017 02:59 PM EDT

President Donald Trump discussed the Paris climate pact this morning with EPA Administrator Scott Pruitt, one the administration's strongest advocates for pulling the U.S. out of the international agreement.

Trump has not yet indicated whether he will exit the deal reached by 195 countries in 2015 or keep the U.S. in it and seek to alter the carbon dioxide cuts promised by former President Barack Obama. But White House spokesman Sean Spicer said the decision was expected soon.

"Ultimately, he wants a fair deal for the American people, and he will have an announcement coming on that shortly," Spicer told reporters today at the daily briefing.

Pruitt has pressed for the U.S. to pull out of international deal, arguing that remaining a part of it could threaten EPA's efforts to revise or revoke the power plant emissions regulations issued by Obama's EPA. One media report over the weekend said that Trump had told some administration officials he planned to exit the climate pact.

Spicer did not address whether Trump, who has described climate change as a hoax, believed that human activity was affecting the planet's temperature.

"Honestly, I haven't asked him, I can get back to you," he said in response to a question.

Nick Juliano contributed to this report.

Subject: Morning Media: Intercept tradecraft under microscope — Leak heat rising — 'Consistently negative' outlook for newspapers

By Joe Pompeo | 06/07/2017 05:39 AM EDT

With Cristiano Lima and Alex Weprin

EXPERT ANALYSIS: "The source, Reality Winner, would have been lead suspect no matter what. Only 6 people viewed the Russia doc & she had emailed Intercept. But @theintercept made egregious mistakes that doomed its source. The FBI affidavit spells them out. ... Normal people don't know all this, but journalists should. And @theintercept does. Which makes it hard to accept this catastrophic failure of source protection. Reporters & editors didn't consult experts right at hand. That too is something @theintercept would denounce with contempt if happened elsewhere. Everyone makes mistakes, but this was a bad one."

That's long-time national security journalist Barton Gellman -- whose reporting on Edward Snowden's NSA revelations in 2013 earned The Washington Post a shared Pulitzer Prize with The Guardian -- in a Twitter thread yesterday criticizing The Intercept for its handling of a story ("TOP-SECRET NSA REPORT DETAILS RUSSIAN HACKING EFFORT DAYS BEFORE 2016 ELECTION") that appears to have come together via reporting that at least partly compromised its alleged anonymous source, a 25-year-old government-contractor-whistleblower who has quickly become a totem of anti-leak jihad in the Trump era.

I chatted with some other veteran intelligence reporters yesterday, and they agreed with Gellman's assessment. ("It was bad. No way around it.") A few additional takeaways I came away with:

1. Journalists in these circles feel like if the tables were turned, and it was a legacy outlet like The New York Times or The Washington Post that came under scrutiny for this, The Intercept would be among the first to throw a stone.

2. An alternate way a story like this might have been handled: Report out and corroborate with sources the details of the document without actually sharing the document, so that the story doesn't necessarily have to rely primarily on the document. Then make a cautious determination about whether it would be worth publishing the document itself.

3. This sh-t is hard, and it doesn't mean the crew over at The Intercept are bad journalists. Also, keep in mind that the apparent source in this case apparently made some mistakes that made it all too easy for the feds to pick up a trail.

THE INTERCEPT SAID YESTERDAY: "Winner faces allegations that have not been proven. The same is true of the FBI's claims about how it came to arrest Winner. We take this matter with the utmost seriousness. However, because of the continued investigation, we will make no further comment on it at this time." Full statement.

A Morning Media reader weighs in: "I don't accept needing to confirm authenticity of the 'actual' document as an excuse given what is at stake -- and the fact that this would have been a hot story even if it had been paraphrased or read to them over the phone a la the Comey memos."

Meanwhile: "WikiLeaks offers $10,000 to get Intercept reporter fired"

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima** (clima@politico.com / @ludacristiano). **Hadas Gold** contributed to today's column. **Archives**. **Subscribe.**

MAKE NO MISTAKE, THE HEAT IS RISING - Cory Bennett in POLITICO : "[T]he Obama administration's aggressive use of the century-old Espionage Act brought prison terms for defendants like Chelsea Manning ... and turned Snowden into a hunted fugitive. The Obama-era Justice Department also scored the first ever prison sentence for a CIA officer ... But leaks have taken on special political importance during Donald Trump's presidency, which has been rocked by a series of unauthorized disclosures ... Trump and Attorney General Jeff Sessions have inveighed against these disclosures. Trump has vowed on Twitter that 'low-life leakers ... will be caught,' and Sessions said in April that 'whenever a case can be made, we will seek to put some people in jail.'"

CNN'S Brian Stelter: "[F]our veteran Washington reporters told CNN that they sense -- based on what their sources are noticing at work -- that leak hunts are taking place. ... One of the longtime reporters who spoke on condition of anonymity said he has perceived a White House effort to 'smoke out' sources ... Another national security reporter said the Obama administration was 'terrible' in terms of prosecuting leakers ... Now, with Trump, 'there is this kind of unknown. It's hard to know how far they'd go.'" More: "Reporters worry about aggressive leak investigations in Trump era"

WILL TRUMP UNBLOCK TWITTER ACCOUNTS IN SPIRIT OF FIRST AMENDMENT? Don't hold your breath, but the Knight First Amendment Institute at Columbia University is demanding that he do so : "In a letter sent today to President Trump, the Knight First Amendment Institute asked the President to unblock the Twitter accounts of individuals denied access to his account after they criticized or disagreed with him, or face legal action to protect the First Amendment rights of the blocked individuals. The President's Twitter account ... is a 'designated public forum' subject to the First Amendment, according to the Knight Institute. The First Amendment bars the government from excluding individuals from a designated public forum because of their views."

EPIC L.A. TIMES ANTI-TRUMP EDITORIALS BEING TURNED INTO A BOOK - "Our Dishonest President," based on the six-part opinion series of the same name , will hit shelves July 4 courtesy of the Berkeley-based indie publishing house Heyday. The book -- also to be available as a digital title -- will include an introduction from LAT editor in chief/publisher Davan Maharaj and editorial page editor Nicholas Goldberg, who said yesterday in a prepared statement, "The United States is in the hands of a president whose character and temperament are

dangerous, and our editorials lay out clearly why we took a stand on this."

HERE COMES COMEY - via WaPo: "Glued even more than usual to the cable news shows that blare from the televisions in his private living quarters, or from the 60-inch flat screen he had installed in his cramped study off the Oval Office, [Trump] has fumed about 'fake news.'"

BREITBART HAS LOST HUNDREDS OF ADVERTISERS IN JUST A COUPLE OF MONTHS - That's according to Digiday, which reports there were "just 26 brands appearing on Breitbart in May, down from a high of 242 in March." As Vanity Fair observed recently, the right-wing news behemoth also has been grappling with a traffic decline (Breitbart's response: "Vanity Fair Busted Pushing Traffic Ranking Hoax "), on top of the similarly problematic advertiser blacklists and marketer education campaigns. Still, few conservative web publications are as prominent as Breitbart right now, and with the backing of the billionaire Mercer family, don't expect them to fizzle out anytime soon.

GOOD TIMING - When you're a monthly magazine that maps out features eons ahead of its eventual street date, it's always nice when a profile subjects delivers up a fresh news peg shortly before you're ready to go to press. Lucky for Esquire, Bill Maher dropped the n-word on his show last week as the editors were preparing for the release of their August 2017 issue, featuring a Maher profile that had been in the works for months. They were able to shoehorn the controversy into the lead and roll out the piece, by Stephen Rodrick, ahead of schedule yesterday online, with an ultra-timely hook: " Bill Maher Knows Exactly What He's Doing. Just Ask Him."

Fun fact: "He attended Pascack Hills High School in Montvale, New Jersey, in the early 1970s." Me too! (But in the '90s, not the '70s.) Love the yearbook photo Esquire got its hands on. Shoutout to fellow alums Dana Bash of CNN and Kerri Green from "The Goonies" -- and to New Yorker EIC David Remnick, who went to our sister/rival high school, Pascack Valley.

SOUND BITES:

-- "The prosecution of any journalistic source without due consideration by the jury as to the harm or benefit of the journalistic activity is a fundamental threat to the free press. As long as a law like this remains on the books in a country that values fair trials, it must be resisted." [Edward Snowden]

-- "Donald Trump has been the greatest thing for your industry. Your industry was dying before Donald Trump became President." [Chris Christie]

-- "Mr. President, it's not the fake news media that's your problem, it's you." [Neil Cavuto]

-- "Fahrentholding. Verb. To grab onto a story and politely but agressively follow it to the bitter end. With receipts." [Soledad O'Brien]

CHEERFUL HIGHLIGHTS FROM THE NEWSPAPER PORTION OF PWC'S GLOBAL MEDIA OUTLOOK FOR 2017-2021, OUT TODAY:

-- "The US news publishing outlook is set to remain consistently negative"

-- "Total newspaper revenue has fallen from US$33.3bn in 2012 to US$29.6bn in 2016 and is forecast to decline at a -4.1%"

-- "Average daily print circulation has fallen by 13% between 2012 and 2016, and is forecast to reduce by almost 21% by 2021"

-- Good news: "Adoption and consequential digital newspaper circulation revenue has doubled since 2012, to US$664mn in 2016. ... the parallel contribution from digital newspaper revenue will offset the print circulation revenue decline"

-- Bad news: "But this trend will be short-lived. Growth in digital newspaper circulation revenue is slowing down, forecast to be 8.5% year-on-year in 2017 as compared to 11.5% in 2016."

-- "The US market is now suffering from a growing fear that it has approached a cliff edge for print advertising. ... In the years ahead, US newspapers will lose print newspaper advertising revenue at the third-fastest rate in the world"

-- "For publishers, hopes of ultimate Internet transformation are turning into a creeping and multi-level digital malaise. Total digital newspaper revenue is plateauing. At just 2.7% CAGR, the US, the world's most advanced technology superpower will now see the world's slowest rate of digital newspaper revenue growth."

A PUBLIC EDITOR THAT WASN'T: BILL GRUESKIN - Since media/journalism obsessives are still digesting and dissecting The New York Times' controversial decision to eliminate its public editor role, I thought it would be worth floating one of the possible public editors that could have been. A couple of people with knowledge of the matter were telling Morning Media recently that Grueskin, a former longtime Wall Street Journal editor and professor at Columbia's Graduate School of Journalism, has been a regular on the shortlist, and that he'd been on the radar for the job that went to Margaret Sullivan in 2012 and to Liz Spayd in 2015. Sullivan's tenure was by and large a popular one; Spayd's, not so much. How do you all think Grueskin would have done?

SOUNDTRACK: Brian Eno, "Here Come the Warm Jets"

Subject: POLITICO's Morning Transportation, presented by Delta Air Lines: Two more set free from laptop ban — DOT skips Gateway event — Volvo to stop making gasoline-only cars

By Tanya Snyder | 07/06/2017 10:00 AM EDT

With help from Lauren Gardner

TWO MORE SET FREE FROM LAPTOP BAN: People traveling to the United States from Ataturk Airport in Istanbul and Dubai International Airport will once again get to bring large electronic devices on their Turkish Airlines and Emirates flights, TSA confirmed Wednesday. DHS has repeatedly said that airports can avoid the ban if the heighten security in certain ways. The ban contributed to one of Emirates' "most challenging years to date," with profits down 82 percent and flights to the United States reduced by a fifth due to weaker demand, according to the Financial Times. Etihad Airways service from Abu Dhabi International Airport has already been restored; Qatar Airways is in the process of having new measures evaluated.

Take your shoes off - again: Information is scarce about the precise procedures the airports are putting in place to comply with U.S. demands, but FT reports that U.S.-bound passengers from Ataturk will now be checked four times, with two checks at the boarding area. The BBC reports that the use of bomb-sniffer dogs will be expanded to 105 countries and that Ataturk Airport is now using sophisticated tomography imaging devices for X-ray and ultrasound screening.

IT'S THURSDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. It's a slow news week, folks - send us your tips and we'll be your best friend. Feedback and lyrics also welcome as usual, at lgardner@politico.com or @Gardner_LM and tsnyder@politico.com or @TSnyderDC.

"He's leaving / On that midnight train to Georgia, yeah / Said he's going back / To a simpler place and time, oh yes he is / I'll be with him on that midnight train to Georgia."

Want to keep up with MT's song picks? Our Spotify playlist has over 100 followers - you can get listening, too!

EXIT GATEWAY: DOT is expected this morning to release a draft environmental impact statement on the Gateway project's rail tunnel under the Hudson River, one of the most massive - and urgent - infrastructure projects in the pipeline. But while DOT played a major role in developing and publishing the document, which is integral to the effort, the agency is skipping the press conference at Penn Station, reports Dana Rubinstein. The no-show follows reports that last week the agency withdrew its participation in the Gateway Program Development Corporation, the entity charged with building the tunnel.

SOP, or is it?: DOT said its withdrawal is "standard practice" when it comes to local transportation projects seeking federal funding, but Jeff Davis, the Eno Center for Transportation's senior fellow, noted that that's "not quite true," since DOT has representation

on, among other things, the Moynihan Station Redevelopment Corporation, which is seeking substantial federal funding.

Moynihands are tied: A DOT spokeswoman disputed Davis' take, saying the agency's role serving on the Moynihan board is by statute, ordered up by TEA-21 (remember that?). She also pushed back against suggestions that DOT not attending the press conference is a slap in the face, saying the agency decided that "while we could not attend in person, [we decided] our release of the draft EIS to them in advance, as well as advancing our statement ... would suffice and would also serve to demonstrate the expedited work that the FRA achieved" - that is, finishing the draft EIS in 22 months, instead of what otherwise would have taken 48 months.

LOOK MA, NO ADS: The FHWA last month confirmed its decision not to allow advertising on highway signs. According to a document obtained by POLITICO, FHWA rejected a request from a top official at Texas DOT to try displaying commercial logos on electronic message signs, thanking him for his interest in "exploring innovative concepts" but saying it conflicts with "applicable statutes and regulations." (Rep. Ted Poe (R-Texas) also opposed this idea and let U.S. DOT know about it.) FHWA's decision upholds a its ruling from a few months earlier, when a concerned citizen from Bensalem, Pa., wrote to DOT suggesting the agency raise money for infrastructure by leasing the space on the back of overhead highway signs. "Im thinking LED signs that last 30 years and could be programed on a desktop to eliminate the need for people to change the advertising on the highway," said the enterprising letter-writer (all typos his). However, FHWA responded that commercial advertising wasn't allowed and that such signs could contribute to driver distraction.

MAKING A LIST, CHECKING IT TWICE: The deadline for railroads to implement positive train control is still 18 months away, but Congress is worried that some railroads and transit systems aren't working fast enough to meet it. DOT's inspector general announced Wednesday the launch of a probe into how railroads are using federal PTC implementation funds. The audit was requested by Senate Commerce Chairman John Thune (R-S.D.), reports our Brianna Gurciullo. The IG will study how FTA and FRA are overseeing the expenditure of the $915 million in grants paid to railroads and transit systems so far for PTC rollout. PTC is up and running on just 23 percent of route miles for passenger rail and 27 percent for freight rail.

TSA: MORE THAN 5 MILLION SERVED: TSA announced Wednesday that its PreCheck program had "reached a milestone," having enrolled more than 5 million travelers since opening its first application center in December 2013. It now has more than 390 application centers nationwide, including locations at 44 airports. Acting Administrator Huban Gowadia said in a statement that the program strengthens security "by growing the trusted traveler population" so that officers are free to focus on potential threats. PreCheck participants can keep their shoes and belts on and their laptops and liquids in their bags.

** **A message from Delta Air Lines:** Delta® partners with CLEAR® to offer SkyMiles® Members exclusive rates on CLEAR membership to enjoy a faster way through security at airports nationwide. CLEAR's biometric technology platform gets travelers through security with just the touch of a finger or blink of an eye. Enroll today at clearme.com/delta. **

HOW TO USE YOUR VW WINDFALL: States are set to receive $2.9 billion, earmarked for "environmental mitigation," from the Volkswagen settlement and the U.S. PIRG Education Fund has an idea for how to use it. In a new report, U.S. PIRG suggests states use the proceeds from VW's emissions test cheating to install electric vehicle charging stations on highways and to replace old diesel buses with electric ones. U.S. PIRG estimates that states could supply between 4,350 and 8,700 additional fast charging stations and more than 3,000 all-electric, zero-emissions buses for the money.

IT'S ELECTRIC: Volvo will soon make a wholesale switch to electric cars, "marking the historic end of cars that only have an internal combustion engine and placing electrification at the core of its future business," according to a statement from the automaker Wednesday. From 2019 onward, every Volvo will have an electric motor, though hybrid cars will be included in the company's portfolio. Volvo officials said the move - which they say marks the opening of "a new chapter in automotive history" - is in response to customer demands. The company says it plans to launch five fully electric cars between 2019 and 2021, including two which will be branded Polestar, Volvo Cars' performance car arm. The company plans to sell a total of a million electric cars by 2025.

SHIFTING GEARS: Tom Murta will join the Short Line Safety Institute on Monday as its executive director. He was most recently assistant vice president of safety and operations compliance at CSX.

DEPARTMENT OF THINGS WE DIDN'T KNOW: There exists a "MicaPlex." (Yes, that Mica - the gentleman from Winter Park, Florida.) MT is willing to bet the MicaPlex's hamburgers are delicious.

New Jersey Eyes Rejoining Northeast's Carbon Trading Program

Posted September 08, 2017, 8:39 A.M. ET

By Gerald B. Silverman

New Jersey is on the cusp of rejoining the Northeastern greenhouse gas trading program it spurned in 2011, which could be a boon for power companies such as Consolidated Edison Inc. and Public Service Enterprise Group Inc. that have utilities across the region.

The Garden State is expected to rejoin the Regional Greenhouse Gas Initiative sometime after electing a new governor in November. Both the Democratic candidate for governor, Phil Murphy, and the Republican candidate, Lt. Gov. Kim Guadagno, support rejoining the program that Gov. Chris Christie (R) abandoned six years ago.

New Jersey would be the third-largest source of carbon dioxide emissions in the trading program should it rejoin the initiative. That would mean a larger marketplace for power companies to buy and sell emissions allowances and give utilities more options for making the necessary emissions reductions, Marjorie B. Kaplan, associate director of the Rutgers Climate and Environmental Change Institute at Rutgers University, told Bloomberg BNA in an email.

"But perhaps even more importantly, it would send a signal to the RGGI states that New Jersey is serious about addressing carbon emissions and a signal outside of the region that the Northeast region is uniting on addressing carbon emissions," she said.

Electric power companies are expected to have a relatively smooth transition if New Jersey takes the expected step of rejoining the trading program. The state's electricity generators participated in 14 RGGI auctions between 2008 and 2011. There were 40 electricity generators required to purchase carbon allowances when the state exited the program, according to RGGI data.

The trading program requires power plants with 25 megawatts of capacity or more in Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island, and Vermont to purchase one allowance for each short ton of carbon dioxide they emit. The allowances

are sold in quarterly auctions, with proceeds returned back to the states for use on renewable energy, energy efficiency and certain other program.

Utilities Back Rejoining

"We will support their decision and will work with the new administration to make sure that the transition back into RGGI goes smoothly," Paul Rosengren, a spokesman for PSEG, told Bloomberg BNA in an Aug. 31 email.

Mike Donovan, a spokesman for Orange & Rockland Utilities Inc., which provides transmission service in the northern part of New Jersey, said its parent company, Consolidated Edison, has been a supporter of RGGI.

The market could grow even larger if Virginia also joins the initiative. Virginia is considering joining RGGI, as part of Gov. Terry McAuliffe's (D) May directive that the commonwealth develop a trading-ready program to reduce carbon emissions.

Virginia, with a relatively large number of coal plants, would be second only to New York in terms of carbon dioxide emissions if it joined RGGI.

'Politically Motivated Tax Increase'

Christie withdrew his state from RGGI in 2011 and vetoed three bills from the Democratic legislature to rejoin the program. In his latest veto message July 13, he said the bill "is nothing more than an unnecessary, politically motivated tax increase."

But his own lieutenant governor has taken a more moderate position on RGGI and other issues in her bid to win election in the largely Democratic state. Ricky Diaz, a spokesman for Guadagno, declined to elaborate on her position, but confirmed that she supports rejoining RGGI.

Murphy, the Democratic candidate, plans to immediately rejoin RGGI if elected, according to his campaign's policy statement on climate change. He also supports developing a plan to eventually make New Jersey's power sector carbon-free.

"Gov. Christie's decision to pull out not only slowed progress on lowering emissions, but it also cost New Jerseyans tens of millions of dollars that should have been used to further reduce greenhouse gas emissions, increase energy efficiency, and improve air quality in urban communities," the policy statement said.

The New Jersey power sector produced 16.7 million metric tons of carbon dioxide emissions in 2014, while the nine current RGGI states had 78 million metric tons of emissions that year, according to Energy Information Administration data.

Carbon Price Boosts Nuclear, Renewables

Putting a price on carbon in the state would help recognize the value of nuclear generation in producing carbon-free electricity, according to Rosengren. About half the state's electricity comes from nuclear power, he said.

New Jersey also would benefit from a new sources of revenues for renewables and energy efficiency because RGGI auction proceeds are returned to states for those types of programs,

Rosengren said.

Though some utilities back rejoining the emissions trading program, other businesses fear the move will only drive up electricity bills.

"In order for businesses to remain competitive in our region, we need to control electric costs," Bob Considine, a spokesman for the New Jersey Business & Industry Association, told Bloomberg BNA in an email.

"About 24 percent of our electric bill is government-imposed taxes and fees," he said. "Increasing generation costs through cap-and-trade would only increase that portion on the ratepayers of New Jersey."

Carbon Allowance Prices Jump as Cap to Tighten in Northeast

Posted September 08, 2017, 12:40 P.M. ET

By Gerald B. Silverman

Power companies saw a 72 percent jump in the price of greenhouse gas emissions allowances in the first auction after the Northeast's trading program announced plans to ratchet down the emissions cap.

Carbon allowances for the Regional Greenhouse Gas Initiative sold for $4.35 each in the Sept. 8 auction, up from $2.53 in June, according to auction results announced today. Despite the increase, that's still slightly down from $4.54 in the September 2016 auction. The latest auction raised $62.5 million for the nine states in the program.

The price increase can be attributed to RGGI's recent proposal to tighten its emissions cap after 2020 and create mechanisms to control the oversupply of allowances.

Forest Management Bills Wander Through Political Woods

Posted September 08, 2017, 6:36 A.M. ET

By Alan Kovski

Wildfires scorching the West may put the heat on lawmakers to revamp management of federal forests and funding of wildfire suppression.

The omnibus funding bill this year or a farm bill in 2018 may be just the must-pass vehicles to advance that legislation, sponsors say.

"We'll just look for whatever moving vehicles are out there. A spending bill may be one—some kind of an omnibus, perhaps in December," Sen. Steve Daines (R-Mont.) told Bloomberg BNA. "Looks like they're looking for a short-term [continuing resolution], which says there'll be something bigger coming in December," he said.

The bills could make a very big difference to companies that harvest timber on federal lands, to the communities dependent on the harvests for jobs and revenues, and to homeowners vulnerable to wildfires. The bills also worry conservationists fearful of excess logging.

Daines would like to shepherd a forest management bill through the Senate Agriculture, Nutrition, and Forestry Committee with a mix of streamlined environmental regulations and litigation relief. He has the support of Sen. Pat Roberts (R-Kan.), chairman of the committee, who told Bloomberg BNA Daines "has some very good ideas."

Burning Motivation for Action

Wildfires have burned 6.85 million acres in the U.S. so far this year, a 50 percent increase over the same period of last year, according to the National Interagency Fire Center. "There are more than a million acres of land burning in the West," Sen. John Barrasso (R-Wyo.) said on the Senate floor Sept. 6.

"Yeah, Montanans are tired of it," Daines said later. "It's an environmental disaster. Economically, it's very harmful."

"Sometimes it takes a tragedy or crisis to drive action in Washington," Daines said. "This fire season may be the—excuse the metaphor—the spark to get something done."

Wildfire fighting routinely drains all available funds from the U.S. Forest Service and leads to disruptive borrowing from other programs, including programs intended to prevent fires.

To stop the borrowing, lawmakers have been looking for a better strategy to supplement funds when appropriations fall short. That effort has bogged down for several years over disagreements on which law to amend—the Balanced Budget and Emergency Deficit Control Act, which can allow budget adjustments, or the Stafford Act for disaster relief, which could be amended to provide wildfire funding as a form of disaster relief, much as hurricane recovery is funded.

Some lawmakers, including Sen. Lisa Murkowski (R-Alaska), chairman of the Senate Energy and Natural Resources Committee, also have argued that it is unwise to increase firefighting funds without also boosting the management strategies—including forest thinning, fire breaks, and prescribed burns—that might reduce the number and severity of fires.

The Energy and Natural Resources Committee is another possible avenue for advancement of a forestry bill, Daines said.

Funding Bills Offered

Rep. Mike Simpson (R-Idaho) has once again proposed a bill (H.R. 2862) to use budget cap adjustments to allow more funding of wildfire suppression. The bill was introduced in June, received bipartisan support, and was referred to three committees (on budget, natural resources, and agriculture), the committee jurisdictional being another complicating factor.

Sen. Mike Crapo (R-Idaho) introduced a bill (S. 1571) that would make wildfire suppression available for disaster relief funding through an amendment of the Stafford Act. His bill hitches the Stafford Act amendment to reauthorization of the National Flood Insurance Program.

The Trump administration has taken no position on the funding options, which may frustrate people wanting action. "We would hope the administration would support a particular approach to fire funding," Bill Imbergamo, executive director of the Federal Forest Resource Coalition, told Bloomberg BNA. His group is an association of federal timber buyers.

Westerman Modifies Strategy

Forest management is the more difficult forest legislation, because it becomes a debate over how much logging to allow, whether to restrain litigation, and how many exemptions to make, if any, to the environmental analysis obligations of the National Environmental Policy Act (NEPA).

The House passed legislation in 2015 to establish a set of exemptions from NEPA requirements and to discourage litigation. This year, Rep. Bruce Westerman (R-Ark.) introduced a modified version (H.R. 2936) of that legislation without the provisions to dampen litigation, but he has won no votes from Democrats yet.

Westerman's bill was approved in June by the House Natural Resources Committee on a party-line vote and awaits action by three other committees. The 2015 version of his bill was passed the House but went nowhere in the Senate.

Thune Tries for Farm Bill

"I think the big difference this time in the Senate is that the Agriculture Committee is actively working on its 2018 farm bill, Mike Anderson, a Seattle-based senior policy analyst at the Wilderness Society, told Bloomberg BNA. "It's must pass, and it probably will include a forestry title or some [forestry] provisions in it."

Roberts unsuccessfully tried to galvanize action with a forest management bill last year. This year, Sen. John Thune (R-S.D.), also on the Agriculture Committee, is giving it a try with his Forest Management Improvement Act of 2017 (S. 1731), introduced Aug. 2.

Thune said he wanted his legislation to become part of a 2018 farm bill, but it was referred to the Environment and Public Works Committee. The referral to that committee may have surprised Thune, Anderson said.

Thune's bill would establish categorical exclusions for projects of up to 10,000 acres for forest thinning, wildlife habitat improvement, creation of areas of new growth ("early serial habitat"), and salvage of dead or dying trees. Where environmental impact statements are needed, the alternatives studied would be limited to the proposed project and the alternative of no action.

"I think the farm bill is a really good vehicle," Imbergamo of the timber buyers group said. He wondered how much of the forestry legislation could be carried in such a bill, however.

The 2014 farm bill (Pub. L. No. 113-79) had a forestry title including some NEPA categorical exclusions, notably for timber harvests of up to 3,000 acres in areas of declining forest health because of insects or disease. A Good Neighbor Authority program, allowing state foresters to conduct projects on federal lands, was expanded to nationwide and permanent status.

"We're very concerned about the Westerman bill and Thune's bill," Anderson said. To the Wilderness Society, the NEPA exemptions are misguided, and Thune's provision for a pilot program of binding arbitration is another effort at litigation restraint opposed by Anderson's group.

Committee Actions Awaited

Barrasso, chairman of the Environment and Public Works Committee, can be expected to be

supportive of the Thune bill, but that does not necessarily mean movement. Behind the scenes, there has been no talk of action on such legislation, a source said Aug. 29.

Democrats on the Environment and Public Works Committee, led by Sen. Tom Carper (D-Del.), can be expected to oppose NEPA exemptions. The majority could still get the bill out of committee to the Senate floor, where it could be added to a farm bill.

Barrasso introduced his own forest management bill (S. 879) early this year. It was referred to the Senate Energy and Natural Resources Committee, like his 2015 version of the bill.

Murkowski and Sen. Maria Cantwell (D-Wash.), ranking member of Energy and Natural Resources Committee, have talked about forest legislation several years in a row, including this year, but have moved nothing yet.

Rounding out the circle of legislation is the Emergency Fuel Reduction Act of 2017 (S. 1752), introduced Aug. 3 by Sen. Dean Heller (R-Nev.) and referred to the Agriculture Committee.

Turf Battle Looms as House Energy Leaders Plan DOE Overhaul

Posted September 08, 2017, 7:41 A.M. ET

By Brian Dabbs

Plans by a key House Republican to retool the Energy Department's core functions are in for a turf battle.

Rep. Joe Barton (R-Texas), a top Energy and Commerce Committee member and former chairman of the panel, plans to float legislation by the end of the year to overhaul the department, he told Bloomberg BNA, confirming statements he's made in recent months.

But beyond the general deadlock on Capitol Hill, there's one big problem: Barton isn't looping in Republican colleagues on another committee that controls the lion's share of department's non-military policy. The leader of that committee, in fact, said he didn't even know about the plans.

"I haven't heard anything about that," Science Committee Chairman Lamar Smith (R-Texas) told Bloomberg BNA Sept. 6. "I haven't heard anything about Barton or E&C [Energy and Commerce] at all."

Reauthorizations are a way for lawmakers to update the missions of federal departments and agencies. Without input from the science committee, the retooling effort could sputter or degenerate into a jurisdictional fight.

The House Science, Space, and Technology Committee is tasked with directing department action on research and laboratories, which play a vital role in innovative energy technologies, some of which are commercialized in the private sector. That research, some of it under the Advanced Research Projects Agency-Energy, and the agency's loan programs are a critical asset to energy companies of all sizes. The loan programs also fall under the science committee.

The E&C Committee is a juggernaut on Capitol Hill, competing with only the Ways and Means Committee for the broadest policy influence. Members covet seats on the two committees, and each of the bodies is known to throw around its weight in jurisdictional battles.

Meanwhile, business representatives are pining for collaboration.

"Ultimately it would be extremely helpful for both committees to team up to get this done," Christopher Guith, senior vice president of the U.S. Chamber of Commerce's Global Energy Institute, told Bloomberg BNA. "Anytime you're going to do [Energy Department] reauthorization, you're going to have to go through multiple committees." Guith served served as deputy assistant secretary for nuclear energy at the department during the George W. Bush administration.

E&C Forges Ahead

Barton suggested the Energy and Commerce Committee is comfortably in the driver's seat.

"We are primary. Depending on how energetic we want to be, we could conceivably have the science committee and the Natural Resources Committee" contribute, he told Bloomberg BNA Sept. 6.

Energy Committee Chairman Greg Walden (R-Ore.) tapped Barton for the task earlier this year, and Walden is committed to seeing the process move forward.

"Chairman Walden wants the committee to take a strategic look at a broad range of Department of Energy activities and responsibilities," Dan Schneider, a spokesman for Walden, told Bloomberg BNA. "He wants to identify where mission and management reforms make the most sense, in light of today's energy landscape, energy security—including cybersecurity—challenges, and national security interests."

Barton didn't disclose details of his priorities for the overhaul, saying only that he'd "like to see a realignment of the [Environmental Protection Agency] and its interaction with the Department of Energy." A spokesman for Barton, Daniel Rhea, said the former chairman plans to release his framework for the overhaul later in September.

The department, created in 1977, has never been fully reauthorized. Congress regularly reauthorizes the Defense Department and Federal Aviation Administration.

Science Committee Headway Made

A partial reauthorization of the Energy Department, a bipartisan bill (H.R. 589) authored by Smith, soared through the House in January.

Smith's bill also gives arcane new directions to the department to administer its 17 national labs and extends the Commercializing Technology pilot program, which aims to ease negotiations between the labs and the private sector over technology transfer, through Sept. 30, 2019. And further, the legislation revises the department's policy on advanced nuclear research, directing, for instance, an assessment of the need for a reactor-based fast neutron source.

Nuclear proponents have praised that language.

"The new bill also includes important reforms allowing the national labs to work more closely with private industry, and establishes new research programs around solar fuels, exascale computing and electricity storage," said a statement from the conservative group ClearPath Foundation in January. "Altogether, this bill establishes research programs focused on several key areas of clean

energy development, while giving the national labs greater flexibility."

But the bill's supporters tout its reauthorization of the department's Office of Science as a major achievement, calling it the first comprehensive overhaul of the office to date. The Office of Science accounts for nearly a sixth of the department's budget in fiscal year 2017.

The House rules on committee jurisdiction, which offers succinct descriptions of those authorities within a sprawling document, show the science committee holds sway over nearly all department research.

E&C has jurisdiction over "energy policy generally," but is charged largely with regulations.

Much of the department's budget is dedicated to nuclear weapons and other military functions, and that authorization is controlled by the armed services committee in the House and Senate. Barton said he doesn't expect an overhaul to touch on the military side.

Committee Still in the Dark

Thea McDonald, a spokeswoman for Smith and the science committee, told Bloomberg BNA Barton will have to reach out to the committee if he wants to achieve a real overhaul.

"Any comprehensive [Energy Department] reauthorization would have to include significant input from the science committee, as upwards of one-third of DOE is under our jurisdiction," she said.

Barton also hasn't reached out to Democrats, who may be needed in striking a deal. Nor has he reached out to Senate Energy and Natural Resources Committee Chairman Lisa Murkowski (R-Alaska), who would take up the mantle on the Senate side, she told Bloomberg BNA Sept. 7.

Monsanto Seeks to Block Arkansas Pesticide Ban

Posted September 08, 2017, 02:52 P.M. ET

By Tiffany Stecker

Monsanto Co. called on the Arkansas governor to reject a recommendation to curb spraying of the herbicide dicamba during a key part of crop-growing season, saying the proposal is backed by "unsubstantiated" theories.

At issue is a proposal by state regulators to prohibit spraying of the herbicide next year after April 15, before the hot summer months begin. Arkansas this summer received an unprecedented number of complaints about crop damage linked to the herbicide, a decades-old chemical undergoing a resurgence as Monsanto, BASF Corp., and other companies sell new versions of the weedkiller.

While the Arkansas ban would affect BASF and Dupont, which have dicamba products used by Arkansas farmers, Monsanto is fighting both to get a new product approved for use in Arkansas, and to get the ban lifted for all companies.

Pesticide Drift

Dicamba products were developed to help farmers kill weeds that have developed resistance to

common herbicides. But scientists in Arkansas say the chemical is prone to evaporate and travel to fields thousands of feet away, causing damage to soybeans, trees, and other vegetation.

Monsanto sent a letter to Gov. Asa Hutchinson (R) and a petition for rulemaking to the Arkansas Plant Board Sept. 7 to oppose the cut-off date.

The company also asked the plant board to allow the use of Monsanto's XtendiMax dicamba herbicide, which is currently prohibited in Arkansas but allowed in other states.

The plant board did not permit XtendiMax this year because state university scientists were not given the opportunity to do independent tests on the herbicide before it came on the market.

BASF spokeswoman Odessa Hines declined to comment specifically on Monsanto's petition, but pointed to a recent statement in which the company opposed the April 15 cutoff date.

"Restricting the use of this proven technology is a major step backwards for Arkansas farmers who will be put at a competitive disadvantage to growers in neighboring states," the BASF statement said.

'Contradicted by Actual Scientific Data'

Monsanto rejects the conclusion that the new versions of dicamba are volatile and argued that the crop damage is probably due to farmers misusing the herbicide, rather than the result of a failure in the product's design.

The state regulators' proposal to limits the herbicide's use "is predicated on unsubstantiated product volatility theories that are not supported by empirical or modeled data, but are contradicted by actual scientific data the Task Force failed to consider," Monsanto's Chief Technology Officer Robb Fraley wrote Hutchinson.

The company has suggested the crop damage is more likely the result of contamination of dicamba with other herbicides; illegal use of older, more volatile formulations of dicamba; spraying in high wind speeds or during other adverse weather conditions; or applicator's misreading the label instructions on the new, lower-volatility dicamba.

The 19-person plant board in August agreed to a task force recommendation to set an April 15 cutoff date to prevent spraying during the hot summer months when volatility—when the herbicide turns from liquid to gas—is more likely to occur. The date also would preclude many farmers from using the products on soybeans, which are usually planted in May.

Integrity Of Scientists

Monsanto's petition also calls into question the integrity of the scientists who say the products are highly volatile. Ford Baldwin, a retired University of Arkansas weed scientist and Jason Norsworthy, a current scientist at the university, spoke at the task force meeting on Aug. 17 in favor of restrictions.

Baldwin is a paid consultant for Monsanto competitor Bayer CropScience and an expert witness in litigation against the company, Monsanto said in its petition.

Norsworthy was quoted in a promotional pamphlet for LibertyLink, Bayer's herbicide developed to

kill resistant weeds, the company said.

Neither Baldwin nor Norsworthy were immediately available to comment.

The nonprofit Center for Biological Diversity criticized Monsanto's efforts to deter the state from instituting a ban.

"Monsanto continues to deny the well-documented fact that dicamba is notoriously drift-prone and is now attempting to thwart common-sense measures to protect farmers from this dangerous pesticide," Nathan Donley, a senior scientist at the organization said in a statement. "Dicamba drift is now blamed in damage across an estimated 3 million U.S. acres yet Monsanto can think only of protecting its own profits."

EPA Chief Pledges to Secure Toxic Sites in Irma's Storm Path

Posted September 08, 2017, 12:44 P.M. ET

By Jennifer A. Dlouhy

The Trump administration is applying lessons from Hurricane Harvey's drenching of southeast Texas as it secures toxic waste sites in the path of Hurricane Irma, U.S. environmental chief Scott Pruitt said.

The Environmental Protection Agency's main goal is to make sure there are "enough people on the ground" to quickly assess the integrity of at-risk chemical sites and respond to needs as the monster storm moves through, Pruitt said. Technical staff already are working to secure about 80 Superfund sites in Irma's path from Miami to North Carolina, including a former pesticide plant, military base, and machine shop.

"Operationally, we've tried to make sure we apply the same type of approach we used in Texas," Pruitt, the EPA's administrator, said in a Sept. 7 interview. "Because of the area and the amount of population that's affected in Florida, we're trying to be even more aggressive."

The EPA faced some criticism for its response to Hurricane Harvey in Texas, as it was not able to immediately inspect some toxic Superfund sites that were flooded or inaccessible. After chemicals at one plant exploded, spewing fumes into the air, the agency said an initial analysis showed "no high levels of toxic chemicals." Earlier on Sept. 7, local police officers filed a lawsuit against the plant owners, Arkema SA, saying they were sickened by the fumes from the plant.

Nearly 200 EPA personnel were deployed in Texas. The agency has about 77 people working on Irma related efforts and another seven are on the way.

Back-to-back hurricanes hitting the U.S. threaten to strain the federal government's resources, prompting the Senate to pass a $15.25 billion relief bill Sept. 7, and renewing a debate about the size and scope of federal agencies. The Trump administration has proposed cutting nearly a third of the EPA's budget for the fiscal year that begins Oct. 1 and culling roughly 3,200 employees from the agency's 15,000-member workforce, a process that has already begun as hundreds of workers accept buyouts.

Pruitt stressed that the EPA has not been hit by budget reductions yet, as Congress weighs how much to spend on the agency. Both Republican and Democratic lawmakers have signaled that they

will refuse to make the steep budget cuts President Donald Trump is seeking for EPA.

"Congress is working through the budget as we speak, so there's been no impact in that regard," Pruitt said. "It's more of just simply allocating personnel and prioritizing personnel—making sure that at the end of the day it's the local officials and the state officials in partnership with the EPA."

Hurricane Irma's Chemical Fallout Could Be Worse Than Harvey's

Posted September 08, 2017, 10:28 A.M. ET

By Jack Kaskey, Ryan Collins and Bryan Gruley

Before flames and smoke leaped into the sky over the Arkema chemical plant in Crosby, Texas, last week, Jolyn Masters was hunkered down at home on a Hurricane Harvey-flooded street a mile away. Then came a knock. A National Guard evacuation boat was waiting because of what was expected at Arkema.

For the next three days, Masters called a company hot line for information about the nine trailers containing volatile chemicals on Arkema's property. "I was on a first-name basis with one of the ladies," Masters said.

By the time she returned home on Labor Day, the trailers had burned. Nobody had died. But Masters couldn't offer comfort to people living near chemical plants as Hurricane Irma bears down. "This wasn't anything foreseeable," she said. "So I wouldn't even know what to tell those people."

What happened in Crosby could happen in Florida, with more disastrous results. It could happen in Homestead, near a pair of nuclear generators; or at plants near Tallahassee that produce potentially explosive ammonia; or rural communities with an expanse of phosphate mines not far from the Gulf Coast.

While Crosby appears to have avoided serious tragedy, Arkema executives admitted they were unprepared. The potential dangers stored within chemical plants remain unclear because regulators have acquiesced to industry demands that such information be kept secret for fear of terrorism. And Environmental Protection Agency head Scott Pruitt delayed for two years Obama-era rules requiring companies to be more transparent about what's in plants and their plans to keep them safe.

"One of the best ways to better prepare for these emergencies is to know what you're dealing with," said Bill Hoyle, a former senior investigator with the U.S. Chemical Safety Board, an independent agency. "What are the chemicals? How much of the chemical is there and what's the potential impact? I am sure the people evacuated in Crosby had no idea they were in a vulnerability zone."

The incident at the 43-year-old plant owned by Arkema SA of Paris, France, provided some of Harvey's most dramatic pictures—and a fortunate anticlimax. But an analysis by the Center for Biological Diversity in Tucson, Ariz., showed that the Houston area's hundreds of refineries and petrochemical operations released almost 1 million pounds of air pollutants in Harvey-related spills and flares, including benzene, sulfur dioxide, toluene, and xylene. The effects might not be known for months.

Before Harvey, the American Chemistry Council industry group issued a statement saying,

“Chemical companies know well to avoid the dangers of being unprepared.” This week, spokeswoman Anne Kolton said in an email that the group’s members “are taking Hurricane Irma extremely seriously.“

Mishandling Hazards

The Arkema plant generates about $30 million in annual revenue, less than 1 percent of its parent’s total. It was among 55 Houston-area facilities named as potentially harmful in a 2015 Houston Chronicle investigation done with Texas A&M University. The Occupational Safety and Health Administration this year fined the plant $91,274 for 10 safety violations, including some that involved mishandling of hazardous materials.

As with Hurricane Katrina in 2005 and the Fukushima, Japan, nuclear disaster in 2011, water defied Arkema’s efforts to protect the facility in the town of 2,300 about 25 miles northeast of Houston. When reporters asked how the company prepared, Arkema president Richard Rennard said, “Certainly we didn’t anticipate having six feet of water in our plant.“

The big problem was 19.5 tons of organic peroxides, used as catalysts in plastics manufacturing, which must be kept cool or they will ignite. When Harvey cut power, Arkema turned to generators that flooded; as at Fukushima, they were below the level of the rising waters.

Arkema had shut down the plant as Harvey barreled into Texas. It moved the peroxides away from chemicals like sulfur dioxide to the nine trailers with their own cooling systems. When those failed, Arkema told the world that explosions would ensue.

The first blast came early Aug. 31. Emergency workers were overcome by fumes, with police officers vomiting and gasping for air, according to a lawsuit filed against Arkema Sept. 7 by seven first responders. After a second explosion the next day, Masters received a call from Arkema saying yet another was coming. A few minutes later: boom!

Rennard said, “I’m not sure what more we could have done to provide additional layers of security to provide power to the site.” He said no dangerous chemicals had been released.

“This is a fire,” he told reporters. “We are watching physics at work.“

Safety Cuts

The Chemical Safety Board—which was slated for elimination in a Trump administration budget proposal—said it would investigate. Masters and her neighbors returned to the evacuation zone. Residents were cautioned to drink bottled water and wear surgical masks. The EPA said aerial monitoring detected no high levels of toxins in the air.

Florida should be so fortunate. Its petrochemical footprint isn’t nearly as large as Houston’s, but a map prepared by the nonprofit group Environment Florida shows scores of plants, storage depots, refineries, wastewater treatment facilities and EPA Superfund sites that could release hazardous materials.

Port Tampa Bay alone handles ammonia, unleaded gasoline, sulfuric acid and ethanol. The port was operating Sept. 7, but will halt shipping if the Coast Guard forecasts gale-force winds of at least 39 miles per hour hitting within the 24 hours to come.

Jennifer Rubiello, state director for Environment Florida, said in an email that industrial sites are poorly regulated and "even well-regulated sites can and do fail." She said she couldn't pinpoint Florida's riskiest because operators aren't required to disclose emergency plans.

Florida Power & Light Co. operates two nuclear-power generators 25 miles south of Miami at the mainland's southernmost tip. They were built in the early 1970s, when engineers couldn't imagine how rising seas could increase storm surges, said Bill Newton, deputy director of the Florida Consumer Action Network.

Fukushima's nuclear plants melted down after tsunami's surge cut power to cooling pumps, and Irma could do the same at Florida Power's Turkey Point plants, Newton said. "You lose the cooling, you lose the whole thing," he said.

Peter Robbins, a spokesman for the utility, said that comparing Turkey Point to Fukushima is "irresponsible."

The Florida plant was built to withstand Category 5 storms, and absorbed a direct hit from Hurricane Andrew 25 years ago, Robbins said. Equipment to mitigate flooding was added after Fukushima, and the plant and backup generators are 20 feet above sea level. Operations will stop before any storm impact, he said.

Then, there are the mines. Central Florida contains the nation's largest deposits of phosphate, a key fertilizer ingredient. Mosaic Co. of Plymouth, Minn., digs the ore from 200,000 acres and breaks it down with sulfuric acid, creating a byproduct called phosphogypsum that contains small amounts of radioactive uranium and radium. Because the phosphogypsum market is tiny, about 1 billion tons is piled in more than 20 stacks around the mines, according to Florida Polytechnic University researchers.

Drinking-Water Threat

Runoff can contaminate drinking and fishing waters from stacks that are inadequately contained, said Jaclyn Lopez, director for the Center for Biological Diversity's Florida office. Spills precipitated by Hurricane Francis in 2004 killed marine animals. Last year, millions of gallons of contaminated water sluiced into an aquifer after a sinkhole opened beneath a Mosaic stack.

"It's hard to say what the implications of 15 to 20 inches of rain would be," Lopez said. "It opens new pathways into the environment."

Ben Pratt, a spokesman for Mosaic, said the company has begun hurricane preparations at the phosphate facilities and has not yet decided whether to shut down.

EPA Administrator Scott Pruitt said in an interview that staff are being dispatched to monitor Irma's impacts, and he's not stinting on manpower. "If someone needs 10 people, send them 20," he said. "If they need 20, send them 40."

Workers are evaluating about 80 Superfund sites from Miami to North Carolina, and the agency is working with owners to secure them, he said.

Back in Crosby, Masters said Arkema handled its problem as well as could be expected. Other locals aren't as positive, she said, but, "even the people that disagree are still both out there helping the neighbor pull carpet out of their house."

Trump Taps Bush-Era Official to Lead EPA Air Office

Posted September 08, 2017, 12:55 P.M. ET

By Abby Smith

A President George W. Bush-era EPA official could once again be leading the agency's air pollution office.

Bill Wehrum, should he be confirmed to lead the Environmental Protection Agency Office of Air and Radiation, would be returning to the post, which he held in the acting position for two years during the Bush administration.

President Donald Trump announced his intent to nominate Wehrum late Sept. 7, and the White House sent his nomination to the Senate shortly after. Wehrum is currently an attorney with Hunton & Williams LLP, where he heads the firm's administrative law group.

As air chief, Wehrum would lead the EPA's work on air and climate regulation—meaning he would be directing Trump administration efforts to review, and potentially unravel, Obama-era rules. The EPA, under Administrator Scott Pruitt, has already committed to review several key Obama-era rules, including the Clean Power Plan, methane limits for the oil and gas methane industry, and more stringent ozone air pollution standards set in 2015.

Merkel Warned That Failure to Hit Climate Goal May Hurt Germany

Posted September 08, 2017, 10:50 A.M. ET

By Brian Parkin

Chancellor Angela Merkel's ambition to lead Europe's fight against global warming is at risk of backfiring and tarnishing Germany's climate credentials, according to researchers.

Germans will likely reduce their carbon dioxide emissions by about 30 percent in 2020 compared to 1990 levels, missing the 40 percent reduction goal set by the government in 2012, according to a report by Berlin-based climate researcher Agora Energiewende.

German emission reductions "won't be a near miss but a booming failure," Agora researchers wrote. They urged Germany to refocus on emission cuts after this month's federal election, in which Merkel is seeking a fourth term as chancellor.

Climate protection is getting short shrift in campaigning by Germany's biggest parties even though polls show it's important to voters. More than seven of 10 Germans worry about the impact of climate change, even more than the 65 percent of voters concerned with war, according to a July survey by Kantar Emnid.

The Environment Ministry in Berlin responded to the Agora report, rejecting its forecast for carbon

dioxide output to 2020 in a statement on Thursday. The ministry expects Germany to cut emissions by as much as 37 percent.

EPA Braces for Irma • Harvey Gives Agency Chance to Shine • Congress Looks for Wildfire Money

Posted September 08, 2017, 7:12 A.M. ET

By Stephen Lee

EPA Braces for Irma

The EPA is doing what it can to prep for Hurricane Irma as the demon storm barrels toward Florida.

Right now the agency is focused on buttoning up local Superfund sites. EPA staffers are checking on the 22 sites in south Florida, assessing vulnerabilities, and prioritizing sites that have to be looked at once the storm has passed. EPA people are going to rush in and check out the sites as soon as they can, the Environmental Protection Agency says.

It's a chance for the agency to redo its Hurricane Harvey Superfund response. That time, remember, the EPA got into a flame war with an Associated Press reporter who said the agency wasn't on the scene.

EPA boss Scott Pruitt, for one, is feeling confident this time around. He says the agency's "expert preparedness and ongoing response efforts" in Houston makes him feel sure that EPA staff in Florida can "replicate their efforts."

The Senate gaveled through $15 billion in FEMA disaster aid on Thursday.

Harvey Gives Agency Chance to Shine

Most people who've heard of the CSB figure it's either a high-powered, zillion-person bureaucracy or a TV network. Wrong on both counts: the Chemical Safety Board is a tiny agency that haunts a few rooms in D.C., can't issue rules or fines, and employs all of 40 people.

That's why most of the time the CSB stays out of the spotlight. But every once in a while something happens that gets it on the nightly news, and now that Arkema's chemical factory has blown up in Texas, the CSB is getting camera-ready again.

The truth is, if anyone in the government is going to figure out what happened at Arkema, it will be the CSB. No one else is going to bother because it doesn't look like Arkema broke any government rules.

But President Trump has said the CSB should be killed because it's redundant. The agency does have funding at least through next September, though, and it's already got people poking around the Arkema site. Perish the thought that anyone would get political with hurricane cleanup, but realistically, this could be the CSB's chance to prove its worth to the folks in the White House.

(By the way, first responders are now suing Arkema for exposing them to nasty chemicals.)

Congress Looks for Wildfire Money

Gigantic wildfires are raging in Montana, Washington, Oregon, and California, and now Congress is trying to find more money to put the flames out.

Funding bills in the House and Senate could find their way into a big spending package in December or a farm bill next year. Something like that would be huge for timber companies, farmers, and people who live near the fires.

It seems like a bit of a long shot, though. The same idea flopped last year and the year before, and Congress doesn't have a ton of time left this year. Still, lawmakers aren't giving up.

One big difference this time in the Senate is the Agriculture Committee is actively working on its 2018 farm bill, which is must-pass legislation and will likely include some forestry stuff, according to Mike Anderson, a policy analyst at the Wilderness Society.

Meanwhile, reports from Montana are terrifying: the Washington Post's Capital Weather Gang is describing "apocalypse-like" conditions that are "blotting out the noonday sun."

What Else?

• Shopkeepers in Houston are mopping up the water and trying to open their doors, but government agencies are making sure they don't just dump their pesticides, paints, and drugs down the toilet.

• The Senate just barely voted down a $750 million chip-in for the U.N. Climate Fund.

• President Trump's fiery rhetoric on trade might hurt big U.S. energy companies.

• The president's nominees for the Federal Energy Regulatory Commission told Congress the agency should be technology-neutral.

• The European Union is sticking to the Paris accord, with or without the U.S.

Today's Events

• 10 a.m. EDT • Hurricanes • The Union of Concerned Scientists hosts a conference call about the things that make disasters like Hurricanes Harvey and Irma happen.

• All day • Climate • The Catalysts of the Climate Economy National Innovation Summit wraps up in Burlington, Vt.

Quote of the Day

"The commission doesn't have the authority—nor should it—to prop up failing technologies."
—Richard Glick, FERC nominee, on legacy energy sources

From Our Inbox

• A new study in Climatic Change journal connects the dots between climate change and specific fossil fuel companies like ExxonMobil and Chevron.

• Chocolate bar maker Mars says it's spending $1 billion to reverse climate change.

• More than 650 facilities energy and industrial facilities were affected by Harvey.

• San Diego Gas & Electric is offering $1,000 electric car rebates to teachers and first responders.

All About: The Green Climate Fund

Thursday the Senate Appropriations Committee rebuffed Democrats' last hope of resurrecting U.S. funding for the UN Green Climate Fund. That's a victory for President Trump, who made the fledgling fund for developing nations the poster child for U.S. climate spending abroad that would be better spent here at home.

But what is the Green Climate Fund exactly, and how did it become such a contentious issue? Well, the U.S. was actually one of the early backers of the UN fund back in 2014, when 190-plus nations were still very far apart on a global climate deal.

Poorer developing nations essentially were asking: why should we agree to act on climate change when the problem was largely caused by richer developed nations, and why shouldn't we be able to use the same fossil fuels richer nations used to industrialize? The Green Climate Fund, essentially, was partly an answer to that question. The U.S. led the way in pledging $3 billion over four years to the GCF to help developing countries adapt to climate impacts and pursue low-carbon development. Pledges today total just over $10 billion from more than 40 nations, mostly from developed ones.

The Obama administration wasn't able to fully deliver on that $3 billion promise; it actually only made good on $1 billion by the time Obama left office in January. But even that was controversial, as Republicans in the House and Senate protested that Obama made payments even without a specific authorization from appropriators. Thursday's vote in the Senate Appropriations Committee against further funding signals the end for such funding, perhaps as long as Trump remains in the White House.

Sent: Fri 7/14/2017 11:07:32 PM
Subject: Report: DOE grid study draft says no threat from renewables

By POLITICO Pro Staff

07/14/2017 07:03 PM EDT

A draft version of the power grid study ordered by Energy Secretary Rick Perry found that wind and solar power did not pose a threat to the U.S. electricity network, Bloomberg News is reporting.

"The power system is more reliable today due to better planning, market discipline, and better operating rules and standards," the July draft obtained by Bloomberg says.

Perry ordered DOE to produce a report on whether federal regulations and tax policies were putting the power grid in jeopardy by driving baseload generating plants like coal and nuclear power into retirement. His April order sparked concerns among lawmakers and renewable advocates that his agency would produce a report that could be used to reduce support for green energy sources and protect coal-fired plants.

The findings in the draft report are under review by DOE's leadership, according to Bloomberg.

A DOE spokeswoman said the draft report appeared to be an outdated version of the report, and that the language cited by Bloomberg was not in the current version.

Last month, Perry said grid experts had expressed fears that baseload power plants were being pushed offline prematurely because of policies that favored renewables at the expense of coal.

"These are politically driven policies driven by a hostility to coal," he said.

Electricity analysts and utility companies have largely blamed the steep jump in U.S. natural gas-fired power production, flat power consumption and the lower efficiency of the aging coal plants for the drop in coal's share of the power market, since wind and solar still make up a small part of the nation's energy mix.

WHAT'S NEXT: DOE may release its grid study as early as next week.

Darius Dixon contributed to this report.

Highlights

Leading the News

EPA Wants to Reconsider Coal Ash Cleanup Rules

By *Sylvia Carignan*

The EPA is taking a second look at its requirements for monitoring and cleaning up coal ash sites, in addition to other provisions of an agency rule currently under court review.

EPA Floats Proposal to Push Back Water Rule to 2020

By *Amena H. Saiyid*

A proposed delay of a regulation defining the reach of the Clean Water Act would help avoid confusion among home builders, contractors, and miners, according the Trump administration.

Third Republican Senator Casts Doubt on EPA's Chemical Pick

By *Tiffany Stecker*

A third Republican senator expressed concerns with the Trump administration's selection of Michael Dourson to lead EPA's chemicals office, potentially imperiling the nomination unless at least one Democrat crosses party lines.

U.S. Vows to Stay Engaged on Climate, Progress

Expected in Bonn

By *Dean Scott*

The U.S. still intends to pull out of the Paris climate pact but will "remain engaged" in international negotiations—including climate talks, its top climate diplomat told other nations on the eve of the close of a two-week U.N. climate summit in Bonn.

Cut U.S. Climate Pledge But Only as Hail Mary, Obama Envoy Says

By *Dean Scott*

The Obama administration's top climate negotiator said Nov. 16 he would back the U.S. weakening its international greenhouse gas reductions pledge—but only as a last-ditch effort to keep President Donald Trump from completely withdrawing from the 2015 Paris deal.

Defense Bill Backing Contaminant Study Sails Through Senate

By *Pat Rizzuto*

A spending blueprint that would support $7 million for a national study examining a group of chemicals increasingly detected in drinking water supplies across the nation passed the Senate Nov. 16.

Today's News

Defunct EPA Program Best Way to Clear Air, Power Plants Say

By *Jennifer Lu*

The power industry wants to use a defunct emissions trading program in place of pollution controls at individual power plants to limit air pollution contributing to visibility problems in parks and wilderness areas.

Energy Policy Wish List Could be Democrats' Roadmap

By *Alan Kovski*

A 283-page Democratic energy policy bill introduced Nov. 16 may have no chance in the current Congress, but it lays down a series of markers for possible action if Democrats win a future majority of House and Senate seats.

Michigan Forgives $20 Million of Flint's Water Debt

By *Alex Ebert*

The Michigan Department of Treasury forgave an additional $20 million of Flint's debt for water infrastructure, bringing the city's total amount of state and federal aid to more than $390 million.

400 Business Could Fall Under New Bay Area Air Pollutants Rule

By *Carolyn Whetzel*

Oil refineries, sewage treatment plants, power plants, and metal plating operations are among the nearly 400 San Francisco Bay Area facilities facing a tough new rule to reduce emissions of toxic air pollutants.

Food Waste Risks Being Tossed Aside in Germany's

Coalition Talks

By *Jabeen Bhatti*

Plans to curtail the waste of 18 million tons of food annually in Germany—and stem the greenhouse gas emissions connected to the production and transfer of such waste—are falling by the wayside during talks on a preliminary coalition agreement for the country's new government.

Millennium Pipeline Fight Led by New York Moves to Court

By *Gerald B. Silverman*

New York's bid to halt the Millennium natural gas pipeline returns to a federal court after the Federal Energy Regulatory Commission denied the state's request to rehear challenges to the project.

Better Company Information Feeds Sustainability Investing Trend

By *Ali Qassim*

Investors who prioritize sustainability over high returns are finding it easier to park their money accordingly, given better access to company information, panelists at a London conference said.

Court Awards Spain $1.85 Billion for Prestige Oil Tanker Spill

By *Brett Allan King*

A Spanish court awarded Spain more than $1.85 billion in damages for the 2002 Prestige oil tanker spill, one of the country's worst environmental disasters, naming the ship's captain, shipping company, insurer, and the International Oil Pollution Compensation Funds responsible for payment.

Energy Regulator Doubles Down on Interim Plan to Bail Out Coal

By *Rebecca Kern*

A short-term plan to compensate at-risk coal and nuclear plants would lead to minimal costs to consumers, Federal Energy Regulatory Commission Chairman Neil Chatterjee said.

Mystery Group Backs Fossil-Fuel Companies Fighting Divestment

By *Benjamin Elgin* and *Zachary Mider*

Grass-roots lobbying—the creation of groups of ordinary citizens to advocate for causes—has been around for decades. But when corporations hide their involvement or recruit members indifferent to the issue, tactics known as astroturfing, it can provide an appearance of public support that doesn't actually exist.

How Much Is Great Barrier Reef Worth? $43 Billion, Economists Say

By *Michael Heath* and *Chris Bourke*

As mankind puts the world's largest living structure at risk, economists have come up with a new solution: put a price tag on it.

Utilities Press Tax-Writers to Save Advance Refunding Bonds

By *Allyson Versprille*

Lobbyists for public ly owned utilities are fighting to preserve advance refunding bonds—repealed in both the House and Senate tax reform proposals—to prevent the loss of billions in savings.

China, Canada, 17 Other Countries Promise Biofuel Target

By *Jessica Shankleman*

Nineteen countries, including China and Brazil, intend to cut pollution by increasing the target for energy derived from crops.

Norway's $1 Trillion Fund Wants Out of Oil and Gas Stocks

By *Sveinung Sleire*

The $1 trillion fund that Norway has amassed pumping oil and gas over the past two decades wants out of petroleum stocks.

Ivory Coast May Legalize Cocoa Farming in Some Protected Forests

By *Olivier Monnier* and *Baudelaire Mieu*

Ivory Coast, the world's top cocoa producer, plans to legalize farming on almost 5 million acres of protected reserves to help balance the rebuilding of forests with output of its most important export.

Former Paper Mill Owners Lose Bid to Exit Superfund Case

By *Steven M. Sellers*

The former owners of an Ohio paper mill aren't entitled to dismissal of Superfund claims on the theory that they are "dead and buried" companies over which the court has no jurisdiction, the Southern District of Ohio ruled Nov. 15.

Apple Tops Ranking of Corporate Work to Clean Up Minerals Supply

By *Andrea Vittorio*

Apple Inc. topped a human rights group's Nov. 16 ranking of corporate efforts to clean up sourcing for minerals that can directly or indirectly finance conflict in the Democratic Republic of Congo.

U.K. Chemicals at Risk from Brexit-Driven Investment Cuts

By *Andrew Noel*

The U.K.'s $50 billion chemicals industry is at risk of withering away if Brexit isn't handled properly, according to an industry expert.

New Leader of EPA New England Office a Critic of Trump Budget

By *David Schultz, Amena H. Saiyid,* and *Sylvia Carignan*

The new head of the EPA's New England office has been a vocal critic of the Trump administration's cuts to the agency's budget.

Houston Startup Envisions Chinese Chemicals Made from U.S. Ethane

By *Jack Kaskey*

A Houston startup is betting it can help create a market for U.S. ethane in the Chinese petrochemical industry.

The U.S. Flooded One of Houston's Richest Neighborhoods to Save Everyone Else

By *Shannon Sims*

"Next contestant, come on down."

VW Teams with Chinese Partners in $12 Billion Electric-Car Push

By *Yan Zhang*

Volkswagen AG will invest more than 10 billion euros ($12 billion) with its partners to make and develop a range of new-energy vehicles in China as carmakers step up investments in low-emission models in the world's biggest auto market.

Trump Climate Exit Panned in Bonn but Cheered in Lordstown, Ohio

By *Ari Natter*

Kevin Scott took a swig of his Pabst Blue Ribbon and professed his love for the environment. Inspired by a boyhood hunting and fishing, the 46-year-old Ohio autoworker earned a degree in environmental policy.

Wednesday Night Wrapup

California's Famed Cancer Warnings Imperiled by Lobbyist Push

By *Lauren Coleman-Lochner*

Corporate lobbyists, aiming to seize on the Trump administration's deregulation drive, are pushing to override state laws on ingredient-disclosure rules and warning labels, including landmark California legislation on potential cancer risks.

As India Endures Blanket of Smog, China's Battle Offers Lessons

By Anindya Upadhyay and Jessica Shankleman

As New Delhi suffers through a surge in the most harmful type of smog—a toxic stew that makes India's capital one of the most polluted in the world—Beijing offers lessons in how another troubled city made progress clearing the air.

Chinese Solar Manufacturer Longi Mulls U.S. Factory as Tariffs Loom

By Brian Eckhouse

Longi Green Energy Technology Co., a Chinese solar manufacturer, is considering opening a U.S. factory, a decision that may hinge upon the looming threat of import tariffs.

Statoil Plans to Step Up Exploration After Driving Down Costs

By Mikael Holter

Statoil ASA plans to step up drilling in Norway for a second consecutive year, according to company officials.

Petrobras Chief Rushing to Deliver as Election Season Nears

By *Sabrina Valle* and *Peter Millard*

The leader of Petrobras, Brazil's state-controlled energy company, is rushing to finish his work before an unpredictable presidential campaign makes it harder to sell assets and complete a key compensation deal with Brazil's government.

Summaries

AIR
Arizona SIP/New Source Review for Stationary Sources
AIR

Interim final rule of the EPA amends regulations under 40 CFR 52 to defer the imposition of sanctions based on a concurrent proposed rule that approves revisions to the Arizona Department of Environmental Quality portion of the Arizona SIP. The revisions correct new source review preconstruction permit requirements for major stationary sources and major modifications to address deficiencies identified by the EPA in a Nov. 2, 2015, final rule (80 FR 67319). The current action defers the imposition of offset and highway sanctions that were triggered by the 2015 final rule. The rule is effective June 1, 2017. Comments are due July 3, 2017. Contact: Lisa Beckham; EPA Region 9; 415-972-3811; beckham.lisa@epa.gov

Regulatory Update

AIR
Idaho SIP/Logan PM-2.5 Nonattainment Area
AIR

Supplemental proposed rule of the EPA amends regulations under 40 CFR 52 to approve revisions to the Idaho SIP relating to the Idaho portion of the Logan, Utah-Idaho, 2006 24-hour fine particulate matter (PM-2.5) NAAQS nonattainment area. The rule approves Idaho's attainment demonstration and 2014 motor vehicle emissions budgets (MVEBs) as early progress budgets. The rule also conditionally approves reasonable further progress quantitative milestones and revised MVEBs for the Idaho portion based on the state's commitment to adopt and submit updates to these attainment plan elements within one year of the final rule's effective date. The current action supplements an Oct. 27, 2016, proposed rule (81 FR 74741) to address provisions for which the EPA deferred action on Jan. 4, 2017 (82 FR 729). Comments are due July 3, 2017. Contact: Jeff Hunt; EPA Region 10, Office of Air and Waste; 206-553-0256; hunt.jeff@epa.gov

ENDANGERED SPECIES

Alaska/Marine Mammals Incidental Take

ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of an application from Quintillion Subsea Operation LLC requesting authorization to take small numbers of Pacific walruses and polar bears from portions of the Bering, Chukchi and Beaufort seas, Alaska state waters, and specified coastal land in Alaska incidental to fiber optic cable-laying activities. The authorization allows takes in the form of level B harassment of listed species between July 1 and Nov. 15, 2017. Level B harassment is defined as disturbance of a marine mammal by causing disruption in behavioral patterns or temporary loss of hearing sensitivity. The authorization also specifies mitigation, monitoring and reporting requirements. The notice also announces the availability of a draft environmental assessment. Comments are due July 3, 2017. Texas Coastal Bend Shortgrass Prairie Recovery Plan

ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the availability of the draft Texas Coastal Bend Shortgrass Prairie Multi-Species Recovery Plan. The plan addresses recovery objectives and criteria for the endangered slender rush-pea and South Texas ambrosia, both found in the Texas Coastal Bend in Kleberg and Nueces counties in Texas. The plan identifies various recovery actions, including minimization of further loss or fragmentation of native shortgrass prairie habitat, development of reintroduction sites, preventing depletion of seed banks, determination and implementation of best management practices, and acquisition of long-term conservation easements. Comments are due July 31, 2017. Contact: Amber Miller; USFWS, Texas Coastal Ecological Services Office; 281-286-8282; amber_miller@fws.gov

FOOD SAFETY
Meat and Poultry Inspections/Exemption Dollar Limitations
FOOD SAFETY

Notice of the Food Safety Inspection Service announces the calendar year 2017 dollar limitations on the amount of meat, meat food products, poultry and poultry products that retail stores can sell to hotels and restaurants without disqualifying themselves from exemption from inspection requirements (9 CFR 303 and 381). The notice specifies a reduction in the dollar limitation for meat and meat food products from $79,200 to $75,700. The notice also specifies that meat retail dollar limitations do not apply to Siluriformes fish and fish products sold at retail. In addition, the notice specifies that the dollar limitation for poultry and poultry products has reduced from $58,200 to $56,600. The limitations are effective July 3, 2017. GENERAL ENVIRONMENT AND SAFETY
North Dakota/Upland Pipeline Crude Oil Exportation Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Department of State announces the withdrawal of an April 15, 2016, notice of intent (81 FR 22359) to prepare an environmental impact statement in connection with an application from Upland Pipeline LLC for a presidential permit (80 FR 44181; 07/24/2015) to construct and operate a new pipeline to carry crude oil from the Williston Basin Region in North Dakota across the U.S.-Canada border in Burke County, N.D. The proposed permit would cover an approximately 18-mile segment of the pipeline between the northernmost mainline shutoff valve in the U.S. and the U.S.-Canada border. The proposed Upland Project would consist of 124 miles of pipeline in Burke, Mountrail and Williams counties in North Dakota. The applicant requested the department pause its review of the presidential permit application until further notice. The withdrawal is effective June 1, 2017. Transportation Officials Move to Scrap Obama Climate Rule

Posted October 04, 2017, 10:59 A.M. ET

By Abby Smith

The Trump administration is working to roll back another Obama-era climate regulation—this time a provision that would require state transportation planners to account for greenhouse gas emissions.

The Federal Highway Administration is quickly moving to repeal the greenhouse gas provision, tucked into a broader Obama administration rule that sets new requirements for tracking the performance and conditions of roads. Trump officials previously suspended the measure, then reinstated it late last month after environmental groups and a coalition of eight states sued, arguing that the administration couldn't suspend without taking notice and comment.

The provision at issue would require state transportation officials to track on-road greenhouse gas emissions and set "locally appropriate" emissions targets on national highways. State officials face an Oct. 1, 2018, reporting deadline.

The Oct. 5 notice seeking the provision's repeal notes Transportation Department officials reviewed existing and pending regulations and "identified the [greenhouse gas] measure ... as being potentially duplicative of existing efforts in some States, and burdensome" (RIN: 2125-AF76).

The Federal Highway Administration will accept comments for 30 days on the provision's repeal.

Interior Wants to Freeze Obama-era Methane Limits

Posted October 04, 2017, 02:43 P.M. ET

By Jennifer A. Dlouhy (Bloomberg) and David Schultz (Bloomberg BNA)

The Interior Department wants to temporarily stop enforcing an Obama-era rule that limited methane emissions from oil and gas drillers operating on federal lands.

The proposal from the department's Bureau of Land Management would delay certain requirements of the rule, which sought to reduce leaking, venting, and flaring of methane, a potent greenhouse gas. The proposed delay comes as the Trump administration is weighing whether to repeal the rule outright.

Under the proposal, scheduled to be published Oct. 5 in the Federal Register, the Bureau would suspend some requirements until Jan. 17, 2019. The methane rule at issue became effective Jan. 17, 2017, though many provisions weren't set to begin until Jan. 17, 2018.

The Bureau said the pause in enforcement aims to avoid "imposing temporary or permanent compliance costs on operators for requirements that may be rescinded or significantly revised in the near future." It also cites executive orders from President Donald Trump that "necessitate a review" of the rule, including one compelling agencies to reduce the costs of complying with federal regulations.

"It doesn't make sense to have companies comply with a rule that will be substantially changed in the near future," Kathleen Sgamma, president of the Western Energy Alliance, told Bloomberg BNA. "The administration is going through the proper rulemaking process to correct this unlawful rule, but that process takes time."

The Western Energy Alliance and other energy industry representatives are challenging the rule through a lawsuit in a Wyoming-based federal court.

Not Expedited

The Bureau's current proposal must go through the standard public comment period, and before it can finalize the proposal, the Bureau must analyze and respond to all of those comments.

Earlier this year, the EPA attempted to enact a 90-day delay on a similar methane regulation without going through that process, but that delay was overturned by a federal appeals court in Clean Air Council v. Pruitt.

Republican lawmakers attempted to overturn the Bureau's rule earlier this year using an expedited legislative process. But they fell one vote short after three Republican senators crossed party lines to vote the measure down.

Perry's Coal Proposal Seen Unlikely to Reverse Historic Decline

Posted October 04, 2017, 8:35 A.M. ET

By Tim Loh

U.S. Energy Secretary Rick Perry's plan to reward coal-fired power plants that keep large stockpiles of fuel won't be enough to reverse the industry's long-term decline, analysts say.

Perry has proposed extra payments for power generators with at least 90 days' worth of supplies on site, arguing that will make America's electric grid more "resilient" in the face of major supply disruptions.

While the measure will probably keep some coal plants open that would otherwise be forced to retire, it doesn't address the industry's core problem: namely, that overall U.S. electricity demand has flattened while natural gas, wind and solar power are stealing market share. To that end, industry experts doubt it'll be enough to make good on President Donald Trump's repeated vows to bring back coal.

"It doesn't solve some of the largest underlying structural challenges to coal demand in this country," Lucas Pipes, an analyst at FBR Capital Markets & Co., said in a phone interview. "We're in a no-growth market."

While any measure that prevents the further erosion of coal's market share would help the industry, Perry's proposal poses some complications for power generators. For one thing, utilities haven't been in the business of hoarding coal. With the U.S. coal sector oversupplied in recent years, power plant operators have preferred, when possible, to buy the fossil fuel "on-demand" rather than maintain large stockpiles, said Andrew Cosgrove, an analyst at Bloomberg Intelligence.

Environmental Costs

That's because stockpiling coal costs money. If left untreated, coal piles can spontaneously catch fire, something that's especially problematic for high-moisture coal from Wyoming and Montana's Powder River Basin, said Andy Blumenfeld, head of market analytics at Doyle Trading Consultants. There are also environmental costs associated with suppressing coal dust and handling runoff. Finally, the quality of stored coal degrades over time, Blumenfeld said.

For utilities participating in Perry's program, costs would go up as it "might require more personnel and equipment," Blumenfeld said.

In July, coal accounted for 32 percent of U.S. electricity generation, down from 47 percent a decade earlier, according to the U.S. Energy Information Administration. Gas was king, at 36 percent, up from 25 percent in July 2007.

In order to qualify, most power plants would also have to go out and buy coal. As of August, power plants holding Powder River Basin coal had an average of 75 days of supplies. Those with Illinois Basin coal had 91 days and those with Northern Appalachian coal had inventories in the low 70s, according to Pipes.

As long as the coal plants aren't expected to run all out, every day, then getting those stockpiles back over 90 days should be doable, said Matt Preston, a coal analyst at Wood Mackenzie Ltd. As recently as early 2016, America's coal plants had, on average, more than that on site.

It'd be much harder, though, if the plants were expected to have enough coal to run full-blast, around-the-clock, for three months straight. That would "require a significant increase in storage area at almost all plants," Preston said. "Some would definitely have to consider offsite storage which may or may not be economically feasible."

EPA Chemical Office Pick Demurs Questions of Recusal on Past Work

Posted October 04, 2017, 01:41 P.M. ET

By Tiffany Stecker

EPA chemicals office nominee Michael Dourson defended his consulting for chemical, tobacco, and oil industries Oct. 4 as Democrats and environmentalists challenged him to recuse himself from certain decisions on chemicals he worked on.

Dourson declined to answer whether he would recuse himself from decisions related to chemicals that he had previously independently consulted on for companies, including Dow Agrosciences, DuPont, and Koch Industries, saying he would follow the agency's guidance on ethics and potential conflicts of interest.

A professor of environmental health at the University of Cincinnati and head of the university's Risk Science Center, Dourson is the White House's nominee to head the Environmental Protection Agency's Office of Chemical Safety and Pollution Prevention. In that role he would oversee pesticide programs and the implementation of the Toxic Substances Control Act, which was amended in 2016.

Senate Environment and Public Works Committee Chairman John Barrasso (R-Wyo.) said in his opening remarks that "blind opposition" from Democrats to all of the Trump administration's EPA nominees has "stalled" the confirmation process in the Senate. Barrasso highlighted the nomination of Susan Bodine to lead the agency's enforcement office, which he said has been "held up" by Democrats since her nomination was approved by the committee in July.

Dedicate 'Mind, Body and Spirit'

Dourson has emerged as a lightning rod for controversy over the last decade as head of the nonprofit Toxicology Excellence for Risk Assessment (TERA), where critics say he worked with industry to downplay the risks of a a number of likely carcinogens and a pesticide linked to neurodevelopmental delays in children.

"I can give you as many or more examples of situations where the science we brought forward as a team" that led to a safety determination that was [more protective], he told Sen. Tom Carper (D-Del.). "I have been objective in my work and have used sound science to come to my conclusions," he told Sen. Sheldon Whitehouse (D-R.I.)

Dourson also defended his work, saying that many of the agency's limits on the chemicals were made later when the science on toxicity of those chemicals had advanced.

He said in his opening testimony that he would dedicate his "mind, body and spirit" to the position of assistant administrator to the chemical safety office.

"I will not deviate in my decisions from the scientific principles of toxicology and risk assessment that have been taught to me by my mentors and coworkers, nor deviate from the code of ethics…nor ever stop listening to my colleagues whose expertise I do not have but otherwise cherish," he said.

'Not Ready to Work for EPA'

But, Dourson didn't answer Democrats' questions on whether he would set aside his previous chemicals assessments, or whether he would lower safety levels of chemicals as head of the EPA's chemicals office.

"I'm not ready to answer that question," he told Sen. Tammy Duckworth (D-Ill.) when she asked whether he would change existing chemical limits.

"Then I don't think you're ready to go work for the EPA," Duckworth responded.

Dourson was among the first leaders of the EPA's Integrated Risk Information System (IRIS)—a primary database of consensus chemical toxicity values—and has decades of experience as a toxicologist, attributes that have earned him accolades from the American Chemistry Council, pesticide industry trade groups, and former EPA officials.

More than 20 agriculture organizations, including the American Farm Bureau Federation, sent a letter to the committee to vouch their support.

Nobel Prize in Reverse

But Democratic senators challenged Dourson on his consulting work with industry, arguing he often recommended safe thresholds of chemicals tens or thousands of times lower than the levels found by the EPA or state health agencies. TERA has done such assessments for 1,4-dioxane, a likely carcinogen found in personal care products; 1-Bromopropane, a likely carcinogen found in stain removers; and TCE, a solvent.

"It appears you have no compunction to taking million dollars from industry to perform scientific studies on their behalf," Duckworth said, focusing on Dourson's work with Koch Industries to evaluate the toxicity of petcoke, a byproduct of the oil refining process.

And Sen. Kirsten Gillibrand (D-N.Y.) called attention to the chemical contamination in Hoosick Falls, N.Y., where she said, residents "are so affected by the decisions that you have made."

"If there was a Nobel prize in chemistry in reverse, you would be the clear winner," Sen. Ed Markey (D-Mass.) told Dourson, a reference to this week's awards for scientific achievement. "It's pretty clear you've never met a chemical you didn't like."

Democratic Nuclear Regulator Nomination 'A Big Ask:' Barrasso

Posted October 04, 2017, 01:25 P.M. ET

By Rebecca Kern

Sen. John Barrasso (R-Wyo.) said he will oppose President Donald Trump's nomination of Jeffery Baran to serve a second term as a Democratic commissioner on the Nuclear Regulatory Commission, saying Democrats have placed a hold on the two Republican nominees to the panel.

Barrasso said at the Oct. 4 Senate Environment and Public Works Committee that Democrats have "refused to advance" Republicans Annie Caputo and David Wright as commissioners on the NRC until Baran is confirmed to a new five-year term.

The committee approved Caputo and Wright's nominations in June, and they are awaiting Senate floor votes. Sen. Tom Carper (D-Del.), ranking member of the committee, has supported the re-nomimation of Baran to pair with the Republican nominees.

Separately, Barrasso hinted that he will likely vote against Baran this time around, saying he has already done so six times. "Since then, Commissioner Baran has given me little reason to reconsider my vote," he said at the confirmation hearing for Baran and other Environmental Protection Agency nominees.

He called the additional five-year term nomination for Baran "a big ask."

Baran has served as a Democratic commissioner for the NRC since October 2014 and was nominated for another five-year term from July 1, 2018, to June 30, 2023. NRC commissioners serve staggered five-year terms.

"If Mr. Baran is confirmed, his term would outlast those of all Republican nominees to the NRC, including Chairman [Kristine] Svinicki [R]," Barrasso said. Svinicki's term ends June 30, 2022.

Caputo has been nominated to fill the remainder of an five-year term that would end in June 30, 2021, which was previously filled by former NRC Commissioner William Ostendorff (R), who left June 30, 2016. Wright has been nominated to the fill the remainder of a five-year term that would end June 30, 2020, which was previously filled by former NRC Commissioner William Magwood, an independent, who left the agency in August 2014.

—With assistance from Tiffany Stecker

Pipeline Safety Agency Nominee Wins Senate Panel's Approval

Posted October 04, 2017, 11:27 A.M. ET

By Sylvia Carignan

A Senate committee approved Howard "Skip" Elliott as head of the Pipeline and Hazardous Safety Materials Administration Oct. 4, sending his nomination to the full Senate.

The Senate Committee on Commerce, Science and Transportation approved Elliott's nomination by voice vote. Committee chairman Sen. John Thune (R-S.D.) said he hoped to see the nomination move to the floor "in the days and weeks ahead."

Elliott was vice president of public safety, health, and environment at CSX from 2004 until he retired earlier this year. He spent four decades in the railroad industry, and the Interstate Natural Gas Association as well as other industry groups have praised his experience.

Elliott told the committee at a hearing Sept. 27 that he embraces safety-focused technology and wants to be transparent with police, firefighters and others responding to emergencies.

"I've had a long, strong belief that we can never do enough to help improve and enhance the capability of our emergency first responders," he told the committee Sept. 27.

Elliott also promised to seek to shorten the hiring process that some federal job candidates have complained is too slow. He wants to aggressively recruit and fill PHMSA's open positions, he told senators.

If confirmed by the full Senate, Elliott would take over from acting administrator Drue Pearce, who joined PHMSA in August. Pearce would retain her position as deputy administrator.

Western Governors to Work Together on Electric Vehicle Charging

Posted October 04, 2017, 02:10 P.M. ET

By Brenna Goth

Governors in seven Western states will work to create an electric vehicle corridor that seamlessly connects their major thoroughfares, according to an initiative announced today.

Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming signed on to a plan to coordinate charging stations and other infrastructure along more than 5,000 miles of highway to drive electric vehicle use, a news release said. The initiative was unveiled at a National Governors Association energy summit.

The memorandum of understanding among the states says leaders will meet quarterly to explore ways to implement voluntary minimum standards for charging stations and promote electric vehicles, among other initiatives.

The memorandum provided no cost estimate of the project, but it cited electric vehicle infrastructure as an economic driver and a boon for tourism.

"Our residents and the millions of visitors to our states will be able to drive electric vehicles from Denver to Las Vegas, from Santa Fe to Helena," Colorado Gov. John Hickenlooper (D) said in a statement.

Energy Royalty Advisory Panel Starts Charting New Rules

Posted October 04, 2017, 01:52 P.M. ET

By Alan Kovski

A royalty policy committee that includes major oil companies will develop new Interior Department regulations on payments companies make for energy development on federal and tribal lands, an Interior official said at the committee's first meeting Oct. 4.

The committee is an example of the Interior Department changing the way it "does business" and a sign of its efforts to promote energy development, Vincent DeVito, energy counselor to Interior Secretary Ryan Zinke, said.

The committee includes representatives from Chevron, ConocoPhillips Corp., Anadarko Petroleum, Cloud Peak Energy Inc. and other oil, gas, and coal companies, along with state and tribal officials and some members of academia.

The Interior Department scheduled at least a year for the committee to look at policies covering royalties and other financial requirements for oil, natural gas, and coal. DeVito said it will examine "every financial aspect" of federal energy regulation.

Beyond royalties, the federal financial regulations for energy include bonus bids, rents, inspection fees, and bonding to cover possible pollution and eventual decommissioning costs.

Mining Giant Sherritt Fined $840,000 for Coal Mine Effluent Leak

Posted October 04, 2017, 01:09 P.M. ET

By Peter Menyasz

Sherritt International Corp., a major nickel miner, faces a C$1.05 million ($840,000) fine for leaking up to 500,000 liters (132,000 gallons) of contaminated wastewater into nearby streams inhabited by an at-risk fish species.

The Provincial Court of Alberta levied the fine after the mining company pleaded guilty Oct. 3 to three counts of violating the federal Fisheries Act by allowing the waste to spill into fish-bearing waters, Environment and Climate Change Canada said.

The pollution entered tributaries of the Athabasca River, including areas identified by the Alberta government as "ecologically significant habitat" for the Athabasca rainbow trout, an at-risk species, it said.

The charges resulted from an August 2012 federal investigation into a report of spills from the mine's wastewater pond, which uncovered two previous releases in July 2011, the department said in a statement.

Sherritt International acted immediately after becoming aware of the spills, Joe Racanelli, the Toronto-based company's director of investor relations, said Oct. 3. "We take these issues very seriously," Racanelli told Bloomberg BNA.

Company Installed Systems

The company installed automated systems on its waste-water ponds to monitor the quality of effluents to ensure they were below levels that would be toxic to fish, and put in place systems and procedures to stop potential spills into neighboring rivers and streams, he said. In addition to the fine, of which C$990,000 ($793,000) will be added to the Environmental Damages Fund to support environmental projects, Sherritt's name will be added to the Environmental Offenders Registry. the government said.

The company also conducted its own investigation into the incidents, he said. "We didn't observe any impacts to wildlife or fish in that area," he said.

Federal inspectors didn't find dead fish or other evidence of direct harm, but said that isn't unusual in such cases, as dead fish often float downstream or sink, Environment and Climate Change Canada spokesman Daniel Smith said. Evidence of harm isn't necessary for a conviction under the Fisheries Act, which prohibits the release of harmful substances into sensitive fish-bearing habitats, he said.

Sherritt owned and operated the open-pit Coal Valley Mine, about 90 kilometers south of Edson, Alberta, from 2001 to 2014. The mine is now owned by Englewood, CO-based Westmoreland Coal Co.

The fine was levied under the old provisions of the Fisheries Act, which allowed for maximum fines of C$300,000 ($240,000) per offense, Smith said.

The penalties section of the act was revised in 2012 to align with those in the Environmental Enforcement Act. It now includes minimum fines for corporations of C$500,000 ($400,000) and maximum fines of C$4 million ($3.2 million) on summary conviction and C$6 million ($4.8 million) for violations. Fines are doubled for second or subsequent offenses.

"We would expect significantly higher penalties for similar offenses going forward," Smith, regional director for environmental enforcement in the department's Edmonton, Alberta office, told Bloomberg BNA.

Dawn of Solar Age Declared as Sun Power Beats All Others

Posted October 04, 2017, 8:49 A.M. ET

By Anna Hirtenstein

Solar power blossomed faster than for any other fuel for the first time in 2016, the International Energy Agency said in a report suggesting the technology will dominate renewables in the years ahead.

The institution established after the first major oil crisis in 1973 said 165 gigawatts of renewables were completed last year, which was two-thirds of the net expansion in electricity supply. Solar grew by 50 percent, with almost half new plants built in China.

"What we are witnessing is the birth of a new era in solar PV," Fatih Birol, executive director of the IEA, said in a statement accompanying the report published Oct. 4 in Paris. "We expect that solar PV capacity growth will be higher than any other renewable technology through 2022."

This marks the sixth consecutive year that clean energy has set records for installations. Mass manufacturing and a switch by governments away from fixed payments for renewables forced down the cost of wind and solar technology.

The IEA expects about 1,000 gigawatts of renewables will be installed in the next five years, a milestone that coal only accomplished after 80 years. That quantity of electricity surpasses what's consumed in China, India and Germany combined.

The surge of photovoltaics in China is largely due to government support for renewables, which are being demanded by a population concerned about air pollution and environmental degradation that has led to deadly smogs. The country is seeking to reduce its reliance on coal and has become the world's largest market for renewables, particularly solar.

"The solar PV story is a Chinese story," said Paolo Frankl, head of the IEA's renewable energy division. "China has been for a long time the leader in manufacturing. What's new is the share in the market. This year, it was equivalent to the total installed capacity of PV in Germany."

The U.S. and India are among other nations pushing renewables. They along with China are projected to make up two-thirds of the clean-energy expansion worldwide. Despite President Donald Trump's vow to bolster coal's position in the power market, the U.S. is expected to be the second-largest market for renewables.

The IEA also expects biofuels to take a larger role in the transportation industry, surpassing gains by electric vehicles.

"A lot of attention has been given in recent months to electric vehicles, and rightly so. They are increasingly globally, exponentially," Frankl said. "But I have to say, we should not forget the biofuels, which at the end of 2016 represented 96 percent of total renewable transport."

Electric vehicles numbers will double by 2022, but biofuels will still make up 93 percent of renewables consumed in the transport industry, the IEA estimates. The fuels are needed especially for heavier vehicles including planes and ships.

The organization recommends that governments put incentives in place to spur the development of biofuels made from non-edible plants, which would avoid diverting food crops into fuel tanks. The cost of biofuels currently is about double the global price of gasoline, Frankl said.

Private Oil Made a Big Find in Mexico, Now State Oil Wants a Cut

Posted October 04, 2017, 10:37 A.M. ET

By Adam Williams

When private drillers struck oil off Mexico's coast this year, they didn't anticipate sharing it with the state oil company. It looks like they'll have to.

The discovery of as much as 2 billion barrels in July, by a group led by Houston-based operator Talos Energy LLC, grabbed the oil world's attention. Mexico's energy reformers celebrated. It was the first big find since the government opened the industry to investors in 2014—a controversial move in a country that kicked out foreign oil companies in the 1930s, and had mixed feelings about letting them back in.

The reformers were vindicated: Private capital could get results where Pemex, the cash-strapped state operator, couldn't. More would surely follow. Then a problem emerged. The crude deposit found by Talos, it turned out, spread beyond the boundary of the company's exploration bloc and into a neighboring one—owned by Pemex.

Now the government is rushing to put together a rulebook for how this find, and subsequent ones, get shared out. It could shape the future of the whole energy plan. The group—which includes Sierra Oil & Gas S de RL de CV and Premier Oil PLC—is said to be holding off on further investment pending the decision. Other drillers who bought exploration rights also want to see the government ruling before making financial commitments. The rush of enthusiasm that followed the July find has turned into a nervous wait.

'Most Important Issue'

"This is the single most important outstanding issue in the sector," said Raymundo Pinones, director of Mexico's Association of Hydrocarbon Companies. "It could delay activity until there is clarity. In place of drilling or continuing with development, the industry is waiting for this to be resolved."

Almost 70 companies have been given leases to explore for crude in Mexico. One of them, Italy's Eni SpA, reported a shallow-water find of at least 1.4 billion barrels this year, located beneath an existing Pemex well.

The field discovered by Talos, Sierra and Premier may be even bigger. From the start, in its July 12 press statement, the consortium said that the oil "could extend into a neighboring block." Weeks later, in an interview with El Financiero newspaper, Pemex Chief Executive Jose Antonio Gonzalez Anaya said that his company, which has rights to that block, would fight for a share of the proceeds.

The Talos-led consortium already has to pay 83 percent of profits from its field, known as Zama-1, to the Mexican government, according to the Energy Ministry. Sharing with Pemex could push the figure even higher. So the group has temporarily halted investment and development of the massive find, according to a person familiar with the plans.

The entire industry in Mexico is affected by the delay in establishing the rules, Pinones said. "All the companies that need to plan investment, all those that need to have certainty when they go to their boards to respond to questions, in order for the approval of hundreds of millions of dollars."

'Global Standards'

Like BHP Billiton Ltd, which won rights to operate the Trion field near Mexico's maritime border with the U.S., estimated to hold the equivalent of about 485 million barrels. The Australian driller has identified at least four locations on the block that have exploration potential.

The new rules on sharing "would be of key interest to us there," Tim Callahan, BHP's Mexico president, said in an Oct. 2 interview. Mexican officials have already circulated a draft version to oil companies, and discussions are ongoing, he said. "We've been working very hard to try to help influence the secretary of energy to come up with a proposal that's more in accordance with global standards."

Even if the government is inclined to cut the Talos-led group some slack, there's a political obstacle. Mexico has a presidential election next year, and the early frontrunner is a fiery populist, Andres Manuel Lopez Obrador, who's campaigning against the energy reforms. Last month he reiterated a promise to review oil contracts if he wins. Concessions to foreign capitalists will be grist to his mill.

Deputy Energy Minister Aldo Flores points out that the problem confronting his government isn't unique to Mexico. The process of dividing up an oil find that spans different jurisdictions is known in the industry as unitization, and there are plenty of international precedents.

'Rule of Capture'

"In Mexico, we don't have a rule of capture as they do in Texas. It's not first-come, first-served," Flores said in an interview last month. "If there's enough evidence and certainty that the discovery extends into Pemex's block, then it would have to be shared."

But the legislation won't be written just for the state company's benefit, he said. Future finds will likely require collaboration between private companies with neighboring blocks, and the same rules will apply to them.

Still, since the first case does involve Pemex, it's extra-sensitive.

The industry has already flagged concerns about preferential treatment. Pemex missed a three-year deadline to meet minimum investment or work requirements in some of the 108 fields that it operated. But in August it was granted a two-year extension for 101 of them - including the one next-

door to Talos's patch - by the Energy Ministry, which cited low oil prices as reasoning for granting additional time.

So if the international oil community thinks the sharing deal isn't fair, it could spook investors hoping to tap Mexico's 9 billion barrels of reserves.

"This isn't going to be a one-off situation," said John Padilla, managing director of energy consulting firm IPD Latin America. "If they don't get this right, they are going to jeopardize a lot."

Draft EU Endocrine Disruptor Pesticide Ban Exterminated

Posted October 04, 2017, 01:29 P.M. ET

By Stephen Gardner

Germany's Bayer AG, Dow AgroSciences, Syngenta and other chemical companies are breathing a sigh of relief after the European Parliament vetoed a draft EU regulation Oct. 4 that could have banned up to 70 pesticides with endocrine disrupting properties.

Endocrine disruptors mimic, block or alter or hormone functions that can shape growth and development.

The veto pleased companies and environmental groups alike. Companies had faulted the draft regulation as a too-blunt instrument that would have led to unjustified pesticide bans, while environmental groups said loopholes in the draft regulation would have allowed continued use of endocrine-disrupting pesticides.

The draft would have set criteria for identifying endocrine disrupting substances in pesticides. The criteria are needed to implement the EU Pesticides Regulation ((EC) No 1107/2009) prohibiting the use of proven endocrine disruptors as pesticides.

European Parliament lawmakers, sitting in Strasbourg, France, voted 389 to 235, with 70 abstentions, to reject the proposal, concluding it would have still allowed a number of pesticides with endocrine disrupting properties as long as those properties only affected the organisms targeted by the pesticide and similar non-vertebrate organisms.

According to the objection adopted by lawmakers, this went too far and would "effectively create a derogation" compared to the intention of the EU Pesticides Regulation to largely outlaw endocrine disruptors.

The effect of Parliament's veto is to send the draft regulation back to the European Commission, the EU's executive arm, which said in an Oct. 4 statement that it would "now need to reflect on next steps to take."

Veto Lauded by Groups

Graeme Taylor, director of public affairs for the European Crop Protection Association, told Bloomberg BNA Oct. 4 that "probably 60 to 70" pesticides might have been banned in the EU under the vetoed draft regulation. Another industry official, Claudia Karsten, spokeswoman for Germany's

Bayer AG, told Bloomberg BNA Oct. 4 the regulation would have been "unworkable, impractical, and would have impacted negatively on the competitiveness of European farming, without providing any increase in protection for health and the environment."

Health and environmental advocates lauded the veto because they believed the draft regulation did not target enough compounds.

Génon K. Jensen, executive director of advocacy group the Health & Environment Alliance, said in an Oct. 4 statement that the European Parliament had shown "remarkable clear-sightedness" in vetoing a proposed regulation "that fails to identify the numerous toxic substances that people are exposed to."

Environmental lawyers ClientEarth said in a statement Oct. 4 that endocrine disruptors "interfere with human hormones and may cause cancer, infertility or impaired brain development," and the European Parliament had been right to reject draft criteria that "would have only benefited the pesticides industry."

Long-Running Process

Bayer, Dow AgroSciences and Syngenta are among the largest suppliers of pesticides in the EU. Dow EU government affairs and science policy leader Filip Cnudde declined to comment to Bloomberg BNA Oct. 4 on the European Parliament vote and referred queries to the European Crop Protection Association.

The parliament's veto of the draft regulation is the latest step in a long process to establish criteria to formally identify endocrine disrupting pesticides. Under the Pesticides Regulation, the criteria should have been proposed by December 2013. The European Commission Oct. 4 did not give an indication of when redrafted criteria might be published.

In the absence of criteria to identify endocrine disruptors in pesticides, certain carcinogenic and reprotoxic substances are by default considered to be endocrine disruptors for the purposes of the EU Pesticides Regulation.

Theresa May's U.K. Energy Price Cap Signals Wafer Thin Margins

Posted October 04, 2017, 02:26 P.M. ET

By Jessica Shankleman, Alex Morales and Mathew Carr

Britain's utilities are the new political punching bag after Theresa May proposed a price cap to insulate customers from higher prices.

Centrica Plc plunged to a 14-year low after the prime minister said she wants to "bring an end to rip-off energy prices once and for all." Earnings may fall at least 10 percent at three of the nation's Big Six utilities, according to a note from RBC Europe Ltd.

The proposals seek to save households 1.4 billion pounds ($1.86 billion) a year and could come at a cost to companies that dominate the energy market that includes almost 60 suppliers. It also signals an end to a period of relative calm in the regulation of electricity and natural gas in the U.K., putting utilities in the firing line.

"People are selling the stock because they're anticipating that the government will push through legislation," said Deepa Venkateswaran, an analyst in London at Sanford C. Bernstein & Co. "It's getting hit again and again for the same thing."

Energy companies wouldn't have it better if voters boot out the Conservatives. Jeremy Corbyn, leader of the Labour opposition, told his members last week he wants to nationalize energy companies, calling for transforming "our economy with a new and dynamic role for the public sector, particularly where the private sector has evidently failed."

The remarks by both of the main parties suggest utilities regulation is about to be rewritten, just when the industry is desperately in need of new investment—and utilities are balking because they're uncertain about the impact of Britain's impending departure from the European Union. The government estimates 100 billion pounds needs to be put into power grids and generation plants within the next decade or so to replace aging facilities and reduce pollution.

May's price cap is just the latest attempt to fix a broken energy market. Ed Miliband, the previous Labour leader, proposed a freeze in 2013. That sparked a debate about overpricing and a two-year investigation by the Competition and Markets Authority. May's predecessor, David Cameron, tried to simplify the market with a limit on the number of tariffs energy companies can offer. Ministers since have scrapped those limits.

"There's a bit of flip flopping that happens in regulation," said Sara Vaughan, political and regulatory affairs director at EON SE.

Market Restructured

Both Labour and Conservative governments spent years reworking the power and gas markets to be more market sensitive. More recently, ministers introduced structures to pay generators that provide steady streams of electricity after competition from wind and solar pushed slashed profits from coal, gas and nuclear. Labour is pressing for more drastic action.

"Today, after pressure from Labour and her own backbenches, Theresa May has finally been forced to recognize that the energy market is broken," Rebecca Long-Bailey, the Labour lawmaker who speaks on business, said in a statement. "Her response doesn't go nearly far enough."

Shares slumped for each of the Big Six -- Centrica, SSE Plc, Innogy SE, EON SE, Iberdrola SA, Electricite de France. RBC said Centrica's earnings per share could be cut 25 percent in a worst-case scenario, while both SSE and Innogy may lose 10 percent of their profit. The operating profit margin for the group as whole may slide to a wafer-thin 0.3 percent from 2.6 percent, RBC analysts John Musk and Olly Jeffery wrote in a note to clients.

The current focus is on so-called Standard Variable Tariffs, which the government says is penalizing passive customers who don't bother to change suppliers. EON last month offered to end the practice of putting people onto those tariffs. Those customers together overpay by 1.4 billion pounds each year, according to a CMA investigation published in 2016.

"We can't be in possession of that information that consumers are being overcharged and not act on it," Greg Clark, the Cabinet secretary overseeing business, energy and industrial strategy, said in a Bloomberg TV interview on Wednesday. He hopes more companies will follow EON and end the practice of putting people onto standard tariff if they don't take action.

Industry View

Scottish Power Ltd., the Iberdrola unit working in the U.K., said it's the government's responsibility to end the tariff system.

"Just as you insure your car and home every year and go to the market for the best deal, so every energy customer should engage regularly with the market," said Neil Clitheroe, chief executive officer of Scottish Power retail and generation unit.

Further details of the Conservative plan, including how long the cap will last, may emerge when the government pushes a draft bill as early as the week of Oct. 9.

"While we are in favor of free markets, we will always take action to fix them when they're broken," May told the Conservative Party conference in Manchester on Oct. 4.

The utilities said the latest maneuvering may backfire by reducing competition and discouraging consumers from switching to better deals.

Britain's energy market is changing rapidly, and consumers are more savvy than when Miliband first called for a price freeze. Three years ago, the Big Six had 99 percent of the market, and less than 4 million people changing suppliers each year, according to the trade association EnergyUK. Since then, dozens of new companies emerged and almost a third of customers started routinely switching, cutting the Big Six's market share to 80 percent.

Any intervention should be "simple to administer, time-limited, and maintain the principles of a competitive energy market to best serve customers' interests," SSE, which is based in Perth, Scotland, said by email.

Japan Regulator Clears Restart of World's Largest Nuclear Plant

Posted October 04, 2017, 9:07 A.M. ET

By Stephen Stapczynski

Tokyo Electric Power Co. Holdings Inc. moved a step closer to resuming operations of the world's biggest nuclear facility after Japan's atomic regulator gave its tacit approval, delivering a much-needed boost for a company still strapped with the cost to clean up its wrecked Fukushima plant.

Japan's Nuclear Regulation Authority Oct. 4 approved a preliminary report saying Tokyo Electric's No. 6 and 7 reactors at its Kashiwazaki-Kariwa power plant in Niigata prefecture meet post-Fukushima safety rules. Tepco, as the utility is known, must still get the endorsement of the prefecture's government, which currently opposes the restart.

Resuming operations at the two reactors "should displace a lot of coal and LNG, and hence impact the bottom line," Tom O'Sullivan, founder of Tokyo-based energy consultant Mathyos, said by email ahead of the decision. "The restarts would have additional significance as they improve the energy security of the east of Japan and Tokyo."

This is the first time Tepco has been cleared to operate a nuclear reactor since its Fukushima Dai-Ichi facility suffered a triple meltdown in 2011.

Under a turnaround plan released in May, Tepco said it expected the two units at Kashiwazaki-Kariwa to resume operations as soon as the fiscal year ending in March 2020. The No. 1 and 5 reactors at the plant could restart in 2022, while the No. 3 and 4 units could come online in 2025. The utility is aiming to restart the No. 2 unit a year later.

The Niigata plant, 220 kilometers (137 miles) northwest of Tokyo, consists of seven reactor units ranging from 20 years to 32 years in age, according to the NRA. The plant has a total operating capacity of about 8 gigawatts.

Four of Japan's 42 operable reactors are currently online.

Operating a single unit at Kashiwazak-Kariwa would cut costs by as much as 90 billion yen ($800 million) a year by reducing fuel imports, Tepco said in May.

The utility is seeking partnerships in its nuclear and electricity transmission and distribution operations to boost profitability as part of its latest 10-year turnaround plan.

After a 30-day public comment period, the report will then be subject to formal approval.

Army of Women Tackles Electricity Thieves in Indian Slums

Posted October 04, 2017, 10:42 A.M. ET

By Bhuma Shrivastava

India's power companies have a problem largely responsible for $10 billion a year in losses. Slum dwellers steal electricity and refuse to pay their bills. But company officials often can't go in without being chased by mobs—and sometimes beaten, tied up, urinated on, even murdered.

So officials at Tata Power Co.'s joint venture with the Delhi state government came up with a solution that's turning out to be a model, not just for the rest of India, but for the world: It hired women living in the 223 slums it serves in the northern and northwest parts of the capital and called them "Abhas," from the Sanskrit word for light.

Tata Power Delhi Distribution Ltd.'s force of now 841 wives, mothers, and women as young as 20 go around the slums, knocking on neighbors' doors and persuading, coaxing, cajoling and nagging them to pay their power bills.

The result is a 183 percent increase in revenue over five years from the slums where Tata operates the project, with minimal cost to the company. Active power connections have risen 40 percent to 196,000—meaning that 56,000 previously freeloading homes have become active, bill-paying power customers.

"This gave us a way to get into these neighborhoods, rife with mafia and political influences," said Praveer Sinha, chief executive officer and managing director at Tata Power-DDL, which had started out operating literacy campaigns for slum women in 2010 as a way into the communities. "We

thought educated women would give us a much better buy-in.''

The success of Tata Power-DDL's initiative is inspiring imitation. Rival BSES Delhi, co-owned by the Delhi state government and Anil Ambani-controlled Reliance Infrastructure Ltd., engaged 40 women earlier this year in a pilot project in a west Delhi slum. Having resident women distribute bills and collect payment from neighbors produced "very encouraging results" that will now be used to expand the program, according to BSES spokesman Deepak Shankar.

The World Bank is trying out similar initiatives in Jamaica and Kenya, and is considering adapting it to other African countries. So far, Kenya Power & Lighting Co. has improved connection rates by doing more community engagement based on the Tata model that "has provided a lot of learning, which we are incorporating," Sunita Chikkatur Dubey, a Ghana-based World Bank consultant, said via email.

The slum in north Delhi known as Sanjay Basti, home to 4,000 people just 2 miles (3 kilometers) away from Tata Power-DDL headquarters, was once notorious for harassing power inspectors. Residents would threaten to pull away ladders when company officials climbed electricity poles to disconnect illegal hookups, said Amarjeet Kaur, who used to be an illiterate housewife before she was hired as an Abha in 2013.

"Residents would ask me: 'Why did you become a 'company person' when you are one of us?'" said Kaur, 39, as she walked through the slum's serpentine lanes filled with low-slung electricity cables that these days connect to almost all the brightly painted brick dwellings. "Now, women are in a queue to take up this job. Even the boys want to become Abhas."

Abhas, whose numbers are expected to swell to 1,000 by next year, do more than just hand-deliver electricity bills and collect payments. They advise slum dwellers on power conservation and safe practices: Use LED bulbs, don't use old motors to pump underground water or it will spike your electricity bill, and most importantly, don't use power cables as clotheslines. The Abhas' newest mandate, Tata Power-DDL's Sinha says, is to encourage slum residents to make mobile payments, which reduces the need to handle and safeguard large amounts of cash.

Abhas make about 4,000 rupees ($60) a month on average, which is what some part-time domestic helpers can make. It includes a base salary plus extra pay based on securing full bill payment, partial payment or new meter installation. Abha managers, 25 in total, can make as much as 12,000 rupees a month—about the equivalent of a bus or van driver in Delhi.

Residents say they prefer dealing with women from their own communities—who personally deliver bills when they know neighbors are home and accept partial payment when money is tight—rather than outsiders. If their repeated cajoling and nagging doesn't result in payment, then power is disconnected. The Abhas have the support of the community leaders, known as pradhans, who weigh in if needed.

"Earlier if we weren't home when the company official came to deliver the bill, we'd miss paying and become defaulters," said Usha, 38, who goes by one name and lives in a 90-square-foot room with six other family members. She likes the convenience of dealing with people she knows, and laughs off any questions about feeling nagged. "If we consume electricity, we're supposed to pay for it!"

The scarcity of resources in slums ensures an interdependence among residents that means they're more likely to listen to one of their own, said Purnima Singh, a psychology professor at the Indian Institute of Technology in New Delhi.

"The social fabric is much tighter in slum clusters," said Singh. "An outsider will never match up in having this level of influence."

Tata Power-DDL started zeroing in on slums in 2009, considering them the last hurdle to paring losses. India's power companies lose revenue on about a fifth of the electricity they supply, or about $10.2 billion annually, due to problems including theft, meter tampering, billing issues and leakage due to faulty equipment, according to PricewaterhouseCoopers India estimates.

To thaw the hostility that Tata Power-DDL officials were encountering, it set up a special consumer group to start drug rehabilitation, provide medical vans, install drinking water stations and launch the women's literacy program. The idea to hire women surfaced in 2012 when, Sinha said, the women who had been studying to read and write started asking how to put their education to use.

"These women weren't allowed to go out and work by their families," said Manisha Wadhwa who now heads the group. "But they could always work in their own communities, choose their own hours and still give us better reach in their neighborhoods."

Wadhwa's group is still trying to tame 39 slums Tata Power-DDL serves that remain crime-prone and mafia-ridden, where the few Abhas the company has been able to hire haven't made much headway.

People pelt stones and pour hot water from the roofs" in one of the areas, Wadhwa said. "We are still trying to befriend them."

Still Tata Power-DDL has come a long way from the days before 2012 when officials had to remove their badges to keep from being identified when visiting slums. Now women like Kaur insist on having Tata Power identity cards, as it gives them status.

"We have learned from this initiative that we can work closely with communities to improve economic outcomes," said Sinha. "We don't need to do charity.''

Brazil to Tap Green Bonds, Fueling Agricultural Expansion

Posted October 04, 2017, 9:10 A.M. ET

By Anna Hirtenstein

Brazil plans to tap green bonds to finance a significant expansion of agricultural exports.

The world's fifth biggest country has underused landmass equivalent to four times the size of France, or, about 190 million hectares (470 million acres), according to Roberto Jaguaribe, president of the Brazilian Trade and Investment Promotion Agency. Green bonds could help finance infrastructure to bring more food to global markets in an environmentally friendly way.

"There's no other country in the world that has the conditions that Brazil has for agricultural supply," said Jaguaribe in an interview in London. "And we want to do it in a very sustainable way, feed the world."

Green bonds could help improve the sustainability of Brazilian agriculture by supporting rules that prevent illegal deforestation or land degradation. The market for the environmentally-focused securities grew from non-existence a decade ago to $95 billion last year. Bloomberg New Energy Finance forecasts issuance will reach $130 billion in 2017.

"We think that almost all of the projects that we have are completely aligned with the green financing," said Jaguaribe, a former ambassador to the U.K. and China at meeting hosted by Brazil's embassy in London. While green bonds won't be the "main source" of financing for the farming expansion they're seen as "increasingly relevant," he said without specifying any amount.

Brazil has already issued about $3 billion of green bonds and could sell a record $5 billion this year. The country has been investing in logistics to get agricultural products to market by building railways such as the Ferrograo, a $4.1 billion project to develop soy exports.

Key Producer

"Green bonds are a way of getting projects financed without using taxpayer money," said Sean Kidney, chief executive officer of the Climate Bond Initiative, an organization that promotes green bonds. The securities could match international investors looking for yield with Brazilian regions that need of financing for infrastructure, he said.

Brazil is a key producer of soy, beef and sugar. Its sustainability credentials are derived from requirements that farmers keep 20 percent to 80 percent a certain percentage of their land fallow for conservation, according to Jaguaribe.

He sees companies in agribusiness, transportation and water sanitation as potential issuers of green securities. Brazil has plans to build railways to crisscross the nation, which are considered to be a more sustainable form of transport because developers cut down less trees than when building highways.

"It's a mode of efficient transport and low carbon approach with green investment and helps reduce deforestation," said Isabella Teixeira, former minister of environment of Brazil.

Here's the Hot Canadian Oil Play You Probably Never Heard About

Posted October 04, 2017, 10:00 A.M. ET

By Robert Tuttle

There's a land grab quietly taking place in a little-known corner of the Canadian oil sands.

Just 200 kilometers (125 miles) southwest of the Fort McMurray oil-sands hub in northern Alberta, investors are rushing to secure rights to land that produces crude at much lower costs than the massive operations the region's known for. That's because beneath the area's characteristic oil-rich soil, which requires expensive extraction and refining techniques, there's crude trapped between layers of rock that can be pumped with conventional gear.

"It's definitely an emerging play," said Roger Tang, chief executive officer Deltastream Energy Corp., one of the companies that's producing oil in the area. "It's new and the production is quite respectable at this price."

The race to acquire drilling rights near the remote Slave Lake community comes as development of Canada's oil-sands, the world's third-largest crude reserves, grinds to a near halt with prices too low to justify the billions of dollars required to build new mines or steam-assisted production sites.

Located roughly between Alberta's Nipisi Lake and an area called Marten Hills, the drilling rights going for sale fall within the Clearwater shale and sandstone formation, with pockets of oil 600 to 700 meters (1,970-2,300 feet) below the ground, Tang said. Crude from the area can be produced for about C$10 ($8) a barrel.

The purchases have been flying under the radar because most of the buyers are closely held companies like Deltastream, which aren't required to disclose what they're up to like listed companies. But one purchase recently stood out.

Under the name Stomp Energy Ltd., the land company Scott Land & Lease Ltd. paid C$10.15 million, or C$1,101 per hectare, in a Sept. 13 provincial land offering for the rights to explore for hydrocarbons near Marten Hills for 15 years, along the far western edge of the Athabasca Oil Sands region.

While that may seem like very little when compared to the prohibitive prices paid for rights in the Permian Basin in Texas, it was the most paid for a single section of exploration land in Alberta since December 2011, provincial data show. And it came amid a flurry of other purchases in the same area by other companies.

Companies including Deltastream, Cenovus Energy Inc. and Spur Petroleum Ltd. have begun drilling in the area over the past year.

Cenovus controls about a third of the play after acquiring drilling rights in the area over recent years, Harbir Chhina, executive vice president of oil-sands development, said in a conference call last June. While Cenovus has drilled a well in the area that produces about 300 barrels a day and plans to drill four or five wells in total, the company lists Marten Hills as a potential divestiture as it seeks to sell C$4 billion to C$5 billion by year end to help cover the cost of buying oil-sands assets from ConocoPhillips.

"We continue to assess what our drilling plans may look like for this property in the coming months," Reg Curren, a Cenovus spokesman, said in an email. "No decision has been made at this time."

Backed by a C$100 million equity line of credit led by ARC Financial Corp. and Wells Fargo & Co., Calgary-based Deltastream has drilled nine wells there since the second quarter, three of which are producing between 150 and 200 barrels a day, Tang said. The company plans to continue drilling new wells into next year.

Well Costs

The advent of multilateral drilling, in which multiple bores are drilled out of a single well hole, has made exploiting the Clearwater formation economically viable, Tang said. Each well costs C$1.1 million to C$1.5 million to drill and produces as much as four times more crude as a conventional horizontal well, he said. That makes the play viable at today's oil price of just over $50 a barrel,

Tang said. By contrast, wells in Alberta's Duvernay Formation cost C$6 million to C$7 million.

Land companies such as Scott typically buy rights in oil-sands areas on behalf of energy producers who want to shield their names from the transaction. Scott declined to comment on the purchase when contacted by phone.

In addition to Scott and Deltastream, Synergy Land Services Ltd. also bought rights to a plot during the Sept. 13 bidding round. It payed C$1,571 per hectare, the most per hectare in the province in more than two years. In July, land company Britt Resources Ltd. paid C$2.99 million for three parcels in the same immediate area, and Scott bought three parcels nearby for C$4.97 million in June of last year.

The drilling rights sales "show you that quiet acquisitions can get hot very quickly," said Mark Oberstoetter, lead analyst for upstream research at Wood Mackenzie in Calgary.

But development of the Clearwater formation in the Marten Hills area is in its infancy and its full potential won't be known until more drilling takes place, Tang said. The Lesser Slave Lake River area that includes Marten Hills pumped just 1.46 million barrels in all of 2015, according to the most recent Alberta government data. But Tang says he's optimistic.

Well results are "looking very good," he said. "Although it's still early stage, you get some indication that it's very exciting."

Cities Pitch Affordability, Innovation in Curbing Sewer Overflows

Posted October 04, 2017, 9:02 A.M. ET

By Amena H. Saiyid

When it rains, it flows—a nasty soup of stormwater and sewage spilling into local streams. Controlling these sewer system overflows costs a lot of money and can require tricky engineering: some cases require the construction of large storage tunnels burrowing hundreds of feet underground. Many cities want more time to clean up the problem, and they're getting it. Washington, D.C., is among the cities that have taken advantage of the EPA's integrated planning policy, which outlines how communities can prioritize Clean Water Act obligations and develop flexible plans to reduce compliance costs.

DC Water, the district's water and wastewater authority, was able to save more than $1 billion by amending a court-ordered agreement with the Environmental Protection Agency detailing its plan to reduce its overflows. Those changes allowed the district to use green infrastructure to address the problem and accounted for the inability of some of DC Water's 130,000 customers to pay for services.

"The integrated planning policy allowed us to inject affordability into the discussion," George Hawkins, outgoing chief executive officer for DC Water, told Bloomberg BNA.

DC Water was able to achieve those savings by reducing the number of storage tunnels from four to

three and implementing a plan for green infrastructure to absorb some of the stormwater flows.

Eight Cities Renegotiate Deadlines

More than 800 cities—mostly older communities in the Northeast and Great Lake states—have wastewater collection systems built in the early 1900s that combine both stormwater and sanitary sewage in one pipe, according to the EPA. They are designed to overflow through a series of outfalls into streams and lakes during storms so that the sudden gush of this combined waste doesn't overwhelm the treatment plant.

Overflows from combined sewers, as well as those from sanitary sewers and stormwater drains, are a huge pollution problem, dumping pathogens, toxic chemicals, debris and other contaminants into the water. Some systems even overflow when it isn't raining due to pipe blockages, line breaks, and power failures.

Communities that have been lax in addressing their overflow problems have found themselves on the receiving end of lawsuits and EPA enforcement actions for violating the Clean Water Act, which resulted in consent orders laying out long-term control plans. Figuring out how to pay for the needed improvements has been a major driver in the effort of some cities to open up those agreements.

The nation's capital was one of at least eight cities that have renegotiated their agreements with the EPA, giving cities more time to incorporate new strategies, such as better integrated planning with other projects, and solutions that consider their ability to pay for them.

Atlanta was another and extended its deadlines from 2014 to 2037 after arguing it couldn't afford the necessary upgrades to its wastewater collection and treatment system over the prescribed time frame.

The city, like most others, was hit hard by the recession and saw local water use reduced and competing demands for limited municipal resources, Mikita Browning, Atlanta's consent decree manager, told Bloomberg BNA. This is despite the fact that Atlanta raised its water and sewer rates by 252 percent over a 10-year period and imposed a 1 percent municipal sales tax to defray the costs of water infrastructure.

Baltimore negotiated a new 2030 deadline to curb its sanitary sewer overflows and stormwater runoff. The extra 14 years would allow the city, once the court approves the extension, to address stormwater runoff and prioritize its funds to eliminate a sewage blockage leading into the River Wastewater Treatment Plant.

"We used integrated planning to front-load our modified consent decree with projects that would deliver the biggest return, then spend additional money as needed in the out years to complete the work," Jeffrey Raymond, spokesman for Baltimore Public Works Department, told Bloomberg BNA.

Policy Issued in 2012

Since the 2012 integrated planning framework came out, the EPA said it has entered into over 31 agreements with municipalities governing sewer overflows. The agency also has revised 11 decrees, with at least eight involving extended deadlines.

Cities like Lima, Ohio, that entered into consent decrees after 2012 also were able to tap into the EPA's updated financial assessment policy, which supplemented the integrated planning policy, to look at historical sewer and water rates, poverty rates, and income levels to obtain a "more accurate

and complete picture" of their ability to pay for Clean Water Act obligations. Backed by the U.S. Conference of Mayors, Lima Mayor David Berger argued that EPA's existing metric for measuring affordability was unworkable for his city.

Many of the municipalities that came under EPA's enforcement gun for overflows pushed for the planning framework to assist them with prioritizing other environmental mandates and public needs, such as public safety, road building, school upgrades, and hospitals.

In seeking to renegotiate the agreements, some cities pitched using less traditional engineering approaches, such as more cost-effective green infrastructure that involve green roofs, wetlands alongside roads, and swales along parking lots to capture stormwater runoff so it can seep slowly into the ground.

They also argued that extending deadlines for putting the control plan in place would allow them to spread out the cost over a longer period of time, thereby reducing annual costs.

The Hampton Roads Sanitation District, which serves 18 cities and counties in Southeast Virginia, amended its 2010 agreement in January in line with integrated planning but didn't seek a deadline extension for reducing sewer overflows from 13 treatment plants and 500 miles of pipelines. The district will be able to use a region-wide plan to spread the costs and proceed with a project to inject the Potomac Aquifer with wastewater treated to meet drinking water standards.

Advocates Caution Against Misuse

But environmental groups are leery of added flexibility that allows cities to delay complying with their Clean Water Act requirements, even as they support green infrastructure.

Blue Water Baltimore intervened in the city's negotiations to extend its deadline because it wanted to make certain that the city "report measurable progress from infrastructure projects and adaptive management of proposed projects based on water quality monitoring results," Angela Haren, the group's advocacy director, told Bloomberg BNA It has objected to the revised consent decree, which is pending approval in a federal district court, because it doesn't require water quality monitoring.

Larry Levine, the NRDC's senior water attorney, cautioned that the flexibility offered by the EPA shouldn't be "misused and abused" as an excuse to defer real progress in cleaning up polluted urban waterways, or to avoid accountability for meeting the Clean Water Act's "fishable, swimmable" goals for waterbodies.

However, Karen Hansen, an attorney with Beveridge and Diamond P.C. that has represented municipalities in negotiating consent decrees, told Bloomberg BNA she expects to see more integrated planning.

"I see integrated planning will have increased utility end use in a climate where EPA under the current administration is very open to ideas about what's cost effective and what makes sense for the community," Hansen said.

Storms Spur $22 Billion Investment in Battery-Backed Grids

Posted October 04, 2017, 8:47 A.M. ET

By Christopher Martin

Growing demand for more resilient power supplies will spur $22.3 billion of global investment in battery-backed local energy systems over the next decade, according to Navigant Research.

Villages and homes in far-flung places will drive the expansion of microgrids, small-scale solar systems with batteries that can retain power until it's needed. Navigant expects 14.9 gigawatts to be in operation in 2026, up from 238 megawatts this year, according to a report Oct. 3.

North America and the Asia-Pacific region will get about three-quarters of the investment as developers find ways to use microgrids more efficiently, including providing energy-management services to utilities. North America will have 5.85 gigawatts of microgrid storage in operation by 2026 and Asia-Pacific will have 5.57 gigawatts. Declining battery costs and new financing methods will also boost deployment in areas like coastal communities in Florida and Texas exposed to flooding and frequent storms, said researcher Alex Eller.

"The storms helped raise awareness of what's available," Eller said in an interview. "For the next couple years, remote microgrids will make up about half of global installations."

Puerto Rico, where the utility grid was knocked out by Hurricane Maria Sept. 20, has become a target for developers eager to showcase microgrid designs. These include solar panels, small wind turbines and backup diesel or propane generators that may be needed if a string of cloudy days reduces solar production and doesn't fully charge the batteries.

Suppliers including Tesla Inc., battery-maker Sonnen GmbH, and solar rooftop supplier Sunnova Energy Corp. have each begun shipping micro-grid equipment to Puerto Rico to help re-power the island following the storm.

Subject: Trump to tap nonproliferation expert as DOE's top lawyer

By Alex Guillén

05/23/2017 05:55 PM EDT

President Donald Trump plans to nominate David Jonas to be the Energy Department's general counsel, the White House announced today.

Jonas, a partner at the Virginia law firm Fluet, Huber and Hoang since 2016, was also a DOE landing team member and is an expert on nuclear nonproliferation.

He previously served as the general counsel for the National Nuclear Security Administration, DOE's nuclear security arm, from 2001 to 2010, according to his LinkedIn page. From 2012 to 2014, Jonas was general counsel for the Defense Nuclear Facilities Safety Board, an independent agency that advises DOE on nuclear defense facilities.

Jonas's resume also includes a year as DOE's director of legal strategy and analysis and a year as a vice president at the Pentagon Federal Credit Union. He holds advanced law degrees in military law and international law.

Jonas's wife, Tina Jonas, served as chief financial officer for the FBI under Robert Mueller and later as CFO and under secretary of Defense from 2004 to 2008.

WHAT'S NEXT: The Senate Energy and Natural Resources Committee likely will schedule a hearing on his nomination for sometime after Congress returns from its Memorial Day recess in early June.

WATER
Water Pollution Control/Recycled Water
Arizona WATER

Proposed rule of the Department of Environmental Quality amends and renumbers regulations under R18-9-701 through -719 as R18-9-A701 through -D702; adopts regulations under R18-9-A707 and -E701; and repeals regulations under R18-9-601, -602, -603, and -720 to update and restructure requirements for reclaimed water and allow for the treatment of reclaimed water for potable use. The rule reorganizes provisions to clarify that gray water, industrial wastewater, and reclaimed water are all categories of recycled water. The rule also provides an exception to the prohibition against providing reclaimed water for human consumption to allow reclaimed water to be treated appropriately for potable use, adds interim permitting criteria for advanced reclaimed water treatment facilities, and modifies gray water permitting requirements. In addition, the rule revises notification and signage, reporting, and permit revocation requirements and establishes a recycled permit transition provision. A hearing is scheduled for July 25, 2017, in Phoenix. Comments are due July 25, 2017. Contact: Heidi Haggerty; DEQ, Water Quality Division; 602-771-4815; haggerty.heidi@azdeq.gov

June 6, 2017

Today on Climate Beat . . .

. . . we listened to the radio, where EPA Administrator Scott Pruitt is alluding to the possibility of reviewing the prior administration's finding that greenhouse gas emissions endanger public health and welfare, a landmark document that forms the basis of all of the agency's climate regulations.

Over in China, California Gov. Jerry Brown (D) is signing a series of clean energy technology development deals with Chinese officials and touting the efforts as trailblazing on climate change amid retreats by the Trump administration.

In personnel news, President Donald Trump announced his intent to nominate a former George W. Bush Department of Justice (DOJ) official – who later represented the U.S. Chamber of Commerce in a suit targeting the Obama EPA's early GHG rules – to head DOJ's environment division.

And our daily news roundup looked at how new coalitions of states, cities and companies are pledging to continue to work toward achieving Obama's GHG reduction target under the Paris Agreement even after Trump vowed to leave the deal.

Trump Administration Illegally Delayed Methane Rule: Court

Posted October 05, 2017, 12:45 P.M. ET

By Jennifer A. Dlouhy (Bloomberg News) and Alan Kovski (Bloomberg BNA)

A federal court ruled the Trump administration illegally froze Obama-era requirements aimed at reducing the amount of natural gas from federal land wasted through venting, flaring, and leaking.

The Interior Department postponement of the effective date of the regulations "is not entitled to deference," the court said.

In delaying the requirements, Interior's Bureau of Land Management relied on the Section 705 "administrative stay" provision of the Administrative Procedure Act, which allows agencies to postpone the effectiveness of rules that are the subject of litigation.

The U.S. District Court for the Northern District of California agreed with plaintiffs, including California, New Mexico, and environmental groups, that postponing implementation of the rule after it already had gone into effect ran afoul of the plain language of Section 705 (California v. U.S. Bureau of Land Mgmt., N.D. Cal., No. 3:17-cv-3804, 10/4/17).

Interior tried to convince the court to allow the delay of regulations because they would soon be rescinded or revised. But Judge Elizabeth Laporte wrote that new rules to postpone the regulations and revise the regulations would take a number of months to complete and would not necessarily survive legal challenge.

The Trump administration used a similar rationale for a delay of changes to federal royalty estimates for oil, gas, and coal only to have its delay overruled by a court in August.

"No one is above the law. As a result of this Rule's implementation, oil and gas operators on federal and Indian lands will be compelled to prevent the waste of natural gas. Natural gas emissions threaten the health of nearby residents and contribute to climate change," California Attorney General Xavier Becerra, who filed the suit, said in a statement.

New Regulations Envisioned

The latest ruling came hours after Interior proposed a rule that would postpone some of the Obama

administration's venting, flaring, and leaking regulations until Jan. 17, 2019, while Interior considers new regulations that might be issued through one or more additional rulemakings governing oil and gas production.

That proposed extension is going through the full notice-and-comment rulemaking process.

The contested regulations were issued in 2016 to reduce methane and other gas emissions through technical requirements—such as leak detection and repair—and the imposition of royalties on lost gas to discourage the losses. Royalties already were levied on some lost gas, and the 2016 rules toughened those regulations.

The Trump administration and industry officials described the regulations as clumsy and expensive requirements likely to reduce royalties by deterring oil and gas work.

"The rule is expected to have real and harmful impacts on onshore energy development and could impact state and local jobs and revenue," Acting Assistant Secretary for Lands and Minerals Management Katharine MacGregor said in May. "Small independent oil and gas producers in states like North Dakota, Colorado and New Mexico, which account for a substantial portion of our nation's energy wealth, could be hit the hardest."

Defenders of the 2016 regulations said they would reduce waste and help protect human health and the environment. Methane, the primary constituent of natural gas, is a potent greenhouse gas.

Federal Regulators Criticize Energy Rule for Distorting Markets

Posted October 05, 2017, 03:27 P.M. ET

By Rebecca Kern

Two of the three members of the Federal Energy Regulatory Commission have publicly criticized an Energy Department proposal that aims to subsidize nuclear and coal plants in the wholesale markets, suggesting it could "destroy" the markets.

"We will not destroy the marketplace," Robert Powelson, a Republican member of the Federal Energy Regulatory Commission, said in a speech at the Organization of PJM States' annual meeting in Arlington, Va., on Oct. 4. Powelson's office confirmed the statement.

Democratic FERC Commissioner Cheryl LaFleur, supported Powelson's comment, saying in an Oct. 4 tweet,"Great message!"

Powelson and LaFleur's comments are the first public reactions from FERC members related to the Energy Department proposal's negative impacts on the wholesale energy markets that the commission is being tasked with overseeing. FERC Chairman Neil Chatterjee (R) has not yet publicly weighed in on the proposal.

The Sept. 28 Energy Department proposal directed FERC to address market challenges facing coal and nuclear plants. The proposal would allow generators with a 90-day supply of fuel on site—which would include coal and nuclear facilities—to recover their operating costs at "a fair rate of return."

"FERC does not do politics. We don't do energy politics," Powelson said at the meeting, which was first reported by SNL.

When it comes to politics, some congressional Republicans have weighed in against the DOE proposal too.

"I really trust the free market. If a power source will survive the market, that's what the people should get," Rep. Pete Olson (R-Texas) told Bloomberg BNA Oct. 5. "This is sort of picking winners and losers, saying, 'I'm going to pick coal and nuclear.' That's not what's good for the consumer."

FERC has set an expedited public comment deadline of Oct. 23 on the proposal. The independent agency published a list of questions on Oct. 4 related to the need, eligibility, implementation, and rates in the proposal for public comment.

The Energy Department gave FERC 60 days to act—a time period that will not begin until a notice is published by the Energy Department in the Federal Register.

Wind in Land of Oil Prompts Surprise Boost in Renewable Spending

Posted October 05, 2017, 12:33 P.M. ET

By Reed Landberg and Anna Hirtenstein

Seven giant wind-power projects, including one in the oil-rich U.S. state of Oklahoma, prompted a surprise investment increase for renewable energy in the third quarter.

Funding for the clean energy industry surged 40 percent from a year ago to $66.9 billion in the three months through September, according to a report by Bloomberg New Energy Finance. Investment rose 2 percent for the first nine months of the year and is on track to finish "close to or a little ahead of" the $287.5 billion recorded in 2016, BNEF said.

The figures marked the fourth consecutive quarterly increase for the industry, where plunging costs for developing wind and solar farms has led to more capacity being built for less money. American Electric Power Co. backed Invenergy LLC's $4.5 billion Wind Catcher project in Oklahoma, which the utility says will save customers $7 billion over more than two decades by delivering electricity cheaper than existing sources.

"Wind Catcher is an example of a regulated utility in a wind-rich area of the U.S. taking advantage of federal tax credits to build a project that will produce electricity at below the cost of its existing coal and gas generating plants," Amy Grace, head of research in North America for BNEF, said in a statement released Oct. 5.

Investment this year is unlikely to match the record $348.5 billion reached in 2015, BNEF said, and a lull continued in some categories of funding that once were among the richest backers of the industry.

Venture capital and private equity provided $662 million in the third quarter, down 79 percent from a year ago and the weakest reading since the start of the modern renewables boom in 2005. Investment from initial public offerings also fell 63 percent to $1.4 billion, the least since early 2016.

"The weak third quarter figure for public markets investment ironically came despite a strong

performance from clean energy stocks," said Abraham Louw, a BNEF researcher who tracks the data. He noted a 22 percent advance so far this year in the WilderHill New Energy Global Innovation Index, which tracks 97 companies in the industry.

Asset finance—which encompass bankers writing project-finance loans, self-funding energy companies, leasing and bonds used to refinance deals—gave renewables their biggest boost. Funding for utility-scale projects jumped 72 percent from a year ago to $54.3 billion in the third quarter, BNEF said.

In addition to the Oklahoma wind farm, six others received funding of at least $600 million, including projects in Mexico, Britain, Germany, China and Australia.

A breakdown by nation showed advances in the biggest economies. China's overall investment in renewables and clean energy rose 35 percent to $23.8 billion. The U.S. advanced 45 percent to $14.8 billion, Europe 43 percent to $11.6 billion and Brazil 32 percent to $1.7 billion.

Investment fell 32 percent in Japan to $2.2 billion and 49 percent in India to $1.1 billion.

U.S. Trade Dispute Scaring Companies From Buying Solar Power

Posted October 05, 2017, 8:40 A.M. ET

By Brian Eckhouse

A trade dispute over solar imports has stalled clean-energy projects across the U.S.

With the looming prospect of tariffs driving up the price of panels, utilities and businesses are holding off on signing deals to buy solar power. It may be months before they get more clarity.

In the meantime, "projects are on hold," Yumin Liu, president of Canadian Solar Inc.'s Recurrent Energy development unit, said in an interview at Infocast's Solar Connect conference in San Diego. Recurrent has multiple projects that were initially scheduled to begin commercial operations next year. Now it's not clear if that will happen on time.

"It's uncertain," Liu said. "Many companies are in the same boat."

Trade Dispute

The trade case dates to an April complaint from Suniva Inc., a bankrupt solar manufacturer based in Georgia. The U.S. International Trade Commission ruled last month that the U.S. industry has been harmed by a flood of cheap imports, and President Donald Trump will get to decide whether to impose tariffs.

With solar development slowing, some corporate buyers may turn instead to wind farms. Such contracts with businesses have been a significant driver of growth for both types of clean energy in the U.S.

"Solar developers anticipating to grow by signing contracts with corporations and utilities are currently in a standstill," Nathan Serota, a New York-based analyst at BNEF, said in an Oct. 4 phone

interview. “Wind developers don’t have that problem.”

While corporate sales of wind usually exceed solar power, the gap was starting to narrow. That trend is now reversing. While wind deals exceeded solar by about 40 percent last year, this year through mid-September businesses have signed contracts to buy almost three times as much wind power as solar, according to Bloomberg New Energy Finance.

There’s another reason solar may slow this year. On Sept. 29, the U.S. Energy Department proposed a rule that would boost nuclear and coal power—potentially at the expense of renewables.

“The market just got a one-two punch,” said Andrew Redinger, a managing director at KeyCorp, “Even if neither happens, the uncertainty during the interim will lead to stoppage. People don’t like uncertainty.”

Oil Drillers May See Big U.S. Tax Cut—If Deductions Survive

Posted October 05, 2017, 01:46 P.M. ET

By Alex Nussbaum

U.S. oil explorers could see a multibillion-dollar benefit from a move to slash the U.S. corporate tax rate but some of the industry’s biggest tax breaks could also be under fire.

The tax overhaul outlined last week by Republican leaders and President Donald Trump still faces challenges and could be stalled by a busy political calendar in Washington, Bloomberg Intelligence analysts James Blatchford and Andrew Silverman wrote in a report released Oct. 5.

Still, the total tax bill for U.S. oil and gas companies could “shrink dramatically” if Congress enacts a law cutting the corporate rate to 20 percent from 35 percent, they wrote. A proposal to allow immediate deduction of capital investments is likely to help companies like Exxon Mobil Corp. and Chevron Corp., although there’s also talk of limiting explorers’ ability to deduct interest costs.

The tax blueprint released by six administration officials and Congressional leaders on Sept. 27 promised to cut the corporate rate almost in half but also signaled other breaks could be squeezed to partially offset the hit to tax revenues. The nine-page framework provided few specific on which deductions may be targeted.

U.S. energy producers paid the second-highest effective tax rate of any business sector in 2014, at 37 percent, according to BI research. An earlier Trump proposal to reduce the corporate rate even deeper to 15 percent would have saved $13 billion that year for a group of 56 oil and natural-gas companies tracked by Bloomberg, according to a BI analysis in April.

Tax negotiators are also weighing “serious proposals” to repeal two of the industry’s biggest tax benefits, said Stephen D. Marcus, a tax attorney with Baker Botts LLP in Dallas who works with explorers. One provision allows companies to deduct so-called intangible drilling costs; another, known as “percentage depletion,” lets them reduce taxable income to reflect the depreciation of reserves, Marcus said in an email.

Eliminating those two provisions would force energy companies to pay about $25 billion in additional

taxes between 2016 and 2026, Congress's Joint Committee on Taxation estimated last year.

TransCanada Ends Pipeline Project, Sees $801 Million Charge

Posted October 05, 2017, 11:10 A.M. ET

By Meenal Vamburkar

TransCanada Corp. has scrapped its Energy East Pipeline and Eastern Mainline projects, oil and natural gas conduits that have faced regulatory hurdles in Canada and stiff opposition from environmental groups.

As a result of the decision, TransCanada expects an estimated C$1 billion ($801 million) after-tax, non-cash charge to be recorded in the fourth quarter, the company said in a statement Oct. 5. Because regulators failed to reach a decision on the projects, TransCanada expects "no recoveries of costs from third parties." The Energy East link to Canada's Atlantic Coast carried a C$15.7 billion price tag.

Energy producers in Alberta had hoped the projects would help them diversify their markets, with most of the existing pipeline network linking the energy-rich province to the U.S. Midwest and Gulf Coast. Last month, TransCanada sought a 30-day suspension of the project applications for more time to review environmental assessment factors.

"TransCanada was forced to make the difficult decision to abandon its project, following years of hard work and millions of dollars in investment," the Canadian Energy Pipeline Association, an industry group, said in a statement. "The loss of this major project means the loss of thousands of jobs and billions of dollars for Canada, and will significantly impact our country's ability to access markets for our oil and gas."

The decision comes as TransCanada seeks again to complete its controversial Keystone XL pipeline, which the Obama administration rejected in 2015. The $8 billion project, which would carry heavy crude from Alberta to Nebraska, is awaiting state approval in Nebraska after a hearing in August. A final decision on whether to build the line is pending.

Atlantic Access

In January, the National Energy Board voided previous decisions on the Energy East application, forcing the company to start the hearing process anew shortly after competing pipeline projects have been approved. The change came after the regulator's previous hearing panel stepped down amid accusations of bias.

TransCanada applied to build Energy East three years ago, seeking to open access for Western Canadian oil producers to the Atlantic Ocean for exports to Europe. It faced intense opposition in Quebec, where the province's premier said the line posed a significant risk to its freshwater resources.

Energy East would carry about 1.1 million barrels of oil a day from Alberta and Saskatchewan to eastern Canadian refineries and a marine terminal in New Brunswick. The Eastern Mainline project would add new gas pipeline and compression facilities to an existing system in Southern Ontario, where most of the country's home and industrial gas consumers are located.

"We are not at all surprised by the decision," given that TransCanada had sought to delay the project applications, said Robert Kwan, an analyst at RBC Dominion Securities Inc., in a research note. The decision won't affect the company's dividend because its growth forecast didn't include those projects, he said.

Energy East Death Pins Oil Sands Hopes on Two Troubled Pipelines

Posted October 05, 2017, 02:47 P.M. ET

By Kevin Orland and Robert Tuttle

TransCanada Corp.'s cancellation of the Energy East pipeline leaves Canadian oil producers more dependent than ever on the Keystone XL and Trans Mountain proposals, two projects facing ardent opposition in their own right.

Energy East would have given oil producers in Alberta and Saskatchewan, who are heavily dependent on buyers in the U.S., another market for their crude by carrying about 1.1 million barrels a day to refineries and a marine-shipping terminal in eastern Canada. TransCanada cancelled that project on Thursday amid regulatory hurdles and weaker oil prices.

With Energy East scrapped, Western Canada's producers are now counting on Kinder Morgan Inc.'s project to carry crude to the Pacific Coast, and TransCanada's Keystone XL to connect with U.S. Gulf Coast refineries. Both face significant hurdles: Keystone XL needs approval in Nebraska, and Trans Mountain is hampered by a legal challenge in British Columbia.

With that avenue closed off, Western Canada's oil industry is now counting on Trans Mountain project to help carry crude to the Pacific Coast, where it would be shipped to markets in Asia, as well as TransCanada's long-delayed Keystone XL pipeline, which would move more Alberta oil to refineries along the U.S. Gulf Coast. However, both of those lines face significant hurdles: Keystone XL still needs approval in Nebraska, and Trans Mountain is now the subject of a legal challenge in British Columbia.

"It definitely puts the leverage on the pipes that are on the docket to get through," said Carl Evans, an oil analyst at Genscape Inc. in Boulder, Colorado. Keystone XL and Trans Mountain must be built "or you are looking at an industrywide problem in a very short amount of time."

Stranded Crude

Pipelines in Western Canada, which holds the world's third-largest crude reserves largely in Alberta's oil sands, can carry about 3.3 million barrels of crude a day, according the the Canadian Association of Petroleum Producers, or CAPP. Meanwhile, the area is expected to produce 3.92 million barrels a day this year and 4.2 million next year as a number of large oil-sands projects come online. The pipeline pinch already had producers shipping more of their crude by rail, which can cost as much as three times more to get oil from Alberta to the U.S. Gulf Coast.

Should Keystone XL and Trans Mountain fail to be built, oil producers could end up shipping more

than 300,000 barrels a day via rail for at least five years, and some producers could shut in operations, Evans said.

Evans said it's probable that Trans Mountain will be built and that Enbridge Inc. will be able to proceed with the replacement and expansion of its Line 3, which carries Western Canadian crude to Wisconsin.

Minnesota Approval

While that project still needs approval in Minnesota, the company has repeatedly expressed confidence that it will receive the necessary permits and has already begun construction on the Canadian portion of the line. Trans Mountain and Line 3 would provide a buffer of about 600,000 barrels a day by 2021, Evans said. Suncor Inc., Canada's largest oil producer by market value, supported Energy East and is disappointed in the decision not to move forward with the project, spokeswoman Sneh Seetal said. The pipeline would have provided new markets for Western Canadian crude and enhanced supply for the company's refinery in Montreal, she said.

"That said, we do have a position in all other pipeline projects, and no single pipeline will impact our ability to grow," Seetal said.

Cenovus Energy Inc., an oil-sands producer that had contracted to ship 200,000 barrels a day on Energy East, said the cancellation will reduce options for Canada's oil producers to reach global markets. The nation's regulators must ensure that decisions on infrastructure projects can be made in a timely manner so as not to put domestic producers at a competitive disadvantage, the company said in a statement.

Indian Market

Energy East would have provided Canadian oil producers with access to buyers in India, one of the fastest-growing markets for petroleum, because shipping there is faster from Canada's Atlantic Coast than from its Pacific Coast, said Tim McMillan, chief executive officer of CAPP. Instead, the cancellation makes the domestic industry more reliant on the U.S. to act as its broker in getting crude to world markets, he said.

"They control the market; they control the Canadian flows," he said "By not having our own access to the East Coast, it strengthens their hand."

Alberta Premier Rachel Notley also decried Energy East's demise, calling it "an unfortunate outcome for Canadians" and saying that it would have reduced the nation's imports of foreign oil. The National Energy Board must let the industry know how future project reviews will be conducted so investors can have confidence in the industry, she said.

"This decision highlights the importance of diversifying market access and the subsequent national priority that must be placed on the Trans Mountain expansion project," Notley said in a statement.

Utilities Rebuke Theresa May's Plan to Cap Power Tariffs

Posted October 05, 2017, 11:31 A.M. ET

By Mathew Carr and Alex Morales

Britain's utilities hit back at Prime Minister Theresa May's vow to cap energy costs, saying the measures would unsettle the industry at a time when government is seeking investment to replace aging power plants.

Centrica Plc, which plunged to a 14-year low on Oct. 4 when the plan was announced, said a limit on charges would also reduce competition among electricity and natural gas suppliers. Scottish Power Ltd. said consumers should be told to shop around for the best deals on offer.

"Price caps are the wrong solution," Centrica Chief Executive Officer Iain Conn said in an emailed response to questions. "Where they have been tried, they have been bad for customers. They limit choice, reduce competition, and prices tend to cluster around the cap."

He amplified his concerns in an interview with the British Broadcasting Corp.'s "Today" program Thursday on Radio 4, saying the proposal "creates exaggerated uncertainty" for utilities.

Centrica's remarks highlight a threat to May's effort to both hold down electricity costs and keep investment flowing into power generation, as more than a dozen coal and nuclear plants finish their service life. The government has estimated the industry may need 100 billion pounds ($132 billion) within the next decade to ensure stable supplies. It's also trying to respond to the concerns of voters worried about rising electricity bills.

The government's move, as soon as this winter, will probably spur big reactions by utilities.

Once in place, the cap may mean utilities scale back on discounts they offer in the market because funding them will become more difficult with standard variable tariffs, said Lakis Athanasiou, a utilities analyst at Agency Partners LLP in London. About two-thirds of customers at the biggest six utilities are on standard variable tariffs.

In the meantime, utilities might embark on a price war to boost market share so they have lots of customers on their books when the discounting ends, Athanasiou said by phone. The deeply discounted tariffs are "severely loss making when taking full costs into account," he said.

Shares Tumble

Shares slumped on Oct. 5 for each of the U.K.'s Big Six utilities-- Centrica, SSE Plc, Innogy SE, EON SE, Iberdrola SA and Electricite de France.

Earnings may fall at least 10 percent at three of six, according to a note from RBC Europe Ltd. The operating profit margin for the group as whole may slide to a wafer-thin 0.3 percent from 2.6 percent, RBC analysts John Musk and Olly Jeffery wrote in a note to clients.

The government's current focus is on the SVTs, which ministers say penalizes passive customers who don't bother to change suppliers. EON last month offered to end the practice of putting people onto those tariffs.

Industry View

Scottish Power Ltd., the Iberdrola unit working in the U.K., said it's the government's responsibility to end the tariff system.

"Just as you insure your car and home every year and go to the market for the best deal, so every energy customer should engage regularly with the market," said Neil Clitheroe, chief executive officer of Scottish Power retail and generation unit.

Further details of the Conservative plan, including how long the cap will last, may emerge when the government pushes a draft bill as early as next week.

"While we are in favor of free markets, we will always take action to fix them when they're broken," May told the Conservative Party conference in Manchester on Oct. 5.

The utilities said the latest maneuvering may backfire by reducing competition and discouraging consumers from switching to better deals.

Britain's energy market is changing rapidly. Three years ago, the Big Six had 99 percent of the market, and less than 4 million people changing suppliers each year, according to the trade association EnergyUK. Since then, dozens of new companies emerged and almost a third of customers started routinely switching, cutting the Big Six's market share to 80 percent.

U.K. homes don't have it bad compared with those across the English Channel. Domestic power prices were 4.9 percent below the EU average last year, according to Eurostat data.

Any intervention should be "simple to administer, time-limited, and maintain the principles of a competitive energy market to best serve customers' interests," SSE, which is based in Perth, Scotland, said by email.

U.K. Seeks Brexit Boost for Renewables, but Onshore Wind Taboo

Posted October 05, 2017, 9:45 A.M. ET

By Jessica Shankleman and Alex Morales

Britain wants a slice of the $30 trillion needed to clean up the world's energy supply—so long as those funds don't go into wind farms in the countryside.

Seeking investment to expand the economy as the U.K. leaves the European Union, the Conservative government is determined to expand the clean energy business while also satisfying its most loyal voters, many of whom see wind farms as an eyesore.

Speaking at the ruling party's annual conference in Manchester, ministers and officials said they were focused on building up other technologies, especially gigantic wind farms placed offshore and carbon capture and storage. There were few signs that onshore wind farms will benefit, even though they're among the cheapest ways to generate low-carbon electricity.

"There was a big debate in recent years about the impact of onshore wind on views and

communities," Greg Clark, the Cabinet secretary in charge of business and energy policy, said in an interview. "Obviously, the greater efficiency that we're seeing in offshore wind comes from much bigger towers and blades that are deployable offshore."

A white paper detailing the plan, setting out how the U.K. "will earn a living in future" once Brexit is complete, is due to be published later this year," Clark said. It'll look at how the U.K. replaces aging power plants and ensures supply for industry and electric cars, something the government has previously estimated may require 100 billion pounds ($132 billion) in investment.

Claire Perry, climate change minister in Clark's department, noted the government is working on both a "Clean Growth Plan" and an "Industrial Strategy" that will affect the energy business. Those probably will include support for carbon capture and storage technology, which is struggling to attract funding despite being seen by the United Nations as a crucial way of cleaning up emissions.

She said about $30 trillion of public and private capital needs to be spent between now and 2035 to help the energy industry shift to low-carbon supplies and meet the goals in the 2015 Paris Agreement on climate change. Britain wants a slice of those funds.

Clean energy could become "as big as coal was," according to Richard Harrington, a junior minister in Clark's business department.

"We really believe that the core of our industrial strategy is our energy policy," Harrington told delegates.

In a contrast with Clark's views, Harrington said there's "no reason" that onshore wind couldn't compete with other renewable technologies in auctions for government support, "provided that it goes through a reasonable local planning system."

In an interview, Clark wouldn't be drawn on whether he'd host a technology neutral auction for capacity that would allow more onshore wind. Instead, he's commissioned a review by University of Oxford Professor Dieter Helm to identify ways to bring down electricity prices. That's due to report back in the coming weeks.

Wind power investors like Richard Nourse, managing partner at Greencoat Capital LLP, urged the government to open energy auctions to all kinds of zero carbon energy, including onshore wind farms. Currently, these projects are banned from receiving new subsidies thanks to a Conservative manifesto pledge against the technology.

Offshore wind energy remains Britain's energy success story, bolstered last month by a auction that prompted developers like Dong Energy A/S to offer electricity from sea-based turbines at 57.50 pounds a megawatt-hour. That's well below the cost of nuclear power and competitive with onshore wind farms.

"We made a manifesto commitment that we would pursue offshore rather than seeking to drive a big expansion onshore, and nothing that I've seen that persuades me that was the wrong judgment," Clark said.

U.K. Power Grid Trials Real-Time Data to Deal with Renewables

Posted October 05, 2017, 9:18 A.M. ET

By Mathew Carr

National Grid Plc for the first time measured the stability of the U.K.'s power network in real time, allowing it to more confidently manage the system as intermittent renewable energy generation jumps.

The London-based network operator used a new tool to measure the network's resilience continuously, allowing control-room operators to react more quickly to changes in generation levels. That allows for cost savings and lower customer bills, said Marc Borrett, chief executive officer of Reactive Technologies Ltd., which provided the technology, without specifying how much could be saved.

Speedier data on how much various types of power stations are generating helps overcome stability problems created as renewables replace fossil-fuel plants, London-based Reactive said. Large coal and natural gas power stations give the network more resilience, known as inertia, because they have heavy spinning shafts and turbines, while solar and wind plants reduce grid stability as they are dependent on weather conditions.

Reactive's tool, which provides data from a national to a postcode level, "will give grid operators a unique and really important insight into how they can manage a grid and take on more and more renewable generation over time in a safe way," Borrett said by phone.

Clean-energy sources including wind, solar and nuclear met a record 52 percent of U.K. power demand in the three months through Sept. 22, compared with 35 percent four years ago, according to National Grid. The rapid pace of the change has made the power system more costly to manage, but previously inertia wasn't measurable, only estimated, Borrett said.

National Grid is reviewing options on a possible contract with Reactive, said Gemma Stokes, the network manager's spokeswoman, declining to be specific.

"We're in advanced discussions with a good handful of system operators around the world," Borret said.

Dutch Regulator Tasks Banks and Insurers on Climate-Change Risk

Posted October 05, 2017, 10:58 A.M. ET

By Alessandro Speciale and Eric Roston

Banks, insurers, and other financial institutions must do more to take into account the risks posed by climate change to their business, a Dutch Central Bank study said.

As global warming increases the risk of extreme weather events, regulators are giving more attention to its economic and market implications, with estimates showing that a single high-impact storm could cause damages of as much as 60 billion euros ($71 billion), according to the report published on Oct. 5. The Netherlands, which is largely below sea level, runs an inordinate risk of being affected by such events.

"Dutch insurers will have to deal with an increasing claims-burden as a result of climate-related damage," the central bank said in the report. "This in turn may lead to shock-induced price rises in premiums. Furthermore, climate change is making it more difficult to estimate the likelihood of extreme weather."

Bank of England Governor Mark Carney, chair of the G20's Financial Stability Board, is spearheading an initiative to standardize financial-sector guidelines on how to disclose risks arising from climate change. Carney in late 2015 appointed former New York City Mayor Michael Bloomberg to lead the Task Force on Climate-Related Financial Disclosures, which issued its final recommendations in June. (Bloomberg is the founder and majority owner of Bloomberg LP, the parent company of Bloomberg News.)

Historical data used to assess Northern Europe's future climate may become less effective as climate change accelerates, in turn rendering inaccurate current insurer pricing policies. In some extreme cases, insurance companies may be offering policies on things that, given the effects of climate change, should no longer be insured.

To counter such eventualities, the central bank said it intends to put in place climate stress tests and "embed climate-related risks more firmly in our supervisory approach and address them in our interviews with supervised institutions."

The study also points out risks that may arise from the transition to a low-carbon economy. A majority of financial institutions have yet to include "all relevant energy label data in their risk management systems," and this may undermine market acceptance and the "value of office buildings that do not meet this requirement."

How Energy-Rich Australia Ended Up With World's Priciest Power

Posted October 05, 2017, 02:42 P.M. ET

By Perry Williams

A bungled transition from coal to clean energy has left resource-rich Australia with an unwanted crown: the highest power prices in the world.

New Yorkers pay half as much as Sydneysiders to keep the lights on, despite Australia boasting among the world's largest coal and natural gas reserves, as well as ideal conditions for clean power generation. A decade of political dithering and climate policy missteps have set its patchwork power system adrift, ratcheting up manufacturing costs and hurting consumers with a doubling in electricity prices since last year and rising risks of blackouts.

"It is not a bit of a mess, it is a major mess," said Sanjeev Gupta, 46, the British billionaire owner of Liberty House Group, who saw firsthand the effects of policy neglect after buying an ailing steel-making business in blackout-beleaguered South Australia in July.

Natural gas was meant to bridge the electricity supply gap left by the shutdown of decaying coal-fired stations and the gradual shift to solar and wind energy. But rising exports of the fuel to higher-paying overseas buyers created a local shortage.

With no long-term solution in sight, Prime Minister Malcolm Turnbull threatened gas producers with export restrictions unless they plugged the domestic shortfall. The government is also trying to convince power generators to patch up old and dilapidated coal-run stations, prolonging dependence on a fossil fuel the rest of the developed world is spurning.

"It takes a while to cause a train-wreck this bad," said Tony Wood, energy program director at the Grattan Institute, a Melbourne-based think tank. "And it also takes a while for a government to think about how they get out of it."

The nation's largest power generators are urging Australia to ditch coal and join the renewables revolution. Turnbull, whose harbor-side mansion is powered by solar panels, is reluctant to remove the fossil fuel from the energy mix lest it boosts power costs further.

The Liddell power station, perched on a lake in the coal-rich Hunter Valley, has come to symbolize Australia's struggle with an industry linked to greenhouse-gas emissions and climate change. The facility, located 240 kilometers (150 miles) north of Sydney, was the most powerful electricity generating station in the country when it was commissioned in the early 1970s.

Its four coal-fired generation units supply the Tomago aluminum smelter, Australia's largest single consumer of energy, and enough to power more than 1 million homes. Nowadays, it's plagued by failures from rusty, leaky equipment that put Liddell on a "sliding scale to oblivion," according to its managers.

The Turnbull government wants to extend its life. But keeping it running beyond its scheduled closure in 2022 would cost as much as A$900 million ($708 million), and lender Australia & New Zealand Banking Group Ltd. said it's unlikely to finance any refurbishment because it probably wouldn't meet the bank's environmental standards. Owner AGL Energy Ltd. instead wants to re-purpose the site, potentially for gas-fired or battery-stored energy.

"It beggars belief that something like Liddell is the backbone of our power supply," said Barry Millar, acting general manager for technical services with plant operator AGL Macquarie. "In the U.K., something of this age would be well and truly gone."

For EnergyAustralia, a power generator owned by Hong-Kong's CLP Holdings, the failure to anticipate electricity demand and supply stems from the absence of a clear climate policy.

"When you've got an environment where the economics will fluctuate from 'this looks like a reasonable project' to 'this is absolutely terrible and don't go anywhere near it' over the space of two years, that is un-investable," said Mark Collette, EnergyAustralia's energy executive, in a phone interview.

Squabbling over climate policy has been a key contributor to political turmoil in Australia, which has changed prime ministers five times in the past decade.

Labor's Kevin Rudd was elected in 2007 promising a carbon-trading scheme, but he shelved the plan amid resistance in the Senate. His successor Julia Gillard introduced a price on carbon, which was scrapped after Tony Abbott led the Liberal-National coalition to victory in 2013. Though replaced by Turnbull in 2015, Abbott's sustained support for coal has emerged as a divisive voice within government ranks.

With the government unable to agree on a clean-energy target and electricity prices surging, energy-intensive industry is demanding investment certainty. Melbourne-based BHP Billiton Ltd., the world's largest mining company, said it may curtail investments in its home country, while rival Rio Tinto Group said price spikes are putting projects at risk.

As well, a third of large industrial users of gas will either cut production or shutter their operations entirely due to the spiraling price of the fuel, according to the Australian Competition and Consumer Commission, the country's antitrust watchdog.

"There are clear sectors of our economy for whom this is a nasty outcome," said the Grattan Institute's Wood. "I think we will see some energy intensive manufacturing close down."

Wood, a former executive at Sydney-based producer and retailer Origin Energy Ltd., doesn't see energy prices falling anytime soon, even as the country tries to ramp up renewable power sources.

Almost 90 percent of the A$88 billion forecast to be spent adding power capacity in Australia through 2040 will go toward clean energy, according to Bloomberg New Energy Finance. It estimates less than 2 percent will be spent on coal, and even then only to refurbish existing plants, with the rest invested in gas.

So far, the move to clean energy has done little to lower the world-topping electricity prices in South Australia, where solar and wind account for about 40 percent of its power generation, the most of any mainland state. A series of blackouts there the past year prompted billionaire Tesla Inc. co-founder Elon Musk to propose building what he said would be the world's biggest battery system in Jamestown, about 210 kilometers north of the state's capital, Adelaide.

Across the Spencer Gulf to the west in Whyalla, Liberty House Group's Gupta is planning to install a variety of alternative energy sources -- including solar electricity, hydropower and storage batteries -- to overcome uncertainty around power supply and prices for his newly acquired steel assets.

"We have every energy resource you could want -- whether its old school or new school -- here in Australia," Gupta said. "Yet, we have the most expensive power in the world."

July 13, 2017

Today on Climate Beat . . .

. . . we took a breath, reporting that the Natural Resources Defense Council is warning of twin threats from ozone and pollen levels that are worsened by global warming, urging the Trump administration not to abandon Obama-era policies aimed at curbing greenhouse gases by arguing that the rules would help target the dual threats.

Speaking of rules, EPA appears to be preparing to overhaul its rules governing its new source review permit program, signaling that the Trump administration is backing widespread calls from industry and labor groups to reform the controversial permit program.

In Congress, Democrats on the Senate Judiciary Committee delayed a vote on Jeffrey Clark, President Donald Trump's pick to lead the Justice Department's environment division.

We highlighted pithy quotes from several hot climate stories, including the two sides of the climate policy debate, reactions to the court ruling vacating EPA's pause of its oil and gas methane standards and a proposal for revamping EPA's regulatory review procedures.

And our daily news roundup looked at the surge in litigation from environmental groups in the early months of the Trump administration.

EPA's Weekly Round-Up ...

This week EPA Administrator Scott Pruitt visited Senators on Capitol Hill, promoted the Federal Green Challenge, and talked with reporters from Reuters and Politico about protecting the environment. Here is a look a recap of the work being done each day at EPA.

NATIONAL COVERAGE …

Politico **reports that EPA Administrator Scott Pruitt discussed the hypocrisy of President Trump's European critics. "**EPA Administrator Scott Pruitt dismissed European critics of President Donald Trump's climate policies as hypocrites on Wednesday, while chastising German Chancellor Angela Merkel for phasing out her country's nuclear power plants. 'I just think the hypocrisy runs rampant,' Pruitt said in an interview with POLITICO. 'To look at us as a nation and say, 'You all need to do more' in light of what we've done in leading with innovation and technology — the hypocrisy is palpable in those areas.' Pruitt mentioned Merkel by name, urging the public to press her on the issue. If reducing carbon dioxide emissions 'is so important to you, Madam Chancellor, why are you getting rid of nuclear? Because last time I checked, it's pretty clean on CO2,' he said."

EPA Administrator Scott Pruitt also sat down with Reuters **where he gave a wide-ranging interview about protecting the environment and American jobs.** "U.S. Environmental Protection Agency Administrator Scott Pruitt gave Reuters a wide-ranging interview on Monday at his office in Washington, discussing issues from climate science to automobile emissions."

TO THE STATES …

In California, The Press-Enterprise **reported on EPA granting the Morongo Band of Mission Indians $167,000 that will help replace older vehicles, including a refuse hauler, with newer, more environmentally friendly vehicles.** "The Morongo Band of Mission Indians is one of two western tribes to benefit from an EPA program designed to reduce emissions from diesel trucks and buses. The U.S. Environmental Protection Agency's Pacific Southwest Region awarded more than $167,000 to the Morongo Band to help buy two heavy-duty vehicles through the Diesel Emission Reduction Act."

In Oregon, the East Oregonian **reported that Whitman Mission National Historic Site has been selected to receive an award from the Environmental Protection Agency for water conservation.** "Whitman Mission National Historic Site has been selected to receive an award from the U.S. Environmental Protection Agency for water conservation after the park lowered its water usage by 36 percent in 2016. The award comes from the Federal Green Challenge, part of the EPA's Sustainable Materials Management Program, which challenges government offices throughout the country to reduce their environmental impact."

In Texas, The Gilmer Mirror **reported that EPA awarded $2.7 million to the Texas Commission**

on Environmental Quality to help improve water quality. “The U.S. Environmental Protection Agency (EPA) recently awarded the Texas Commission on Environmental Quality (TCEQ) a performance partnership grant of $2,775,937 for administering water quality and environmental programs.”

In New Mexico, Carla J. Sonntag writes in The Farmington Daily Times about EPA's pursuit of sensible regulatory reform. "So much drama, so little focus on the facts. That’s the heart of methane issues being addressed by both the Environmental Protection Agency and the Bureau of Land Management."

In Kentucky, The Richmond Register reported that EPA has awarded a $200K grant to help facilitate the cleanup of the Parker Seal plant. “A $200,000 grant has been awarded for the environmental clean-up of the former Parker Seal plant in Berea. The Brownfields Program grant was secured from the Environmental Protection Agency (EPA) by the Kentucky River Foothills Development Council Inc. (KRFDC) in partnership with Fahe in Berea. Located at 103 Lewis Street, the Parker Seal building is said to be contaminated with trichloroethene and debris that remained after the plant closed in 2001. The Brownfields Program provides EPA funding for cleanup and reuse of contaminated properties.”

Subject: Today on Climate Beat

June 9, 2017

Today on Climate Beat . . .

. . . we took the first step, reporting in our news roundup that EPA has made its first move to roll back the Obama-era Clean Power Plan, which sets first-time greenhouse gas standards for existing power plants.

In Congress, a group of Democratic and Republican lawmakers is floating legislation to improve efforts to curb emissions of short-lived, but potent GHGs, with the lawmakers touting the move as part of a growing bipartisan push to address climate change even as the Trump administration scraps federal climate measures.

In litigation, a federal judge is denying the Trump administration's request to quickly appeal a prior order allowing a constitutional climate change lawsuit brought by youth plaintiffs to proceed, meaning parties will now proceed to trial, including a lengthy discovery process regarding the government's efforts to limit GHGs.

In the court of public opinion, new polling finds a majority of Americans believe it is their state's responsibility to address climate change in the absence of federal action on the issue.

And, of course, we highlighted some of our must-read stories from the past week.

Subject: Pruitt picks former Pennsylvania official for Region 3 job

By Alex Guillén

10/04/2017 03:55 PM EDT

A former Pennsylvania environmental official will head EPA's Region 3 office, which oversees Pennsylvania, Delaware, Maryland, West Virginia, Virginia and Washington D.C.

Administrator Scott Pruitt has selected Cosmo Servidio for the post, EPA announced today. Servidio previously was the southeast regional director for Pennsylvania's Department of Environmental Protection from 2012 to October 2016, when he "abruptly" resigned for unknown reasons, according to local reports.

Servidio is currently director of environmental affairs for the Bucks County Water and Sewer Authority, according to EPA. Before joining DEP in 2012, Servidio was a vice president at insurance broker Willis North America. From 2005 to 2009, he was chief of staff for EPA's Region 2 office in New York.

Servidio "brings federal, state, and local administrative experience working in the environmental field," Pruitt said in a statement.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

June 27, 2017

Latest News

Pruitt Faces Early Legal Tests Over Efforts To Delay Obama-Era EPA Rules

EPA is using both the Clean Air Act and the Administrative Procedure Act (APA) to delay Obama-era regulations -- a tactic to buy time for the Trump administration to rewrite the rules -- but environmentalists' challenges to those stalling tactics could be first legal tests to the bounds of EPA's authority to administratively stay its rules.

Three Suits Test Scope Of EPA Authority To Administratively Stay Rules

Three lawsuits in which environmentalists are challenging EPA administrative delays of Obama-era regulations are likely to provide the first legal tests of the agency's authority to stay its rules using administrative tools -- as EPA's use of the statutes has little prior legal precedent and could be legally risky.

EPA Seeks New Science Advisors, But Delay May Halt CASAC In Fall

EPA is poised to call for new experts to join two of its advisory committees, the Clean Air Scientific Advisory Committee (CASAC) and Science Advisory Board (SAB), though the nearly two-month delay in doing so may mean that CASAC, which reviews the science underlying EPA's air quality standards, will be without new members before current members leave in the fall, effectively grinding that group's work to a halt.

Continuing Trend, EPA Taps New Water Office Deputy Ahead Of AA

EPA has named Dennis Lee Forsgren, a former industry lobbyist, Capitol Hill aide and NASA official in the Bush administration, as its new deputy assistant administrator for water, continuing a trend seen in several other offices of appointing deputies who do not require Senate confirmation before nominating office chiefs who require approval.

High Court Declines To Hear Suits On EPA's SSM Policy, Gold King Spill

The Supreme Court has declined to hear an industry suit seeking to overturn an Obama administration policy that emissions limits apply even in cases of

malfunctions as it applied to a boiler air toxics rule, leaving industry groups and the agency to now reconsider the broader issue of waivers for startup, shutdown and malfunctions (SSM) as they apply to state air quality plans.

Critics Say Trump Officials' 'Red Team' Climate Review Would Mislead Public

Trump administration critics say calls by EPA Administrator Scott Pruitt and other cabinet officials for a "red team, blue team" approach to refine climate change science would mislead the public because scientific findings already undergo a rigorous peer-review process and the new approach would give unwarranted weight to claims made by a small percentage of climate skeptics.

Daily Feed

Senate Democrats pledge to block environment 'riders' in spending bills

"To help maintain regular order and to ensure bipartisan support, we urge you to keep the FY 2018 bills free of controversial environmental policy riders," 39 Senate Democrats write.

Report seeks better Superfund data to address cleanup slowdowns

"There is a pressing need to better understand what factors have led to the slowdown in cleanup progress and what steps could be taken to address this issue," the report says.

Democratic AGs fear regulatory reform bill would stymie asbestos ban

A group of 13 Democratic attorneys general says a pending regulatory reform bill in the Senate would block EPA from banning asbestos under the new toxics law.

Our most read: about EPA personnel and revamping rules

The most-accessed stories over the past week involve personnel issues -- including the deputy administrator guessing game -- and rules -- including TSCA and NSR.

RGGI floats 'other ways' to link carbon trading programs

"In cases where jurisdictions may not wish or may not be able to fully adopt the RGGI Model Rule, their program may still allow for trading allowances with the RGGI program," says a presentation from the nine-state program.

Ewire: Pruitt joins Trump to push US energy 'dominance'

The EPA administrator joins the president and other officials to make the case of increasing energy exports. Plus: Clearing BOSC will leave a 'huge void' and mayors step up climate policy work.

9th Circuit rejects rehearing in Navajo haze air plan suit

A federal appeals court has denied a tribe's request to reconsider a ruling that upheld a haze emissions reduction plan EPA issued for a power plant on its land.

By ANNA PALMER (anna@politico.com; @apalmerdc) and JAKE SHERMAN (sherman@politico.com; @JakeSherman) with DANIEL LIPPMAN (daniel@politico.com; @dlippman)

Driving the Day

FROM THE VATICAN at 7:30 this morning -- **@Pontifex:** "I encourage everyone to engage in constructive forms of communication that reject prejudice towards others and foster hope and trust today."

HE'S BACK!! -- @realDonaldTrump at **8:10 a.m.:** "Just returned from Europe. Trip was a great success for America. Hard work but big results!" ... at **8:33 a.m.:** "It is my opinion that many of the leaks coming out of the White House are fabricated lies made up by the #FakeNews media." ... at **8:34 a.m.:** "Whenever you see the words 'sources say' in the fake news media, and they don't mention names...." at **8:45 a.m.:** "....it is very possible that those sources don't exist but are made up by fake news writers. #FakeNews is the enemy!" ... at **8:45 a.m.:** "Does anyone notice how the Montana Congressional race was such a big deal to Dems & Fake News until the Republican won? V was poorly covered" ... at**10:43 a.m.:** "British Prime Minister May was very angry that the info the U.K. gave to U.S. about Manchester was leaked. Gave me full details!"

-- BY THE WAY ... -- Trump's White House asks for permission to speak without attribution to reporters all the time. Also, just days ago, Trump said he wanted his administration to find the leakers. Now he's saying that leaks "coming out of the White House" are fake. Which one is it?

-- @anniekarni: "I've been told a factor in the lack of tweeting abroad overall was the presence of Melania Trump." ***Note: Melania is supposed to move into the White House sometime next month.***

A QUICK SUNDAY BEST -- TRUMP "WIDE OPEN" ON PARIS ACCORDS -- DEFENSE SECRETARY JAMES MATTIS to **JOHN DICKERSON** on **CBS' "FACE THE NATION" -- DICKERSON:** "Let me ask you about the Paris climate accords. The president is going to make a decision on those. Tell me about the national security role of climate change." **MATTIS:** "You know, we've - we've obviously got a discussion going on about our policy in this regard. And I was sitting in on some of the discussions in Brussels, by the way, where climate change came up, and the president was open, he was curious about why others were in the position they were in - his counterparts in other nations - and I'm quite certain the president is wide open on this issue as he takes in the pros and cons of that accord."

Good Sunday morning. JUST WONDERING.... Will President Trump head to his golf club in Virginia today to take in the final round of the Senior PGA Championship? We hear it's a possibility.

FIRST IN PLAYBOOK -- THE PRESIDENT'S WEEK -- The only items listed on the president's schedule so far are remarks at Arlington tomorrow for Memorial Day, meetings with Rex Tillerson and Vietnamese Prime Minister Nguyen Xuan Phuc on Wednesday and a travel day Thursday (Trump recently canceled a rally in Iowa, but the travel day still remains on his schedule). Lots of free time -- as of now.

INSIDE THE WEST WING -- Expect more rallies to try to jumpstart Trump's legislative agenda. Expect more loyalists in the West Wing. Expect to see an effort to woo high-profile D.C. lawyers. **BUT, BUT, BUT ... --** The old crew -- people like Corey Lewandowski -- were sidelined for a reason. Nationwide rallies do not always spark legislative action. Just ask Barack Obama how his rallies worked out for his legislative agenda. And big-time D.C. scandal lawyers will probably tell Trump to do all sorts of things he doesn't want to do, like stop tweeting whatever comes to mind, dump some advisers and normalize White House operations.

WE HEAR -- That the White House has told people on Capitol Hill that Jared Kushner is willing to cooperate extensively with any investigation.

SO MUCH AWESOME PALACE INTRIGUE ... WHAT YOU NEED TO KNOW --

-- ANNIE KARNI and **JOSH DAWSEY** with **TARA PALMERI, "Russia scandal casts uncertainty over Kushner's future role:** Trump's son-in-law, who's long been above White House infighting, now has to defend his position in the West Wing": "Internally at the White House, according to multiple sources, there is a feeling of resentment among people about Kushner's special status as a family member, and a feeling that it's about time for him to have a turn under the gun. There is also a sense of uncertainty about how long Kushner and Ivanka Trump - who associates say likes, but doesn't love, Washington - are planning to stick it out. Some have noted that they rent their Kalorama mansion, which allows them to keep their options of moving back to Manhattan more open. ...

"Two associates who have spoken to Kushner in recent weeks described him as 'unhappy' and 'miserable,' in part because he has not been able to make the changes he wants to under his father-in-law. Kushner, the source said, has recently seemed resigned to the fact that the internal dysfunction that has defined the first months of Trump's administration is unlikely to pass. 'He's still trying to tell people it will improve but he seems like he was trying to convince himself,' the source said." http://politi.co/2qrU2d8

- WAPO A1, JOHN WAGNER, BOB COSTA and **ASHLEY PARKER, "Trump considers major changes amid escalating Russia crisis"** (print headline: "Trump may retool his staff"): "White House officials ... are trying to find ways to revive Trump's stalled policy agenda in Congress and to more broadly overhaul the way the White House communicates with the public. That includes proposals for more travel and campaign-style rallies nationwide so that Trump can speak directly to his supporters ...

"[T]he beefed-up operation could include the return of some of Trump's more combative campaign aides, including Corey Lewandowski, who was fired as campaign manager nearly a year ago, and David N. Bossie, who was deputy campaign manager and made his name in politics by investigating Bill and Hillary Clinton for two decades. Both men have been part of ongoing discussions about how to build a war room that have been led in part by chief strategist Stephen K. Bannon. ...

"Other Trump players who have drifted from his orbit in recent months, such as Sam Nunberg, are also being courted to play more active roles, either officially joining the White House or in an outside capacity, working through confidants of the president. 'Go to the mattresses,' a line from the film 'The Godfather' about turning to tough mercenaries during troubled times, has circulated among Trump's friends [***The scene*** http://bit.ly/2qwn3nq] ... Underscoring the uncertainty of what lies ahead, some Trump associates said there have been conversations about dispatching Priebus to serve as ambassador to Greece -- his mother is of Greek descent -- as a face-saving way to remove him from the White House. A White House spokeswoman strongly denied that possibility Saturday. ...

"On Thursday, Donald Trump Jr., Eric Trump and Eric's wife, Lara Trump, participated in a two-hour meeting at the RNC headquarters in Washington. ... RNC spokesman Ryan Mahoney ... said the RNC is increasing its efforts to bolster Trump. ... At a recent breakfast in Washington with Ruddy, Lewandowski and Alexandra Preate, a close ally of Bannon, the trio discussed whether Lewandowski and Nunberg could put aside their differences to again rally behind Trump." http://wapo.st/2r9qnH0

-- NYT A1, MAGGIE HABERMAN, GLENN THRUSH and **JULIE HIRSCHFELD DAVIS: "Trump Returns to Crisis Over Kushner as White House Tries to Contain It"** (print headline: "President Faces Growing Crisis On Russia Ties"): "The White House canceled a presidential trip to Iowa in the coming days and was putting together a damage-control plan to expand the president's legal team, reorganize his communications staff and wall off a scandal that has jeopardized his agenda and now

threatens to engulf his family. Mr. Trump's private legal team, led by his New York lawyer, Marc E. Kasowitz, was preparing to meet in Washington to face new questions about contacts between Mr. Kushner and representatives of President Vladimir V. Putin of Russia. Mr. Trump may meet with Mr. Kasowitz as early as Sunday, and aides have recruited a series of prominent Washington lawyers with experience in political investigations for Mr. Trump to interview in hopes that they might join the legal team.

"Mr. Kushner ... has no plans to step down from his role as senior adviser or to reduce his duties, according to people close to him. Still, there are signs that he is tiring of the nonstop combat and the damage to his reputation. He has told friends that he and his wife, Ivanka Trump, have made no long-term commitment to remain by Mr. Trump's side, saying they would review every six months whether to return to private life in New York. ...

"The president, who has more than 30 million followers on Twitter , has been told by his lawyers to limit his posts. Each one, they argue privately, could be used as evidence in a legal case against him, and the president went through his entire overseas trip without posting a single incendiary message.

"Among those most adamant about limiting Mr. Trump's access to the news media was Mr. Kushner, who has been critical internally of the White House press operation and has sought to marginalize Mr. Spicer, whom he views as too undisciplined to control the president's message. Mr. Kushner has also favored creating a rapid-response team to counter reports like the ones that emerged on Friday." http://nyti.ms/2r9pSwz

--WAPO A1, "A high-stakes gamble: How Jared Kushner reacted to previous crises," by Michael Kranish and Jonathan O'Connell in New York. http://wapo.st/2r9j1Dy

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** One in two Americans rely on their employers for health care benefits including affordable access to prescription drugs. That's why employers are partnering with PBMs to provide access to effective medications at the most affordable price and improve health outcomes. Learn more at www.affordableprescriptiondrugs.org. ******

WHAT PEOPLE IN THE KNOW ARE SAYING -- The interesting -- and unpredictable -- element of the Jared saga is what happens when he has to testify on Capitol Hill. He'll be put under oath, either in a private setting or public setting, and be forced to testify about his contacts with the Russians. One slip up could land him in hot water. **ALSO:** As we get closer to 2018 -- and midterm elections -- this chaotic environment will become less tenable for Republicans.

BULLETIN from AP at 9:25 a.m.: "BROOKHAVEN, Mississippi (AP) - Police say eight people are dead, including deputy sheriff, after shooting in Mississippi; suspect in custody."

REAX AFTER THE G7 -- Via AFP/Frankfurt am Main: "Europe 'must take its fate into its own hands' faced with a western alliance divided by Brexit and Donald Trump's presidency, German Chancellor Angela Merkel said Sunday.

"'The times in which we could completely depend on others are on the way out. I've experienced that in the last few days,' Merkel told a crowd at an election rally in Munich, southern Germany. 'We Europeans truly have to take our fate into our own hands,' she added. While Germany and Europe would strive to remain on good terms with America and Britain, 'we have to fight for our own destiny', Merkel went on." http://bit.ly/2rc7qWj

MORE SUNDAY BEST -- CHUCK TODD speaks with **DHS SECRETARY JOHN KELLY** on **NBC'S "MEET THE PRESS" -- TODD:** "Before I get to the stuff that is in your portfolio, I do want to ask about Jared Kushner, the Washington Post report, the president's son-in-law, about this idea of setting up a backchannel communication while he was a private citizen before the president took the oath. Can you add much to this story and to what the White House has said?" **KELLY:** "I can't. I know Jared. He's a great guy, decent guy. His number one, number one interest, really, is the nation so you know there's a lot of different ways to communicate, backchannel, publicly with other countries. I don't see any big issue here relative to Jared. ... I think any time you can open lines of communication with anyone, whether they're good friends or not so good friends, is a smart thing to do." ...

-- TODD: "Do you plan -- you call -- you believe it's treason, to leak some of this stuff, you believe that's treason?" **KELLY:** "I do believe it is. I believe when you leak the kind of information that seems to be routinely leaked - high, high level of classification -- you are telling the --" **TODD:** "And what was leaked on this Manchester bombing you believe maybe even meets the treason standard?" **KELLY:** "I think it's darn close to treason."

CHRIS WALLACE also spoke with **DHS SECRETARY JOHN KELLY** on**"FOX NEWS SUNDAY"** (via Cristiano Lima) -- "While not confirming reports that Kushner discussed with Russian officials how to create secret back channels of communication that escaped potential U.S. monitoring, Kelly said that any attempts to strengthen dialogue with Russia were a positive.

"'I don't know if it is true or not, I know it's being reported in the press,' Kelly said on 'Fox News Sunday,' before being told by anchor Chris Wallace that the network had confirmed that the discussion between Kushner and Russian officials had taken place. 'I think that any channel of communication back or otherwise, with a country like Russia is a good thing,' he said. 'It doesn't bother me.'"

-- SCARY, from Mattis on CBS's "Face the Nation": **DICKERSON:** "Help people understand what a conflict with North Korea would be like and how it would be different?" **MATTIS:** "A conflict in North Korea, John, would be probably the worst kind of fighting in most people's lifetimes. Why do I say this? The North Korean regime has hundreds of artillery cannons and rocket launchers within range of one of the most densely populated cities on earth, which is the capital of South Korea. We are working

with the international community to deal with this issue. This regime is a threat to the region, to Japan, to South Korea. And in the event of war, they would bring danger to China and to Russia as well. But the bottom line is it would be a catastrophic war if this turns into a combat if we're not able to resolve this situation through diplomatic means."

GEORGE STEPHANOPOULOS spoke to **REP. ADAM SCHIFF (D-Calif.)** on **ABC'S "THIS WEEK" --** Schiff on the Kushner-Russia back channel: "If these reports are accurate, right after that campaign, after that intervention, to have the president's son-in-law, a key player within the Trump Organization trying to establish a back channel with the Russians through a Russian diplomatic facility, you have to ask, well, who are they hiding the conversations from? ... I think we need to get to the bottom of these allegations. But I do think there ought to be a review of his security clearance to find out whether he was truthful, whether he was candid. If not then there's no way he can maintain that kind of a clearance."

DANA BASH talks to **SEN. CORY BOOKER (D-N.J.)** on **CNN'S "STATE OF THE UNION" -- BASH:** "In the meantime, while there's an investigation, should Jared Kushner's security clearance be revoked or at least suspended?"**BOOKER** : "Well, again, I think we need to first get to the bottom of it. He needs to answer for what was happening at the time. It raises very serious concerns for me and that could be a potential outcome that I seek, but I want to understand, at least hear from, Jared Kushner as well as the administration about what was exactly going on there." ***Flashback, 7/16/13 "*Trump to host fundraiser for Booker"** http://politi.co/2ruw5q3 (Ivanka and Jared bundled tens of thousands of dollars for Booker.)

THE JUICE ...

-- SPOTTED IN ASPEN: Sen. Ted Cruz (R-Texas) yesterday in the hot tub at the St. Regis spa.

Playbook Reads

PHOTO DU JOUR: President Donald Trump shakes hands as he arrives to speak to U.S. military troops and their families at Naval Air Station Sigonella on May 27 in Sigonella, Italy. | Evan Vucci/AP Photo

COOL NEW FEATURE -- "Inside Trump's war on regulations: The push to block, rewrite and delay scores of Obama-era rules may be the administration's biggest untold success," by Andrew Restuccia and Nancy Cook with help from seven Politico Pro colleagues: "The president's aides say the goal is 'systemic' change. ... Trump is ... setting bureaucratic wheels in motion that could eventually ax or revise hundreds of regulations as agencies reorient themselves toward unwinding red tape and granting speedier approvals to projects. ... If successful, these efforts could represent the most far-reaching rollback of federal regulations since Ronald Reagan's presidency,

especially if Trump's proposed budget cuts make it hard for a future Democratic president to reaccelerate the rule-making apparatus." ***With an interactive look at the fate of regulations across industries*** http://politi.co/2qrQw2N

THE GRADUATION CIRCUIT -- "Defense Secretary Mattis at West Point graduation: 'We Americans are not made of cotton candy'" - AP via Army Times: "He spoke on a sun-drenched day at the military academy's football stadium in New York's Hudson Valley, but spoke of 'storm clouds gathering' around the world. 'Our enemies are watching,' he said. 'By your commitment, you will prove the enemy wrong. Dead wrong.' He drew loud cheers when he added: 'We Americans are not made of cotton candy.'" http://bit.ly/2rL8gKa

BOMBSHELL -- "New accuser sues Dennis Hastert, alleging sexual abuse," by the Chicago Tribune's Marwa Eltagouri: "Less than three months before Dennis Hastert's scheduled release from prison, a new accuser has come forward with allegations saying he was sodomized by Hastert decades ago, according to a lawsuit filed in Kendall County on Friday. ...

"The new accuser, referred to in the lawsuit as Illinois resident 'Richard Doe,' is seeking $50,000 in damages from Hastert and Yorkville Community Unit School District 115 for charges including battery, negligent infliction of emotional distress and intentional infliction of emotional distress.

"The accuser said that during the spring or summer of 1973 or 1974, he stopped by the Game Farm Building, now the Yorkville High School parking lot, to use the bathroom after riding his bike along Game Farm Road. He was 9 or 10 at the time, in fourth grade, the lawsuit alleges. The accuser entered the bathroom and, while sitting on the toilet in a stall, heard a male voice mutter something outside the stall door, according to the lawsuit. The stall door opened, and he alleges he was sodomized." http://trib.in/2r9tsXK

REMEMBERING JIM BUNNING - David Cohen: "Jim Bunning, the only person ever elected both to the U.S. Senate and the Baseball Hall of Fame, died late Friday. He was 85 and, according to his family, died of complications from a stroke suffered last year. Bunning, a blunt, conservative Republican who spent a combined 24 years representing Kentucky in the House and Senate, weathered several close elections to earn his place in both institutions. Sometimes, his two professions seemed to go together perfectly.

"'I have been booed by 60,000 fans at Yankee Stadium standing alone at the pitcher's mound, so I have never really cared if I stood alone here in Congress as long as I stood by my beliefs and my values,' he said in his farewell Senate speech in December 2010. 'I have also thought that being able to throw a curve ball never was a bad skill for a politician to have.'" http://politi.co/2qw7rQW

-- FLASHBACK, per C-SPAN: The moment on March 5, 1996, when then-Rep. Henry Hyde (R-Ill.) informed the House that their colleague Jim Bunning got into the Baseball Hall of Fame and gave him a standing ovation: http://cs.pn/2qoU2Pi (h/t Howard

Mortman)

REMEMBERING GREGG ALLMAN -- Atlanta Journal Constitution's Melissa Ruggieri: "A seminal voice of Southern rock is gone. Gregg Allman, leader of The Allman Brothers Band, died Saturday at his home in Savannah from complications due to liver cancer. He was 69.

"'It's a sad passing,' said Peter Conlon, president of Live Nation Atlanta, who knew and worked with Allman for decades. 'It's not only the end of Gregg Allman, but between him and Butch (Trucks) gone, the end of The Allman Brothers.'" http://on-ajc.com/2rL7tca ... ***Some essential contemporary Allman Bros videos (compiled by Jake)*:** http://bit.ly/2rLvlwd ... http://bit.ly/2r9XR8g... http://bit.ly/2rbXxaU

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** As list prices for brand drugs continue to rise, employers are partnering with PBMs to keep drug costs under control. ****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** One in two Americans rely on their employers to provide health care benefits. So, employers partner with PBMs to provide access to effective medications at the most affordable price. PBMs drive savings in part by using clinical expertise to identify generic alternatives that achieve the same health outcomes for a lower price. With generics accounting for 89 percent of prescriptions filled in 2015, but only 27 percent of drug costs, that represents a savings of $227 billion across the U.S. health care system in just one year. Learn more at www.affordableprescriptiondrugs.org. ******

Andrew Wheeler Nominated as EPA Deputy Administrator

WASHINGTON (October 5, 2017) Today, President Donald J. Trump announced his intention to nominate Andrew Wheeler as deputy administrator for the U.S. Environmental Protection Agency (EPA).

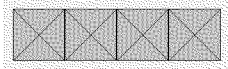
Mr. Wheeler has spent his entire career working in environmental policy. In addition to spending four years at EPA's Office of Pollution Prevention and Toxics during the George H. W. Bush and Bill Clinton administrations, he also spent many years on Capitol Hill. After serving as general counsel to U.S. Senator James Inhofe, he worked as staff director and chief counsel for two Senate Committees with vital roles in protecting human health and the environment: the U.S. Senate Committee on Environment and Public Works (EPW) and the U.S. Senate Subcommittee for Clean Air Wetlands and Nuclear Safety. Mr. Wheeler currently works as a principal at FaegreBD Consulting providing guidance on federal regulatory and legislative environmental and energy issues.

"Andrew will bring extraordinary credentials to EPA that will greatly assist the Agency as we work to implement our agenda," **said Administrator Pruitt**. "He has spent his entire career working to improve environmental outcomes for Americans across the country and understands the importance of providing regularity certainty for our country."

His nomination is receiving high accolades from across the country:

U.S. Senator James Inhofe: "I am pleased that President Trump has nominated Andrew Wheeler to serve as deputy administrator at the EPA. There is no one more qualified than Andrew to help Scott Pruitt restore EPA to its proper size and scope. When he served as my staff director of the Environment and Public Works Committee, he provided me with invaluable guidance, and in turn became a close friend. I am confident he will serve the American people and President Trump with exceptional skill in this position, and I look forward to ensuring his swift confirmation."

U.S. Congressman Bill Johnson: "Andrew Wheeler will do a fine job at EPA, helping to ensure the agency's mission of protecting the environment is maintained without the EPA becoming an unnecessary impediment to responsible energy exploration and job creation."



U.S. Congressman David B. McKinley: "With extensive experience working on Capitol Hill, in the Executive branch, and in the private sector, Andrew Wheeler is eminently qualified and a great pick to serve as Deputy Administrator of the EPA. There are few people in Washington who have the same depth of knowledge and experience on energy and environment issues. I look forward to continuing working with Andrew once he is confirmed in his new role."

Former U.S. Senator Joe Lieberman: "Andrew was Republican staff director during part of the time I was on the Senate Environment Committee. We worked together on some issues and disagreed on others. He conducted himself in a fair and professional manner. I hope his nomination will

receive similarly fair consideration by the Senate."

Jay Timmons, President and CEO, National Association of Manufactures: "Andrew's significant experience on Capitol Hill, and his extensive background working on environmental and natural resource policy makes him an outstanding choice to join the leadership at the EPA. Manufacturers have welcomed Administrator Pruitt's efforts to bring balance to rulemaking at the agency and focus on the EPA's core mission. We're confident Andrew will help advance that mission and ensure that our country can achieve the dual goals of responsible environmental stewardship and strong economic growth."

July 14, 2017

Today on Climate Beat . . .

. . . we took up arms, reporting that several dozen House Republicans joined a unified Democratic caucus to retain a provision in an annual defense authorization bill calling climate change a "direct threat" to national security and requiring the Defense Department to conduct a study of a range of climate risks.

Out West, two former top Obama EPA officials are endorsing a proposal to extend California's cap-and-trade program though 2030, arguing the move would be "a critical leap forward for our country."

We also highlighted some must-read stories from the past week, including news on California's cap-and-trade debate, fallout from the court ruling scrapping EPA's pause of its oil and gas methane rule, as well as the budget, climate science, carbon capture and state climate action.

And our daily news roundup looked at how the Trump administration hopes to use its seat on the board of the Green Climate Fund to advance "high-efficiency" coal plants and other fossil fuel development abroad.

EPA Transportation Chief Touts Enforcement Focus As Major Rules Slow

Chris Grundler, head of EPA's Office of Transportation & Air Quality (OTAQ), says enforcement of existing mobile source rules such as the Volkswagen and Fiat "defeat device" cases is an essential priority for OTAQ's future, as the office faces a budget and staffing cut in fiscal year 2018 and its regulatory work appears to slow down.

DOJ Urges Supreme Court To Reject Suit Over Colorado's Role In Mine Spill

The Department of Justice (DOJ) is urging the Supreme Court to reject New Mexico's novel bid to directly sue Colorado over its contribution to the 2015 Gold King Mine wastewater spill, saying the justices should either dismiss the suit outright as improper or put it on hold indefinitely to allow a district court case over the spill to conclude.

Eying Planned Budget Cuts, States Identify Dozens Of EPA Rules To Scrap

State officials are urging EPA to "repeal, replace or modify" scores of federal rules, steps that if adopted would ease states' abilities to implement federal requirements as they weigh plans to slim their programs to absorb the Trump administration's proposed budget cuts in fiscal year 2018.

Great Lakes Advisers Wrestle With Nutrient Plan Amid EPA Funding Cuts

Members of EPA's Great Lakes Advisory Board (GLAB) are wrestling with how the agency should target future funding to reduce nutrient runoff in the region, even though the agency's proposal to zero out funding for Great Lakes protection in fiscal year 2018 could create significant new hurdles for cleanup efforts in the region.

Nanomaterials Users Fault Draft EPA Reporting Guide, Call For Rule Repeal

Nanomaterials users and producers are faulting EPA's draft guidance for implementing its nano reporting rule for failing to clarify which substances are covered by the regulation, vowing to highlight their concerns in comments on the policy but also renewing their push to repeal the entire rule either administratively or

through litigation.

1st Circuit Urged To Rehear Ruling Prohibiting Local Coal Ash Disposal Bans

Two Puerto Rico municipalities are asking the U.S. Court of Appeals for the 1st Circuit to rehear a suit where judges overturned novel ordinances banning disposal of coal ash within their borders, aiming to send the case to state court and reverse the court's precedent that local governments may not bar ash disposal after state regulators approve it.

Subject: EPA hires energy attorney for enforcement office

By Alex Guillén

06/09/2017 04:50 PM EDT

EPA has hired veteran Hogan Lovells energy attorney Patrick Traylor as a deputy in the Office of Enforcement and Compliance Assurance, according to the agency's website and his LinkedIn profile.

Traylor has been an attorney at Hogan Lovells since 1997 and specialized in Clean Air Act issues, environmental litigation and infrastructure.

According to his law firm biography, Traylor's clients included the utility Southern California Edison; Venture Global LNG, a natural gas exporter; Flint Hills Resources, a Koch subsidiary refiner; Koch Nitrogen, maker of synthetic fertilizer; and several wind companies seeking Endangered Species Act permits. The bio also says he "helped secure an 'against all odds' series of permits authorizing the expansion of a coal mine on the Navajo Nation for BHP Billiton."

Other clients included TransCanada, Dominion Energy, AES Corp., NRG Energy and the Anschutz Corporation, according to the Energy Bar Association.

Traylor earned his law degree from the South Texas College of Law in 1994 and received an advanced degree in environmental law from George Washington University in 1998.

President Donald Trump's nominee to run the enforcement office, Senate Environment and Public Works Committee staffer Susan Bodine, is slated to have a confirmation hearing next week.

Driving the Day

BULLETIN at 5:46 a.m. **-- "**BRUSSELS (AP) - EU fines Google record 2.42 billion euros ($2.7 billion) for breaching competition rules in online shopping service."

Good Tuesday morning. BUZZ IN THE CAPITOL -- If Senate Republicans pass their health care bill Friday, House GOP leadership is planning to keep the chamber in session over the weekend until they pass the legislation, according to multiple sources familiar with their plans. There's an unusual level of confidence among House Republicans that they'll be able to pass the Senate bill. Color us much more skeptical.

A REMINDER -- 22 MILLION MORE UNINSURED ... The CBO score , per NYT's Tom Kaplan and Robert Pear: "[T]he report said premiums for older people would be much higher under the Senate bill than under current law. As an example, it said, for a typical 64-year-old with an annual income of $26,500, the net premium in 2026 for a midlevel silver plan, after subsidies, would average $6,500, compared with $1,700 under the Affordable Care Act. And the insurance would cover less of the consumer's medical costs. Likewise, the report said, for a 64-year-old with an annual income of $56,800, the premium in 2026 would average $20,500 a year, or three times the amount expected under the Affordable Care Act." http://nyti.ms/2thE8am

-- NYT's UPSHOT: "A Few Bright Spots for Republicans. The Rest Can Be Scored as Grim." http://nyti.ms/2sh3ZKJ

THE LATEST FROM BURGESS EVERETT AND JEN HABERKORN -- MCCONNELL "WORKING FURIOUSLY" TO SAVE HEALTH CARE BILL -- "Senate Obamacare repeal on brink of defeat": "Senate Republicans' Obamacare repeal effort is on track

to blow up before it even gets started. The GOP is well short of the votes needed to bring their bill to the floor, and party leaders and President Donald Trump are kicking into overdrive to save their imperiled health care overhaul. At least four Republican senators, Susan Collins of Maine, Rand Paul of Kentucky, Dean Heller of Nevada and Ron Johnson of Wisconsin, have signaled they could oppose a key procedural vote that will occur either Tuesday afternoon or Wednesday. A number of other senators, like Shelley Moore Capito of West Virginia and Marco Rubio of Florida, are undecided.

"Senate Majority Leader Mitch McConnell (R-Ky.) and his team are working furiously to round up 50 of the caucus's 52 senators to even bring the bill to the floor, let alone pass it by week's end. GOP leaders said ultimately that even lawmakers that oppose the bill in its current form could be convinced to allow the debate over the party's long-sought Obamacare rollback to begin. 'I would hope ... our members would at least let us get on it,' said Sen. John Thune (R-S.D.), the No. 3 GOP leader. 'Everybody wants to exert whatever leverage that they can, where they can get the most leverage, but I would expect we'd be able to get on the bill.'" http://politi.co/2uaDCaI

-- TO REITERATE ... Forget passage for the moment. Republicans have not yet secured the votes to begin work on the bill. It'll be a crazy week. And make no mistake: Republicans might not be able to repeal and replace Obamacare. The situation is that dire for them.

-- "Pence woos Senate conservatives in Obamacare repeal push," by Eliana Johnson and Seung Min Kim: "With the fate of Republicans' Obamacare repeal bill hanging in the balance, Vice President Mike Pence is swooping in to see if he can work out a deal to secure the 50 votes needed to pass it through the Senate. Pence will host a group of conservative GOP senators including Utah's Mike Lee for dinner on Tuesday to discuss their concerns with the legislation. Invitations have also been extended to Oklahoma Sen. James Lankford and Arkansas Sen. Tom Cotton. Sen. Ben Sasse was also invited to the dinner, although it is unclear whether he will attend." http://politi.co/2sLU96Z

-- AP'S ERICA WERNER: "These senators will make or break the GOP's health care push" http://apne.ws/2rWScSr

-- WARNING, FROM THE WSJ ED BOARD: "The Senate's Health-Care Hour: GOP opponents will be held accountable if they ruin this rare reform moment": "Senate Republicans are headed for a vote on their health-care bill as soon as this week, and Majority Leader Mitch McConnell is still scrambling for 50 votes. What the holdouts should understand is that this is a defining political moment. They may never have a better chance to improve U.S. health care and reform government, and the window is closing. ...

"Another fantasy is that Republicans can vote no and blame Democrats for the collapsing ObamaCare status quo. The media will blame Republicans for every premium hike, and voters believe they elected a GOP Congress and President. If this

bill fails Republicans will be forced to come hat in hand to Chuck Schumer's Democrats for the votes to stop a downward spiral of surging premiums and declining choices. Conservative reform won't be included. ...

"Every consequential legislative reform is difficult, but the GOP anxiety over repeal and replace is excessive. They should have more confidence in their convictions and how their solutions can improve American lives." http://on.wsj.com/2tfmjZq

IMPORTANT STORY -- ANOTHER WAR? -- "White House threatens Syria over possible chemical attack," by Bryan Bender and Annie Karni: "The White House, in a rare high-stakes gambit that took some national security veterans off guard, announced Monday it has evidence that Syria is preparing to launch another chemical attack and warned that it will 'pay a heavy price' for doing so. 'The United States has identified potential preparations for another chemical weapons attack by the Assad regime that would likely result in the mass murder of civilians, including innocent children,' Press Secretary Sean Spicer said in a brief statement issued late in the evening. 'The activities are similar to preparations the regime made before its April 4, 2017 chemical weapons attack.'

"If Syrian President Bashar Assad 'conducts another mass murder attack using chemical weapons,' the statement added, 'he and his military will pay a heavy price.' The public warning was seen as highly unusual -- reflecting both confidence in the intelligence information suggesting that another attack might be imminent and a willingness to take military action should the warning not be heeded." http://politi.co/2rW9xuW

-- WAIT A SECOND... We thought President Donald Trump didn't telegraph what he's going to do?

-- AP REPORTER VIVIAN SALAMA (@vmsalama): "It appears policy advisers at State were not briefed on WH Syria statement. Spoke to one senior official tonight who heard the news from me."

-- BUZZFEED'S CLAUDIA KOERNER and **NANCY YOUSSEF:** "Five U.S. defense officials reached by BuzzFeed News said they did not know where the potential chemical attack would come from, including one US Central Command official who had 'no idea' about its origin. The officials said they were unaware the White House was planning to release its statement; usually such statements are coordinated across the national security agencies and departments before they are released." http://bzfd.it/2sMj8aA

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study found that pharmacy benefit managers (PBMs) reduced spending in Medicare Part D by 58 percent in 2014, driving down costs for the government, taxpayers, and beneficiaries. The study forecasts that PBMs will save $1,800 per Medicare beneficiary, per year over the next ten years. Learn more at

FIRST IN PLAYBOOK -- HATCH CLOSELY-TIED POLITICAL, FOUNDATION FUNDRAISING -- Senate Finance Committee Chairman Orrin Hatch (R-Utah), who runs one of the most powerful committee in Congress, is raising money for his reelection at the Montage Deer Valley resort in Park City, Utah, in August. The following two days after that political fundraiser, the Orrin Hatch Foundation is raising money at the same resort. The ties don't end there: the two organizations use the same fundraiser, the Larrison Group. And his fundraising team and allies have targeted lobbyists and consultants with business before Hatch's committee to attend the events.

THE POLITICAL EVENT IS HATCH'S ANNUAL "Fly Fishing & Outdoor Adventure Weekend" Aug. 11 and 12 at Montage Deer Valley. Attendees are asked to contribute up to $5,000 for PACs and $3,000 for individuals to be "Main Street" donors. His "First Annual Golf Tournament & Outdoor Adventure Weekend" for the foundation is Aug. 13 and 14 at the same resort. Foundation donors are asked to contribute at much higher levels, with top "Kings Peak Club" donors contributing $100,000, or more.

NOTHING PROHIBITS LAWMAKERS from raising campaign contributions and also raising money for a nonprofit. However, it is very unusual for lawmakers to host back-to-back destination fundraisers for their campaign and their eponymously titled charity at the same time in the same location. Scott Anderson, chairman of the foundation, said in a statement that "[t]he Orrin G. Hatch Foundation has taken appropriate steps to ensure that its activities comply with all applicable ethics requirements." The foundation has ethics lawyer Rob Walker of Wiley Rein on retainer.

HATCH LAUNCHED HIS FOUNDATION in 2016 in an effort to raise tens of millions of dollars for the "Hatch Center," a place to house documents from his tenure in the Senate, at a university in his home state. While there has been widespread speculation that he won't run for reelection in 2018, Hatch has raised $4.3 million this year, and has $3.5 million in the bank to run for re-election next year.

IF YOU CARE ABOUT THE GOP AGENDA, READ THIS -- "Fight between GOP House chairs imperils budget deal," by Sarah Ferris and Rachael Bade: "A fight between House Republican chairmen is threatening to upend a tentative budget deal enabling the chamber to take the first steps toward tax reform, forcing the budget panel to cancel plans to begin work this week. Republican leadership and House Budget Committee Chairwoman Diane Black (R-Tenn.) reached a fragile agreement with defense hawks over the weekend, defusing a contentious matter over Pentagon spending that had held up the fiscal blueprint for weeks. But several committee chairmen are now balking at the second part of the deal: a promise of about $50 billion in additional cuts to mandatory programs to make those very defense increases more digestible for conservatives." http://politi.co/2sMcgtx

WHAT PAUL RYAN IS THINKING -- "Something Important is Happening" http://bit.ly/2sMrKhj

DEVLIN BARRETT in **WAPO -- "FBI has questioned Trump campaign adviser Carter Page at length in Russia probe":** "FBI agents have repeatedly questioned former Trump campaign adviser Carter Page about his contacts with Russians and his interactions with the Trump campaign, according to people familiar with the investigation. Over a series of five meetings in March, totaling about 10 hours of questioning, Page repeatedly denied wrongdoing when asked about allegations that he may have acted as a kind of -go-between for Russia and the Trump campaign, according to a person familiar with Page's account.

"The interviews with the FBI are the most extensive known questioning of a potential suspect in the probe of possible Russian connections to associates of President Trump. The questioning of Page came more than a month before the Russian investigation was put under the direction of Special Counsel Robert S. Mueller III. Page confirmed Monday that the interviews occurred, calling them 'extensive discussions.' He declined to say if he has spoken to investigators since the March interviews." http://wapo.st/2sg64qh

JOHN BRESNAHAN and **RACHAEL BADE: "Conyers and Lujan face Ethics Committee scrutiny**: John Lewis' top aide is also under review for an alleged campaign violation": "Democratic Reps. John Conyers of Michigan and Ben Ray Lujan of New Mexico are under scrutiny by the House Ethics Committee for alleged violations, although both men strongly deny any wrongdoing.

"The allegation against Lujan is tied to the Democratic 'sit-in' on the House floor in June 2016. Conyers has come under review for his interaction with a former top aide who pleaded guilty to receiving stolen property.

"And Michael Collins, chief of staff for Rep. John Lewis, is also under investigation by the Ethics panel following a complaint from a conservative watchdog group over allegedly serving improperly as the Georgia Democrat's campaign treasurer and top aide at the same time." http://politi.co/2ucw0o6

TRUMP'S TUESDAY -- TRUMP is speaking with French President Emmanuel Macron. He'll meet with H.R. McMaster and will speak with Irish Prime Minister Leo Varadkar.

THE JUICE ...

-- PETER BAKER has a new book out today -- "Obama: The Call of History." It is an illustrated, coffee-table sized book with photographs by Times photographers like Doug Mills and Stephen Crowley, and a narrative account of the Obama presidency by Baker. Baker is promoting the book at a Times Talk in New York tonight with Dean Baquet, Maggie Haberman and Jim Rutenberg, and at a D.C. event at the National Press Club Thursday. ***$31.45 on Amazon*** http://amzn.to/2sVQmTd

-- 2018 WATCH: Republicans have again found their boogeyman: House Minority

Leader Nancy Pelosi. The Congressional Leadership Fund, which is aligned with Speaker Paul Ryan, is out with new polling from 11 Congressional districts showing Pelosi's popularity is underwater. The lesson: Expect Republicans to employ the same tactic they have been using since 2010: make Pelosi a key issue in ads in states like California, Florida, Montana and Nebraska. ***The memo*** http://bit.ly/2teVdBy

-- **FIRST IN PLAYBOOK:** **PENNY PRITZKER** has signed on with the Harry Walker Agency for speaking. She will be speaking on a number of issues, including helping workers adjust and train for today's economy and making sure a modern social safety net is there to support people as needed.

It's part of a seven-figure ad buy nationwide. http://bit.ly/2uc2zmh ... **THE ASSOCIATION FOR COMMUNITY AFFILIATED PLANS** is targeting Sens. Shelley Moore Capito (W.Va.), Rob Portman (Ohio), Cory Gardner (Colo.), Dean Heller (Nev.) and Jeff Flake (Ariz.). ***National ad*** http://bit.ly/2shgs0N ... ***One of the ads -- West Virginia:*** http://bit.ly/2th5SvT

PLAYBOOK has been hitting the road, taking our events across the country. We are trying to find out a bit more information on where you, the Playbook community, live. ***Please take this two-question survey*** http://bit.ly/2u9pcYo

NEW "OFF MESSAGE" PODCAST -- NEW ORLEANS MAYOR MITCH LANDRIEU -- What I'm doing is directly challenging what the word 'great' means." Or, to put it more simply: Trump "is wrong most of the time, because he takes a myopic, narrow view." Take the health care bill: "When all those people in the cities don't have health care, where are they supposed to go? And how do we provide enough drug treatment centers and emergency rooms," Landrieu told Isaac Dovere. "And if you don't have an answer for that, why are we doing this again?"

-- ON 2020 CHATTER: "I'm not planning to run for president, I'm not running for president. I can't tell you if they offered me the job I wouldn't take it, but that generally is never going to happen."

-- ON TAKING DOWN NOLA'S CONFEDERATE MONUMENTS: "I miscalculated that. I would have done it anyway, but I really did think it was not going to dig up the kind of vitriol and the kind of intentional intimidation, nor did I think I would find as much institutional bias as I found, which manifested itself to me just in the very simple act of trying to get a crane to take the monuments down. That surprised me, and it bothered me tremendously. It's confirmation that institutional racism continues to exist." http://politi.co/2tfSrMd

#THISTOWN -- DANIEL LIPPMAN and **JOHN F. HARRIS** in the July/Aug. issue of POLITICO Magazine, **"'It's the End of Small Talk in Washington':** There may be no city as unsettled by Donald Trump as the one he just moved to. A social anthropology" (Daniel's print magazine debut): "During the 1968 riots, Washington, D.C., was ablaze with arson and looting when an aide burst in to tell President Lyndon B. Johnson of a rumor that the carnage was headed toward the exclusive precincts of Georgetown. Johnson replied with acid humor: 'I've waited 35 years for this day.' ... If these were normal times, the kind of people LBJ excoriated and Leibovich lampooned would be engaged right now in a familiar ritual. It would involve lunches and dinners with the new White House team, off-the-record chats about the workings of government mixed with let's-be-friends chatter about real estate and schools and fitness routines.

"But these aren't normal times. Team Trump is showing few signs so far of hungering for the sort of social intercourse with permanent Washington that usually accompanies a new administration. Presidential advisers would respond cautiously, flattered by their new social cachet, and correctly worried that they might be suspected of divided loyalties and leaks back at the White House. ... It's common to hear well-known D.C. media figures describe Trump in terms like 'low-class jerk' or diagnose him with maladies, like 'serious personality disorder,' as one did at a recent party." ***With cameos by Sally Quinn, Kellyanne Conway, Tony Podesta, Steve Clemons, Margaret Carlson, Evan Thomas*** http://politi.co/2thNdAe

HISTORY LESSON -- TIM WEINER in the N.Y. Times Magazine, "How Donald Trump Misunderstood the F.B.I.: Since Watergate, the agency has come to view itself as an essential, and essentially independent, check on the president": Former FBI agent John "Mindermann, the young ex-cop with five $27 department-store suits to his name, remembers the president's men who stonewalled the investigation throughout 1972 and early 1973 as 'Ivy Leaguers in their custom-fitted finery - these privileged boys born to be federal judges and Wall Street barons. They were gutless and completely self-serving. They lacked the ability to do the right thing.' By late April 1973, however, the stonewalls were crumbling.

"On Friday, April 27, as Nixon flew off to Camp David for the weekend, mulling his dark future, the F.B.I. moved to secure White House records relevant to Watergate. At 5:15 p.m., 15 agents arose from their dented metal desks in the Old Post Office building and marched in tight formation, fully armed, up Pennsylvania Avenue. On Monday, a highly agitated Nixon returned to the White House to find a skinny F.B.I. accountant standing watch outside a West Wing office. The president pushed him up against a wall and demanded to know how he had the authority to invade the White House." http://nyti.ms/2scv8Dk

AMERICA AND THE WORLD -- "Poll shows U.S. tumbling in world's regard under Trump," by WaPo's Isaac Stanley-Becker in Berlin and Scott Clement: "[I]n the survey of 37 countries, Russia is a bright spot for Trump. As beleaguered as the president is at home, a majority of Russians say they have confidence in him. And Russians' attitudes

toward the United States have improved since Trump took office. Elsewhere, though, and with remarkable speed, Trump's presidency has taken a toll on the United States' image abroad.

"The international survey by the Pew Research Center found that favorable ratings of the United States have decreased from 64 percent of people across all countries surveyed at the end of Barack Obama's presidency to 49 percent this spring. The new figures are similar to those toward the end of the George W. Bush administration. The president himself has fared even worse: A median 22 percent are confident that Trump will do the right thing in global affairs, down from 64 percent who had confidence in Obama." http://wapo.st/2rWlaAD

JARED'S NEW LAWYER -- "Kushner adds powerhouse lawyer Abbe Lowell to legal team," by Josh Dawsey: "Jared Kushner has hired Abbe Lowell, one of the country's leading criminal defense lawyers, to represent him in the special counsel's probe of potential Russian collusion with the Trump campaign and his financial dealings, as well as in separate congressional inquiries. But Kushner has also decided to keep Jamie Gorelick, his current lawyer and a WilmerHale partner, on his legal team ... Lowell, a Democrat, has represented prominent politicians such as John Edwards and lobbyist Jack Abramoff. ... Lowell is currently representing New Jersey Sen. Bob Menendez, who is charged with corruption and faces a trial later this year. He was also chief minority counsel to the Democrats during the Bill Clinton impeachment proceedings." http://politi.co/2tfwqNNr

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)** : A new study projects pharmacy benefit managers (PBMs) will save Medicare Part D $896 billion over ten years. PBMs drive savings for taxpayers and seniors by negotiating discounts from drug manufacturers; by encouraging the use of lower cost, clinically equivalent drugs; and by providing clinical programs that improve health outcomes. Learn more at affordableprescriptiondrugs.org ******

INSIDE THE TRUMP ADMINISTRATION -- "E.P.A. Official Pressured Scientist on Congressional Testimony, Emails Show," by NYT's Coral Davenport: "The [EPA's] chief of staff pressured the top scientist on the agency's scientific review board to alter her congressional testimony and play down the dismissal of expert advisers, his emails show. Deborah Swackhamer, an environmental chemist who leads the E.P.A.'s Board of Scientific Counselors, was to testify on May 23 before the House Science Committee on the role of states in environmental policy when Ryan Jackson, the E.P.A.'s chief of staff, asked her to stick to the agency's 'talking points' on the dismissals of several members of the scientific board. 'I was stunned that he was pushing me to 'correct' something in my testimony,' said Dr. Swackhamer, a retired University of Minnesota professor. 'I was factual, and he was not. I felt bullied.'" http://nyti.ms/2tQwxwN

SCOTUS WATCH -- "5 questions on the future of Trump's travel ban," by Josh Gerstein: http://politi.co/2sL2V5v

MEDIAWATCH -- "Three CNN employees resign over retracted story on Russia ties," by WaPo's Erik Wemple: "Thomas Frank, a reporter for 'CNN Investigates,' last Thursday appeared to have a compelling exclusive on the story of the year. The Senate Intelligence Committee, reported Frank, was investigating a Russian investment fund - the Direct Investment Fund (RDIF) -- 'whose chief executive met with a member of President Donald Trump's transition team four days before Trump's inauguration.'

"That transition team official is Anthony Scaramucci, a Wall Streeter who was expected to take a prominent White House position but did not. Scaramucci met in January with RDIF head Kirill Dmitriev. The CNN exclusive -- which hung from one unnamed source -- didn't take long to wither. Breitbart News's Matthew Boyle bombed the CNN piece as baseless.

"Sputnik News published a refutation, indicating that the fund was not a part of Russian state bank Vnesheconombank, as the CNN report had claimed. This detail mattered a great deal, considering that Vnesheconombank was listed in a set of sanctions issued by the U.S. government. ... CNN announced on Monday afternoon that three network officials are leaving their jobs over the incident: Frank, the reporter on the story; Eric Lichtblau, a recent CNN addition from the New York Times who edited the piece; and Lex Haris, the executive editor of 'CNN Investigates.' The moves follow an investigation carried out by CNN executives over the weekend, with the conclusion that longstanding network procedures for publishing stories weren't properly followed." http://wapo.st/2tQFxBO

IN THE BREITBART WORLD -- "Exclusive - Donald Trump Jr: Jeff Zucker Must Address CNN's Very Fake News Scandal in On Camera Press Briefing," by Breitbart's Matt Boyle: http://bit.ly/2sM4tMc

Today's Playbook Power Briefing presented by Morgan Stanley
05/30/2017 01:00 PM EDT

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon.

WHY REPUBLICANS THINK TRUMP'S THEORY OF THE CASE IS FLAWED -- President Donald Trump is increasingly itching to be surrounded by campaign-style aides, as evidenced by Mike Dubke's departure, Corey Lewandowski and David Bossie's resurgence and talk of a "war room" structure. There are those in the White House who are spooked by Trump's decision making, and are certain this is a mistake. **TRUMP'S** presidential campaign was predicated on -- and amplified by -- his willingness to break stuff and lash out at his party. The presidency is a different beast, and starting fights -- which is what the campaign did, occasionally -- is not a helpful instinct, Republicans we've spoken to say.

IF YOU'RE A REPUBLICAN , here's what might worry you, according to several Republicans both in the administration and dealing with the administration: the president either is not paying attention, or does not understand the simple basics of what his party is trying to do with control of the White House and both chambers of Congress. Trump tweeted: "The U.S. Senate should switch to 51 votes, immediately, and get Healthcare and TAX CUTS approved, fast and easy. Dems would do it, no doubt!" **WELL...** Actually, tax reform and health care are proceeding on reconciliation rules, which only require 51 votes for passage. AND Republicans on Capitol Hill don't want a simple tax cut. They want tax reform. And yesterday, Trump said the tax process was ahead of schedule. That's not what it sounds like this morning. AND McConnell said there aren't 50 Republicans to repeal and replace the health care law.

TOP TWEETS -- @anniekarni : "Spicer is back to being comms director and press secretary, until everything is sorted out." ... **@DylanByers:** "Source tells me Trump could never get over Dubke saying that "there is no Trump doctrine" in a meeting that was leaked to Politico in April." ***The April POLITICO story, from Shane Goldmacher*** http://politi.co/2rjPusB

-- SPICER will be back behind the podium today at 2 p.m.

--WHAT DUBKE WILL DO NEXT -- Daniel Lippman and Alex Isenstadt: "Dubke, who spoke with POLITICO as he drove into the White House early Tuesday morning, said he expects to go back to Black Rock Group, his communications and public affairs firm. ... In a notoriously leak-prone White House, Dubke told POLITICO he was surprised that the news of his planned departure took 12 days to leak out. ... Trump told friends in recent weeks that he was unhappy with Dubke -- and that he wondered why he never seemed to get positive press anymore." http://politi.co/2qx4U9V

ATTENTION TRAVELERS -- "US tells EU: No laptop ban," by Cathy Buyck: "The U.S. today opted not to introduce a ban on bringing laptops into the cabins of flights to the U.S. from Europe, sources told POLITICO. 'No ban,' a Commission official said. 'Both sides have agreed to intensify technical talks and try to find a common solution.'" http://politi.co/2sijYZo

SCOOP: MCCASKILL'S CANCUN ADVENTURE -- Sen. Claire McCaskill (D-Mo.) paid more than $15,000 for Senate Minority Leader Chuck Schumer (D-N.Y.) and Sen. Jon Tester (D-Mont.) and their spouses to spend a few days in Cancun in February 2016. Recently filed financial disclosure documents show McCaskill paid $8,235.11 for Schumer and his wife to travel, stay and eat in Mexico, and $7,410.27 for Tester and his wife to take the trip. Schumer traveled from Dallas and returned to Houston, Schumer's wife traveled from New York and Tester and his wife from Great Falls, Montana.

ON RUSSIA -- "Sources: Russians discussed potentially 'derogatory' information about Trump and associates during campaign," by CNN's Pamela Brown, Jim Sciutto and Dana Bash: "Russian government officials discussed having potentially 'derogatory' information about then-presidential candidate Donald Trump and some of his top aides in conversations intercepted by U.S. intelligence during the 2016 election, according to two former intelligence officials and a congressional source.

"One source described the information as financial in nature and said the discussion centered on whether the Russians had leverage over Trump's inner circle. The source said the intercepted communications suggested to U.S. intelligence that Russians believed 'they had the ability to influence the administration through the derogatory information.' But the sources, privy to the descriptions of the communications written by U.S. intelligence, cautioned the Russian claims to one another 'could have been exaggerated or even made up' as part of a disinformation campaign that the Russians did during the election. ...

"None of the sources would say which specific Trump aides were discussed. One of the officials said the intelligence report masked the American names but it was clear the conversations revolved around the Trump campaign team. Another source would not give more specifics, citing the classified nature of the information. ... A White House spokesman told CNN: 'This is yet another round of false and unverified claims made by anonymous sources to smear the President. The reality is, a review of the President's income from the last ten years showed he had virtually no financial ties at all. There

appears to be no limit to which the President's political opponents will go to perpetuate this false narrative, including illegally leaking classified material. All this does is play into the hands of our adversaries and put our country at risk.'" http://cnn.it/2shIFoR

****** **A message from Morgan Stanley:** Morgan Stanley helped E-commerce leader Alibaba Group advance technologies to give rural communities access to goods and services once considered out of reach. Capital creates change. Read the full story at morganstanley.com/alibaba CRC 1221469 06/15 ******

TRUMP'S TWEETS -- @realDonaldTrump at **6:40 a.m.**: "We have a MASSIVE trade deficit with Germany, plus they pay FAR LESS than they should on NATO & military. Very bad for U.S. This will change" ... at **7:04 a.m.:** "Russian officials must be laughing at the U.S. & how a lame excuse for why the Dems lost the election has taken over the Fake News." ... at **9:59 a.m.:** "The U.S. Senate should switch to 51 votes, immediately, and get Healthcare and TAX CUTS approved, fast and easy. Dems would do it, no doubt!"

-- @jdawsey1: "Trump hates anonymous 'sources.' But he just re-tweeted a Fox News story, with no byline and one anonymous source, that defends Kushner."

OKAY -- "Democrats are pushing an unlikely source - Jerry Springer - to run for governor in Ohio," by Business Insider's Allan Smith and Maxwell Tani: "Influential Ohio Democrats are pushing former Cincinnati mayor and daytime TV host Jerry Springer to run for Ohio governor in 2018, more than half-a-dozen Democrats familiar with the race told Business Insider. Many said Springer, who sought the Democratic nomination for governor of Ohio in 1982 and remains active in state politics, could be a good fit for the current political climate. ...

"Those discussing a possible run with the talk-show host include former Ohio Gov. Ted Strickland, who ran for Senate last year, said Tim Burke, the Hamilton County Democratic Party chairman. And several Democrats said recent conversations with Springer, as well as his schedule, suggested he seemed to be more seriously interested in running this time than in years past. ... Strickland confirmed to Business Insider that he had discussed a potential run with Springer. He said he has also spoken with candidates such as Dayton mayor Nan Whaley, former state representative Connie Pillich, and the former state Senate minority leader, Joe Schiavoni." http://read.bi/2shG8Lm

NEWT'S NEXT ACT -- "Speaker of the House of Trump," by The Atlantic's McKay Coppins: "Even as the unique brand of politics that Trump championed in the campaign has been all but sapped of meaning in the early months of his presidency, an ever-growing number of opportunists and stakeholders has emerged to compete for the mantle of Trumpism's premier public intellectual. Arguably no one has pursued that title more aggressively than Gingrich. ...

"'Total energy,' he told me when I asked what he admired about Trump. '[He's] more

energetic than any president since Theodore Roosevelt.' And then: 'It's not an accident that he put Andrew Jackson in the Oval Office. He identifies with Andrew Jackson as a disruptive figure.' Laudatory talk like this is not surprising coming from Gingrich, who spent much of the 2016 campaign as a Trump surrogate, and much of the post-campaign as a quasi-authorized Trump biographer (his forthcoming book includes a foreword by Eric Trump). More notable, perhaps, is his analysis of the president's weaknesses. Trump is 'too restless,' Gingrich told me, and 'not introspective.' Though he possesses great talent for marketing, he lacks either the desire or the ability to persuade his constituents through education." http://theatln.tc/2shYb4b

OBAMA ALUMNI -- BUFFY WICKS, one of the architects of the 2008 and 2012 Obama campaigns' grassroots organization, is jumping into politics. She's running for a California Assembly seat in the East Bay, one of the bluest in the state. More from our California Playbook colleagues Carla Marinucci and David Siders: "With 18 months until the 2018 elections, Wicks' entry into politics comes at a time when Obama himself is calling on young Democratic activists to revitalize their party and step forward to run for office. And it also comes as women's groups have expressed concern about the dismal numbers of women in the California State legislature -- now at just 22 percent, a 20-year low. And only 5 percent are women with young children. ...

"'I think November was a turning point for me,' Wicks told POLITICO on Monday. 'President Trump was elected, and he goes against everything I believe in -- especially coming off my time in the Obama years. ... It was a big awakening for me, in terms of the kind of country we want our baby to grow up in. We have the opportunity to drive for a set of bold policies that are going to help people -- and I'm uniquely situated, with my background in political organizing, to lead that fight.' **Why she's one to watch:** Wicks has a vast and loyal network of political friends and contacts developed from her work on the Obama campaign -- including Obama himself -- and her impressive skills in grassroots organizing and knowledge of fundraising could make her formidable in future state politics." http://politi.co/2rjxJda

TODAY'S BEYOND THE BELTWAY -- Multiple bidders emerge for Chicago Sun-Times -- NYC Puerto Rican Day Parade surrounded in controversy
http://politi.co/2rjECei

DEEP DIVE -- "Uber, But for Meltdowns: Sexual harassment, corporate-espionage charges, taking advantage of drivers: The company that practically courts bad PR is in an existential crisis," by Reeves Wiedeman in NYMag: "When Kalanick got to Palo Alto, he told the assembled engineers that, seven years after the app launched, it was time for ... Uber [to] become not simply a better place to work but 'the most just place to work in the world.' In a blue V-neck sweater over a white undershirt, Kalanick cited Harriet Tubman, Gandhi, and Martin Luther King Jr. as inspirations ...

"Coming from Kalanick, who is described by even his supporters as an 'a***hole,' the talk sounded forced ('I talk a lot about justice - I'm just about it'), especially when he put up a photograph on a projector screen of the Fearless Girl statue that had recently been

installed in downtown Manhattan, across from the Wall Street bull. 'When I saw it, I was inspired,' Kalanick said. He wanted Uber's employees, especially its women, to 'be that fierce girl standing up to the bull,' while adding that he intended to make Uber a place that 'doesn't have bulls all over the freaking place.' He sat back as the crowd applauded." http://slct.al/2rRdc04

PROBLEMATIC -- "Forest Service women: We faced assault, mistreatment, retaliation if we complained," by McClatchy DC's Michael Doyle: "Female Forest Service workers in California reported enduring sexual misconduct, harassment and a fear of retaliation if they complained, according to a previously unreleased study obtained by McClatchy under the Freedom of Information Act.

"While many Forest Service employees voiced general satisfaction with their workplaces, women were much more likely than men to identify serious problems in the 2015 survey. Their grievances spanned a wide range, from misdeeds to mismanagement, and they echoed complaints lodged by women in the military and other federal agencies." http://bit.ly/2shsyHG

AFTERNOON READ -- "Schmucks Like Us," by National Review's Kevin Williamson: "Maybe you haven't behaved the way Tiger Woods does -- but how many Playboy models do you have on speed-dial? How many of them were calling you at the peak of your career or slightly thereafter? Maybe you lead a more virtuous life. Maybe you just lead a smaller one. It is difficult to say without being tested. And that may be why we love the ritual public denunciation of fallen idols. If we convince ourselves that they are monsters and moral outliers, then we do not have to face the much more terrifying possibility that they are schmucks like us - and that we are schmucks like them." http://bit.ly/2shSOC3

EPA Administrator Pruitt Addresses American Farm Bureau's State Leadership Meeting

Scott Pruitt reaffirms Trump Administration's commitment to American farmers

WASHINGTON, D.C. (July 11, 2017) - U.S. Environmental Protection Agency Administrator Scott Pruitt addressed the American Farm Bureau Federation's State Leadership Meeting earlier today to discuss EPA's recent decision to begin rescinding the 'Waters of the U.S.' rule (WOTUS), as well as other issues of concern to American farmers.

"EPA is returning power to the states and standing with farmers who have been hurt by misguided policies of the past," said Administrator Pruitt. **"The farming industry deserves regulatory certainty and I committed that to them today. The group expressed gratitude that their voices are being heard for the first time in a long time and I look forward to an ongoing partnership with the agriculture community in the future."**

The address follows the Administrator's visit to Gully Branch Tree Farm in rural Georgia last week where he and U.S. Secretary of Agriculture Sonny Perdue visited one of Georgia's premier outdoor classrooms to promote environmental stewardship and reaffirm the Trump Administration's commitment to farmers and foresters.

Subject: Heller confirms hold on nominee for DOE No. 2 spot

By Darius Dixon

07/13/2017 05:12 PM EDT

Sen. Dean Heller said he put a hold on deputy Energy secretary nominee Dan Brouillette because of his support for resuming work on the Yucca Mountain nuclear waste repository.

"If you're pro-Yucca, we're not friends," the Nevada Republican told POLITICO this afternoon.

Brouillette was approved by the Senate Energy and Natural Resources Committee more than five weeks ago. He voiced support for Yucca Mountain during his nomination hearing.

The hold, Heller said, "is to send a message" about H.R. 3053 (115), a nuclear waste bill approved 49-4 by the House Energy and Commerce Committee last month, and funding for Yucca Mountain in the House fiscal 2018 energy and water appropriations bill.

"I want people to know how I feel — how Nevada feels — about this atrocious piece of legislation that's coming out of the House. There's no room for it. There's nothing right about it," he said.

When asked whether he sought to stop the House bill or get money out of the spending bill, Heller answered, "all of the above."

WHAT'S NEXT: Both bills are awaiting time on the House floor. The Senate energy and water spending bill is expected to be released this month but it's unclear if it will also have money for Yucca Mountain.

Military Climate Study Survives With Crucial House GOP Votes

Posted July 14, 2017, 12:14 P.M. ET

By Dean Scott

A small but growing number of climate-friendly House Republicans scored their first big victory July 13 when 46 of them joined Democrats to defend language in a defense spending bill highlighting national security concerns posed by climate change.

Republican Reps. Scott Perry (Pa.) and Ken Buck (Colo.) were confident their amendment to strike the the climate change language from the fiscal year 2018 Defense Department spending bill would prevail, given a string of Republican victories that have derailed climate funding and policies in recent years. But their amendment, which appeared to have sailed through an afternoon voice vote, fell to defeat by a vote of 185–234 in a recorded vote. A small but growing coalition of Republicans in favor of climate action joined all Democrats in defeating the measure.

The debate was over a section that would put the House on record in viewing climate change as a "direct threat" to U.S. national security and refers to ways in which increasing temperatures, droughts, and other climate impacts may already be contributing to conflicts around the world. It also directs the Defense Department to compile a sort of top 10 list of U.S. military installations within each branch of the military that are most vulnerable to sea-level rise and other climate impacts.

Buck, who co-sponsored the amendment targeting the section, told Bloomberg BNA before the vote that he recognizes that the climate is changing, but is skeptical that the impacts will be as grave over the coming decades as some scientists predict.

"The issue here is whether we need to spend money on climate change in the Department of Defense," he said, arguing that the money would be better spent addressing backlogs in maintenance for U.S. Navy planes and other defense needs.

"I think we have better priorities, and I want to make sure that we fund the core mission," of U.S. defense, he said.

Big Oil Just Woke Up to Threat of Rising Electric Car Demand

Posted July 14, 2017, 9:40 A.M. ET

By Jessica Shankleman

The world's biggest oil producers are starting to take electric vehicles seriously as a long-term threat.

OPEC quintupled its forecast for sales of plug-in EVs, and oil producers from Exxon Mobil Corp. to BP Plc also revised up their outlooks in the past year, according to a July 14 study by Bloomberg New Energy Finance. The London-based researcher expects those cars to reduce oil demand 8 million barrels by 2040, more than the current combined production of Iran and Iraq.

Growing popularity of EVs increases the risk that oil demand will stagnate in the decades ahead, raising questions about the more than $700 billion a year that's flowing into fossil-fuel industries. While the oil producers' outlook isn't nearly as aggressive as BNEF's, the numbers indicate an acceleration in the number of EVs likely to be in the global fleet.

"The number of EVs on the road will have major implications for automakers, oil companies, electric utilities and others," Colin McKerracher, head of advanced-transport analysis at BNEF in London, wrote in a note to clients. "There is significant disagreement on how fast adoption will be, and views are changing quickly."

BNEF expects electric cars to outsell gasoline and diesel models by 2040, reflecting a rapid decline in the cost of lithium-ion battery units that store power for the vehicles. It expects 530 million plug-in cars on the road by 2040, a third of worldwide total number of cars.

The Organization of Petroleum Exporting Countries raised its 2040 EV fleet prediction to 266 million from the 46 million it anticipated a year ago. Battery cars under the new projection account for 12 percent of the market within 23 years, compared to 2 percent in the 2015 forecast. Based in Vienna, the group representing 14 nations expects half the number of diesel vehicles as it did a year ago.

Others making similar expectations according to the BNEF note include:

• The International Energy Agency more than doubled its central forecast for EVs, raising its 2030 EV fleet size estimate from to 58 million from 23 million,

• Exxon Mobil boosted its 2040 estimate to about 100 million from 65 million,

• BP anticipates 100 million EVs on the road by 2035, a 40 percent increase in its outlook compared with a year ago,

• Statoil ASA, the Norwegian state oil company, says EVs will account for a 30 percent of new sales by 2030.

Just a fraction of the world's cars sold today are powered by batteries instead of gasoline. Many analysts increasingly say the market will expand rapidly as almost all major auto makers bring dozens of new EV models to market. OPEC said in its oil market report on July 12 that electric vehicle sale targets could dampen demand in some parts of Asia as soon as 2018.

Long-term growth depends on a wide range of factors, including policy decisions by governments seeking to tackle air pollution to the cost of the lithium-ion batteries that account for about a third of the cost of each one.

Yet even as oil majors lift their outlook, they remain much less optimistic than the automakers. The world's top automakers have a combined plan to sell 6 million EVs a year by 2025, rising to 8 million in 2030, according to Bloomberg New Energy Finance.

Some big companies plan to go all electric. Volvo AB expects to have an electric motor in every car by 2019. It joins Elon Musk's Tesla Inc. as a major EV maker and Geely Automobile Holdings Ltd., the Hong Kong-based maker of London's black cabs, which is re-branding itself to focus on EVs.

"What oil companies and car companies are saying is diverging," said McKerracher, the BNEF analyst. "This is a trillion dollar question, and somebody is going to be wrong."

Trump Picks Lawyer for Energy Regulator Crippled Without Quorum

Posted July 14, 2017, 7:37 A.M. ET

By Catherine Traywick

President Donald Trump named attorney Kevin McIntyre as his pick for chairman of the Federal Energy Regulatory Commission, paving the way for the agency to regain its authority to rule on natural gas pipelines and contested utility mergers.

McIntyre, co-head of Jones Day's global energy practice, would take the reins from acting chairman Cheryl LaFleur and is the third Republican Trump has named to the commission, according to a July 13 statement from the White House. In May, Trump named Neil Chatterjee, senior energy adviser to Senate Majority Leader Mitch McConnell, and Robert Powelson, former chairman of the Pennsylvania Public Utility Commission, to fill the remaining two seats on the commission.

Trump has been under pressure to fill three vacancies on the panel following the February resignation of former chairman Norman Bay, whose departure left the commission without the quorum it needs to make major decisions. Until new commissioners are confirmed, the agency can't approve multibillion-dollar natural gas pipelines, potentially stalling a massive expansion of the U.S. gas pipeline network brought on by the shale boom.

More than $50 billion worth of project applications are pending before the commission, including an application for the $2 billion Nexus gas line in the Midwest, which is scheduled to start by year-end. Other issues awaiting agency action are a proposed rule on commercial battery storage, and a decision on the commission's income tax allowance policy for pipelines run by master limited partnerships.

"They've got a hell of a mess to clean up," former commission member Marc Spitzer said of the candidates. "There's several months of backlog. They'll be drinking from a fire hose."

Energy Practice

At Jones Day in Washington, McIntyre represents companies in cases involving energy markets, utilities and oil and gas pipeline regulations. His global energy practice focuses on compliance and enforcement, and energy marketing and trading among other issues, according to the firm's website.

Chatterjee and Powelson are still waiting for a Senate floor vote to confirm their nominations. During a committee hearing, both nominees expressed limited support of state subsidies for ailing nuclear plants, an issue that has drawn controversy across the power industry. Once confirmed, the commissioners would have to rule on cases challenging those subsidies, as well as determine whether the agency should issue new rules addressing their impact on wholesale markets.

The commission normally consists of five members who serve five-year terms. Right now, it's made up of one. LaFleur, a Democrat and former utility executive, has been on the commission since 2010. The term of another commissioner, Colette Honorable, a Democrat who previously served as chair of the Arkansas Public Service Commission, ended in June.

Brazil Projects Rapid Growth in Wind and Solar by 2026

Posted July 14, 2017, 12:41 P.M. ET

By Michael Kepp

Brazil's latest 10-year energy expansion plan sees wind power doubling to a 13 percent share of the electricity matrix, while solar power stands to also gain a foothold.

The country's Mines and Energy Ministry unveiled July 10 its 269-page 10-year energy expansion plan, one that includes both electricity and combustion-fuel energy generation through 2026.

Increased wind and solar power capacity would offset decreased hydropower capacity by the end of 2026, according to the plan. But, wind and solar associations have even more optimistic projects for sector growth through 2026.

Rodrigo Lopes Sauaia, executive director of the Brazilian Photovoltaic Solar Energy Association (Absolar) told Bloomberg BNA July 13, that the government's latest 10-year energy expansion plan's projections for solar power growth "are conservative."

Absolar projects that if the government follows Absolar's investment recommendations, large-scale solar power could have an installed capacity of 14,000 megawatts by 2026, compared to 9,660 megawatts in the government's plan. Reaching this projection would require 70 billion reais ($21.8 billion) worth of investments, compared to 50 billion reais ($15.6 billion) in the government's plan, Lopes Sauaia said.

"Solar polar is growing in Brazil in part because solar equipment prices are rapidly declining making solar power more competitive with other energy sources," Lopes Sauaia said. "That's is why we are even more optimistic about such growth potential than the government, now trying diversify the electricity matrix to include a greater share of power from non-hydro renewable sources, another reason for solar power's projected growth here."

Renewables could offset a decade-long decrease in hydropower installed capacity, which will drop from 69 percent of the electricity matrix in 2016 to 56 percent in 2026. Hydropower generation will drop because over 80 percent of its remaining potential is in the Amazon where impacts caused by dam reservoirs' flooding parts of rainforests, some of them protected, will make it increasingly hard to get licenses from environmental agencies.

Wind power—which in 2016 accounted for 6.7 percent (10, 025 megawatts) of the electricity matrix—would account for 13 percent (28,470 megawatts) in 2026. The plan also said that large-scale (non-rooftop) solar power, which accounted for .01 percent (21 megawatts) of the electricity matrix in 2016 would account for 4.5 percent (9,660 megawatts) of the matrix in 2026.

Elbia Gannoum, president of the Brazilian Association of Wind Power Producers (Abeeolica), told Bloomberg BNA July 13, that the energy expansion plan's wind growth projections were just below Abeeolica's.

"The energy expansion plan projects that 1,800 megawatts per year of wind power will be added to the electricity matrix by 2026, just below the 2,000 megawatts per year that Abeeolica estimates," said Gannoum. "And according to our estimates such wind power growth will require 50 billion reais ($15.6 billion) in investments by 2026."

Carbon from L.A. to Paris Jumps as Lawmakers Plan Tightening

Posted July 14, 2017, 10:33 A.M. ET

By Mathew Carr, Joe Ryan and Marine Strauss

Carbon prices from California to New Zealand are soaring as lawmakers across the globe seek more stringent rules for their greenhouse-gas markets.

California emission permits surged to a four-year high this week after Gov. Jerry Brown (D) published a plan to extend the biggest U.S. carbon trading program. In Europe, allowances reached their highest level since March as politicians debate proposals to cut a permit glut, while New Zealand carbon contracts rose before a review of its system.

Most countries are looking for the most cost-effective way to switch from the fossil fuels blamed for climate change. Even in the U.S., President Donald Trump's decision last month to pull out of the landmark Paris accord on cutting emissions triggered widespread condemnation by civic and state leaders across the country including from the governors of New York and Massachusetts.

China is planning to install the world's largest carbon market this year, though it's seen phasing in industries over time to smooth the impact on the economy. The biggest energy consumer burned the least coal in six years in 2016, became the number one producer of renewable energy and even lowered its emissions of climate-warming gases, BP Plc data show.

"There seems to be a clearer political will to lift carbon prices," said Ingo Ramming, the London-based co-head of commodity solutions for Commerzbank AG. "Even if China's national carbon market takes longer to install than expected, globally there's a lot happening, especially among the North American states and provinces."

In carbon trading, governments set a limit on emissions and then auction off or give away rights to pollute within the cap. These permits can be sold by more efficient companies to those that are less efficient. As governments periodically lower the caps, overall emissions fall.

No Poison

California's proposed legislation is designed to extend the basic current structure of its cap-and-

trade program through 2030. Brown emphasized early this week that his plan would not only help limit global warming, but "protect vulnerable communities from industrial poisons."

On July 13, he urged lawmakers to extend the program to show the world how to lower the risks of mass migration, fires and disease. "This isn't for me. I'm going to be dead. It's for you. And it's damned real. So I just ask you; take it seriously."

California's December allowances closed at a peak of $15.41 a metric ton this week, the highest since January 2013 when the program started, according to data from exchange ICE Futures.

"They've never been this high, except for the very beginning of the market," said Lenny Hochschild, managing director at Evolution Markets Inc., the environmental broker based in White Plains, N.Y.

In Europe, lawmakers are currently debating proposals to control the supply of emission allowances as a way to boost prices in its 12-year-old carbon market. Per Lekander, a fund manager at Lansdowne Partners U.K. LLP in London, reckons permit values will double within a year if the plans are approved.

"Finally, after 10 years of oversupply, this mechanism is now about to deliver what was intended," Lekander said.

European Union efforts to reform its $48 billion cap-and-trade system have repeatedly failed to increase the penalty for polluting, with the price of emissions slumping more than 80 percent since 2008 because of the glut. Futures fell 0.8 percent to 5.32 euros ($6.07) a ton on ICE Futures Europe July 14.

The latest steps to overhaul the market looked "promising" after legislators met July 10, said Siim Kiisler, the environment minister of Estonia, current holder of the European Union's rotating presidency. Lawmakers meet again on the market changes in September.

The Group of 20 nations published its first-ever climate and energy action plan at the weekend. The U.S. was the only member that didn't agree that the Paris accord was "irreversible."

"It's good to see the countries taking a stand against the regressive climate policies of President Trump," said Trevor Sikorski, head of carbon and natural gas at Energy Aspects Ltd. in London.

U.S. Said to Stymie Japan's Plan to Explore for Russian Oil

Posted July 14, 2017, 10:13 A.M. ET

By Jack Farchy

A Japanese group's plans to explore for Russian oil with state-run Rosneft PJSC have been stymied by U.S. intervention over sanctions, according to people familiar with the matter.

Washington's objection to the Japanese project to explore for oil in the ocean off Russia's Far East shows the U.S. Treasury is maintaining a firm line on sanctions, even as some international companies press on with Russian energy deals. In April, the U.S. turned down a request from ExxonMobil Corp. for a waiver to allow it to drill with Rosneft in the Black Sea.

Rosneft signed a preliminary deal with a Japanese consortium of Japan Oil, Gas & Metals National Corp., known as Jogmec, Inpex Corp., and Marubeni Corp. for offshore exploration at a license to the south west of Sakhalin Island in December, one of more than 60 agreements and memorandums signed during Russian President Vladimir Putin's visit to Japan.

However, since then the U.S. government has objected to the project, according to two people familiar with the discussions who asked not to be identified discussing a sensitive matter.

Washington's Allies

The U.S. objection to the project is based on the principle that Washington's G7 allies should not "backfill" the sanctions by allowing their companies to carry out projects that U.S. companies would be prohibited from working on. Tokyo's position is that the project with Rosneft does not represent backfilling, since the Japanese consortium was not competing with U.S. companies, according to one of the people.

As well as political pressure from its closest ally, Japan also risked falling foul of U.S. sanctions on Russia that prevent foreign companies exploring in deepwater with equipment that is 25 percent or more originated in the U.S.

The Japanese project's struggles come as U.S. lawmakers are working on new sanctions targeting energy projects in Russia. The measures were passed almost unanimously by the Senate last month, but are currently stalled in the House.

Japan's Ministry of Economy, Trade and Industry declined to comment. The U.S. Treasury Department didn't respond to requests for comment.

While the Japanese consortium joins Exxon in being frustrated by sanctions, some Chinese, Indian and European companies are pressing ahead with projects in Russia. China's Beijing Gas Group last month completed a $1.1 billion deal to buy a stake in Rosneft's Verkhnechonskneftegaz unit. Italy's Eni SpA is set to start exploration drilling with Rosneft in the Black Sea this summer, Rosneft Chief Executive Igor Sechin said in May.

Deep Water

The license area due to be explored by Rosneft and the Japanese group—which the companies did not name but can be identified as Central Tatarsky by maps they published—includes areas deeper than 500 feet (152 meters). They are subject to U.S. sanctions on the provision of equipment and services to Russian deepwater oil projects, the people said.

A spokesman for Inpex wasn't immediately able to comment. Marubeni and Jogmec declined to comment citing a confidentiality agreement. Rosneft also declined to comment.

Sechin said last September that Rosneft planned to carry out 2D and 3D seismic surveys at the Central Tatarsky license starting in summer 2017. The Japanese consortium had planned to use Shigen, a seismic vessel owned by the Japanese Ministry of Economic, Trade and Industry, to carry out the research, Jogmec said in a December statement. As of July 13, the vessel was off the east coast of Japan, on its way to the west coast port of Nigata, according to ship tracking data.

The U.S. intervention is a blow to Japanese hopes of converting warmer relations between Prime

Minister Shinzo Abe and President Putin into economic gains. The Japanese companies said in a joint statement in December that they expected "to strengthen Japan-Russia economic cooperation through this joint project."

In the past three years, Tokyo has attempted to take a diplomatic line that supports its western allies without alienating Moscow. It imposed some sanctions on Russia in 2014 but stopped short of the wide-ranging restrictions on the financial and energy sectors that have been imposed by the U.S. and EU.

The Japanese and U.S. governments are still negotiating and may yet find a way for the project to go ahead, the people said. Some of the license lies in waters shallower than 500 feet, which is not classified as deepwater under the sanctions. A Japanese government official said that all Japanese projects would comply with sanctions.

Asia at Risk of Deeper Poverty Due to Climate Change, Bank Says

Posted July 14, 2017, 9:34 A.M. ET

By Bloomberg News

Asia and the Pacific, home to two thirds of the world's poor, are at the highest risk of suffering deeper poverty and disaster due to unabated climate change, reversing current development gains, according to the Asian Development Bank.

The Asian landmass will see a temperature increase of 6 degrees Celsius (10.8 degrees Fahrenheit) by the end of the century under a business-as-usual scenario, ADB said in a July 14 statement. The comment is based on findings included in a report from the bank and Potsdam Institute for Climate Impact Research that analyses climate risks in Asia and the Pacific.

Some countries in the region could experience significantly hotter climates, with temperature increases in Tajikistan, Afghanistan, Pakistan, and northwest China projected to hit 8 degrees Celsius, ADB said.

Hotter climates would cause drastic changes in the region's weather system, agriculture and fisheries sectors, land and marine biodiversity, domestic and regional security, trade, urban development, migration, and health, and may even pose an existential threat to some countries, the ADB said.

The findings underscore the need for the region to reduce greenhouse gas emissions along the lines of those agreed to by the global community under the Paris accord—which calls for warming to be limited to well below 2 degrees Celsius—and to explore better strategies to mitigate the impact of climate change.

ADB approved a record $3.7 billion in climate financing last year and has pledged to further boost its investments to $6 billion by 2020, it said.

Other findings in the report include:

• Under a business-as-usual scenario, annual precipitation is expected to rise by as much as 50 percent over most land areas in the region, although nations such as Pakistan and Afghanistan may see a decline in rainfall by 20 to 50 percent,

• 19 of the 25 cities most exposed to a 1 meter sea-level rise are located in the region, 7 of which are in the Philippines alone. Indonesia, however, will be the country in the region most affected by coastal flooding,

• 13 of the top 20 cities with the largest growth of annual flood losses from 2005-2050 are in the region.

Climate change also will make food production in the region harder and will raise production costs. In some countries of Southeast Asia, rice yields could tumble by up to 50 percent by 2100 if no adaption efforts are made

Marine ecosystems, particularly in the Western Pacific, will be in serious danger by 2100. Even with a 1.5 degree Celsius temperature increase, 89 percent of coral reefs are expected to suffer from serious bleaching, severely affecting reef-related fisheries and tourism in Southeast Asia

Heat-related deaths in the region among the elderly are expected to rise by about 52,000 cases by 2050 due to climate change, according to data from the World Health Organization. Deaths related to vector-borne diseases such as malaria and dengue may also increase

Climate change can exacerbate energy insecurity through continued reliance on unsustainable fossil fuels, reduced capacities of thermal power plants due to a scarcity of cooling water, and intermittent performance of hydropower plants as a result of uncertain water discharges, among other factors

Solar Eclipse Could Wipe Out 9,000 Megawatts of Power Supplies

Posted July 14, 2017, 7:54 A.M. ET

By Naureen S. Malik

The eclipse set to darken skies next month threatens to sideline solar farms and rooftop panels in a wide swath of the U.S., wiping out enough power generation to supply about 7 million homes.

This rare event, during which the moon will completely obscure the sun, will cast a shadow along a 70-mile-wide (113-kilometer) corridor stretching from Oregon to South Carolina on Aug. 21. Based on a Bloomberg calculation of grid forecasts, more than 9,000 megawatts of solar power may go down. That's the equivalent of about nine nuclear reactors.

The impact is a testament to the ninefold increase in solar installed in the U.S. since 2012 and highlights the risks associated with relying on an intermittent resource such as the sun for power. The onslaught of wind and solar resources is already regularly contributing to wild swings in power supplies across grids, sending wholesale electricity prices below zero on some days.

On July 13, PJM Interconnection LLC, operator of the nation's largest power grid covering parts of the eastern U.S., estimated the eclipse could take out as much as 2,500 megawatts of solar

generation on its system from about 1:30 p.m. to 3:40 p.m. North Carolina and New Jersey may bear the brunt because so many panels are installed in those states. PJM said rooftop solar panels will account for 80 percent of the anticipated outages.

The duration of the eclipse (12:05 p.m. to 4:09 p.m. EDT) is too short to meaningfully boost demand for fossil fuels. But it could trigger spikes in wholesale power prices, especially since demand tends to surge in the summer as people blast their air conditioners. The last time the contiguous U.S. saw a total eclipse was in 1979, according to NASA.

"If it is sunny and all of the sudden the eclipse comes through, there may be a pricing spike in real-time" power trading, said Tom DiCapua, managing director at Con Edison Energy in Valhalla, New York.

California may see the biggest impact to solar generation as it meets about 40 percent of the state's demand on some days. The eclipse stands to dim solar radiation by about 70 percent, said Dave Quinn, a power market analyst at energy data provider Genscape Inc.

According to California's grid operator, generation from large solar farms may plunge by 70 megawatts a minute over an 82-minute period and then begin surging 90 megawatts a minute as the sun re-emerges. The market will need to fill a gap of 6,008 megawatts, Steven Greenlee, spokesman for the grid operator, said by email.

Texas's power grid operator expects the eclipse to affect about 600 megawatts of solar generation over an hour to 90 minutes. The operator of a grid that stretches from the Midwest into Louisiana estimated a potential impact of as much as 125 megawatts.

Week Ahead: New Jersey Republican Lawmaker Boosting EPA's Budget

Posted July 14, 2017, 03:57 P.M. ET

By Chuck McCutcheon

Rep. Rodney Frelinghuysen (R-N.J.) will get an initial public crack at boosting EPA spending as House Appropriations Committee chairman at a Tuesday committee markup of the fiscal 2018 budget bill, one of numerous environment and energy events scheduled for the week of July 17.

Frelinghuysen, who took over as Appropriations chairman in January, has compiled a moderate voting record since arriving in Congress in 1995, though he has grown more conservative in recent years as his caucus shifted to the right.

He worked with environmental advocates on a 2004 law to preserve land in environmentally sensitive areas of New Jersey and nearby states. He differs with some of his Republican colleagues in having said publicly that humans have "some effect" on climate change.

Frelinghuysen questioned Environmental Protection Agency Administrator Scott Pruitt at a June hearing about the Trump administration's proposed 31 percent cut to the EPA's budget. The House Appropriations' Interior, Environment and Related Agencies Subcommittee approved a spending bill

this month that would cut the EPA's budget about 7 percent.

In particular, Frelinghuysen cited his home state's large number of Superfund sites and noted that the majority of cleanup money comes not from the federal government, but from companies and other parties found responsible for contamination. He also lauded the EPA's "damn good team" serving the mid-Atlantic region.

"I think it's good to sort of move with precaution and caution before you take any, too many dramatic steps," Freylinghuysen told Pruitt.

The House subcommittee's spending bill would provide more than $1.1 billion for the Superfund program, well above the $516 million requested in Trump's budget. Pruitt told Frelinghuysen, however, that Superfund remains "absolutely a priority for this administration." Tiffany Stecker will cover the appropriations markup.

In Other News

House bills: The House is expected to consider several environment-related bills:

• H.R. 806, which would delay deadlines for the EPA's 2015 ozone standards and has drawn sharp criticism from Democrats. Catherine Douglas Moran will cover.

• H.R. 2883, which would accelerate the permitting process for cross-border pipelines, transmission lines, and other energy projects. Bloomberg BNA staff will cover.

• H.R. 2910, which would reinforce the Federal Energy Regulatory Commission's role as the lead agency for siting interstate natural gas pipelines. Bloomberg BNA staff will cover.

Senate energy bill: Senate Energy and Natural Resources Committee Chairman Lisa Murkowski (R-Alaska) will hold a Tuesday hearing to help build support for comprehensive energy legislation (S. 1460) she introduced with Sen. Maria Cantwell (D-Wash.), the committee's ranking member. The hearing will feature testimony from representatives of the American Nuclear Society, International Energy Agency, and Carmot Strategic Group. Brian Dabbs will cover.

Energy Committee nominations: The Energy and Natural Resources Committee will meet Thursday to consider six Trump administration nominees, including Mark Wesley Menezes to be undersecretary of Energy; Paul Dabbar to be Energy's undersecretary for science; David Jonas to be Energy's general counsel; and Susan Combs to be an assistant secretary of the Interior for policy, management and budget. Rebecca Kern will follow.

Electricity industry: The House Energy and Commerce's Energy Subcommittee will hold a Tuesday hearing on the state of the electricity industry. Panelists include representatives from Duke Energy Corp., NextEra Energy, and American Municipal Power Inc. Rebecca Kern will cover.

Energy technology: The House Science, Space and Technology Committee will hold a Wednesday hearing on how the private sector can commercialize next-generation energy technology to increase efficiency, environmental benefit, and consumer savings. Panelists include representatives from Oklo and AES Energy Storage. Bloomberg BNA staff will monitor.

Resources bills: The House Natural Resources Committee will hold a Wednesday hearing on five bills, including a measure (H.R. 424) that would delist gray wolves from federal Endangered Species Act protections in Minnesota, Wisconsin, Michigan, and Wyoming. Alan Kovski will track.

California cap-and-trade: California lawmakers are scheduled to vote Monday on a bill that would extend the state's cap-and-trade program for greenhouse gas emissions. The measure (A.B. 398) would preserve the basic structure of the existing trading program, which establishes declining annual caps that businesses such as oil refineries, power plants, cement producers, and distributors of natural gas and transportation fuels must meet. California's powerful environmental justice community says the bill is too friendly to the oil industry. Carolyn Whetzel will handle.

Perry at Press Club: Energy Secretary Rick Perry will speak Tuesday at the National Press Club with International Energy Agency Executive Director Fatih Birol. Perry is expected to discuss how the combination of hydraulic fracturing and horizontal drilling for oil and gas will provide energy security for the U.S., as well as trading partners and allies. Rebecca Kern will cover.

Renewable fuels: The Center for Strategic & International Studies will hold a Wednesday forum on the renewable fuel standard. Participants include representatives from Citi Research and Harvard's Kennedy School of Government. Brian Dabbs will monitor.

Children's health panel: The EPA's Children's Health Protection Advisory Committee will discuss lead emissions from aircraft fuel, lead in drinking water, chemical safety, and other issues Tuesday and Wednesday. Sylvia Carignan, David Schultz, and Pat Rizzuto will cover.

Colorado pipelines: An update on a recent flowline notice to operators will be the focus of a Colorado Oil and Gas Conservation Commission industry operations meeting on Tuesday. The commission issued the notice, which required inspections and pressure testing of underground natural gas and oil pipelines within 1,000 feet of homes and other occupied buildings, after a fatal explosion was caused by a severed natural gas line near a home in Firestone in April. Tripp Baltz will watch.

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Starbucks

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

SCOOP FROM THE BEST-IN-CLASS POLITICO HILL TEAM -- "House to vote on immigration bills next week," by Seung Min Kim and John Bresnahan: "One of the bills to see a floor vote, dubbed Kate's Law, boosts penalties for immigrants who try to re-enter the United States after being deported. It is named after Kate Steinle, a young woman who was shot and killed in San Francisco by an immigrant who had been deported repeatedly yet returned. Trump frequently discussed the killing on the campaign trail last year.

"The second is legislation that goes after so-called sanctuary cities -- localities that limit cooperation with federal immigration authorities, including by refusing to hold an immigrant in jail longer just so federal officials can pick him or her up to be deported. Sanctuary cities, usually liberal jurisdictions such as New York, have also been a major Trump target." http://politi.co/2tXevYC

THIS MORNING'S STUNNING READ -- WAPO -- "Obama's secret struggle to punish Russia for Putin's election assault," by Greg Miller, Ellen Nakashima and Adam Entous: "Early last August, an envelope with extraordinary handling restrictions arrived at the White House. Sent by courier from the CIA, it carried 'eyes only' instructions that its contents be shown to just four people: President Barack Obama and three senior aides. Inside was an intelligence bombshell, a report drawn from sourcing deep inside the Russian government that detailed Russian President Vladi-mir Putin's direct involvement in a cyber campaign to disrupt and discredit the U.S. presidential race. But it went further. The intelligence captured Putin's specific instructions on the operation's audacious objectives -- defeat or at least damage the Democratic nominee, Hillary Clinton, and help elect her opponent, Donald Trump....

"[A]t the highest levels of government, among those responsible for managing the crisis, the first moment of true foreboding about Russia's intentions arrived with that CIA intelligence.

The material was so sensitive that CIA Director John Brennan kept it out of the

President's Daily Brief, concerned that even that restricted report's distribution was too broad. The CIA package came with instructions that it be returned immediately after it was read. To guard against leaks, subsequent meetings in the Situation Room followed the same protocols as planning sessions for the Osama bin Laden raid.

"But in the end, in late December, Obama approved a modest package combining measures that had been drawn up to punish Russia for other issues -- expulsions of 35 diplomats and the closure of two Russian compounds -- with economic sanctions so narrowly targeted that even those who helped design them describe their impact as largely symbolic. Obama also approved a previously undisclosed covert measure that authorized planting cyber weapons in Russia's infrastructure, the digital equivalent of bombs that could be detonated if the United States found itself in an escalating exchange with Moscow. The project, which Obama approved in a covert-action finding, was still in its planning stages when Obama left office. It would be up to President Trump to decide whether to use the capability." http://wapo.st/2sYrs7A

Good Friday afternoon. FACEBOOK IN ASPEN - per the company: "Facebook will have a big presence at the Aspen Ideas Festival this year, including a pop-up tent in the heart of the Aspen Institute's Campus featuring a Facebook Live studio, an Oculus demo, and a Facebook Journalism Project help desk. The Live broadcasts will bring the best of Aspen Ideas to the rest of the world and encourage viewers to engage directly with conference speakers.

Attendees expected to go live from the studio include: Facebook's Head of News Partnerships Campbell Brown and Civic Engagement Product Manager Samidh Chakrabarti, Cecile Richards, Pat Mitchell, Jose Antonio Vargas, and Jean Case with The Atlantic's Steve Clemons. Visit the Facebook Journalism Project Page as the Festival kicks off for the full Live lineup here": http://bit.ly/2rY1WQE ***(Anna and Daniel will be at the festival next week. Email us at*** *anna@politico.com* ***and*** *daniel@politico.com* ***if you will be there and want to meet up.)***

DRIP DRIP -- "F.B.I. Investigating Deals Involving Paul Manafort and Son-in-Law," by NYT's Mike McIntire: "Federal investigators are examining financial transactions involving Paul Manafort and his son-in-law, who embarked on a series of real estate deals in recent years fueled by millions of dollars from Mr. Manafort, according to two people familiar with the matter.

"The transactions involve the financing of apartments and luxury homes in New York and California using money from Mr. Manafort, as well as from other investors solicited by the son-in-law, Jeffrey Yohai, including the actor Dustin Hoffman and his son. F.B.I. agents have reviewed financial records related to Mr. Yohai, who has been accused in a lawsuit of defrauding investors, the sources said. It was not clear if the F.B.I.'s interest was part of the broader investigation that has ensnared Mr. Manafort, who was President Trump's campaign chairman until he resigned last August amid reports that he had received millions of dollars in off-the-book payments for his consulting work in Ukraine." http://nyti.ms/2sYUTpX

****** **A message from Starbucks:** At Starbucks, the opportunity to nurture and inspire the human spirit is, for so many of us, what the iconic green apron represents. We continuously look for new ways to create and invest in our partners (employees), including offering access to meaningful opportunities and a full suite of benefits to those working an average of 20 hours or more a week: http://sbux.co/2rzzTGI ******

ON RUSSIA -- BRYAN BENDER in POLITICO Mag: **"How a U.S.-Russia Back Channel Came to Life":** "Inside the Russian-American room of the Russian Cultural Center, in a tony Washington neighborhood, negotiators from the American and Russian governments this week sipped wine and nibbled on caviar after spending the day trying to live up to that charge-a quaint reminder of the former Cold War rivals' warm relationship in the 1990s. Despite tense relations that President Donald Trump has said may be at 'an all-time low,' the small group of military and civilian officials exchanged closely held information that might help determine what happened to the thousands of U.S. and Russian military personnel lost in conflicts stretching from World War II to the Cold War and even the fate of a Russian pilot shot down over the Republic of Georgia in 2008.

"The so-called technical talks of the U.S.-Russian Joint Commission on POW/MIAs-the first since 2005-were the result of a surprising new level of Russian willingness to engage in recent months, according to the Americans. They were also an eerie reflection of how far the relationship has fallen since 1999, when the cultural center was dedicated." http://politi.co/2sZiU05

-- "Under pressure, Western tech firms bow to Russian demands to share cyber secrets," by Reuters' Joel Schectman, Dustin Volz and Jack Stubbs: "Western technology companies, including Cisco, IBM and SAP, are acceding to demands by Moscow for access to closely guarded product security secrets, at a time when Russia has been accused of a growing number of cyber attacks on the West, a Reuters investigation has found.

"Russian authorities are asking Western tech companies to allow them to review source code for security products such as firewalls, anti-virus applications and software containing encryption before permitting the products to be imported and sold in the country. The requests, which have increased since 2014, are ostensibly done to ensure foreign spy agencies have not hidden any 'backdoors' that would allow them to burrow into Russian systems." http://reut.rs/2tX0Dhn

GOOD NEWS -- @ABC7News: "JUST IN: Hospital says Matt Mika, lobbyist who was shot in ballpark attack, is now in good condition and was visited by #Nats Jayson Werth." http://bit.ly/2sZnWd6

PROTECTING LAWMAKERS -- "Rattled by shooting, GOP lawmakers discuss beefing up security funding," by Kyle Cheney and Rachael Bade: "In a closed-door meeting of the House Republican conference, Speaker Paul Ryan discussed beefing up

members' security budgets by as much as $25,000 apiece. Lawmakers exiting the meeting said the funds would likely help lawmakers hire personal protection, especially in districts where local police aren't able to provide round-the-clock security. The funds could also be used to help members pay for alarms in their homes or panic buttons if they're ever in physical danger. ...

"Members also discussed obtaining a blanket waiver from the Federal Election Commission permitting members to use campaign funds for security while conducting political business as well. Members can obtain individual waivers now, but lawmakers are interested in securing a broader standing waiver that wouldn't require them to individually seek FEC permission." http://politi.co/2tWRmpq

PAGING MITCH MCCONNELL -- @RalstonReports: "Here we go: Sandoval and Heller with joint presser on Medicaid today in Vegas."

THE OPPOSITION - NEERA TANDEN sat down for a POLITICO "PULSE CHECK" podcast to discuss how Democrats can seize on the GOP health bill. The head of the Center for American Progress tells POLITICO's Dan Diamond that progressives need to link themselves to Obamacare - and that even if they lose the health care battle now, they'll end up ahead. http://bit.ly/2tWtEcZ

JOE SCARBOROUGH'S BAND, Scarborough, had a release party for the new Mystified EP last night at The Cutting Room in New York. ***Pics*** http://bit.ly/2sYJLtp ... http://bit.ly/2sYtQey ... http://bit.ly/2sYMrXF ... http://bit.ly/2sYM0MX ... ***The EP*** http://bit.ly/2sZvlsl

MEDIAWATCH -- JEFF MASON, president of the White House Correspondents' Association, wrote a letter to members of the association this morning saying he met with Sean Spicer and Sarah Huckabee Sanders yesterday to talk about press briefing and gaggles. From the letter: "[W]e believe strongly that Americans should be able to watch and listen to senior government officials face questions from an independent news media, in keeping with the principles of the First Amendment and the need for transparency at the highest levels of government. ... we have urged the White House not to replace on-camera briefings with 'gaggles,' not-for-broadcast question & answer sessions. ...

"Sean and Sarah agreed to consider these positions, and the Board will follow up with them in the coming days. We are not satisfied with the current state-of-play, and we will work hard to change it. In the meantime, I have asked that reporters be able to use audio from all gaggles going forward. We will keep you posted as developments occur."

-- "Be honest: People outside a Trump rally told us why they hate the media," by Vice News' Evan McMorris-Santoro http://bit.ly/2tXfg48

OUT AND ABOUT -- Bush-Cheney alums gathered at The Ritz-Carlton for a "Portraits of Courage" book signing last night with the former president. *($21.18 on Amazon* http://amzn.to/2rZjbRv). Bush ribbed Josh Bolten, his final chief of staff, saying he "thought I was a cultural cretin and wouldn't know who Bono was when I first met him." Bush called Steve Hadley "the best NSA ever, don't tell Condi." He said he hoped PEPFAR would get funded, and spoke about the work he's doing in Africa. Bush said spending money to teach democracy "is out of fashion now" but you have to give them a way to get freedom.

Asked why he isn't speaking out against this or any president, Bush said he is "muted" because actions speak louder than words. He specifically noted his democracy fund. Bush said it is impossible to garner press coverage unless you criticize the current president. He ended by urging the crowd to not take themselves too seriously, and closed with "keep laughing and thank you for serving." ***Pics from last night's Bush-related events*** http://bit.ly/2sZeIh4 ... http://bit.ly/2sZeXIP ... http://bit.ly/2sZnLhG ... http://bit.ly/2sZq5pe

SPOTTED: Josh Bolten, Steve Hadley, Joel Kaplan, Brian McCormack, Marilyn Baker, Becky Relic, Sara Fagen, Ashley and Garrett Marquis, Jeanne Phillips, former DHS secretary Michael Chertoff, former HUD Secretary Alphonso Jackson, Chris Frech, Holly Kuzmich, Tracy Schmitt, Tony Fratto, Jeanie Mamo, Matthew Downer, Amber Downer, Tony Fratto, Stuart Siciliano, Andrew Olivastro, Valerie Boyd, Andrea Wuebker, Nate Bailey, David McFadden, ER Anderson, Emily Miller, Judy Pino, Brian Jones, Christie Parell, Col. Mark Tillman, Eryn Witcher, Rob and Tonya Klause, David and Julie Almacy, Scott and Mary Sforza, Dan Ronayne.

--SPOTTED last night at a small dinner at the new AEI building in advance of today's Bush Institute-hosted "Stand-To" for military veterans, in which more than 70 organizations are gathering to provide best practices for education, health and employment for vets: former President George W. Bush and Laura Bush, Veterans Affairs Secretary David Shulkin and Merle Bari, Steve Hadley, Rep. Francis Rooney (R-Fla.) and his wife Kathleen, Wayne and Lea Berman, William Wood, Margaret Spellings, Josh Bolten and Nick Calio.

-- EFB Advocacy hosted a party last night featuring a specially designed drink called the EGB. **SPOTTED:** John Easton, John and Kerry Feehery, Adam Belmar, Chris Brown, Carl Hulse, Julie Davis, Jared Rizzi, Alex Treadway, Mitch Bainwol, Ziad Ojakli, Meg Hauck, Katie Anderson, Lauren Maddox, John Scofield, Kate Dickens, Jill Kozeny, Lindsay Slater, Stacy Hughes, Jack Smedile, Doug Schwartz, Gayle Osterberg, Kathy Ramsey and Kris Jones.

SUNDAY PREVIEW -- MEGYN KELLY will interview J.D. Vance, the author of the best-selling "Hillbilly Elegy" on this week's "Sunday Night with Megyn Kelly." *Preview* http://nbcnews.to/2sYDFsT

-- "Food & Wine Magazine Will Leave New York for Alabama," by NYT's Stephanie Strom: "Food & Wine, the glossy, chef-focused food magazine, is moving to Birmingham, Ala., joining a stable of other publications owned by Time Inc. that includes Cooking Light and Southern Living.

Hunter Lewis, the editor of Cooking Light, will become Food & Wine's new editor in chief, replacing Nilou Motamed, who is leaving the company after a little more than a year. Ms. Motamed had taken over from Dana Cowin, who edited the magazine for more than 20 years. The magazine started in New York in 1978 as The International Review of Food and Wine." http://nyti.ms/2tXm81j

SPOTTED: Senate Majority Whip John Coryn having lunch with Sen. Dan Sullivan (R-Alaska) in the Senate dining room today ... Rep. Robert Pittenger (R-N.C.) this morning wearing a light gray suit and pink tie, typing on his phone, while waiting to board American flight 1727 from DCA to Charlotte ... Ben Jacobs, glasses intact, in the second row of coach on American flight 1849 from DCA to West Palm Beach, en route to the Michelle Fields-Jamie Weinstein wedding this weekend at The Breakers in Palm Beach ... Rep. Lois Frankel (D-Fla.) was on the same flight as Ben.

****** **A message from Starbucks:** At Starbucks, the opportunity to nurture and inspire the human spirit is, for so many of us, what the iconic green apron represents. We recognize that the *Starbucks Experience* comes to life through our partners (employees). When our partners are satisfied and engaged, the result is deeper customer connections and an elevated experience for everyone. In addition to access to meaningful opportunities and a competitive wage, our baristas working an average of 20 hours per week receive a comprehensive benefits package that includes access to affordable healthcare coverage, equity in the company in the form of stock, a 401(k) savings match, full tuition reimbursement to finish a bachelor's degree through a significant partnership with Arizona State University and other in-store discounts and offerings. http://sbux.co/2rzzTGl ******

THAT SETTLES IT! -- AP at 5:54 a.m.: "ST.PETERSBURG, Russia (AP) - Putin denies Russian state involvement in hacking, says hackers can't affect elections results abroad."

Good Thursday morning and happy first day of June. **THE PARIS ANNOUNCEMENT -- 3 P.M. TODAY -- THE BACKDROP --** President Donald Trump -- joined by Vice President Mike Pence -- will announce whether the United States will drop out of the Paris climate agreement, joining Syria, which is in the midst of a civil war, and Nicaragua, which wanted the agreement to go further in punishing nations that don't comply. Inside the White House, there is near uniform agreement Trump will pull out, but some senior aides still think Trump will try to squeeze out a "better deal" by only partially ditching the climate accord.

ANDREW RESTUCCIA and **JOSH DAWSEY -- "Inside the struggle to sway Trump on Paris:** Steve Bannon and Scott Pruitt have spent months building pressure on the president to exit the climate deal -- and trying to outmaneuver Ivanka Trump": "Donald Trump's chief strategist and EPA administrator maneuvered for months to get the president to exit the Paris climate accord, shrewdly playing to his populist instincts and publicly pressing the narrative that the nearly 200-nation deal was effectively dead - boxing in the president on one of his highest-profile decisions to date.

"Steve Bannon and Scott Pruitt have sought to outsmart the administration's pro-Paris group of advisers, including Trump's daughter Ivanka, who were hoping the

president could be swayed by a global swell of support for the deal from major corporations, U.S. allies, Al Gore and even the pope. But some of that pro-Paris sentiment wound up being surprisingly tepid, according to White House aides who had expected that European leaders would make a stronger case during Trump's trip abroad earlier this month. ...

"Some White House aides held out the prospect that the president still might take the middle course that Ivanka Trump and others had advocated -- staying in the deal while drastically scaling back the Obama administration's non-binding carbon cleanup promises. But three White House officials said Wednesday that they expect Trump to make a clean break by withdrawing from the agreement, though they noted it's possible the president changes his mind at the last minute." http://politi.co/2rsvPXM

THE NITTY GRITTY ON HOW TRUMP CAN WITHDRAW , from Dawsey and Restuccia: "If he withdraws, how will Trump do it? He could abide by the formal procedures in the underlying text of the agreement, which mandate that a formal withdrawal will not go into effect until at least Nov. 4, 2020. Or he could pull out of the United Nations Framework Convention on Climate Change, the underlying 1992 treaty that governs the negotiations, which would allow for a speedier pullout -- a far more radical step that would see the U.S. abstain from the entire climate negotiating process. He could also declare that the agreement is a treaty, which would require a two-thirds-majority ratification vote in the Senate that would certainly fail."

GOOD DETAIL, from NYT's Mike Shear and Coral Davenport: "At home, he faced urgent pleas from corporate leaders, including Tim Cook, the chief executive of Apple, who told Mr. Trump on Tuesday that pulling out was wrong for business, the economy and the environment. Elon Musk, the chief executive of Tesla, threatened to resign from two White House advisory boards if the president withdrew from the Paris agreement." http://nyti.ms/2shnrbA

--"All the ways Trump is shredding Obama's climate agenda" - Politico
http://politi.co/2qDy5MD

-- BOSTON GLOBE: "Boston scraps summit on climate with China": "The State Department-sponsored summit in Boston, revealed last June by then-secretary of state John F. Kerry, would have brought thousands of urban and business leaders to Boston from cities across the United States and China. It would have been the third such conference." http://bit.ly/2sgZTU2

ONLY IN PLAYBOOK: UNDERSTANDING TRUMP -- THE DAWSEY DOWNLOAD : "Senior administration officials told a dozen news outlets President Trump would withdraw from the Paris Accord, leaving few people completely sure he would do so. It is one of many hall-of-mirrors, sometimes head-spinning aspects of Trump's White House. Administration officials and advisers fan flames of firing officials like Sean Spicer and Reince Priebus, and even speculate on replacements, while the current aide works. As one Spicer ally recently said: 'How many times have people said he was going to be

fired? He is still at the podium.'

"Administration officials leak to the media hoping it will eventually become true and that coverage will sway Trump. White House officials sometimes don't trust one another and spread rumors. They call other aides and advisers to see what he is saying about them. And officials are contradicted by other officials -- and even Trump, who tests different strategies aloud to different people. He sometimes agrees with whoever is in the room with him. He likes to please and can dial dozens of friends in a weekend.

"So while Trump told people he was pulling out of the accord, and officials began moves to make it so, no one was exactly sure if he would change his mind before 3 p.m., when he promised a Rose Garden announcement. As one adviser he frequently speaks to said of a different issue last week: 'I heard that two days ago. That might not be true anymore.' Corey Lewandowski, Trump's first campaign manager, reminded people on the trail: The only person who speaks for Trump is Trump. It just depends who he is speaking to -- and when he is speaking."

****** **A message from Morgan Stanley:** Morgan Stanley helped First Solar raise capital to bring clean, renewable energy to new markets worldwide. Capital creates change. Read the full story at morganstanley.com/firstsolar. CRC 1678408 01/17 ******

THE STORY DRIVING NEXT WEEK -- "Comey Expected to Testify Before Senate, if He Isn't Blocked," by NYT's Matt Apuzzo and Mike Schmidt: "Senators expect the former F.B.I. director, James B. Comey, to testify next week about his conversations with President Trump, congressional officials said on Wednesday, setting up a test of the White House's willingness to cooperate with investigations into Mr. Trump's associates.

"Putting the highly anticipated hearing on the calendar would force Mr. Trump to decide whether to invoke executive privilege and try to prevent Mr. Comey from testifying. Mr. Comey is expected to be asked about several conversations he had with the president, including one in which he says Mr. Trump encouraged him to stop investigating his former national security adviser, Michael T. Flynn." http://nyti.ms/2qDSUHM

THE LATEST ON RUSSIA -- "House Russia investigators subpoena Flynn, Cohen," by Austin Wright: "The House Intelligence Committee on Wednesday approved subpoenas for former National Security Adviser Michael Flynn and President Donald Trump's longtime personal attorney, Michael Cohen, as part of the panel's investigation into Russia's meddling in the presidential election. The panel is also issuing subpoenas to businesses owned by the two men. The subpoenas to Flynn and Cohen were part of seven total subpoenas issued by the House committee on Wednesday, according to a congressional source who spoke on the condition of anonymity. Four of the subpoenas were related to the Russia probe, and three others were related to the issue of 'unmasking' - the process used by intelligence officials to learn the identities of people inside the United States who are referenced in intelligence

reports." http://politi.co/2rX1QYt

WELCOME BACK -- "Trump administration moves to return Russian compounds in Maryland and New York," by WaPo's Karen DeYoung and Adam Entous: "The Trump administration is moving toward handing back to Russia two diplomatic compounds, near New York City and on Maryland's Eastern Shore, that its officials were ejected from in late December as punishment for Moscow's interference in the 2016 presidential election. ... Early last month, the Trump administration told the Russians that it would consider turning the properties back over to them if Moscow would lift its freeze, imposed in 2014 in retaliation for U.S. sanctions related to Ukraine, on construction of a new U.S. consulate on a certain parcel of land in St. Petersburg. Two days later, the U.S. position changed. Secretary of State Rex Tillerson told Russian Foreign Minister Sergei Lavrov and Russian Ambassador Sergey Kislyak at a meeting in Washington that the United States had dropped any linkage between the compounds and the consulate, according to several people with knowledge of the exchanges." http://wapo.st/2qIWT0R

--**"Russia escalates spy games after years of U.S. neglect,"** by Ali Watkins: "In the throes of the 2016 campaign, the FBI found itself with an escalating problem: Russian diplomats, whose travel was supposed to be tracked by the State Department, were going missing. The diplomats, widely assumed to be intelligence operatives, would eventually turn up in odd places, often in middle-of-nowhere USA. One was found on a beach, nowhere near where he was supposed to be. In one particularly bizarre case, relayed by a U.S. intelligence official, another turned up wandering around in the middle of the desert.

"Interestingly, both seemed to be lingering where underground fiber optics cables tend to run. According to another U.S. intelligence official, 'they find these guys driving around in circles in Kansas. It's a pretty aggressive effort.' It's a trend that has led intelligence officials to conclude the Kremlin is waging a quiet effort to map the United States' telecommunications infrastructure, perhaps preparing for an opportunity to disrupt it." http://politi.co/2qDSyNh

COMING ATTRACTIONS -- "Benghazi investigators set for rematch on Trump-Russia scandal," by Kyle Cheney and Austin Wright: "The last time Trey Gowdy and Elijah Cummings oversaw a politically explosive investigation, the two congressmen ripped into each other on national TV, as a grimacing Hillary Clinton looked on. With Washington in the grip of a new scandal over President Donald Trump and his team's possible ties to Russia, Gowdy and Cummings appear set for a reunion that would test a deeply divided Congress' ability to hold the White House to account. ...

"The Gowdy-Cummings relationship, forged over two years as the leaders of the House Select Committee on Benghazi, is as complicated as it will be critical. It's often harder for the executive branch to ignore bipartisan requests, which was a difficult hurdle during the Benghazi probe. The two men have squabbled publicly, but when the cameras are off, both profess respect for each other and an ability to work together,

however haltingly." http://politi.co/2qJk2jD

KEN VOGEL: "We were used, abused and exploited": "As he built support for his signature political issue, Donald Trump formed a powerful partnership with a non-profit group dedicated to families of those killed by undocumented immigrants, but now some of those families are alleging they were exploited by both the non-profit group and President Trump. More than a dozen families involved in the Houston-based Remembrance Project - including two who spoke at the Republican National Convention and several more who spoke at Trump's rallies or were featured in his campaign ads -- have parted ways with the organization, according to people familiar with the situation, including six of the families." http://politi.co/2rHsXr0

PAGE SIX: "CBS scrambling to find Scott Pelley replacement": "CBS insiders say Norah O'Donnell has the gravitas for the job, but news chiefs are reluctant to take her out of 'CBS This Morning,' which she hosts alongside Charlie Rose and Gayle King, because the show is doing so well it could soon overtake NBC's 'Today' in overall ratings.

"One insider said, 'Norah would be willing to do both the evening and the morning if CBS wanted her to do so, but it would be a lot of work.' CBS News chiefs had been in talks with Willie Geist last year, but insiders said he wanted too much money to leave NBC. Other TV insiders say CNN's Jake Tapper could have been up for the role as he 'had been making it clear that he's ready for something bigger.' But Tapper, as well as Anderson Cooper, who's reported for '60 Minutes,' have long-term contracts with CNN. Plus, CBS News doesn't need to get the new evening anchor into the chair until September for the fall-ratings push." http://pge.sx/2qJ17W7

THE JUICE ...

--JOE AND MIKA will serve as visiting fellows this summer and fall at Harvard Kennedy School's Institute of Politics. They'll do a D.C. event with IOP students and alums in the "Summer in Washington" program and will go up to Cambridge in the fall to do more campus events with students. http://bit.ly/2reEdcP

-- WAPO SCOOP: The Obamas paid $8.1 million to buy the Kalorama home they've been renting from Joe and Giovanna Lockhart. Lockhart purchased the house for $5.295 million in 2014. http://wapo.st/2refFRg

-- EVERETT EISSENSTAT , the Senate Finance Committee's top Republican trade counsel, is expected to join the National Economic Council as deputy director, Adam Behsudi, Andrew Restuccia and Ben White report. http://politi.co/2rsGcLc

-- PETER J. BOYER to the Weekly Standard: "Morning Media has learned that he'll be a national correspondent at the 22-year-old conservative publication, as part of what EIC Stephen Hayes is calling a 'big staff expansion.' Boyer is an illustrious magazine veteran who has done tours at Vanity Fair, The New Yorker and Newsweek. But his

most recent job, as an editor at large for Fox News, included a brush with controversy, as it was revealed that Boyer was present for a series of 'war room' meetings in which Roger Ailes plotted a smear campaign against biographer Gabriel Sherman."

-- DAVID SUTPHEN is leaving the Brunswick Group after nearly nine years at the firm. He is joining 2U, which partners with colleges and universities to work on digital education, as chief communications and engagement officer. **George Little** will replace Sutphen as head of the Brunswick Group's D.C. office. Little joined the firm in 2015 as a partner. He previously was a Pentagon press secretary and director of public affairs and spokesman for the CIA.

THE MOMENT -- per California Playbook: Recode's Kara Swisher to Sen. Kamala Harris on stage Tuesday night at the #codecon conference in Rancho Palos Verdes: "Are you planning on running for President in 2020?" Harris: "I'm not giving that any considering. I've got to stay focused." Swisher: "That's a yes." http://bit.ly/2qEeWWK

Playbook Reads

PHOTO DU JOUR: A member of the Secret Service looks out on the North Lawn from a balcony of the White House on May 31. | Andrew Harnik/AP Photo

CLICKER - Mary Meeker's annual report -- "Internet Trends 2017 -- Code Conference" http://bit.ly/1dB4Zm9

LETHAL DUO -- ADAM NAGOURNEY and **JONATHAN MARTIN** in Vista, California: **"Democrats' Bid to Regain Hold on House Begins in California":** "If Democrats have any chance of capturing the 24 Republican seats they need to take back control of the House, the road to victory starts here in California, and particularly in Orange County, a former conservative bastion that favored Hillary Clinton in 2016. It was the first time the county had voted for a Democratic presidential candidate since Franklin D. Roosevelt in 1936.

"All 14 members of the California Republican congressional delegation voted to repeal the Affordable Care Act, including seven who, like Mr. Issa, represent districts that voted for Mrs. Clinton. Four of those come from districts that include Orange County. With its changing demographics and its declining Republican Party, California has increasingly loomed as the center of any national battle for House control. The Trump fervor this year offers an opportunity for Democrats to make the sort of congressional district gains that have eluded them even as they have come to dominate state politics over the last decade.

"At least for one election, it seems, there will be a role reversal: The state that has

long served mostly as just an A.T.M. for candidates from across the nation will be on the receiving end of campaign cash. The Democratic Congressional Campaign Committee, in an early show of force, is opening an office in Irvine. The committee's western director, Kyle Layman, is already on the scene, working at a cafe table outside a Whole Foods Market in Tustin until a lease is signed." http://nyti.ms/2sqW2mO

THE ECONOMIST WEIGHS IN ON U.K. ELECTIONS -- "Backing the open, free-market centre is not just directed towards this election. We know that this year the Lib Dems are going nowhere. But the whirlwind unleashed by Brexit is unpredictable. Labour has been on the brink of breaking up since [Jeremy] Corbyn took over. If [Theresa] May polls badly or messes up Brexit, the Tories may split, too. Many moderate Conservative and Labour MPs could join a new liberal centre party-just as parts of the left and right have recently in France. So consider a vote for the Lib Dems as a down-payment for the future. Our hope is that they become one element of a party of the radical centre, essential for a thriving, prosperous Britain." http://econ.st/2rHxOYU

2020 WATCH -- "Trump to hold reelection fundraiser in June," by Alex Isenstadt: "President Donald Trump continues to prepare for his next election - in 2020. Trump is slated to headline a Washington, D.C. fundraising dinner on June 28 that will benefit Trump Victory, a joint fundraising agreement between Trump's campaign and the Republican National Committee, according to an invitation obtained by POLITICO. Funds raised at the event will be split between the two accounts." http://politi.co/2rncyoh

-- "Biden launches PAC, keeping options open," by Isaac Dovere: Former Vice President Joe Biden will launch a new PAC on Thursday, American Possibilities, giving him a way of supporting candidates and keeping his own options open for a potential 2020 presidential run. Officially, the group will be 'dedicated to electing people who believe that this country is about dreaming big, and supporting groups and causes that embody that spirit,' according to the PAC's launch materials. Biden has hired Greg Schultz, his political director during his second term as vice president, as the executive director of the PAC." http://politi.co/2qDwana

****** **A message from Morgan Stanley:** Capital creates light in new places. Nearly a decade ago, First Solar had a bold idea: make solar power an affordable alternative to conventional energy. THE FAMILY -- "How Jared Kushner built a luxury skyscraper using loans meant for job-starved areas," by WaPo's Shawn Boburg: "Jared Kushner and his real estate partners wanted to take advantage of a federal program in 2015 that would save them

millions of dollars as they built an opulent, 50-story residential tower in this city's booming waterfront district, just across the Hudson River from Lower Manhattan. There was just one problem: The program was designed to benefit projects in poor, job-starved areas. So the project's consultants got creative, records show.

"They worked with state officials in New Jersey to come up with a map that defined the area around 65 Bay Street as a swath of land that stretched nearly four miles and included some of the city's poorest and most crime-ridden neighborhoods. At the same time, they excluded some wealthy neighborhoods only blocks away. The tactic - critics liken it to the gerrymandering of legislative districts - made it appear that the luxury tower was in an area with extraordinarily high unemployment, allowing Kushner Companies and its partners to get $50 million in low-cost financing through the EB-5 visa program." http://wapo.st/2sqUvNx

-- "Trump administration approves tougher visa vetting, including social media checks," by Reuters' Yeganeh Torbati: "Critics argued that the new questions would be overly burdensome, lead to long delays in processing and discourage international students and scientists from coming to the United States. Under the new procedures, consular officials can request all prior passport numbers, five years' worth of social media handles, email addresses and phone numbers and 15 years of biographical information including addresses, employment and travel history." http://reut.rs/2rsrX94

TRUMP'S WHITE HOUSE -- "Trump White House grants waivers of ethics rules," by Josh Gerstein: "President Donald Trump's executive order on ethics has been waived at least 11 times since the administration came into office in January, according to records the White House posted online Wednesday night. The waivers allow White House staffers to work on matters that could affect their former employers or clients or involve issues from which the aides would be normally be excluded because of past lobbying work. The waivers allow White House staffers to work on matters that could affect their former employers or clients or involve issues from which the aides would be normally be excluded because of past lobbying work." http://politi.co/2rHz1zL

-- WHO GOT THE WAIVERS: Kellyanne Conway to work with former clients, Stephen Bannon to engage with Breitbart, energy lobbyist Michael Catanzaro to work on "energy and environmental policy issues," and tax policy adviser Shahira Knight, formerly of Fidelity, to work on tax issues. Andrew Olmem, a White House economic aide, to work on finance issues although he previously lobbied for the industries, Mike Pence's chief of staff Josh Pitcock to work on issues related to Indiana and six lawyers from Jones Day, "including [Don] McGahn, were granted approval to take part in meetings with their former Jones Day colleagues relating to the firm's ongoing legal representation of Trump, his campaign and related entities."

Subject: DOE electricity, fossil picks easily clear Senate energy committee

By Darius Dixon

10/04/2017 03:03 PM EDT

The Senate Energy and Natural Resources Committee gave its support to two Energy Department assistant secretary nominees today, the panel announced.

President Donald Trump has tapped Bruce Walker to lead DOE's electricity delivery and energy reliability office, while Steven Winberg was picked to head the agency's fossil energy programs. Both were approved by the Energy committee on a voice vote.

The panel held a hearing last week to consider both nominees and was supposed to vote on them out at a Tuesday markup that was canceled Monday night.

WHAT'S NEXT: The Winberg and Walker nominations move to the full Senate but it's unclear when they will get approved.

What do worker-first policies look like?

Ryan Streeter | Forbes

With his proposal to expand apprenticeships last week, President Trump has put forward the first worker-centric policy of his administration. Carried into the White House on a wave of working-class unrest in America's heartland, the president has until now walked back his populist campaign rhetoric on trade and pushed a tax plan that is conventionally Republican. The problem with apprenticeships, though, is that alone they are too small a solution for the challenges faced by workers.

Reuters

Fighting back in the war on crime kingpins

Roger Noriega, Kirsten Madison, et al. | AEI

Transnational organized crime resides at the heart of nearly every major threat confronting the Americas today. These organizations

systematically degrade democratic institutions and the rule of law, stunting economic growth and stifling legitimate commerce and investment. The threat of transnational organized crime in the Americas requires greater focus and investment from policymakers to effectively combat illicit trafficking networks, corrupt government officials, and gang activity and violence.

Twenty20

Why calling addiction 'brain disease' is dangerous

Sally Satel and Scott Lilienfeld | The Boston Globe

At last official count, in 2015, more than 33,000 people have died from opioid painkillers, heroin, and fentanyl — twice the number killed by guns — and the number of fatalities is rising. Health officials, police, and politicians at all levels of government are desperately looking for solutions. In the medical and research communities, the dominant narrative holds that that addiction is a “brain disease.” This is the wrong approach.

Reuters

Seattle's fight for $15 is coming home to roost (2014)

Michael R. Strain | The Washington Post

A recently released report from The National Bureau of Economic Research dives into the effects of Seattle rapidly increasing its minimum

wage from $9.47 an hour to $13 over the past two years. The research finds that the average low-wage employee now takes home $125 less a month. In an article from 2014, AEI's Michael Strain predicted this policy backfiring: "a city-specific $15 per hour minimum wage is simply reckless."

Subject: POLITICO's Morning Score: GOP super PAC warns members to prep for 2018 storm — Moore scandal spills into other Republicans' campaigns — If Moore wins, Senate Republicans poised to expel

By Elena Schneider | 11/15/2017 10:00 AM EDT

With Zach Montellaro

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

DISASTER PREPAREDNESS - "GOP super PAC warns members to prep for 2018 storm," by Campaign Pro's Elena Schneider: "House Republicans' top super PAC strategist has a blunt message for some of them: Work harder in 2018, or prepare to lose next November. The group, Congressional Leadership Fund, is already fortifying weak spots in the GOP's 24-seat House majority as it builds a massive field program to defend Republican districts during the midterms. The process is expensive and time-consuming, demanding an early start - and making it clear, one year before the election, that the data-driven super PAC foresees tough races ahead in territory Republicans have held for a generation. ... But Corry Bliss, CLF's executive director, said that although most perennial battleground incumbents are suiting up for battle, not all of the Republican House members are preparing seriously for a difficult election." **Full story.**

MOORE HEADLINES, MOORE PROBLEMS - "Moore scandal spirals into other Republicans' campaigns," by Campaign Pro's Kevin Robillard: "Roy Moore's political blast radius is expanding rapidly, encompassing GOP candidates far beyond Alabama and pouring gasoline on the intense battle between establishment and nationalist Republicans. ... But beyond Alabama, Democratic groups are pressuring Republican Senate and gubernatorial candidates to go on the record about the accusations against Moore. Republicans aligned with McConnell are blaming Republicans aligned with former White House strategist Steve Bannon for the predicament, and Bannon allies are on the defensive." **Full story.**

- "Senate Republicans poised to expel Moore if he wins," by POLITICO's Seung Min Kim and John Bresnahan: "Senate Majority Leader Mitch McConnell and Senate Republicans say that Alabama Senate GOP candidate Roy Moore is virtually certain to face a formal ethics complaint - which would lead to expulsion proceedings - should he get elected next month. It's an outcome that senior Republicans say privately is all but unavoidable after the embattled Senate hopeful was accused of sexual misconduct, including with a 14-year-old girl. ... McConnell initially outlined his thinking at his weekly leadership meeting earlier this week: The majority leader said if Moore is elected next month, he expects a senator to file an ethics complaint against Moore, according to multiple sources. That process would eventually lead to a vote on expelling him." **Full story.**

- "Trump faces wrenching call on Moore," by POLITICO's Alex Isenstadt, Eliana Johnson

and Josh Dawsey: "President Donald Trump is returning from Asia to a political maelstrom in the United States - one that could force him to decide whether to push out Attorney General Jeff Sessions in a Hail Mary attempt to save the Alabama Senate seat Sessions once held." **Full story.**

- "RNC cuts off Moore," by Isenstadt: "The Republican National Committee is withdrawing its support for besieged Alabama Senate candidate Roy Moore, leaving him increasingly isolated as he confronts charges of sexual misconduct with teenagers." **Full story.**

- "Sen. Dean Heller calls for Moore to drop out of Alabama Senate race," The Las Vegas Review-Journal reported. But Heller's primary opponent, Danny Tarkanian, told the newspaper that "he didn't think Moore should drop out."

Days until the 2018 election: 356.

NET NEUTRALITY 101: The long-running fight over net neutrality, which pits telecom giants against tech companies, is heating up at the Federal Communications Commission. To understand what the fight is all about and where it's headed, check out POLITICO's latest explainer video featuring technology reporter Margaret Harding McGill and the artwork of Pulitzer Prize-winning cartoonist Matt Wuerker. Click HERE to watch.

JOHNSON AMENDMENT - "House tax bill frees churches, nonprofits from political restrictions," by Campaign Pro's Maggie Severns: "A small provision added to the House tax reform bill last week would free up churches to get more involved in politics - and could insert a massive new nonprofit loophole into the campaign finance system, some experts are warning. The addition to the bill would end a long-standing prohibition on churches, schools and charities endorsing candidates, called the Johnson Amendment, after a major behind-the-scenes lobbying campaign by religious conservatives. While the House bill has contained some Johnson Amendment language since it was introduced, the provisions were dramatically expanded last week - with little fanfare, in the final hours of a multi-day markup of the House bill - to include all nonprofits, not just religious institutions." **Full story.**

POLLING DATA - Quinnipiac, Marist polls show Democrats with double-digit edge in 2018: A pair of public polls released Tuesday shows Democrats with a double-digit edge over Republicans in the upcoming midterm elections. A Quinnipiac University poll found that 51 percent of voters want Democrats to control the House in 2018, while 52 percent said they want Democrats to control the Senate. A Marist poll found Democrats hold a 15-point edge on the generic ballot, as 51 percent of voters are opting for Democrats, while 36 percent support Republicans.

FIRST IN SCORE - Survey finds voters want bipartisanship in midterms: A Global Strategy Group poll commissioned by Center Forward found that 72 percent of nationwide voters are more likely to support a candidate who will work with both parties. Eight in 10 voters nationally also said they strongly agree that they wanted members of Congress to work together, while 91 percent of voters called Congress "dysfunctional." The poll also found House leaders in both parties to be unpopular with 54 percent of voters disapproving of both Speaker Paul Ryan and Minority Leader Nancy Pelosi. **Check out the full polling memo here.**

FROM THE COURTROOM - "No verdict in Menendez case, jury will resume deliberations Wednesday," by POLITICO New Jersey's Matt Friedman: "Jurors in the federal corruption trial of Sen. Bob Menendez went home Tuesday without reaching a verdict, a day after telling the court they were deadlocked on all charges. Jurors sent no notes and asked no questions during their five-and-a-half hours of deliberations on Tuesday, giving no clue as to whether they were any closer to reaching a verdict on the 12 counts against Menendez, a Democrat and New Jersey's senior senator, and the 11 counts against his co-defendent, Florida eye doctor Salomon Melgen." **Full story.**

CODA - QUOTE OF THE DAY: "Good luck." - Ed Gillespie's campaign manager, Chris Leavitt, said, referring to Republicans running in 2018, The Richmond Times-Dispatch reported.

Regulatory Update

AIR
Fees
California Regions AIR

Final rule of the South Coast Air Quality Management District amends Regulation III, Rules 301 through 315 (nonconsecutive), to increase fees to correspond to the 2016 California consumer price index increase of 2.5 percent, effective July 1, 2017. The rule also increases Title V annual operating permit renewal and permit processing fees by an additional 16 percent above the CPI for the next two fiscal years. In addition, the rule increases annual operating permit renewal, permit processing and plan fees for non-Title V facilities by 4 percent above the CPI for the next two fiscal years. Finally, the rule updates and clarifies references, removes obsolete provisions, makes technical corrections, and extends certain due dates. The rule is effective July 1, 2017. New Jersey

AIR
Air Pollution Control
New Jersey AIR

Proposed rule of the Department of Environmental Protection, Division of Air Quality, amends regulations under NJAC 7:27-8.1 through :27-22.33 (nonconsecutive) and :27A-3.10 and repeals regulations under NJAC 7:27-34 concerning air pollution control requirements for t-butyl acetate emissions. The rule discontinues t-butyl acetate emissions reporting requirements for the air permitting and gasoline transfer operations standards and deletes related penalties to reflect Feb. 25, 2016, EPA amendments to 40 CFR 51.100. The rule will be submitted to the EPA as a revision to the state implementation plan. A hearing is scheduled for Aug. 24, 2017, in Trenton. Comments are due Sept. 1, 2017. Contact: Alice Previte; DEP; 609-292-9398

—New Jersey Register (07/03/2017)

Regulatory Update

AIR
Technical Manuals for Control of Air Contaminant Emissions
New Jersey AIR

Notice of the Department of Environmental Protection, Division of Air Quality, announces the withdrawal of the state-of-the-art technical manuals for the control of air contaminant emissions from petroleum refineries, degreasers, and other solvent-based metal surface cleaners and nonhazardous onsite remediation processes. The department has determined that the manuals no longer satisfy applicable requirements under NJAC 7:27-8.12 for preconstruction permits for minor facilities and NJAC 7:27-22.35 for operating permits for major facilities. The department also is updating the effective dates for five other state-of-the-art technical manuals for the control of air contaminant emissions. Comments are due Aug. 2, 2017. Regulatory Update

AIR
SIP Revision/Warren County Sulfur Dioxide Nonatttainment Area
Pennsylvania AIR

Notice of the Department of Environmental Protection announces a proposed revision to the state implementation plan (SIP) regarding the Warren County nonattainment area for the 2010 one-hour sulfur dioxide national ambient air quality standards (NAAQS). The SIP revision sets forth a base-year emission inventory, reasonable further progress toward attainment, reasonably available control measures/technology, dispersion modeling demonstrating attainment in 2018, an approved new source review program, and contingency measures. The department has drafted a consent order and agreement with United Refining Co. to incorporate control measures, emission limits, and contingency measures applicable to its facility into a federally enforceable vehicle. The revision will be submitted to the EPA for approval. A hearing is scheduled for Aug. 2, 2017, in North Warren. Comments are due Aug. 4, 2017. Contact: Roma Monteiro; DEP; 717-787-9495; rmonteiro@pa.gov

Subject: Playbook Power Briefing, presented by Hewlett Packard Enterprise: HOUSE passes debt ceiling/hurricane aid/government funding deal -- TRUMP: 'Sorry, Republicans' -- JOE BIDEN'S daughter says she hopes he runs in 2020

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Hewlett Packard Enterprise

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

MUST-READ STORY -- BLOOMBERG BNA'S JONATHAN NICHOLSON: "Spring 2018 likely for next debt vote but election season possible": "The good news for lawmakers: Under the Harvey aid package that passed the Senate Sept. 7, they won't have to vote on the debt limit again until 2018-with early estimates that the next debt vote will be in the spring.

"The bad news for lawmakers : There's an outside chance a vote will take place a few months ahead of the midterm elections. ... While the legislation temporarily suspends the debt limit through Dec. 8 -- resetting it at a higher level Dec. 9 to include debt issued while the debt limit was not in effect -- allows Treasury to reset its 'extraordinary measures' that give it some extra borrowing capacity, and thus extra time, once it nears the debt limit. The actual amount of time granted by the extraordinary measures will depend on various factors, including Treasury's borrowing patterns, incoming receipts and the government's rate at which it burns through cash.

"There is a small but real chance that extraordinary measures might meet the Treasury's needs through the April 15 tax date. If that happens, the debt ceiling debate could stretch all the way to August or even September,' Lou Crandall, chief economist with analytical firm Wrightson ICAP, told Bloomberg BNA." http://bit.ly/2eLxRKY

Good Friday afternoon.

THE NEW ALLIANCE, CEMENTED -- THE HOUSE PASSED the debt ceiling/government funding/hurricane Harvey relief deal 316-90. All 90 of the no votes came from the Republican party.

-- BEHIND THE SCENES, REPUBLICANS FUME -- Rachael Bade and Kyle Cheney: "It was supposed to be a call to unity. Treasury Secretary Steven Mnuchin and Office of Management and Budget Director Mick Mulvaney joined a closed-door GOP conference meeting Friday to try to rally wary Republicans around a debt ceiling bill they hated.

"But the huddle quickly went off the rails when Rep. Tim Walberg stood up to say President Donald Trump needed to play more with the team. The Michigan Republican said he was all for bipartisanship. But he argued that Trump shouldn't have blindsided the conference the way he did when he struck a deal with Democratic leaders Nancy Pelosi and Chuck Schumer, undercutting GOP leaders. And the room booed when Mulvaney and Mnuchin refused to commit to spending cuts during the next debt ceiling debate - and then asked for their vote on the current legislation." http://politi.co/2gPtAH1

'REPUBLICANS, SORRY' -- FROM THE WHITE HOUSE -- @realDonaldTrump at 8:34 a.m.: "Hurricane Irma is of epic proportion, perhaps bigger than we have ever seen. Be safe and get out of its way, if possible. Federal G is ready!" ... **at 8:37 a.m.:** "Our incredible U.S. Coast Guard saved more than 15,000 lives last week with Harvey. Irma could be even tougher. We love our Coast Guard!" ... **at 8:41 a.m.:** "Republicans, sorry, but I've been hearing about Repeal & Replace for 7 years, didn't happen! Even worse, the Senate Filibuster Rule will...." ... **at 8:46 a.m.:** "...never allow the Republicans to pass even great legislation. 8 Dems control - will rarely get 60 (vs. 51) votes. It is a Repub Death Wish!" ... **at 8:57 a.m.:** "Republicans must start the Tax Reform/Tax Cut legislation ASAP. Don't wait until the end of September. Needed now more than ever. Hurry!"

-- HOLD YOUR HORSES, MR. PRESIDENT. There are roughly 45 legislative days until the end of the year. A chunk of December will be eaten up by another government-funding and debt-ceiling fight that you just set up. Congress hasn't passed a budget. That's a multi-week affair, at best. ... **AND BY THE WAY:** There is no appetite to change the Senate's rules.

WHAT KEVIN MCCARTHY IS READING -- "SAN FRANCISCO (AP) - Federal audit says $84 million in U.S. taxpayer funds were used improperly for planning California water tunnel project."

WEATHER GURU STEVE SHEPARD SPEAKS! -- Irma has weakened slightly in the past 24 hours and now has maximum sustained winds of 150 mph. That's roughly the intensity at which the National Hurricane Center expects the storm to make landfall late Saturday or early Sunday. To put that in perspective, that's about on par with Hurricane Andrew's intensity upon landfall near Homestead in 1992, and 20 mph stronger than Hurricane Harvey when it came ashore in Texas last month.

The latest forecast (http://bit.ly/2gPPrSj) at 11 a.m. jogged ever-so-slightly westward - but regardless of whether the ultimate track of Irma runs up I-95, I-75 or somewhere in between, Irma is going to spread extreme winds, deadly storm surge, flooding rains and tornadoes over much of the Florida peninsula. The strongest winds will be over South Florida - especially overnight Saturday into Sunday -- but even parts of North Florida could see hurricane-force winds Sunday night and Monday as Irma heads north. Tropical-storm conditions will begin over South Florida tomorrow, so today is the final day for residents to finish their preparations to protect life and property.

-- "Jeb Bush praises Trump's leadership handling hurricanes," by CNN's Ashley Killough: "Jeb Bush offered some rare praise Friday for President Donald Trump and the way he's handling two back-to-back hurricanes. 'President Trump has done a good job keeping, showing his concern for the victims of Harvey and I'm sure he'll do the same (for Irma),' the former two-term Florida governor said on CNN's 'New Day.' 'The key, though, is to make sure Washington's here for the long haul, for the long-term recovery of our state.' The intense hurricane season is all too familiar for Bush, who dealt with the catastrophic storm seasons of 2004 and 2005, in which eight hurricanes and four tropical storms slammed into Florida." http://cnn.it/2gPhFcm

REMEMBER THE ELECTION INTEGRITY COMMISSION? -- "Election Integrity Commission members accuse New Hampshire voters of fraud," by WaPo's Dave Weigel: "Days before they meet in New Hampshire, members of the White House's Election Integrity Commission have seized on a report about same-day registration to allege that massive fraud might have swung the state's 2016 vote. Both voters and election experts say the allegation -- accusing thousands of voters of criminal activity simply for living in New Hampshire but holding out-of-state driver's licenses -- are baseless.

"The accusation arose Thursday morning, when Shawn Jasper, the speaker of New Hampshire's Republican-run House of Representatives, released data on same-day registrants that he'd obtained from the secretary of state's office. In November 2016, 6,540 voters had registered to vote on Election Day. As of Aug. 30, just 1,014 of those voters had obtained a New Hampshire drivers license. A few hundred voters did not obtain state licenses but had registered cars in the state. That was enough for Jasper to allege thousands of fraudulent votes - and for Kansas Secretary of State Kris Kobach, the vice chairman of the commission, to flatly allege that fraudulent voters might have stolen the state's four electoral votes and a U.S. Senate seat away from Republicans. ...

"Kobach apparently made no attempt to contact voters who'd cast ballots but held out-of-state IDs. Thursday night, The Washington Post asked voters who'd done so to tell their stories; three did so within 60 minutes -- college students, who were living in New Hampshire but did not change their licenses." http://wapo.st/2xidyAb ... ***Kobach's evidence free column in Breitbart*** http://bit.ly/2xie9Sr

Military Climate Study Survives With Crucial House GOP Votes

Posted July 14, 2017, 12:14 P.M. ET

By Dean Scott

A small but growing number of climate-friendly House Republicans scored their first big victory July 13 when 46 of them joined Democrats to defend language in a defense spending bill highlighting national security concerns posed by climate change.

Republican Reps. Scott Perry (Pa.) and Ken Buck (Colo.) were confident their amendment to strike the the climate change language from the fiscal year 2018 Defense Department spending bill would prevail, given a string of Republican victories that have derailed climate funding and policies in recent years. But their amendment, which appeared to have sailed through an afternoon voice vote, fell to defeat by a vote of 185–234 in a recorded vote. A small but growing coalition of Republicans in favor of climate action joined all Democrats in defeating the measure.

The debate was over a section that would put the House on record in viewing climate change as a "direct threat" to U.S. national security and refers to ways in which increasing temperatures, droughts, and other climate impacts may already be contributing to conflicts around the world. It also directs the Defense Department to compile a sort of top 10 list of U.S. military installations within each branch of the military that are most vulnerable to sea-level rise and other climate impacts.

Buck, who co-sponsored the amendment targeting the section, told Bloomberg BNA before the vote that he recognizes that the climate is changing, but is skeptical that the impacts will be as grave over the coming decades as some scientists predict.

"The issue here is whether we need to spend money on climate change in the Department of Defense," he said, arguing that the money would be better spent addressing backlogs in maintenance for U.S. Navy planes and other defense needs.

"I think we have better priorities, and I want to make sure that we fund the core mission," of U.S.

defense, he said.

Trump Picks Lawyer for Energy Regulator Crippled Without Quorum

Posted July 14, 2017, 7:37 A.M. ET

By Catherine Traywick

President Donald Trump named attorney Kevin McIntyre as his pick for chairman of the Federal Energy Regulatory Commission, paving the way for the agency to regain its authority to rule on natural gas pipelines and contested utility mergers.

McIntyre, co-head of Jones Day's global energy practice, would take the reins from acting chairman Cheryl LaFleur and is the third Republican Trump has named to the commission, according to a July 13 statement from the White House. In May, Trump named Neil Chatterjee, senior energy adviser to Senate Majority Leader Mitch McConnell, and Robert Powelson, former chairman of the Pennsylvania Public Utility Commission, to fill the remaining two seats on the commission.

Trump has been under pressure to fill three vacancies on the panel following the February resignation of former chairman Norman Bay, whose departure left the commission without the quorum it needs to make major decisions. Until new commissioners are confirmed, the agency can't approve multibillion-dollar natural gas pipelines, potentially stalling a massive expansion of the U.S. gas pipeline network brought on by the shale boom.

More than $50 billion worth of project applications are pending before the commission, including an application for the $2 billion Nexus gas line in the Midwest, which is scheduled to start by year-end. Other issues awaiting agency action are a proposed rule on commercial battery storage, and a decision on the commission's income tax allowance policy for pipelines run by master limited partnerships.

"They've got a hell of a mess to clean up," former commission member Marc Spitzer said of the candidates. "There's several months of backlog. They'll be drinking from a fire hose."

Energy Practice

At Jones Day in Washington, McIntyre represents companies in cases involving energy markets, utilities and oil and gas pipeline regulations. His global energy practice focuses on compliance and enforcement, and energy marketing and trading among other issues, according to the firm's website.

Chatterjee and Powelson are still waiting for a Senate floor vote to confirm their nominations. During a committee hearing, both nominees expressed limited support of state subsidies for ailing nuclear plants, an issue that has drawn controversy across the power industry. Once confirmed, the commissioners would have to rule on cases challenging those subsidies, as well as determine whether the agency should issue new rules addressing their impact on wholesale markets.

The commission normally consists of five members who serve five-year terms. Right now, it's made up of one. LaFleur, a Democrat and former utility executive, has been on the commission since 2010. The term of another commissioner, Colette Honorable, a Democrat who previously served as chair of the Arkansas Public Service Commission, ended in June.

Soil Removal Necessary at Colorado Smelter Site, EPA Says

Posted July 14, 2017, 03:16 P.M. ET

By Tripp Baltz

Eighteen inches of soil contaminated with lead and arsenic need to removed to protect residents near a Pueblo, Colo., Superfund site, the EPA said.

Indoor dust cleanups also will be part of the remedy, the agency said July 14 in its proposed plan to address contaminated soils—including transported slag—and dust contamination at homes within the Colorado Smelter Superfund site. A public comment period on the plan began July 14 and ends Aug. 14, the EPA said.

The facility was a silver and lead smelter operated by ASARCO south of downtown Pueblo from 1883 to 1908. The EPA listed the site on the National Priorities List in December 2014 due to concern about high levels of arsenic and lead identified in the slag and neighborhood soils.

"EPA believes this early interim action is necessary because data collected from May 2015 through June 2016 show there is an increased risk of exposure to elevated levels of smelter-related lead and arsenic in residential soils and indoor dust at some homes," the agency said in its proposed plan.

Brazil Projects Rapid Growth in Wind and Solar by 2026

Posted July 14, 2017, 12:41 P.M. ET

By Michael Kepp

Brazil's latest 10-year energy expansion plan sees wind power doubling to a 13 percent share of the electricity matrix, while solar power stands to also gain a foothold.

The country's Mines and Energy Ministry unveiled July 10 its 269-page 10-year energy expansion plan, one that includes both electricity and combustion-fuel energy generation through 2026.

Increased wind and solar power capacity would offset decreased hydropower capacity by the end of 2026, according to the plan. But, wind and solar associations have even more optimistic projects for sector growth through 2026.

Rodrigo Lopes Sauaia, executive director of the Brazilian Photovoltaic Solar Energy Association (Absolar) told Bloomberg BNA July 13, that the government's latest 10-year energy expansion plan's projections for solar power growth "are conservative."

Absolar projects that if the government follows Absolar's investment recommendations, large-scale solar power could have an installed capacity of 14,000 megawatts by 2026, compared to 9,660 megawatts in the government's plan. Reaching this projection would require 70 billion reais ($21.8 billion) worth of investments, compared to 50 billion reais ($15.6 billion) in the government's plan, Lopes Sauaia said.

"Solar polar is growing in Brazil in part because solar equipment prices are rapidly declining making

solar power more competitive with other energy sources," Lopes Sauaia said. "That's is why we are even more optimistic about such growth potential than the government, now trying diversify the electricity matrix to include a greater share of power from non-hydro renewable sources, another reason for solar power's projected growth here."

Renewables could offset a decade-long decrease in hydropower installed capacity, which will drop from 69 percent of the electricity matrix in 2016 to 56 percent in 2026. Hydropower generation will drop because over 80 percent of its remaining potential is in the Amazon where impacts caused by dam reservoirs' flooding parts of rainforests, some of them protected, will make it increasingly hard to get licenses from environmental agencies.

Wind power—which in 2016 accounted for 6.7 percent (10, 025 megawatts) of the electricity matrix—would account for 13 percent (28,470 megawatts) in 2026. The plan also said that large-scale (non-rooftop) solar power, which accounted for .01 percent (21 megawatts) of the electricity matrix in 2016 would account for 4.5 percent (9,660 megawatts) of the matrix in 2026.

Elbia Gannoum, president of the Brazilian Association of Wind Power Producers (Abeeolica), told Bloomberg BNA July 13, that the energy expansion plan's wind growth projections were just below Abeeolica's.

"The energy expansion plan projects that 1,800 megawatts per year of wind power will be added to the electricity matrix by 2026, just below the 2,000 megawatts per year that Abeeolica estimates," said Gannoum. "And according to our estimates such wind power growth will require 50 billion reais ($15.6 billion) in investments by 2026."

Brazil to Loan $625M to States, Cities to Upgrade Sanitation

Posted July 14, 2017, 10:53 A.M. ET

By Michael Kepp

Brazil will provide 2 billion reais ($625 million) in low-cost loans to states and municipalities that most urgently need to upgrade basic sanitation, in particular water and sewage treatment, a ministry official told Bloomberg BNA.

The Cities Ministry—which announced the financing July 12—will analyze project proposals and the level of debt of the cities and states requesting the loans, Sergio Wippel, director of the Cities Ministry department that finances basic sanitation projects, said July 14.

"States and municipalities with a low percentage of households whose water and/or sewage is being treated will be given financing preference because they are in the most urgent need," Wippel said. "But states and municipalities that don't have exceedingly high levels of debt, and thus don't represent high loan-payback risk, will also be given financing preference."

The ministry will decide on the recipients by March 2018 and will disburse loans between March 2019 and March 2020, Wippel said. The last time the ministry offered states and municipalities basic sanitation financing was in 2013.

Around 45 percent of the ministry's financing will go to boost water and sewage treatment. The rest will go to install landfills and incinerators for disposing of residential solid waste, and construct storm drains, among other projects, Wippel said.

Daimler Says It's Ready to Fight Emissions Cheating Accusations

Posted July 14, 2017, 10:44 A.M. ET

By Elisabeth Behrmann and Chad Thomas

Daimler AG said it would push back against allegations that it manipulated emissions in its Mercedes-Benz engines, as a German government probe into the luxury-car maker deepens.

"We would employ all legal means" to defend against any accusation by the Federal Transport Motor Autority of an illegal defeat device in Mercedes-Benz cars, the company said in an emailed statement. Daimler was responding to an article in Der Spiegel which said government examiners suspect that such a device was built into some vehicles.

Daimler's statement comes a day after top executives were summoned for a special meeting to Berlin to discuss an ongoing probe into the carmaker's engines, and hours after the German government said it would expand its examination to include additional models.

The Federal Motor Transport Authority, or KBA, which is also looking into potential emissions violations at other carmakers, will oversee these additional tests, Transport Ministry spokesman Ingo Strater told reporters in Berlin July 14. Details emerged July 13 that two engines used in Daimler's Mercedes-Benz cars were being scrutinized by Stuttgart prosecutors as part of an investigation they opened in March.

"The KBA is testing vehicles from Daimler, just as it has done with other manufacturers in the past ," Strater said.

Germany's scrutiny of Daimler deepens concerns that defeat devices used to cheat on emissions tests were used more widely than initially thought. Volkswagen in September 2015 was the first manufacturer to be caught using the technology in 11 million cars.

Engines Scrutinized

At Daimler, German prosecutors are focused on two diesel motors built between 2008 to 2016 that are used across Mercedes's product lineup, according to a person familiar with the investigation. Details about the engines in question were contained in a search warrant used to conduct raids at Daimler sites in May.

"For us, the discussion was a continuation of the constructive dialog with the KBA," Daimler said in the statement. "Of course we will continue to work constructively with the authorities."

Talks didn't include threats of a recall, Daimler said. German automakers last year agreed with authorities on a voluntary fix involving 630,000 cars to upgrade emissions control setups.

After the revelation of the new details, South Korea's environment ministry started a probe into some imported Mercedes vehicles, Yonhap news agency reported. The ministry found about 40 types of cars suspected of carrying a device manipulating emissions and is investigating how many of these cars have been sold in the country, according to unidentified official.

"It's quite disconcerting that this investigation is happening and the accusations are serious," Baden-

Wurttemberg state Transport Minister Winfried Herrmann told Deutschlandfunk radio. "We need unreserved clarification of the whole process and responsibilities."

The July 13 meeting at the ministry included the head of technology development Ola Kaellenius, who reiterated that the company complied with existing rules, according to a ministry statement. EU emissions rules allow for companies to reduce the degree to which exhausts are treated, if deemed necessary to protect the engine in tough driving conditions like low temperatures or high altitude.

Loose Regulations

While reports about 1 million diesel cars at risk of decommissioning because of emissions violations "look bad," according to a note from Citigroup analyst Mike Tyndall, they're not "a new development as such and we take comfort from Daimler's continued assertion that its vehicles comply with the relevant, albeit somewhat loose regulations."

As part of its efforts to clear up mounting questions about the reliability of emissions controls in diesel cars, the Transport Ministry is due to meet manufacturers on meet Aug. 2 to discuss steps to clean up older vehicles that use diesel technology, including software updates. A number of cities, including the respective hometowns of BMW AG and Daimler have considered banning older diesel cars.

KBA has also looked into potential emissions violations at Volkswagen AG's Audi, Fiat Chrysler Automobiles NV and General Motors Co.'s Opel.

Germany to Test More Daimler Vehicles in Diesel Emissions Probe

Posted July 14, 2017, 9:51 A.M. ET

By Elisabeth Behrmann and Chad Thomas

The German government said it will test additional vehicles made by Daimler AG, a day after company executives were summoned to Berlin for an extraordinary meeting about the ongoing probe into the carmaker's diesel emissions.

The Federal Motor Transport Authority, or KBA, which also is looking into potential emissions violations at other carmakers, will oversee the tests, Transport Ministry spokesman Ingo Strater told reporters in Berlin July 14. On July 13, details emerged that two engines used in Daimler's Mercedes-Benz cars were being scrutinized by Stuttgart prosecutors as part of an investigation they opened in March.

"The KBA is testing vehicles from Daimler, just as it has done with other manufacturers in the past ," Strater said.

Germany's scrutiny of Daimler deepens concerns that defeat devices used to cheat on emissions tests were used more widely than initially thought. Volkswagen in September 2015 was the first manufacturer to be caught using the technology in 11 million cars. At Daimler, German prosecutors are focused on two diesel motors built between 2008 to 2016 that are used across Mercedes's product lineup, according to a person familiar with the investigation.

Officials from the Transport Ministry on July 13 met with Daimler representatives, including the head of technology development Ola Kaellenius, who reiterated that the company complied with existing rules, according to a ministry statement.

"For us, the discussion was a continuation of the constructive dialogue with the KBA," Daimler said in an emailed statement, declining to say what was discussed. "Of course we will continue to work constructively with the authorities."

As part of its efforts to clear up mounting questions about the reliability of emissions controls in diesel cars, the Transport Ministry is due to meet manufacturers on meet Aug. 2 to discuss steps aimed at cleaning up older vehicles that use diesel technology, including software updates.

KBA has also looked into potential emissions violations at Volkswagen AG's Audi, Fiat Chrysler Automobiles NV and General Motors Co.'s Opel.

Big Oil Just Woke Up to Threat of Rising Electric Car Demand

Posted July 14, 2017, 9:40 A.M. ET

By Jessica Shankleman

The world's biggest oil producers are starting to take electric vehicles seriously as a long-term threat.

OPEC quintupled its forecast for sales of plug-in EVs, and oil producers from Exxon Mobil Corp. to BP Plc also revised up their outlooks in the past year, according to a July 14 study by Bloomberg New Energy Finance. The London-based researcher expects those cars to reduce oil demand 8 million barrels by 2040, more than the current combined production of Iran and Iraq.

Growing popularity of EVs increases the risk that oil demand will stagnate in the decades ahead, raising questions about the more than $700 billion a year that's flowing into fossil-fuel industries. While the oil producers' outlook isn't nearly as aggressive as BNEF's, the numbers indicate an acceleration in the number of EVs likely to be in the global fleet.

"The number of EVs on the road will have major implications for automakers, oil companies, electric utilities and others," Colin McKerracher, head of advanced-transport analysis at BNEF in London, wrote in a note to clients. "There is significant disagreement on how fast adoption will be, and views are changing quickly."

BNEF expects electric cars to outsell gasoline and diesel models by 2040, reflecting a rapid decline in the cost of lithium-ion battery units that store power for the vehicles. It expects 530 million plug-in cars on the road by 2040, a third of worldwide total number of cars.

The Organization of Petroleum Exporting Countries raised its 2040 EV fleet prediction to 266 million from the 46 million it anticipated a year ago. Battery cars under the new projection account for 12 percent of the market within 23 years, compared to 2 percent in the 2015 forecast. Based in Vienna, the group representing 14 nations expects half the number of diesel vehicles as it did a year ago.

Others making similar expectations according to the BNEF note include:

• The International Energy Agency more than doubled its central forecast for EVs, raising its 2030 EV fleet size estimate from to 58 million from 23 million,

• Exxon Mobil boosted its 2040 estimate to about 100 million from 65 million,

• BP anticipates 100 million EVs on the road by 2035, a 40 percent increase in its outlook compared with a year ago,

• Statoil ASA, the Norwegian state oil company, says EVs will account for a 30 percent of new sales by 2030.

Just a fraction of the world's cars sold today are powered by batteries instead of gasoline. Many analysts increasingly say the market will expand rapidly as almost all major auto makers bring dozens of new EV models to market. OPEC said in its oil market report on July 12 that electric vehicle sale targets could dampen demand in some parts of Asia as soon as 2018.

Long-term growth depends on a wide range of factors, including policy decisions by governments seeking to tackle air pollution to the cost of the lithium-ion batteries that account for about a third of the cost of each one.

Yet even as oil majors lift their outlook, they remain much less optimistic than the automakers. The world's top automakers have a combined plan to sell 6 million EVs a year by 2025, rising to 8 million in 2030, according to Bloomberg New Energy Finance.

Some big companies plan to go all electric. Volvo AB expects to have an electric motor in every car by 2019. It joins Elon Musk's Tesla Inc. as a major EV maker and Geely Automobile Holdings Ltd., the Hong Kong-based maker of London's black cabs, which is re-branding itself to focus on EVs.

"What oil companies and car companies are saying is diverging," said McKerracher, the BNEF analyst. "This is a trillion dollar question, and somebody is going to be wrong."

U.S. Said to Stymie Japan's Plan to Explore for Russian Oil

Posted July 14, 2017, 10:13 A.M. ET

By Jack Farchy

A Japanese group's plans to explore for Russian oil with state-run Rosneft PJSC have been stymied by U.S. intervention over sanctions, according to people familiar with the matter.

Washington's objection to the Japanese project to explore for oil in the ocean off Russia's Far East shows the U.S. Treasury is maintaining a firm line on sanctions, even as some international companies press on with Russian energy deals. In April, the U.S. turned down a request from ExxonMobil Corp. for a waiver to allow it to drill with Rosneft in the Black Sea.

Rosneft signed a preliminary deal with a Japanese consortium of Japan Oil, Gas & Metals National Corp., known as Jogmec, Inpex Corp., and Marubeni Corp. for offshore exploration at a license to the south west of Sakhalin Island in December, one of more than 60 agreements and memorandums signed during Russian President Vladimir Putin's visit to Japan.

However, since then the U.S. government has objected to the project, according to two people familiar with the discussions who asked not to be identified discussing a sensitive matter.

Washington's Allies

The U.S. objection to the project is based on the principle that Washington's G7 allies should not "backfill" the sanctions by allowing their companies to carry out projects that U.S. companies would be prohibited from working on. Tokyo's position is that the project with Rosneft does not represent backfilling, since the Japanese consortium was not competing with U.S. companies, according to one of the people.

As well as political pressure from its closest ally, Japan also risked falling foul of U.S. sanctions on Russia that prevent foreign companies exploring in deepwater with equipment that is 25 percent or more originated in the U.S.

The Japanese project's struggles come as U.S. lawmakers are working on new sanctions targeting energy projects in Russia. The measures were passed almost unanimously by the Senate last month, but are currently stalled in the House.

Japan's Ministry of Economy, Trade and Industry declined to comment. The U.S. Treasury Department didn't respond to requests for comment.

While the Japanese consortium joins Exxon in being frustrated by sanctions, some Chinese, Indian and European companies are pressing ahead with projects in Russia. China's Beijing Gas Group last month completed a $1.1 billion deal to buy a stake in Rosneft's Verkhnechonskneftegaz unit. Italy's Eni SpA is set to start exploration drilling with Rosneft in the Black Sea this summer, Rosneft Chief Executive Igor Sechin said in May.

Deep Water

The license area due to be explored by Rosneft and the Japanese group—which the companies did not name but can be identified as Central Tatarsky by maps they published—includes areas deeper than 500 feet (152 meters). They are subject to U.S. sanctions on the provision of equipment and services to Russian deepwater oil projects, the people said.

A spokesman for Inpex wasn't immediately able to comment. Marubeni and Jogmec declined to comment citing a confidentiality agreement. Rosneft also declined to comment.

Sechin said last September that Rosneft planned to carry out 2D and 3D seismic surveys at the Central Tatarsky license starting in summer 2017. The Japanese consortium had planned to use Shigen, a seismic vessel owned by the Japanese Ministry of Economic, Trade and Industry, to carry out the research, Jogmec said in a December statement. As of July 13, the vessel was off the east coast of Japan, on its way to the west coast port of Nigata, according to ship tracking data.

The U.S. intervention is a blow to Japanese hopes of converting warmer relations between Prime Minister Shinzo Abe and President Putin into economic gains. The Japanese companies said in a joint statement in December that they expected "to strengthen Japan-Russia economic cooperation through this joint project."

In the past three years, Tokyo has attempted to take a diplomatic line that supports its western allies

without alienating Moscow. It imposed some sanctions on Russia in 2014 but stopped short of the wide-ranging restrictions on the financial and energy sectors that have been imposed by the U.S. and EU.

The Japanese and U.S. governments are still negotiating and may yet find a way for the project to go ahead, the people said. Some of the license lies in waters shallower than 500 feet, which is not classified as deepwater under the sanctions. A Japanese government official said that all Japanese projects would comply with sanctions.

Carbon from L.A. to Paris Jumps as Lawmakers Plan Tightening

Posted July 14, 2017, 10:33 A.M. ET

By Mathew Carr, Joe Ryan and Marine Strauss

Carbon prices from California to New Zealand are soaring as lawmakers across the globe seek more stringent rules for their greenhouse-gas markets.

California emission permits surged to a four-year high this week after Gov. Jerry Brown (D) published a plan to extend the biggest U.S. carbon trading program. In Europe, allowances reached their highest level since March as politicians debate proposals to cut a permit glut, while New Zealand carbon contracts rose before a review of its system.

Most countries are looking for the most cost-effective way to switch from the fossil fuels blamed for climate change. Even in the U.S., President Donald Trump's decision last month to pull out of the landmark Paris accord on cutting emissions triggered widespread condemnation by civic and state leaders across the country including from the governors of New York and Massachusetts.

China is planning to install the world's largest carbon market this year, though it's seen phasing in industries over time to smooth the impact on the economy. The biggest energy consumer burned the least coal in six years in 2016, became the number one producer of renewable energy and even lowered its emissions of climate-warming gases, BP Plc data show.

"There seems to be a clearer political will to lift carbon prices," said Ingo Ramming, the London-based co-head of commodity solutions for Commerzbank AG. "Even if China's national carbon market takes longer to install than expected, globally there's a lot happening, especially among the North American states and provinces."

In carbon trading, governments set a limit on emissions and then auction off or give away rights to pollute within the cap. These permits can be sold by more efficient companies to those that are less efficient. As governments periodically lower the caps, overall emissions fall.

No Poison

California's proposed legislation is designed to extend the basic current structure of its cap-and-trade program through 2030. Brown emphasized early this week that his plan would not only help

limit global warming, but "protect vulnerable communities from industrial poisons."

On July 13, he urged lawmakers to extend the program to show the world how to lower the risks of mass migration, fires and disease. "This isn't for me. I'm going to be dead. It's for you. And it's damned real. So I just ask you; take it seriously."

California's December allowances closed at a peak of $15.41 a metric ton this week, the highest since January 2013 when the program started, according to data from exchange ICE Futures.

"They've never been this high, except for the very beginning of the market," said Lenny Hochschild, managing director at Evolution Markets Inc., the environmental broker based in White Plains, N.Y.

In Europe, lawmakers are currently debating proposals to control the supply of emission allowances as a way to boost prices in its 12-year-old carbon market. Per Lekander, a fund manager at Lansdowne Partners U.K. LLP in London, reckons permit values will double within a year if the plans are approved.

"Finally, after 10 years of oversupply, this mechanism is now about to deliver what was intended," Lekander said.

European Union efforts to reform its $48 billion cap-and-trade system have repeatedly failed to increase the penalty for polluting, with the price of emissions slumping more than 80 percent since 2008 because of the glut. Futures fell 0.8 percent to 5.32 euros ($6.07) a ton on ICE Futures Europe July 14.

The latest steps to overhaul the market looked "promising" after legislators met July 10, said Siim Kiisler, the environment minister of Estonia, current holder of the European Union's rotating presidency. Lawmakers meet again on the market changes in September.

The Group of 20 nations published its first-ever climate and energy action plan at the weekend. The U.S. was the only member that didn't agree that the Paris accord was "irreversible."

"It's good to see the countries taking a stand against the regressive climate policies of President Trump," said Trevor Sikorski, head of carbon and natural gas at Energy Aspects Ltd. in London.

Asia at Risk of Deeper Poverty Due to Climate Change, Bank Says

Posted July 14, 2017, 9:34 A.M. ET

By Bloomberg News

Asia and the Pacific, home to two thirds of the world's poor, are at the highest risk of suffering deeper poverty and disaster due to unabated climate change, reversing current development gains, according to the Asian Development Bank.

The Asian landmass will see a temperature increase of 6 degrees Celsius (10.8 degrees Fahrenheit) by the end of the century under a business-as-usual scenario, ADB said in a July 14 statement. The comment is based on findings included in a report from the bank and Potsdam Institute for Climate Impact Research that analyses climate risks in Asia and the Pacific.

Some countries in the region could experience significantly hotter climates, with temperature increases in Tajikistan, Afghanistan, Pakistan, and northwest China projected to hit 8 degrees Celsius, ADB said.

Hotter climates would cause drastic changes in the region's weather system, agriculture and fisheries sectors, land and marine biodiversity, domestic and regional security, trade, urban development, migration, and health, and may even pose an existential threat to some countries, the ADB said.

The findings underscore the need for the region to reduce greenhouse gas emissions along the lines of those agreed to by the global community under the Paris accord—which calls for warming to be limited to well below 2 degrees Celsius—and to explore better strategies to mitigate the impact of climate change.

ADB approved a record $3.7 billion in climate financing last year and has pledged to further boost its investments to $6 billion by 2020, it said.

Other findings in the report include:

• Under a business-as-usual scenario, annual precipitation is expected to rise by as much as 50 percent over most land areas in the region, although nations such as Pakistan and Afghanistan may see a decline in rainfall by 20 to 50 percent,

• 19 of the 25 cities most exposed to a 1 meter sea-level rise are located in the region, 7 of which are in the Philippines alone. Indonesia, however, will be the country in the region most affected by coastal flooding,

• 13 of the top 20 cities with the largest growth of annual flood losses from 2005-2050 are in the region.

Climate change also will make food production in the region harder and will raise production costs. In some countries of Southeast Asia, rice yields could tumble by up to 50 percent by 2100 if no adaption efforts are made

Marine ecosystems, particularly in the Western Pacific, will be in serious danger by 2100. Even with a 1.5 degree Celsius temperature increase, 89 percent of coral reefs are expected to suffer from serious bleaching, severely affecting reef-related fisheries and tourism in Southeast Asia

Heat-related deaths in the region among the elderly are expected to rise by about 52,000 cases by 2050 due to climate change, according to data from the World Health Organization. Deaths related to vector-borne diseases such as malaria and dengue may also increase

Climate change can exacerbate energy insecurity through continued reliance on unsustainable fossil fuels, reduced capacities of thermal power plants due to a scarcity of cooling water, and intermittent performance of hydropower plants as a result of uncertain water discharges, among other factors

Week Ahead: New Jersey Republican Lawmaker Boosting EPA's Budget

Posted July 14, 2017, 03:57 P.M. ET

By Chuck McCutcheon

Rep. Rodney Frelinghuysen (R-N.J.) will get an initial public crack at boosting EPA spending as House Appropriations Committee chairman at a Tuesday committee markup of the fiscal 2018 budget bill, one of numerous environment and energy events scheduled for the week of July 17.

Frelinghuysen, who took over as Appropriations chairman in January, has compiled a moderate voting record since arriving in Congress in 1995, though he has grown more conservative in recent years as his caucus shifted to the right.

He worked with environmental advocates on a 2004 law to preserve land in environmentally sensitive areas of New Jersey and nearby states. He differs with some of his Republican colleagues in having said publicly that humans have "some effect" on climate change.

Frelinghuysen questioned Environmental Protection Agency Administrator Scott Pruitt at a June hearing about the Trump administration's proposed 31 percent cut to the EPA's budget. The House Appropriations' Interior, Environment and Related Agencies Subcommittee approved a spending bill this month that would cut the EPA's budget about 7 percent.

In particular, Frelinghuysen cited his home state's large number of Superfund sites and noted that the majority of cleanup money comes not from the federal government, but from companies and other parties found responsible for contamination. He also lauded the EPA's "damn good team" serving the mid-Atlantic region.

"I think it's good to sort of move with precaution and caution before you take any, too many dramatic steps," Freylinghuysen told Pruitt.

The House subcommittee's spending bill would provide more than $1.1 billion for the Superfund program, well above the $516 million requested in Trump's budget. Pruitt told Frelinghuysen, however, that Superfund remains "absolutely a priority for this administration." Tiffany Stecker will cover the appropriations markup.

In Other News

House bills: The House is expected to consider several environment-related bills:

• H.R. 806, which would delay deadlines for the EPA's 2015 ozone standards and has drawn sharp criticism from Democrats. Catherine Douglas Moran will cover.

• H.R. 2883, which would accelerate the permitting process for cross-border pipelines, transmission lines, and other energy projects. Bloomberg BNA staff will cover.

• H.R. 2910, which would reinforce the Federal Energy Regulatory Commission's role as the lead agency for siting interstate natural gas pipelines. Bloomberg BNA staff will cover.

Senate energy bill: Senate Energy and Natural Resources Committee Chairman Lisa Murkowski (R-Alaska) will hold a Tuesday hearing to help build support for comprehensive energy legislation (S. 1460) she introduced with Sen. Maria Cantwell (D-Wash.), the committee's ranking member. The hearing will feature testimony from representatives of the American Nuclear Society, International Energy Agency, and Carmot Strategic Group. Brian Dabbs will cover.

Energy Committee nominations: The Energy and Natural Resources Committee will meet Thursday to consider six Trump administration nominees, including Mark Wesley Menezes to be undersecretary of Energy; Paul Dabbar to be Energy's undersecretary for science; David Jonas to be Energy's general counsel; and Susan Combs to be an assistant secretary of the Interior for policy, management and budget. Rebecca Kern will follow.

Electricity industry: The House Energy and Commerce's Energy Subcommittee will hold a Tuesday hearing on the state of the electricity industry. Panelists include representatives from Duke Energy Corp., NextEra Energy, and American Municipal Power Inc. Rebecca Kern will cover.

Energy technology: The House Science, Space and Technology Committee will hold a Wednesday hearing on how the private sector can commercialize next-generation energy technology to increase efficiency, environmental benefit, and consumer savings. Panelists include representatives from Oklo and AES Energy Storage. Bloomberg BNA staff will monitor.

Resources bills: The House Natural Resources Committee will hold a Wednesday hearing on five bills, including a measure (H.R. 424) that would delist gray wolves from federal Endangered Species Act protections in Minnesota, Wisconsin, Michigan, and Wyoming. Alan Kovski will track.

California cap-and-trade: California lawmakers are scheduled to vote Monday on a bill that would extend the state's cap-and-trade program for greenhouse gas emissions. The measure (A.B. 398) would preserve the basic structure of the existing trading program, which establishes declining annual caps that businesses such as oil refineries, power plants, cement producers, and distributors of natural gas and transportation fuels must meet. California's powerful environmental justice community says the bill is too friendly to the oil industry. Carolyn Whetzel will handle.

Perry at Press Club: Energy Secretary Rick Perry will speak Tuesday at the National Press Club with International Energy Agency Executive Director Fatih Birol. Perry is expected to discuss how the combination of hydraulic fracturing and horizontal drilling for oil and gas will provide energy security for the U.S., as well as trading partners and allies. Rebecca Kern will cover.

Renewable fuels: The Center for Strategic & International Studies will hold a Wednesday forum on the renewable fuel standard. Participants include representatives from Citi Research and Harvard's Kennedy School of Government. Brian Dabbs will monitor.

Children's health panel: The EPA's Children's Health Protection Advisory Committee will discuss lead emissions from aircraft fuel, lead in drinking water, chemical safety, and other issues Tuesday and Wednesday. Sylvia Carignan, David Schultz, and Pat Rizzuto will cover.

Colorado pipelines: An update on a recent flowline notice to operators will be the focus of a Colorado Oil and Gas Conservation Commission industry operations meeting on Tuesday. The commission issued the notice, which required inspections and pressure testing of underground natural gas and oil pipelines within 1,000 feet of homes and other occupied buildings, after a fatal explosion was caused by a severed natural gas line near a home in Firestone in April. Tripp Baltz will watch.

Subject: Morning Energy: Trump's final Paris decision comes today at 3 p.m. — States, cities look at filling climate void — Dakota Access begins shipping today

By Anthony Adragna | 06/01/2017 05:42 AM EDT

With help from Esther Whieldon

DECISION DAY: In a scene that could come straight from reality TV, President Donald Trump today will announce his decision on whether to abandon the 2015 landmark Paris climate agreement today at 3 p.m. in the Rose Garden, he tweeted Wednesday night. Withdrawing from the pact would honor his campaign pledge to "cancel" the deal, but go against the wishes of vast swathes of the U.S. business community, many of his own aides and the international community. Three officials tell POLITICO's Andrew Restuccia and Josh Dawsey that Trump plans to pull out of the deal, though they noted he could still change his mind at the last minute.

Trump's decision comes after months of internal clashes between Trump's warring factions of advisers spilled into the open with a rush of leaks Wednesday, Andrew and Josh report. And if Trump follows through and withdraws, as expected, opponents of the agreement will have to thank the months-long effort by White House strategist Steve Bannon and EPA Administrator Scott Pruitt to play to his populist instincts and publicly push the narrative the accord was effectively dead. One White House official said the president's team was furiously working on an announcement of the withdrawal on Wednesday.

Some aides were still clinging to hope late Wednesday that Trump may change course and stay in the deal, while drastically scaling back the Obama administration's non-binding carbon cleanup promises, in line with a plan they had previously pushed. Trump had not officially told his entire team of senior aides he was considering leaving the agreement Wednesday when news leaked out, and administration officials cautioned against definitive reporting, warning that the president is notoriously fickle.

Takeaway from one former U.S. official: "Will global leaders trust the U.S. to negotiate a climate treaty ever again? After Kyoto and Paris, who will trust us to keep our word as a nation? Our credibility is gone."

Meanwhile, cities and states aren't waiting: Talks are just getting off the ground but several states, municipalities, and business leaders are in early discussions to create a carbon reduction agreement to replace the cuts that Trump is expected to eliminate, Pro's Eric Wolff reports. Potentially modeled after the "Nationally Determined Contributions" nations submitted to join the Paris agreement, the possible reduction pledge would help show the international community that climate action continues in the U.S. "It is really important to the international community to understand to avoid a knock-on effect of U.S. withdrawal on the actions of other countries," a source working to facilitate the conversations told Eric. Meanwhile, a group of West Coast Democratic lawmakers urged the governors of California, Washington and Oregon to keep pursuing climate policies to "send a signal" to the international community absent federal action.

California not pleased: Gov. Jerry Brown didn't mince words in calling Trump's intent to withdraw from the Paris accord "outrageous" while predicting its effects would be short-lived, POLITICO California's David Siders reports. "I think Trump, paradoxically, is giving climate denial such a bad name that he's actually building the very movement that he is [purporting] to undermine," Brown said in an interview. "You can't fight reality with a tweet."

More European reverberations: European Commission President Jean-Claude Juncker warned Trump about the consequences of following through on withdrawing from the Paris deal, POLITICO Europe's Kalina Oroschakoff reports . "I am a trans-Atlanticist, but if the American president said in the next hours or days that he wants to get out of the Paris climate deal, then it is the duty of Europe to say, 'No, that's not how it works,'" Juncker said at an event in Berlin. "Eighty-three countries run into danger of disappearing from the surface of the Earth if we don't resolutely start the fight against climate change."

Clinton weighs in too: Trump's election rival, Hillary Clinton, said it would be "really stupid" and "totally incomprehensible" to squander the economic opportunities that arise from addressing climate change if the administration withdraws from the pact. "The President is a very impulsive, reactive personality," she said at the Code Conference in California. "So if we all like the Paris Agreement, he may decide to get out of it. Not even understanding one bit about what that means."

But it's worth taking a step back to remember that regardless of the fate of Paris, Trump has been busy chipping away at Obama's climate policies. Your Pro Energy team looks at all the ways he's already taken shots at Obama's green legacy here.

Carper invokes Exxon vote: Top Senate EPW Democrat Tom Carper urged Trump to look at the fact that more than 62 percent of Exxon Mobil shareholders on Wednesday called for the company to assess how climate change and global efforts to limit temperature increases will affect its business as he mulls the fate of the Paris deal. "President Trump should take note of what happened today as he decides the fate of our country's participation in the Paris Climate Agreement," he said in a statement. "We should seize the economic opportunities that come from combating climate change, not cede our role as a global leader."

Greens gather today: Environmental groups, including 350.org, Sierra Club, Natural Resources Defense Council, Peoples Climate Movement, NextGen Climate and the Center for American Progress Action Fund, are holding a rally outside the White House today at 5 p.m. in support of the Paris accord. The Sierra Club said more than 20,000 people have already called the White House to voice their opposition to withdrawal.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and congrats to Van Ness Feldman's Jonathan Simon for being first out of the box to correctly guess there are six non-voting members of the House (D.C., Guam, Puerto Rico, U.S. Virgin Islands, Northern Mariana Islands and American Samoa). For today: Who was D.C.'s first modern delegate in Congress? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy , and @POLITICOPro.

CATANZARO GIVEN ETHICS WAIVER: The White House has granted an ethics waiver for energy aide Mike Catanzaro, a former partner at CGCN Group LLC, to participate in matters related to EPA's Clean Power Plan, waters of the U.S. rule and methane regulations. His past clients include Devon Energy, an Oklahoma oil and gas company close to Pruitt, and he has lobbied on behalf of the American Fuel and Petrochemical Manufacturers and the American Chemistry Council, among others. Catanzaro's is one of more than a dozen waivers quietly released Wednesday night after a dust up between the Office of Government Ethics and White House, which initially refused to disclose them.

DAKOTA ACCESS BEGINS SHIPPING TODAY: The hotly-contested Dakota Access pipeline is expected to begin shipping North Dakota oil today to a distribution point in Illinois, the Associated Press reports. That comes even as the North Dakota Public Service Commission plans to look later this summer at whether the pipeline's developer, Energy Transfer Partners, violated state rules during its construction.

GROUP SEEKS REVIEW OF HARLEY SETTLEMENT: The free-market Cause of Action Institute is taking aim at a settlement the Obama administration reached with Harley-Davidson over after-market "super tuner" devices the company sold to boost motorcycles' performance that allegedly led to Clean Air Act Violations. The August 2016 settlement with EPA required the motorcycle manufacturer to fund a program to replace or retrofit wood-burning stoves with cleaner appliances. But Cause of Action says that approach violates the agency's own guidance, and the group says Pruitt ought to take another look at the settlement. "EPA is overstepping its authority by requiring Harley-Davidson to implement an emissions mitigation project that lacks such a sufficient nexus to the underlying violation," the group wrote today in a letter to Pruitt, along with a FOIA request for documents related to the settlement negotiations.

ORDER AIMS AT BOOSTING ALASKAN ENERGY PRODUCTION: Interior Secretary Ryan Zinke signed an order Wednesday calling for a review of opportunities to increase oil drilling in Alaska. He directed Interior to examine whether oil production can increase in the National Petroleum Reserve in Alaska and assess how much oil and gas could be extracted from a piece of the Arctic National Wildlife Refuge, Pro's Ben Lefebvre reports. Officials have 31 days to develop a plan to implement his order. Zinke signed the order following a speech at an Alaska Oil and Gas Association conference in Anchorage. "Rules should be based on science and best practice not on arbitrariness," he said.

Alaska's congressional delegation hailed the move. "This Secretarial Order is exactly the type of announcement that so many Alaskans have been asking for: a smart, timely step to restore access to our lands, throughput to our Trans-Alaska Pipeline, and growth to our economy under reasonable regulations that do not sacrifice environmental protections," Senate Energy Chairman Lisa Murkowski said in a statement.

As for Paris, Zinke sidestepped a question on the climate change agreement that's on everyone's mind this week. Zinke told reporters in Alaska that he has "yet to read what the actual Paris agreement is," and declined to weigh in without having a chance to "sit down and read" it, the Associated Press reports.

RUSSIA LATEST COMPLICATION IN FILLING VACANCIES: Some potential federal appointees are having second thoughts about executive branch appointments given the ongoing investigations into the Trump campaign's ties with Russia, POLITICO's Andrew Restuccia and Josh Dawsey report. "You're going to have a situation where they're going to have trouble getting A-list or even B-list people to sign up," one lawyer advising potential appointees said. The administration has announced nominees for just 117 of the 559 most-important Senate-confirmed positions.

CASSIDY DOWNPLAYS PROPOSED EPA CUTS: Louisiana Sen. Bill Cassidy told attendees of a Covington, La. town hall meeting Tuesday that "EPA is not being dismantled" despite Trump's proposed cut of one-third of the agency's budget and efforts to roll back landmark Obama-era regulations addressing climate change and water quality, among other issues. "Certainly there are regulations being rolled back," Cassidy said. "But the Clean Water Act is still in place. There will not be mercury spewing out. All those regulations are still in place." (h/t Pro Health Care's Jennifer Haberkorn)

PERRY'S MOVE TOWARD JAPAN: Energy Secretary Rick Perry kicks off a week-long trip to Asia today. He'll stop in Japan and China. Stops include a trip to the Fukushima Daiichi nuclear site where Perry will look at efforts to recover from the 2011 earthquake and participation in the 8th Annual Clean Energy and Mission Innovation Ministerials in Beijing where energy ministers from around the world discuss clean energy efforts.

EPA BOOSTS EAST CHICAGO EFFORTS: Fresh off a visit to the East Chicago, Ind., Superfund site, Pruitt ordered a dedicated community coordinator deployed to the area of the contaminated site and vowed the agency would monthly community meetings to provide updates on cleanup progress. "We will take a more hands-on approach to ensure proper oversight and attention to the Superfund program at the highest levels of the agency," he said in a statement. More information is available here.

ZINKE TO FOCUS ON FOREST FIRES FRIDAY: Zinke and Agriculture Secretary Sonny Perdue will spend Friday in Boise, Idaho — the home of the National Interagency Fire Center — where the two will likely talk about forest fires and prevention techniques. The secretaries will also speak at Boise State University in the morning.

WATCHDOG QUESTIONS IF TILLERSON VIOLATED ETHICS PLEDGE: A nonprofit watchdog group launched to track the Trump administration's activities is questioning whether Secretary of State Rex Tillerson violated his ethics pledge. The group, American Oversight, is raising questions over reports Tillerson appeared at a signing ceremony between his former employer, Exxon Mobil, and the Saudi Basic Industries Corporation concerning a proposed petrochemical complex slated for Texas. American Oversight filed FOIA requests seeking any guidance or waivers issued to Tillerson regarding the signing ceremony, as well as photos of the event and his calendar. Tillerson pledged during his confirmation process not to participate in any matters related to Exxon for one year.

MAIL CALL! STRENGTHEN ENVIRONMENTAL JUSTICE PROGRAM: Democratic

Reps. Donald McEachin, Nanette Diaz Barragán and Pramila Jayapal released a letter to Pruitt urging him to build upon and strengthen EPA's environmental justice program. "We must act on climate change, recognizing that frontline communities have continually been most impacted by the effects of climate change," the letter, signed by 43 other congressmen, said. Their calls are likely to fall on deaf ears, though, given Trump's budget zeroed out the program.

MOVE THOSE FERC NOMS ALONG: The U.S. Chamber of Commerce sent a letter to the top Republican and Democrat on the Senate Energy Committee Wednesday, urging them to swiftly advance the nominations Robert Powelson and Neil Chatterjee for open slots on the quorumless FERC. "Mr. Powelson and Mr. Chatterjee have demonstrated a solid grasp on the subject matter within FERC's overview and have a demonstrated record of advocating policy over partisanship," Neil Bradley, chief policy officer for the Chamber, wrote.

PERRIELLO NABS McKIBBEN ENDORSEMENT: Two weeks ahead of the Virginia gubernatorial primary election, Tom Perriello picked up the endorsement of prominent environmentalist Bill McKibben on Wednesday. "Tom Perriello, for the first time in Virginia's political history, has stood up to Dominion Energy," McKibben said. "That's a smart move — what the politically connected utility wants to do is lock the Commonwealth into a future of pipelines and power plants, even as the energy landscape is changing fast in the direction of renewables."

NEEDS IMPROVEMENT: EPA needs to do better at tracking spending on contracts and grants to small businesses to develop and commercialize innovative technologies, GAO said in a report released Wednesday.

EDF PLANS CHALLENGE TO PRUITT METHANE ACTION: Joining the Natural Resources Defense Council, the Environmental Defense Fund announced Wednesday it would challenge Pruitt's decision to stay additional components of the agency's 2016 rule setting methane emissions limits for new oil and gas industry sources. "Colorado, Wyoming and Ohio, already have similar protections in place, which demonstrate the reasonableness of these clean air measures," Peter Zalzal, lead attorney for the group, said in a statement.

The American Petroleum Institute praised Pruitt's decision in its own statement. "As demonstrated through previous regulatory efforts, EPA's focus should be on cost-effective regulations that target emissions of volatile organic compounds, providing the co-benefit of methane emission reductions," the group said in statement.

How Bannon and Pruitt boxed in Trump on climate pact Back

By Andrew Restuccia and Josh Dawsey | 05/31/2017 08:00 PM EDT

Donald Trump's chief strategist and EPA administrator maneuvered for months to get the president to exit the Paris climate accord, shrewdly playing to his populist instincts and publicly pressing the narrative that the nearly 200-nation deal was effectively dead — boxing in the president on one of his highest-profile decisions to date.

Steve Bannon and Scott Pruitt have sought to outsmart the administration's pro-Paris group of advisers, including Trump's daughter Ivanka, who were hoping the president could be swayed by a global swell of support for the deal from major corporations, U.S. allies, Al Gore and even the pope. But some of that pro-Paris sentiment wound up being surprisingly tepid, according to White House aides who had expected that European leaders would make a stronger case during Trump's trip abroad earlier this month.

Those who want Trump to remain also faced an insurmountable hurdle: The president has long believed, rightly or wrongly, that the U.S. is getting a raw deal under the accord, and it proved nearly impossible to change his mind.

The internal reality show will culminate Thursday when Trump finally announces his decision,

after a rush of leaks Wednesday from administration officials saying he was on the verge of pulling the plug on U.S. participation in history's most comprehensive global climate agreement.

"I will be announcing my decision on Paris Accord, Thursday at 3:00 P.M.," Trump tweeted Wednesday night, without revealing the outcome. "The White House Rose Garden. MAKE AMERICA GREAT AGAIN!"

Some White House aides held out the prospect that the president still might take the middle course that Ivanka Trump and others had advocated — staying in the deal while drastically scaling back the Obama administration's non-binding carbon cleanup promises. But three White House officials said Wednesday that they expect Trump to make a clean break by withdrawing from the agreement, though they noted it's possible the president changes his mind at the last minute.

In recent months, Pruitt and Bannon made sure Trump heard from a parade of conservative leaders and Republican lawmakers who raised concerns that the deal would hobble his pro-fossil-fuel energy agenda.

"We made very much the economic message argument," said Club for Growth President David McIntosh, whose group wrote letters to the White House and spoke to senior staff. "It was bad for the U.S. economy. It would stifle economic growth and the United States should withdraw."

As the news of the impending decision spread Wednesday, White House chief of staff Reince Priebus began calling and fielding calls from lawmakers, indicating that the U.S. was unlikely to stay in the agreement, one person familiar with the conversations said.

If he withdraws, Paris' foes will have Pruitt and Bannon to thank.

One Republican close to the White House called it the "classic split" and said conservative activists had flooded the White House in recent weeks, after seeing increasing chatter that Trump may stay in. This person said Bannon and Pruitt worked quietly to make sure Trump was hearing their side and touched base occasionally on political strategy to woo him.

"You had the New Yorkers against it, and all the campaign loyalists for it," this person said, referring to the push to withdraw. "When the New Yorkers get involved, it gets complicated for Trump and everyone else around him."

Pruitt and Bannon have told others repeatedly for months that Trump will pull out of the agreement, as they aggressively pushed a narrative that they hoped would prove to be true, even as White House aides continued to debate the issue.

"Some of the debate was for show to help the moderates feel like they had their say," said one person who has spoken to Pruitt. "Pruitt has believed all along that this was never in doubt."

Pruitt, who frequently attacked the EPA's regulations in court when he was Oklahoma's attorney general, used his new post as EPA administrator to orchestrate an aggressive campaign to

marshal conservative opposition to the Paris agreement.

He bashed the deal during a closed-door April meeting of the National Mining Association's executive committee, telling the group that the agreement would hurt the economy. Pruitt's staff also urged lawmakers and conservative groups to publicly criticize the agreement, sources familiar with the issue told POLITICO, which had the effect of increasing public pressure on Trump.

Bannon similarly argued in meetings with Trump and his team that the president would be breaking his campaign promise to "cancel" the agreement if he decided to remain. And he argued that the accord is a bad deal for the United States because other countries aren't doing enough to curb their emissions.

Pruitt and Bannon's anti-Paris campaign was meant to counter a separate offensive by members of the administration who supported staying in the pact, including Ivanka Trump and her husband, Jared Kushner.

In recent months, Ivanka Trump set up a process in which the president would regularly hear from people who supported remaining in the agreement, according to administration officials.

The remain camp believed, perhaps naively, that Trump could be influenced by the support the Paris deal has received from major corporations, including Exxon Mobil, which Secretary of State Rex Tillerson led for more than a decade.

"Ivanka is doing what she can to get him to stay," one official said. "But that doesn't mean he's going to do it."

White House aides outlined a plan to remain in the agreement while weakening former President Barack Obama's pledge to cut domestic greenhouse gas emissions. They made the case that Trump could use the good will generated from remaining to negotiate better economic incentives for fossil fuels, and they even won the buy-in of several coal companies that detested Obama's climate policies.

They hoped European leaders could persuade Trump he would risk damaging diplomatic relations if he withdrew. Ivanka Trump also brought Gore to Trump Tower to try to sway her father's mind during the presidential transition, and Pope Francis handed the president a copy of his papal encyclical on climate change when the two men met at the Vatican last week.

Trump took calls from a parade of business leaders and foreign leaders in recent weeks, most pressing him to remain, according to a senior administration official — and the calls continued on Wednesday.

"He had tremendous pressure from international leaders, from members of his own Cabinet and advisers in the international sphere not to pull out of the accord because of the perceived loss of face," said McIntosh, the Club for Growth president.

But while the leaders of G-7 nations all pressed Trump to remain in the agreement during last week's summit in Italy, Paris supporters in the White House have privately groused that they didn't make an aggressive enough case.

European officials countered they tried not to push Trump too much during the meetings, believing that a hard-sell could backfire. And they were buoyed by early signals from White House officials ahead of the summit that Trump was open to remaining.

Indeed, European officials received a series of mixed messages from Trump's team during the summit. National Economic Council Director Gary Cohn, a Paris supporter and the only U.S. official permitted to attend meetings with G-7 leaders, told reporters that Trump was "evolving" on climate change, which many interpreted to mean that he would remain.

White House officials chalked up Cohn's comments to Trump's habit of echoing the perspective of the last person he talked to. By that time, Bannon and other opponents of the agreement had returned the United States. But Trump's decision to delay a final verdict on the agreement gave Pruitt and Bannon a final opportunity to make their case. Pruitt met with Trump to discuss Paris on Tuesday.

Most European officials were unwilling to comment about the prospect that Trump will withdraw, as they have not yet received official word from the White House and they are still holding out hope that the president will change his mind.

The officials have already begun looking to other countries for support on climate change, with the European Union set to promise deeper cooperation with China. Some officials have even adopted a new informal nickname for the major remaining countries that support action on climate change: the G-6.

Some Trump administration officials were reeling on Wednesday after the news first broke that Trump was prepared to withdraw.

Trump had not officially told his entire team of senior aides he was considering leaving the agreement Wednesday when news leaked out. "Everyone assumed that's what was going to happen, but we weren't called all in and told, 'Oh, we're putting this story out today," one person said.

Having learned a lesson after Trump changed his mind about pulling out of NAFTA, administration officials cautioned against definitive reporting, warning that the president is notoriously fickle. As administration officials began tamping down reports that Trump's decision was final, White House aides were swamped with calls, emails and texts from lobbyists and diplomats seeking clarification.

Officials close to Trump sometimes leak information before it is final — hoping to back him into a corner, or believing that comments during a private meeting represent his ultimate view. White House officials put out word in April that he was pulling out of NAFTA, even though Trump had not made up his mind, and news leaked during the campaign that he would pick Mike Pence as

his running mate even as he weighed other candidates.

"Sometimes people close to Trump put things into the media environment to see how he'll react to it," one adviser said. "If your idea gets good coverage, it's likely to help him decide to go with what you're saying."

One of the biggest lingering questions: If he withdraws, how will Trump do it?

He could abide by the formal procedures in the underlying text of the agreement, which mandate that a formal withdrawal will not go into effect until at least Nov. 4, 2020. Or he could pull out of the United Nations Framework Convention on Climate Change, the underlying 1992 treaty that governs the negotiations, which would allow for a speedier pullout — a far more radical step that would see the U.S. abstain from the entire climate negotiating process.

He could also declare that the agreement is a treaty, which would require a two-thirds-majority ratification vote in the Senate that would certainly fail.

Whatever he does, supporters of the climate agreement expect a harsh reaction from the United States' friends if the country pulls out.

"I think the diplomatic backlash will be worse than it was when the U.S. rejected Kyoto," said Susan Biniaz, the State Department's longtime former climate change lawyer, referring to the George W. Bush administration's decision to spurn the 1997 Kyoto climate agreement.

One former U.S. official agreed: "Will global leaders trust the U.S. to negotiate a climate treaty ever again? After Kyoto and Paris, who will trust us to keep our word as a nation? Our credibility is gone."

Trump aides weighing staying in Paris deal, but rejecting Obama pledge Back

By Andrew Restuccia | 03/09/2017 03:08 PM EDT

Trump administration officials are considering a plan to remain part of the nearly 200-nation

Paris climate change agreement, while weakening former President Barack Obama's pledge to reduce U.S. greenhouse gas emissions, multiple sources told POLITICO.

The plan has not yet won the buy-in of key Trump aides and the president has not signed off. Sources familiar with the plan cautioned that it remains in flux, and could be scuttled by Trump advisers who are critical of the agreement.

But keeping the U.S. in the 2015 Paris pact would be a victory for some in the Trump administration, including the president's daughter Ivanka and his son-in-law Jared Kushner, who have sought to boost the president's green credentials and fear that pulling out would damage relations with key U.S. allies. Many conservatives have been pushing President Donald Trump to withdraw from the deal altogether, as the president himself pledged to do during the campaign.

One way to square those conflicting imperatives would be to reject the pledge Obama offered as part of the 2015 Paris pact — a nonbinding target for reducing the United States' emissions of planet-warming greenhouse gas emissions. That's increasingly seen within the White House as a possible way forward.

Obama had pledged that by 2025 the U.S. would reduce its greenhouse gas emissions by 26 percent to 28 percent below where it was in 2005.

Weakening Obama's pledge would probably frustrate many American allies, who see the United States' commitment to tackling climate change as a bedrock of the Paris agreement. It would also reflect the likelihood that Trump's push to revoke key Obama environmental regulations would make it more difficult to meet the existing target.

George David Banks, a White House senior adviser on international energy and environmental issues, has briefed people outside the administration on the plan in recent days, according to people who have spoken with him.

Banks discussed the plan during a Thursday meeting with about a dozen fossil fuel industry officials, according to people familiar with the closed-door discussion.

Banks did not respond to a request for comment. A White House spokeswoman said, "We have no announcements to make at this time."

It's unclear when the Trump administration will announce a final decision on its approach to Paris. Sources cautioned a verdict may not be made public for weeks or even months, and could hinge on broader energy-related discussions with other countries.

Ivanka Trump and Kushner, a senior adviser to the president, have been strong advocates of staying in the agreement, sources said. And other advisers raised fears that withdrawing altogether would greatly damage U.S. diplomatic relations with other countries.

Trump's appointees are separately taking steps to revoke regulations requiring cuts in greenhouse gas pollution from the nation's power plants, among other rollbacks of Obama-era environmental

rules.

Those regulations were the bulwark of Obama's promise that the United States, the world's second-largest carbon polluter, would do its share to address the problem — even though scientists have said steeper cuts are needed to avoid catastrophic harm from climate change.

Trump's advisers have sometimes been at odds over how to approach Paris — and Trump's chief strategist, Steve Bannon, is said to be advocating for withdrawing from the agreement. Bannon's influence with Trump could undercut the proposal to stay in the deal.

Some Trump supporters have even hoped he would pull out from the entire decades-old "framework" of United Nations climate negotiations. Such a step would have been even more extreme than former President George W. Bush's abandonment of the 1997 Kyoto climate accord, which made the U.S. an untrusted figure in international climate circles for years afterward.

To clinch the Paris agreement, the Obama administration had to pull off some tricky diplomatic gymnastics, bringing together rich and poor countries that had disagreed for decades about how to divide the burden of curbing the world's carbon output. The pact, reached in December 2015 after two weeks of negotiations in a Paris suburb, followed months of U.S. pressure on China and India to make their own commitments, despite arguments from the developing world that already-wealthy nations should be doing the lion's share.

Ultimately, the talks were successful because negotiators allowed countries to write their own domestic pledges to tackle climate change, rather than imposing across-the-board mandates to slash emissions.

Those pledges are largely nonbinding, which enabled Obama to avoid a politically disastrous ratification fight in the Senate. But that also makes it easier for Trump to change Obama's pledge.

Even if Obama's target remained in place, scientists and climate activists have warned that the deal won't cut carbon pollution enough to prevent the worst effects of climate change, including rising seas and worsening droughts and storms. Instead, they said, countries would need to steadily escalate their targets.

The agreement calls on countries to aim to limit global warming to "well below" 3.6 degrees Fahrenheit from pre-industrial levels, and it said countries should "pursue efforts" to keep temperature increases to 2.7 degrees Fahrenheit. Under a business-as-usual scenario, global temperatures could rise by 4.7 to 8.6 degrees Fahrenheit by the end of the century, according to scientists, an increase that would have catastrophic consequences for the planet.

States, cities to boost climate action as Trump's Paris withdrawal looms Back

By Eric Wolff | 05/31/2017 07:49 PM EDT

Amid news that President Donald Trump is preparing to withdraw the U.S. from the Paris climate agreement, several cities, states and private businesses are hoping to accelerate their efforts to fight climate change and fill any gap left by Washington.

Mayors of New York, Los Angeles and other cities are promising to maintain their own commitments to reduce their cities' carbon dioxide emissions, and New York Gov. Andrew Cuomo responded to Wednesday's leaks from the White House with a new proclamation that he would advance "bold" renewable energy goals.

While governments below the national level cannot officially sign onto the Paris agreement, Trump's expected move to pull out of the 2015 accord signed by 195 countries is prompting them to look for other paths they can follow to contribute to the international effort. Sources tell POLITICO that several states, municipalities, and business leaders are in early discussions to create a carbon reduction agreement that could be called a "Societally Determined Contribution," a name that aims to mimic the "Nationally Determined Contribution" that each of the Paris accord's members submitted.

Liberal states like New York and California have already launched efforts to fight greenhouse gas emissions, and climate change is becoming an issue in Virginia's gubernatorial race. And while questions remain whether states, cities and businesses have the political will and the capacity to make a significant contribution to reducing the pollution blamed for global warming, for climate activists,they offer the best chance to reduce emissions.

"Local governments, corporations, individuals, they're the ones who have made a difference in America, and not the Obama administration," said former New York Mayor Michael Bloomberg, now the U.N. Special Envoy for Cities and Climate change. "I think the danger and the damage that the Trump administration decision to pull out would [have] is more psychological -- it isolates us from the rest of the world, it sends exactly the wrong message."

Former President Barack Obama had pledged under the U.S.' Nationally Determined Contribution to reduce carbon dioxide emissions between 26 percent to 28 percent of 2005 levels by 2025. That promise, though not legally binding, was built on Obama's policies like the Clean Power Plan, which would have shrunk emissions at power plants but is now being unwound by Trump's administration.

Trump tweeted that he'd announce a decision in the "next few days," prompting calls from business heavyweights like Apple's Tim Cook and Tesla's Elon Musk to remain in the global deal, but the local and state leaders are working to develop their plan B to step in for the U.S. on the international climate scene, sources tell POLITICO.

Discussions are still very preliminary, but the participants are trying to come up with a combined

carbon reduction from states, cities and businesses to replace the cuts that Trump is expected to eliminate. The structure and operation of the group behind the "SDC" is still unknown, as is the final target, whether it would set a single reduction target for the group or if there will be other clean energy or carbon reduction goals. Developing an agreement would require analysis to determine whether policies like California's carbon price and commitments like Facebook's promise to rely solely on renewable power could be merged, but proponents are hopeful they can find some way to set a target.

"It strikes folks as an obvious thing, a great way to show the international community that there's a lot going on in the U.S." said a source working to facilitate the conversations. "It is really important to the international community to understand to avoid a knock-on effect of U.S. withdrawal on the actions of other countries."

Even without a binding document, states are moving into the space created by the absence of federal action. A group of 18 lawmakers led by Democratic Reps. Earl Blumenauer (Ore.), Jared Huffman (Calif.), and Suzan DelBene (Wash.). sent a letter to Govs. Kate Brown (Ore.), Jerry Brown (Calif.) , and Jay Inslee (Wash.), calling for them to act.

"Given the vacuum in climate leadership that has resulted from the election of Donald Trump, our states must continue to form a 'green wall' in the West that will maintain climate leadership in the United States. The Paris Agreement calls for significant reductions in greenhouse gas emissions, and if Donald Trump's administration won't lead, our states must," the lawmakers wrote.

Virginia Gov. Terry McAuliffe enacted a series of policies that will make the commonwealth "trading ready" for a carbon cap-and-trade program, a move seen as a precursor to Virginia's joining the nine-state Regional Greenhouse Gas Initiative. McAuliffe's successor will have to decide whether to take that next step, thrusting the issue into this year's gubernatorial race, where Republican candidates have been critical of his efforts.

To be sure, there may be limits to what the green-minded cities and states can do. California plus the nine states in RGGI comprised less than 14 percent of U.S. emissions in 2014, according to the Energy Information Administration, and they have been working toward decarbonization for years. Meanwhile, Texas, a state with an intensive energy industry and little appetite for carbon action, contributes nearly 12 percent of U.S. emissions on its own.

Pennsylvania and Illinois are the third and fourth biggest emitters among U.S. states, and both states have active coal-mining industries that would likely oppose aggressive state action. Pennsylvania Gov. Tom Wolf, who signed a letter calling on Trump to stay in the Paris agreement earlier this month, made joining RGGI a campaign promise, but has rarely mentioned it since taking office.

Critics of climate change policies say any state efforts are likely to have no effect, except to raise energy prices.

"Climate regulations at the state and local levels will still be all cost and no climate benefit but I

would say that if states want to pursue climate policies that's their prerogative," said Nick Loris, an economist at the conservative Heritage Foundation. "There's also a matter of politics. Even a pretty liberal state like Washington couldn't get through an aggressive carbon tax policy because environmental groups didn't like that the money wasn't being spent on green technologies."

But for environmental leaders, like California's Brown, Trump's expected rejection of the Paris pact has only helped make the case for climate action clearer.

"This current departure from reality in Washington will be very short-lived, that I promise you," Brown told POLITICO in an interview. "I've spoken with Republicans here in the legislature, and they're beginning to get very serious about climate action, so the momentum is all the other way. And I think Trump, paradoxically, is giving climate denial such a bad name that he's actually building the very movement that he is [purporting] to undermine."

Brown: 'The rest of the world is against' Trump Back

By David Siders | 05/31/2017 04:10 PM EDT

LOS ANGELES — California Gov. Jerry Brown, one of the nation's foremost proponents of efforts to address climate change, on Wednesday called President Donald Trump's planned withdrawal from the Paris climate accord "outrageous," while predicting the effect of the move will be short-lived.

"This current departure from reality in Washington will be very short-lived, that I promise you," Brown told POLITICO in an interview. "I've spoken with Republicans here in the Legislature, and they're beginning to get very serious about climate action, so the momentum is all the other way. And I think Trump, paradoxically, is giving climate denial such a bad name that he's actually building the very movement that he is [purporting] to undermine."

Brown added, "You can't fight reality with a tweet."

News of the president's decision drew ire from Democrats and environmental groups across the country, nowhere more so than in California, where the state Senate hours later passed major climate legislation requiring utilities to obtain 100 percent of their electricity from renewable sources by 2045.

After the vote, state Senate President Pro Tem Kevin de León told reporters that Trump's decision is "distressing" but that California "will forge ahead."

Brown has been harshly critical of Trump on climate policy, but he said last week that he believed the Republican president to be a political "realist" and that progress on the issue might be "not as disastrous as we thought a few months ago."

On Wednesday, Brown said, "I don't think the Trump deviation will stand."

"Yes, he's making this announcement," the governor said. "But the rest of the world is against him. California is against him. New York is against him. We are for sensible, scientifically based climate action. And this is unfortunate, even tragic, but we will overcome it. And through Trump's outrageous action, the contrary movement is galvanized, and we're mobilizing people, states, provinces and working with other countries to move in a direction that is sustainable and is compatible with what we know we must do to survive."

Brown is preparing to travel this week to China, where he will participate in an international climate summit, meet with Chinese officials and rally support for local efforts to counteract the effects of climate change. The fourth-term Democratic governor, a longtime champion of environmental causes, has helped sign more than 170 mostly subnational governments to a nonbinding pact to limit greenhouse gas emissions.

Asked what he would tell Chinese officials about Trump, Brown said, "I don't think I'll have much to say about the president. I'll have a lot to say about California, and I'll have a lot to say about the 170-plus states and provinces that have joined with California in the 'Under 2' initiative."

All the ways Trump is shredding Obama's climate agenda Back

By Ben Lefebvre, Esther Whieldon, Darius Dixon, Alex Guillén and Andrew Restuccia | 05/31/2017 04:45 PM EDT

President Donald Trump's expected decision to withdraw the United States from the Paris climate agreement is a huge morale blow to the worldwide effort to head off the worst effects of global warming. But it's just the latest step in his determined campaign to erase Barack Obama's green agenda.

Pulling out of the Paris deal means that the United States — the world's second-largest producer of greenhouse gases — would no longer take part in the most comprehensive international pact ever crafted on climate change, joining Syria and Nicaragua as the only holdouts among nearly 200 nations.

But Trump's domestic environmental efforts will have the most immediate real-world impact on the planet's fate, by halting Obama's attempts to achieve steep cuts in U.S. carbon emissions and

shift the country away from fossil fuels. The impact of those regulation rollbacks and other steps could be equivalent to adding almost 2 percent to the world's carbon output by 2025 compared with Obama's targets, based on recent analyses — at a time when climate researchers say the world urgently needs to accelerate its reductions.

This is POLITICO's rundown of the steps Trump has already set in motion:

Lifting limits on coal

— Trump ordered the Environmental Protection Agency to take the first steps toward repealing Obama's Clean Power Plan, a suite of curbs on greenhouse gas pollution from thousands of existing power plants. Those restrictions, and a separate regulation on future plants, would have encouraged power companies to shift away from coal.

— The administration lifted Obama's freeze on new coal leases on federal land, and halted the Interior Department's formal environmental review of coal leasing charges.

— Interior announced it will repeal an Obama-era rule that threatened to increase companies' royalty payments for coal, oil and natural gas they extract on federal lands.

— Energy Secretary Rick Perry ordered a 60-day review of tax and regulatory policies that "are responsible for forcing the premature retirement of baseload power plants," language suggesting the report will criticize federal support for wind and solar power.

Drill, baby drill

— Trump ordered Interior to end restrictions on oil drilling in Arctic waters, and told it to consider opening up the Atlantic coast for drilling.

— He ordered Interior to rewrite a 2015 rule that called for tighter environmental standards for fracked oil and gas wells on public lands. He also ordered reviews of a rule on offshore oil well safety, as well as one relating to air quality evaluations for offshore oil and gas drillers.

— He signed a congressional repeal of an Interior Department land-use planning update after fossil fuel companies complained it would hurt their access to federal lands.

— EPA withdrew a request for information from oil and gas companies about methane emissions from their operations. The Obama administration's request had been seen as an early step toward regulating those sources.

— Trump ordered the Commerce Department to review all marine sanctuaries established or expanded in the past 10 years for possible oil and natural gas drilling opportunities.

— He reversed Obama's denial of a permit for the Keystone XL pipeline and ordered the Army Corps of Engineers to allow final construction on the Dakota Access pipeline. Neither project

would have much impact on the climate by itself, but the moves sent a strong signal of the administration's intention to increase fossil fuel production.

Rolling back regulations

— Trump ordered EPA to reopen its review of Obama's tightened automobile emissions standards for model years 2022-2025. The review is the first step toward relaxing the standards.

— The administration froze the rollout of several Energy Department energy efficiency rules.

— EPA is reviewing whether to continue a 2013 waiver that lets California impose stricter air pollution limits regulations than the federal government does on "non-road" diesel engines like bulldozers and tractors.

— EPA is reviewing several regulations still in litigation, including rules on mercury from power plants, ozone, wetlands and waterways, pollution from heavy-duty trucks, methane emissions from new oil and gas operations, coal plants' pollution discharges into waterways and refrigerants, plus a rule that would let citizen groups sue power plants that exceed emissions limits during startup, shutdown or malfunction.

Cutting climate and green energy programs

— Trump's 2018 budget request proposed a 31 percent cut to EPA's budget, which especially targeted its climate programs. He also proposed cutting climate research at other agencies, including Interior's U.S. Geological Survey.

— EPA reassigned employees who had been working on adapting to the effects of climate change.

— Trump called for eliminating DOE's loan program and its Advanced Research Projects Agency-Energy, which supports commercially risky technologies aimed at reducing greenhouse gas emissions. The administration also sought deep cuts to offices devoted to fossil, nuclear and renewable energy as well as energy efficiency.

— DOE placed a hold on funding for nearly two dozen ARPA-E projects. Only three have gotten approval under the Trump administration.

Exxon shareholders win vote to build Paris climate pact into plans Back

By Ben Lefebvre | 05/31/2017 02:37 PM EDT

The Trump administration may be preparing to withdraw the U.S. from the Paris climate change accords, but shareholders at Exxon Mobil and at least one other U.S. oil company are demanding the companies incorporate the international deal in their business models.

Nearly two-thirds of Exxon's shareholders backed a proposal on Wednesday calling for the company to assess how climate change and global efforts to limit temperature increases will affect its business. The vote is non-binding, but the results show that the once-fringe idea of linking climate change to big oil's operations has gained momentum.

The vote at the Exxon annual shareholder meeting in Dallas came after investors in its smaller rival Occidental Petroleum earlier this month cast more than two-thirds of their votes for a measure calling for the company to assess how its business would be affected by the Paris climate change accord's target of holding global warming to 2-degrees. Company credit rating agency Moody's said last year it would start to use the Paris pledge to assess financial risk for corporations.

"Shareholders have spoken clearly on climate," said Danielle Fugere, president and chief counsel for As You Sow, a group that helps shareholders introduce environmental proposals. "If there's less demand for oil and the world is awash in oil, there's going to be more competition among these companies. Shareholders are trying to figure out who is the best bet."

Not all of these climate-related investor proposals succeeded, however. Chevron shareholders Wednesday morning rejected a motion that the company issue a report on how limiting global temperature increase to 2 degrees Celsius (3.6 degrees Fahrenheit) would affect its business. Only 27 percent of voting shareholders approved the proposal, down from more than 40 percent who voted for a similar proposal last year.

Exxon, Chevron and other energy companies facing such proposals argue that they are already taking the Paris agreement seriously and incorporating it into their business plans. Exxon in particular pointed out that it was developing technology that would capture the carbon emitted at natural gas power plans and then either store it or use it to produce more electricity.

"We believe the goal of carbon policy is to reduce emissions at the lowest cost to society," Exxon Chief Executive Darren Woods said at the shareholder meeting. "These goals led us to support the Paris Agreement." Woods sent President Donald Trump a letter earlier this month urging the U.S. to stay in the Paris deal.

For Exxon, the votes also illustrate how entangled the company has become in New York state climate change politics. The climate change proposal shareholders approved was partly sponsored by the New York State Common Retirement Fund, which is run by the State's comptroller. Meanwhile, the company is embroiled in a lawsuit with the New York and Massachusetts attorneys general over whether it withheld its own research on climate change from shareholders.

"The burden is now on Exxon Mobil to respond swiftly and demonstrate that it takes shareholder concerns about climate risk seriously," New York State Comptroller Thomas P. DiNapoli said in

a prepared statement after the vote.

Feds reach settlement with Harley-Davidson over defeat devices Back

By Alex Guillén | 08/18/2016 12:32 PM EDT

Harley-Davidson riders may have to do a little less freewheel burning after the motorcycle maker agreed to stop selling defeat devices that had EPA spitting flames.

In a lawsuit and settlement announced today, the Justice Department and EPA allege that Harley-Davidson sold 340,000 "super tuners," after-market defeat devices that can be installed on motorcycles to boost their performance. But they also increase emissions of hydrocarbons and nitrogen oxides, which contribute to smog formation.

The company has agreed to buy back and destroy the devices, which it sold at dealerships across the U.S. since 2008. It also will pay a $12 million civil penalty and spend $3 million on air quality mitigation projects.

"Given Harley-Davidson's prominence in the industry, this is a very significant step toward our goal of stopping the sale of illegal aftermarket defeat devices that cause harmful pollution on our roads and in our communities," said John Cruden, DOJ's top environmental prosecutor.

The violations were discovered following a "routine" inspection, according to the agencies.

Any tuners Harley-Davidson looks to sell in the future will have to be approved by the California Air Resources Board.

DOJ and EPA also say Harley-Davidson sold more than 12,000 bikes from 2006 to 2008 that were not covered by a key EPA certification. The company agreed to have all future motorcycle models certified by EPA.

The deal is open to a 30-day public comment period and judicial approval.

Zinke signs order to promote oil drilling in Alaska Back

By Ben Lefebvre | 05/31/2017 05:27 PM EDT

Interior Secretary Ryan Zinke today signed an order aimed at sparking additional oil development in Alaska.

Interior will review the possibility of increasing oil production in the National Petroleum Reserve in Alaska and to assess how much oil and gas could be extracted from part of the Arctic National Wildlife Refuge.

The order seeks to revise BLM's Integrated Activity Plan to evaluate "efficiently and effectively maximizing the tracts offered for sale during the next NPR-A lease sale."

It also tells officials to come up with a plan to measure undiscovered, technically recoverable oil and natural gas resources of Alaska's North Slope, focusing in part on Section 1002 of the ANWR.

"Working with the Alaska Native community, Interior will identify areas in the NPR-A where responsible energy development makes the most sense and devise a plan to extract resources," Zinke said in a statement. "We will do it in a way that both respects the environment and traditional uses of the land as well as maintains subsistence hunting and fishing access."

Alaskan Republican Sens. Lisa Murkowski and Dan Sullivan hailed the move. Both senators have submitted bills this year in an attempt to jump-start energy production in the state.

The U.S Geological Survey in 2010 estimated the NPR-A held about 895 million barrels of economically recoverable oil and 52.8 trillion cubic feet of natural gas. In 1995, then-President Bill Clinton vetoed legislation Congress sent him that called for oil and gas exploration in the 1.5-million-acre Section 1002 of the ANWR.

WHAT'S NEXT: Interior officials have 31 days to come up with a plan to implement Zinke's directive.

Russia probe scares off potential appointees Back

By Andrew Restuccia and Josh Dawsey | 05/31/2017 05:05 AM EDT

President Donald Trump's effort to fill hundreds of vacant jobs across the federal government has hit a new snag: Russia.

Potential hires are paying close attention to the expanding investigations, which have now begun to touch senior Trump aides, with some questioning whether they want to join the administration.

Four people who work closely with prospective nominees told POLITICO that some potential hires are having second thoughts about trying to land executive branch appointments as federal and congressional investigations threaten to pose a serious distraction to Trump's agenda.

"It's an additional factor that makes what was an already complicated process of staffing the government even harder," said Max Stier, head of the Partnership for Public Service, which has advised the Trump transition on hiring.

According to the nonpartisan Partnership for Public Service, the White House has announced nominees for just 117 of the 559 most important Senate-confirmed positions.

That trails the records of Presidents Barack Obama and George W. Bush, who had each nominated about twice as many people by this point in the first year of their first terms.

Trump has not yet nominated a No. 2 at the Agriculture Department, Education Department, Department of Veterans Affairs or Environmental Protection Agency, and dozens of top positions at every federal agency remain vacant. Trump's nominees for deputy secretary of Commerce and Treasury both withdrew.

One lawyer who represents prospective political appointees told POLITICO that three clients said over the past two weeks that they are no longer interested in working for the Trump administration following the appointment of Robert Mueller as special counsel overseeing the federal investigation into Trump associates' contacts with Russian officials during the campaign.

"There's no doubt in my mind that people are being very cautious, to put it mildly," this lawyer said, adding that there is growing concern in Republican circles that the caliber of hires could deteriorate if the administration's top picks drop out.

"You're going to have a situation where they're going to have trouble getting A-list or even B-list people to sign up," the lawyer added.

Others agreed. "With all that is going on now, there is certainly a greater amount of hesitation," said a former government official who regularly speaks with one of Trump's Cabinet secretaries. "They have a real talent problem that continues to grow."

A White House spokeswoman said the Russia investigation and the series of news stories that have pummeled the administration in recent weeks have had no impact on hiring. She said the president is recruiting individuals "of the highest quality."

But the steady stream of palace intrigue stories about internal tensions and plans for a staff shakeup — after months of rumors about various senior officials getting pushed out — are making it harder to persuade people to join the administration, another White House official said.

White House communications director Michael Dubke said Tuesday he will leave his role, while Trump is weighing the possibility of bringing former campaign aides Corey Lewandowski and

David Bossie into the White House.

"It's not the best place to work right now, but you're still working at the White House, so there are far worse jobs," the official said.

Former Bush and Obama administration officials who worked on personnel issues told POLITICO they never struggled to find qualified candidates for top jobs.

"I can't speak to Republicans not wanting to join this administration but, as a general matter, we didn't have trouble recruiting people — quite the opposite," said Lisa Brown, who served as White House staff secretary under Obama for two years.

Along with distracting from lower-level hires, the Russia probe has slowed and complicated the process of filling the administration's highest-profile vacancy — director of the FBI.

Trump administration officials have been frustrated by the difficulties they've faced in finding a new FBI director. Top White House officials, including chief of staff Reince Priebus and chief strategist Steve Bannon, hoped to have made a decision made by now.

Instead, leading candidates Sen. John Cornyn (R-Texas), Rep. Trey Gowdy (R-S.C.) and former Sen. Joe Lieberman have all withdrawn from consideration. The White House is now looking at a new field of candidates, and Trump met with two possibilities — John Pistole and Chris Wray — on Tuesday.

"It's not so easy to find an FBI director in the Trump administration," the White House official said.

The official added that Trump and his senior team are aware that hiring is not moving fast enough at agencies but said that, right now, "It's just not priority No. 1."

A second White House official said he was not aware of any potential nominees dropping out because of the recent news but echoed concerns that the Russia probe would inevitably add to further delays filling empty jobs.

"The problem we are likely to have is it may be difficult to get people to focus on hiring with all of this going on," the official said.

EPA to reconsider more provisions of oil and gas well emissions rule Back

By Alex Guillén | 05/31/2017 11:55 AM EDT

EPA today placed a 90-day stay on several additional portions of its 2016 rule setting methane emissions limits for new oil and gas industry sources.

The delay is needed as the agency considers several petitions to reconsider parts of the regulation, EPA said. The agency in April stayed some other portions of the rule, including fugitive emissions requirements, but today's announcement covers other key parts of the regulation.

Two more parts of the rule EPA will now reconsider are standards for well site pneumatic pumps and requirements for closed vent systems to be certified by a professional engineer, according to a Federal Register notice signed by Administrator Scott Pruitt on Friday and running soon.

Those requirements will be placed on hold for 90 days while EPA reviews them, and the agency "intends to look broadly at the entire 2016 Rule," not just the specific portions already identified, according to the notice.

EPA will have to take public comment on any proposed changes to the rule before finalizing them, and could subsequently face litigation.

WHAT'S NEXT: EPA will issue proposed changes to the rule's requirements and take public comment.

Subject: BREAKING NEWS: House Intelligence Committee leaders ask White House for any Comey tapes

Leaders of the House Intelligence Committee are asking the White House to produce any tapes that might exist of President Donald Trump's conversations with ousted FBI director James Comey.

Rep. Mike Conaway (R-Texas) and Rep. Adam Schiff (D-Calif.), the lawmakers leading the investigation, asked White House counsel Don McGahn on Friday to confirm whether any tapes exist, and if so, to produce them for the committee by June 23.

Their request comes less than two hours after President Donald Trump, in a Rose Garden news conference, refused to answer questions about whether such tapes exist.

Subject: EPA Announces Appointment of Cosmo Servidio to Region 3 Administrator

CONTACT: press@epa.gov

EPA Announces Appointment of Cosmo Servidio to Region 3 Administrator

WASHINGTON (October 4,2017) –Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt announced the appointment of Cosmo Servidio of Pennsylvania to become regional administrator for Region 3. Mr. Servidio will oversee environmental protection efforts in Pennsylvania, New Jersey, Delaware, Maryland, West Virginia, Virginia, and the District of Columbia.

Cosmo Servidio currently holds the position of director of environmental affairs for the Bucks County Water and Sewer Authority in Pennsylvania where he plays a vital leadership role in one of the state's largest water and wastewater utilities. Mr. Servidio oversees operations and facility planning to help identify needed improvements to maintain essential water and wastewater services and provides oversight to ensure utilities comply with all state and federal requirements. Prior to joining Bucks County Water and Sewer Authority, Mr. Servidio served as regional director for the Pennsylvania Department of Environmental Protection for the Southern Region, where he worked to ensure staff implemented the Department's priorities to improve air quality, waste management, radiation protection, remediation, conservation, safe drinking water, dam safety, and clean water programs.

Mr. Servidio also served as the chief of staff for EPA's Region 2 headquarters from 2005-2009, where he helped administer federal programs in implementing the Agency's mission in New Jersey, New York, Puerto Rico, and the U.S. Virginia Islands.

"Cosmo Servidio has spent much of his career providing administrative support for institutions that provide healthy environmental outcomes for the public," **said Administrator Pruitt**. "He brings federal, state, and local administrative experience working in the environmental field and will provide exceptional leadership for Region 3."

Cosmo Servidio's appointment is receiving support from across the region:

Douglas Bilheimer, Executive Director, Pennsylvania Municipal Authorities Association: "We are very pleased to learn that Cosmo Servidio has been appointed to serve as director of EPA Region 3. Mr. Servidio's background at Pennsylvania's Department of Environmental Protection and most recently with one of our largest most progressive municipal authorities will serve him well in his new responsibilities."

Austin Caperton, Secretary of the West Virginia Department of Environmental Protection: "I was very encouraged by my first meeting by phone with Cosmo Servidio. He is obviously experienced and qualified for the position. It was clear that he believes in cooperative federalism and the rights of states. He is clearly in line with the current administration. But most important to me: he listened!"

Ben Grumbles, Maryland Secretary of the Environment: "Cosmo is a seasoned environmental

professional who knows how to build partnerships for progress throughout our region."

Debra McCarty, Commissioner of the Philadelphia Water Department: "Cosmo Servido is an excellent appointment. He was good to work with at the PA DEP and will bring pragmatism, experience and commonsense to the EPA. I look forward to again working him in this new role to protect the environment."

Maya K. van Rossum, Delaware Riverkeeper: "Cosmo Servidio is the best choice for Regional Administrator. He is highly regarded by throughout the environmental community. This respect has been earned by the fair minded and forthright decisions and actions taken by Cosmo to implement the law and achieve the goals of community and environmental protection. Even if there was a decision Cosmo made in his role as regional director at PADEP that I didn't like or agree with, I always knew it was a decision grounded in the facts, the law and one that Cosmo truly believed was the right outcome. I might not always like the answers Cosmo gave me as a regulator, but I always knew I could trust that he was telling me the truth. That kind of integrity from a Regional Administrator is critical for success, particularly in today's political climate."

Wilmer Stoneman, Director of Commodities and Marketing, Virginia Farm Bureau: "Virginia Farm Bureau certainly welcomes this opportunity to work with Mr. Servidio to balance the needs of Virginia Farmers and the Chesapeake Bay."

Jeff Warmann, CEO and President, Monroe Energy LLC: "Cosmo's leadership is unparalleled. He has a keen ability to bring regulators and business together, ensuring that they communicate effectively and that their shared goals of protecting the environment are achieved. Cosmo and his team were readily available to answer any questions we had or to provide guidance when needed. I want to congratulate Cosmo on his appointment to Region Three Administrator; I know that he will do a tremendous job."

Rob Wonderling, President and CEO of the Chamber of Commerce for Greater Philadelphia: "On behalf of the Chamber of Commerce for Greater Philadelphia we applaud the recent appointment of Cosmo Servidio as the Region III EPA Administrator. Cosmo has served our region well as a public servant and business leader who keenly understands that environmental stewardship and economic growth require consensus, collaboration, and a modern approach to policy and regulation. Cosmo has a proven track record of being a highly energetic leader and innovative leader who actively listens to all sides and perspectives related to complex environmental issues. He also has a keen eye on global trends, solid science, and macroeconomic opportunities that will serve our region and nation well in this new assignment."

Greenhouse Gas Reporting Budget Slashed in Trump Proposal

Posted May 23, 2017, 03:29 P.M. ET

By Dean Scott and Andrew Childers

An EPA program to track greenhouse gas emissions nationally faces an 85 percent budget cut as President Donald Trump looks to slash the agency's funding and sideline climate change efforts.

Trump and Environmental Protection Agency Administrator Scott Pruitt have vowed to downplay the agency's climate change work, instead focusing on priorities such as cleaning up Superfund sites.

The EPA in the fiscal year 2018 budget proposal released May 23 faces $336 million in cuts to its climate work compared to estimated funding levels for 2017. The Office of Management and Budget compared its fiscal 2018 proposal to estimated funding based on the continuing resolution for 2017 rather than the recently passed omnibus funding levels for that year. International climate programs are also on the chopping block as Trump follows through on a pledge to end funding for international climate aid.

The $336 million in cuts to the EPA's air pollution and climate work include:

• $161 million reduction—a 34 percent cut from 2017 levels—to environmental programs and management,

• $114 million less for science and technology programs, a 46 percent reduction, and

• $60 million in cuts to aid to states and tribes—a nearly 18 percent cut from 2017 levels.

Within the environmental programs funding, the EPA's greenhouse gas reporting program is slated to receive only $13.6 million, down from an estimated $95.3 million in 2017. The estimated savings would come from eliminating a variety of voluntary programs such as Energy Star, voluntary methane reduction efforts for the oil and gas sector, and the Green Power Partnership, which encourages the use of renewable energy.

Reducing those programs is part of what the Trump administration calls its "commitment to return EPA to its core work."

The greenhouse gas reporting program collects annual emissions data from nearly 8,000 industrial facilities across 41 sectors of the economy.

International Climate Aid Eliminated

Trump's fiscal year 2018 budget plan also maintains his pledge to zero out billions in international climate aid.

The proposal would eliminate a total of $1.59 billion for the United Nations Green Climate Fund, the Global Climate Change Initiative, and other international climate programs.

Zeroing out the Green Climate Fund would mean the U.S. would fall well short of the amount President Barack Obama pledged in 2014 toward the fund—$3 billion over four years—which helps developing nations adapt to climate impacts and pursue low-carbon development. Obama used the Global Climate Change Initiative to make sure climate issues were being addressed in assistance funneled through multiple foreign assistance agencies.

Cleanup Research of Contaminated Sites Gets Boost in Trump Plan

Posted May 23, 2017, 04:12 P.M. ET

By Sylvia Carignan

Toxin-eating bacteria and other remediation research projects would get a bump in funding under President Donald Trump's proposed budget, contrasting with agency-wide slashes in research and cleanup spending.

Trump's administration is proposing an additional $5 million—or a 22 percent increase—in environmental cleanup research and development under the Department of Defense.

Meanwhile, the Environmental Protection Agency's Superfund budget would be cut by 30 percent, to $762 million, under Trump's proposed plan.

The proposed cut contradicts EPA Administrator Scott Pruitt's recent memos stating that the Superfund program is "vital" and an agency priority, environmental advocates said.

But additional funding for cutting-edge research will benefit cleanup activities across the country, not just at federal facilities, said Janet Anderson, managing scientist at San Antonio-based environmental consulting firm Integral Consulting.

The White House released the numbers in a proposed budget May 23.

The proposed increase comes in sharp contrast to other agencies' research and development budgets under Trump's plan.

Across the Department of Defense, the president is proposing a 25 percent cut in research and development spending, from $71.2 billion in 2017 to $53.4 billion in 2018.

The EPA budget for research and development would be cut by almost half, from $510 million in 2017 to $277 million in 2018, under Trump's budget.

Investing in Remediation's Future

Defense research projects currently under development include developing new varieties of anaerobic bacteria that can biodegrade contaminants and finding ways to clean up aqueous film-forming foams, used to extinguish fuel fires, on contaminated sites.

The projects focus on contaminants that are left behind by military activities, but those contaminants—like dioxins, chlorinated solvents and perfluoroalkyl substances—also affect non-federal properties.

The Defense Department's environmental research programs include the Strategic Environmental Research and Development Program and the Environmental Security Technology Certification Program. They support innovative technology that improves the characterization, remediation and management of contaminated federal sites.

Sharing that research is a built-in feature for those programs.

"It is actually an explicit requirement that any and all interested entities can benefit from the information gleaned from research funded out of SERDP/ESTCP," Anderson told Bloomberg BNA.

Sue Boyle, executive director of the New Jersey Licensed Site Remediation Professionals Association, said defense-led research in vapor intrusion and long-term monitoring have benefited civilians working on cleanup sites.

The Department of Defense also is pushing research on perfluoroalkyl substances, she told Bloomberg BNA, since the contaminant has become an expensive problem, especially for the Air Force.

Growing Liability

According to the Government Accountability Office, the federal government's cleanup liability hovers around $447 billion for contaminated sites as of fiscal year 2016.

The independent watchdog reported earlier this year that the federal government's environmental liability for its contaminated properties has been growing for the past 20 years and is likely to increase.

The U.S. Army Corps of Engineers' funding for cleaning up former federal sites, meanwhile, would see a small proposed increase under Trump's plans, from $111 million in 2017 to $115 million in 2018. The Corps is responsible for remediation at about 5,400 former federal sites, according to Lt. Gen. Todd Semonite, the Corps' commanding general.

Budget Funds Shutdown of 'Duplicative' Chemical Safety Board

Posted May 23, 2017, 01:07 P.M. ET

By Sam Pearson

The Trump administration kept its earlier promise to eliminate the U.S. Chemical Safety Board, describing the watchdog as "largely duplicative" in its proposed budget released May 23.

The White House first proposed closing the CSB in its skinny budget in March. Under the budget proposal released May 23, CSB would receive $9.42 million in fiscal 2018—but only to fund its closure. The board received $11 million in fiscal 2017.

CSB board members, industry figures and labor unions have said the CSB is not duplicative because similar agencies do not perform the same kind of work. While other agencies like the Environmental Protection Agency and the Occupational Safety and Health Administration may also investigate incidents that the CSB probes, they lack the board's mandate to seek the root cause of an investigation. These other agencies can issue citations and fines, which may dissuade plant operators from sharing information.

In its justification for the proposal, the budget notes Congress' intent that the agency "be an investigative arm that is wholly independent of the rulemaking, inspection, and enforcement authorities of its partner agencies in making recommendations on actions that can be taken to prevent similar accidents from occurring in the future." However, the document argues CSB "more often than not" creates friction with other agencies. The CSB has also focused too much on "the need for greater regulation of industry, which has frustrated both regulators and industry."

The budget mentions controversies that occurred under the tenure of former CSB Chairman Rafael Moure-Eraso, resulting in reports by the EPA Inspector General and the House Committee on Oversight and Government Reform in 2014. Moure-Eraso left the CSB more than two years ago.

"While CSB's new leadership is making progress on the previous management challenges," the document said, "due to the duplicative nature of its work, the Budget recommends eliminating the agency."

Members Confused

Board members said at a meeting April 13 they did not understand why the agency was targeted. They found out about the White House plan to seek the agency's closure March 15, the day before the release of the skinny budget.

"We haven't been told exactly why the CSB does not perform a necessary function," Engler said.

Under the board's authorizing statute, it can issue its own budget request independent of the White House. CSB spokeswoman Hillary Cohen said in an email to Bloomberg BNA the board expects to do so late May 23.

Hanford Nuclear Cleanup Budget Slashed in Energy Proposal

Posted May 23, 2017, 04:08 P.M. ET

By Chuck McCutcheon

Washington state's Hanford Nuclear Reservation, scene of a recent collapse of a tunnel containing nuclear waste, would see its funding slashed under President Donald Trump's new budget proposal.

The May 23 release of the fiscal year 2018 budget for the Department of Energy, which follows

Trump's earlier "skinny budget," drew praise from conservative Republicans for being fiscally responsible and criticism from those who want more funding for energy research and development and other programs. Given that many of the department's programs are located in numerous areas of the country and enjoy bipartisan support, Congress is expected to restore many of the proposed cuts.

The Energy Department would sustain an overall 5.4 percent cut, or $1.7 billion—minor compared to most other Cabinet agencies—from the estimated funding levels Congress provided in fiscal 2017, according to White House Office of Management and Budget documents. The agency's clean energy programs would bear the brunt of the cuts, with new funds funneled into the arm of the agency dealing with developing and safeguarding nuclear weapons.

"This budget delivers on the promise to reprioritize spending in order to carry out DOE's core functions effectively and efficiently while also being fiscally responsible and respectful to the American taxpayer," Energy Secretary Rick Perry said in a statement.

But Ernest Moniz, Perry's predecessor under former President Barack Obama, called the budget proposal "a retreat of American leadership on energy innovation, environmental protection and energy security."

Trump's budget blueprint calls for reducing cleanup at Hanford from $921 million to $716 million, a 22 percent reduction. That comes as the budget proposes to boost overall departmental defense-related environmental cleanup of materials from $5.28 billion to $5.54 billion.

Hanford Cleanup Needed

Washington state's congressional delegation, including Democratic Sens. Patty Murray and Maria Cantwell, long have pressed various administrations to commit to cleaning up Hanford. The site in eastern Washington has milllons of gallons of highly radioactive wastes stored in 177 aging underground tanks, some of which have leaked.

"Previous administrations and Congress have repeatedly supported the legal and moral obligation of the federal government to clean up the Hanford site, and we urge you to continue this important work to protect health and safety," the two senators and Rep. Dan Newhouse (R-Wash.) said in a May 19 letter to Perry.

The Hanford tunnel, containing radioactive wastes that were byproducts of producing plutonium for nuclear weapons, partially collapsed on May 9, prompting nearby workers to evacuate. A worker's clothing also was exposed to radioactive contamination in what Washington Gov. Jay Inslee (D) called an "alarming incident."

Trump's budget also calls for steep cuts to numerous other Energy programs:

• Basic energy sciences, which supports research to advance new energy technologies, would see a proposed cut from $1.84 billion to $1.55 billion.

• Biological and environmental research, which studies biological, earth and environmental systems for energy and infrastructure resilience and sustainability, would see a proposed cut from $608 million to $349 million.

• Energy effiency and renewable energy programs would receive a proposed $636 million, a decline of $1.4 billion. Subprograms dealing with weatherization of homes and state energy are proposed for

elimination "to reduce federal intervention in state-level energy policy and implementation," according to the department.

• Sustainable transportation programs, which conduct early-stage research and development on vehicle technologies, fuel cells and other energy innovations, would see a proposed cut from $659 million to $336 million. Within that, solar energy would be cut from $324 million to $134 million; wind energy from $145 million to $66 million; water power from $97 million to $44 million. Geothermal technologies would be sliced in half to $38 million.

• Fossil energy research, which supports research into coal, oil and other energy types that Trump has emphasized, would see a proposed cut from $631 million to $280 million. The budget seeks to consolidate the work for the National Energy Technology Laboratory, which does work in several states, into a single operational site.

• Cybersecurity for energy-delivery systems, which supports research on cutting-edge solutions to defend against cyber attacks, would see a proposed cut from $62 million to $42 million. The proposed budget adds $43 million for cybersecurity within the defense environmental cleanup program.

ARPA-E Cut Maintained

The proposed budget maintains the administration's earlier call for cutting the Advanced Projects Research Agency-Energy (ARPA-E) office, which invests in early-stage, high-risk energy technologies that have potential to transform the nation's energy system.

In addition, it maintains the "skinny budget" promise to eliminate the Advanced Technology Vehicles Manufacturing Loan Program, which provides loans to automakers to help produce advanced-technology vehicles. The program's loan office will wind down operations in fiscal 2018 with the expectation it will shut down the following fiscal year, according to an Office of Management and Budget document.

Similarly, it continues the call for eliminating the Title 17 Innovative Technology Loan Guarantee Program, which funds high-risk technology that aims to avoid, reduce or sequester air pollutants or greenhouse gases.

Trump's blueprint also underscores the administration's interest in reconsidering waste storage at Nevada's Yucca Mountain site despite widespread objections from Nevada lawmakers. It proposes restarting the Nuclear Waste Fund Fee in 2020, an indication the administration is planning to have a permanent storage site for high-level spent fuel from commercial nuclear power plants up and running by that time. The budget also separately includes a $30 million request for the Nuclear Regulatory Commission to restart work on the site northeast of Las Vegas, which the Obama administration had mothballed.

Perry, in recent visits to several of the department's national laboratories, has pledged to support much of their work. The proposed budget includes a boost from $620 million to $722 million for the Advanced Scientific Computing Research program, which supports research in applied mathematics and computer science at such labs as Oak Ridge in Tennessee, Argonne in Illinois and Lawrence Berkeley in California.

Video: Advanced Energy Research Office Would Be Cut in Trump Budget

Posted May 23, 2017, 04:18 P.M. ET

By Rebecca Kern

The Trump White House is proposing to eliminate a small Energy Department advanced energy research office under a fiscal 2018 budget proposal.

The Advanced Research Projects Agency-Energy, created in 2007 during President George W. Bush's administration, invests in early-stage, high-risk energy technologies that have potential to transform the nation's energy system, such as converting renewable energy into fuels.

Bloomberg BNA interviewed Lisa Jacobson, president of the Business Council for Sustainable Energy, about how companies benefit from early-stage investment through ARPA-E. The ARPA-E office has had support from the business community as well as bipartisan support in Congress.

The program received an estimated $291 million in fiscal 2017, but would be phased out in the fiscal 2018 budget request. It would receive $20 million for staff to oversee existing awards to completion and monitor a loan portfolio.

Renewable Energy Powers Jobs for Almost 10 Million People

Posted May 23, 2017, 04:12 P.M. ET

By Mahmoud Habboush

Renewable energy employed 9.8 million people last year, up 1.1 percent from 2015, led by solar photovoltaic at 3.09 million jobs, according to the International Renewable Energy Agency's annual report on the industry.

Growth has slowed in the past two years while solar photovoltaic and wind categories more than doubled their number of jobs since 2012, the first year assessed, Irena said in the report.

Global renewables employment has climbed every year since 2012, with solar photovoltaic becoming the largest segment by total jobs in 2016, according to the report..

Solar photovoltaic employed 3.09 million people, followed by liquid biofuels at 1.7 million. The wind industry had 1.2 million employees, a 7 percent increase from 2015.

Employment in renewables, excluding large hydro power, increased 2.8 percent last year to 8.3 million people, with China, Brazil, the U.S., India, Japan and Germany the leading job markets. Asian countries accounted for 62 percent of total jobs in 2016 compared with 50 percent in 2013.

Renewables jobs could total 24 million in 2030, as more countries take steps to combat climate change, the agency said in the report.

Climate Spending 'Crazy Stuff' Targeted in Trump Budget

Posted May 23, 2017, 03:56 P.M. ET

By Christopher Flavelle

President Donald Trump's first budget request to Congress would cut or eliminate a range of programs designed to reduce greenhouse gas emissions, as well those helping communities prepare for more intense flooding or hurricanes expected to result from climate change.

The scope of climate funding established under President Barack Obama is broad, and Trump's budget took aim at much of it: It would terminate a NASA program to launch satellites to measure carbon dioxide in the atmosphere and slash grants to help local communities cope with the increasing risks of a natural disaster. A $190 million effort to map the risks of flooding also would be eliminated.

"We want to do some climate science, but we aren't going to do some of the crazy stuff that the previous administration did," Mick Mulvaney, director of the White House Office of Management and Budget, told reporters. The "pendulum went too far to one side."

Trump's proposed cuts come amid growing scientific consensus that climate change is real and accelerating—but deep skepticism about the risks from both the president and members of his administration. Trump had dubbed climate change a hoax, and Scott Pruitt, the head of the Environmental Protection Agency, said focus on combating climate change under Obama distracted the agency from other important tasks.

But there were 15 separate billion-dollar natural disasters in the U.S. alone last year, three times the average since 1980, and environmental advocates say the nation needs to prepare for the impacts both being felt today and forecast to come in the years ahead.

"This is a budget declaring war on climate change policy and solutions," said Elgie Holstein, a senior director for strategic planning at the Environmental Defense Fund and a former budget official under President Bill Clinton. "It's not a deep surprise, but it's deeply disappointing."

Presidential budget proposals typically undergo significant changes in Congress, but they provide insight into White House priorities.

The proposed cuts are most pronounced at agencies tasked under Obama with reducing emissions for carbon dioxide from power plants, automobiles and oil and natural gas production.

EPA would lose about one third of its funding, including a steep cut to the office dealing with clean air and global climate change.

At the Energy Department, funding for the agency's arm charged with renewable energy and energy efficiency research would be cut by nearly 70 percent. Research on carbon capture and storage, which could help reduce emissions from coal, would also be cut.

The budget would also reduce or end programs designed to protect Americans from the consequences of climate change.

The Federal Emergency Management Agency maps flood risks to help the National Flood Insurance Program decide how much to charge for coverage, alert homeowners if they're in danger and inform projects to reduce flood risk. The Trump administration argues that those services mainly benefit communities at risk of flooding, and so the cost should be paid locally. The $190 million program would be eliminated under its plan.

'Better Target'

A similar program at the National Oceanic and Atmospheric Administration to research how coastal communities can deal with sea-level rise would be eliminated. That cut would allow NOAA "to better target remaining resources to core missions and services," the budget document said.

Programs designed to gather data about climate change also would be cut.

The budget proposes ending five earth-science programs at the National Aeronautics and Space Administration, including one that would measure carbon dioxide emissions and concentrations. The budget would also eliminate funding for the U.S. Geological Survey to study so-called biological carbon sequestration: when peat moss or other vegetation holds greenhouse gases, keeping them from entering the atmosphere.

Also gone would be U.S. efforts to help poor nations develop low-carbon energy or grapple with climate impacts. The administration wants to cancel funds run by the State Department aimed at encouraging clean energy. It would also stop all assistance aimed at helping other countries deal with the effects of climate change.

"America must put the energy needs of American families and businesses first," according to the section of the budget document justifying those cuts. That includes "promoting development of the nation's vast energy resources."

Two Energy Professionals Chosen for Nuclear Commission

Posted May 22, 2017, 09:17 P.M. ET

By Rebecca Kern

A former utility commission chairman and a Senate energy staffer were named by the Trump administration to fill two vacant Republican seats on the Nuclear Regulatory Commission.

David Wright, a former South Carolina Public Service Commission chairman, and Annie Caputo, a senior policy adviser for the Senate Environment and Public Works Committee, will be nominated to serve terms as Republican commissioners on the nuclear regulatory body, the administration announced May 22.

The administration also said it plans to renominate Kristine Svinicki, the current chairman, to serve another five-year term as chairman. Svinicki's current term was set to expire July 1.

The NRC has been down to three commissioners—Svinicki, a Republican; Stephen Burns, an independent; and a former chairman, Jeff Baran, a Democrat. If the nominees are confirmed, the agency would return to a full five-person panel.

Wright has been the owner of Wright Directions LLC, a strategic consulting and communications business based in South Carolina, since 2013. He served on the South Carolina Public Service Commission from March 2004 to June 2013.

From 2011-2012, he was president of National Association of Regulatory Utility Commissioners,

which represents state public service commissioners. He also was national chairman of the Nuclear Waste Strategy Coalition from 2006 to 2013, a group of state utility regulators, local governments, and tribes on nuclear waste policy issues. He has a political science degree from Clemson University.

Marc Spitzer, a former commissioner at the Federal Energy Regulatory Commission from 2006-2011 and currently a partner at Steptoe & Johnson LLC, told Bloomberg BNA he worked with Wright on a jurisdictional issues between FERC and the South Carolina commission.

Two of the four nuclear reactors being built in the U.S. are being built by SCANA Corp. in South Carolina, which likely factored into the administration's choice to nominate Wright.

Caputo's Bipartisan Reach

Caputo has more than a decade of experience working as a staffer on both Senate and House energy committees. She has worked as a policy adviser on the Senate Environment and Public Works Committee since January 2015, and was a staffer from 2007-2012, specializing in nuclear energy issues. From 2012 to 2015 she worked as a staffer on the House Energy and Commerce Committee.

She was a congressional affairs manager at Exelon Corp. from 1998 to 2005. Caputo has a chemical engineering degree from Michigan Technological University and a degree in nuclear engineering from the University of Wisconsin-Madison.

"On the Hill, both Democrats and Republicans see her as a leading expert on NRC issues," Ryan Fitzpatrick, deputy director of the Clean Energy Program at Third Way, a group that advocates for clean energy and nuclear energy, told Bloomberg BNA.

Fitzpatrick said he worked with Caputo on the Nuclear Energy Information and Modernizaton Act (S. 512), which the Environment and Public Works Committee reported out favorably in March. The bill directs the NRC to create a regulatory framework for advanced nuclear reactor technologies, which aren't cooled by water as existing nuclear reactors are.

Trillions on Yearly Infrastructure Spending Would Help Climate Goals: OECD

Posted May 23, 2017, 03:45 P.M. ET

By Rick Mitchell

The world's biggest economies have to spend about $6.9 trillion a year on "smart" infrastructure through 2030 to be on track to keep global warming to safe levels, a new OECD report said.

Because most major economies have skimped on infrastructure since the 2008 financial crisis, an average $6.3 trillion of yearly investment is required in the next 14 years just to meet development needs globally. And for an extra $600 billion, the $6.9 trillion in total annual outlays could buy infrastructure that is "modern, smart and clean infrastructure" and not "carbon-intensive," according to the report the Organization for Economic Cooperation and Development released May 23.

Because smart infrastructure is more energy-efficient, it would cut fossil fuel spending by $1.7 trillion annually, more than offsetting the extra cost, the OECD said.

Low-emissions infrastructure investment figures at the heart of the report's recommendations for policy makers to combine strong fiscal and structural reform with coherent climate measures, rather than treat climate as a separate issue. Such an approach would significantly reduce climate change risks, while also providing near-term economic, employment and health benefits, it said.

The 314-page report forecasts "a climate-compatible policy package" that could increase economic output by up to an average 2.8 percent across the Group of 20 countries by midcentury, and that gain rises to almost 5 percent compared with a business-as-usual scenario, if positive impacts of avoiding climate damage are taken into account.

Today's Investment, Tomorrow's Goals

The Paris-based economic policy body released the report at the eighth annual Petersberg Climate Dialogue, which Germany hosted in Berlin as part of its presidency of the G-20 countries, which account for about 85 percent of global economic output and about 80 percent of carbon dioxide emissions.

Infrastructure investments made to 2030 will determine whether the 2015 Paris Agreement's goal to hold global warming to 2 degrees Celsius in this century, compared with pre-industrial levels, can be achieved, the report said. Smart infrastructure includes renewable energy generation and storage, electric vehicles, advanced building insulation techniques and negative emissions technologies, and restoring degraded grasslands, among others.

Public and private financing are crucial to infrastructure investment, the OECD said in the report. Today's low-interest rates give many countries "fiscal space" to borrow, while others can optimize their tax-and-spending mix to pay for projects. Meanwhile, well-aligned climate, fiscal, and investment policies will spur increased private investment.

The OECD said the "financial system" has to do more to correctly value and incorporate climate-related risks for infrastructure investments. And development banks and finance institutions should boost available resources, while helping to develop "green finance" in partner countries.

The organization's 35 member countries, which are mainly wealthy economies, include Group of 20 members Australia, Canada, France, Germany, Italy, Japan, Mexico, South Korea, Turkey, the U.K. and the U.S. Argentina, Brazil, China, India, Indonesia, Russia, Saudi Arabia, and South Africa are G-20 members but not in the OECD. The European Union also is a G-20 member.

U.S. Sues Fiat Chrysler for Diesel Emissions Test Violations

Posted May 23, 2017, 03:02 P.M. ET

By Ryan Beene and Jamie Butters

The U.S. Justice Department sued Fiat Chrysler Automobiles NV over claims its diesel-powered pickups and SUVs were outfitted with illegal software that allowed them to pass laboratory emissions tests (U.S. v Fiat Chrysler Automobiles N.V., E.D. Mich., No. 17-cv-11633, 5/23/17).

The complaint filed May 23 alleges that nearly 104,000 vehicles with 3.0 liter EcoDiesel engines were equipped with software "defeat devices" that caused the vehicles' emission control systems to perform differently, and less effectively, during certain normal driving conditions than on laboratory emissions tests, according to a statement from the Environmental Protection Agency.

The company issued a statement saying it "is currently reviewing the complaint, but is disappointed" that the suit had been filed.

"The company intends to defend itself vigorously, particularly against any claims that the company engaged in any deliberate scheme to install defeat devices to cheat U.S. emissions tests," according to the statement.

That could set up an intense showdown between U.S. officials and Fiat Chrysler, which has fought regulators in the past. The government is seeking civil penalties for alleged violations of the Clean Air Act, according to the EPA.

The suit comes after months of negotiations failed to bridge a divide between the company and regulators over the nature of emissions calibrations used on 2014-2016 Jeep Grand Cherokee SUVs and Ram 1500 pickups powered by diesel engines. Fiat Chrysler's diesel emissions are also the subject of a U.S. criminal probe.

Fiat Chrysler Denies Allegations

Volkswagen AG touched off the biggest scandal in modern automotive history when it admitted in 2015 that about 11 million diesel cars worldwide were outfitted with so-called defeat devices, embedded algorithms used to game emissions tests. The German automaker has committed to spending upwards of $24.5 billion in North America to settle legal claims, including both civil and criminal cases brought last year by the U.S. government, and buy back or repair some 560,000 vehicles.

Unlike VW, Fiat Chrysler has steadfastly denied that it knowingly set out to cheat on emissions tests.

Fiat Chrysler announced May 19 that it had proposed a fix to its diesel emissions calibrations in a bid to resolve the EPA's concerns with the vehicles. If the agency approves the proposed settings for the automaker's 2017 diesels, the company said, the carmaker would then make the same modifications to the older vehicles under scrutiny.

In January, the EPA identified eight emissions controls in the Jeep and Ram diesels that weren't disclosed as required in applications for clean-air certifications filed with the agency. The EPA also said it believed that one or more of those controls were defeat devices, and challenged the carmaker to prove otherwise.

An initial hearing of separate lawsuits, brought by owners of the diesel SUVs and pickups, is set for Wednesday in San Francisco federal court where VW emissions lawsuits were consolidated. The EPA said in a statement Tuesday it will try to move its case to the same court.

EPA Applies Brakes on Landfill Methane Rules

Posted May 23, 2017, 11:31 A.M. ET

By Andrew Childers

The EPA took its first step toward reconsidering methane limits for landfills set by the Obama administration by freezing implementation of the rules for 90 days.

The Environmental Protection Agency plans to rethink several aspects of the methane limits for both new and existing landfills, including whether the requirements overlap with other existing regulations, Administrator Scott Pruitt said in a May 5 letter to the National Waste & Recycling Association, Solid Waste Association of North America, Republic Services, Inc., Waste Management, Inc., and Waste Management Disposal Services of Pennsylvania, Inc.

These groups had all petitioned the agency to reconsider the rules.

The EPA announced its plan to halt implementation of the regulation for 90 days in a notice released May 23. The 90-day halt will take effect when the notice is published in the Federal Register.

Trump Proposes Selling Off Half the U.S. Strategic Oil Reserve

Posted May 23, 2017, 8:19 A.M. ET

By Catherine Traywick and Jennifer A. Dlouhy

The White House plan to trim the national debt includes selling off half of the nation's emergency oil stockpile, part of a broad series of changes proposed by President Donald Trump to the federal government's role in energy markets.

Trump's first complete budget proposal, released in part May 22, would raise $500 million in fiscal year 2018 by draining the Strategic Petroleum Reserve, and as much $16.6 billion in oil sales over the next decade.

The proposal also seeks to boost government revenues by allowing oil drilling in the Alaska National Wildlife Refuge, ending the practice of sharing oil royalties with states along the Gulf of Mexico and selling off electricity transmission lines in the West. Like much of the budget, those moves are likely to face opposition in Congress.

Presidential budget proposals typically undergo significant changes in Congress, but provide insight into White House priorities.

The Strategic Petroleum Reserve currently holds 687.7 million barrels of oil in salt caverns and tanks at designated locations in Texas and Louisiana. That allows for quick distribution when natural disasters or unplanned accidents occur, according to the Energy Department website.

Measures passed in 2015 and 2016 call for the sale of nearly 190 million barrels of oil from the reserve between 2017 and 2025, to raise money for unrelated government programs. Those sales would cut the reserve by about 27 percent. Slashing the stockpile by half would require further sales, and would risk breaching the legally required inventory threshold. The reserve must contain a minimum of 450 million barrels.

The budget summary document doesn't indicate the scope or timing of potential oil reserve sales, or whether a $2 billion program to modernize the stockpile's infrastructure would be affected.

Oil, Gas Proposals

Trump is also seeking to raise money with two other proposed changes—one that would be cheered by the oil industry and another that would draw its ire.

For instance, he projects raising $1.8 billion over the next decade by opening up the 19-million-acre Arctic National Wildlife Refuge to oil and gas development. The idea of allowing drilling in the refuge for its estimated 12 billion barrels of crude has long been championed by Alaska Republicans, including Sen. Lisa Murkowski, who heads the appropriations subcommittee in charge of Interior spending.

But it's anathema to environmentalists, who have successfully blocked ANWR drilling plans from advancing on Capitol Hill by stoking concerns about threats to the polar bears, caribou, wolves and other animals that live in the territory.

Trump's budget request suggests ANWR leasing could begin to pay off in fiscal 2022, with $100 billion in projected revenue that year. In addition to environmentalists' opposition, it's unclear how much appetite energy companies would have for the reserve. Monster discoveries there could yield decades of oil production, but the cost of operations in northern Alaska could discourage the activity amid modest crude prices and the domestic shale boom.

Offshore Royalties

Trump's budget request also revives an Obama-era proposal to cut the payments Gulf Coast states collect from offshore drilling near their coastlines, a change that would translate to an extra $3.56 billion in federal revenue over the next decade. Under a 2006 law, four Gulf states—Alabama, Louisiana, Mississippi and Texas—now claim 37.5 percent of the royalties that oil and gas companies send the federal government in exchange for drilling rights and production on some Gulf of Mexico leases.

Trump's move echoes Obama's attempt to divert some of those royalty payments. And his bid to quash state revenue sharing is likely to meet the same fierce resistance that Obama's plans did. Just as they did under Obama, Gulf Coast lawmakers also will vigorously fight to defend those payments, which help support restoration programs.

The budget also proposes restarting the Nuclear Waste Fund Fee in 2020, a sign that the administration is planning to have a permanent storage site for that waste up and running by that time—presumably at a site in Nevada known as Yucca Mountain. That fee would raise nearly $3.1 billion over 10 years, it estimates.

The White House foresees $2.4 billion in additional revenue in 2019 from the sale of federally-owned transmission lines in the West. Those power lines mostly carry electricity from government-owned dams to metro areas.

Clean Car Rules Lead to Jobs From Technology, Equipment

Posted May 23, 2017, 02:22 P.M. ET

By Ryan Beene

More than a quarter million U.S. jobs are tied to the use of technology and production of materials used to improve vehicle fuel economy, according to a report released May 23 by environmental groups.

The report by the Natural Resources Defense Council and the BlueGreen Alliance seeks to draw attention to jobs supported by auto efficiency regulations under review by the Trump administration. That review was initiated by President Donald Trump in March and directs the Environmental Protection Agency to decide by next April whether to change greenhouse gas standards for 2022-2025 that require annual increases in vehicle efficiency.

The report found that about 1,200 U.S. factories and engineering centers in 48 states produce components such as advanced transmissions or electric motors, or advanced materials such as carbon fiber or aluminum used in vehicles. Those locations employ some 288,000 workers, more than double the number recorded in a 2011 version of the report, the groups said.

"There has been a huge amount of clean vehicle innovation over the last five years," said Luke Tonachel, director of the clean vehicles and fuels project at the Natural Resources Defense Council, a New York-based environmental group. "Clean vehicle innovations are key to both protecting the environment while also keeping the the U.S. manufacturers in a globally competitive position on technology."

Current U.S. auto efficiency rules aim to boost average new vehicle fuel economy to more than 50 miles per gallon by 2025. An automaker-funded study released in March found that the standards would lead to higher vehicle prices and reduce auto-sector employment in the short term. The U.S. could see a net gain of about 150,000 jobs by 2031 as fuel savings at the pump outweigh higher vehicle costs, one of the report's authors said at the time.

China Joins EU, Canada in Backing Climate Deal Before Trump Plan

Posted May 23, 2017, 01:11 P.M. ET

By Marine Strauss and Brian Parkin

China, Canada and the European Union are joining forces to advance the Paris Agreement while President Donald Trump is still deciding whether the U.S. should stick with the landmark deal on climate change.

Canada's environment minister Catherine McKenna, EU Climate and Energy Commissioner Miguel Arias Canete and China's special envoy for climate change Xie Zhenhua are meeting May 23 in Berlin to discuss climate leadership and how to maintain momentum if the U.S. pulls out of the Paris Agreement.

The collaboration between the three countries is another sign that Trump, and the U.S., will become isolated from the rest of the world. Almost 200 nations pledged to fight climate change when the Paris deal was signed in 2015 and since then only the U.S. has indicated it may step off that path.

"It's very important that we continue the shared programs on climate change," McKenna said in an interview at the Petersberg Climate Dialog hosted by Chancellor Angela Merkel. "There is a need to

bring together key players. We think that China, Canada and the EU are in a good position to bring together other countries at the ministerial level to have high-level discussions about how we're going to move forward on the Paris Agreement."

Trump has given mixed signals about the fate of the Paris deal under his administration. He's called climate change a hoax and said during his campaign last year he would scrap the deal if elected. Since then, he's said he would keep an open mind but has prioritized stimulating fossil fuels and especially coal, which conflicts with U.S. promises under the deal. Trump's advisers are divided on the issue.

Germany is assuming Trump will indicate the position the U.S. will take regarding the Paris accord at a Group of Seven summit in Sicily on May 26 and May 27, Environment Minister Barbara Hendricks said at a climate conference in Berlin May 22. Signatory states of the Paris accord won't let their agenda be derailed whatever the outcome of Trump's decision and subsequent policy, Merkel indicated May 23.

"We are often asked about our position when looking at the U.S. uncertainty," said Chinese envoy Xie. "The Paris Agreement is a hard-won achievement, and all signatories should stick to it instead of walking away. China will stick to its word."

The United Nations climate conference, which Germany is hosting this year in Bonn, is pressing ahead with its agenda, Merkel said May 23. Global warming is "something that concerns us all," she told delegates. We must "uphold the spirit of Paris."

Concerns were also raised by a number of global corporate and political leaders, including the OECD which said that bringing growth and climate-change agendas together could lift 2050 economic output by as much as 2.8 percent, a report released May 23 said. Taking into account the economic benefits of avoiding climate change impacts such as flooding, that number goes up to almost.

"This trio is emblematic of the kind of distributed leadership we're seeing, with a diversity of countries putting their shoulders to the wheel on climate," said David Waskow, International Climate Director at the World Resources Institute. "It ranges from major emitters to many of the most vulnerable, and many in between."

The agreement is broader than any previous climate accord. It calls for reducing pollution in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above temperatures at the outset of the industrial revolution.

"The Paris Agreement was a signal to the market and now it's about how to take advantage of this opportunity and how do we make sure that every country is part of it," McKenna said. "There's a huge opportunity and now it's bigger than just one country."

Toyota, Nissan, Honda to Lead Japan's Hydrogen Station Coalition

Posted May 23, 2017, 12:10 P.M. ET

By Toshio Aritake

Eleven leading Japanese companies including Toyota, Nissan and Honda said they will collaborate to build more hydrogen stations to accommodate fuel cell motor vehicles in Japan.

While the government has a target of 160 hydrogen stations serving 40,000 fuel cell vehicles by 2020, just 90 hydrogen stations are currently in operation—and slightly more than 1,000 fuel cell vehicles on Japanese roads, according to government statistics and the Japan Automobile Manufacturers Association.

The companies are Toyota Motor Corp. , Nissan Motor Co., Honda Motor Co., JXTG Nippon Oil & Energy Corp., Idemitsu Kosan Co. Ltd., Iwatani Corp., Tokyo Gas Co., Toho Gas Co. Ltd., Air Liquide Japan Ltd., Toyota Tsusho Corp., and the Development Bank of Japan Inc., they said in a May 19 announcement.

The cost of building a hydrogen filling station is more than twice the cost of building a gas station, the Japan Automobile Manufacturers Association said.

Daimler Raided by Prosecutors in Emission-Manipulation Probe

Posted May 23, 2017, 8:53 A.M. ET

By Karin Matussek

Daimler AG offices across Germany were raided as part of a criminal investigation into diesel emission-manipulation allegations.

The Stuttgart prosecutors' office raided 11 properties in four German states, including in its home state of Baden-Wuerttemberg, their spokeswoman Melanie Rischke said in an emailed statement May 23. Daimler is fully cooperating with the authorities, Joerg Howe, a spokesman for the Stuttgart-based manufacturer, said in a statement.

Prosecutors in Stuttgart last months opened a probe into an unspecified number of current and former employees over emission-manipulation allegations. The employees are being probed for possible fraud and false advertising.

Carmakers have been under the spotlight since Volkswagen AG revealed in September 2015 that it installed software in 11 million diesel vehicles worldwide to bypass pollution rules. Authorities across Europe are focusing their attention on whether a separate technology that enables emissions controls to switch off at certain temperatures to help protect engines—widely used across the industry—violates the law.

After rising as much as 1.4 percent, Daimler shares pared gains and were up 0.3 percent at 67.95 euros at 2:37 p.m. in Frankfurt.

States, Industry at Odds Over Crude By Rail Pressure Standard

Posted May 23, 2017, 11:59 A.M. ET

By Sylvia Carignan

Six state attorneys general and petroleum industry groups are battling over a pressure standard for transporting crude oil by rail tank cars.

The attorneys general say the increased transportation of crude oil by rail and a suggested pressure standard under consideration by the Pipeline and Hazardous Materials Safety Administration increases the possibility of exploding or flammable trains near high-population areas.

But some industry groups say that standard would impose "unreasonable costs" on crude oil transportation, and that vapor pressure isn't a reliable indicator of flammability. Vapor pressure is generally used as a measure of the volatility of a liquid.

PHMSA is weighing a petition from New York's attorney general, who asked the agency to require a Reid vapor pressure limit of less than 9 pounds per square inch for crude oil transported by rail. If PHMSA grants the attorney general's petition, the agency would need to determine whether 9 pounds per square inch is a preferable limit.

The attorneys general and industry groups, which include the American Fuel and Petrochemical Manufacturers, submitted their comments in response to an advanced notice of proposed rulemaking that asked for input on the pressure standard (RIN:2137-AF24).

States See Increased Crude Movement

The attorneys general for New York, California, Illinois, Maine, Maryland, and Washington state submitted joint comments pushing for a vapor pressure standard lower than the one PHMSA is considering for crude transported by rail tank cars.

Before 2011, crude oil wasn't transported across Washington state by rail. But in 2013, the attorneys general said, Washington had seen about 700 million gallons of crude by rail, most on its way from North Dakota to refineries in Washington or California.

North Dakota, which has its own pressure standard, intends to defend it despite any federal rule, according to comments from the state's Industrial Commission. Their standard is higher or more lax than PHMSA's proposal.

Across the U.S., about 275,000 barrels of crude oil are transported by rail each day, according to the Energy Information Administration's February 2017 estimates.

"We have seen some of the rail traffic slack off a bit, but it's going to be upticking again," Tyson Slocum, energy program director at Public Citizen, told Bloomberg BNA.

The fact that there have been fewer recent accidents may be a result of lower volume, he said, but a federal standard is still necessary.

"We've had too many accidents to sacrifice safety for oil and rail industry profits," Slocum said.

Setting a Limit

While federally-funded research into the flammability and explosive potential of crude oil continues, the attorneys general argue a lower pressure standard is safer.

The North Dakota Petroleum Council commented that New York's petition shouldn't assume that limit is appropriate because federally-funded research has not been completed. Until an ongoing study at Sandia National Laboratories is completed, PHMSA shouldn't move ahead, the council stated.

The American Fuel and Petrochemical Manufacturers commented that instead of pressure, the presence of heat is more important when considering crude oil's flammability and explosive potential.

A rail accident including the collision of tank cars "virtually guarantees" that crude oil will ignite, and restricting vapor pressure won't make much of a difference, the association said.

The association represents companies such as AECOM, Exxon Mobil Corp, and Formosa Plastics Corp.

Merkel to Confront Climate-Change 'Doubters' Among G-20 Peers

Posted May 23, 2017, 10:07 A.M. ET

By Brian Parkin

German Chancellor Angela Merkel said she won't give up trying to persuade doubters among her global peers that climate change is real, signaling her message for a Group of Seven summit starting May 26.

Merkel called on countries to uphold the Paris Agreement to combat climate change and limit the rise of global temperatures, which was brokered by nearly 200 nations in 2015 and entered into force in November. U.S. President Donald Trump, who has called global warming a hoax, may be on the verge of saying whether he'll stick to the pact.

"Today, we need to capture the same spirit that marked the completion of the climate pact in Paris, in terms of implementation in Europe, among G-7 and G-20 countries, and the United Nations," Merkel said May 23 in a speech to a conference in Berlin. "I am trying to persuade the doubters."

Merkel, a former environment minister, has consistently championed the Paris agreement, which pledged emerging countries such as China to combat global warming for the first time. The potentially divisive topic is likely to be on the agenda as well when Merkel hosts fellow Group of 20 leaders for a summit in Hamburg in July.

EU Says Most European Beaches Safe for Swimming

Posted May 23, 2017, 12:57 P.M. ET

By Stephen Gardner

Nearly all of Europe's coastal and inland recreational sites met water quality standards for swimming last year, the European Environment Agency said May 23.

Of more than 21,000 sites monitored, 96.3 percent met minimum requirements, while 85.5 percent met a higher "excellent quality" standard, according to the report.

Under the European Union's Bathing Water Directive (76/160/EEC), beaches and inland sites are monitored for microbial contamination and must be closed for bathing if the minimum standards are not achieved.

The agency's report said bathing sites in Europe "are much cleaner than forty years ago when large quantities of untreated or partially treated municipal and industrial wastewater were discharged into water."

The report covers beaches and inland sites in the 28 EU countries and in non-EU nations Albania and Switzerland. The EU countries with the highest numbers of noncompliant sites were France and Italy, while the highest proportions of noncompliant sites were in Ireland and the U.K.

'Gas Apocalypse' Looms Amid Power Plant Construction Boom

Posted May 23, 2017, 9:30 A.M. ET

By Naureen S. Malik and Brian Eckhouse

The glut of cheap natural gas from a single, gigantic, shale basin that straddles the Northeast, mid-Atlantic and Midwest has sparked a massive construction boom of power plants. Dozens have been built in the past two years alone.

There's just one problem: There isn't nearly enough electricity demand to support all the new capacity. And as wholesale electricity prices plunge, industry experts are anticipating a fire sale of scores of plants in the region. Many, in fact, have already been sold along the PJM Interconnection LLC grid, the nation's largest, encompassing 13 states from Virginia to Illinois.

"Everything in fossil fuels is for sale," said Ted Brandt, chief executive officer at Marathon Capital LLC, a mergers-and-acquisitions adviser in Chicago. "People are bleeding."

Drawing from abundant, cheap and nearby natural gas in the country's most prolific shale field, the new plants are adding a gigantic amount of power generation—more than 20 gigawatts—to a region that arguably has more than it needs. The new gas-fired plants are also coming online at a time of market turmoil, buffeted by Obama administration efficiency policies that have helped tamp down demand and by the Trump administration's determination to keep old coal-fired plants going.

Spot wholesale prices at PJM's benchmark Western hub slumped to an average of $28.79 per megawatt-hour last year, falling by more than half since 2008 as the shale boom took hold. Many players are exiting the market. Calpine Corp.—the highly leveraged Houston-based independent power producer with a more than $4 billion market value and 17 plants in the PJM grid—is exploring a sale of its facilities. The company has attracted interest from private-equity firms, Bloomberg reported this month. And FirstEnergy Corp. and American Electric Power Co. took more than a combined $11 billion in 2016 charges for plants. They're exiting production to focus on buying and distributing electricity. Dynegy Inc. has also been reported as a takeover target.

"It's a gas-driven apocalypse in the power market," said Toby Shea, a New York-based analyst at Moody's Investors Service.

As prices slip, some see a buying opportunity. Blackstone Group LP and ArcLight Capital Partners LLC bought four Midwest plants from American Electric for $2.17 billion in September. That implies an average sale price of $417 a kilowatt, a fraction of the $1,000 a kilowatt cost to build a new gas plant.

"It suddenly becomes a buyer's market if the summer disappoints," said Paul Pace, who heads KeyCorp's energy lending team.

Contributing to the a glut is the slowdown in coal-plant closures resulting from more favorable policies under the Trump administration. Some of the country's smartest investors, including Blackstone, are buying these facilities at discounts, betting that a few hot or cold days each year will yield enough money to justify keeping them operating.

Patches of extreme weather are also a motive for the building boom. The polar vortex sidelined a fifth of PJM's power plants in the game-changing winter of 2014, when frigid weather forced some plants to suspend production. This resulted in a huge, if temporary, spike in electricity rates for consumers. Preventing another such shutdown is a primary focus for PJM: Now, power plants must be both efficient and reliable in extreme weather or face steep penalties.

LED Bulbs

Finally, advances in efficiency, reducing demand for electricity, are converging with the gas glut to further depress the industry. Everything from the advent of LED light bulbs to Energy Star-certified refrigerators and appliances prompted PJM to slash its long-term growth forecasts to just 0.2 percent a year from 1 percent in 2014. Add in wind and solar, which are providing ever more energy to the grid, and the demand for new power plants looks even shakier.

The industry will get a glimpse of where the market is heading May 23 when PJM is scheduled to release the results of an auction to secure its electricity supply. Prices are expected to continue to fall as another wave of new gas plants is about to come online.

Given lackluster demand for energy, it's surprising that power-plant valuations haven't fallen more, said Ravina Advani, a New York-based managing director at BNP Paribas SA. One reason: Developers continue to attract new investors, including from Japan and Korea. Still, it's just a matter of time before prices break lower, said Dean Murphy, a Cambridge, Mass.-based principal at the Brattle Group.

"It's like the housing market that is oversupplied and it takes longer to move your house," he said. "Buyers have tons and tons of options."

—With assistance from Christine Buurma.

Subject: Morning Energy, presented by Exelon: What's new for Energy Week? — Zinke takes Montana — Pruitt returns to Capitol Hill

By Ben Lefebvre | 06/27/2017 05:42 AM EDT

With help from Darius Dixon Alex Guillen and Eric Wolff

ENERGY WEEK ROLLS ON: We've heard the rah-rah but ME is still wondering if and when something substantive may come. So far it's been hinted that Interior Secretary may have something new to say when he speaks in Montana today (more below), but at first blush Energy Week may shape up to be old hydrocarbons in new barrels.

Enticing India with LNG: Following a meeting at the White House with Indian Prime Minister Narendra Modi on Monday, Trump played up the possibility of selling more liquefied natural gas to India, which is trying to bring electricity to more of its population, Pro Trade's Doug Palmer reports. Trump said oil and gas contracts are "right now being negotiated and we will sign them. We're trying to get the price up a little bit." But India has been in the market for U.S. gas at least since 2011, when its state-owned gas company, GAIL India, was among the first customers to sign a 20-year contract with then-fledgling Cheniere Energy. India has said it will increase its oil and gas purchases from the U.S., but the country is notorious for being price-sensitive. GAIL earlier this year reached a deal with Swiss trading company Guvnor to save on shipping costs by swapping some of its Cheniere cargoes for closer supplies.

Wait 'til tax reform: When it comes to questions of new policy, Energy Secretary Rick Perry mostly sidestepped questions when he briefed reporters on energy week plans earlier Monday. But he said answers would likely come in the president's tax plan. "I don't think the administration is going to be wildly supportive of government subsidies for sectors of the energy industry," Perry said when asked whether to expect continued federal support for renewable energy research. He then added: "Whenever we get this healthcare bill passed and we get into tax reform, at that particular point in time we'll have a good healthy conversation on the energy sector and tax subsidies."

Nuclear happens: Perry did say the White House is keenly aware that nuclear power operators are facing an increased threat of bankruptcy because of competition from cheap natural gas and renewables. "There's a lot of reasons we need to have the conversation about keeping our nuclear industry viable...whether it's Gen 4 plant or modular reactors," he said. Perry did not weigh in on specific issues such as the fate of a nuclear energy tax credit extension being debated in Congress or programs aimed at propping up existing reactors in states like New York and Illinois, but he warned that the U.S. risked losing ground to competitors like China and Russia in developing the next generation of nuclear technology. "Most Americans will say nuclear energy will occur," Perry continued. "Who controls it and is most supportive, I'm sure that will be America."

If you'd like to hear more from Perry, he's up for the keynote address at the 8:30 a.m. plenary

session today at EIA's Energy Conference at the Washington Hilton. He also is tentatively scheduled to talk at 9:45 a.m. today with Piyush Goyal, of India's ministry of power, coal, new and renewable energy and mines at U.S.-India Business Council's 42nd Annual Leadership Summit.

Going local: One possible new avenue the administration may follow may come when President Donald Trump will meet tribal leaders on Wednesday to discuss local energy. This is in line with the administration's line that wouldn't mind for Native American tribes to get in on the oil boom. Energy and Interior department officials met with tribes in May to discuss energy development, and the topic popped up in Senate subcommittee hearings on Interior's budget.

GOOD MORNING, MORNING ENERGY! I'm your host, Ben Lefebvre, filling in for Anthony Adragna, who is away on matrimony. No applause — just throw tips and comments to blefebvre@politico.com, please. Anthony will be back Wednesday. You can find him at aadragna@politico.com, or follow us on Twitter @bjlefebvre, @aadragna, @Morning_Energy and @POLITICOPro.

THE DOI ABIDES: Zinke is slated to speak at the Western Governors' Association today in Whitefish, Mont., his old stomping grounds. While there, he'll make a "bigly onshore energy announcement," a department source tells ME. The WGA, which is giving the secretary of the Interior twin billing with actor and hometown hero Jeff Bridges, will not stream Zinke's speech. They do promise to live-Tweet it at #WGA17.

Say what you want about the tenets of national monuments: Whatever Zinke may have his sleeve, it's his Trump-ordered review of national monuments that seems to be getting the most attention from locals in Whitefish, where Zinke served as state lawmaker from 2009 to 2011 (he also tried to open a bed and breakfast and brewery there around the same time). Whitefish Mayor John Muhlfeld has joined environmentalists and sportsmen in the area calling on Zinke to resist the urge to eliminate or shrink national monuments under his review. "As a friend of Ryan Zinke, I urge him to respect and protect America's public lands, in Montana and across the country," Muhlfeld says in a press release sent by the Center for Western Priorities.

PILT paychecks: Zinke was in Nevada Monday, where he announced that nearly $465 million is headed to local governments as part of the Payments in Lieu of Taxes program. PILT payments compensate jurisdictions that are home to large swaths of federal land they cannot tax. Details on who's getting how much here.

** **A message from Exelon:** Innovation always begins with the spirit of discovery—the search for new ideas and answers to our biggest questions. As America's largest clean energy provider, what happens when 34,000 Exelon engineers, analysts, and innovators put their heads together to tackle the energy industry's biggest challenges? Find out here: http://bit.ly/2szvZN4 **

ROUND 2 FOR PRUITT ON BUDGET: EPA Administrator Scott Pruitt is on the Hill today to testify for the second time on the administration's proposal to massively slash his agency's funding, and if his first hearing is any guide, Pruitt is in for some tough questions from both parties.

What to expect today: Sen. Lisa Murkowski, who chairs the Senate's Interior-EPA spending panel, is already on the record as not being a big fan of EPA's proposed cuts. She's noted before that recent years have already seen Congress significantly reduce EPA's budget and personnel, and she's likely to raise objections to the administration's proposal to zero out a water infrastructure program aimed at Alaska Native villages. Expect one or more senators, including possibly Steve Daines , to complain about the proposed Superfund cuts. The hearing starts at 9:30 a.m. in Dirksen 124.

Hands across the Capitol: The Sierra Club, Union for Concerned Scientists and more than a dozen other environmental groups plan to protest the 31 percent cut to the EPA that Trump's budget calls for. They'll meet at Lower Senate Park ahead of the hearing.

Coincidentally: Today marks the end of the 60-day stay on the Clean Power Plan lawsuits put in place in April by the D.C. Circuit Court of Appeals. The court took comment on whether to remand the rule to EPA (as environmentalists wanted) or keep the lawsuit in abeyance indefinitely while EPA works on its review, as advocated for by the agency and the rule's challengers. Click for a refresher on who wanted what and why. It's not clear what exactly might happen today, if anything; the court could decide on the remand-versus-abeyance issue today, or extend its stay and decide later.

SCIENTIST SPEAKS UP: Look for Pruitt to also face questions today about his agency's treatment of independent science advisers, especially in the wake of Monday night's New York Times report that his chief of staff pressured one of them to alter her testimony to a separate congressional committee last month. EPA Chief of Staff Ryan Jackson asked Deborah Swackhamer, who chairs EPA's Board of Scientific Counselors, to stick to the agency's "talking points" about why board members were not being reappointed before she testified to the House Science Committee, according to the paper, which cited emails she had shared with committee Democrats. Science Chairman Lamar Smith told the Times that Democrats are "politicizing" an attempt by EPA to make sure her testimony was accurate. Swackhamer was testifying as a private citizen and not on behalf of EPA, and it does not appear that she changed her written testimony. In it, she warns that changes to the board "may lead to the perception that science is being politicized and marginalized within EPA."

NATURE ABHORS A VACUUM AND RGGI FILLS A SPOTLIGHT: The nine-state Regional Greenhouse Gas Initiative meets today to discuss whether to modify its carbon cap, whether and how to link with other cap programs, and how to manage new participants. Emissions reductions from the northeastern states have gone faster than expected, and green groups hope to see some carbon cap tightening from the meeting. If you go: It's at 1 p.m. at Jerome Greene Hall Room 701, Columbia Law School, in New York. You can also stream it here.

Be! Aggressive! B! E! Aggressive!: Emissions reductions have come faster than expected, so green groups are looking for deeper reduction requirements. The Natural Resources Defense Council and 50 other green groups have asked the program to set caps lower to push for more carbon reductions, and to raise the price floor so as to ensure that there's a cost to emissions.

ON HER WAY OUT: FERC Commissioner Colette Honorable plans to leave the agency Friday, Pro's Darius Dixon reports. She will formally announce the news today when she speaks to the EIA conference. That will leave acting Chairwoman Cheryl LaFleur as the only remaining commissioner, meaning both of Trump's pending nominees will have to be confirmed before FERC can conduct any major business again. Honorable tells ME she doesn't have a job lined up but "I have some irons in the fire."

THE ROAD TO RECLAIM: The RECLAIM Act is going before the House Natural Resources Committee for markup today. The bill as currently written would take money from the Abandoned Mine Land Fund to pay laid-off coal miners to work cleaning up abandoned mines.

EPW HEARING ON HOLD: A Senate EPW subcommittee meeting that had been scheduled for 2:45 p.m. today on clean energy technologies has been postponed. A committee spokeswoman tells us no new date planned yet.

NOMS ON PARADE: Two more former George W. Bush appointees are in line to return to the Interior Department, the White House said Monday. Trump plans to nominate Brenda Burman as commissioner of reclamation. She was the deputy commissioner for reclamation and assistant secretary for water and science under Bush; now she is the director of water strategy at the Salt River Project. Douglas W. Domenech, a senior adviser to Zinke, will be nominated as assistant Interior secretary for insular affairs. His positions in the Bush administration included deputy assistant Interior secretary for insular affairs and White House liaison.

SVINICKI SECURES SENATE NOD: The Senate voted 88-9 Monday to confirm Nuclear Regulatory Commission Chairwoman Kristine Svinicki to a third term at the agency, just days before her tenure had been set to expire. Nevada Sen. Dean Heller was the only Republican to vote against Svinicki; fellow dissenters included Sens. Catherine Cortez Masto, Kirsten Gillibrand, Cory Booker, Elizabeth Warren and Bernie Sanders, among others.

CALLING CARTER PAGE: The FBI interviewed Carter Page, an energy consultant who traveled to Moscow last year while advising the Trump campaign, Pro's Austin Wright reports. The interviews occurred in May and were part of the FBI's investigation into Russia's meddling in the 2016 Presidential election, Page said in a statement.

WATCHDOG TAKES NATIONAL PARK SERVICE OFF THE HOOK: The unlikely spat between the National Park Service and Trump may have broken toward the NPS, POLITICO's Matthew Nussbaum reports. Interior's Inspector General said Monday that NPS employees did not alter crowd size records, which Trump complained had low-balled the number of people attending his inauguration. The IG also said NPS wasn't the one who leaked info about a phone call in which Trump allegedly ordered the acting NPS director to release additional photos of the crowd. Will this end the feud? ME will keep an eye on a certain Twitter account in the coming days.

CRUDE HACK: Those "dipping donkey" pump jacks that dot the Texas and Oklahoma oil field landscape are a great entryway for hackers looking to disrupt America's fuel production, Deloitte

says in a new study. Cyber-attacks on oil and gas companies are growing in frequency, sophistication, and impact, the study finds, and the production part of the business is the most vulnerable to attack and the most potentially damaging if exploited. "Thus, the consequence of a cyber-attack on oil and gas production could be severe, promptly affecting both the top and bottom lines," Deloitte says in its report.

COUNTDOWN FOR KEYSTONE: A judge in the U.S. District Court in Montana will hear arguments on Aug. 31 whether to dismiss the case the Northern Plains Resource Council and other environmental groups brought against the Keystone XL pipeline, according to a new court filing. White House lawyers argued earlier that the case should be thrown out as the plaintiffs don't have standing to challenge the executive branch's authority in granting permits for pipeline border crossings.

SUNIVA DISPUTES GTM'S SOLAR IMPACT REPORT: Suniva is disputing GTM Research's findings Monday that the trade tariffs the company seeks for imported solar panels and cells could wipe out nearly two-thirds of U.S. solar projects slated to be built by 2022. "GTM's conclusions are based on faulty and unsupported assumptions, and demonstrate a fundamental misunderstanding" of what Suniva seeks, the company said in a press release.

MOVER/SHAKER: Washington lawyer Dennis Lee Forsgren has been named EPA's deputy assistant administrator in the Office of Water, a job that does not require Senate confirmation but gives him a significant role in the agency's efforts to rewind the Waters of the U.S. rule and other key regulations. Forsgren's appointment was revealed in a blog post from the Association of State Drinking Water Administrators. Forsgren most recently was a lawyer at HBW Resources, where his lobbying clients since 2011 have included GE and a subsidiary of the nuclear company Babcock & Wilcox.

Stories from POLITICO Pro

Trump, India's Modi pledge to work together to boost and balance trade Back

By Doug Palmer | 06/26/2017 06:46 PM EDT

President Donald Trump and Indian Prime Minister Narendra Modi pledged today to work together to boost — and balance — bilateral trade, including through sales of U.S. liquefied natural gas currently being negotiated.

"I look forward to working with you, Mr. Prime Minister, to create jobs in our countries, to grow our economy and create a trading relationship that is fair and reciprocal," Trump said during a Rose Garden appearance with Modi, where neither leader took any questions. "It is important

that barriers be removed to the export of U.S. good into your markets and that we reduce our trade deficit with your country."

Although trade between the United States and India has grown rapidly in recent years, it still remains below what many experts believe is its long-term potential, partly because of a range of longstanding regulatory and structural barriers on the Indian side. The United States ran a trade a $24 billion trade deficit with India last year. That has attracted White House attention, although it's far below the $347 billion trade deficit U.S. ran with China.

Trump hailed a recent purchase by an Indian airline to buy 100 American planes, an apparent reference to a $22 billion deal announced earlier this year between the no-frills, low-fare carrier Spicejet and Boeing.

"We're also looking forward to exporting more American energy to India as your economy grows, including major long-term contracts to purchase American natural gas," Trump said. Those are "right now being negotiated and we will sign them. We're trying to get the price up a little bit," he joked.

For his part, Modi said India was committed to pursuing a "bilateral architecture that will take our strategic partnership to new heights" — an apparent nod to Trump's preference for bilateral deals, over regional pacts.

"One of our common priorities will be the development of trade, commerce and investment links," Modi said, emphasizing more cooperation in the technology, innovation and knowledge economy sectors. "Towards this end, we shall take steps to further strengthen our successful digital partnership," he said.

GOP tells Pruitt he will get bigger budget than requested Back

By Alex Guillén | 06/15/2017 02:42 PM EDT

Republican lawmakers made it clear today that EPA is not going to get the budget it asked for — it's going to get a whole lot more.

Multiple GOP members of the Appropriations committee overseeing EPA said they will not come close to enacting the administration's proposed 31 percent cut.

"I can assure you you're going to be the first EPA administrator that's come before this committee in eight years that actually gets more money than they asked for," Rep. Tom Cole (R-Okla.) told EPA Administrator Scott Pruitt. "That doesn't mean you'll get as much as you've had, but you'll do better than you asked for."

Rep. Mark Amodei (R-Nev.) noted that Congress has already cut EPA's budget by more than $2 billion since 2010. "No one's standing on the rooftops begging for dirty air and dirty water," he said in calling for no more than moderate spending reductions.

Other Republicans on the panel made sure to defend specific programs they favor.

House Appropriations Chairman Rodney Frelinghuysen (R-N.J) told Pruitt that his state is home to more than 100 of the nation's 1,300 Superfund sites. "I think it's good to move with precaution before you take too many dramatic steps," he warned about EPA's 31 percent cut to that program.

Subcommittee chairman Ken Calvert (R-Calif.) criticized steep cuts to a popular diesel engine refit program and lamented the complete deletion of targeted air shed grants.

And Rep. Dave Joyce (R-Ohio) criticized the budget for killing the $300 million Great Lakes Restoration Initiative.

WHAT'S NEXT: Appropriators will write EPA's spending bill for next year, expected to be released later this summer.

Trump EPA urges court to keep climate rule lawsuit on hold Back

By Alex Guillén | 05/15/2017 05:02 PM EDT

The Trump administration and the states and companies seeking to quash the Obama EPA's Clean Power Plan told a federal court Monday they want to keep the lawsuit over that landmark climate rule on hold indefinitely.

They argue a freeze would be preferable to a court decision to send the rule back to EPA without deciding on the whether the power plant carbon regulations violated the Clean Air Act. And they say that remanding the rule to the agency to review would just lead to headache-inducing quagmires for EPA and the court.

If the court remands the rule, its opponents might file new lawsuits to preserve their legal claims, while environmentalists could challenge any EPA attempt to set new compliance deadlines.

Keeping the case on hold would also allow EPA to finish its review of the rule more quickly because it would not have to divert resources to addressing those new legal issues, the administration added.

"These consequences can be — and manifestly should be — avoided by continuing to hold this litigation in abeyance," EPA wrote in its brief.

EPA received back-up from the Clean Power Plan's opponents, who made similar arguments in their own brief.

When the D.C. Circuit Court of Appeals issued its 60-day stay last month, the judges asked all sides to weigh in on whether to keep the case on ice indefinitely — which could be a long time given the years that are likely needed to repeal the Clean Power Plan and resolve subsequent litigation — or send the rule back to EPA right now, without rendering a decision on its legality.

The rule's supporters, however, would prefer a third path.

Environmentalists, states that support the Clean Power Plan, clean energy groups and several utilities noted their first choice would actually be for the court to issue its ruling.

Those groups were likely buoyed by EPA's strong showing at oral arguments last year. After watching seven hours or arguments, many observers predicted EPA would prevail on most of the legal issues, though a win for the Clean Power Plan was not guaranteed.

Plus, green groups argue, there are several major legal questions the courts likely will need to answer at some point no matter what the Trump administration does now. That includes whether EPA can achieve emissions reductions through "fuel switching," also known as EPA's "beyond the fence line" approach. The court could also weigh in on the so-called 112 Exclusion, which the rule's challengers argued should prevent EPA from regulating in this manner, no matter the details.

But the court's order seeking opinions on remand versus abeyance indicate that the judges are no longer interested in issuing a ruling.

In that case, environmental groups argued, keeping the Supreme Court stay in place would "convert temporary enforcement relief pending judicial review into a long-term suspension of the Clean Power Plan, without any court having issued a decision on its legal merits and without following the administrative steps necessary to amend, suspend or withdraw a regulation."

Meanwhile, EPA and its challengers made similar arguments urging the court to maintain its hold on lawsuits over the Clean Power Plan's sister regulation that sets emissions limits for future power plants, also known as the 111(b) rule or the new source performance standard.

That case was on a slower judicial track than the CPP. All sides had completed briefing, but last month the Trump administration convinced the court to delay arguments.

Meanwhile, environmental groups, supportive states and pro-rule utilities said they would like to see this case continued through arguments and a decision by the court, but that in lieu of that they have no preference over remand versus abeyance.

Although the Clean Power Plan was stayed, the future plant rule has been in effect since it was released in 2015, and neither option would hurt its "effectiveness during any period of review by the new administration," environmentalists argued.

The court has no strict deadline to decide what to do. It has paused the lawsuits challenging both rules through June 27, but is under no obligation to act before then.

FERC's Honorable to step down Friday Back

By Darius Dixon | 06/26/2017 08:13 PM EDT

FERC Commissioner Colette Honorable plans to leave the agency Friday, she has told POLITICO.

The move will bring the commission down to just one member, acting Chairwoman Cheryl LaFleur, meaning the Senate will have to confirm both of President Donald Trump's pending nominees before it can conduct most major business again. FERC has been operating without a quorum since former Chairman Norman Bay stepped down in February.

Honorable said she will formally announce her plans in a speech Tuesday to the Energy Information Administration conference in Washington.

Honorable said she plans to stay in D.C. but doesn't have her next job lined up.

WHAT'S NEXT: Trump's FERC nominees, Senate aide Neil Chatterjee and Pennsylvania regulator Robert Powelson, have cleared the Energy and Natural Resources Committee but are still waiting for a vote to be scheduled before the full Senate.

Carter Page says he's been interviewed by the FBI Back

By Austin Wright | 06/26/2017 06:24 PM EDT

Carter Page, a former Donald Trump campaign foreign policy adviser, said Monday he's been interviewed by the FBI as part of its investigation into Russia's election meddling.

The interviews, which he called "extensive discussions," came prior to James Comey's firing as

FBI director in May, Page said. Page, an energy consultant who traveled to Moscow last summer to deliver a speech while advising the Trump campaign, has become a target of the FBI investigation, along with the probes being pursued by the House and Senate Intelligence Committees, which are all looking into the possibility of collusion between Moscow and the Trump campaign.

"During my extensive discussions with the FBI agents just weeks before Comey's departure, they acknowledged that I'm a loyal American veteran but indicated that their 'management' was concerned that I did not believe the conclusions of the fake January 6 intelligence report," Page said in a statement, referring to the public assessment by U.S. intelligence agencies that Russia sought to sway the presidential election in Trump's favor.

"I told them that I learned the lessons from the intelligence failures of the original Dodgy Dossier from 2003 which cost this country thousands of service members lives and over a trillion dollars," he continued. "Our frank and open conversations gave me confidence that there are still logical, honest individuals at the Bureau who respect civil rights and the Constitution, despite the recent devastating impact on our democracy by self-centered politicians at the top of the Clinton-Obama-Comey regime."

Page has previously claimed to be the victim of a civil-rights conspiracy because of possible government surveillance of his communications.

The Washington Post first reported that he had been interviewed by the FBI.

Park Service behaved appropriately regarding Trump crowd reports, watchdog finds Back

By Matthew Nussbaum | 06/26/2017 06:14 PM EDT

The feud between the National Park Service and the Trump White House appeared to ease on Monday after a watchdog found that NPS officials did not alter inauguration crowd size estimates and that public affairs officials did not leak information about a phone call between President Donald Trump and the agency's acting director.

The NPS was wrapped up in the controversy that overwhelmed the first days of Trump's administration after the president and his aides claimed record crowds at his inauguration and railed against those who cast doubt on the claim.

One day after the inauguration, White House press secretary Sean Spicer lambasted reporters in the briefing room and said, falsely, that Trump's inaugural had drawn the "largest audience ever to witness an inauguration, period."

The Park Service became the target of Trump's ire after its Twitter account retweeted side-by-side images that appeared to show a paltry crowd for Trump's inauguration compared to former President Barack Obama.

The feud deepened when reports leaked of a phone call Trump placed the day after the inauguration to Acting NPS Director Michael Reynolds in which the president allegedly ordered the agency to produce images to help prove his claims of crowd size.

But a report from the Department of the Interior Inspector General released on Monday found that NPS employees did not alter crowd size records and the NPS public affairs officials did not leak information to the press about the phone call.

The report does not make clear who requested the investigation, which was initiated in February.

The watchdog explores whether an official with the NPS National Mall and Memorial Parks (NAMA) had inappropriately asked employees to scrub attendance records when responding to requests from both the media and the White House about the crowd size.

"We found no evidence to substantiate the allegation that the NAMA official asked staff to alter crowd size information," the IG report said. "The official told us that she instructed the staff not to include crowd size estimates in the reports because she wanted to make sure that the reports did not contain nonfactual references to crowd size. She explained that the NPS did not have the necessary methodology in place to do an accurate crowd count and, since the Million Man March in 1995, had made it a practice not to collect or provide any crowd size information for events held at the National Mall."

A second point the IG dug into was whether a public affairs employee had leaked information about a call between Reynolds and Trump, in which Trump allegedly ordered the acting NPS director to release additional photos of the crowd and apparently vented about the agency's Twitter account posting the side-by-side photos.

The complaint, apparently from another NPS employee to the IG, was made after an NPS employee allegedly commented about the need to "refute" Spicer's Jan. 21 claims and said he disagreed with Spicer's characterization. The IG's report concluded that neither that employee, or other members of the public affairs team had disclosed information about the phone call and that "Reynolds stated that he did not consider his conversation with the President protected information."

The employee who was accused acknowledged that he took issue with three of Spicer's comments that he considered false: that the inauguration was the first time protective grass coverings had been used; that the crowd extended from the steps of the Capitol to the Washington monument; and that the crowd was the biggest ever at an inauguration.

"The public affairs employee recalled thinking that NPS would need to prepare a response to address Spicer's statements; he explained that based on his experience, he expected the NPS to get questions about them from the media," the report found. "Soon after the press conference

ended, the employee said, NPS prepared a written response to Spicer's statements, which was vetted through the NPS and DOI Offices of Communications, so that public affairs staff would be ready for any media inquiries. We confirmed the employee's account with an NPS communications official."

The report confirmed that Trump did in fact contact Reynolds by phone on Jan. 21 and "request photographs of the inauguration." The NPS sent six pictures to the White House, the report found.

The White House later hung a different picture of the inauguration crowd in the area near the press room. The picture is incorrectly dated Jan. 21, 2017.

Subject: POLITICO's Morning Energy, presented by Chevron: Mixed signals from U.S. as world leaders arrive in Bonn — More shots fired in RFS fight — Senate panel votes on ANWR measure today

By Anthony Adragna | 11/15/2017 10:00 AM EDT

With help from Sara Stefanini, Eric Wolff and Alex Guillén

POLITICAL COPS HIT THE CLIMATE BEAT: Politicians roll into Bonn, Germany, today to take over the final three days of the COP23. The opening ceremony will include German Chancellor Angela Merkel, French President Emmanuel Macron, and U.N. Secretary General António Guterres around 10 a.m. EST. The goal over the remaining days of the summit is to make as much progress as possible on the complex rules supporting the Paris climate agreement.

No Bonn voyage: Citing "a family emergency," career State Department diplomat Tom Shannon will no longer arrive in Bonn today to lead the U.S. delegation to the climate talks, Pro's Emily Holden reports. Other delegations had been anxiously waiting to see what tone and direction he'd set for the U.S. at the talks. Leading the delegation in his place will be Judith Garber, acting assistant secretary of State for oceans and international environmental and scientific affairs.

Optimism among other diplomats: Career U.S. diplomats negotiating technical elements of the deal with their foreign counterparts have stuck to many of the same stances they did under the Obama administration and that's raising hopes the Paris accord will survive the presidency of Donald Trump, POLITICO's Emily Holden, Kalina Oroschakoff and David Siders report. Christiana Figueres, a former United Nations climate envoy who helped orchestrate the Paris climate agreement's adoption two years ago, said that in the long-term effort to reduce greenhouse gas emissions, Trump is "going to be a blip" in history.

Walking the line: Dave Banks, Trump's energy adviser, argued the U.S. policy on fossil fuels is totally separate from what American diplomats are discussing in negotiation halls. The administration hasn't made any effort to start renegotiating the agreement, which would have set off an immediate diplomatic fray. And Banks said Shannon would not have pushed the administration's coal efforts if he made the trip. "So you think he's going to say, 'We're going to promote coal'? No, that's a policy discussion. It's not a negotiation," Banks said.

How one senior African negotiator summed up the situation for career State diplomats: "I think the mandate is not to be a blocker. They engage, but in the end they're not the ones calling the shots," he said.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and ME led you astray with an imprecise trivia question. Alaska has the most federal land by acreage and Nevada has the greatest percentage federal land within its border. Sorry! For today: Which former congressman was convicted of voter fraud by forging ballots at a nursing home? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

NET NEUTRALITY 101: The long-running fight over net neutrality, which pits telecom giants against tech companies, is heating up at the Federal Communications Commission. To understand what the fight is all about and where it's headed, check out POLITICO's latest explainer video featuring technology reporter Margaret Harding McGill and the artwork of Pulitzer Prize-winning cartoonist Matt Wuerker. Click HERE to watch.

ANWR SET TO CLEAR COMMITTEE: The Senate Energy Committee convenes at 9 a.m. to consider reconciliation legislation offered by Chairman Lisa Murkowski that would open a small part of the Arctic National Wildlife Refuge to oil and gas development. The CBO estimates the package would raise $1.092 billion over the 10-year budget window, though Democrats and public lands groups say that overestimates how much lease sales could raise. Expect the package to pass on a largely party-line vote with West Virginia Democratic Sen. Joe Manchin likely to vote in favor.

ME first - New ad blitz launched: The League of Conservation Voters is unveiling a $550,000 television ad campaign in the districts of Republican Reps. Erik Paulsen, Bruce Poliquin, John Katko and Washington today opposing the effort to open ANWR to drilling. Watch it here.

BISHOP: SOMETHING'S GOTTA GIVE: Don't expect Congress to send tens of billions in relief funds to Puerto Rico until the island's government and a congressionally created independent financial oversight board are able to work together, House Natural Resources Chairman Rob Bishop told reporters. "If they don't do that, then it's going to be a very difficult ask to ask this body to appropriate a whole bunch of money without some kind of guarantee that things will be different," he said. "The power struggle has got to stop if they expect Congress to actually come up with the money." Bishop said he doesn't think additional legislation is necessary to improve that relationship, but he's willing to insert language into forthcoming spending packages if necessary.

What about Whitefish? Bishop's not worried about the details of the now-cancelled contract, but wants to ensure the process that led to it is never replicated. "The details of Whitefish and PREPA are insignificant - that's history," he said. "The process that created Whitefish cannot happen again and cannot be replicated. This is what's bothersome to me." He declined to say whether Ricardo Ramos, the head of the utility who inked the Whitefish deal, should be fired.

That comes as documents showed the utility ignored advice from its law firm of Greenberg Traurig to include language in the contract that would cap the amount of money Whitefish Energy could charge, allow PREPA to terminate the agreement for any breach of contract and make Whitefish responsible for paying Puerto Rican taxes, Pro's Ben Lefebvre reports.

CRUZ TO IOWA: COME TO THE TABLE OR NORTHEY GETS IT: Sen. Ted Cruz, having seemingly failed to secure a meeting with Midwestern senators brokered by the White House, has turned to newly fledged Iowa Gov. Kim Reynolds to try and bring corn-staters to the table. Cruz wrote to Reynolds Tuesday to explain why he has put a hold on the nomination of Iowan Bill Northey to become an undersecretary for the Department of Agriculture. He cites high costs of biofuel credits in the Renewable Fuel Standard that refiners in Texas and elsewhere

say is hurting their bottom line (Reuters reported yesterday that at least one refinery is selling off high priced credits to meet debt payments). "Both sides of the debate must negotiate in good faith to find a mutually agreeable solution to secure the fate of liquid fuels in America," Cruz wrote.

You started it! Cruz said Iowa Sens. Joni Ernst and Chuck Grassley blocked "multiple EPA nominations (and threatened to do the same to judicial nominations)" to protect the RFS from EPA interference. Ernst blocked only EPA air chief Bill Wehrum. The rumor that Grassley, who chairs the Senate Judiciary committee, threatened to block judicial nominations has circulated for months. A spokesman told ME that the Iowa Republican "did not place a hold on any EPA nominee and has not threatened to place a hold on any judicial nominee."

What about that meeting? Cruz and eight colleagues wrote to Trump last month asking the White House to broker a meeting with the Midwestern senators within three weeks. Three weeks is up today, and as of Monday, aides to two Midwestern Senators said they had received no outreach from the White House to set up a meeting.

** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat-buckwheat. Watch the video: http://politi.co/2yQ8q7z **

PAGING GRASSLEY: It's not just Cruz you have to worry about. Sen. Lamar Alexander, one of the chamber's top wind energy critics, took aim at the production tax credit in a floor speech Tuesday. The Senate Finance Committee is expected to beginning processing amendments today to its tax bill, and Alexander said the wind incentive should go on the chopping block. "I'm here today to challenge my colleagues to be willing to consider all energy subsidies for mature technologies - wind, solar, oil and gas - as candidates for elimination in a tax reform bill," he said. "These dollars could be better spent to lower rates for taxpayers." Senate tax-writers did not follow the lead of their House counterparts and left the PTC alone in their tax bill, and Grassley, a senior Finance Committee member, is likely to make sure it stays that way after the markup.

Green group targets bill: The Sierra Club launched a digital ad campaign urging 29 House Republicans to oppose the chamber's tax package H.R. 1 (115). "The GOP's plan even manages to raise taxes on the middle class, while sneaking in an outrageous attack on the Arctic Refuge by opening it up for drilling," Melinda Pierce, the group's legislative director, said in a statement.

FOR YOUR RADAR: Vice President Mike Pence joins Energy Secretary Rick Perry, FEMA Administrator Brock Long and Texas Gov. Greg Abbott in Austin for a briefing on recovery efforts from Hurricane Harvey today at 1:40 p.m. EST.

VOTE EXPECTED ON MINE SAFETY PICK: A final vote is scheduled for noon today to confirm David Zatezalo to be assistant secretary of Labor for Mine Safety and Health. Majority Leader Mitch McConnell hailed his "keen understanding of the challenges and risks sometimes associated with mining" on the floor Tuesday and said "this firsthand experience will serve him well in his new role." The cloture vote was 52 to 45.

House clears flood insurance, final NDAA bills: Lawmakers cleared by a 237-189 vote legislation H.R. 2874 (115) would reauthorize and overhaul the National Flood Insurance Program, which has struggled to meet its obligations to policyholders in the midst of a string of hurricanes, Pro Financial Services' Zachary Warmbrodt reports. The House also passed a compromise defense policy bill H.R. 2810 (115) that includes language requiring a study of the threats posed by climate change to military installations by a 356-70 vote, Pro Defense's Connor O'Brien reports.

SASC CLEARS ARMY CORPS NOM, EPW UP NEXT: The Senate Armed Services Committee on Tuesday gave the green light to R.D. James' nomination to run the Army Corps of Engineers, but thanks to the Corps' dual role in water policy, he also has to clear the Environment and Public Works Committee before he can hit the floor. An EPW spokesman said the hearing for James will happen sometime in December, though that timeline means a committee vote may not happen until the new year.

HEARING ROUNDUP - E&C SUBPANEL VOTES ON AIR BILLS: The House Energy and Commerce Environment Subcommittee today marks up legislation on the brick MACT H.R. 1917 (115), wood heaters H.R. 453 (115), racing vehicles H.R. 350 (115) and a bill H.R. 1119 (115) meant to help waste coal-to-energy power plants cope with the Cross-State Air Pollution Rule and the mercury rule. That vote takes place at 10 a.m. in Rayburn 2123.

Science panel tackles research bills: The full House Science Committee marks up a series of bills today, including one H.R. 4376 (115) making upgrades to DOE research capacities and another H.R. 4378 (115) boosting nuclear energy research infrastructure. The session convenes at 10 a.m. in Rayburn 2318.

EPW looks at reducing emissions: Senate EPW holds a hearing entitled "Promoting American Leadership in Reducing Air Emissions Through Innovation" at 10 a.m. in Dirksen 406. Look for the National Association of Manufacturers to call for Congress to "work with the EPA to fix [the New Source Review program] so that it functions properly and does not stand in the way of efficiency." Watch here.

MAIL CALL! RESTORE CLIMATE WEBPAGES: Seven members of the Senate Democratic caucus asked EPA Administrator Scott Pruitt in a letter to restore a series of removed webpages on climate change and for explanations of modifications. "These latest website alterations are part of a sequence of disturbing EPA actions that appear designed to censor dialogue about climate change in the United States," the group, led by Cory Booker, wrote.

WHAT A WASTE: The Environmental Defense Fund is out with a new report finding wide discrepancies between flaring rates among the top 15 oil and gas producers working in the Texas Permian Basin and concluding the industry continues to struggle to tamp down on natural gas waste.

NEW LIFE FOR OLD MINES? The Rocky Mountain Institute released new research on how to evaluate old mining sites for potential renewable energy siting opportunities. Link here.

TAKE A GLANCE! The Federalist Society launched the Regulatory Transparency Project, which it aims to "foster a national discussion about where government regulation seems to be doing more harm than good."

MOVERS, SHAKERS: Members of New Jersey Gov.-elect Phil Murphy's transition team on environmental and energy issues include: former NRG Energy CEO David Crane, former John Kerry senior advisor Kathleen Frangione, Earthjustice VP Lisa Garcia and former state Board of Public Utilities President Jeanne Fox, according to NJ.com.

GENERAL ENVIRONMENT AND SAFETY

Notice of the Energy Department announces the availability of an interconnection facilities studies summary for the Northern Pass Transmission Line Project (80 FR 54876; 09/06/2013). The project, proposed by Northern Pass Transmission LLC, of Manchester, N.H., involves the construction, operation, maintenance, and connection of a new, 192-mile electric transmission line across the U.S.-Canada border into northern New Hampshire that will be capable of transmitting up to 1,090 megawatts of power. The notice addresses modifications to the original proposal. Comments are due Aug. 7, 2017. GENERAL ENVIRONMENT AND SAFETY
North Carolina, South Carolina/Carolina Bays Parkway Extension
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the U.S. Army Corps of Engineers to prepare a draft environmental impact statement (DEIS) for the Carolina Bays Parkway Extension project. The DEIS will be prepared in cooperation with the North Carolina Department of Transportation and the South Carolina Department of Transportation. The project would improve SC 31 from the SC 9 interchange near Little River, S.C., to US 17, near Shallotte, N.C. The DEIS will assess environmental impacts, including secondary and cumulative impacts with particular emphasis on wetlands and surface/groundwater resources, and will provide wetlands impact mitigation measures. Comments are requested, but a due date is not specified. Contact: Brad Shaver; USACE, Wilmington Regulatory Field Office; 910-251-4611; Brad.E.Shaver@USACE.army.mil

HAZARDOUS MATERIALS TRANSPORTATION
New York City/Hazardous Materials Transportation Permits
HAZARDOUS MATERIALS TRANSPORTATION

Notice of PHMSA announces an administrative determination regarding the New York City Fire Department's (FDNY's) requirement that those wishing to transport hazardous materials by motor vehicle must, in certain circumstances, obtain a permit, submit to inspections, and pay a permit fee. PHMSA has determined that federal hazardous material transportation law preempts FDNY's permit and inspection requirements with respect to vehicles based outside the inspection jurisdiction because scheduling and conducting inspections may cause unnecessary delays in the transportation of hazardous materials. PHMSA also finds that federal hazardous material transportation law preempts the FDNY's hazardous materials permit fee requirement for all vehicles. The determination will become final July 26, 2017, if no petition for reconsideration is filed by that date. Contact: Vincent Lopez; PHMSA, Office of Chief Counsel; 202-366-4400. HAZARDOUS WASTE CLEANUP
Minnesota/SLRIDT Superfund Site
HAZARDOUS WASTE CLEANUP

Notice of the Justice Department announces a proposed consent decree and draft restoration plan/environmental assessment in the United States v. XIK LLC (Civil Action No. 017-cv-02368), lodged June 29, 2017, with the U.S. District Court for the District of Minnesota. The consent decree resolves claims under CERCLA regarding natural resource damages from industrial discharges of polycyclic aromatic hydrocarbons identified in river sediments at the St. Louis River/Interlake/Duluth Tar (SLRIDT) Superfund Site in Duluth, Minn. The consent decree requires the defendants to pay a civil penalty of $8.2 million, $6.5 million of which will fund trustee-sponsored natural resource restoration projects. The consent decree also provides that the trustees conduct enhancement and restoration of shallow sheltered embayment at Kingsbury Bay, implement watershed protection at Kingsbury Creek, and restore wild rice in the St. Louis River estuary. Comments are due Aug. 7, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701; pubcomment-ees.enrd@usdoj.gov

OCCUPATIONAL SAFETY AND HEALTH
Walking and Working Surfaces/Fall Protection Systems
OCCUPATIONAL SAFETY AND HEALTH

Final rule of OSHA makes technical revisions to reflect the OMB approval of new information collection requests in a Nov. 18, 2016, final rule (81 FR 82494) that updated the general industry standards for walking-working surfaces and personal protective equipment (fall protection systems). The current rule adds the OMB control number for new information collection requirements regarding ladder defect notifications, rope descent system inspection notifications, and the development of alternative fall protection plans and associated training. The collections also add hazard assessments for workers who use personal fall protection systems. The rule is effective July 6, 2017. TOXIC SUBSTANCES
Formaldehyde Emission Standards for Composite Wood Products
TOXIC SUBSTANCES

Notice of the EPA announces the withdrawal of a May 24, 2017, direct final rule (82 FR 23735) to extend the compliance dates for a Dec. 12, 2016, final rule (81 FR 89674) that established formaldehyde emission standards for composite wood products and finished goods containing these products that are sold, supplied, manufactured or imported, or offered for sale in the U.S., under TSCA Title VI. The December 2016 rule set forth standards for laminated products and products made with no-added formaldehyde-based resins or ultra low-emitting formaldehyde resins and addressed testing requirements, product labeling, chain of custody documentation and recordkeeping, enforcement, import certification, and product inventory sell-through

provisions. The rule also established a third-party certification program, provided procedures for the accreditation of third-party certifiers, and set forth general requirements for accreditation bodies and third-party certifiers. The May 2017 direct final rule would have extended compliance dates for emission standards, recordkeeping, and labeling provisions to March 22, 2018; import certification provisions to March 22, 2019; and provisions applicable to producers of laminated products to March 22, 2024. The direct final rule also would have extended the transitional period for California Air Resources Board third-party certifiers to March 22, 2019. The withdrawal is in response to receipt of adverse comments, and the agency will instead proceed with a final rule based on the related proposed rule (82 FR 23769; 05/24/2017). The withdrawal is effective July 6, 2017. Contact: Erik Winchester; EPA, Office of Pollution Prevention and Toxics; 202-564-6450; winchester.erik@epa.gov. Subject: Playbook Power Briefing, presented by Better Medicare Alliance: THE DON JR. EMAILS -- STELTER says Trump Jr asked NYT for more time, and then tweeted out emails they were about to report on -- GRAHAM's 'new approach' on health care -- JARRETT writing book

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Better Medicare Alliance

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon.

DONALD TRUMP JR. RELEASES HIS EMAILS WITH ROB GOLDSTONE -- @DonaldJTrumpJr: "Here's my statement and the full email chain" http://bit.ly/2tEiT1r ... "Here is page 4 (which did not post due to space constraints)." http://bit.ly/2t9P8Cm

-- THE EMAILS FROM ROB GOLDSTONE to **DONALD TRUMP JR.** that the "crown prosecutor of Russia ... offered to provide the Trump campaign with some official documents and information that would incriminate Hillary and her dealings with Russia and would be very useful to your father. This is obviously very high level and sensitive information but is part of Russia and its government's support for Mr. Trump -- helped by Aras and Emin." **TRUMP** said if the information is how it's described by Goldstone, Trump "love it, especially later in the summer."

-- THEY THEN set up a meeting with a "Russian government attorney" with Paul Manafort, Donald Trump Jr. and Jared Kushner.

THE TIMING is probably not coincidental. The New York Times published a story from Jo Becker, Adam Goldman and Matt Apuzzo at about the same time Trump Jr. tweeted out the email chain. http://nyti.ms/2v8tAHq

-- @brianstelter: "Confirmed from an NYT source: 'We were preparing to publish' story -- Don Jr. camp 'asked for more time' to comment 'and then pre-empted us'".

CONSIDER HOW MUCH THIS STORY DEVELOPED -- TRUMP JR. initially said this was a meeting about Russian adoptions. But within a few days, he admitted he was knowingly meeting with a Russian government emissary to get dirt on Hillary Clinton.

STATEMENT FROM PENCE PRESS SECRETARY MARC LOTTER, per NBC's Kasie Hunt: "He was not aware of the meeting. He is also not focused on stories about the campaign -- especially those pertaining to the time before he joined the campaign."

NEW YORKER'S MICHAEL LUO (@michaelluo): "I keep re-reading this section of the statute" http://bit.ly/2t0FnuO

MICHAEL MCFAUL (@mcfaul), the former U.S. ambassador to Russia under Barack Obama: "Wow, I'll let the experts judge the legalities here, but engaging the Russian government to influence our elections is deeply unethical." **NORM EISEN (@normeisen)**, the founder of CREW and Obama's special counsel for ethics and government reform: "even more deeply illegal @McFaul. clearly violates campaign finance law and likely implicates Don Jr. and campaign under conspiracy statute".

TV TONIGHT -- Fox News producer Fin Gomez (@finnygo): ".@DonaldJTrumpJr will be on @seanhannity tonight."

-- "Russian Lawyer Who Met With Trump Jr.: I Didn't Have Clinton Info They Wanted," by NBC News' Keir Simmons and Rachel Elbaum: "The Russian lawyer who met with Donald Trump Jr. during the presidential campaign denied in an exclusive interview with NBC News that she had any connection to the Kremlin and insists she met with President Donald Trump's son to press her client's interest in the Magnitsky Act - not to hand over information about Hillary Clinton's campaign. 'I never had any damaging or sensitive information about Hillary Clinton. It was never my intention to have that,' Natalia Veselnitskaya said.

"When asked how Trump Jr. seemed to have the impression that she had information about the [DNC], she responded: 'It is quite possible that maybe they were longing for such an information. They wanted it so badly that they could only hear the thought that they wanted.'" http://nbcnews.to/2v8EXPE

-- "Donald Trump Jr.'s lawyer is a Juilliard-trained trombonist who plays in a symphony and defends mobsters," by WaPo's Derek Hawkins http://wapo.st/2uaA6QN

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. A BIG THANK YOU for reading Playbook on our one-year anniversary. Here's a special video message from Anna, Jake and Daniel: http://bit.ly/2uMNDfn

-- TODAY'S BONUS BRIEFING -- Jake and Anna talk about how Washington and American politics at large has changed in the last year. http://bit.ly/2uaeHqZ

-- "SPOTTED" ON SNAP -- Have some fun with us today and find our secret Snapchat "SPOTTED" filter at select locations around Washington, D.C., including federal office

buildings, popular restaurants and watering holes, metro stops, and more. Snap us your "Spotted" snaps to @POLITICO and we will feature your best snaps on Twitter!

SPOTTED in first class on a flight from O'Hare to DCA: Rep. Markwayne Mullin, the Oklahoma Republican who recently told his constituents he was abandoning his term-limit pledge. Veteran Michigan Rep. Fred Upton (R) was in coach on the same flight.

GOING THERE -- @mkraju: "TIM KAINE, former Dem VP nominee, tells us that Don Jr 'potentially' could have committed 'treason'". ***Video from NBC*** http://snpy.tv/2u4z89b

APPOINTMENT TELEVISION ALERT -- @JenniferJJacobs: "New: Trump and Macron will do a press conference in Paris on Thursday, per @gviscusi. Conférence de presse conjointe."

NEWS -- @kasie: "LINDSEY GRAHAM: Says new approach underway on healthcare that could involve DEMOCRATS -- mum on details but says 24-48hrs he'll say more".

-- KEEP IN MIND: Graham isn't a member of Senate Republican leadership. He often freelances. It's unclear what he is referencing here. Senate Minority Leader Chuck Schumer has given no indication that he is looking to cut a deal with Republicans based on any publicly released draft legislation. A main sticking point is how lawmakers deal with Medicaid. Unless there is a deal on that, nothing is going to get any Democratic support and will likely lose a lot of GOP moderates as well. ***Austin Wright's story*** http://politi.co/2t0m44N

AND ON THE OTHER SIDE OF THE CAPITOL: What might fly in the Senate doesn't necessarily fly in the House, where Democrats are, broadly speaking, more liberal and more willing to oppose tweaking the health-care law.

THE WHITE HOUSE BRIEFING -- Sarah Huckabee Sanders will brief reporters off camera at 2 p.m.

DEEP DIVE -- "The Business Links of Those Leading Trump's Rollbacks," by NYT's Danielle Ivory and Karl Russell and ProPublica's Robert Faturechi: "In February, President Trump ordered federal agencies to form teams that would identify regulations to roll back or eliminate. Through interviews, public records and documents obtained under the Freedom of Information Act, The New York Times and ProPublica have identified many appointees to these groups. An investigation has revealed a string of possible conflicts, including some hires who may be reviewing rules their previous employers tried to weaken or kill, and others who may personally profit if certain regulations are changed." http://nyti.ms/2v8xrEp

BEN SCHRECKINGER'S LATEST -- "GOP Researcher Who Sought Clinton Emails Had Alt-Right Help," in POLITICO Magazine: "In his Hail Mary bid to tip the election to Trump, the Republican private equity executive [Peter Smith] enlisted two controversial alt-right activists to help him understand the workings of the internet and make contacts

in Trump's orbit, according to interviews with those involved and emails obtained by POLITICO. The activists, the journalist-turned-entrepreneur Charles Johnson and his former business partner Pax Dickinson, agreed to help Smith's quixotic mission, which failed to track down copies of Clinton's emails. Johnson is a polarizing figure who was banned from Twitter in 2015 after promoting an effort to 'take out' a Black Lives Matter activist but maintains ties to White House officials. Smith also reached out to 'Guccifer 2.0'-an alias the U.S. intelligence community has linked to Russian state hackers-and was advised to seek the help of a white nationalist hacker who lives in Ukraine." http://politi.co/2v8C81a

STATEMENTS FROM THE WHITE HOUSE -- @realDonaldTrump at 6:59 a.m.: "The Senate Democrats have only confirmed 48 of 197 Presidential Nominees. They can't win so all they do is slow things down & obstruct!" ... **at 7:46 a.m.:** "Working hard to get the Olympics for the United States (L.A.). Stay tuned!" ... **at 8:09 a.m.:** "Marine Plane crash in Mississippi is heartbreaking. Melania and I send our deepest condolences to all!" ... **at 8:23 a.m.:** "Big wins against ISIS!" ***He also retweeted Fox & Friends three times***

2020 WATCH -- Former Maryland Gov. Martin O'Malley is headed back to New Hampshire next week to lend his support to the special elections. (h/t NH1's Paul Steinhauser)

WHAT THEY'RE READING AT C.A.A.-- "Valerie Jarrett, top Obama adviser, working on book," by AP's Hillel Italie: "Viking told The Associated Press on Tuesday that Jarrett is working on a book that will combine personal history and civic advice. The book is currently untitled and scheduled for 2019. 'I don't want to just tell my story,' Jarrett, a senior adviser during both terms of the Obama administration, said in a statement. 'I want to share the experiences, life lessons and values that have shaped who I am and my ideas for the future.'" http://bit.ly/2tJ4D5X

TODAY'S BEYOND THE BELTWAY -- Florida Republican party has awful fundraising quarter -- Rauner ousts his chief of staff http://politi.co/2uamZis

JARED POLIS IS SMILING -- "Ed Perlmutter to drop out of Colorado governor's race, sources say," by The Denver Post's Mark Matthews: "Rep. Ed Perlmutter plans to announce Tuesday that he will end his run for Colorado governor just three months after the Arvada Democrat began it, according to three sources close to the campaign. The sixth-term lawmaker also won't seek re-election in Colorado's 7th Congressional District; a move likely to bring a sigh of relief to the three Democratic state lawmakers who already have declared for his left-leaning seat, which includes the Denver suburbs of Thornton and Lakewood." http://dpo.st/2v8EZau

LUNCHTIME READ -- FRED FROMMER in The Atlantic -- **"When the Nation's Capital Came Together for the MLB All-Star Game:** In the throes of the Great Depression, residents and lawmakers rallied around the summer event" http://theatln.tc/2sLY5lL

WEEKEND WEDDING -- Elham Khatami , national outreach director at the National Iranian American Council and a CQ Roll Call alum, recently married **Kirk Keshishian**, a financial analyst for a microloan company. "We met at a mutual friend's birthday party in late 2011 and we got engaged in January 2016 [***pic*** http://politi.co/2u8PL3a]. The wedding was at the Sulgrave Club in Dupont Circle. It was a traditional Persian ceremony, followed by a reception." ***Wedding pic*** http://bit.ly/2uMyKK8

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

Subject: Utility exec picked to run EPA Region 8

By Alex Guillén

10/05/2017 02:52 PM EDT

EPA has picked an Xcel Energy executive to run the Region 8 office, which oversees Colorado, Utah, Wyoming, Montana and North and South Dakota.

Doug Benevento has been at Xcel since 2010, for most of that time as vice president of public affairs, according to his LinkedIn profile. He previously was an attorney at the law firm Greenberg Traurig, executive director of the Colorado Department of Public Health and Environment, and an aide to former Sen. Wayne Allard (R-Co.).

He also served six years as an elected member of the Douglas County school board, and in 2013 was one beneficiary of a major push by the Koch brothers-connected Americans for Prosperity to get conservative voices elected to that board, as POLITICO reported at the time. Benevento resigned last year, writing that his "priorities have been largely accomplished."

Subject: Collins 'leaning against' Dourson for EPA chemicals role

By Anthony Adragna

11/16/2017 12:35 PM EDT

Sen. Susan Collins told reporters today she's "leaning against" backing Michael Dourson's nomination to run EPA's chemicals office, which would leave him without adequate support for confirmation in the closely divided chamber.

"I have a lot of concerns about Mr. Dourson, but I've not yet made a final decision," she said.

North Carolina Republican Sens. Richard Burr and Thom Tillis both came out in opposition on Wednesday to Dourson, who is currently working as an adviser at the agency. Both declined to say if he should leave that role today.

Sen. John McCain (R-Ariz.) also said today he had not decided whether to support the nomination.

Subject: Morning Media, presented by MSNBC: The good and the bad of the NYT public editor — Peter J. Boyer joins The Weekly Standard — A new deal for Lawrence O'Donnell

By Joe Pompeo | 06/01/2017 05:39 AM EDT

With Cristiano Lima and Alex Weprin

IF YOUR TWITTER FEED LOOKED ANYTHING LIKE MINE YESTERDAY AFTERNOON, then the sense you would have gotten about The New York Times eliminating its high-profile Public Editor role , after nearly 15 years and six iterations, was that a whole lot of prominent journalists and media figures think it's a bad idea, while a smaller number of these types of people were all too happy to say good riddance. I was chatting with an in-the-know Times source who reiterated the company's official position that, in an era where readers can interact with and hold a publication accountable in so many different ways on so many different platforms, the Times' has essentially outgrown the public editor as a sort of singular, all-powerful ombudsman. Two other things emphasized in our conversation: this wasn't about money, and it wasn't about the performance of the latest public editor, Liz Spayd, whose brief stewardship of the position proved particularly controversial both inside the newsroom and out.

The upside of a public editor, per HuffPost's Michael Calderone, who broke the news: "[B]y being in the newsroom, public editors and ombudsmen can often get responses from management on editorial decision-making that outside reporters and critics cannot. While an outside reporter covering the Times may not get calls returned, the public editor ... can literally wait outside a Times editor's office. And Times management typically responded to the public editor's queries, since failing to do so would call into question its commitment to transparency."

The cynical take, via Tom Scocca, writing for POLITICO Magazine: "The majority of the public editors were bad because the public editor's job was designed to be badly done. ... [T]he work of minding the Times fell to a series of timid people, dull-witted ones and bores. Only the fifth public editor, Margaret Sullivan, broke with that pattern and did her job energetically enough that she ended up being hired as a real media columnist, at the Washington Post. ... The public editors were a flagellating instrument, meant to sting the paper on its surface, never to cut to the bone."

IN OTHER TIMES NEWS - The latest round of buyouts is at hand, and this time it is targeting the most behind-the-scenes layer of editors with the goal of generating enough savings to hire up to 100 new journalists. Layoffs could happen if there aren't enough takers. As the FT notes, the move could cost the Times between $17m and $23m this year.

Statement from the union that reps Times journalists: "The announcement ... is devastating for our members ... and though we're heartened to hear that they intend to invest more in reporters and content, it comes at an unfortunate cost. ... These Guild members don't simply correct comma splices, they protect the integrity of the brand. They are the watchdogs that ensure that the truth is told. The "Paper of Record" should value their importance. We have

asked for a meeting with Times management to discuss how they intend to restructure their editing process, as we fight to keep our members and their institutional knowledge in the newsroom."

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima** (clima@politico.com / @ludacristiano). **Archives**. **Subscribe.**

REVOLVING DOOR: PETER J. BOYER IS JOINING THE WEEKLY STANDARD - Morning Media has learned that he'll be a national correspondent at the 22-year-old conservative publication, as part of what EIC Stephen Hayes is calling a "big staff expansion." Boyer is an illustrious magazine veteran who has done tours at Vanity Fair, The New Yorker and Newsweek. But his most recent job, as an editor at large for Fox News, included a brush with controversy, as it was revealed that Boyer was present for a series of "war room" meetings in which Roger Ailes plotted a smear campaign against biographer Gabriel Sherman. After exiting Fox amid the network chief's sexual harassment scandal last summer, Boyer resurfaced earlier this year working on a piece for Esquire. Presumably he's happy to have all the Fox drama behind him and to get back to magazine deadlines.

A NEW DEAL FOR LAWRENCE O'DONNELL? - It sure sounds like MSNBC's 10 p.m. host Lawrence O'Donnell has inked a new deal to remain with the cable channel. On his show last night, O'Donnell told a guest "You know where I'll be next week? I will be sitting right here talking about the James Comey hearing and everything else that happens next week and everything that happens for the next couple of years." He added on Twitter later, "Yes I will be saying hi to Rachel @maddow at 10pm for the foreseeable future." O'Donnell's contract negotiations had come down to the wire, with his current deal set to expire this weekend. MSNBC hasn't announced anything yet, but don't be surprised to see something official today.

WHAT THE OFFICIAL CBS ANNOUNCEMENT ABOUT SCOTT PELLEY *DIDN'T* SAY - via Page Six : "Furious fired CBS News anchor Scott Pelley ordered his assistant to clear out his office on Tuesday after he clashed with the news division's president David Rhodes. Pelley, who is away on assignment in Syria, had already learned of his firing from the 'Evening News' and decided to take action on his own, well-placed sources tell us. Rhodes and Pelley have recently had a rocky relationship, mostly due to Pelley's poor ratings and his reluctance to shake the broadcast up by moving away from his traditional delivery ... The source familiar with the matter said that even CBS News chiefs were taken by surprise when Pelley's assistant brought in the removal crew Tuesday and started shipping out his belongings."

MUST READS:

-- "Inside the struggle to sway Trump on Paris" [POLITICO]

-- "Looking For Right And Wrong In The Philippines" [BuzzFeed]

-- "The Secret Evangelicals at Planned Parenthood" [Marie Claire]

-- "The Addict's Next Door" [The New Yorker]

KEEP YOUR EYE OUT FOR THESE JOURNO BIG SHOTS IN 'HOUSE OF CARDS' - We haven't yet dug into season 5, which Netflix dropped on Tuesday, but a rep for the show confirmed the following cameos: Charlie Rose; Ann Curry; Bret Baier; Joe Scarborough; Mika Brzezinski; Kasie Hunt; Donny Deutsch; Van Jones; S.E. Cupp; Gloria Borger; Rachel Maddow; and Connie Chung. Aside from the (perhaps no-longer-so-over-the-top-ridiculous-seeming) storylines, part of the fun of the show is keeping tabs on the real-life media figures who make it into the script. In past seasons, journalists like Matt Bai and Ashleigh Banfield were worked into key plot points. Other past appearances have included Chuck Todd, Wolf Blitzer, John King, Chris Matthews and Sean Hannity.

JULIAN ASSANGE IS 'LOOKING INTO' SUBBING FOR HANNITY - Just when you thought things couldn't get more surreal, this happened: "Wikileaks founder Julian Assange told CNN on Wednesday that he is exploring the possibility of guest hosting conservative personality Sean Hannity's nationally-syndicated radio show after Hannity offered him the opportunity to fill in. 'I'm looking into it,' Assange said in a Twitter direct message. 'My physical circumstances means that nothing is easy.'" Hannity's Twitter invite : "If you would like to fill in for me one day I am on over 550 stations and 14 plus million listeners."

SOUND BITES:

-- "The @nytimes might be right in eliminating the public editor but most of its stated reasons for doing so seem like cobbled together nonsense" [Emily Bell]

-- "Tonight @seanhannity is misleading his audience by suggesting @maddow is part of the NBC News operation, not an opinion host on MSNBC. ...which is funny because he always complains when people don't refer to him as opinion host but make him out to be part of Fox News news op" [Oliver Darcy]

-- "Next issue of @NYTmag is a special one: all comics, all based on stories from @NYTMetro. Here's the cover. Issue online Friday." [Jake Silverstein]

NBC AND EURONEWS SEAL THE DEAL - Our colleague Ryan Heath reports from Brussels: "NBC News will [today] close a ???25 million transaction to purchase a 25 percent stake of Euronews, a European media company that claims 52 million daily TV viewers and digital users in 158 countries. The acquisition is the latest in a series of recent NBC investments, including stakes in Snapchat, Vox and Buzzfeed.Company executives told POLITICO a Euronews board meeting Thursday morning will confirm a plan to infuse the multilingual network with NBC's global reach and production values."

From the official announcement: "Euronews has unmatched scale as well as the unique ability to offer international coverage rooted in a local sensibility in every country and language it spans," said NBC News chief Andy Lack. ... Deborah Turness, President of NBC News International, will lead the NBC side of the collaboration, providing editorial and programming leadership as well as strategic guidance."

REVOLVING DOOR, PART 2:

-- **POLITICO is importing its Playbook newsletter franchise to London** later this summer, and we've hired Jack Blanchard, political editor of UK newspaper the Daily Mirror, as the author.

-- **"Liz Garrigan is stepping down as editor of" Washington City Paper,** Washingtonian's Andrew Beaujon reports. "She's returning to Paris, where her husband is still working, says strain of households on two continents was too much"

-- **Mashable has hired Michael Nuñez**, formerly Gizmodo's technology editor, as its deputy technology editor.

SOUNDTRACK: Neil Diamond, "Do It"

EXTRAS:

-- The Roger Ailes comeback that wasn't to be: Bannon TV. [The Daily Beast]

-- As the Trump-Russia plot thickens, the president is increasingly leaning on a friendly face: Fox News Channel. [CNN]

-- CNN has cut ties with comedia Kathy Griffin, who co-hosted the network's New Year's special, over her incendiary video featuring a fake severed and bloody Trump head. [POLITICO]

-- A Daily Caller story about a rally in support of Confederate Gen. Robert E. Lee's statue failed to mention a few things -- like a speech in which the story's reporter praised the white nationalist movement. [ProPublica]

** **A message from MSNBC:** At MSNBC, we recognize that information and facts have never been more important. Each weeknight, Chris Matthews, Chris Hayes, Rachel Maddow, Lawrence O'Donnell, and Brian Williams help you make sense of a complicated time, with insight and perspective that allows you to know that you're in the know. These trusted journalists made MSNBC the #1 cable news network between 7pm-midnight for the month of May. Join us nightly on MSNBC, or catch up at msnbc.com.

Subject: Japanese Internationalism in the 21st Century: Reshaping Foreign Policy in an Era of Upheaval

Japanese Internationalism in the 21st Century: Reshaping Foreign Policy in an Era of Upheaval

November 2017

Michael Auslin

Key points

- **Implementing Japanese Prime Minister Shinzo Abe's vision of a more regionally and internationally engaged foreign policy is essential to the future of Japan and the region.**
- **Abe has distanced his country from its postwar pacifism and unveiled a new, more realist foreign policy. His attempts to modernize Japan's foreign and security policies are limited by how much internal change he and other Japanese are willing to accept.**
- **The competition between Tokyo and Beijing is poised to enter an even more intense period.**
- **As Asia's most developed democracy, Japan can be a key partner for the United States in championing liberal values.**

Subject: Morning Media: NYT Styles search in home stretch — Heads roll at CNN — 'Studio 360' heads to Slate

By Joe Pompeo | 06/27/2017 05:36 AM EDT

With Hadas Gold and Alex Weprin

STYLES SHORTLIST - New York Times insiders tell Morning Media the company is close to naming a new editor for its Styles section, a high-profile gig that's been open since it became public a few months ago that Stuart Emmrich would be stepping down, after seven years at the helm, for a new position within the Times. Sources familiar with the search told Morning Media a decision is expected as early as the end of this week. The internal favorite is Jim Windolf, editor of the monthly Men's Style supplement; formerly of Vanity Fair and The New York Observer. The two external candidates that Times executive editor Dean Baquet has his eye on, my sources confirmed, are Choire Sicha and Lori Leibovich. As with Windolf, probably neither of them needs an introduction for many readers of this newsletter, but just in case: Sicha is an executive at Vox Media, co-founder of The Awl and a veteran of Gawker and The New York Observer. (He also has written for Windolf at Men's Style.) Leibovich is Time Inc's digital director of women's content, whose previous editing gigs include HuffPost and Salon. (Fun fact: Her brother is NYT Mag chief national correspondent and "This Town" author Mark Leibovich.) As Morning Media reported in April, Baquet had offered the job to New York mag's Stella Bugbee, but she turned it down. The Times declined to comment.

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima**. (clima@politico.com / @ludacristiano). **Hadas Gold** contributed to today's newsletter. **Archives**. **Subscribe.**

HARD FAST FALL - Eric Lichtblau had barely gotten up and running at CNN after 15 years as a Pulitzer Prize-winning investigative reporter for The New York Times. Now Lichtblau and two of his colleagues are out in the midst of a controversy -- over a retracted article linking Trump ally Anthony Scaramucci to the Russia investigation -- that has cast a shadow over CNN while adding fuel to the anti-mainstream-media fire that's been spreading across the land. The other two journalists are no schlubs themselves. Thomas Frank, author of the retracted story, is a seasoned alum of USA Today and Newsday, as well as a Pulitzer finalist. Lex Haris, who formerly ran CNN Money, had been the editor in charge of a new investigative unit that Lichtblau and Frank had joined.

A tidbit that was making the rounds last night was that the offending article had been submitted to CNN's lawyers for review, and was published despite the legal team throwing up red flags. At the same time, a CNN source told us that, in fact, legal *hadn't* reviewed the final piece, and was concerned/surprised when they saw that it had been published. A CNN rep didn't respond to an email seeking clarification/confirmation. (If you know exactly how it went down, we'd love to hear from you.)

Additionally, a source told my colleague Hadas Gold that Scaramucci called Frank and Washington Bureau Chief Sam Feist on Friday after the story posted, hinting at a potential lawsuit if the piece was not taken down, which it was by Friday night. An editor's note said the story "did not meet CNN's editorial standards and has been retracted. Links to the story have been disabled. CNN apologizes to Mr. Scaramucci." Yesterday evening, CNN said it had "accepted the resignations of the employees involved in the story's publication." No way around it: The whole thing's a bad look for CNN, and a devastating blow for three otherwise well-respected newsmen.

SOUND BITES:

-- "CNN published a bad story, pulled it, apologized. 3 journalists quit. That's impressive and decisive action. Yelling 'Fake News' unfair." [John Podhoretz]

-- "Inquiring minds want to know: what in the story was bad? Has anyone said? Have I missed?" [Michael Wolff]

-- "CNN employs Jeffrey Lord. And yet it lets 3 reporters/editors w/ combined 80 years of experience and a Pulitzer go over one mistaken story?" [Daniel Gross]

-- "Many of our best journalists seem, in news coverage, not just opinion pieces, to be moving away from balance and nonpartisanship. Is this the end of all that is good and decent in American journalism? Nah." [Mitchell Stephens]

-- "Their briefing room. Their rules. TV camera coverage relatively recent development during Clinton Admin." [Mark Knoller]

FIRST IN MORNING MEDIA: KURT ANDERSEN'S 'STUDIO 360' IS HEADED TO SLATE - The weekly public radio show and podcast has long been co-produced by Public Radio International and WNYC. But the 18-year marriage is coming to an end. "Studio 360," a Peabody-winning pop-culture broadcast, will now be a partnership between PRI and Slate, which has developed its own podcasting operation. WNYC will continue to be one of the 214 stations that distribute "Studio 360," but PRI Chief Content Officer Melinda Ward says the Slate partnership will help the show "realize its full potential as a podcast." WNYC is itself a serious podcast player, but most of its energy/resources in that department go into shows that WNYC started/owns. ("Studio 360" is owned by PRI.) Andersen, who's also a novelist and co-creator (with Graydon Carter) of the legendary Spy magazine, said he "couldn't be more excited" about combining forces with Slate.

Podcasts are becoming increasingly influential both from an audience standpoint and a business one. (A study out yesterday from IAB/PwC says U.S. advertising revenues for the medium are projected to rise 85 percent in 2017 to $220 million.) Slate, best known as a long-running digital magazine, is one in a number of companies to create a successful podcast network over the past few years, and "Studio 360" will easily be the most high profile of Slate's roughly 30 shows. Andersen and his team will move to Slate's Brooklyn headquarters, where

they will collaborate with Slate staff on the production, distribution, and promotion of both the radio program and podcast.

MUST READS:

-- "Being Donald Trump: the life of an impersonator" [The Guardian]

-- Jack Shafer: "America's Mayor" [POLITICO Mag]

-- "What Happened to America's Public Intellectuals?" [Smithsonian]

-- An oral history of Playgirl. [Esquire]

MOVE OVER, PULITZER PRIZE WINNERS: SEAN HANNITY IS BEING HONORED WITH AN AWARD FOR 'MEDIA EXCELLENCE' - Granted, said award is to be handed down not from the ivory tower of an elite journalism school, but from the Media Research Center (a conservative watchdog group) at its upcoming September gala. Nonetheless, it's bound to send a shiver of irony down the spines of many journalists to whom the Fox News anchor's brand of propagandistic anti-MSM fervor and unabashed Trump boosterism is downright anathema. The annual MRC fete, known as the DisHonor Awards, is a cheeky black-tie affair where "dishonors" are bestowed on liberals and the mainstream media, while conservative media types are honored in earnest. Previous winners of the William F. Buckley award that Hannity is to receive include Andrew Breitbart, Charles Krauthammer, Phyllis Schlafly and Charlie Daniels. Rush Limbaugh also is set to make an appearance.

REVOLVING DOOR:

-- **Bloomberg has hired former BBC Economics Editor Stephanie Flanders** to lead a new unit called Bloomberg Economics. From EIC John Micklethwait's memo: "We believe that we can provide a better product if our ... economists and our economics journalists ... belong to one unified team. So in October we will bring them together into one unit called Bloomberg Economics. ... Dan Moss, who has led our economics journalists for more than a decade and built the team into a reporting powerhouse of 100 people around the globe, will soon take on a new role in the world of commentary and analysis." Flanders also is an alum of the FT and The New York Times, and has been with with JPMorgan since 2013.

-- **Two new Washington-oriented hires at Al-Monitor**, a U.S.-based news website that does in-depth coverage of the Middle East. Per the announcement: "Jack Detsch will spearhead our coverage of the Pentagon as we expand our reporting of US military alliances, arms sales and many other aspects of Defense policy. Jack joins us from the Christian Science Monitor ... Bryant Harris has been hired as our new congressional correspondent. Bryant spent three years as an assistant correspondent for Japan's Yomiuri Shimbun."

ERRATUM - My mistake: It was Keith Kelly who first reported, back in January, that David Pecker's AMI was interested in buying Time Inc. (Missed that one!)

SOUNDTRACK: Gang of Four, "Damaged Goods"

EXTRAS:

-- CBS News says it was the first outlet to broadcast from inside Raqqa since ISIS took control of the city. [TV Newser]

-- "Taking the pulse of ESPN" [Sports Business Daily]

-- "Can Journalists Live Without Twitter?" [TNR]

-- The Washington Post, Bloomberg and the Chicago Tribune are among this year's National Press Club Award winners. [press.org]

Subject: POLITICO's Morning Transportation: NTSB: Amtrak safety culture needs work — Bradbury confirmed — Huerta's plea for perspective

By Tanya Snyder and Lauren Gardner | 11/15/2017 10:00 AM EDT

With help from Brianna Gurciullo and Stephanie Beasley

NTSB POUNDS AMTRAK SAFETY CULTURE: Amtrak had a "deficient" safety culture marked by a hyper-focus on following rules and marred by a silent acceptance of workarounds that enabled one of its trains to crash into an active work zone last year near Philadelphia, killing two track workers and injuring dozens, NTSB determined Tuesday. It was altogether a jarring assessment of the company's safety posture at the time of the collision, with investigators discovering more than two dozen unsafe conditions revealing an inconsistent safety vision across layers of Amtrak's corporate structure.

Two big takeaways: Amtrak workers had instituted a workaround for company procedures on "fouling" - or taking a track out of service for maintenance work - that in practice should have prevented the accident. Removing those foul time limits, coupled with workers not using supplemental devices to protect the track segment being worked on as an additional safety measure, prevented positive train control from working as designed, since the technology couldn't detect the backhoe on the track. Check out the NTSB abstract of the report, findings and recommendations here.

Call and response: Amtrak blasted out an advisory to employees after NTSB wrapped to describe ways the company has worked to address the agency's concerns along the way, something board Chairman Robert Sumwalt acknowledged. "The important message we want you to take away from today is that we've been in the process of transforming our safety culture since this incident," co-CEOs Richard Anderson and Wick Moorman wrote . Even so, NTSB staff noted at different points that they had yet to see evidence that Amtrak had made significant strides to address some of their harshest criticisms - namely the company's relationship with its unions on safety issues and an apparent focus on on-time performance over safety.

Not to be left out: NTSB also dinged FRA for being five years late on issuing a final rule requiring system safety plans for railroads. DOT stayed the effective date of the regulation until Dec. 4, though FRA recently held a meeting to hear concerns from states about the requirements. An FRA spokesman said the agency will "thoroughly review" NTSB's findings.

WEDNESDAY ALREADY? Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Tanya is at the MT helm. Send tips, feedback and song lyrics to tsnyder@politico.com or @TSnyderDC.

"Well traffic is kind of bad / They're widening 'Easy Street' / To fit more SUVs."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than

with songs (picked by us and readers) about lonely highways and south-bound trains?

BRADBURY'S IN: The Senate confirmed Steven Bradbury to be DOT's top attorney Tuesday, despite vehement objections from Democrats and some Republicans over his role in the George W. Bush administration writing memos authorizing torture. Sen. John McCain (R-Ariz.) said before the vote that it was "a dark, dark chapter in the history of the United States Senate" and that the chamber was "legitimizing offenses against the code of the Geneva Conventions." Sen. Tammy Duckworth (D-Ill.) spoke on the floor for an hour against Bradbury's confirmation. Sen. Bill Nelson (D-Fla.), the top Democrat on the Commerce Committee, had spoken out against Bradbury due to his work representing Takata, the now-bankrupt manufacturer of lethal airbags involved in a massive recall, reports our Lauren Gardner.

LEARN TO LISTEN: FAA Administrator Michael Huerta wants the debate over air traffic control to get an injection of facts and a dose of perspective. "We need to have a transparent discussion that's based on where we are today - not where we were a decade ago," he said Tuesday in his final speech before the Aero Club of Washington as the head of the FAA. Huerta, echoing the point he made in a speech to the National Business Aviation Association last month, also said opposing sides need to do a better job passing around the talking stick. "We can't keep talking past each other. We need to talk with each other," he said.

Fun fact: Huerta gave a NextGen shout out during his remarks, saying that for "three years now, GPS procedures have outnumbered the old ground-based navigation routes."

What's next? "Jan. 6 is my last day, which happens to correspond to the start of ski season," Huerta said, in response to a question from the audience. He also gave some tips to his successor, saying he or she should "embrace change, be a good listener, make the tough decisions."

NIELSEN APPROVED: After much hemming and hawing, the Senate Homeland Committee approved DHS secretary nominee Kirstjen Nielsen on Tuesday afternoon, Stephanie Beasley reports. Though four Democrats - Sens. Tom Carper (Del.), Maggie Hassan (N.H.), Kamala Harris (Calif.) and Gary Peters (Mich.) - voted in opposition. Carper said he worried that Nielsen did not have the "leadership training" needed for the position. "I have struggled with this probably as much as anything I've struggled with this year," he said at the markup. And Hassan said she voted "no" because Nielsen was not called back to again testify under oath, as she and some other committee Democrats requested last week.

Next steps: Chairman Ron Johnson (R-Wis.), who has touted Nielsen's cybersecurity experience and relationship with White House chief of staff John Kelly as pluses, said that he hopes the Senate "moves as quickly as possible" to take up a vote on her nomination. It's possible that Nielsen could be confirmed this week, but with the Senate's full floor agenda and the Thanksgiving holiday fast approaching, it might be a long shot.

YOU HAD ONE JOB (WELL, TWO): The American Association of State Highway and Transportation Officials wrote to Senate leaders Tuesday to say how disappointed they are that the tax overhaul bill (H.R. 1 (115)) does not include a fix to the Highway Trust Fund's structural deficit. Calling it a missed opportunity, AASHTO said that if nothing is done, federal highways

will face a 40 percent cut in 2021 and federal transit funding will be zeroed out completely from 2021 to 2023. AASHTO also called out the GOP doublespeak on an infrastructure plan: "We need to be honest with the American people: failure to find the revenue for an infrastructure initiative now, as part of tax reform, will make passage of such a package nearly impossible in the future."

HECKUVA JOB: Between April and September of this year, the DOT's Inspector General closed 157 investigations and opened 131 more, leading to 43 convictions, the office said in a semiannual report to Congress released Tuesday. The office blew the whistle on hazmat fraud, got a man sentenced for killing a police officer while driving a commercial vehicle under the influence of drugs, and enforced highway and bridge safety rules. The financial impact of their work over those six months, they say: $3.42 million.

IN WITH THE NEW: Cathy Gautreaux, who was executive director at the Louisiana Motor Transport Association for nearly three decades, started Monday as deputy FMCSA administrator, a DOT source confirmed to MT.

MAKE A RUN PAST THE BORDER: More than 100 trade organizations urged U.S. Trade Representative Robert Lighthizer on Tuesday to keep NAFTA's rules allowing Mexican trucking companies to drive beyond U.S. border zones. The organizations that signed the letter said allowing Mexican truckers to haul goods further into the United States helps alleviate congestion at and near the border, "creating more efficiency through the system." They noted that Mexican carriers have "have an excellent safety record."

Don't go: The Trump administration doesn't appear to be proposing the complete removal of Mexico's long-haul trucking industry from NAFTA's cross-border services chapter, Morning Trade reported. What they are considering is a form of safeguard mechanism that would allow the U.S. to impose new restrictions or limitations on Mexico's trucking industry if it were faced with certain negative conditions. The proposal was formally put forward in the fourth round of talks outside Washington.

THEIR TURN: Tuesday was the deadline for comments to DOT's revised driverless car policy. The Auto Alliance remains concerned that the guidance isn't clear enough that states shouldn't enact any kind of pre-approval process before allowing the testing and deployment of self-driving cars on the road, creating "unnecessary delays." NTSB Chairman Robert Sumwalt said he was disappointed that the guidance didn't address Level 2 automation, like the Tesla involved in a fatal May 2016 crash that NTSB just investigated. And as always, motorcyclists showed up in force with concerns about whether driverless cars will be able to adequately detect motorcycles on the road.

SPOTTED: Transportation Secretary Elaine Chao with several other Cabinet officials, more than two dozen members of Congress and Delta Air Lines CEO Ed Bastian on Tuesday night at a reception in honor of Andie Newman, who retired this summer as Delta's senior vice president of government affairs after a 22-year career in the airline industry.

SHIFTING GEARS: Laura Bonavita is the new new manager of policy communications in

Hyundai Motor Company's Washington office. Bonavita previously worked at the U.S. Chamber of Commerce and the National League of Cities.

NET NEUTRALITY 101: The long-running fight over net neutrality, which pits telecom giants against tech companies, is heating up at the Federal Communications Commission. To understand what the fight is all about and where it's headed, check out POLITICO's latest explainer video featuring technology reporter Margaret Harding McGill and the artwork of Pulitzer Prize-winning cartoonist Matt Wuerker. Click HERE to watch.

THE AUTOBAHN:

- "These are the GOP officials who have spent the most at Trump properties." The Washington Post. (MT note: Reps. Bill Shuster (R-Pa.) and Michael McCaul (R-Texas) are on the list.)

- "How a decaying surface transport system is endangering U.S. security and economic strength." Forbes.

- "Boeing inks $1.3B Ethiopian Airlines deal for 777 freighters." The Associated Press.

- "New FAA guidance for electronic flight bags." FAA.

- "Study: Ride-hailing, automation will hurt car sales." The Detroit News.

- "Colorado track will test super-speedy transit that could be offered at toll-road price." The Denver Post.

THE COUNTDOWN: DOT appropriations run out in 24 days. The FAA reauthorization expires in 137 days. Highway and transit policy is up for renewal in 1,051 days.

Subject: BREAKING NEWS: U.S. tells EU: No laptop ban

The U.S. today opted not to introduce a ban on bringing laptops into the cabins of flights to the U.S. from Europe, sources told POLITICO.

"No ban," a Commission official said. "Both sides have agreed to intensify technical talks and try to find a common solution."

The decision was made during a conference call this afternoon between U.S. Department of Homeland Security Secretary John Kelly and European Home Affairs Commissioner Dimitris Avramopoulos and Transport Commissioner Violeta Bulc.

Subject: Pruitt delays next step in implementing 2015 ozone standard

By Alex Guillén

06/06/2017 07:14 PM EDT

EPA Administrator Scott Pruitt is delaying a deadline for deciding which areas of the U.S. do not meet the 2015 ozone standard, saying "there is insufficient information" to act at this time.

In letters to governors sent today, Pruitt says he needs the extra year to "consider completely" the states' suggestions "and to rely fully on the most recent air quality data." Determining which areas do not comply with the new standard is the first step toward requiring states to form plans to reduce ozone levels.

June 9 had been the target date for EPA to publish state proposals and take public comment, with a final decision coming by Oct. 1 of this year, according to a February 2016 memo from EPA.

Pruitt said he is also reviewing "a host of complex issues" regarding the standard, including background ozone, international sources and "exceptional events" like wildfires or volcanic eruptions that can spike ozone levels. The letter says Pruitt has also created an Ozone Cooperative Compliance Task Force "to develop additional flexibilities for states to comply with the ozone standard."

EPA has paused legal challenges to the standard while it reviews the rule requiring states to limit ozone to 70 parts per billion. It is not yet clear whether Pruitt will seek to repeal it and return to the 2008 standard of 75 ppb.

Summaries

AIR
California SIP/Placer County APCD
AIR

Proposed rule of the EPA amends regulations under 40 CFR 52 to approve revisions to the Placer County Air Pollution Control District (APCD) portion of the California SIP. The revisions concern the district's demonstration regarding reasonably available control technology (RACT) requirements for the 1997 and 2008 eight-hour ozone NAAQS and negative declarations for the polyester resin control techniques guidelines for the 2008 eight-hour ozone standard. Comments are due July 17, 2017. Contact: Nicole Law; EPA Region 9; 415-947-4126; law.nicole@epa.gov

82 FR 27456 (06/15/2017)

Regulatory Update

AIR
California SIP/South Coast Air Quality Management District
AIR

Proposed rule of the EPA amends regulations under 40 CFR 52 to approve revisions to the South Coast Air Quality Management District portion of the California SIP. The revisions concern the district's demonstration of reasonably available control technology requirements for the 2008 eight-hour ozone NAAQS in the South Coast Air Basin and Coachella Valley ozone nonattainment areas under the nitrogen oxides Regional Clean Air Incentives Market (RECLAIM) program. The revisions supplement a prior RACT submission and include additional emissions analysis, two negative declarations, and certain conditions from permits for two specific stationary sources located in Coachella Valley. The EPA also is withdrawing a Nov. 3, 2016, proposed rule (81 FR 76547) that would have partially approved and partially disapproved the RACT SIP demonstration. The proposed approval is based on a draft version of the RACT supplement that was submitted by the California Air Resources Board, and final approval will not be granted until the supplement is adopted and submitted to the EPA. Comments are due July 17, 2017. Contact: Stanley Tong; EPA Region 9; 415-947-4122; tong.stanley@epa.gov

Regulatory Update

AIR
Tennessee SIP/Visibility Transport Infrastructure Requirements
AIR

Final rule of the EPA adopts regulations under 40 CFR 52.2219 to conditionally approve portions of revisions to the Tennessee SIP. The revisions address the visibility transport (prong 4) infrastructure requirements for the 2010 one-hour nitrogen dioxide, the 2010 one-hour sulfur dioxide, and the 2012 annual fine particulate matter NAAQS. The rule is effective July 17, 2017. Contact: Sean Lakeman; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9043; lakeman.sean@epa.gov

ENDANGERED SPECIES
California/Monterey Bay Marine Mammals Incidental Take
ENDANGERED SPECIES

Final rule of the National Oceanic and Atmospheric Administration, National Marine Fisheries Service, amends regulations under 50 CFR 217.11 through 217.18 to allow for issuance of letters of authorization for the take of marine mammals incidental to commercial fireworks displays permitted by the Monterey Bay National Marine Sanctuary in California. The rule authorizes take of small numbers of California sea lions and harbor seals by Level B harassment in the Cambria, Half Moon Bay, Monterey Peninsula, and Santa Cruz/Soquel regions from 2017 through 2022. The rule extends current incidental take authorizations under a May 29, 2012, final rule (77 FR 31537) from June 28, 2017, through July 3, 2022. The rule is effective July 4, 2017. Regulatory Update

FOOD SAFETY
Animal Generic Drug User Fee Act Cover Sheet
FOOD SAFETY

Notice of the Food and Drug Administration announces the submission of a continuing information collection request to the OMB regarding the Animal Generic Drug User Fee Act cover sheet (FDA Form 3728). The collection addresses fees for certain types of abbreviated applications for generic new animal drugs, annual fees for certain generic new animal drug products, and annual fees for certain sponsors of abbreviated applications for new animal drugs and/or investigational submissions for generic new animal drugs. The collection also provides information to determine whether a fee is required for an application, to determine the amount of the fee required, and to account for and track user fees. Comments are due July 17, 2017. Contact: Ila Mizrachi; FDA, Office of Operations; 301-796-7726; PRAStaff@fda.hhs.gov

Regulatory Update

FOOD SAFETY
Food Labeling
FOOD SAFETY

Notice of the Food and Drug Administration announces the submission of a continuing information collection request to the OMB concerning food labeling requirements and exemptions from such requirements for small businesses (21 CFR 101, 102, 104, and 105). The collection addresses requirements for food producers to disclose specific information on the label of a product, to retain records concerning the basis for the information contained in the label, and to submit food labeling petitions to the FDA. The collection also addresses small business exemption claims (FDA 3570), requirements for restaurants to provide nutrition information upon request, requirements concerning certain nutrient claims, and requirements for dietary supplements. Comments are due July 17, 2017. Contact: Ila Mizrachi; FDA, Office of Operations; 301-796-7726

Regulatory Update

FOOD SAFETY
Human Food and Cosmetics Manufactured with Cattle Material
FOOD SAFETY

Notice announces the intention of the Food and Drug Administration to seek OMB approval for a continuing information collection request regarding human food and cosmetics manufactured from, processed with, or containing material from cattle. The collection addresses the recordkeeping and reporting requirements for manufacturers, processors, and importers of FDA regulated human food, dietary supplements, and cosmetics to ensure such products do not contain prohibited cattle materials, including specified risk materials, the small intestine of cattle not otherwise excluded from being a prohibited cattle material, material from nonambulatory disabled cattle, and mechanically separated beef (21 CFR 189.5 and 700.27). Comments are due Aug. 14, 2017. Contact: Ila Mizrachi; FDA, Office of Operations; 301-796-7726

Regulatory Update

FOOD SAFETY
Infant Formula Recall Requirements
FOOD SAFETY

Notice announces the intention of the Food and Drug Administration to seek OMB approval for a continuing information collection request concerning infant formula recall requirements (21 CFR 107). The collection addresses reporting and recordkeeping requirements that allow the agency to monitor the effectiveness and speed of recalls in order to protect babies from products that may be unsafe because of contamination, nutritional inadequacy, misbranding, or other

adulteration. Comments are due Aug. 14, 2017. Contact: Ila Mizrachi; FDA, Office of Operations; 301-796-7726; PRAStaff@fda.hhs.gov

FOOD SAFETY
Temporary Market Permits/Experimental Packs of Food
FOOD SAFETY

Notice announces the intention of the Food and Drug Administration to seek OMB approval for a continuing information collection request regarding temporary market permits to test consumer acceptance and measure the technological and commercial feasibility in interstate commerce of experimental packs of food that deviate from applicable definitions or standards of identity (21 CFR 130.17). The collection addresses agency monitoring of the manufacture, labeling, and distribution of experimental packs of food to be used to support petitions to establish or revise applicable definitions or standards of identity. The collection also addresses requirements for firms to submit certain information to obtain an extension of a temporary marketing permit. Comments are due Aug. 14, 2017. Contact: JonnaLynn Capezzuto; FDA, Office of Operations; 301-796-3794; PRAStaff@fda.hhs.gov

GENERAL ENVIRONMENT AND SAFETY
Oregon/Jordan Cove LNG Terminal and Pacific Connector Pipeline Projects
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Federal Energy Regulatory Commission to prepare an environmental impact statement for the proposed Jordan Cove LNG Terminal and Pacific Connector Pipeline Projects located in Coos, Douglas, Jackson, and Klamath counties in Oregon. The projects, proposed by Jordan Cove Energy Project LP, a subsidiary of Veresen Inc., of Calgary, and Pacific Connector Gas Pipeline LP, of Roseburg, Ore., include the construction and operation of a liquefied natural gas export terminal on the North Spit of Coos Bay designed to liquefy about 1.04 billion cubic feet per day of LNG for export to markets across the Pacific Rim. The projects also include the construction and operation of a 235-mile-long, 36-inch diameter interstate natural gas transmission pipeline capable of transporting about 1.2 billion cubic feet per day of natural gas, and associated aboveground facilities. The notice specifies that although no formal application has been filed with FERC, the agency has begun initial review of the project under the prefiling process. The agency previously denied the project application in a March 11, 2016, order. The notice also specifies preliminary environmental issues identified by FERC and cooperating agencies, including impacts on endangered species and aquatic resources. Meetings are scheduled for June 27, 28, and 29, 2017, in Coos Bay, Roseburg, and Klamath Falls, Ore., respectively. Comments are due July 10, 2017. OIL AND GAS INDUSTRY

Onshore Oil and Gas Leases/Venting and Flaring of Waste Gases

OIL AND GAS INDUSTRY

Notice the Department of the Interior, Bureau of Land Management, announces the postponement of compliance dates for a Nov. 18, 2016, final rule (81 FR 83008) that amended regulations under 43 CFR 3103.3-1, 3160.0-5c, and 3162.3-1 and adopted regulations under 43 CFR 3178.1 through 3179.401 to set forth requirements to reduce waste of natural gas from venting, flaring and leaks during oil and natural gas production activities on onshore federal and Indian leases. The rule updated and revised requirements for flaring, venting, and royalty-free use of gas (NTL-4A). The current action postpones compliance dates that have not yet passed for provisions requiring operators to capture a certain percentage of gas they produce; to measure flared volumes; to upgrade or replace pneumatic equipment; to capture or combust storage tank vapors; and to implement leak detection and repair programs. The action is effective June 15, 2017. Contact: Timothy Spisak; BLM; 202-912-7311

Subject: Federal Insider: Panel pushes Trump, Congress for better use of confidential evidence in policymaking

Panel pushes Trump, Congress for better use of confidential evidence in policymaking

By Joe Davidson

The U.S. Capitol (Aaron P. Bernstein/Bloomberg)

There's sweet irony in a federal blue-ribbon panel dispatching a report on the need for evidence in policymaking to a president known for prevarication.

Yet without sarcasm or irony, the Commission on Evidence-Based Policymaking sent its findings to President Trump and congressional leaders Thursday.

In their cover letter, the 15 commissioners, who unanimously adopted the report, said the panel "envisions a future in which rigorous evidence is created efficiently, as a routine part of government operations, and used to construct effective public policy … while simultaneously providing stronger protections for the privacy and confidentiality of the people, businesses, and organizations from which the government collects information."

"Traditionally, increasing access to confidential data presumed significantly increasing privacy risk," the report says. "The Commission rejects that idea."

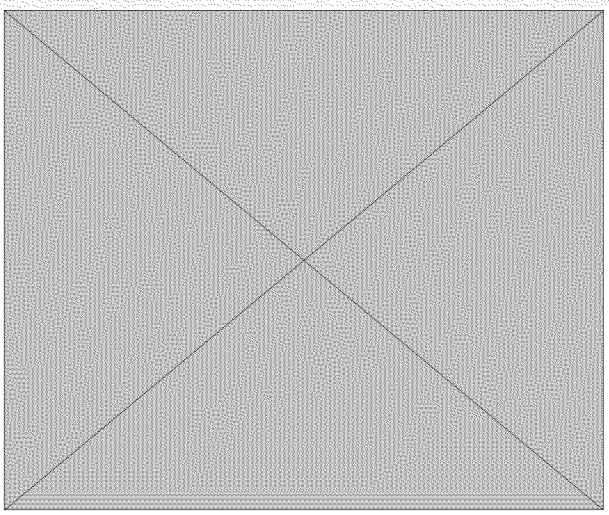
Commissioners did more than call for the obvious. We shouldn't need a commission to make the case for evidence in policymaking. The panel made nearly two dozen well-considered recommendations, tools for better use of data, in four areas — "improving secure, private and confidential data access," "modernizing privacy protections for evidence building," "strengthening federal evidence-building capacity" and "implementing a National Secure Data Service."

The data service would be housed in the Commerce Department and would

ADVERTISEMENT

"maintain a searchable inventory of approved projects using confidential data."

This would assist policymakers who "must have good information on which to base their decisions about improving the viability and effectiveness of government programs and policies," the report begins. "Today, too little evidence is produced to meet this need."



To get the needed information, commission members recommended revising "laws authorizing Federal data collection and use … but only under strict privacy controls."

Presentation of the report at a Capitol Hill news conference was an almost joyous event for a dull but important topic. Speaker Paul D. Ryan (R-Wis.) and Sen. Patty Murray (D-Wash.), who both worked to create the commission, joked about Sunday's football game between the Green Bay Packers and Seattle Seahawks and the infrequent nature of bipartisan agreement before praising the commission.

Ryan called the report "phenomenal … impressive and important work … for an efficient and effective federal government."

Murray said that "no matter what any of us think about government in general — and no matter what we may think about programs or investments in particular — surely we should be able to agree that we should all do everything we can to make them work as well as possible. Not just by wishing for it, and not just letting blind ideology or partisanship guide the way or undermine policies that help people — but by using evidence, facts, science — making sure our policies are aligned with what we know works — and what we know doesn't."

The call for increased use of confidential data comes as companies invade our privacy by collecting information on our buying and recreational habits so they can sell us more. Facebook and Google can creep too deep into our lives. Equifax, the credit reporting agency, said Thursday that personal information on 143 million Americans was hacked. Still fresh is the memory of the 2015 Office of Personnel Management data breach, which resulted in the theft of personal information, including Social Security numbers, belonging to more than 22 million people.

Even confidential data should be used for research

It is interested in anonymous administrative and survey information that could be used to improve programs, if not for roadblocks. For example, census data are available “only for the narrow purpose of improving Census Bureau programs,” the report said, yet that information, without names or identifying information, could be used to enhance any number of agency efforts.

The commission’s emphasis on evidence is particularly welcome during a period when the nation is beset with a president renown for lies, deceptions and dissimulation. Since Trump’s inauguration, he was made an average of nearly five false or misleading claims a day, according to The Washington Post’s Fact Checker.

The commission was created through legislation enacted last year. The members were appointed by then-President Barack Obama and the Republican and Democratic leaders of the House and Senate.

Privacy is a driving concern throughout the report. It urges the adoption of “modern privacy-enhancing technologies for confidential data used for evidence building.”

Marc Rotenberg, president of the Electronic Privacy Information Center (EPIC), welcomed the report, saying, “Smart public policy requires good information.”

But his email cautioned that some government “data sets, such as census

More from Federal Insider

data, to impersonal privacy. There the key is to adopt new 'Privacy Enhancing Techniques' that minimize or eliminate the collection of personally identifiable information. The Commission endorsed PETs, which EPIC has long supported. But federal agencies must also demonstrate that these techniques successfully safeguard privacy.

"That is the big test ahead."

Subject: White House waiver lets former lobbyist help shape energy policy

By Anthony Adragna

05/31/2017 09:59 PM EDT

The White House disclosed tonight it has granted energy aide Mike Catanzaro an ethics waiver to allow him to participate in policy matters he once lobbied on.

Catanzaro, a former partner with CGCN Group LLC, has been cleared to specifically participate in matters related to EPA's Clean Power Plan, the waters of the U.S. rule and methane regulations. The waiver also covers unspecified "broad policy matters."

At CGCN, Catanzaro's clients included the American Fuel and Petrochemical Manufacturers, the American Chemistry Council and Noble Energy. He also worked on behalf of Devon Energy, an Oklahoma-based oil and gas company close to EPA Administrator Scott Pruitt.

Catanzaro's waiver was one of 14 disclosed by the White House. Their release capped a battle between the Office of Government Ethics and Trump's administration, which initially refused to release them.

Trump's January executive order on ethics barred lobbyists entering the administration from working on anything they specifically lobbied on for two years, but allowed waivers.

Subject: POLITICO's Morning Energy: Replacing Clean Power Plan could disappoint conservatives — Domenech nomination clears Senate — More regulatory waivers extended after hurricanes

By Anthony Adragna | 09/14/2017 10:00 AM EDT

With help from Eric Wolff

PRUITT'S CARBON TIGHTROPE BALANCING ACT: Leaving the door open to rewrite the Obama administration's Clean Power Plan would help President Donald Trump's administration honor the wishes of power companies looking to avoid years of legal uncertainty but might not satisfy the demands of some conservative activists, Pro's Emily Holden reports. EPA wants to move to collect comments about whether to write a new regulation, and is likely to write a new rule given the agency would be on much shakier legal ground if it simply opted not to regulate carbon dioxide from power plants.

Any replacement rule would be unlikely to take a meaningful bite out of carbon levels and would be based on a much narrower interpretation of EPA's Clean Air Act authority. That may be enough in the interim for some conservatives who would prefer a straight withdrawal of Clean Power Plan but who wouldn't oppose a replacement rule. "Ultimately, the responsibility to fix this mess lies with the Congress, so until they act, the only thing the Administration can do is minimize the damage," said Tom Pyle, a conservative lobbyist with the American Energy Alliance who led Trump's Energy Department transition team. But the details could have political implications for Pruitt, who is widely seen as a potential candidate for the U.S. Senate in his native Oklahoma.

Most utilities assume future regulations or laws will ultimately require them to curb carbon emissions even if the Obama administration's Clean Power Plan goes down and support EPA issuing a replacement rule - albeit a much weaker one. "We think that future regulation of carbon emissions from power production is likely, and could provide additional planning certainty," Tammy Ridout, a spokeswoman with coal-heavy AEP, said. Regardless of the approach Pruitt ultimately selects, environmental groups are sure to vigorously contest his efforts in court.

DOMENECH CLEARS SENATE: Trump's pick for Interior assistant secretary nominee, Douglas Domenech, cleared the Senate by voice vote late Wednesday. The veteran of George W. Bush's Interior Department who was on the Trump transition team's landing team at the agency said during the confirmation process that he still believes that the human contribution to climate change is very small. Domenech also previously served as Virginia's secretary of natural resources.

But others will wait: Efforts to fill out the Trump energy team must wait a few more days again after the Senate Energy and Natural Resources Committee shelved votes slated for today on the nominations of five FERC, DOE and Interior nominees, Pro's Darius Dixon reports. Votes are now slated for next Tuesday.

Democrats threaten to delay Bodine: Two EPW Democrats - Sheldon Whitehouse and Jeff Merkley - threatened to hold up Susan Bodine's nomination to be EPA enforcement chief until she provides details about her advisory role to the administrator and whether she played a role in the agency's decision to enforce its methane rule on a "case by case" basis. They said Bodine's assumption of a role at EPA without being confirmed first may run afoul of federal law.

EPA nominees up next week: Four EPA nominees will get their day at Senate EPW for a hearing next Wednesday. They are: Michael Dourson to run the agency's chemical office; Matt Leopold to be general counsel; David Ross to run the water office; and William Wehrum's contentious bid to be EPA's top air official. The committee also will consider Jeffery Baran's renomination to another five-year NRC term.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and Bracewell's Frank Maisano named Schuyler Colfax and John Nance Garner as the two House speakers that became vice president. For today, and in keeping with the theme: Who is the lone speaker that went on to become president? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

TEMPORARY REGULATORY WAIVERS GALORE: With Florida and Texas still restoring power and taking stock of damage following Hurricanes Harvey and Irma, federal regulators are temporarily relaxing regulatory requirements to help those states get back online. As POLITICO Florida's Bruce Ritchie reports, the EPA acknowledged in a letter Wednesday it recognized the need to use "flexibility" provided in federal stormwater discharge permits for facilities affected by the storm.

Jones Act waiver extended: Citing "severe disruptions of the oil supply system," DHS announced Wednesday it extended a Jones Act waiver through Sept. 22 to alleviate fuel shortages in the areas affected by the hurricanes. The decision will allow foreign-flagged vessels to deliver fuel from U.S. refineries to Florida and other impacted states, something barred under the 1920 Jones Act.

Texas' too: EPA said late Wednesday it would waive fuel requirements under the Clean Air Act for reformulated gasoline and low volatility gasoline in Texas through Oct. 1 to "help address the emergency circumstances" in the state from the hurricanes. In addition, the agency also continued to allow the use of Texas Low Emission Diesel in 110 Texas counties.

Three's a trend! OMB Chief Mick Mulvaney told CNN's Jake Tapper on Wednesday there's "plenty of time later" to discuss climate change but said the focus right now should be on helping hurricane victims in Texas and Florida. "I'd be more than happy to have a longer discussion another day about climate change, man-made climate change," he said. Energy Secretary Rick Perry previously said now's "not the time" to discuss climate change, while EPA Administrator Scott Pruitt called such talk " insensitive."

Curbelo fine with climate talk: Back on Capitol Hill after responding to Hurricane Irma's impacts on his district, Rep. Carlos Curbelo said climate change should be a part of post-storm discussion. "It shouldn't be the first thing people talk about - the first concern has to be all the

people in the Florida Keys and throughout the state of Florida who are struggling," he told reporters. "[But] it's certainly not irresponsible to highlight how this storm was probably fueled - in part - by conditions that were caused by human-induced climate change."

Backs Nelson's climate comments: Curbelo said he "absolutely" agreed with his state's senior senator, Bill Nelson, that Republicans were "denying reality " if they refused to acknowledge climate change. "I am critical of both the deniers and the alarmists because they don't contribute much to solving this problem," he said. "The deniers deny it so you can't address a problem you don't recognize and the alarmists scare everyone and take credibility away from the issue, and people who are convincible then shy away. People need to talk about this in a sober way, in a rational way."

Be on the lookout: Curbelo said his bipartisan Climate Solutions Caucus should hit 60 members in the near future, which would triple its membership from last Congress. The caucus grew to 56 members on Tuesday with the additions of Republicans Chris Collins and Pat Tiberi and Democrats John Larson and Nydia Velazquez.

HOUSE PANEL TAKES FIRST LOOK AT RELIABILITY: They've split the original hearing into two, but the House Energy and Commerce Energy Subcommittee takes a first look at various issues associated at the reliability of the U.S. electric grid. Making his first congressional appearance since confirmation is FERC Chairman Neil Chatterjee. Also testifying is Gerry Cauley, president of the North American Electric Reliability Corporation, and Patricia Hoffman, an official within DOE's Office of Electricity. The background memo for the hearing, which kicks off at 10 a.m. in Rayburn 2123, is available here.

HERE'S SOMETHING YOU WON'T SEE EVERYDAY: Still looking to drum up momentum for their bipartisan bill boosting carbon capture and sequestration technologies, one of the Senate's most unusual possible quartets - Heidi Heitkamp, Shelley Moore Capito, Sheldon Whitehouse and John Barrasso - participate in an event hosted by the Center for Climate and Energy Solutions on the latest innovations in the technology and efforts to speed its deployment. It kicks off in Hart 902 at 8:30 a.m. Details here.

PARTS OF EPA DISCHARGE RULE DELAYED: EPA issued a final rule Wednesday formally delaying key compliance dates from a 2015 regulation limiting toxic discharges in power plants' wastewater streams, Pro's Alex Guillén reports . Specifically, the agency will delay deadlines related to limits on discharges of flue gas desulfurization wastewater and bottom ash transport water, two waste streams associated with burning coal for electricity, while it reconsiders those standards. EPA said the delays will provide annualized utility cost savings between $27.5 million and $36.8 million.

Environmental groups vowed to sue: Mary Anne Hitt, director of Sierra Club's Beyond Coal campaign, said in a statement her group would take "immediate action" to fight a decision she called "so unconscionable from a public health - and common sense - perspective, that [Pruitt] couldn't even name a valid legal reason for the delay." Earthjustice Attorney Thomas Cmar called the rule "a bold-faced gift to the coal industry at the expense of the health of families everywhere."

PROBE OF EPA GRANT PROCESS SOUGHT: The Center for American Progress and Union of Concerned Scientists are today asking EPA's inspector general in a letter to investigate the agency's grant review process, rumored cancellation of some grants and allegations of political interference. "We urge your office to begin an investigation of these matters immediately," they write.

REVAMPED FEDERAL LEASING PROGRAM SOUGHT: The Wilderness Society, along with several other petitioners, are asking Interior and BLM this morning to revamp the fiscal terms and management processes regarding oil and gas leasing on federal lands. The petitioners argue their reform proposals would not harm, slow, or stop energy production on public lands. "Analyses of these decades-old [current] policies has shown that they are harming the taxpayers that the BLM is obligated to ensure receive the benefits of leasing and the public lands that BLM is obligated to ensure are managed for multiple use and sustained yield," they write.

HIDDEN DANGER IN OKLAHOMA? Massive oil storage tanks in Cushing, Okla. could be growing more vulnerable by the day as man-made earthquakes stemming from fracking tests their limits, Kathryn Miles reports in POLITICO Magazine. Five of the largest energy companies each said have procedures and protocols for natural disasters, but that they would not comment on the specific designs of their tanks, nor how those tanks would fare in a major earthquake. Read the full thing here.

NRDC SEEKING REHEARING ON REFRIGERANTS CASE: The Natural Resources Defense Council plans to ask the D.C. Circuit for an en banc rehearing of last months' decision striking down an EPA rule limiting use of hydrofluorocarbons, a global warming exacerbating coolant. NRDC believes the majority in the 2-1 decision erred in its determination that the law was clear and did not require agency interpretation, known as Chevron Step 1. "[D.C. Circuit Judge Brett] Kavanagh interprets the law in a way that eviscerates the program," said David Doniger, head of climate programs for NRDC. "Everybody understood to this point that the substitutes for ozone depleting chemicals were replacements ... and when new ones are developed safer than the old ones, the old ones are supposed to give way." HFCs fall out of the atmosphere faster than CO2, but have a far higher global warming potential.

Honeywell, too? "We believe the EPA's regulation is well-supported by the law and was in the best interests of the public, industry and the environment," a spokeswoman for Honeywell International Inc. said in an email to ME. Honeywell makes next generation coolants. "We are closely reviewing the decision and are likely to pursue an appeal, and are already taking steps to ensure that the accelerated transition to HFC alternatives continues."

FOR YOUR REFERENCE: Advanced Energy Economy today released seven specific issue briefs as policymakers consider ways to modernize the U.S. electric grid. They cover: advanced metering; access to data; optimizing capital expenditures; distributed energy resource ownership; using energy efficiency as a resources; performance-based regulation and designing rates in a distributed energy resource future.

BETTER LUCK NEXT YEAR? Two ambitious bills in California - laying the groundwork for

a regional electricity grid and eventually phasing out use of fossil fuels - won't advance this year, a key committee chairman told the Los Angeles Times Wednesday. "There's not a lot of time for the engagement we need to make it work," Assemblyman Chris Holden said, adding they should be considered as part of a "comprehensive conversation" in 2018. The legislative session ends Friday and the deadline for amending legislation was Tuesday night.

REPORT: CLOSING COAL PLANTS MEANS BIG BUCKS: Phasing out inefficient coal plants would save U.S. customers up to $10 billion annually by 2021, a new report from Carbon Tracker finds. Constructing combined cycle gas turbines will be more cost-effective by the mid-2020s than continuing to operate 78 percent of the nation's current coal fleet, the study concludes. "The US power sector remains entirely unprepared for a coal phase-out consistent with a below [2 degree] C outcome," it finds, referring to the goal of the Paris climate agreement to limit global temperature increases.

NEW EDF AD USES HARVEY FOOTAGE: The Environmental Defense Fund is launching a new ad in the Washington area for three weeks using footage from the Arkema plant incident in Texas. The ad warns Congress that cutting the agency's budget could harm disaster response moving forward.

MOVER, SHAKER: Nick Conger starts a new gig as former Vice President Al Gore's communications director in Nashville on Oct. 2. The Obama administration EPA veteran leaves his current post as a press secretary at NRDC on Sept. 22. "I couldn't be more thrilled to join [Gore's] team and help shape his public activities," he writes of his role.

Subject: EPA Proposes Repeal of Glider Provisions for Heavy-Duty Truck Rule

Administrator Pruitt Advances Effort to Keep EPA within Regulatory Lane with Proposed Repeal of Glider Provisions from Heavy-Duty Truck Rule

WASHINGTON (November 9, 2017) The Environmental Protection Agency (EPA) is proposing to undo the regulatory overreach of the prior administration by repealing application of the Medium- and Heavy-Duty Truck Phase II Greenhouse Gas Emission and Fuel Efficiency Standards for the glider industry. Gliders are a specially manufactured type of heavy duty highway vehicle assembled from newly manufactured kits that include the vehicle's frame and cab, to which a used engine, transmission and axles are added.

"The previous administration attempted to bend the rule of law and expand the reach of the federal government in a way that threatened to put an entire industry of specialized truck manufacturers out of business," **said EPA Administrator Scott Pruitt**. "Accordingly, the Agency is taking comment on an interpretation of the Clean Air Act that recognizes the unique nature of a vehicle made up of both new and used component parts. Gliders not only provide a more affordable option for smaller owners and operators, but also serve as a key economic driver to numerous rural communities."

Due to the unique way that gliders are manufactured, the Agency is proposing that gliders should not be regulated as "new motor vehicles" or "new motor vehicle engines" under section 202(a)(1) of the Clean Air Act. This action does not affect nor propose to affect EPA's authority to address heavy-duty engine rebuilding practices under Clean Air Act section 202(a)(3)(D).

EPA estimates that about 10,000 gliders are manufactured annually, comprising less than five percent of the Class 8 heavy-duty highway truck market.

The public comment period for the proposal will be open through January 5, 2018. EPA will also hold a public hearing on Monday, December 4, 2017 at EPA's Washington, DC headquarters. More information on the proposal, hearing and how to comment: https://www.epa.gov/regulations-emissions-vehicles-and-engines/regulations-greenhouse-gas-emissions-commercial-trucks

Today's proposal is based on a review of the glider provisions of the Phase II rule. On August 17, 2017, Administrator Pruitt announced the Agency's intent to reconsider the glider provisions of the Phase II rule in response to several petitions for reconsideration. See: https://www.epa.gov/regulations-emissions-vehicles-and-engines/petitions-reconsideration-phase-2-ghg-emissions-and-fuel

Michigan Sues to Keep Flint on Detroit Water System

Posted June 28, 2017, 02:46 P.M. ET

By Alex Ebert

Michigan's Department of Environmental Quality sued the Flint City Council over the local government's decision against a long-term deal to purchase water from a Detroit-area water authority.

The complaint, filed June 28 in federal court, seeks to compel the council to enter into an agreement with the Great Lakes Water Authority. Flint Mayor Karen Weaver, the state, and Genessee County struck the agreement with the water authority in response to an Environmental Protection Agency emergency administrative order that requires extensive testing if Flint decides to switch water sources. The council wants to change water sources this fall, so the state sent a letter two weeks ago arguing Flint would not be able to meet safety requirements and must enter the long-term deal or face litigation (Michigan Dep't of Envtl Quality v. City of Flint, E.D. Mich., No. 2:17-cv-12107, 6/28/17).

"It is imperative that the City of Flint have a water source in place prior to October 1, and switching to a new water source at this late hour is practically impossible and we believe violates the U.S. Environmental Protection Agency's order under the federal Safe Drinking Water Act," Heidi Grether, director of the Department of Environmental Quality, said in a statement.

For about 50 years, Flint purchased water from Detroit-area water authorities that draw water from Lake Huron. In 2013, Flint announced that it was going to join the Karegnondi Water Authority in hopes of lowering its costs.

When the Detroit water authority to cut off water to Flint in 2014, Flint's emergency manager decided to draw water from the Flint river while the Karegnondi Water Authority pipeline was being constructed. That led to the city's water supply being contaminated with high concentrations of lead.

The contract between Great Lakes Water Authority and Flint is set to expire in October of this year.

The city did not immediately respond to requests for comment.

Senators Want More Water Infrastructure Spending, Not Cuts

Posted June 28, 2017, 03:20 P.M. ET

By Alan Kovski

The Trump administration's proposed spending cuts for the U.S. Army Corps of Engineers and the Bureau of Reclamation are unlikely to be accepted by Senate appropriators, members of both parties said June 28.

"In my opinion we should spend more, not less, on our water infrastructure," Sen. Lamar Alexander (R-Tenn.) said during a hearing of the Senate Appropriations Subcommittee on Energy and Water Development, which he chairs.

"This is an enormous step backwards," Alexander said of the $1 billion cut proposed for the Corps of Engineers, a remark seconded by Sen. Tom Udall (D-N.M.).

$200 Million Brownfields Bill Easily Clears House Panel

Posted June 28, 2017, 12:54 P.M. ET

By Sylvia Carignan

Members of the House Energy and Commerce Committee gave their blessing to a popular brownfields bill on its way to the House floor.

The bill (H.R. 3017) to reauthorize the brownfields program passed by voice vote at a committee meeting June 28. Both Republican and Democratic committee members touted bipartisan efforts on the bill and the jobs it would create.

"This is one of the best job-creation pieces of legislation you could come up with," said Rep. David McKinley (R-W.Va.), who introduced the program reauthorization bill.

The Environmental Protection Agency's brownfields program provides grants to those who want to remediate and redevelop a contaminated property. Those properties generally need less remediation work than sites that are placed on the agency's National Priorities List, which includes the most contaminated sites in the country.

The bill will still need the approval of the House Transportation and Infrastructure Committee before it can move to the House floor, according to an Energy and Commerce Committee spokesperson. The transportation committee last had a hearing on a brownfields bill in March.

Modifying the Program

The brownfields program started in 2002, at a funding level of $200 million. H.R. 3017 would reauthorize the program at the same funding level. The program has not been reauthorized since 2006.

Rep. Paul Tonko (D-N.Y.) said the bill would enable more "complex" brownfields sites to be

remediated because of the increased dollar limit on grants for individual sites.

The proposed changes for the brownfields program include:

• setting aside $1.5 million in annual grants for recipients in rural areas, small communities, disadvantaged areas, and tribes;

• allowing petroleum spill sites to be eligible for brownfields grant funding if no viable, responsible party is able to pay for cleanup; and

• increasing the funding limit for remediation grants from $200,000 to $500,000, with the option for the EPA to waive the limit and award up to $750,000 based on contamination, size, or site ownership.

Rep. Buddy Carter (R-Ga.) said the House bill "represents an opportunity to really reinvigorate our communities across the country."

Companion Bill

The Senate Environment and Public Works Committee was scheduled to discuss a similar brownfields bill June 28, but the committee's meeting was indefinitely postponed.

Mike Danylak, a spokesman for the Senate committee, said staff are working to reschedule those agenda items.

House Compromise Struck on Interim Nuclear Storage Measure

Posted June 28, 2017, 11:56 A.M. ET

By Brian Dabbs

A bipartisan measure to authorize private interim storage of nuclear waste will move to the House floor following the Energy and Commerce Committee's approval June 28.

Lawmakers struck a compromise on an amendment to provide "adequate" funding for related transportation services, while ensuring a "base authorization for at least $150 million for the first private interim storage agreement," Rep. John Shimkus (R-Ill.) said at the markup.

"This gives those private storage initiatives financial surety," he said, noting that interim storage must have local support.

The legislation also reboots Energy Department research on a permanent repository at Nevada's Yucca Mountain site, which had been under study as the permanent U.S. burial site before the Obama administration mothballed it. Most Nevada lawmakers staunchly oppose using Yucca Mountain as a waste repository.

Another amendment aims to placate concerns over Nevada's water rights.

The underlying legislation (H.R. 3053) authorizes the Energy Department to strike contracts with private facilities on interim storage of spent fuel from commercial nuclear power plants, which is currently stored on-site at those plants.

But Rep. Ben Ray Lujan (D-N.M.) opposed the bill over concerns the interim storage facilities will

become de facto permanent repositories. The Nuclear Regulatory Commission has received two applications from private companies to accept the spent fuel.

House Energy Spending Chair Cuts Research Program He Likes

Posted June 28, 2017, 01:17 P.M. ET

By Rebecca Kern

Rep. Mike Simpson (R-Idaho) said that while he likes the Energy Department's ARPA-E program, which provides early stage investment in innovative energy technologies, his Energy and Water Subcommittee's fiscal 2018 appropriations bill would cut it "because of limited resources."

The House Appropriations Committee's Energy and Water Subcommittee approved by voice vote June 28 the $37.56 billion appropriations bill funding the Energy Department, Army Corps of Engineers, and other related agencies. The funding would be $209 million below the fiscal 2017 enacted level and $3.65 billion above the President Donald Trump's budget request. No amendments were offered during the markup.

The Advanced Research Projects Agency-Energy was proposed to be eliminated in Trump fiscal 2018 budget, which requested just $20 million to wind down remaining projects, compared to $291 million in the fiscal 2017 annualized continuing resolution.

While the House version would cut ARPA-E funding, the program has strong backing in the Senate. Sen. Lamar Alexander (R-Tenn.), chairman of the Senate Appropriations Committee's Energy and Water Subcommittee, told Energy Secretary Rick Perry during the Energy Department budget hearing June 21 that he wanted his assurance that Perry would continue to fund the program.

Simpson acknowledged the funding bill will be altered. "We'll go into conference and it will change. This is the first step in a process, but it will change along the way," he told reporters after the markup.

ARPA-E was created during President George W. Bush's administration. Since 2009, ARPA-E has funded over 400 potentially transformational energy technology projects.

Pipeline Pinch Adds to Oil-Sands Woes as Keystone Wait Drags

Posted June 28, 2017, 03:33 P.M. ET

By Kevin Orland and Frederic Tomesco

Call it the pipeline pinch, or maybe the Keystone quagmire.

While plans by Canadian companies from Suncor Energy Inc. to Canadian Natural Resources Ltd. to boost oil output are racing to fruition, the construction of three pipelines needed to move that product to market, including the infamous Keystone XL, is lagging years behind.

The result: Producers have little choice but to move those extra barrels by train, with costs two to three times higher than pipeline shipping. It's an unwelcome added expense after oil plunged about 20 percent from this year's peak. Futures prices have settled in below $45 a barrel, after many predicted it would rise to $60.

"We're not going to see significant new pipeline capacity until late 2019 or 2020," said Nick Schultz, vice president for pipelines and regulatory matters at the Canadian Association of Petroleum Producers. In the meantime, the extra expense for shipping "impacts royalties and other things that impact the public."

During Barack Obama's administration, oil-sands producers feared a future when they would have to rely heavily on costly railway shipments if he didn't approve Keystone XL. That may start this year.

Pipelines in Western Canada, which holds the world's third-largest oil reserves, can carry about 3.3 million barrels of crude a day, according to CAPP. Meanwhile, the area is expected to produce 3.92 million barrels a day this year and 4.2 million next year as a number of large oil-sands projects come online.

The looming bottleneck adds a new urgency to the industry's calls for more capacity and may lend credence to its argument that the lack of lines hurts the nation's economy.

More Expensive

Canadian oil producers have long lamented the dearth of pipelines carrying their supplies to the nation's east and west coasts, saying that the situation leaves them able to export only to the U.S. and forces them to accept whatever price American refiners will pay. Environmentalists in Canada and the U.S. have opposed new or expanded pipelines, arguing that burning the crude locked up in the oil sands would contribute to catastrophic global warming.

The industry saw glimmers of hope last year, when government regulators approved expansions of Kinder Morgan Inc.'s Trans Mountain pipeline linking Alberta's oil sands with export facilities on British Columbia's Pacific Coast as well as Enbridge Inc.'s Line 3 running from Hardisty, Alberta, to the U.S. border in Manitoba.

The pipeline situation got another boost when U.S. President Donald Trump approved TransCanada Corp.'s Keystone XL, which spans from the oil sands to the U.S. Gulf Coast. Kinder Morgan this month entered into credit agreements totaling C$5.5 billion ($4.2 billion) to help fund the development of Trans Mountain.

More Hurdles

Yet Keystone still needs to win approvals from regulators in Nebraska, and the Line 3 project has faced delays that pushed its in-service date back to 2019. The fate of Trans Mountain also has been called into question after opponents of the project won power in British Columbia last month.

Meanwhile, there are a handful of massive new oil projects that will start production this year and next. Suncor's Fort Hills oil-sands project is expected to begin production in the fourth quarter and ramp up to about 90 percent of its capacity of 194,000 barrels a day within 12 months. Canadian Natural plans to complete another phase of expansion at its Horizon mine this year that will add 80,000 barrels a day.

While Suncor has pipeline space reserved for output from Fort Hills, the company believes market access is important to Canada's oil producers and its economy, said Sneh Seetal, a spokeswoman. Canadian Natural isn't concerned with transportation of Horizon's production because the operation produces light oil, which has fewer shipping constraints, said spokeswoman Julie Woo.

"Though transportation of crude oil by pipeline is our current and primary method of shipment, we evaluate and monitor on an ongoing basis where crude by rail has been, and will continue to be, an option," Woo said.

Offshore Project

More oil will be produced outside of Western Canada as well. The Hebron project off the coast of Newfoundland and Labrador also is expected to come online this year. Operated by Exxon Mobil Corp. with investments by Chevron Corp., Suncor, Statoil ASA and Nalcor Energy Corp., Hebron is expected to have crude oil production capacity of 150,000 barrels a day at its peak.

All that extra Canadian crude promises to be a boon for railroad companies who were stung by declines in that business when crude prices crashed in 2014. In fact, some already are seeing a pickup in their oil business. Canadian Pacific Railway Ltd. Chief Executive Officer Keith Creel said on a conference call last month that the company had moved 17,000 carloads of oil so far this year, nearly meeting its forecast for 20,000 carloads for all of 2017.

Two-Year Window

Canadian National Railway Co. foresees a two-year window of opportunity before Trans Mountain starts up and crude-by-rail shipments are affected, Chief Commercial Officer Jean-Jacques Ruest told an investor presentation June 14.

If crude-by-rail demand "comes in, you want to ride it very hard, and if at some point the opportunity disappears, then you ride something else," Ruest said.

Crude and condensate accounted for about C$370 million of revenue at Canadian National Railway last year. That's less than half the C$750 million that the company generated from the same line of business in 2014. The company's overall revenue was C$12 billion last year.

Railways may benefit from a pickup in their oil businesses for the next year or two, said David Tyerman, an analyst at Cormark Securities.

"They view it as a short-term boost," he said. "They're happy to haul the stuff, but they're not going to spend a lot of money on infrastructure because they don't know if this is going to be around long."

But the oil industry's trade group sees a need for more pipelines beyond those that already are expected to enter service. Canada will need an additional 1.3 million barrels a day of pipeline capacity by 2030 to meet the nation's growing production, CAPP said in a report earlier this month.

"The urgent need for new pipelines to increase our competitiveness continues to be one of the biggest challenges facing our industry," CAPP CEO Tim McMillan said.

Justice Department Environment Pick Downplays BP Defense Work

Posted June 28, 2017, 01:52 P.M. ET

By David Schultz

Past work defending BP PLC after the Deepwater Horizon oil spill and personal opposition to the EPA's climate change efforts would have no bearing on running the Justice Department's environmental office, President Donald Trump's nominee said.

Jeffrey Bossert Clark told senators at his June 28 confirmation hearing that, if approved to head the Environment and Natural Resources Division, he would vigorously defend his federal agency clients just as he has defended corporate clients.

"Client agencies are the ones who make policies. I don't think my personal views are relevant," Clark said.

During the hearing, Democrats pressed him about his work for corporate clients such as BP, his views on climate change, and his affiliation with the Federalist Society for Law & Public Policy Studies.

'Hired to Do a Job'

Several Democrats on the Judiciary Committee, including Sens. Dianne Feinstein (D-Calif.) and Sheldon Whitehouse (D-R.I.), grew frustrated with Clark's evasion and pleaded with the committee's chairman, Sen. Chuck Grassley (R-Iowa), to force him to answer their queries.

Though he expressed concern with the issue of the Trump administration stonewalling congressional inquiries, Grassley said it wouldn't be appropriate to demand that Clark talk about his views on environmental issues in this case.

"What Democrats really need to know is these guys are hired to do a job," Grassley told reporters after the hearing. "They leave their personal views out."

Grassley also said he expects his committee to cast a vote on Clark's nomination late next month.

No Fan of Chevron

Clark has been at the firm Kirkland & Ellis LLP since 1996, with the exception of a four-year period during the George W. Bush administration when he served in the Justice Department.

While at the department, he was the second-in-command at its environment division, in charge of its appellate work. If confirmed, Clark would be in charge of the entire environment division, which prosecutes civil and criminal environmental violations and also defends the Environmental Protection Agency and others when their actions are challenged in court.

Last year, Clark testified before the House Judiciary Committee in favor of a bill that would have reined in the regulatory authority of federal agencies. The bill, which passed the House but died in the Senate, would have effectively overturned the so-called Chevron doctrine, in which courts defer to agencies' interpretations of ambiguous laws.

"Chevron has been a failed experiment," Clark said at the May 2016 hearing. It has resulted in "too much authority being given to the executive branch."

Criticism for Writings

When asked about Chevron at his confirmation hearing, however, Clark told the senators, "As we sit here today, Chevron is still good law and I would enforce it."

Though there were three other nominees being considered at the hearing, the majority of the senators' questions were directed at Clark.

He came under the most intense questioning from Democrats on the issue of articles he wrote for the Federalist Society's website on the issue of climate change. In these articles, Clark criticized EPA decisions to classify greenhouse gasses as dangerous pollutants and its reliance on United Nations-backed climate science.

"You have gone beyond role of a lawyer," Whitehouse told him. "You've been a political advocate against climate science."

Clark responded by pointing to his record at the Justice Department during the Bush administration as an indication that he would defend agencies and enforce environmental laws objectively.

Looking for a Coal Job? Better Work on Those Playstation Skills

Posted June 28, 2017, 10:23 A.M. ET

By Tim Loh

While on the campaign trail in West Virginia last year, Donald Trump donned a hardhat and pantomimed digging coal with a shovel. The coal miners in the audience would soon be back to work, he promised: "Get ready, because you are going to be working your asses off."

The only problem: Coal miners no longer swing a pickax or wield a shovel. While coal companies are hiring again, executives are starting to search for workers who can crunch gigabytes of data or use a joystick to maneuver mining vehicles hundreds of miles away.

"If you do PlayStation, you can run a 300-ton truck," said Douglas Blackburn, a fourth-generation miner himself who runs the industry consultancy Blackacre LLC. For an industry once notorious for its risks, "the worst that can happen is you sprain a thumb."

The trend toward fewer workers, of course, is nothing new. The heyday of coal employment came in 1923, when the U.S. industry—then reliant on laborers with hand tools, blast powder and oil lamps—had a record 863,000 miners, according to the Mine Safety and Health Administration. Ever since, that number has fallen thanks to increasingly sophisticated machinery. The technological change took a leap forward in the 1980s with the expansion of large-scale mining in Wyoming's Powder River Basin, where the coal can be scooped out of the ground from above. The miners no longer had to tunnel underground.

In the Powder River Basin's giant open-pit mines, large haul trucks now crisscross the sites day and night, collecting up to 400 tons of coal at a time from towering seams. High-school graduates with little experience often drive the trucks, taking home salaries that can be $30 an hour. Trains that can stretch more than 100 cars long are loaded up mechanically with the coal and sent off to plants as far away as Georgia.

"Whether coal comes back or not is not necessarily directly related to jobs," Heath Lovell, a spokesman for coal producer Alliance Resource Partners LP, said in an interview on NPR's On

Point. "We should be becoming more and more efficient, which would mean we could produce the same amount of coal with less employees."

In Illinois, underground miners including Alliance Resource and Foresight Energy LP have a collection of longwall machines—computerized devices that cut coal from the earth in slices that can extend for miles—ready to ramp up production with minimal manpower if demand allows.

To be sure, Trump's pledge has come true for some workers. Coal companies added 2,400 jobs since September, bringing the total to 51,000, according to the Bureau of Labor Statistics. Coal companies are advertising for licensed mechanics and electricians, warehouse clerks and security guards.

Coal's future, however, is likely to involve a new set of skills. It won't be long before a miner is working out of an office in, say, Denver, where she'll stare at computer screens and maneuver equipment in Wyoming, according to Blackburn. The miner— earning, perhaps, $15 an hour—will monitor several massive trucks that largely steer themselves, he said.

Just as electric locomotives once replaced the pit ponies and mules in the mines, Caterpillar Inc. is already selling fleets of its "autonomous" haul trucks to Australian mining companies. One customer, iron-ore giant Fortescue Metals Group Ltd, has increased productivity by up to 30 percent thanks to the vehicles' better-than-human consistency and precision, Denise Johnson, Caterpillar's head of resource industries, said at a Deutsche Bank summit on June 8.

"You can keep those trucks running 24/7," Johnson said. "You don't have to take bathroom breaks."

That sort of savings will be hard for U.S. coal companies to resist as they struggle to stay competitive against the onslaught of cheap natural gas, solar and wind power. Caterpillar's autonomous-mining technology is already being adopted by U.S. customers, and it's expanding its offerings, a company spokesman said by email. The company declined to identify its customers.

And such technology won't be limited to Wyoming. When talking to coal executives, Rick Honaker, chairman of the University of Kentucky's mining program for the past decade, keeps hearing how they want young engineers who can automate a piece of equipment, managing gigabytes of data so the machinery can be used most efficiently.

"The way to compete is being more automated," Honaker said in an interview. "And unfortunately, that means less jobs—more skilled labor but less overall employment."

Sense of Nostalgia

Against that backdrop, Trump is capitalizing on the sense of nostalgia for coal's bygone days and anxiety about the future, said Patrick Hickey, a political science professor at West Virginia University. In Appalachia, people are well aware that miners stopped heaving coal with shovels generations ago, but Trump's air-shoveling still resonated in a state whose flag bears the image of a 19th century miner holding a pickax.

"Coal mining jobs were hard jobs—people had serious health problems as a result of them—but an honest effort was rewarded well," Hickey said. By trading politically on an antiquated image of a miner, Trump is appealing not just to displaced coal workers but to those in manufacturing and other sectors threatened by automation and foreign competition.

"As we see this disruption all over the economy in the public and private sector, I think it's really

powerful to hearken back to these touchstones of an economy that had more certainty," he said.

One irony for the industry now is that in some areas the coal companies say they can't find the high-skilled workers they need. In West Virginia, companies are resorting to offering signing bonuses and fully paid healthcare to poach experienced shift foremen, mechanics and electricians from rivals. Many of those workers left the coal industry during the last decade's collapse and found more stable employment in other sectors. They aren't anxious to switch back.

"The scars are still fresh," said George Dethlefsen, CEO of Canonsburg, Penn.,-based Corsa Coal Corp., which opened a mine in Pennsylvania this month. "Those guys are not fully trusting that this market is back and here to stay.''

Finding young talent is especially hard. During the bust, companies were laying off people rather than training a new generation of miners. That created a dearth of high-skilled workers in their 20s and 30s.

"Youth might be the most looked-for qualification," Matt Preston, a coal analyst at Wood Mackenzie Ltd., said in an email. Finding young workers "willing to get into a shrinking industry is an uphill climb."

North Carolina Slashes Blood Lead-Level Thresholds

Posted June 28, 2017, 12:14 P.M. ET

By Andrew M. Ballard

North Carolina lowered its thresholds for blood lead levels in children to match federal recommendations and extended those protections to pregnant women in its newly enacted budget.

The state Legislature overrode the governor's veto to enact the budget legislation (S.B. 257) June 28. The new law boosts North Carolina's lead-poisoning prevention program that has seen a drop in funding and attention during the past few years.

S.B. 257 will cut in half its threshold for "confirmed lead poisoning" that triggers an investigation, from 20 micrograms per deciliter to 10 micrograms per deciliter, effective July 1. The new law also will drop its threshold for "elevated blood lead levels" from 10 micrograms per deciliter to 5 micrograms per deciliter.

When a confirmed lead poisoning case is discovered through two consecutive blood tests within a year, the state Department of Health can require the removal of lead risks in residences and other facilities such as daycare centers. Findings of elevated blood lead levels also can trigger hazard investigations.

Leading Again

Matt Gross, policy director for N.C. Child, a Raleigh-based children's advocacy group, told Bloomberg BNA that most states already use the federally recommended levels when testing young

children. However, North Carolina's extension of such provisions to pregnant women puts it ahead of other states in lead poisoning prevention efforts, he said.

"A decade ago, North Carolina was noted as a leader in lead surveillance of young children, but in recent years, progress has stagnated due to budget cutbacks," according to Gross. "The new budget provisions, plus an allocation of more than $500,000 to implement them, are expected to re-energize the state's program," he said.

Paint represents approximately 70 percent of the lead exposure in North Carolina, and water makes up about 20 percent, Gross told Bloomberg BNA. A separate bill addressing water testing stalled this session, he said, but N.C. Child hopes it will be revived in 2018, he said.

Another provision in the new budget law will provide $250,000 to pursue a legal challenge against the federal "waters of the United States" rule enacted during the Obama administration. Those regulations expanded the bodies of water covered by the Clean Water Act.

California Weighs Making Electric Cars Cheaper Right Off the Lot

Posted June 28, 2017, 12:07 P.M. ET

By Dana Hull and Ryan Beene

The federal tax credit for electric car purchases has an end in sight, but California doesn't want demand for the zero-emissions vehicles to meet the same fate.

The state, long a champion of electric cars, is considering a bill to provide rebates to electric vehicle buyers at the time of purchase, reducing the sale price right as customers drive off the lot. The bill, which does not specify the size of rebates but proposes giving more cash to low-income buyers, looks to set aside as much as $3 billion for the incentives.

If passed, the program could help bridge the "valley of death" looming on the horizon for electric vehicle demand as federal rebates begin to wind down, said Max Baumhefner, an attorney with the Natural Resources Defense Council's clean vehicles program.

"The conditions are right for a tipping point to occur but with uncertainty about the state's purchase rebates and the prospect of federal tax incentives expiring, it could tip in the wrong way."

The plan—dubbed the California Electric Vehicle Initiative—could be a key step in encouraging the purchase of battery-powered vehicles by bringing the price after credits more in line with similar gasoline-fueled models. Gov. Jerry Brown (D) set a goal of 1.5 million zero-emission cars on state roads by 2025, and the state already offers clean vehicle rebates for the purchase of models including the Chevy Bolt, Nissan Leaf and Tesla Model S and X, but customers have to apply for those credits after the purchase is complete, a possible deterrent.

Plan Details

The bill would eliminate the need for buyers to file tax rebates with the state, according to a draft statement on the bill seen by Bloomberg News. The income-based rebates would also help assuage concerns that tax dollars are helping wealthy buyers afford luxury cars such as the Tesla Model S, which can sell for more than $100,000.

The legislation, which passed a vote on the assembly floor earlier this month, faces votes in two state Senate committees next week, the draft statement said.

The bill is modeled on the state's highly successful California Solar Initiative, which resulted in an uptick in rooftop solar installations on homes and commercial buildings across the state. Like that program, the electric vehicle proposal suggests the rebates decline over time as market penetration rises. Electric vehicles are forecast to become comparable price-wise with combustion-engine vehicles around 2026 in the U.S., according to Bloomberg New Energy Finance.

The bill comes as the federal tax rebate begins to run its course. Purchasers of only the first 200,000 electric cars sold by each manufacturer in the U.S. are eligible for the $7,500 federal tax credit before it starts to phase out, meaning the largest electric vehicle makers including General Motors Co., Nissan Motor Co. and Tesla Inc. will lose eligibility first, just as their more affordable, longer-range electrics are hitting the market.

Tesla is slated to begin in July production of its Model 3 sedan, which is expected to start at $35,000 before incentives or options. Tesla produced roughly 84,000 electric vehicles in 2016 and plans to make half a million in 2018, then 1 million in 2020.

As the nation's coal-fired power plants close, transportation is likely to eclipse electricity production as the nation's largest source of greenhouse gas emissions. That is already true in California, where transportation accounts for nearly 40 percent of the state's emissions.

Discoveries Boost Hopes for Alaska Oil Output

Posted June 28, 2017, 9:15 A.M. ET

By Alan Kovski

Oil discoveries on the North Slope of Alaska during the past few years have increased hopes for the economy of the region and the state.

The developments also could quiet worries about keeping viable the North Slope's oil lifeline—the Trans-Alaska Pipeline. If its volumes sink too low, it becomes uneconomical to operate.

Oil production on the North Slope increased during the past 12 months as new wells more than made up for declines at older wells, said Ed King, a special assistant to the commissioner of the Alaska Department of Natural Resources.

The increases came from ConocoPhillips Co. operations primarily, and an Exxon Mobil Corp. project to a lesser extent. At the same time, BP Plc has slowed the decline at the super-giant Prudhoe Bay Oil Field.

"I don't anticipate that it'll be another increase in 2018," King said, referring to Alaska's fiscal 2018, which will start July 1. There are no notable new supplies set to come online during the next 12 months that would allow another increase, he told Bloomberg BNA.

After 2018, the picture becomes more complicated because of the difficulties in forecasting the output of new discoveries.

Sharply Differing Outlooks

The spring 2017 forecast from the Alaska Department of Revenue projected a decade of decline in North Slope output, without benefit of enough information to include significant volumes from recent discoveries.

Interior Secretary Ryan Zinke visited Alaska in late May. He signed an order to accelerate development of the National Petroleum Reserve-Alaska and to make a new estimate of potential oil reserves in part of the Arctic National Wildlife Refuge.

The Wilderness Society issued a report June 19 arguing that expected developments in North Slope oil fields should keep the Trans-Alaska Pipeline viable for many years to come.

"The pipeline will continue operating for decades, with no need to drill in controversial, ecologically important and federally protected Arctic regions, i.e., the Arctic National Wildlife Refuge, off-limits portions of the National Petroleum Reserve-Alaska, and the Arctic Ocean," the report said.

Pipeline Volumes Rise

The Trans-Alaska Pipeline carried more than 2.1 million barrels a day at its peak in 1988, but now is operating at a quarter of that amount.

Alyeska Pipeline Service Co., operator of the line for a consortium of oil companies, has not determined the lower limit at which the line would become uneconomical, said Michelle Egan, an Alyeska spokeswoman.

Flow through the pipeline rose in 2016 to 517,000 barrels a day, the first annual increase since 2002, according to Alyeska. Year-to-date flows in 2017 have averaged 557,000 barrels a day, Egan said June 26.

The increases in North Slope production that fed the pipeline occurred primarily because of more production from the Alpine and Kuparuk fields, both operated by ConocoPhillips, and the startup of Exxon Mobil's Point Thomson field.

Good management at the Prudhoe Bay field managed to temporarily arrest the long decline of output there, according to DNR's King.

"It'll be interesting to see if they can extend that," he said of the Prudhoe Bay work. "They did a really great job last year."

Two Especially Big Fields

But big hopes for future production come from new fields.

Foremost is Nanushuk, which Armstrong Energy LLC is developing in partnership with Spanish oil giant Repsol S.A. The companies estimate that 1.2 billion barrels of light oil can be recovered, their calculation boosted this year by additional exploration wells.

Nanushuk's location is not too far from existing infrastructure and enough wells have been drilled to boost confidence in estimates.

Less certain is the discovery of Caelus Energy LLC's Smith Bay Project, because only two wells have been drilled. In October 2016, the company said it estimated that there could be several billion barrels of oil in the field in state waters off the northern coast of Alaska. How much of the oil is recoverable remains to be determined.

Groups Sue Hawaiian Dairy to Halt Illegal Manure Discharges

Posted June 28, 2017, 03:54 P.M. ET

By Carolyn Whetzel

Groups in Hawaii want a federal court to order a large dairy in Hilo to stop discharging waste into streams and ocean waters.

Big Island Dairy LLC is dumping manure and other waste in violation of the federal Clean Water Act, Kupale Oookala Inc., a community group, and the Center for Food Safety said in a lawsuit filed in the U.S. District Court for the District of Hawaii June 28 (Kupale Ookala Inc. v. Big Island Dairy LLC, Haw. Dist. Ct., No. 1:17-cv-305, 6/28/17).

The complaint alleges the dairy lacks a federal permit to discharge animal waste to streams that empty into the Pacific Ocean. Also, Big Island Dairy has violated its individual National Pollutant Discharge Elimination System permit allowing storm water discharges from certain construction activities, the lawsuit said.

Since April 2012, the dairy has been improperly spraying manure-laden wastewater on its field, the complaint said. Wastewater also seeps from fields, compost areas, pens and lagoons into groundwater, plaintiffs said.

"Big Island Dairy has been dumping manure on the residents of Ookala, including flooding our properties, for many years," Genard Frazier a member of the community group, said in a written statement. "We want to be in the driver's seat so we can hold this pollluter accountable and protect our community."

The lawsuit follows a 60-day warning letter from the plaintiffs, which prompted an enforcement order from the Hawaii Department of Health in May, assessing a $25,000 penalty and directed the company to apply for an NPDES permit and take corrective actions to prevent future unlawful discharges.

The dairy, a confined animal feeding operation that has 2,600 cows, didn't immediately respond to Bloomberg BNA's request for comment.

Amanda Steiner, of Terrell, Marshall Law Group LLC in Seattle, and Charles M. Tebbutt and Sarah A. Matsumoto of the Law Offices of Charles M. Tebbutt P.C. in Eugene, Ore., represent the plaintiffs.

Connecticut's Renewable Efforts Get Court Approval

Posted June 28, 2017, 12:13 P.M. ET

By Adrianne Appel

A Connecticut effort to contract for renewable energy does not violate federal law, a federal judge ruled Wednesday.

The state and proponents of renewable energy hailed the decision as a broad win for states that seek to grow their renewables market by requesting proposals for renewable energy projects.

Allco Renewable Energy Limited, a solar developer and investment firm based in New York City, filed a suit in August 2016, claiming Connecticut violated the federal Commerce Clause by giving preference to energy developers based in the Northeast (Allco Finance Ltd. v. Klee, 2d Cir., No. 16-2946, 6/28/17).

EU Chemicals Agency Hopes Guidance Increases Imports' Scrutiny

Posted June 28, 2017, 01:40 P.M. ET

By Stephen Gardner

Updated guidance on the notification obligations of companies that import goods containing hazardous chemicals into the European Union could lead to more compliance checks on imports, the European Chemicals Agency told Bloomberg BNA.

The agency issued the revised guidance June 28, covering the requirement under the EU's REACH law (Regulation No. 1907/2006 on the registration, evaluation and authorization of chemicals) for companies that import goods containing hazardous substances above a 0.1 percent by weight threshold to notify the chemicals agency, unless exposure of people or the environment to the substance can be reasonably excluded.

The obligation applies to chemicals that are considered to be "substances of very high concern" under REACH, of which there are currently 173. Examples of hazardous substances in products include phthalates in vinyl flooring, cables, garden hoses and other soft plastics, and lead compounds in batteries, electronics and machinery.

According to the European Chemicals Agency website, only 365 product notifications covering 39 of the 173 high concern substances have been submitted.

The agency told Bloomberg BNA it was "of the impression that the number of notifications is low and probably does not reflect" the number of products containing high concern substances that are imported into the EU.

"Awareness-raising amongst importers, and ultimately stronger enforcement are the keys to making these mechanisms work better," the chemicals agency said. Clarity in the updated guidance on the obligations might "help and encourage" EU countries "to consider the initiation of additional enforcement actions," the agency added.

The updated guidance takes into account a European Court of Justice ruling from September 2015 that the 0.1 percent notification threshold for hazardous chemicals in products should apply to individual components within products, and not only to the whole product. For example, the obligations would apply to vehicle components that contain hazardous substances, rather than to the whole vehicle.

The updated guidance replaces interim guidance on the rules on hazardous substances in products that the chemicals agency issued in December 2015 in the wake of the court ruling.

China Is About to Bury Elon Musk in Batteries

Posted June 28, 2017, 9:04 A.M. ET

By Joe Ryan

As Elon Musk races to finish building the world's biggest battery factory in the Nevada desert, China is poised to leave him in the dust.

Chinese companies have plans for additional factories with the capacity to pump out more than 120 gigawatt-hours a year by 2021, according to a report published this week by Bloomberg Intelligence. That's enough to supply batteries for around 1.5 million Tesla Model S vehicles or 13.7 million Toyota Prius Plug-in Hybrids per year, according to Bloomberg New Energy Finance.

By comparison, when completed in 2018, Tesla Inc.'s Gigafactory will crank out up to 35 gigawatt-hours of battery cells annually.

Lithium-ion batteries have long been used in smartphones, laptops, and other personal electronics, but demand is forecast to explode in the next five years as electric vehicles proliferate and power companies install giant storage systems to smooth the ebb and flow of wind and solar.

Telsa produced nearly 84,000 vehicles in 2016 and has said it plans to make 500,000 in 2018.

While Tesla may be building the biggest and splashiest factory, the Chinese government has launched a sweeping effort to increase the country's dominant market share.

Roughly 55 percent of global lithium-ion battery production is already based in China, compared with 10 percent in the U.S. By 2021, China's share is forecast to grow to 65 percent, according to Bloomberg New Energy Finance.

In all, global battery-making capacity is forecast to more than double by 2021 to 273 gigawatt-hours, up from about 103 gigawatt-hours today. That's a huge opportunity, and China doesn't want to miss it.

"The Gigafactory announced three years ago sparked a global battery arms race," said Simon Moores, a managing director at Benchmark Mineral Intelligence. "China is making a big push."

But don't count Tesla out. The company, based in Palo Alto, Calif., plans to announce locations for up to four new factories by the end of 2017. (It's exploring at least one site in Shanghai.) And there are few, if any, individual Chinese battery companies that can match the scale of Tesla's production toe to toe.

Yet while China lacks a dominant battery behemoth, it makes up for it with a constellation of smaller players, including Amperex Technology Ltd., Tianjin Lishen Battery Joint-Stock Co. and dozens of others.

Earlier this year, the Chinese government announced plans to consolidate battery manufacturers to help the industry mature. The initiative goes hand in hand with China's plans to flood highways with

five million electric vehicles by 2020.

China's ambition to become the global leader in clean cars stems in part from pressure to clear pollution from smog-choked streets in Baoding, Xingtai, Shijiazhuang, and other cities. There's a second reason: creating a domestic market for Chinese battery manufacturers, said Logan Goldie-Scot, a Bloomberg New Energy Finance analyst.

"The Chinese government wants to encourage the creation of a domestic market to create a large enough base and gain a foothold," Goldie-Scot said. "From there, they can expand and sell globally."

China State Grid Chairman Says Clean Energy Will Create Jobs

Posted June 28, 2017, 8:37 A.M. ET

By Bloomberg News

Thousands of renewable energy plants will create jobs as the world switches to clean power from coal, according to the chairman of the State Grid Corp. of China.

New roles will emerge during construction and for operators and maintenance personnel, Shu Yinbiao said at press briefing June 27 at the World Economic Forum's Annual Meeting of the New Champions in Dalian, China.

"We will have more opportunities for jobs," Shu said. "The transformation of energy will not impact employment, it will create opportunities."

The remarks followed the International Renewable Energy Agency's forecast that green energy jobs will continue to grow in developing nations, especially Asia. The clean-energy business employed 9.8 million people last year, up 1.1 percent from 2015, led by an expansion in solar photovoltaics, according to the Irena's annual report.

Green jobs may reach 24 million worldwide in 2030 as more countries work to combat climate change, Irena said.

China, the world's biggest emitter, plans to invest 2.5 trillion yuan ($360 billion) in renewable energy through 2020 to reduce greenhouse gases that cause global warming. The investment will help create 13 million jobs, Li Yangzhe, former deputy head of National Energy Administration said in January.

China to Treat More Animal Waste to Help Clear Rural Pollution

Posted June 28, 2017, 8:13 A.M. ET

By Bloomberg News

China, the world's top pork producer, plans to treat more waste from livestock breeding to improve its rural environment and reduce agriculture pollution.

Pollution from the country's livestock breeding is becoming an "outstanding issue" after years of steady development of the sector to ensure meat, eggs and dairy supply, according to a summary of remarks by Vice Premier Wang Yang at a conference June 27. China will increase treatment of animal wastes, encourage more use of bio-gas in the countryside and expand large-scale farms which are able to treat the waste, he said.

China is tackling soil pollution as part of its nationwide agriculture reforms, with its top legislative body considering tougher penalties for those who pollute water and prohibiting the building of homes or schools in areas with contaminated soil. The country has dealt with problems including cases where crops have been grown in areas contaminated with cadmium. China has more than half of the world's pigs, according to the U.S. Department of Agriculture.

Farmers favor using chemical fertilizers, which save time and costs, over organic fertilizer, Yu Kangzhen, vice agriculture minister, told a press conference June 14. About 40 percent of China's 3.8 billion tons of annual animal waste have been left untreated and unutilized, he said. China is aiming to increase the use of animal waste as fertilizer for fruit, tea and vegetables by as much as 50 percent by 2020.

Some local governments are closing down more pig farms or banning breeding due to pollution concerns, which may threaten the meat supply, said Yu. China's central government will offer financial support to 500 counties and 200,000 large farms for waste treatment facilities, he said.

Germany Counters Diesel's Dirty Image with National Task Force

Posted June 28, 2017, 8:26 A.M. ET

By Elisabeth Behrmann and Birgit Jennen

Germany is seeking to counter concerns over the harmful emissions from diesel vehicles by bringing together government and auto-industry experts to devise ways to clean up the technology, which supports thousands of jobs in the country.

The first meeting of the National Diesel Forum will take place on Aug. 2, a little less than two years since Volkswagen AG's emissions-cheating scandal led to a backlash. Since the German automaker admitted to rigging 11 million vehicles worldwide to circumvent regulatory tests, more cities are mulling bans on diesel vehicles and European consumers are gradually turning away from the technology.

"The task of this national forum is to bundle the discussion on optimizing diesel vehicles," Transport Minister Alexander Dobrindt said in a joint statement with the German Environment Ministry. "We're aiming to find workable measures to cut emissions from diesel cars."

Diesel technology plays a major role in the German auto industry, with the models accounting for about 46 percent of car sales in the country last year. At Robert Bosch GmbH, the world's biggest car-parts supplier, about 50,000 jobs are related to diesel, with many more at Volkswagen and other

automakers.

That importance hasn't stopped Germany from putting pressure on automakers to clean up their vehicles in the aftermath of the VW scandal. Last year, the Transport Ministry prodded manufacturers including VW, Audi and Mercedes-Benz to recall 630,000 cars that pushed the limits of emissions regulations. Government officials and carmakers remain in talks to upgrade older diesel vehicles to pollute less on the road.

Munich and Stuttgart—the hometowns of BMW AG and Mercedes parent Daimler AG, respectively—are among a growing list of municipalities that are weighing measures to restrict the use of diesel vehicles to reduce health risks caused by their exhaust. The debate is also turning off European consumers, with buying rates slipping.

"The national forum offers manufacturers the chance to win back lost trust," Environment Minister Barbara Hendricks said in the statement. "I hope they grasp that opportunity and make a substantial contribution to improving air quality in our cities."

Green Energy Investing Meets Crowd Funding in African Venture

Posted June 28, 2017, 9:32 A.M. ET

By Mathew Carr

Gullspang Invest led a group of investors providing 6 million euros ($6.8 million) to Trine Finance Ltd., a company that spurs off-grid solar power in emerging markets including Africa by tapping crowd funding in the U.K. and other advanced economies.

Trine offers crowd investors a return of about 5 percent, with money used to finance solar lamps and solar home systems from Zambia to Uganda, the Gothenburg, Sweden-based company said on its website. The electricity can be cheaper and safer than existing systems typically fueled by kerosene, which emit toxic fumes.

"When you can go in with everything from 25 euros and up, it's opening up finance to people who might not have had that opportunity before," said Lena Apler, founder of Collector AB and a member of Trine's advisory board, by email. "Sustainable solutions are not only turning out to be necessary, but also out competing traditional alternatives."

Trine Chief Executive Officer Sam Manaberi wants to channel 100 million euros of crowd-investment into solar energy projects over two years, up from more than 1 million euros distributed the past three years. Risks for the crowd investors, who spend a minimum 25 euros, range from fluctuating currencies to developing-country solar suppliers who might struggle to make payments.

Payments for the solar energy equipment can be made via mobile phones on a weekly or monthly basis, saving the need for large upfront costs and boosting its appeal. A Trine project listed for Kenya expects to save each participant 1,000 Kenyan shillings ($9.65) a month, about 10 percent of average income, the company said.

Subject: White House ignores Cruz request for biofuels meeting

By Eric Wolff

11/15/2017 09:55 AM EDT

The White House appears to have spurned a request from Sen. Ted Cruz (R-Texas) and eight other senators to set up a meeting with seven Midwestern senators to discuss the Renewable Fuel Standard.

"We won't have such a meeting," Sen. Chuck Grassley (R-Iowa) told reporters today. "The White House would have to be interested in such a meeting. I've not heard from the White House."

Cruz has been blocking Iowan Bill Northey from becoming an undersecretary at the Department of Agriculture in an effort to force corn-state senators to discuss changes to the program. Last month he led a letter to President Donald Trump asking for a meeting within three weeks. That period ends today. Cruz has said he would lift the hold when he gets a meeting.

The White House did not respond to questions about setting up a meeting, nor did Cruz's office. Cruz sent a letter on Tuesday to Iowa Gov. Kim Reynolds explaining his desire to come to a compromise on the RFS to protect "liquid fuels."

Trump has consistently backed the RFS and the Midwestern senators in policy disputes, rejecting repeated efforts to change the program by a small group of refiners and EPA Administrator Scott Pruitt.

WHAT'S NEXT: The final rule setting RFS requirements for 2018 and 2019 is due by Nov. 30.

Subject: Trump floats idea of using solar panels to pay for Mexico wall

By Josh Dawsey and Rachael Bade

06/06/2017 06:00 PM EDT
Updated 06/06/2017 06:19 PM EDT

President Donald Trump floated putting solar panels on his planned Mexican border wall in a meeting with legislative leaders this afternoon, according to White House and Capitol Hill officials.

It was unclear why Trump brought up the topic, but he presented the panels as a way to fund the wall, which is expected to cost billions of dollars, according to three people familiar with the conversation.

He didn't express certainty that it would happen — but that he'd heard it as a possible idea and wanted to see what others thought, said a senior official familiar with the White House meeting.

Trump has insisted that Mexico will pay for the wall's construction — something Mexican officials have repeatedly denied — but has acknowledged that taxpayers may need to initially foot the bill before being repaid.

The president's interest in a potential solar panel solution comes as he's received intense criticism from world leaders for his decision to pull out of the Paris climate agreement.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

July 6, 2017

Latest News

EPA Proposes To Maintain 2018 RFS Targets But Lowers Cellulosic Volumes

EPA's just-released 2018 renewable fuel standard (RFS) proposal calls for maintaining 2017 requirements that in effect call for blending 15 billion gallons of conventional, corn-based, renewable fuel -- though the plan would also use EPA's waiver authority to lower volumes for low-carbon cellulosic biofuel below legislative targets.

CEI Renews Call For Trump To Attack California's Vehicle GHG Rule Power

The Competitive Enterprise Institute (CEI) is citing an early effort to develop bipartisan endorsement of negotiations over vehicle greenhouse gas and fuel economy rules as a new justification for the Trump administration to pursue attacks on California's vehicle GHG authority -- illustrating the challenges to forging any bipartisan consensus on the issue.

SAB Panel Members Question Agency Method For Air Toxics Rule Reviews

EPA Science Advisory Board (SAB) panel members are questioning many of the agency's assumptions in its method for reviewing health risks from air toxics emitted by a host of industries, saying the approach might be too conservative by capturing too many emissions sources and could create too much work for EPA.

Pruitt Review Of Hanford ROD One Of First Under Centralized Oversight

A record of decision (ROD) for cleaning up part of the Energy Department's massive Hanford, WA, Superfund site will be one of the first to be decided by EPA Administrator Scott Pruitt pursuant to a policy he signed in May that transferred final authority on RODs for remedies costing more than $50 million from the regional and waste offices to him.

Wood Product Makers Seek More Changes To EPA Formaldehyde Air Rule

Wood product trade groups are seeking additional phase-in periods and other provisions of EPA's plan for extending compliance dates in an Obama-era Toxic

Substances Control Act (TSCA) rule setting formaldehyde emissions limits on wood products, prompting the agency to withdraw a direct final rule implementing the changes.

Russia Sanctions Bill Stalled by GOP Over Energy Provisions

Posted July 13, 2017, 02:49 P.M. ET

By Anna Edgerton, Terrence Dopp and Jennifer A. Dlouhy

House Republicans are throwing up new roadblocks to a Russia and Iran sanctions bill over concerns from the energy industry that a provision could block U.S. companies from lucrative foreign oil deals.

A section of the legislation would prevent U.S. companies from doing business anywhere in the world with Russian interests, causing consternation in the capital-intensive energy industry where foreign partnerships are common. That prompted Republicans to push for a fix to the version passed by the Senate before the bill moves forward in the House.

"You're empowering Russia more based upon the way they wrote it, that you can give Russia greater energy power over Europe and everywhere else," House Majority Leader Kevin McCarthy (R-Calif.), said in an interview July 12. "So yes, we do need to change that."

Republicans previously said the measure was stalled over complaints from Democrats that changes to the bill would weaken lawmakers' authority to block the Trump administration from lifting sanctions on Russia. The delay gave time for companies to scale up their lobbying on the energy provision, even as lawmakers from both parties are pushing hard for new constraints on President Donald Trump's ability to ease penalties on the Russian government.

This new fight comes amid controversy over the release of emails related to Donald Trump Jr. accepting a meeting last year with a Russian lawyer who he was told had information from the Russian government that could prove damaging to Democratic presidential candidate Hillary Clinton.

House leadership is considering whether the sanctions bill can be put to a vote as is, with the promise that the energy provisions could be changed administratively, or if the matter needs to be addressed before a vote, according to a GOP aide who was briefed on the issue. House leaders don't want to give the impression they're watering down the bill, the aide said.

98-2 Vote

The sanctions measure, S. 722, passed the Senate last month in an overwhelming 98-2 vote, in an effort to punish Iran and get tough on Russia for its efforts to interfere in the U.S. election.

As the measure stalled in the House, several House Republicans said they have been hearing from energy companies with complaints about a provision that would allow the president to penalize someone who invests in or helps build Russian energy export pipelines.

Rep. Bill Flores (R-Texas), said he has been approached by "five or six of the majors" based in his state. The energy companies have told him they worry the bill as it stands is overly broad.

"You could restrict the sanctions of those activities within the borders of Russia, that might be a quick fix and also the national security carve out as well," Flores said when asked how the sanctions bill might be changed to address those concerns. "Most of us are fine with having sanctions on U.S. interests operating inside Russia, with Russian companies, but then going outside of Russia is too broad."

House Rules Chairman Pete Sessions said the Senate passed the bill before lawmakers understood its potential consequences and that whoever wrote the energy provisions wasn't familiar with the industry.

"I appreciate my friends in the Senate but this was rushed through," the Texas Republican said in an interview late July 12.

Broader Opposition

The possibility of the pipeline curbs sent a jolt through the traditional oil industry, as well as a broader group of related companies, including equipment providers, tubular piping manufacturers and oilfield services companies, that worry they wouldn't be able to supply projects in which sanctioned Russian companies are involved.

Current sanctions already block oil and gas companies from doing deals in Russia. But the Senate-passed bill would extend the reach of those prohibitions, barring U.S. companies from partnering with sanctioned Russian firms to develop energy projects anywhere around the world.

Richard Sawaya, who studies the impact of sanctions for the Washington-based National Foreign Trade Council, estimated the provision may mean U.S. oil and gas firms could be shut out of as much as $100 billion worth of projects over 10 years. Also at risk may be high-earning jobs and lost investment income, he said. His group advocates against unilateral U.S. sanctions in most cases.

'Loses Sight'

"In any place where Russian companies have a position—U.S. companies couldn't be there," Sawaya said. "It loses sight of the shape of the forest."

Democrats complain that Republicans are stalling, pointing to remarks from White House legislative affairs director Marc Short that the administration is opposed to the bill's provisions that would allow Congress to block some sanctions-related decisions by the president.

Three House Democrats, Minority leader Nancy Pelosi, Minority Whip Steny Hoyer of Maryland and Rep. Eliot Engel of New York, ranking member of the Foreign Affairs Committee, introduced their own measure, which is identical to the Senate version, in an effort to circumvent GOP procedural

objections. Republican leaders said that certain revenue-related provisions in the bill meant that it had to originate in the House.

Global Disadvantage

The fight over the energy provision, however, threatens to delay the bill further. The oil industry is warning of potentially widespread consequences—some unintended—that could put U.S. companies at a disadvantage globally, even when they aren't actively collaborating with sanctioned Russian firms.

"This has far-reaching impacts to a variety of companies and industries," said Jack Gerard, president of the American Petroleum Institute. "It has the potential to penalize U.S. interests and advantage Russia."

That broader approach could imperil at least one of Exxon Mobil Corp.'s major exploration projects, a joint venture with Rosneft that's producing oil and gas in waters off Russia's eastern shore. Oil fields there are estimated to contain 2.3 billion barrels of oil and 17.1 trillion cubic feet of natural gas. The project, called Sakhalin 1, doesn't fall under current U.S. sanctions that bar U.S. companies from producing oil in Russian deep-water, Arctic or shale areas.

If the legislation passes without changes, Exxon Mobil would likely have to obtain a special waiver from the U.S. government to maintain production at the site, slated to stretch until 2050.

Neighboring Wells

Industry officials warn that the Senate-passed bill could also jeopardize oil and gas projects far from Russia that have only tangential ties to the country. For instance, they say it could preclude U.S. oil companies from proceeding with offshore projects where sanctioned Russian companies hold neighboring leases because there may be pooled collaboration on pipelines and other infrastructure to support the developments.

"We will continue to comply with all applicable laws, including trade controls and sanctions regulations," said Royal Dutch Shell spokesman Curtis Smith. "We believe that this bill, if endorsed, would be contrary to the objective of providing international markets with reliable access to energy at competitive prices."

The fear is that Russian companies may invest in leases located next to U.S. energy projects as a way to help edge out their American competitors.

Oil industry lobbyists are circulating alternative language on Capitol Hill aimed at addressing these concerns and others. Most of the changes aim to narrow the legislation's reach. They are also seeking a 180-day ramp-up period to ensure companies have adequate time to comply, a narrowed definition of affected pipelines to zero in on oil export pipelines and to change the timeline for prohibitions on dealings in new debt to avoid a jolt to oil and gas trading.

The Senate-passed legislation would also place new penalties on Iran over its ballistic missile program. The bill directs the president to impose sanctions on any entity that knowingly contributes to Iran's ballistic missile program or other programs to develop vehicles to deliver weapons of mass destruction. Those who are sanctioned would have their assets within U.S. jurisdiction frozen and would be barred from entering the country.

—With assistance from Catherine Traywick and Billy House.

Trump Administration Conditionally Approves Eni's Arctic Oil Drilling Plan

Posted July 13, 2017, 12:13 P.M. ET

By Jennifer A. Dlouhy

The Trump administration has conditionally approved Eni SpA's plan to drill up to four oil exploration wells in Arctic waters, with the activity launched from a gravel island in the Beaufort Sea.

The government's letter of approval lays out 13 conditions that Rome-based energy company must first meet, including securing drilling permits from the U.S. Bureau of Safety and Environmental Enforcement and other state and federal authorizations. The safety bureau also must approve Eni's spill response plan.

According to the Bureau of Ocean Energy Management, a site-specific monitoring program is not necessary for the first year of operations, but Eni may have to monitor for bowhead whales during its second year of operations.

Environmentalists pounced on the White House decision, saying it gives short shrift to potential damage from an oil spill in the remote Arctic.

"An oil spill here would do incredible damage, and it'd be impossible to clean up. The Trump administration clearly cares only about appeasing oil companies, no matter its legal obligations or the threats to polar bears or our planet," Kristen Monsell, an attorney with the Center for Biological Diversity, said in an emailed statement.

Eni's leases are set to expire Dec. 3, but a recent Interior Department rule effectively allows extensions of offshore leases for one year from most recent drilling. The company is expected to begin in December and continue throughout the winter months.

U.S., China Immersed in Talks on LNG Export, Energy Issues

Posted July 13, 2017, 9:17 A.M. ET

By John Butcher

U.S. Secretary of Energy Rick Perry advanced the prospect of expanding American liquefied natural gas exports to China during a July 13 meeting with Executive Vice Premier Zhang Gaoli in Beijing.

LNG exports were among a range of energy issues the pair discussed, during a meeting in Zhongnanhai, the headquarters of China's Communist Party, according to a release by the U.S. embassy in Beijing.

LNG exports to countries that do not have a free trade agreement with the U.S. are restricted, but President Donald Trump last month agreed to lift barriers on those to China as part of a range of trade deals between the two countries. That could offer huge export potential for U.S. LNG suppliers

to China, which is the world's largest growth market for gas, according to energy research firm Wood Mackenzie, and may prompt new investment in industry.

It also could benefit China, which seeks alternatives to coal as it tackles a serious problem with air pollution.

Perry's talks with Zhang will be welcome news for U.S. LNG suppliers such as Cheniere Energy, which has been in negotiations with China about increasing exports there.

The Trump administration also hopes it will help them make good on election promises to rebalance trade and deliver jobs. In a statement, released June 5, to kick off his visit to China, Perry said, "By unleashing our domestic energy sector, we are creating, and will continue to create, well-paying, middle-class jobs and economic prosperity, protecting our environment, promoting innovation, and strengthening energy security for America and our allies."

Manchin Aims to Tack Appalachian Ethane Hub on Energy Bill

Posted July 13, 2017, 02:20 P.M. ET

By Brian Dabbs

West Virginia Sen. Joe Manchin (D) is ready to take a stab at creating an ethane storage hub in Appalachia that could break ground for more ethane use nationwide, while boosting manufacturing in the region.

Manchin told Bloomberg BNA July 12 he is aiming to propose an amendment on the Senate energy package to qualify a storage facility as a "critical infrastructure project," which would expedite Federal Energy Regulatory Commission licensing.

The facility's supporters, including the American Chemistry Council, argue it will pave the way for more nationwide use of ethane, a liquid derived from natural gas production that is used in consumer products and chemicals.

Manchin, along with Sen. Shelley Moore Capito (R-W.Va.), introduced the measure as a stand-alone bill (S. 1337) in June.

"That just gives it so much certainty to move forward. It gives it a pathway," Manchin, who described the energy bill as a "perfect vehicle," told Bloomberg BNA.

The energy bill (S. 1460) already contains a provision to compel the Energy Department to study the benefits of a ethane storage facility in the Marcellus, Utica, and Rogersville shale regions, which span from New York to Tennessee, but a spokeswoman for Manchin said the licensing is now the bigger priority.

Both Sens. Lisa Murkowski (R-Alaska) and Maria Cantwell (D-Wash.) are pledging an open amendment process for the energy bill, but timing is so far unclear.

Booming Wind, Solar to Erode Gas Demand in Americas, IEA Says

Posted July 13, 2017, 8:03 A.M. ET

By Patrick Martin

A surge in power from wind, solar and other renewable sources will begin chipping away at natural gas demand growth in the Americas over the next five years, according to the International Energy Agency.

The region's gas consumption will climb just 0.9 percent per year from 2016 through 2022, compared with 2.2 percent annually over the previous six-year period, the agency said in a report released July 13. Rising gas prices and a slowdown in coal plant retirements will also limit demand for the fuel, the IEA said.

A boom in cheaper energy from wind farms and solar arrays is creating competition for gas-fired generators, pummeling electricity prices. While gas has grabbed a bigger share of the power market in the Americas as coal-fired plants shut, the demand surge won't last, according to the IEA.

"There will be weak growth in electricity demand," the agency said in the report. "The level of gas consumed in the power sector is expected to be at broadly the same level throughout the forecast period."

Though U.S. gas futures averaged about $2.55 per million British thermal units last year, the IEA predicts prices will be "significantly higher" through 2022, rising above $3. That'll make gas-fired electricity generation more expensive than power from coal—especially coal supplies from the Powder River Basin in the western U.S., the agency said.

Industrial consumers may represent a bright spot for gas demand, however. Consumption in the sector may rise 1.7 percent a year as new chemical plants using gas as a feedstock are built on the U.S. Gulf Coast, the IEA said.

Meanwhile, gas output from U.S. shale basins will continue to flood the global market, the IEA said. The U.S. will boost production more than any other country over the next five years, accounting for almost 40 percent of global supply growth and more than one-fifth of the world's output by 2022.

Subject: EPA reschdules science meeting to add industry voices after Smith cries foul

By Alex Guillén

06/09/2017 03:43 PM EDT

EPA has postponed an upcoming meeting hosted by the agency's scientific integrity official and invited more industry officials and state representatives, following complaints from a senior Republican lawmaker.

The meeting is an annual event at which the scientific integrity official, Francesca Grifo, discusses her work and the agency's scientific integrity policy. House Science Chairman Lamar Smith last month flagged the meeting after discovering the guest list primarily consisted of environmentalists, science organizations, watchdog groups, certain media representatives and think tanks, but almost no one from regulated industries.

EPA "agrees that invitees to the EPA Scientific Integrity Stakeholder meeting should include a balanced representation of those organizations having an interest in scientific integrity at the EPA," Robert Kavlock, the acting assistant administrator for research and development, wrote this week to Smith.

Previous meetings included more industry attendees, and EPA "recently sent invitations to additional organizations representing the regulated community and state governments."

A separate email to invitees seen by POLITICO said the meeting would be rescheduled, but did not specify a timeline.

Grifo, a career official who was hired from the Union of Concerned Scientists in 2013, rose to prominence this spring when she was asked to investigate the Sierra Club's complaint that Administrator Scott Pruitt violated EPA's scientific integrity policy by saying on television that carbon dioxide is not a primary driver of climate change.

Earlier this week, the free-market group Cause of Action Institute filed a Freedom of Information request it says is meant to investigate alleged politicization in Grifo's office.

WHAT'S NEXT: EPA will invite more industry and state representatives and reschedule the meeting for a future date.

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

OL' VIRGINNY - FIRST IN SCORE - "Liberal groups team up for $2M digital buy in Virginia," by Campaign Pro's Kevin Robillard: "A slew of liberal groups are teaming up for a $2 million digital ad buy aiming to drive Virginia voters to the polls in November and back Democratic Lt. Gov. Ralph Northam for governor. Planned Parenthood Votes and the Planned Parenthood Virginia PAC, the Tom Steyer-backed Next Gen America, Priorities USA, Progress Virginia and the Virginia League of Conservation Voters PAC are all contributing hundreds of thousands of dollars to the effort, which will begin this week and run until Election Day. The ads will aim to reach and turn out more than 1.2 million voters. ... The groups are touting the buy as an unprecedented effort from liberal groups to coordinate their digital spending. The groups are sharing data and working together to develop messaging, voter contact timelines and dividing targeted audiences. Democrats have often worked together to coordinate their television and mail efforts, but digital efforts have sometimes been more scattershot. Priorities, which was the main super PAC backing Democratic presidential nominee Hillary Clinton in 2016, hopes to replicate the effort in other states with competitive races in 2018." **Full story.**

PRIMARY CONCERNS - "Democrats weigh convention instead of primary in top House battleground," by Robillard: "Democratic officials in one of the nation's most contested House districts are considering picking their nominee through a convention rather than a primary, a step opposed by all but one of the leading candidates: Virginia state Sen. Jennifer Wexton, the only Democratic elected official in the race against GOP Rep. Barbara Comstock. The Democratic committee in Virginia's 10th District met on Sunday to discuss how to pick their nominee to challenge Comstock in 2018. POLITICO obtained an audio recording of a lengthy debate between committee members over whether to hold a regular state-run primary, a more limited 'firehouse primary,' a caucus or a convention. ... Now, nine Democrats have lined up to take on Comstock in 2016. The DCCC touted Wexton's entrance when she declared her candidacy in April, but her fundraising has trailed three main rivals: Obama administration alumni Lindsey Davis Stover and Alison Friedman and Rhodes Scholar and Army veteran Daniel Helmer. Some Democrats in the district think Wexton, the only candidate with experience running elections in the 10th District, may prefer a more insular convention to a more expensive primary." **Full story.**

EARLY POLLING DATA - "Democratic poll: Flake trails Ward in primary, Sinema in

general," by Robillard: "A new poll paid for by Senate Majority PAC shows Arizona Sen. Jeff Flake in deep trouble in both the primary and general election phases of his Senate bid. The poll, conducted by the Democratic firm GBA Strategies, has the incumbent Republican trailing former state Sen. Kelli Ward by substantial margins in the GOP primary. Flake is also behind Democratic Rep. Kyrsten Sinema in the poll's general election matchup. Flake, a staunch fiscal conservative, has faced intra-party attacks for his repeated criticisms of President Donald Trump's behavior and demeanor. Ward leads Flake in the primary test by a wide margin, 58 percent to 31 percent. Only 25 percent of GOP primary voters have a favorable opinion of Flake, while 56 percent have an unfavorable opinion. Just 34 percent approve of Flake's job performance, and 59 percent disapprove. Sinema leads Flake, 47 percent to 40 percent, in the general election matchup. Flake's job approval is at 38 percent among the general election electorate, with 50 percent disapproval. Just 23 percent have a favorable opinion of him, and 48 percent have an unfavorable opinion." **Full story.**

CORRECTION - A story in yesterday's Score incorrectly stated the American Academy of Dermatology's position on repeal of Obamacare. It opposed repeal of the tanning taxes included in the legislation.

Days until the 2017 election: 55.

Days until the 2018 election: 419.

DAILY ROLL TIDE - Senate Leadership Fund set to spend $1.6M down the stretch in Alabama: Senate Leadership Fund has increased its ad buy by about $200,000 in Alabama. It's now set to spend $1.6 million over the final two weeks of the GOP primary race, as it tries to boost Sen. Luther Strange past former state Supreme Court Justice Roy Moore. The group is set to spend about $3 million during the run-off between the two men.

READY FOR ROUND TWO - "Heitkamp announces re-election bid for 2018," by the Bismarck Tribune's Amy Dalrymple: "Democratic U.S. Sen. Heidi Heitkamp announced Wednesday she is running for re-election in 2018, a decision she says was cemented the night before while attending a dinner with President Donald Trump. 'I really felt last night that there's an opportunity to do some good bipartisan work,' Heitkamp said in an interview with The Bismarck Tribune. 'If I didn't think I was getting things done, I don't know that I'd want to stay here.' ... She cited her efforts to support lifting the oil export ban, responding to concerns about the opioid crisis and fighting to improve lives for Native American children as some of her accomplishments." **Full story.**

TAX TIME - "GOP shudders as Trump courts Democrats on taxes," by Rachael Bade and

Burgess Everett: "President Donald Trump's courtship of Democrats on tax reform is dividing congressional Republicans on the merits of a bipartisan bill - and could upend the party-line strategy that White House and GOP leaders have been pursuing for months. Trump talked tax reform with two bipartisan groups of senators and House members over the past 24 hours, dining with swing-state Democrats and hobnobbing with centrists in the lower chamber. He told them he wants their votes on a tax bill, even entertaining a Democratic request to raise taxes on wealthier individuals. ... Tax decision-makers in the "Big Six" - Speaker Paul Ryan , Majority leader Mitch McConnell, Treasury Secretary Steve Mnuchin, White House economic adviser Gary Cohn and the GOP chairmen of the House and Senate tax-writing committees - opted months ago to pursue a partisan tax bill, all but writing off Democrats. They aim to pursue tax reform via budget 'reconciliation,' a procedural tool that allows them to evade a 60-vote threshold in the Senate, where the GOP controls just 52 seats. Now, GOP leaders and conservative lawmakers are warning that a Trump alliance with Democrats could upend all those plans." **Full story.**

WEB WARS - NRSC digital ad attacks McCaskill over plane: The NRSC is out with a digital ad attacking Democratic Sen. Claire McCaskill for saying "normal people" can afford a private plane. **Watch it here.**

GETTING THE NOD - "Trump nominates James Trainor III to FEC," by Campaign Pro's Maggie Severns: "President Donald Trump plans to nominate Texas-based lawyer James "Trey" Trainor III to the FEC, the White House said Tuesday night. Trainor is a partner at the law firm Ackerman, where his practice involves campaign finance and elections. According to his website bio at the firm, he has experience working with Trump, both in the general counsel's office for Secretary of Defense James Mattis and as counsel for Trump's presidential campaign. He has also worked in the Texas Secretary of State's office and the Texas state legislature." Full story.

HAPPENING TODAY -- FEC to discuss Russian Facebook ads: The Federal Election Commission will meet this morning and is poised to discuss Russia's reported purchasing of Facebook ads during the 2016 election. The commission posted a letter written last week by Democratic Commissioner Ellen Weintraub to its agenda in which Weintraub asks to discuss the ads and whether the FEC should undertake rulemaking for disclaimers on digital advertisements. "The need for us to act grows more compelling every day," Weintraub wrote in the letter. Weintraub also made clear she plans to ask the commission to restart the rulemaking process--though other commissioners have in recent months have shown almost no interest in doing so.

FAMILY TIES - "Chuck Grassley will back Pat Grassley for Iowa Secretary of Agriculture," by the Des Moines Register's Jason Noble: "U.S. Sen. Chuck Grassley left no doubt on Wednesday whether he's backing his grandson, state Rep. Pat Grassley, for the soon-to-be vacant office of Iowa secretary of agriculture. 'I know darn well you expect me to support my grandson, and I am. I hope he'll be appointed,' Grassley, a Republican, said in a conference call with Iowa reporters Wednesday. The statewide elected office is expected to come open later this year or early next following incumbent Republican Secretary Bill Northey's nomination to an undersecretary post at the U.S. Department of Agriculture." **Full story.**

QUOTE OF THE DAY: "Because when I didn't have an alert, I would be in the middle of an interview with someone like you, and they would ask me about something he tweeted, and I would be caught flat-footed." - Ohio Sen. Rob Portman to BuzzFeed News.

Subject: BREAKING NEWS: NRA calls for federal review of whether bump fire stocks comply with current law

The National Rifle Association on Thursday called on the Bureau of Alcohol, Tobacco, Firearms and Explosives to review whether bump fire stocks - like the device used in this week's Las Vegas shooting massacre - comply with current federal law.

"The NRA believes that devices designed to allow semi-automatic rifles to function like fully-automatic rifles should be subject to additional regulations," NRA CEO Wayne LaPierre and Executive Director Chris Cox added in a joint statement.

Subject: POLITICO INVESTIGATION: In Trump country, a university confronts its skeptics

The University of Michigan, like many flagship public universities, was founded to help low-income students. But today, a full 10 percent of its student body comes from families in the top 1 percent of earners, with just 16 percent from the bottom 60 percent combined. High tuition is a major culprit. So, too, is an elite reputation that drives away applicants in the state that sealed Donald Trump's victory. The university is trying to change that - but is facing some surprisingly intractable barriers.

Subject: House energy committee approves slate of brownfield, ozone and pipeline bills

By Darius Dixon

06/28/2017 03:43 PM EDT

The House Energy and Commerce Committee today signed off on legislation that would reauthorize a brownfields cleanup program, delay ozone standards and give FERC power to approve cross-border oil pipelines.

The most contentious bill was the Ozone Standards Implementation Act, H.R. 806, which would delay implementation of the 2015 ozone standard through 2025 and stretch the regular air quality standard review period from five years to 10. It advanced on a 29-24 vote, mostly along party lines, after the committee voted down two Democratic amendments.

E&C also approved legislation to speed up decisions on energy projects crossing into Canada and Mexico on a partisan 31-20 vote. The bill, H.R. 2883, Promoting Cross-Border Energy Infrastructure Act, would scrap the presidential permitting process for electric, natural gas and oil projects, which became contentious by former President Barack Obama's decision to reject TransCanada's Keystone XL pipeline. Instead of the State Department, FERC would be authorized to review cross-border oil pipelines. A handful of Democratic amendments were voted down.

A separate bill aimed at streamlining approvals for interstate natural gas pipelines, H.R. 2910, was approved on a 30-23 vote.

On a bipartisan note, the committee approved a bill, H.R. 3017, to reauthorize a brownfields cleanup program with a voice vote amendment-free.

WHAT'S NEXT: The bills are expected to get votes in the full House before the August recess, but GOP leaders have not yet scheduled floor time.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

November 15, 2017

Latest News

Oklahoma Official Seeks Greater State Role In EPA's Superfund Reforms

States are pressing EPA to boost their role in the Superfund cleanup process and to generally increase communications between state and federal agencies, according to Oklahoma environment chief Scott Thompson, who leads a national states' workgroup focused on EPA's Superfund reforms.

EPA Regional Heads Downplay Superfund Sites' Damage From Hurricanes

The heads of three EPA regions are downplaying reports of contamination from Superfund sites and facility leaks in the aftermath of this year's disastrous hurricane season, saying any contaminated sites have been contained and did not pollute drinking water in damaged areas despite early reports to the contrary.

Pending EPA Nominees To Face At Least Two-Week Wait For Senate Votes

Several nominees for top political slots at EPA that have been long awaiting Senate confirmation likely must wait at least an additional two weeks, with the chamber not planning to take up any additional agency candidates until the week of Nov. 27 at the earliest, Capitol Hill sources say.

GOP Senators Tout Bills To Ease EPA Air Rules But Democrats Push Back

Republican senators at a Nov. 14 environment panel hearing touted several bills they said would help to ease compliance with Obama EPA air rules for manufacturers of bricks and wood stoves, though Democrats on the panel pushed back by warning that the legislation ultimately would undermine Clean Air Act protections.

EPA Launches Two-Year Pilot Aimed At Streamlining Superfund ARARs

EPA's Superfund office is launching a two-year pilot project to field a "best practices" process developed jointly by EPA and states aimed at discussing and identifying state cleanup standards earlier in the remedial process in order to avert disputes and bottlenecks over applying the standards.

New EPA Advisory Committees' Chairmen Have History Of Agency Criticism

The new chairmen of two influential EPA science advisory committees have a history of criticizing the agency's scientific analyses in ways fundamental to how EPA evaluates and seeks to support regulations to manage environmental risks, ranging from risk assessment approaches generally to specific air pollutants and chemicals.

Daily Feed

Democrats, environmentalists vow ongoing climate push

Sen. Sheldon Whitehouse (D-RI) said Democrats' message at the United Nations climate talks was that "the administration is not only isolated in the world . . . it is isolated from the rest of America."

North Carolina newspaper opposes EPA toxics office nominee

The newspaper is urging its readers to lobby the state's senators to oppose the Trump administration's nomination of Michael Dourson to be EPA toxics chief.

NRDC urges EPA to hold more hearings on CPP repeal

"The agency [must] give the public real opportunities to speak at hearings in the nation's capital and across the nation when proposing to repeal the" Clean Power Plan, the environmental group says.

CATF cites oil & gas emission equity harms to fight EPA rule repeal

Environmentalists hope new findings about harms African-American fence-line communities face from oil and gas emissions will help block EPA from scrapping methane limits for the sector.

CEI files suit to compel Paris Agreement documents

The free-market group, which argues that the Paris Agreement is a treaty requiring Senate ratification, is seeking State Department documents that it hopes will bolster that claim.

Ewire: Trump's pro-fossil event at U.N. climate talks prompt outcry

In today's news roundup: Climate change advocates are faulting the Trump administration's pro-fossil side event at the United Nations climate talks. But is the message getting to career U.S. diplomats?

Greenhouse Gas Reporting Budget Slashed in Trump Proposal

Posted May 23, 2017, 03:29 P.M. ET

By Dean Scott and Andrew Childers

An EPA program to track greenhouse gas emissions nationally faces an 85 percent budget cut as President Donald Trump looks to slash the agency's funding and sideline climate change efforts.

Trump and Environmental Protection Agency Administrator Scott Pruitt have vowed to downplay the agency's climate change work, instead focusing on priorities such as cleaning up Superfund sites.

The EPA in the fiscal year 2018 budget proposal released May 23 faces $336 million in cuts to its climate work compared to estimated funding levels for 2017. The Office of Management and Budget compared its fiscal 2018 proposal to estimated funding based on the continuing resolution for 2017 rather than the recently passed omnibus funding levels for that year. International climate programs are also on the chopping block as Trump follows through on a pledge to end funding for international climate aid.

The $336 million in cuts to the EPA's air pollution and climate work include:

• $161 million reduction—a 34 percent cut from 2017 levels—to environmental programs and management,

• $114 million less for science and technology programs, a 46 percent reduction, and

• $60 million in cuts to aid to states and tribes—a nearly 18 percent cut from 2017 levels.

Within the environmental programs funding, the EPA's greenhouse gas reporting program is slated to receive only $13.6 million, down from an estimated $95.3 million in 2017. The estimated savings would come from eliminating a variety of voluntary programs such as Energy Star, voluntary methane reduction efforts for the oil and gas sector, and the Green Power Partnership, which encourages the use of renewable energy.

Reducing those programs is part of what the Trump administration calls its "commitment to return EPA to its core work."

The greenhouse gas reporting program collects annual emissions data from nearly 8,000 industrial facilities across 41 sectors of the economy.

International Climate Aid Eliminated

Trump's fiscal year 2018 budget plan also maintains his pledge to zero out billions in international climate aid.

The proposal would eliminate a total of $1.59 billion for the United Nations Green Climate Fund, the Global Climate Change Initiative, and other international climate programs.

Zeroing out the Green Climate Fund would mean the U.S. would fall well short of the amount President Barack Obama pledged in 2014 toward the fund—$3 billion over four years—which helps developing nations adapt to climate impacts and pursue low-carbon development. Obama used the Global Climate Change Initiative to make sure climate issues were being addressed in assistance funneled through multiple foreign assistance agencies.

Hanford Nuclear Cleanup Budget Slashed in Energy Proposal

Posted May 23, 2017, 04:08 P.M. ET

By Chuck McCutcheon

Washington state's Hanford Nuclear Reservation, scene of a recent collapse of a tunnel containing nuclear waste, would see its funding slashed under President Donald Trump's new budget proposal.

The May 23 release of the fiscal year 2018 budget for the Department of Energy, which follows Trump's earlier "skinny budget," drew praise from conservative Republicans for being fiscally responsible and criticism from those who want more funding for energy research and development and other programs. Given that many of the department's programs are located in numerous areas of the country and enjoy bipartisan support, Congress is expected to restore many of the proposed cuts.

The Energy Department would sustain an overall 5.4 percent cut, or $1.7 billion—minor compared to most other Cabinet agencies—from the estimated funding levels Congress provided in fiscal 2017, according to White House Office of Management and Budget documents. The agency's clean energy programs would bear the brunt of the cuts, with new funds funneled into the arm of the agency dealing with developing and safeguarding nuclear weapons.

"This budget delivers on the promise to reprioritize spending in order to carry out DOE's core functions effectively and efficiently while also being fiscally responsible and respectful to the American taxpayer," Energy Secretary Rick Perry said in a statement.

But Ernest Moniz, Perry's predecessor under former President Barack Obama, called the budget proposal "a retreat of American leadership on energy innovation, environmental protection and energy security."

Trump's budget blueprint calls for reducing cleanup at Hanford from $921 million to $716 million, a 22 percent reduction. That comes as the budget proposes to boost overall departmental defense-related environmental cleanup of materials from $5.28 billion to $5.54 billion.

Hanford Cleanup Needed

Washington state's congressional delegation, including Democratic Sens. Patty Murray and Maria Cantwell, long have pressed various administrations to commit to cleaning up Hanford. The site in eastern Washington has milllons of gallons of highly radioactive wastes stored in 177 aging underground tanks, some of which have leaked.

"Previous administrations and Congress have repeatedly supported the legal and moral obligation of the federal government to clean up the Hanford site, and we urge you to continue this important work to protect health and safety," the two senators and Rep. Dan Newhouse (R-Wash.) said in a May 19 letter to Perry.

The Hanford tunnel, containing radioactive wastes that were byproducts of producing plutonium for nuclear weapons, partially collapsed on May 9, prompting nearby workers to evacuate. A worker's clothing also was exposed to radioactive contamination in what Washington Gov. Jay Inslee (D) called an "alarming incident."

Trump's budget also calls for steep cuts to numerous other Energy programs:

• Basic energy sciences, which supports research to advance new energy technologies, would see a proposed cut from $1.84 billion to $1.55 billion.

• Biological and environmental research, which studies biological, earth and environmental systems for energy and infrastructure resilience and sustainability, would see a proposed cut from $608 million to $349 million.

• Energy effiency and renewable energy programs would receive a proposed $636 million, a decline of $1.4 billion. Subprograms dealing with weatherization of homes and state energy are proposed for elimination "to reduce federal intervention in state-level energy policy and implementation," according to the department.

• Sustainable transportation programs, which conduct early-stage research and development on vehicle technologies, fuel cells and other energy innovations, would see a proposed cut from $659 million to $336 million. Within that, solar energy would be cut from $324 million to $134 million; wind energy from $145 million to $66 million; water power from $97 million to $44 million. Geothermal technologies would be sliced in half to $38 million.

• Fossil energy research, which supports research into coal, oil and other energy types that Trump has emphasized, would see a proposed cut from $631 million to $280 million. The budget seeks to consolidate the work for the National Energy Technology Laboratory, which does work in several states, into a single operational site.

• Cybersecurity for energy-delivery systems, which supports research on cutting-edge solutions to defend against cyber attacks, would see a proposed cut from $62 million to $42 million. The proposed budget adds $43 million for cybersecurity within the defense environmental cleanup program.

ARPA-E Cut Maintained

The proposed budget maintains the administration's earlier call for cutting the Advanced Projects Research Agency-Energy (ARPA-E) office, which invests in early-stage, high-risk energy technologies that have potential to transform the nation's energy system.

In addition, it maintains the "skinny budget" promise to eliminate the Advanced Technology Vehicles Manufacturing Loan Program, which provides loans to automakers to help produce advanced-

technology vehicles. The program's loan office will wind down operations in fiscal 2018 with the expectation it will shut down the following fiscal year, according to an Office of Management and Budget document.

Similarly, it continues the call for eliminating the Title 17 Innovative Technology Loan Guarantee Program, which funds high-risk technology that aims to avoid, reduce or sequester air pollutants or greenhouse gases.

Trump's blueprint also underscores the administration's interest in reconsidering waste storage at Nevada's Yucca Mountain site despite widespread objections from Nevada lawmakers. It proposes restarting the Nuclear Waste Fund Fee in 2020, an indication the administration is planning to have a permanent storage site for high-level spent fuel from commercial nuclear power plants up and running by that time. The budget also separately includes a $30 million request for the Nuclear Regulatory Commission to restart work on the site northeast of Las Vegas, which the Obama administration had mothballed.

Perry, in recent visits to several of the department's national laboratories, has pledged to support much of their work. The proposed budget includes a boost from $620 million to $722 million for the Advanced Scientific Computing Research program, which supports research in applied mathematics and computer science at such labs as Oak Ridge in Tennessee, Argonne in Illinois and Lawrence Berkeley in California.

Two Energy Professionals Chosen for Nuclear Commission

Posted May 22, 2017, 09:17 P.M. ET

By Rebecca Kern

A former utility commission chairman and a Senate energy staffer were named by the Trump administration to fill two vacant Republican seats on the Nuclear Regulatory Commission.

David Wright, a former South Carolina Public Service Commission chairman, and Annie Caputo, a senior policy adviser for the Senate Environment and Public Works Committee, will be nominated to serve terms as Republican commissioners on the nuclear regulatory body, the administration announced May 22.

The administration also said it plans to renominate Kristine Svinicki, the current chairman, to serve another five-year term as chairman. Svinicki's current term was set to expire July 1.

The NRC has been down to three commissioners—Svinicki, a Republican; Stephen Burns, an independent; and a former chairman, Jeff Baran, a Democrat. If the nominees are confirmed, the agency would return to a full five-person panel.

Wright has been the owner of Wright Directions LLC, a strategic consulting and communications business based in South Carolina, since 2013. He served on the South Carolina Public Service Commission from March 2004 to June 2013.

From 2011-2012, he was president of National Association of Regulatory Utility Commissioners, which represents state public service commissioners. He also was national chairman of the Nuclear Waste Strategy Coalition from 2006 to 2013, a group of state utility regulators, local governments, and tribes on nuclear waste policy issues. He has a political science degree from Clemson University.

Marc Spitzer, a former commissioner at the Federal Energy Regulatory Commission from 2006-2011 and currently a partner at Steptoe & Johnson LLC, told Bloomberg BNA he worked with Wright on a jurisdictional issues between FERC and the South Carolina commission.

Two of the four nuclear reactors being built in the U.S. are being built by SCANA Corp. in South Carolina, which likely factored into the administration's choice to nominate Wright.

Caputo's Bipartisan Reach

Caputo has more than a decade of experience working as a staffer on both Senate and House energy committees. She has worked as a policy adviser on the Senate Environment and Public Works Committee since January 2015, and was a staffer from 2007-2012, specializing in nuclear energy issues. From 2012 to 2015 she worked as a staffer on the House Energy and Commerce Committee.

She was a congressional affairs manager at Exelon Corp. from 1998 to 2005. Caputo has a chemical engineering degree from Michigan Technological University and a degree in nuclear engineering from the University of Wisconsin-Madison.

"On the Hill, both Democrats and Republicans see her as a leading expert on NRC issues," Ryan Fitzpatrick, deputy director of the Clean Energy Program at Third Way, a group that advocates for clean energy and nuclear energy, told Bloomberg BNA.

Fitzpatrick said he worked with Caputo on the Nuclear Energy Information and Modernizaton Act (S. 512), which the Environment and Public Works Committee reported out favorably in March. The bill directs the NRC to create a regulatory framework for advanced nuclear reactor technologies, which aren't cooled by water as existing nuclear reactors are.

Trump Proposes Selling Off Half the U.S. Strategic Oil Reserve

Posted May 23, 2017, 8:19 A.M. ET

By Catherine Traywick and Jennifer A. Dlouhy

The White House plan to trim the national debt includes selling off half of the nation's emergency oil stockpile, part of a broad series of changes proposed by President Donald Trump to the federal government's role in energy markets.

Trump's first complete budget proposal, released in part May 22, would raise $500 million in fiscal year 2018 by draining the Strategic Petroleum Reserve, and as much $16.6 billion in oil sales over the next decade.

The proposal also seeks to boost government revenues by allowing oil drilling in the Alaska National Wildlife Refuge, ending the practice of sharing oil royalties with states along the Gulf of Mexico and selling off electricity transmission lines in the West. Like much of the budget, those moves are likely to face opposition in Congress.

Presidential budget proposals typically undergo significant changes in Congress, but provide insight into White House priorities.

The Strategic Petroleum Reserve currently holds 687.7 million barrels of oil in salt caverns and tanks at designated locations in Texas and Louisiana. That allows for quick distribution when natural disasters or unplanned accidents occur, according to the Energy Department website.

Measures passed in 2015 and 2016 call for the sale of nearly 190 million barrels of oil from the reserve between 2017 and 2025, to raise money for unrelated government programs. Those sales would cut the reserve by about 27 percent. Slashing the stockpile by half would require further sales, and would risk breaching the legally required inventory threshold. The reserve must contain a minimum of 450 million barrels.

The budget summary document doesn't indicate the scope or timing of potential oil reserve sales, or whether a $2 billion program to modernize the stockpile's infrastructure would be affected.

Oil, Gas Proposals

Trump is also seeking to raise money with two other proposed changes—one that would be cheered by the oil industry and another that would draw its ire.

For instance, he projects raising $1.8 billion over the next decade by opening up the 19-million-acre Arctic National Wildlife Refuge to oil and gas development. The idea of allowing drilling in the refuge for its estimated 12 billion barrels of crude has long been championed by Alaska Republicans, including Sen. Lisa Murkowski, who heads the appropriations subcommittee in charge of Interior spending.

But it's anathema to environmentalists, who have successfully blocked ANWR drilling plans from advancing on Capitol Hill by stoking concerns about threats to the polar bears, caribou, wolves and other animals that live in the territory.

Trump's budget request suggests ANWR leasing could begin to pay off in fiscal 2022, with $100 billion in projected revenue that year. In addition to environmentalists' opposition, it's unclear how much appetite energy companies would have for the reserve. Monster discoveries there could yield decades of oil production, but the cost of operations in northern Alaska could discourage the activity amid modest crude prices and the domestic shale boom.

Offshore Royalties

Trump's budget request also revives an Obama-era proposal to cut the payments Gulf Coast states collect from offshore drilling near their coastlines, a change that would translate to an extra $3.56 billion in federal revenue over the next decade. Under a 2006 law, four Gulf states—Alabama, Louisiana, Mississippi and Texas—now claim 37.5 percent of the royalties that oil and gas companies send the federal government in exchange for drilling rights and production on some Gulf of Mexico leases.

Trump's move echoes Obama's attempt to divert some of those royalty payments. And his bid to quash state revenue sharing is likely to meet the same fierce resistance that Obama's plans did. Just as they did under Obama, Gulf Coast lawmakers also will vigorously fight to defend those payments, which help support restoration programs.

The budget also proposes restarting the Nuclear Waste Fund Fee in 2020, a sign that the administration is planning to have a permanent storage site for that waste up and running by that time—presumably at a site in Nevada known as Yucca Mountain. That fee would raise nearly $3.1 billion over 10 years, it estimates.

The White House foresees $2.4 billion in additional revenue in 2019 from the sale of federally-owned transmission lines in the West. Those power lines mostly carry electricity from government-owned dams to metro areas.

Trillions on Yearly Infrastructure Spending Would Help Climate Goals: OECD

Posted May 23, 2017, 03:45 P.M. ET

By Rick Mitchell

The world's biggest economies have to spend about $6.9 trillion a year on "smart" infrastructure through 2030 to be on track to keep global warming to safe levels, a new OECD report said.

Because most major economies have skimped on infrastructure since the 2008 financial crisis, an average $6.3 trillion of yearly investment is required in the next 14 years just to meet development needs globally. And for an extra $600 billion, the $6.9 trillion in total annual outlays could buy infrastructure that is "modern, smart and clean infrastructure" and not "carbon-intensive," according to the report the Organization for Economic Cooperation and Development released May 23.

Because smart infrastructure is more energy-efficient, it would cut fossil fuel spending by $1.7 trillion annually, more than offsetting the extra cost, the OECD said.

Low-emissions infrastructure investment figures at the heart of the report's recommendations for policy makers to combine strong fiscal and structural reform with coherent climate measures, rather than treat climate as a separate issue. Such an approach would significantly reduce climate change risks, while also providing near-term economic, employment and health benefits, it said.

The 314-page report forecasts "a climate-compatible policy package" that could increase economic output by up to an average 2.8 percent across the Group of 20 countries by midcentury, and that gain rises to almost 5 percent compared with a business-as-usual scenario, if positive impacts of avoiding climate damage are taken into account.

Today's Investment, Tomorrow's Goals

The Paris-based economic policy body released the report at the eighth annual Petersberg Climate Dialogue, which Germany hosted in Berlin as part of its presidency of the G-20 countries, which account for about 85 percent of global economic output and about 80 percent of carbon dioxide emissions.

Infrastructure investments made to 2030 will determine whether the 2015 Paris Agreement's goal to hold global warming to 2 degrees Celsius in this century, compared with pre-industrial levels, can be achieved, the report said. Smart infrastructure includes renewable energy generation and storage, electric vehicles, advanced building insulation techniques and negative emissions technologies, and restoring degraded grasslands, among others.

Public and private financing are crucial to infrastructure investment, the OECD said in the report. Today's low-interest rates give many countries "fiscal space" to borrow, while others can optimize their tax-and-spending mix to pay for projects. Meanwhile, well-aligned climate, fiscal, and

investment policies will spur increased private investment.

The OECD said the "financial system" has to do more to correctly value and incorporate climate-related risks for infrastructure investments. And development banks and finance institutions should boost available resources, while helping to develop "green finance" in partner countries.

The organization's 35 member countries, which are mainly wealthy economies, include Group of 20 members Australia, Canada, France, Germany, Italy, Japan, Mexico, South Korea, Turkey, the U.K. and the U.S. Argentina, Brazil, China, India, Indonesia, Russia, Saudi Arabia, and South Africa are G-20 members but not in the OECD. The European Union also is a G-20 member.

Merkel to Confront Climate-Change 'Doubters' Among G-20 Peers

Posted May 23, 2017, 10:07 A.M. ET

By Brian Parkin

German Chancellor Angela Merkel said she won't give up trying to persuade doubters among her global peers that climate change is real, signaling her message for a Group of Seven summit starting May 26.

Merkel called on countries to uphold the Paris Agreement to combat climate change and limit the rise of global temperatures, which was brokered by nearly 200 nations in 2015 and entered into force in November. U.S. President Donald Trump, who has called global warming a hoax, may be on the verge of saying whether he'll stick to the pact.

"Today, we need to capture the same spirit that marked the completion of the climate pact in Paris, in terms of implementation in Europe, among G-7 and G-20 countries, and the United Nations," Merkel said May 23 in a speech to a conference in Berlin. "I am trying to persuade the doubters."

Merkel, a former environment minister, has consistently championed the Paris agreement, which pledged emerging countries such as China to combat global warming for the first time. The potentially divisive topic is likely to be on the agenda as well when Merkel hosts fellow Group of 20 leaders for a summit in Hamburg in July.

Toyota, Nissan, Honda to Lead Japan's Hydrogen Station Coalition

Posted May 23, 2017, 12:10 P.M. ET

By Toshio Aritake

Eleven leading Japanese companies including Toyota, Nissan and Honda said they will collaborate to build more hydrogen stations to accommodate fuel cell motor vehicles in Japan.

While the government has a target of 160 hydrogen stations serving 40,000 fuel cell vehicles by 2020, just 90 hydrogen stations are currently in operation—and slightly more than 1,000 fuel cell vehicles on Japanese roads, according to government statistics and the Japan Automobile Manufacturers Association.

The companies are Toyota Motor Corp. , Nissan Motor Co., Honda Motor Co., JXTG Nippon Oil & Energy Corp., Idemitsu Kosan Co. Ltd., Iwatani Corp., Tokyo Gas Co., Toho Gas Co. Ltd., Air Liquide Japan Ltd., Toyota Tsusho Corp., and the Development Bank of Japan Inc., they said in a May 19 announcement.

The cost of building a hydrogen filling station is more than twice the cost of building a gas station, the Japan Automobile Manufacturers Association said.

Clean Car Rules Lead to Jobs From Technology, Equipment

Posted May 23, 2017, 02:22 P.M. ET

By Ryan Beene

More than a quarter million U.S. jobs are tied to the use of technology and production of materials used to improve vehicle fuel economy, according to a report released May 23 by environmental groups.

The report by the Natural Resources Defense Council and the BlueGreen Alliance seeks to draw attention to jobs supported by auto efficiency regulations under review by the Trump administration. That review was initiated by President Donald Trump in March and directs the Environmental Protection Agency to decide by next April whether to change greenhouse gas standards for 2022-2025 that require annual increases in vehicle efficiency.

The report found that about 1,200 U.S. factories and engineering centers in 48 states produce components such as advanced transmissions or electric motors, or advanced materials such as carbon fiber or aluminum used in vehicles. Those locations employ some 288,000 workers, more than double the number recorded in a 2011 version of the report, the groups said.

“There has been a huge amount of clean vehicle innovation over the last five years,” said Luke Tonachel, director of the clean vehicles and fuels project at the Natural Resources Defense Council, a New York-based environmental group. “Clean vehicle innovations are key to both protecting the environment while also keeping the the U.S. manufacturers in a globally competitive position on technology.“

Current U.S. auto efficiency rules aim to boost average new vehicle fuel economy to more than 50 miles per gallon by 2025. An automaker-funded study released in March found that the standards would lead to higher vehicle prices and reduce auto-sector employment in the short term. The U.S. could see a net gain of about 150,000 jobs by 2031 as fuel savings at the pump outweigh higher vehicle costs, one of the report’s authors said at the time.

Renewable Energy Powers Jobs for Almost 10 Million People

Posted May 23, 2017, 04:12 P.M. ET

By Mahmoud Habboush

Renewable energy employed 9.8 million people last year, up 1.1 percent from 2015, led by solar photovoltaic at 3.09 million jobs, according to the International Renewable Energy Agency’s annual

report on the industry.

Growth has slowed in the past two years while solar photovoltaic and wind categories more than doubled their number of jobs since 2012, the first year assessed, Irena said in the report.

Global renewables employment has climbed every year since 2012, with solar photovoltaic becoming the largest segment by total jobs in 2016, according to the report..

Solar photovoltaic employed 3.09 million people, followed by liquid biofuels at 1.7 million. The wind industry had 1.2 million employees, a 7 percent increase from 2015.

Employment in renewables, excluding large hydro power, increased 2.8 percent last year to 8.3 million people, with China, Brazil, the U.S., India, Japan and Germany the leading job markets. Asian countries accounted for 62 percent of total jobs in 2016 compared with 50 percent in 2013.

Renewables jobs could total 24 million in 2030, as more countries take steps to combat climate change, the agency said in the report.

Subject: Industry backs EPA legal push on methane rule

By Alex Guillén

07/11/2017 12:10 PM EDT

A coalition of industry groups today backed EPA's request for a federal court to lift its July 3 order striking down Administrator Scott Pruitt's 90-day stay of the 2016 methane rule for new oil and gas wells.

The industry groups echoed EPA's arguments that the court should have waited longer to formally order EPA to resume enforcing the rule. Courts typically wait 45 days or longer for that step to allow for appeals, but the 90-day stay would have expired around that time.

The groups also pointed to EPA's forthcoming plan to issue a two-year stay of the methane rule's requirements, on which EPA is taking comment now. That could mean regulatory whiplash for oil and gas drillers, they argued.

"It is unreasonable to require immediate compliance with the 2016 Rule when the requirements may again be stayed shortly after being implemented," they wrote, adding that there would be little environmental benefit but "very significant" costs to industry.

Meanwhile, coalitions of environmentalists and states supportive of the rule urged the court not to reinstate Pruitt's stay. The rule had been in effect since August, and if the court had not acted immediately, the stay would have remained effectively unchanged despite being ruled unlawful, they argued.

Any risk faced by industry "is due to the Administrator's own dilatory and irregular approach to suspending these protections, as well as some companies' failure to take advantage of the extensive lead time" for compliance, the green groups added.

WHAT'S NEXT: EPA's response is due by Wednesday at 10 a.m. The court could decide shortly after whether to reverse its order. EPA's separate two-year stay of the rule is expected to take weeks or months to finalize.

Driving the Day

BREAKING LATE LAST NIGHT -- STATEMENT FROM REP. STEVE SCALISE'S (R-LA.) OFFICE: "Congressman Steve Scalise has been readmitted to the Intensive Care Unit at MedStar Washington Hospital Center due to new concerns for infection. His condition is listed as serious. We will provide another update tomorrow, July 6."

Good Thursday morning. PRESIDENT DONALD TRUMP IS IN POLAND ... WHAT HE SAID AT HIS NEWS CONFERENCE WITH ANDRZEJ DUDA -- TRUMP said Polish Americans came "out in droves" in the 2016 election and he noted he was "very happy" with the result ... He said the U.S. was working with Poland to counter Russia's "destabilizing behavior" in the region ... Trump vowed to confront North Korea "very strongly" and said "there are consequences for their very, very bad behavior."

TRUMP CALLED ON The Daily Mail's David Martosko and NBC's Hallie Jackson at his press conference.

-- ON CNN: "I think what CNN did was unfortunate for them. ... They have been fake news for a long time ... They have been covering me in a very dishonest way ... NBC is equally as bad despite the fact that I made them a fortunate with 'The Apprentice,' but they forgot that."

-- ON NORTH KOREA: "We'll see what happens. ... I have some pretty severe things that we are thinking about."

-- ON RUSSIAN INTERFERENCE IN THE 2016 ELECTIONS: "I think it was Russia, and I think it could've been other people. ... I agree, I think it was Russia, but I think it

was probably other people or countries ... Nobody really knows for sure."

TRUMP likened his uncertainty about who meddled in the election to the false intelligence about weapons of mass destruction in Iraq.

Other items: Trump said the U.S. would "continue to work with Poland" militarily to counter Russia's influence in the region, but the two presidents did not discuss guarantees. There are up to 5,000 U.S. troops in Poland, Trump said.

STANDING WITH the presidents of Poland and Croatia, Trump said: "This is a beautiful room, I must say. I love beautiful rooms," according to print pooler Abby Phillip of the Washington Post.

-- AND ... TRUMP SPOKE ABOUT THE U.S. ECONOMY: "We picked up in market value almost $4 trillion dollars ... Personally, I've picked up nothing. Everybody else is getting very rich. That's ok."

NOTE -- @GlennThrush: ".@realDonaldTrump slams fake news, then stands by as Duda describes why he's restricting Polish media outlets from covering parliament."

THE PRESIDENT is speaking at Krasinski Square around 7:15 a.m. D.C. time. He'll then leave for Hamburg for the G20 Summit. He meets with German Chancellor Angela Merkel at noon. At 1:30 p.m., Trump will attend the Northeast Asia Security Dinner with South Korean President Moon Jae-In and Japanese President Shinzo Abe.

SPOTTED ON THE TRIP: U.S. Ambassador to Poland Paul Jones, Commerce Secretary Wilbur Ross, Jared Kushner, national security adviser HR McMaster, National Economic Council Director Gary Cohn, Dina Powell, Sean Spicer, Dan Scavino, Hope Hicks, Rob Porter, Wendy Teramoto, Eli Miller and Stephen Miller, per the pool.

-- **@juliehdavis**: "Spotted at Trump's Krasinski Square speech in Warsaw: fmr WH national security advisers Gen. Jim Jones (Obama) & Steve Hadley (Bush 43)"

-- WHAT TRUMP WILL SAY IN HIS BIG SPEECH ... Excerpts, per the pool: "The triumph of the Polish spirit over centuries of hardship gives us all hope for a future in which good conquers evil, and peace achieves victory over war. ... I am here today not just to visit an old ally, but to hold it up as an example for others who seek freedom and who wish to summon the courage and the will to defend our civilization ... We must stand united against these shared enemies to strip them of their territory, their funding, their networks, and any form of ideological support. While we will always welcome new citizens who share our values and love our people, our borders will always be closed to terrorism and extremism. ...

"Finally, on both sides of the Atlantic , our citizens are confronted by yet another danger -- one firmly within our control. This danger is invisible to some but familiar to the Poles. The steady creep of government bureaucracy that drains the vitality and wealth

of the people The West became great not because of paperwork and regulations but because people were allowed to chase their dreams and pursue their destinies. Americans, Poles, and the nations of Europe value individual freedom and sovereignty. We must work together to counter forces, whether they come from inside or out, from the South or the East, that threaten over time to undermine these values and to erase the bonds of culture, faith and tradition that make us who we are. ...

"The people have been that foundation here in Poland -- they were right here in Warsaw -- and they were the foundation from the very beginning in America. ... Because as the Polish experience reminds us -- the defense of the West ultimately rests not only on means but also on the will of its people to prevail. The fundamental question of our time is whether the West has the will to survive. ... Our own fight for the West does not begin on the battlefield -- it begins with our minds, our wills, and our souls."

THE STAKES -- NYT A1, "Talks With Putin Pose Main Risks Of Trump's Trip," by Julie Hirschfeld Davis and Glenn Thrush (online headline: **"Trump Aides' Biggest Worry About Europe Trip: Meeting With Putin"):** "Even his top aides do not know precisely what Mr. Trump will decide to say or do when he and Mr. Putin meet face to face on Friday on the sidelines of the Group of 20 economic summit gathering in Hamburg, Germany. And that is what most worries those advisers as well as officials across his administration as Mr. Trump begins his second foreign trip as president, stopping first in Warsaw to give an address on Thursday and then heading to Hamburg.

"**The highly anticipated conversation** with Mr. Putin is in many ways a necessity, given the critical disputes separating the United States and Russia. But it also poses risks for Mr. Trump, who faces a web of investigations into his campaign's possible links to Russia, as well as questions about his willingness to take on Moscow for its military aggression and election meddling on his behalf. The air of uncertainty about the meeting is only heightened by the president's propensity for unpredictable utterances and awkward optics." http://nyti.ms/2tPli9Z

OTHER MEETING TO WATCH: Trump is slated to meet with Chinese President Xi Jinping just as he has ratcheted up his rhetoric over North Korea.

--"The Flashpoints for World Leaders at the Hamburg G-20," by Bloomberg's Alan Crawford and Sam Dodge: "Sparks could really ???y over the policy agenda of free trade, climate change and migration put forward by the German host." https://bloom.bg/2uN5nX9

HAPPENING TONIGHT -- Leaders from Canada, Argentina, Norway and Belgium are gathering with Coldplay, Shakira, Pharrell Williams and Ellie Goulding for the Global Citizen Festival in Hamburg ahead of the G20. Their aim is to raise commitments of up to $661 million from governments to support global health, gender equality and education. Trump was not invited. A source in the organization organizing the festival told us they do not believe he has made a meaningful commitment to the world's poor. ***Livestream at 1 p.m. Eastern*** http://bit.ly/2sPmXIQ

FOR YOUR RADAR -- "S. Korea fires missiles in drills amid standoff with North," by AP's Hyung-Jin Kim in Seoul, South Korea: "South Korean jets and navy ships fired a barrage of guided-missiles into the ocean during drills Thursday, a display of military power two days after North Korea test-launched its first intercontinental ballistic missile. ... The live-fire drills off South Korea's east coast were previously scheduled. In a show of force, South Korea and the United States also staged 'deep strike' precision missile firing drills on Wednesday as a warning to the North." http://bit.ly/2uNhpzE

-- "U.S. missile shield not yet ready for North Korean nukes: The Pentagon and its contractors still haven't figured out how to reliably shoot down an intercontinental ballistic missile like the one recently tested by North Korea," by Jacqueline Klimas and Connor O'Brien: "Tens of billions of dollars spent over three decades have still left the Pentagon with no reliable way to shoot down nuclear-tipped missiles approaching the U.S. homeland - a vulnerability that has taken on sharp new urgency after North Korea's Independence Day test of its first ICBM. Instead, the missile defense system designed to shield the United States from an intercontinental ballistic missile - a diverse network of sensors, radars, and interceptor missiles based in Alaska and California - has failed three of its five tests, military leaders acknowledge.

"Even the two successful ones were heavily scripted. 'If the North Koreans fired everything they had at us, and we fired at all of the missiles, we'd probably get most of them,' said Jeffrey Lewis, the director of the East Asia nonproliferation program at the James Martin Center for Nonproliferation Studies. 'But is 'probably get most' a good day or a bad day?'" http://politi.co/2tL6ny6

-- "U.S. diplomat blasts China and Russia for 'holding the hands' of North Korean leader," by WaPo's David Nakamura and Emily Rauhala: "The top U.S. diplomat at the United Nations blasted Russia and China on Wednesday for 'holding the hands' of North Korean leader Kim Jong Un, as the Trump administration struggled to respond to Pyongyang's latest ballistic missile test. U.N. Ambassador Nikki Haley chided Moscow and Beijing over their opposition to a Security Council resolution condemning North Korea and imposing greater economic sanctions for what she called its 'sharp military escalation.'" http://wapo.st/2usY2Nb

TARA PALMERI -- FIEFDOM ALERT -- "Trump's aides build their own empires in the West Wing": "President Donald Trump won office on promises to shake up how Washington works, and so far that's been most apparent in his own West Wing, where his top advisers have built up personal staffs to support their own agendas instead of using a traditional White House policy and messaging operation. ...

"Chief strategist Steve Bannon has two special assistants , a deputy assistant, an executive assistant and a body man working in his 'war room' -- plus his external press hand, something his predecessors under President Barack Obama, David Axelrod and David Plouffe, never had while working in the White House. Senior adviser Jared Kushner has seven staffers below him, including his own communications adviser, a former Hollywood PR exec who previously repped Kushner's real estate work. ...

"Senior counselor Kellyanne Conway ... has a chief of staff, Renee Hudson, who manages one person below her ... Ivanka Trump also has a chief of staff, Julie Radford, who holds the title of special assistant to the president and only manages a single person below her. ... Most noticeable is the proliferation of spokespeople operating parallel to the White House press office. That includes spokesman Josh Raffel, a commissioned officer with a senior title and salary who handles White House-related queries concerning Jared Kushner and Ivanka Trump's initiatives. He's also worked to promote initiatives from the Office of American Innovation like a tech CEO event in addition to Kushner's work on Israel and Ivanka Trump's paid leave initiatives. Raffel previously represented Kushner Companies when he worked at Hiltzik Strategies, a New York firm." http://politi.co/2sPjARW

MITCH MCCONNELL'S LATEST HEADACHE -- "Right threatens McConnell's Obamacare repeal," by Burgess Everett: "Conservative groups are aggressively backing Mike Lee and Ted Cruz in their bid to move the Senate Republicans' Obamacare repeal bill further to the right, setting up a major confrontation between the party's warring factions next week.

"On Wednesday afternoon both FreedomWorks and the Club for Growth urged Senate Majority Leader Mitch McConnell (R-Ky.) to adopt an amendment from Sens. Cruz of Texas and Lee of Utah that would largely gut Obamacare's regulatory regime. The move is significant: Without at least a neutral stance from conservative groups, it could be impossible for McConnell to find the 50 votes needed to pass a repeal this month. But what the right is asking for may not be able to pass the Senate either.

"Cruz and Lee's Consumer Freedom Act would allow the sale of non-compliant healthcare plans as long as insurers offered plans that also covered pre-existing conditions and other terms mandated by the Affordable Care Act. Lee and Cruz, who were part of the Senate's health care working group, have been pushing their colleagues privately to adopt the language, arguing they should at least allow consumers to buy cheap plans if they can't repeal the law entirely." http://politi.co/2sr0jXD

-- "GOP Scrambles to Recruit Senate Candidates," by WSJ's Natalie Andrews: http://on.wsj.com/2ssKK1R

THE OPPOSITION -- "Dems' new pitch to voters: A 'Better Deal'," by Elana Schor and Heather Caygle: "Democratic leaders are zeroing in on a new mantra for their long-

promised economic agenda: the 'Better Deal.' The re-branding attempt comes as Democrats acknowledge that simply running against President Donald Trump wasn't a winning strategy in 2016 and probably won't work in 2018 either. The slogan, which is still being polled in battleground House districts, aims to convince voters that Democrats have more to offer than the GOP and the self-proclaimed deal-maker in the White House. But even as Senate Minority Leader Chuck Schumer and House Minority Leader Nancy Pelosi prepare a jobs package centered on infrastructure, trade and the minimum wage, some of their most vulnerable members are already making other plans.

"Several moderate Democrats facing reelection next year told POLITICO that no matter what leadership does, they're preparing to craft their own pitch to voters. The ideological and political divides that gripped the party during the Hillary Clinton-Bernie Sanders primary wars are far from healed, and leadership may not find universal support for the left-leaning platform, particularly from those trying to defend seats in Trump-friendly states." http://politi.co/2trdcT4

IN FOGGY BOTTOM -- "Tillerson's new deputy quietly wins over State Department staffers," by Nahal Toosi: "John Sullivan, the new deputy secretary of state, is quickly winning over State Department employees by taking otherwise ordinary steps in what seem like extraordinary times. The 57-year-old has repeatedly stated his admiration for the foreign service, even as President Donald Trump has proposed gutting it. He talks to career officers - and says he wants to meet all of them, even as Secretary of State Rex Tillerson grows increasingly isolated from his staff. Sullivan has also pushed the boundaries of the Trump administration's ethos by reaching out to Democrats as well as Republicans to help him prepare for his new job. ...

"On Wednesday, Tillerson announced that Sullivan would oversee a steering team focused on ways to restructure the State Department and the U.S. Agency for International Development, the most contentious issue facing the agency as Trump pushes to shrink its budget and 75,000-person workforce. Although he's been a Supreme Court law clerk, held a top legal position at the Pentagon, and served as the deputy secretary of commerce, Sullivan had no direct State Department experience when nominated to be deputy to Tillerson, who is widely viewed within his department as isolated from and dismissive of career staff." http://politi.co/2ts9oRp

-- "Tillerson urges Russia to cooperate on Syria ahead of Trump-Putin meeting," by Nahal Toosi: "Secretary of State Rex Tillerson on Wednesday called on Russia to do more to bring peace to Syria, and suggested that Moscow and Washington could cooperate on establishing no-fly zones in the war-torn Arab country. In the unusual statement, Tillerson also insisted that America's top priority in Syria remains defeating the Islamic State terrorist network and that the future of the Syrian regime of Bashar Assad, who is engaged in a civil war with rebel factions, must be decided through a political settlement." http://politi.co/2ut3fEK

THE JUICE ...

-- **FIRST IN PLAYBOOK: SHANNON DIBARI**, chief operating officer and executive vice president at the U.S. Chamber of Commerce, is retiring at the end of the year after 38 years with the trade group. Statement from the Chamber: "Her generous advance notification gives us ample time to plan a smooth transition of her duties and appropriately celebrate her success."

-- PLAYBOOK SCOOP: Senate Homeland Security and Governmental Affairs Committee Chairman Ron Johnson (R-Wis.) is releasing a report and sending a letter to Attorney General Jeff Sessions detailing what he believes are national security risks posed by leaks. The report from the majority staff says: "Under President Trump, leaks are flowing at the rate of one a day, an examination of open-source material by the majority staff of the Committee on Homeland Security and Governmental Affairs shows. Articles published by a range of national news organizations between January 20 and May 25, 2017 included at least 125 stories with leaked information potentially damaging to national security ... To ensure the security of our country's most sensitive information, federal law enforcement officials ought to thoroughly investigate leaks of potentially sensitive information flowing at an alarming rate." ***The report*** http://politi.co/2tjVIJG

Playbook Reads

PHOTO DU JOUR: President Donald Trump shakes hands with Poland's President Andrzej Duda after arriving at the Royal Castle on July 6 in Warsaw. | Evan Vucci/AP Photo

AN ADAPTATION from Josh Green's new book on Steve Bannon, which just posted on Bloomberg Businessweek's site at 6 a.m. -- **"The Evolution of Donald Trump":** "History could have been different. While Trump always displayed populist instincts, his opinions on national affairs tended to reflect the views of a New York Democrat, which was, after all, the world he inhabited. It's almost impossible to imagine now, but in the period just before he entered politics, Trump's appeal to blacks and Hispanics was powerful enough to make him the darling of corporate America. Although he was not a politician, Trump's multicultural appeal was an achievement that a sclerotic Republican Party was increasingly desperate to match. One reason this story has never been told is because Trump decided he'd be better served politically by destroying this legacy. He wasn't exactly wrong: His 'birther' attack on President Obama in 2011, when Trump was eyeing a 2012 run, marked a sharp pivot on race and then immigration that enabled his remarkable rise to the presidency." https://bloom.bg/2tjXIlm ... ***$21.80 on Amazon*** http://amzn.to/2utkR30

BUZZY READ -- NYT BUSINESS DAY COVER -- "A Network vs. the President," by Mike Grynbaum (online headline: "The Network Against the Leader of the Free World): "Jeffrey A. Zucker hasn't been getting a lot of sleep lately. But he says that's nothing new. 'I don't sleep that much anyway,' Mr. Zucker, the president of CNN, said on Wednesday in his fifth-floor office, just off the network's glassy Midtown Manhattan newsroom. A television executive with a reputation for pugilism - a plaque above his desk reads 'Punch Today in the Face' -- Mr. Zucker, 52, has weathered decades of battles in his industry. But he and CNN are in the middle of their most intense bout yet: an unlikely public fight with the leader of the free world.

"It is rare that a single news organization attracts the level of ire mustered by President Trump, who over the weekend posted on Twitter a video that portrayed him wrestling a figure with the logo of CNN for a head. ... The onslaught has contributed to a foxhole-like mentality inside CNN's offices, where security measures have been tightened and some hosts have considered abandoning their social media accounts because of abuse. ...

"White House advisers have discussed a potential point of leverage over their adversary, a senior administration official said: a pending merger between CNN's parent company, Time Warner, and AT&T. Mr. Trump's Justice Department will decide whether to approve the merger, and while analysts say there is little to stop the deal from moving forward, the president's animus toward CNN remains a wild card." http://nyti.ms/2tsO91W

****** **A message from Postmates:** Operating in over 200 cities across the United States - Postmates is an innovative, on-demand logistics platform, transforming the way goods move around towns by enabling anyone to have anything delivered to their door step within minutes, and driving over $1B in goods and merchandise across its platform in 2017. https://postmates.com ******

TRUMP INC. -- "Trump Organization renews rights to TrumpTowerMoscow.com," by Madeline Conway and Tyler Fisher: "The Trump Organization has renewed its claim on more than 1,000 of the web domains registered by its general counsel, including some politically sensitive websites such as TrumpRussia.com and TrumpTowerMoscow.com. The company, which President Donald Trump's two adult sons are managing while he serves in the White House but from which he has not divested, has reserved thousands of web domains associated with the Trump name and its various properties. POLITICO recently published a searchable database of hundreds of those URLs, based on publicly available internet directory records on the domain registration database website WhoIs.com." http://politi.co/2sPcwF7

MEDIAWATCH - "An inside look at One America News, the insurgent TV network taking 'pro-Trump' to new heights," by WaPo's Marc Fisher: "One America News is an obscure TV channel struggling to emerge from the cellar of the cable ratings, but it is nonetheless one of President Trump's favorite media outlets. It's not hard to see why: On One America newscasts, the Trump administration is a juggernaut of progress, a

shining success with a daily drumbeat of achievements. ... [S]ince its inception in 2013, and especially since Trump began his march to the White House, One America's owner, Robert Herring Sr., a millionaire who made his money printing circuit boards, has directed his channel to push Trump's candidacy, scuttle stories about police shootings, encourage anti-abortion stories, minimize coverage of Russian aggression, and steer away from the new president's troubles, according to more than a dozen current and former producers, writers and anchors, as well as internal emails from Herring and his top news executives." http://wapo.st/2tP7aO3

--"The New York Times will fly you around the world for $135,000. Is that a problem?" by WaPo's Paul Farhi: "It's the trip of a lifetime - around the world in 26 days, with stops in nine countries. Just 50 people will travel on this guided tour next year via a private Boeing 757 to places like Marrakesh, Easter Island and Reykjavik, Iceland.

"The price: $135,000 per person. And that's not all. Those who make the journey will be accompanied on various legs by journalists from the New York Times. ... Among those scheduled to join the traveling party are Washington bureau chief Elisabeth Bumiller, op-ed columnist Nicholas Kristof and Publisher Arthur O. Sulzberger Jr. The super-luxe journey and other Times-sponsored travel packages are a lucrative source of income for the paper at a time when news organizations are under increasing financial pressure. The round-the-world trip ... could gross as much as $6.7 million." http://wapo.st/2ut6YSP ... ***See the trip*** http://nyti.ms/2sIPtAJ

Playbookers

SPOTTED: Former FBI director James Comey at National Airport assisting his daughter as she applied for TSA PreCheck ... Cambridge Analytica CEO Alexander Nix and Matthew Swift at dinner last night at Milos in NYC.

DAN BARTLETT, Jay Carney, and Geoff Morrell were all named to PR Week's U.S. Power List 2017: http://bit.ly/2tLo28U

Subject: BREAKING NEWS: McConnell calls for Ethics Committee probe of Franken

Senate Majority Leader Mitch McConnell called for an Ethics Committee investigation of Sen. Al Franken after allegations that he groped a woman in 2006.

"As with all credible allegations of sexual harassment or assault, I believe the Ethics Committee should review the matter. I hope the Democratic Leader will join me on this," he said. "Regardless of party, harassment and assault are completely unacceptable-in the workplace or anywhere else."

Today's Playbook Power Briefing presented by Better Medicare Alliance

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Friday afternoon. TO: SUN VALLEY, ATTN: JARED -- "Startup That Got a Seat at White House Roundtable Is Part-Owned by Kushner Family: Venture-capital firm run by Kushner's brother partly owns OpenGov, whose CEO last month attended summit with Donald Trump, leaders of Apple, Amazon, Microsoft," by WSJ's Jean Eaglesham and Lisa Schwartz: "Prominent technology-industry leaders and venture capitalists gathered in the White House's state dining room last month to discuss tech policy with President Donald Trump in an event that Jared Kushner, the president's son-in-law and senior adviser, helped organize.

"Seated at the rectangular table alongside the corporate luminaries , university presidents and senior White House officials was a less-prominent figure: Zachary Bookman, the 37-year-old CEO of a small startup called OpenGov. Mr. Kushner's brother, through a venture-capital firm, is a part owner of OpenGov, according to government disclosures and data from Dow Jones VentureSource. Until earlier this year, Mr. Kushner owned stakes in the venture-capital firm that he sold to his brother, according to a person familiar with the matter. Mr. Kushner's connection to OpenGov isn't widely known. ...

"OpenGov's Mr. Bookman was the only chief executive of a small firm among the 18 tech leaders to get a seat at the table with the president. At least one other startup CEO had a second-row seat. OpenGov's valuation was estimated at $180 million after an October 2015 funding round, according to Dow Jones VentureSource, while the average market capitalization of the 14 publicly traded companies represented at the table-including Amazon.com Inc., Apple Inc., Microsoft Corp. and Alphabet Inc. -- is about $250 billion, according to FactSet. ...

"Mr. Kushner recently filed an amended disclosure form, which is expected to be released publicly soon, according to people close to him. It will disclose assets that Mr. Kushner didn't report in his original filing in March, including up to $250,000 of Israeli government bonds he sold earlier this year and an art collection he jointly owns with his wife, Ivanka Trump, the people said." http://on.wsj.com/2urc9FL

DRIP, DRIP, DRIP -- "Russian-American lobbyist says he was in Trump son's meeting" by NBC News' Ken Dilanian, Natasha Lebedeva and Hallie Jackson: "A Russian-American lobbyist says he attended a June 2016 meeting with President Donald Trump's son, marking another shift in the account of a discussion that was billed as part of a Russian government effort to help the Republican's White House campaign. Rinat Akhmetshin confirmed his participation to The Associated Press on Friday. Akhmetshin has been reported to have ties to Russian intelligence agencies, though he denies those links. ...

"While Trump Jr. has confirmed that Russian attorney Natalia Veselnitskaya was in the meeting, he did not disclose Akhmetshin's presence. The president's son has tried to discount the meeting, saying that he did not receive the information he was promised. Akhmetshin said Trump Jr. asked the attorney for evidence of illicit money flowing to the Democratic National Committee, but Veselnitskaya said she didn't have that information. She said the Trump campaign would need to research it more, and after that Trump Jr. lost interest, according to Akhmetshin." http://bit.ly/2umEJY0 ... ***NBC's report, which did not initially name the lobbyist*** http://nbcnews.to/2vkHt5v

-- "U.S. officials probing Russian lobbyist who met Trump team," by Ali Watkins: "U.S. officials are examining what role a Washington-based lobbyist who they consider a Russian intelligence operative may have played in a controversial June 2016 meeting he attended between Donald Trump Jr. and a Russian lawyer [Rinat Akhmetshin] ... U.S. officials became aware of Akhmetshin's potential involvement in the meeting earlier this week. Three officials expressed their concern about his role to POLITICO and said they were probing it further as part of their larger investigation into ties between Trump associates and the Kremlin." http://politi.co/2vlkV4A

-- BRAD PARSCALE SPEAKS: @parscale on Twitter: "I am unaware of any Russian involvement in the digital and data operations of the 2016 Trump presidential campaign. The Trump digital campaign used the exact same digital marketing strategies that are used every day by corporate America. ... I have accepted a request from the House Intelligence Committee to meet with them for a voluntary interview, and I look forward to sharing with them everything I know." ***Full statement:*** http://bit.ly/2ummwtO

LAWYERING UP -- "Trump to Hire Lawyer Ty Cobb to Respond to Russia Probes," by Bloomberg's Jennifer Jacobs: "President Donald Trump plans to put a veteran Washington lawyer, Ty Cobb, in charge of overseeing the White House's legal and media response to investigations into Russian meddling in the 2016 campaign. Top administration officials want someone to enforce discipline in the White House regarding Russia matters -- and that includes the president, who frequently vents his frustrations about the investigations on Twitter, two people familiar with the decision said. They requested anonymity because Cobb's hiring hasn't been announced. ...

"Cobb will be the central in-house figure on matters related to the investigations into Russian interference in the election and the Trump campaign's possible involvement,

working closely with Trump's outside legal team led by Marc Kasowitz. Cobb is a relative of the legendary American Baseball League home run champion and outfielder of the same name. He has a reputation for managing crises and dealing with corruption allegations, and he's familiar with the workings of the Justice Department and FBI. He represented figures involved in government investigations during former President Bill Clinton's administration, according to Reuters, which reported on July 3 that Trump had met with him." https://bloom.bg/2umN8uS

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. ON THE HILL -- "House Republicans weigh massive partisan spending bill," by Rachael Bade, Sarah Ferris and Jennifer Scholtes: "House GOP leaders will decide next week whether to brave an ugly floor fight over a massive GOP spending bill -- a proposal applauded by some rank-and-file Republicans but that risks embarrassment if it fails. In a closed-door GOP conference meeting Friday morning, House Majority Leader Kevin McCarthy said all 12 appropriations bills will be finished in committee by the end of next week. Starting Monday, leadership will begin a tentative whip count on whether lawmakers would vote for a package before the August recess that combines all of those bills into one $1 trillion government funding bill.

"The idea, first proposed by Rep. Tom Graves, a senior appropriator, is to give House Republicans a chance to pass a red-meat spending bill that will lay out GOP priorities. Though the bill would never pass the Senate in the face of Democratic opposition, the process would allow House Republicans to offer potentially hundreds of amendments, an exercise that excites members who are frustrated that they've had no input on how to fund the government. ... The strategy could open something of a Pandora's box, however. Lawmakers would be required to vote on controversial amendments that could be used against them in their districts, from provisions on the Confederate flag to gay rights proposals that put them in bind. Democratic amendments chiding the administration for the Russia controversy are almost assured.Perhaps more worrisome: The bill might fail on the floor, which would provoke another flood of damaging headlines about the GOP's deep divisions and inability govern." http://politi.co/2vla3nz

-- "House passes budget-busting defense policy bill," by Connor O'Brien: http://politi.co/2vlciHr

THE DOUGH -- SEN. JOHN CORNYN (R-TEXAS) got $247,700 from Paul L. Foster, the chairman of Western Refining.

TODAY'S BONUS BRIEFING -- In our last bonus audio briefing, Jake and Anna preview the year ahead for the Playbook community http://bit.ly/2vkWTqs

TRUMP INC. -- "Ivanka Inc.: The first daughter talks about improving the lives of working women. Her father urges companies to 'buy American.' But her fashion line's practices collide with those principles - and are out of step with industry trends," by WaPo's Matea Gold, Drew Harwell, Maher Sattar and Simon Denyer: "While President Trump has chastised companies for outsourcing jobs overseas, an examination by The Washington Post has revealed the extent to which Ivanka Trump's company relies exclusively on foreign factories in countries such as Bangladesh, Indonesia and China, where low-wage laborers have limited ability to advocate for themselves.

"And while Ivanka Trump published a book this spring declaring that improving the lives of working women is 'my life's mission,' The Post found that her company lags behind many in the apparel industry when it comes to monitoring the treatment of the largely female workforce employed in factories around the world. From big brands such as Adidas and Kenneth Cole to smaller, newer players like California-based Everlane, many U.S. clothing companies have in recent years made protecting factory workers abroad a priority - hiring independent auditors to monitor labor conditions, pressing factory owners to make improvements and providing consumers with details about the overseas facilities where their goods are produced.

"But the Trump brand has taken a more hands-off approach. Although executives say they have a code of conduct that prohibits physical abuse and child labor, the company relies on its suppliers to abide by the policy. The clothing line declined to disclose the language of the code." http://wapo.st/2vkF8rn

WHITE HOUSE STATEMENTS -- @realDonaldTrump at 9:47 a.m.: "Great conversations with President @EmmanuelMacron and his representatives on trade, military and security." ... **at 10:16 a.m.:** "Left Paris for U.S.A. Will be heading to New Jersey and attending the #USWomensOpen, their most important tournament, this afternoon." ***The U.S. Women's Open is at Trump's club in Bedminster.***

BEN SCHRECKINGER in POLITICO Magazine, "The Putin Obsession That Led to Trump Jr.'s Meeting: Russia has been trying to roll back human rights sanctions for years. And Moscow's strategy is getting more sophisticated": "The Russian lawyer whose June meeting at Trump Tower is rocking American politics was just the tip of the spear of a massive, years-long effort by the Kremlin against human rights laws named for Sergei Magnitsky, a Russian lawyer who died under mysterious circumstances while a prisoner of the Russian government. The sweeping Kremlin campaign has included lobbying Congress, the creation and promotion of several slick documentaries, the opening of murder investigations in Russia against the laws' top advocate, the use of social media bots to promote criticism of the laws and the posting of a suspiciously popular petition calling for repeal on WhiteHouse.gov. And it's been a personal fixation

of Russian President Vladimir Putin, who has railed against the 2012 Magnitsky Act and its various incarnations for years." http://politi.co/2tlwK9A

HOT ON THE LEFT -- "The Wasted Mind of Ben Sasse," by Slate's Ben Mathis-Lilley: "Many politicians are hypocrites, of course. But most of them are also phonies and bulls****ters. Ben Sasse isn't. He stands out by educating himself earnestly and speaking honestly about complicated matters of history and policy. (He's got to be the only serving Senate Republican to have written a book that approvingly cites 1960s leftist cultural critic Paul Goodman.) Unfortunately, he is also beginning to stand out by doing nothing of substance as the things he says he believes in are thrown in a garbage can by his own party." http://slate.me/2vkIpqx

TOP VID -- French army band medleys Daft Punk following Bastille Day parade for Trump and Macron -- *3 min. video* http://bit.ly/2vkE0nL

TONIGHT ON TV -- Washington Week's Bob Costa will be joined by The New York Times' Mark Mazzetti, The Washington Post's Ashley Parker, The Cook Political Report's Amy Walter, and TIME's Michael Scherer.

HOT JOB -- POLICY ANALYST -- EXECUTIVE OFFICE OF THE PRESIDENT: Open & closing dates 2017-07-13 to 2017-07-27. Salary $66,510 to $123,234 / per year http://bit.ly/2tlYbQB

HMM... -- "This Congressman Doesn't Think Climate Science Is Real. He Just Went On A Secret Tour Of The Melting Arctic," by BuzzFeed News' Zaha Hirji: "Lamar Smith, one of the most vocal critics of climate science in Congress, led a secret trip to the Arctic in May, BuzzFeed News has learned. He and at least eight other U.S. representatives, mostly members of the House Committee on Science, Space, and Technology, met with scientists working on the front lines of climate change. ... Billed as an oversight visit for the science committee, the May 8-14 trip included a series of closed-door sessions for the politicians to inspect facilities and learn about federally funded science conducted at research hot spots in the Arctic Circle, as well as social events for the lawmakers and their families. No one publicized the visit, and some scientists told BuzzFeed News they were instructed not to talk about it." http://bzfd.it/2umLDg5

AFTERNOON READ -- "The Ayatollah's Billion-Dollar Alaskan Bag Man," by Zach Dorfman in POLITICO Magazine: "In August 2012, a silver Rolls-Royce pulled up to the majestic Broadmoor Hotel in Colorado Springs, Colorado. Out stepped a newly married couple, freshly arrived from their wedding ceremony. ... The bride wore a dazzling sapphire pendant around her neck, matching sapphire earrings and a weighty diamond ring around her finger. At the wedding dinner, a man toasted the groom, Mitchell Zong, as the kind of person who 'really bends over backwards to help friends and family.'

"Less than two years later, when FBI agents, executing a search warrant, entered the Zong family's Southern California home, they took that same sapphire wedding set,

valued at more than $40,000, as well as $24,000 in cash. Federal prosecutors had initiated a huge civil forfeiture case over property owned by the Zong family, including Mitchell Zong. Prosecutors claim that what the FBI seized that day represents a fraction of the ill-gotten funds that tie Mitchell Zong to a spectacular transnational sanctions-evasion scheme, one that laundered more than $1 billion in Iranian government funds over a mere six-month period in 2011.

"And the unlikely figure at the center of this story-which encompasses shadowy Iranian businessmen based in the Middle East and Caucasus; high-ranking South Korean state banking officials; an Iranian-American airline magnate whose planes have been linked to covert work for the U.S. government, including the CIA; the difficult politics of multilateral sanctions; the abstruse world of illicit finance; and laundered property and goods spread across three U.S. states-is a septuagenarian Alaskan ex-salmon exporter and restaurateur, Mitchell's father, Kenneth Keun Zong." http://politi.co/2umMWeX

TODAY'S BEYOND THE BELTWAY -- Sheldon Silver's conviction vacated in New York -- Jerry Brown presses hard for cap-and-trade http://politi.co/2vlnyU2

POWER SHOWER -- Reps. Diane Black (R-Tenn.), Susan Brooks (R-Ind.) and Cathy McMorris (R-Wash.) co-hosted a bridal shower for New York Republican Rep. Elise Stefanik, who's engaged to Matt Manda. Attendees brought a cooking utensil or gadget and recipe at the all-women fete last night at Rep. Black's home. Each lawmaker also gave marriage advice to Stefanik, starting with the longest-married member North Carolina Rep. Virginia Foxx, who has been married for 53 years. One attendee said that there was lots of laughs throughout the evening and that the lawmakers even remembered to collect the bows and make a bouquet.

SPOTTED: Sen. Shelley Moore Capito (R-W.Va.), Reps. Ann Wagner (R-Mo.), Kyrsten Sinema (R-Ariz.), Mimi Walters (R-Calif.), Ileana Ros-Lehtinen (R-Fla.), Kathleen Rice (D-N.Y.), Barbara Comstock (R-Va.), Marsha Blackburn (R-Tenn.), Debbie Dingell (D-Mich.) and Suzanne Bonamici (D-Ore.).

TRANSITIONS -- Sam Ori has been named executive director of the Becker Friedman Institute for Research in Economics at UChicago; he was most recently executive director of the university's Energy Policy Institute. ... **Ryan Erickson** has started as a policy advisor to Rhode Island Gov. Gina Raimondo. He was previously associate director of economic campaigns at the Center for American Progress. ...

... **Sam Hananel** has been hired as the Center for American Progress' associate director of media relations. He was previously an AP reporter covering the Supreme Court. Additionally, **Kyle Epstein** is now a senior media coordinator at CAP. He previously worked on the CAP project Generation Progress.

SPOTTED boarding a morning American flight out of DCA to Martha's Vineyard: Heather Podesta, Steve Kessler, Tammy Haddad, Ken Feinberg, former Sen. John

Breaux (D-La.), and former Rep. Jane Harman (D-Calif.). It is the DSCC's annual weekend on the island.

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Energy and Climate Report

May 31, 2017 - Number 104

News

Climate Change

EU, China to Reaffirm Paris Agreement Commitment, as U.S. Wavers

The European Union and China will reaffirm their commitment to the United Nations Paris Agreement on climate change during a June 1–2 summit in Brussels, despite uncertainty about continued U.S. participation in the deal.

Climate Policy

Exxon Investors to Company: Make Climate Curb Fallout Public

Exxon Mobil Corp. investors, in a split with the company, urged the explorer to publish a detailed analysis next year on how carbon curbs could affect the value of its oil fields, refineries and pipelines.

Climate Policy

Swiss Pickles Set to Benefit from First Carbon Capture Plant

Climeworks AG, the Swiss company that captures carbon from the air, opened its first commercial facility at a farm outside of Zurich.

Coal Mining

Environmentalists Revive Lawsuit Against Federal Coal Leasing Program

One of the litigants in an on-hold lawsuit over the Interior Department's coal leasing program said it's necessary to restart the case in light of the department's decision to begin processing coal lease applications again.

Energy

Exelon: Still Time for Pennsylvania to Help Three Mile Island

Pennsylvania's legislature still has time to help keep Exelon Corp.'s financially struggling Three Mile Island nuclear plant operating, Exelon's Joseph Dominguez told Bloomberg BNA.

Energy

Is Three Mile Island the Canary in Nuclear's Coal Mine?

In 1979, Three Mile Island managed to survive the worst nuclear accident in U.S. history. Almost four decades later, the Pennsylvania power plant can't seem to withstand cheap natural gas. And the Nuclear Energy Institute, which represents commercial nuclear operators in the U.S., is warning that lots of other U.S. reactors are equally imperiled.

International Climate

Musk Leads CEOs' Full-Court Press on Paris as Trump Weighs Exit

As Donald Trump nears a final decision on the Paris climate agreement, top corporate

executives are mounting a last-minute push aimed at persuading the president that the U.S. has more to lose from abandoning the accord.

International Climate

Scoring Business Climate Action a Dilemma as Paris Exit Looms

The prospect of President Donald Trump pulling the U.S. out of the Paris climate pact has spurred states and U.S. companies to pledge to fill any gap in climate action. But the real gap may be in finding the right yardstick to measure companies' often-voluntary efforts as well as uniting a loose coalition of states that have cut carbon emissions.

International Climate

Solar Stocks Fall on Reports That U.S. May Exit Paris Agreement

Solar manufacturers fell sharply on reports May 31 that President Donald Trump is leaning toward withdrawing the U.S. from the landmark 2015 Paris climate accord.

Motor Vehicles

EU Proposes Truck Monitoring as Preparation for Emissions Standard

Manufacturers of trucks and other heavy-duty vehicles sold in the European Union would be required to monitor and report their vehicles' carbon dioxide emissions and fuel economy performance, under a long-delayed proposal published by the European Commission May 31.

Natural Gas

Could West Virginia Royalty Reversal Spark Suits?

The West Virginia Supreme Court's reversal of a decision on oil and gas leases is likely to spark more court cases unless the Legislature steps in, attorneys say.

Oil & Gas

EPA Methane Regulations Officially on Hold

An Obama-era EPA rule designed to limit methane leaks from oil and gas wells is officially on hold, as the agency's new leadership begins the formal process of weighing whether to repeal it altogether.

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Expect GOP Plaudits for Pruitt But Not EPA Budget at Hearing

Posted June 09, 2017, 6:00 A.M. ET

By Brian Dabbs

EPA chief Scott Pruitt will likely get a warm welcome from Republican appropriators next week despite bipartisan opposition to the agency's fiscal year 2018 budget, a GOP lawmaker told Bloomberg BNA.

Republicans are applauding the agency's regulatory rollbacks, and that praise will likely set the tone for Pruitt's maiden testimony on Capitol Hill as administrator, said Rep. Tom Cole (R-Okla.), a member of the House Appropriations Subcommittee on Interior, Environment and Related Agencies, which oversees the Environmental Protection Agency's budget.

Members on both sides of the aisle, however, are poised to raise concerns about the wide-ranging cuts in the agency's budget, lawmakers said. Pruitt will defend the request, which was crafted and released by the White House, before the subcommittee on June 15.

'A Very Friendly Reception'

"He'll get, obviously from the Republican side, a very friendly reception because of the regulatory things, but I think there'll be some pretty serious discussions about the size of the cuts," Cole told Bloomberg BNA. "I think at the end of the day, EPA takes a haircut. It's certainly taken several haircuts with a Republican Congress, but it's hard for me to see cuts of the size that were proposed in the president's budget."

The EPA is reviewing rules defining which bodies of water are subject to federal regulation and limiting methane emissions in oil and gas operations, as well as those setting ozone and fuel economy standards. The agency is also reviewing the Clean Power Plan, President Barack Obama's signature rule to combat climate change by limiting power plant emissions.

But the FY18 budget cuts, which total $2.6 billion, hit immediate Republican opposition on Capitol Hill. That reduction amounts to nearly one-third of the agency's current budget.

"Just trying to substitute agency cuts for policy disagreement is a tool, but it's probably not the longest-lasting, most effective one," Rep. Mark Amodei (R-Nev.), another member of the

subcommittee told Bloomberg BNA. "I don't think that any of those people on that committee are going to vote for cuts just because that's the administration's recommendation."

The budget would slash enforcement and zero out funding for programs to restore the Great Lakes, Chesapeake Bay and other bodies of water, while chopping an array of other bedrock programs. The White House is requesting a roughly 80 percent reduction in funding for the Diesel Emissions Reduction Act, which funds clean diesel projects. That program is a favorite of subcommittee Chairman Ken Calvert (R-Calif.).

'The King's Man'

The White House budget also makes deep cuts in Superfund and state grant accounts, both of which Pruitt has singled out as important functions. But the administrator is prepared to vouch for the budget before lawmakers.

"Administrator Pruitt will be testifying in support of the president's proposed budget, which seeks to return EPA to its statutory mission, and reduce redundancies and inefficiencies," EPA spokeswoman Liz Bowman told Bloomberg BNA. "We believe that with better leadership, and reducing inefficiencies and administrative costs, we can accelerate the pace of the clean-ups of [Superfund sites]. It is also worth noting that we believe there is a significant amount of money being wasted in administrative costs in this program."

Agency chiefs regularly disagree with some aspects of a budget they're tasked to defend.

"He works for the president. You take the king's shilling, you become the king's man. That's just the way it works," Cole said. "At the end of the day, if you're going to be part of the administration, you have to defend the president's budget."

Carbon Prices Continue to Drop in Northeast

Posted June 09, 2017, 01:34 P.M. ET

By Gerald B. Silverman

The cost for electricity generators to comply with the Regional Greenhouse Gas Initiative sank to a four-and-a-half-year low in RGGI's latest auction, driven by an oversupplied market and uncertainty over a longstanding program review by the nine states in the initiative.

RGGI carbon allowances sold for $2.53 in the auction, a decline of 15.6 percent from the previous auction and 44 percent from June 2016, RGGI announced June 9.

The trend in RGGI carbon prices has been downward for a couple of years, as a result of an over-supply of allowances, regulatory uncertainty on the federal and state levels and the prices for natural gas and renewables.

Mike Taylor, president of Emission Advisors Inc., told Bloomberg BNA that the decline was not a surprise, given a large bank of unused allowances, declining emissions, and an "underwhelming" program review.

Taylor said "a case can be made for prices to trend up through the remainder of the decade," as the bank of allowances is depleted and the nine RGGI states complete their review of the program.

RGGI states -- Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island and Vermont -- started a program review in 2015 that will determine if the existing emissions cap will be tightened after 2020, when the current cap expires.

EPA's Pruitt Could Face Tough Crowd at G-7 Environment Meeting

Posted June 09, 2017, 6:30 A.M. ET

By Eric J. Lyman

Climate-related issues are just one part of the agenda for this weekend's meeting in Italy of environment ministers from the leading industrial nations, but EPA Administrator Scott Pruitt can expect an earful on the decision of the U.S. to withdraw from the Paris climate change agreement, environmental groups said.

"The ministerial in Bologna is first and foremost an opportunity for the G-7 countries to send a clear signal to Scott Pruitt that these actions are not tolerated, that backsliding doesn't come without consequences," Climate Action Network International Executive Director Wael Hmaidan told Bloomberg BNA.

Environmental officials from the Group of Seven nations—Canada, France, Germany, Italy, Japan, the U.K. and the U.S.—meet in Bologna, Italy, June 11-12.

An outline of the meeting goals released June 8 said they would focus on the "state of implementation of the goals set by the Paris Agreement to fight climate change," sustainable development goals that are part of the United Nations' 2030 agenda, environmental tax reform, and sustainable finance.

Italian ministry officials declined to comment on the priorities at the talks.

'Trump's Crazy Decision'

Trump announced June 1 that the U.S. would withdraw from the Paris Agreement, which has the support of virtually every other nation. The Environmental Protection Agency's Pruitt was among the strongest voices in the Trump administration calling for withdrawal from the Paris accord, agreeing with Trump that the pact would cost U.S. workers jobs, especially in industries like coal mining.

"Despite Trump's crazy decision, the G-7 should strongly afford the need to implement the Paris accord and push countries to put more effort into filling the void left by the United States," Luca Iacoboni, the head of the energy and climate program for Greenpeace-Italy, told Bloomberg BNA.

Angelo Paletta, a business professor at the University of Bologna who is following the talks, said: "It will be important to understand what this means about other countries commitments over the next five years, as well as concerns about finance as the world tries to raise $100 billion per year starting in 2020."

Paletta was referring to the United Nations' Green Climate Fund, which aims to help developing countries adapt to the impacts of climate change.

President Barack Obama had pledged that the U.S. would commit $3 billion over four years to the

fund, but Trump has vowed to halt U.S. contributions to the fund.

EPA's Reconsideration of Power Plant Carbon Rule at White House

Posted June 09, 2017, 10:12 A.M. ET

By Andrew Childers

The White House is reviewing the EPA's plan to roll back carbon dioxide standards on the fleet of existing power plants.

Environmental Protection Agency Administrator Scott Pruitt opposed the Obama-era regulation, known as the Clean Power Plan, while he was Oklahoma attorney general. He has repeatedly said the EPA overstepped its Clean Air Act authority issuing the rule and Congress needs to speak directly to the agency's power to regulate greenhouse gases.

The Clean Power Plan faces a host of legal challenges from states and utility groups. The EPA asked a federal appellate court to indefinitely pause those challenges while it reconsiders the power plant rule.

Paris Pullout Pits Chamber Against Some of Its Biggest Members

Posted June 09, 2017, 8:30 A.M. ET

By Ari Natter

As President Donald Trump mulled whether to exit the Paris climate accord, companies as varied as Dow Chemical Corp., Exxon Mobil Corp., and Citigroup Inc. prodded him to stay in.

But when Trump announced his decision, he cited research from one business behemoth that's issued a steady stream of criticism to the Paris deal, the U.S. Chamber of Commerce that counts all three companies as members.

That disconnect between corporate executives and the nation's top corporate lobbying force is reviving pressure on the Chamber—and on the companies that remain members despite their differences over climate policy.

"For decades, the U.S. Chamber of Commerce has been big polluters' partisan enforcer in Washington," Democratic Sen. Sheldon Whitehouse, who co-authored a congressional report last year about this corporate disconnect over climate change, said in an emailed statement.

"It's time for member companies to ask themselves whether they want to side with a relentless climate foe, or protect the health and safety of the American people and the reputation of our country," he added.

Public Citizen and other groups said they are starting a petition drive to prod three companies—Walt Disney Co., Gap Inc., and PepsiCo Inc.—to drop their connection to the U.S. Chamber. That organized pressure is reminiscent of 2009, when companies such as Apple Inc. and Exelon Corp that advocated for federal action to address climate change quit the Washington group as it lobbied to derail cap-and-trade legislation.

"You've got a lot of companies that are really talking out of both sides of their mouth," said Dan Dudis, who heads the Chamber Watch project at Public Citizen.

The U.S. Chamber of Commerce spent nearly $104 million on lobbying last year making it the top lobbying spender among 3,734 groups tracked by the Center for Responsive Politics. Among the issues it has championed are reworking the Affordable Care Act, business tax cuts, and opposition to a minimum wage hike. The group, which has its headquarters across Lafayette Square from the White House, said it was officially neutral on the Paris accord despite its long list of criticisms.

The chamber said in a statement that the business community "stands ready to fashion solutions to keep America prosperous, clean and secure. America should choose a path for an energy future that is achievable, affordable, and most importantly meaningful."

From coal producer Cloud Peak Energy Inc. to electric-automaker Tesla Inc., corporate America has broadly supported the Paris accord, a 2015 agreement of nearly 200 nations to address the threat of climate change. The deal is the first to include pledges from developing nations such as India and China to curtail their emissions, as well as developed nations in North America and Europe.

Among the companies that signed onto an open letter to publicly support the Paris climate agreement were Microsoft Corp. and Google's Alphabet Inc. Ivanka Trump appealed to Dow Chemical's CEO Andrew Liveris to spearhead a late lobbying push to try to save U.S. involvement in the pact. And executives' response to Trump's decision was quick and overwhelmingly negative. Robert Iger, chief executive of Disney, resigned from a White House advisory council. Ford Motor Co. and Microsoft weighed in with their dismay, too.

In response to questions from Bloomberg, companies said they agree with the chamber on some issues, but not all. Others said they are putting pressure on it to change course.

"We have been outspoken in our support for the Paris Agreement and have had a dialogue with the chamber about how its views and advocacy on climate policy are inconsistent with Citi's position," Citigroup spokeswoman Elizabeth Kelly said in an email. "Citi does not expect to be in agreement with every position our trade associations take."

Time to Time

Dow, which gave the chamber $1.8 million for lobbying in 2016, "participates in many trade and business associations," the chemical-maker's spokeswoman Rachelle Schikorra, said in an email. "From time to time, we find ourselves in disagreement with the prevailing views of the majority of the U.S. Chamber's membership, including issues such as climate change."

"PepsiCo's long-standing commitment to addressing climate change will not change," the company said in a statement that didn't address questions about its ties to the chamber.

"No organization speaks for Ford on every issue," said Christin Baker, a Ford spokeswoman. "The chamber has been actively supportive of tax reform, but takes a different view on climate. We will continue to work with the chamber on issues where we are aligned."

Companies may differ with the chamber on climate change, but agree on taxes or labor issues, said Lee Drutman, a senior fellow in the program on political reform at New America, a Washington research organization. Still, they face the risk of customer blowback.

"Any company with a consumer-facing brand has to worry about its reputation," Drutman said in a

phone interview. "If it's on the wrong side of a political issue that its customer base is passionate about, it could find itself losing a lot of customers."

Oil giant Exxon, which disclosed giving the U.S. Chamber of Commerce Foundation $1 million in 2015, advocated for staying in the Paris accord, as its chief executive Darren Woods argued that oil demand will continue to grow in the coming decades even with the agreement in place.

"We believe that the United States is well positioned to compete within the framework of the Paris Agreement, with abundant low-carbon resources such as natural gas, and innovative private industries," spokesman Alan Jeffers, said in an email. He declined to comment on the chamber's report on Paris.

While the chamber said it hadn't made a recommendation on whether the U.S. should remain in Paris, it issued a series of criticisms of the pact since even before it was completed.

In congressional testimony, it said the U.S. pledge to cut greenhouse gas emissions by 26 percent would hike U.S. energy costs and diminish job creation—and that the pact would not do much to actually curtail greenhouse gas emissions. The chamber jointly funded a study in March that determined the deal could slice $3 trillion off U.S. gross domestic product by 2040.

Trump made specific reference to that study, and each of the group's earlier arguments, in announcing his decision to pull the U.S. out of the pact.

"The cost to the economy at this time would be close to $3 trillion in lost GDP and 6.5 million industrial jobs, while households would have 7,000 less income, and in many cases, much worse than that," Trump said in the Rose Garden ceremony June 1.

Kevin Steinberger, a policy analyst with the Natural Resources Defense Council's climate and clean air program, said the chamber's claim that it was neutral on the accord was "disingenuous."

"The report was clearly aimed at attacking the Paris agreement and used an unrealistic scenario to do so," he said.

Trump Climate Critics Wrong on Pulling Out of Paris, Perry Says

Posted June 09, 2017, 02:23 P.M. ET

By Feifei Shen and Tom Mackenzie

Critics of President Donald Trump's move to withdraw the U.S. from the Paris climate change agreement are acting more for political reasons than for the reality of what the accord may achieve, U.S. Energy Secretary Rick Perry said June 9 in an interview where he defended the president's move.

Goldman Sachs Group Inc. Chief Executive Officer Lloyd Blankfein, JPMorgan Chase & Co. Chairman Jamie Dimon and others ranging from General Motors Co. and Ford Motor Co. to Exxon Mobil Corp. are wrong about wanting the U.S. to remain a part of the Paris climate deal, Perry said

in a Bloomberg Television interview with Tom Mackenzie.

"When you looked at the cost versus the benefit of what you're going to get from being in the Paris agreement, it wasn't worth it," Perry said in Beijing. "I think they are wrong, because they're coming at it from the political side of it rather than the reality."

Perry was in Beijing June 7 and 8 attending a ministerial-level meeting on clean energy where he made a broad appeal to cooperate on natural gas, nuclear energy and technologies such as carbon capture and storage.

"The reality is we are going to continue to be leaders on clean energy," Perry said, adding that the U.S. will continue to contribute to mitigating climate change. "There's a real story to be told here about the U.S.; it's about what we are doing to reduce emissions."

China Meetings

Earlier in the week, Perry met with Chinese Vice Premier Zhang Gaoli where he emphasized areas where the two countries can cooperate. One area is liquefied natural gas. The U.S. is the world's largest producer of natural gas and within a few years will be the third-largest exporter of the super-chilled version of the fuel.

Companies are proposing dozens of new export plants in the U.S. and need foreign buyers to underpin financing for the multi-billion-dollar projects. China, which is trying to increase gas use instead of coal to help clear smog-choked air, should be interested in U.S. supplies because the projects have the benefit of political stability, Perry said.

Perry also said President Trump is right to look at selling some oil from the Strategic Petroleum Reserve. The Trump administration proposed a budget last month that included selling off 270 million barrels on top of a 190 million-barrel drawdown already planned. The reserve currently has a little less than 700 million barrels of oil.

Strategic Reserves

On the strategic reserve, "the debate is what's the right level," Perry said. "The president is right to have the conversation. How much of this do we really need to keep on hand, how much of it can we put into the market, and how do you manage all that. That is classic Donald Trump negotiating a better deal for the people of the U.S."

When in Tokyo earlier in the week, Perry sounded a combative tone, challenging China to take up the mantle of leadership on climate change while dodging questions about whether President Trump believes in global warming.

"Those of you that focus on that are chasing a rabbit down a hole," Perry told reporters in Tokyo.

China has transformed itself into one of the world's leaders in renewables in recent years with ambitious bets on wind and solar. The country, which is home to about one out of every three wind turbines in the world, has led in clean-energy spending since 2012. In the first quarter of this year, China outspent the U.S. and Japan combined on clean-energy projects.

Macron Said to Push for Franco-German Carbon Emissions Price Floor

Posted June 09, 2017, 12:09 P.M. ET

By Francois de Beaupuy and Helene Fouquet

Emmanuel Macron reached out to Germany to establish a common price floor for carbon dioxide emitted by power utilities as the French president seeks to strengthen his alliance with Angela Merkel after the U.S. decided to exit the Paris climate accord, according to people familiar with the matter.

Macron wants to revive a plan to set up a minimum price of 30 euros ($33.55) per ton of CO2 emissions, about six times the current European level, a French official said, asking not to be named as the matter isn't yet public. France is seeking to convince Germany and other European countries to adopt a similar plan, the person said. It would also make sense for countries such as Belgium, the Netherlands and Luxembourg, said another person who has heard about Macron's initiative.

Merkel and Macron have been leading the international opposition to the disruptive presidency of Donald Trump in the U.S. rallying support for trade and climate action. Macron this week launched an appeal to U.S. environmentalists to come work in France, while Merkel is in Latin America preparing for another meeting with Trump at the Group of 20 summit in Hamburg.

The U.S. decision to exit the Paris climate accord comes after the price of European carbon permits plunged from their 2008 peak, eroding the penalty for burning coal, the most polluting fuel. Companies from Electricite de France SA to Engie SA have lobbied for a minimum price of at least 30 euros, arguing it would boost the use of cleaner natural gas-fired power stations.

Hard Sell

Spokesmen at Germany's Environment Ministry weren't immediately available for comment. Messages seeking comment from the French president's office weren't immediately replied to.

The proposal may be a hard sell in the short term for German Chancellor Merkel, who faces general elections in September. A floor price for carbon emissions might hurt German utilities RWE AG and Uniper SE, which have said it would lead to job losses because they rely heavily on lignite and coal to produce electricity.

France unsuccessfully tried to convince Germany to adopt a common carbon floor price last year in a bid to supplement the EU's Emissions Trading System, which has failed to provide an efficient incentive to reduce greenhouse gases. A glut of pollution rights pushed prices in the $48 billion market down more than 80 percent since 2008.

France then considered introducing a floor price unilaterally last year before dropping the plan a few months before this year's presidential elections amid labor union protests that it would prompt coal-fired plant closures.

The French and German leaders plan to hold a joint cabinet meeting over the summer.

Generating Revenue

A tax on carbon would generate government receipts, which could be used to mitigate the "social impacts" of the energy transition on the coal industry, EDF Chief Executive Officer Jean-Bernard Levy said June 8 at a conference in Paris organized by the Toulouse School of Economics. By introducing a levy of 18 pounds ($22.88) per ton of CO2 emissions, the U.K. has cut the share of coal in electricity production to 10 percent from 30 percent in two years, he said.

"The time is the right one today for an initiative that maybe could be generated in France, with quick support of Germany, obviously after the September elections," Levy said. "It can be done gradually, and it can be done in such a way that it leads to no massive phasing out of production means in the short term."

India Power Plants Stranded as 50 Million Homes Left in the Dark

Posted June 09, 2017, 10:56 A.M. ET

By Anindya Upadhyay

India is scaling back expectations for power demand growth as it struggles to electrify millions of homes despite a glut in generation capacity.

The world's second-most populous nation is building more power plants than it can utilize as state-level distributors struggle to connect 50 million households, according to Ravindra Kumar Verma, head of the Central Electricity Authority, the power ministry's planning arm. As a result, about 25 gigawatts of coal-fired power-generating capacity is "stranded" and unused, he said. That's equivalent to the entire installed capacity of neighboring Pakistan.

Demand growth for power is slowing as state distribution companies, known as discoms, struggle to purchase enough electricity for the populations they serve. Most discoms lose money selling below cost to poor and agricultural customers and through power theft. The CEA defines demand as the amount of electricity that distributors buy, not necessarily how much would be needed for the whole country, helping explain why millions still lack power and several cities face regular blackouts despite the under-utilized capacity.

"We were thinking that the entire demand will come on the system, but it has not happened that way," Verma said in an interview in New Delhi June 6. "When discoms turn around is the point when we will get close to 24/7 power. That's where all the constraint lies."

Electricity use is estimated to grow 6.2 percent a year over the six years ending March 2022. Consumption over the previous six years expanded 5.3 percent, missing a 7.6 percent forecast, the CEA said in its latest power survey report published this year. The lower-than-expected growth rate led the agency to temper its outlook, Verma said.

"Projections are estimated growth rates worked out on the basis of certain assumptions. If the assumptions slip, then projections are hit," he said.

India is on track to add 102 gigawatts of conventional power projects in the five years ended March

2017, compared with a target of 88.5 gigawatts, according to country's Draft Electricity Plan published in December. At the same time, the country's gas-fired plants, which can generate nearly 25 gigawatts of power, are running at less than a quarter of their capacity, according to the plan. The country's capacity totaled 329 gigawatts, with more than half of that coming from coal-fired plants, according to CEA data.

Subject: Wehrum says degree of human role in climate change an 'open question'

By Alex Guillén

10/04/2017 01:38 PM EDT

William Wehrum, the nominee to run EPA's air office, said today that the degree of human contribution to climate change is an "open question."

In response to questions from Sen. Jeff Merkley, Wehrum said human activity contributes in some manner to climate change, but declined to say whether human activity is the primary driver.

"These are very complex issues and very important issues and I understand they're important to you," Wehrum added at a Senate Environment and Public Works Committee hearing before Merkley cut him off. Wehrum declined several times to answer follow-up questions, drawing the ire of Merkley, who expressed incredulity that Wehrum was not familiar enough with those issues to comment despite his lengthy history working on environmental legal issues in the private sector and at EPA.

"No one can look at what is happening on the planet and see that there is nothing happening unless you're deliberately determined to ignore that information," Merkley said. "And that makes you really quite frankly unacceptable to serve in this capacity."

WHAT'S NEXT: The Senate Environment and Public Works Committee has not yet set a date to vote on Wehrum's nomination.

Subject: Senators send letter opposing EPA cuts to RFS volumes

By Eric Wolff

10/05/2017 01:48 PM EDT

A bipartisan group of 38 senators are calling on EPA Administrator Scott Pruitt to reverse the proposed cuts to biodiesel and cellulosic ethanol volumes in the Renewable Fuel Standard.

A letter led by Sens. Chuck Grassley (R-Iowa) and Amy Klobuchar (D-Minn.) praises Pruitt for setting conventional biofuel volumes at the maximum allowed by law, but says the agency's proposed rule setting biofuels volumes for 2018 and 2019 "unjustifiably flatlines biomass-based diesel, reduces advanced biofuels, and reduces the cellulosic biofuel blending target by about 25 percent."

The senators attack EPA's methodology for using historical measures and not forward projections. They also criticize EPA for proposing to reduce biodiesel volumes in a notice released last week, and for considering allowing credits for exported biofuel.

"If done right, this rule is an opportunity to continue our nation's path to be not only the world leader in first generation ethanol production, but also in cellulosic ethanol and advanced biofuel production by spurring investment and manufacturing here in the United States rather than overseas," the letter says.

WHAT'S NEXT: Grassley and Sens. Joni Ernst (R-Iowa) and Deb Fischer (R-Neb.) are scheduled to meet with Pruitt next week.

Subject: Senate approves Wehrum for EPA air post

By Alex Guillén

11/09/2017 12:03 PM EDT

The Senate today approved William Wehrum to be assistant administrator for air and radiation at EPA, filling a top vacancy in Administrator Scott Pruitt staff.

Wehrum was approved on a vote of 49-47.

Most recently an attorney at Hunton & Williams, Wehrum had previously served as the acting top air official under George W. Bush, although that appointment had been stalled by Democrats.

Five other EPA nominees are currently awaiting Senate approval, including deputy nominee Andrew Wheeler, who had his confirmation hearing on Wednesday, as well as nominees to run the enforcement, water, chemicals and general counsel's offices.

WHAT'S NEXT: Wehrum will be sworm into his new position as early as this afternoon.

Subject: BREAKING NEWS: U.S. to expand laptop ban to all flights that flunk safeguards

The Trump administration is threatening to expand its laptop ban to all U.S.-bound flights from anywhere in the world for airlines that fail to take additional security measures against concealed explosives, DHS plans to announce Wednesday.

The restrictions would also apply to checked luggage - not just to the carry-on bags targeted by a more limited ban the U.S. imposed for some Middle Eastern airports in March. That additional provision would make the ban considerably more onerous for business travelers, but would also avoid the dangers of stacking laptops and their flammable lithium batteries inside planes' cargo holds.

But the new measures could also allow several foreign-owned airlines to escape the existing laptop ban that the U.S. imposed in March for carry-on luggage from 10 airports in the Middle East and North Africa, if they adopt the additional screening procedures.

The U.S. hasn't announced when the new restrictions would take effect but said some airlines could adopt the enhanced security procedures as early as this summer.

Like the initial ban, the expanded restrictions would apply to electronic devices larger than a cellphone, including laptops, tablets and e-readers.

California Regions

AIR
Health Risk Assessment Methodology
California Regions AIR

Notice of the Mojave Desert Air Quality Management District announces an interim policy concerning health risk assessments and the calculation of maximum individual cancer risk under Rules 1320 and 1520, which address toxic air contaminants. The district is decreasing the exposure duration used for estimating cancer risk at the maximum exposed individual resident from 70 years to 30 years and the off-site worker exposure duration from 46 to 25 years. The interim policy aligns the district's calculation methodology with the California Air Resources Board and California Air Pollution Control Officers Association risk management guidance for stationary sources of air toxics and the Office of Environmental Health Hazard Assessment's 2015 health risk assessment methodology. The district intends to amend Rules 1320 and 1520 at a later date. Contact: Mojave Desert AQMD, Engineering/Permitting Department; 760-245-1661; engineering@mdaqmd.ca.gov

Regulatory Update

WATER
Municipal Wastewater Dischargers
California Regions WATER

Notice of the Central Valley Regional Water Quality Control Board announces a tentative general order regarding water discharge requirements for municipal waste dischargers that meet specified objectives and criteria at the point of discharge to surface water. The order permits discharges of secondary and tertiary treated wastewater under specified conditions; includes site-specific limitations; and sets forth additional requirements for low volume, existing, new or increased, and ultraviolet light disinfection dischargers. Coverage under the order serves as a national pollutant discharge elimination system permit. The order is proposed to be effective Dec. 1, 2017, and expire Nov. 30, 2022. A hearing is scheduled for Aug. 10-11, 2017, in Rancho

Cordova. Comments are due Aug. 4, 2017. Contact: David Kirn; Central Valley RWQCB; 916-464-4761; david.kirn@waterboards.ca.gov

Regulatory Update

Delaware

AIR

New Source Performance Standards/Municipal Solid Waste Landfills
Delaware AIR

Final rule of the Department of Natural Resources and Environmental Control, Division of Air Quality, amends regulations under 7 DEAC 1120 regarding new source performance standards. The rule incorporates by reference federal requirements concerning volatile organic compound and methane emissions from municipal solid waste landfills (40 CFR 60, Subparts Cf and XXX). The rule also expands the applicability of new source performance standards to both existing and new municipal solid waste landfills and revises the state plan for such facilities. The state plan will be submitted to the EPA for approval. The rule is effective July 11, 2017. Contact: Jim Snead; DNREC; 302-323-4542; jsnead@state.de.us

—Delaware Register of Regulations (07/01/2017)

Regulatory Update

WATER

Licensing Operators of Wastewater Facilities
Delaware WATER

Proposed rule of the Department of Natural Resources and Environmental Control, Division of Water, amends regulations under 7 DEAC 7204 regarding licensing operators of wastewater facilities. The rule updates the treatment plant classification process, modifies licensing requirements, and adds a temporary level I operator-in-training license. The rule also specifies that results for the licensing examination are valid for three years, reorganizes provisions and renumbers provisions, and reflects the reorganization of the Board of Certification. A hearing is scheduled for Aug. 10, 2017, in Dover. Comments are due July 31, 2017. Contact: Bryan Ashby; DNREC; 302-739-9946; Bryan.Ashby@state.de.us

Regulatory Update

Kansas

WATER
Surface Water Quality Standards
Kansas WATER

Proposed rule of the Department of Health and Environment amends regulations under KAR 28-16-28b, -28d, -28e, and -28f and adopts regulations under KAR 28-16-28h regarding surface water quality standards. The rule incorporates the March 2, 2017, version of the Kansas Surface Water Quality Standards: Tables of Numeric Criteria, which include a new reference for the ammonia aquatic life criteria, add a total ammonia acute criterion, and provide new total ammonia chronic criterion, among other changes. The rule also revises the process for variances allowing for individual and multiple discharger variances. In addition, the rule adds the Kansas Surface Water Quality Standards Variance Register to document surface water quality standard variances that have been approved by the agency and made available to the public. Finally, the rule adds definitions, including for the terms discharger, highest attainable condition, interim criterion, interim designated use, multiple-discharger variance, pollutant minimization plan, and reconfiguration activities, and revises numerous other definitions. A hearing is scheduled for Oct. 3, 2017, in Topeka. Comments are due Oct. 3, 2017. Contact: Julia Young; DHE, Bureau of Water; 785-296-5508

Regulatory Update

Mississippi

OCCUPATIONAL SAFETY AND HEALTH
Safety Conveyance Act
Mississippi OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Insurance Department amends regulations under Title 19, Part 8, Chapter 1, regarding the Safety Conveyance Act. The rule updates provisions to prevent the retroactive application of the 2011 National Safety Code for Existing Elevators and Escalators (American Society of Mechanical Engineers A.17.3). The rule also requires that certain hydraulic elevators have the hydraulic jacks pressure tested annually and specifies that those with jacks determined

to be leaking underground must be immediately shut off until the jack unit is replaced. Comments are due July 30, 2017. Contact: Daniel Bradshaw; Insurance Department; 601-359-1074; daniel.bradshaw@mid.ms.gov

By ANNA PALMER (anna@politico.com; @apalmerdc) and JAKE SHERMAN (sherman@politico.com; @JakeSherman) with DANIEL LIPPMAN (daniel@politico.com; @dlippman)

Driving the Day

Good Saturday morning. THE BIG NEWS FROM SICILY -- U.S. ON ITS OWN ON CLIMATE -- "U.S. is the lone G7 holdout on supporting Paris climate deal," by David Herszenhorn and Tara Palmeri in Taormina, Italy: "President Donald Trump refused to join his counterparts in the G7 Saturday in a pledge to uphold the 195-nation Paris accord on climate change, breaking the unified front of the world's most exclusive geopolitical club. ...

"While the declaration included remarkable language, highlighting that the U.S. stood apart, the other allies expressed some relief that Trump had not outright rejected the accord and said they remained hopeful he would come around to supporting the Paris agreement in the coming days. But Trump's refusal to take a position while in Sicily has shaken the unity among the G7, the world's most exclusive geopolitical club. The U.S. has also raised doubts about the G7's longstanding language opposing protectionism in all forms. The Trump administration blocked similar language in a G20 communique earlier this year." http://politi.co/2qmj1Tb

-- FROM THE G7 COMMUNIQUE: "The United States of America is in the process of reviewing its policies on climate change and on the Paris Agreement and thus is not in a position to join the consensus on these topics. Understanding this process, the Heads of State and of Government of Canada, France, Germany, Italy, Japan, and the United Kingdom and the Presidents of the European Council and of the European Commission reaffirm their strong commitment to swiftly implement the Paris Agreement, as previously stated at the Ise-Shima Summit." ***See the full document*** http://bit.ly/2rJ6NEj

FROM SICILY -- @JenniferJJacobs: "It's an unprecedented step for final G7

statement to give the U.S. its own section. U.S. not in unison with other 6 on Paris climate deal."

TWEETS FROM @realDonaldTrump, with the geotag Taormina, Sicily, Italy -- at **5:58 a.m.** : "Big G7 meetings today. Lots of very important matters under discussion. First on the list, of course, is terrorism. #G7Taormina." ... at **6:03 a.m.**: "Many NATO countries have agreed to step up payments considerably, as they should. Money is beginning to pour in- NATO will be much stronger." ... at **8:17 a.m.:** "I will make my final decision on the Paris Accord next week!"

-- NEXT WEEK is typically a slow week in Washington, due to the Memorial Day holiday. Trump's decision should spice things up.

QUITE THE HEADLINE! -- AP: **"What if US quits climate deal? Doesn't look good for Earth,"** by Seth Borenstein http://apne.ws/2qpJviW

THE PORTRAIT: DRAMA. LOTS OF IT -- IN THE NEWS THIS MORNING: Donald Trump's campaign has been asked to turn over all Russia-related documents. Jared Kushner had undisclosed contacts with the Russian ambassador. And the Russian ambassador discussed with Kushner a secret communication channel to Trump world. **THE PRESIDENT** is scheduled to return to the White House around 10:45 p.m.

A DRUMBEAT OF SCOOPS ...

--WAPO: "Russian ambassador told Moscow that Kushner wanted secret communications channel with Kremlin," by Ellen Nakashima, Adam Entous and Greg Miller: "Jared Kushner and Russia's ambassador to Washington discussed the possibility of setting up a secret and secure communications channel between Trump's transition team and the Kremlin, using Russian diplomatic facilities in an apparent move to shield their pre-inauguration discussions from monitoring, according to U.S. officials briefed on intelligence reports.

"Ambassador Sergey Kislyak reported to his superiors in Moscow that Kushner, son-in-law and confidant to then-President-elect Trump, made the proposal during a meeting on Dec. 1 or 2 at Trump Tower, according to intercepts of Russian communications that were reviewed by U.S. officials. Kislyak said Kushner suggested using Russian diplomatic facilities in the United States for the communications. The meeting also was attended by Michael Flynn, Trump's first national security adviser.

"The White House disclosed the meeting only in March, playing down its significance. But people familiar with the matter say the FBI now considers the encounter, as well as another meeting Kushner had with a Russian banker, to be of investigative interest. Kislyak reportedly was taken aback by the suggestion of allowing an American to use Russian communications gear at its embassy or consulate - a proposal that would have carried security risks for Moscow as well as the Trump team." http://wapo.st/2rrNteO

-- BEHIND THE SCENES: "The Post was first alerted in mid-December to the meeting by an anonymous letter, which said, among other things, that Kushner had talked to Kislyak about setting up the communications channel. This week, officials who reviewed the letter ... said the portion about the secret channel was consistent with their understanding of events."

--@nycsouthpaw: "Greg Miller says on MSNBC the anonymous letter came to Ellen Nakashima and appeared to have come from someone inside the transition."

--NYT's Maggie Haberman, Mark Mazzetti and Matt Apuzzo: "It is unclear who first proposed the communications channel, but the people familiar with the meeting said the idea was to have Mr. Flynn speak directly with a senior military official in Moscow to discuss Syria and other security issues. The communications channel was never set up, the people said." http://nyti.ms/2qtJute

-- REUTERS: "Exclusive: Trump son-in-law had undisclosed contacts with Russian envoy - sources," by Ned Parker and Jonathan Landay: "President Donald Trump's son-in-law and close adviser, Jared Kushner, had at least three previously undisclosed contacts with the Russian ambassador to the United States during and after the 2016 presidential campaign, seven current and former U.S. officials told Reuters. Those contacts included two phone calls between April and November last year, two of the sources said. By early this year, Kushner had become a focus of the FBI investigation into whether there was any collusion between the Trump campaign and the Kremlin, said two other sources - one current and one former law enforcement official.

"Kushner initially had come to the attention of FBI investigators last year as they began scrutinizing former national security adviser Michael Flynn's connections with Russian officials, the two sources said. ... After the Nov. 8 election, Kushner and Flynn also discussed with Kislyak the idea of creating a back channel between Trump and Russian President Vladimir Putin that could have bypassed diplomats and intelligence agencies." http://reut.rs/2rlxkS6

-- KUSHNER'S LAWYER RESPOND: "'Mr. Kushner participated in thousands of calls in this time period. He has no recollection of the calls as described,' Kushner's lawyer Jamie Gorelick [of WilmerHale] told POLITICO in a statement, responding to a Reuters report about Kushner's contacts with Russian ambassador to the U.S. Sergey Kislyak. 'We have asked (Reuters) for the dates of such alleged calls so we may look into it and respond, but we have not received such information.'" http://politi.co/2qtFR6K

-- THIS IS GETTING BAD FOR JARED. And there's no shortage of snickering from haters and detractors inside Trump's White House.

-- BOB COSTA IN ON THE ACTION: "Senate Intelligence Committee requests Trump campaign documents": "The Senate Intelligence Committee ... has asked President Trump's political organization to gather and produce all Russia-related

documents, emails and phone records going back to his campaign's launch in June 2015, according to two people briefed on the request.

"The letter from the Senate arrived at Trump's campaign committee last week and was addressed to the group's treasurer. Since then, some former staffers have been notified and asked to cooperate ... The demand follows a Senate request months earlier for the campaign committee to preserve documents. Dozens of former staffers are expected to be contacted in the coming days to make sure they are aware of what they are required to produce and how to submit those documents." http://wapo.st/2s1f2sG

-- NYT, TOO: "Russian Once Tied to Trump Aide Seeks Immunity to Cooperate With Congress," by Barry Meier and Jesse Drucker: "Oleg V. Deripaska, a Russian oligarch once close to President Trump's former campaign manager, has offered to cooperate with congressional committees investigating Russian meddling in the 2016 election, but lawmakers are unwilling to accept his conditions, according to congressional officials. Mr. Deripaska's offer comes amid increased attention to his ties to Paul Manafort, who is one of several Trump associates under F.B.I. scrutiny for possible collusion with Russia during the presidential campaign. ... Senate and House panels turned him down because of concerns that immunity agreements create complications for federal criminal investigators." http://nyti.ms/2rrDA0Q

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** One in two Americans rely on their employers for health care benefits including affordable access to prescription drugs. That's why employers are partnering with PBMs to provide access to effective medications at the most affordable price and improve health outcomes. Learn more at www.affordableprescriptiondrugs.org. ******

INSIDE THE WHITE HOUSE -- "Trump Pushing Big White House Changes as Russia Crisis Grows," by WSJ's Mike Bender and Peter Nicholas: "President Donald Trump is actively discussing major changes in the White House, including having lawyers vet his tweets and shaking up his top staff, as he grapples with the fallout from probes into his campaign's dealings with Russia, according to several senior administration officials and outside advisers. ... Meetings devoted to White House operations are scheduled for next week, after the president returns from his overseas trip, ... One major change under consideration would see the president's social media posts vetted by a team of lawyers, who would decide if any needed to be adjusted or curtailed. The idea, said one of Mr. Trump's advisers, is to create a system so that tweets 'don't go from the president's mind out to the universe.' ...

"Other changes under discussion include removing communications director Mike Dubke and installing Sarah Sanders as the main spokesman instead of Mr. Spicer. ... Mr. Trump's return to Washington will mark the end of a period which, White House staffers said, brought some relief from the hectic pace of the news surrounding the administration and the Russia investigation. Some noted that it gave them a rare time to eat dinner at home." http://on.wsj.com/2qpuzBo

ON THE HILL ... -- "Sources: Nunes still has say in issuing subpoenas in House Intel's Russia inquiry," by CNN's Manu Raju and Tom LoBianco: "In a private meeting this week, House intelligence committee members discussed their plans to move ahead with the Russia investigation into meddling in the US election. And the GOP members made clear that the current rules of the committee still apply: That Nunes can issue the subpoenas 'upon consultation with' ranking Democrat Adam Schiff or by a vote of the full committee, according to several sources familiar with the matter." http://cnn.it/2qZchcL

TRUMP'S SATURDAY -- THE PRESIDENT is giving remarks this morning to military personnel at Naval Air Station Sigonella. From pooler Mike Shear of the New York Times: "[S]picer said that the POTUS speech would [likely] include some trip wrap-up stuff and 'relationship' stuff relating to other countries. So not just a message to the troops."

THE WORLD STAGE -- "Trump brings his solo act to Europe : The president has seemed less at ease among his fellow world leaders in group settings than he is in one-on-one encounters," by Tara Palmeri and David Herszenhorn in Taormina, Sicily: "While he avoided any major gaffes or serious diplomatic breaches, Trump's lack of rapport with European leaders raises serious questions about his ability to effectively team up with critical U.S. allies. 'Like when there's a new strange kid in the class nobody likes,' said a senior EU official who was briefed on the closed NATO meetings in Brussels. 'You behave civilly when teachers [media] watch but don't spend time with him in private because he's so different.'" http://politi.co/2s10dpV

IF YOU READ ONE THING - N.Y. MAGAZINE COVER, "She's Okay. How About You?" by Rebecca Traister (online headline: "**Hillary Clinton Is Furious. And Resigned. And Funny. And Worried** . The surreal post-election life of the woman who would have been president): "Almost everywhere Clinton goes, it seems, someone starts crying. It's not just friends and staffers. And though it was more intense in the weeks immediately following the election, it hasn't entirely let up. At restaurants, in grocery stores, on planes, and in the woods, there are lines of people wanting selfies, hugs, comfort. ... This is the dynamic that is perhaps the most intense for Clinton. "Not so much anymore, but in the immediate aftermath, from after the election to probably the first of the year," she says, 'I had people literally seeking absolution.' ... '"I'm so sorry I didn't vote. I didn't think you needed me." ...

"In particular, Clinton recalls one night at the theater. 'It was intermission, and a woman came over holding the hand of a young woman. She literally dragged her daughter over to see me. And she said, "My daughter has something to tell you ... Tell her." And this girl says to me, "I am really sorry; I didn't think you needed my vote and I didn't vote." And her mother says [yelling], "Yes, she didn't vote! You didn't vote! You're part of the problem!" I said, "Okay, well, next time I hope you'll vote.""

-- A FASCINATING BITE: "I ask her if she's ever been in therapy, and she shakes her head. 'Unh-uh. No. I have not.' When I express surprise, she allows, 'Well, we had some

marital counseling in the late '90s, around our very difficult time, but that's all.' She shrugs. 'That's not how I roll. I'm all for it for anybody who's at all interested in it. It's just not how I deal with stuff.'" http://nym.ag/2qXeBRC ... ***The cover*** http://nym.ag/2qsmRFw

HMM -- "U.S. Quietly Lifts Limit on Number of Refugees Allowed In," by NYT's Gardiner Harris: "Despite repeated efforts by President Trump to curtail refugee resettlements, the State Department this week quietly lifted the department's restriction on the number of refugees allowed to enter the United States. The result could be a near doubling of refugees entering the country, from about 830 people a week in the first three weeks of this month to well over 1,500 people per week by next month, according to refugee advocates. Tens of thousands of refugees are waiting to come to the United States." http://nyti.ms/2qtEhSv

THE JUICE ...

-- NORM EISEN, former U.S. Ambassador to the Czech Republic and White House ethics czar for President Barack Obama, is writing "The Last Palace," a narrative book of historical non-fiction of the people who have lived in the U.S. ambassador's house in Prague over the last 100 years. Those people include the residence's Jewish builder, an aristocratic German general who occupied it during World War Two, and Shirley Temple Black, a child star who later was a diplomat. Eisen's book was sold at auction to Crown and has also been sold to publishers in the U.K., Germany, Italy, Holland, Israel, Brazil and of course the Czech Republic.

REMEMBERING ZBIG -- "Zbigniew Brzezinski, National Security Adviser to Jimmy Carter, Dies at 89," by NYT's Daniel Lewis: "Zbigniew Brzezinski, the hawkish strategic theorist who was national security adviser to President Jimmy Carter in the tumultuous years of the Iran hostage crisis and the Soviet invasion of Afghanistan in the late 1970s, died on Friday at a hospital in Virginia. He was 89. His death, at Inova Fairfax Hospital in Falls Church, was announced on Friday by his daughter, Mika Brzezinski, a co-host of the MSNBC program 'Morning Joe.'

"Like his predecessor Henry A. Kissinger, Mr. Brzezinski was a foreign-born scholar (he in Poland, Mr. Kissinger in Germany) with considerable influence in global affairs, both before and long after his official tour of duty in the White House. In essays, interviews and television appearances over the decades, he cast a sharp eye on six successive administrations, including that of Donald J. Trump, whose election he did not support and whose foreign policy, he found, lacked coherence. Mr. Brzezinski was nominally a Democrat, with views that led him to speak out, for example, against the 'greed,' as he put it, of an American system that compounded inequality. He was one of the few foreign policy experts to warn against the invasion of Iraq in 2003." http://nyti.ms/2r8oixc

--MIKA'S INSTAGRAM POST about her dad: "My father passed away peacefully tonight. He was known to his friends as Zbig, to his grandchildren as Chief and to his wife as the enduring love of her life. I just knew his as the most inspiring, loving and

devoted father any girl could ever have. I love you Dad #HailToTheChief." http://bit.ly/2rrPfN3 ... ***Another Mika Instagram post about her dad and mom*** http://bit.ly/2qZgY6x

-- BRZEZINSKI's LAST TWEET - May 4, (@zbig): "Sophisticated US leadership is the sine qua non of a stable world order. However, we lack the former while the latter is getting worse."

Playbook Reads

PHOTO DU JOUR: Leaders of the G7 nations watch the Frecce Tricolori Italian Air Force acrobatic squadron performing in Taormina, Italy, on May 26. | Luca Bruno/AP Photo

HEADS UP -- AP/LONDON: "British Airways cancels flights amid global computer outage": "British Airways canceled all flights from London's Heathrow and Gatwick airports Saturday as a global IT failure causes severe disruption for travelers. The airline said it was suffering a 'major IT systems failure' around the world. It didn't say what was causing the problem but said there is no evidence of a cyberattack."

FOR WHITE HOUSE AIDES -- "Trump aides facing perilous stage of Russia probe: Investigators are ramping up requests for documents, and any failure to preserve records exposes Trump aides to criminal charges down the line," by Darren Samuelsohn: "Trump's campaign, said a former senior aide, didn't do much in the way of establishing a backup plan to preserve those digital records. 'You'd be giving us too much credit,' said [a] former staffer. 'The idea of document retention did not come up.'" http://politi.co/2qpWSzn

IN FOGGY BOTTOM -- "Exclusive: Tillerson declines to host Ramadan event at State Department," by Reuters' Yeganeh Torbati: "Secretary of State Rex Tillerson has declined a request to host an event to mark Islam's holy month of Ramadan, two U.S. officials said, apparently breaking with a bipartisan tradition in place with few exceptions for nearly 20 years.

"Since 1999, Republican and Democratic secretaries of state have nearly always hosted either an iftar dinner to break the day's fast during Ramadan or a reception marking the Eid al-Fitr holiday at the end of the month, at the State Department. Tillerson turned down a request from the State Department's Office of Religion and Global Affairs to host an Eid al-Fitr reception as part of Ramadan celebrations, said two U.S. officials who declined to be identified because they were not authorized to speak publicly." http://reut.rs/2rlZ8ps

CLINTON WATCH -- "Suit against Hillary Clinton over Benghazi deaths and emails is dismissed," by Josh Gerstein: "A federal judge in Washington has dismissed a

lawsuit alleging that Hillary Clinton's lax security surrounding her emails led to the deaths of two of the Americans killed in the 2012 attack on the U.S. diplomatic compound in Benghazi, Libya. In a ruling Friday, U.S. District Court Judge Amy Berman Jackson tossed out the wrongful death claims as well as allegations that Clinton essentially slandered the parents of the deceased by contracting accounts the parents gave of their children's deaths." http://politi.co/2r6qYsY

DEPT. OF SWAMP DRAINING -- "White House Backs Down on Keeping Ethics Waivers Secret," by NYT's Eric Lipton: "The White House unexpectedly backed down Friday in a confrontation with the government's top ethics officer, announcing it will publicly disclose waivers that have been quietly handed out since January to let certain former lobbyists work in the administration." http://nyti.ms/2r6U6Au

MEDIAWATCH -- "As Trump's Problems Mount, Breitbart's Numbers Are Cratering: A media business based on attack has been much less successful when forced to defend," by Vanity Fair's Tina Nguyen: "'Breitbart News is the #45th most trafficked website in the United States, according to rankings from Amazon's analytics company, Alexa.com,' [Breitbart] wrote on January 9, 2017. ... Just a few months later, the numbers have a different story to tell. As of May 26, 2017, according to Alexa.com ... Breitbart is in 281st place. ... Measuring web traffic is an inexact art, but other web-analytics companies reflect a similar, unusually steep decline in Breitbart's traffic. ComScore estimated that Breitbart had nearly 23 million unique visitors during the month of November 2016, but only drew 10.7 million in April 2017, a 53 percent drop." http://bit.ly/2rHJevH

President Trump's trip to Poland is a chance to seize the moment

Gary J. Schmitt and James M. Cunningham | AEIdeas

President Trump's first visit to Poland has been called a softball — a chance to visit a friendly, right-leaning nation and receive a warm welcome. But that understates the visit's potential. More than just an easy stopover, it's a chance for the United States to strengthen military ties with central and eastern Europe. The Poles appear willing to support an even larger NATO presence. America should jump at the opportunity.

What Xi Jinping's censorship says about the future of China

Weifeng Zhong | Foreign Affairs

In post-Mao China, censorship of the press has become a way to mask bad economic policies. Censorship has been less pervasive when leadership enacted reforms that led to economic prosperity, but when such progress stalls, the regime opts to control the media to curb public discontent. Censorship became even more widespread under current President Xi Jinping, who took over just as the economy began to slow.

Twenty20

Early childhood education and the US workforce problem

Katharine B. Stevens | AEIdeas

Americans increasingly recognize the importance of early childhood. A full 82 percent

of Republicans, 86 percent of independents, and 98 percent of Democrats said that "making early education and child care more affordable for working parents" is important for our country. Almost 80 percent of respondents said that public investment should be made equally or more heavily in early childhood than higher education.

Trump Tests Legal Limits by Delaying Dozens of Obama's Rules

Posted July 13, 2017, 8:15 A.M. ET

By Jennifer A. Dlouhy and Alan Levin

It typically takes years for presidents to kill federal regulations they dislike, but Donald Trump has found a shortcut: He's just putting them on long-term hold.

The Trump administration has stalled more than two dozen Obama-era rules, a legally questionable tactic that sidesteps the cumbersome rulemaking process.

Presidents from both parties routinely pause their predecessors' rules, but Trump's delays are lasting longer and reaching further—with targets including protections for student borrowers, standards for e-cigarettes, and an expansion of requirements that airlines report lost luggage. In one instance, a federal court found the approach illegal, providing fodder for future challenges.

"Obama did it to Bush. Bush did it to Clinton," said Stuart Shapiro, a Rutgers University professor who served as a White House regulatory analyst under presidents Bill Clinton and George W. Bush. "But the extent of the regulations that we're talking about, and the political importance and the impact, is greater in the Trump administration."

Federal agencies have wide latitude to rewrite and rescind rules, but they must follow the Administrative Procedure Act, a 71-year-old law that sets out a process designed to prevent regulatory whiplash. Agencies must first formally propose revisions, justify them and give the public a chance to weigh in. Relatively small tweaks, such as a delay, can advance more quickly—but generally still require a formal notice and comment period.

Trump has moved aggressively to fulfill his promise to repeal "job-killing rules." He issued an order requiring two rules be spiked for each one created and capped the cost of new regulations.

"We're working very hard to roll back the regulatory burden so that coal miners, factory workers, small business owners and so many others can grow their businesses and thrive," Trump said while

signing an executive order addressing the issue in February.

Supporters of Trump's approach say the president is just doing what he promised by taking on overzealous regulations. The goal of trying to align government with a president's own philosophy "is hardly uncommon," said Dan Goldbeck, a research analyst specializing in regulations at the conservative-leaning American Action Forum.

The effort isn't an attempted wholesale undoing of Obama-era rules, Goldbeck said. "I think the intention is to dive back into them and see if they can tweak them—and not necessarily chop them entirely," he said.

Trump's EPA is following the law in ensuring its "actions are consistent with our core mission and statutory authority granted by Congress," spokeswoman Amy Graham said. "Where regulations may be unjustified or overly burdensome, we will consider all legally available means to provide regulatory certainty," Graham said.

In some cases, the administration is buying time for possible rule rewrites, as with an Agriculture Department regulation governing the treatment of organically raised livestock. The department delayed the measure's effective date by eight months and announced it was launching a formal effort to rewrite the regulation.

The administration has gone further in some cases, indefinitely delaying all or parts of rules while contemplating revamping them. They include a Federal Highway Administration mandate that local governments monitor greenhouse gas emissions and a congressionally ordered update of penalties for automakers that fail to meet fuel economy standards.

"These agencies are saying they're not going to do the job they've previously said needs to be done, and they're hoping to get away with that by promising some future replacement regulation," said William Buzbee, a regulatory law professor at Georgetown University. "This being overtly declared on so many fronts is really quite unusual."

Earlier this month, a U.S. federal Court of Appeals panel rebuked the Environmental Protection Agency for suspending a regulation requiring oil and gas companies to pare emissions of methane. A two-justice majority said the EPA wrongly claimed discretion to halt the already finalized rule, and if the agency wanted to rescind the measure, it must cite specific statutory authority to do so or go through a formal rulemaking process.

Emily Hammond, a law professor at George Washington University, said the judges were putting agencies on notice that the court would carefully scrutinize their justifications for delaying rules. The message: "You must meet statutory criteria, and if you don't, we'll hold what you did unlawful," she said.

The ruling is especially notable because that Washington-based appeals court hears the bulk of regulatory cases, and is poised to be the arbiter in other delay-related challenges to come. State attorneys general, environmentalists and good government activists have filed lawsuits challenging at least five other regulatory delays.

Attorneys general in 18 states and the District of Columbia last week filed a lawsuit challenging a decision by Education Secretary Betsy DeVos to put on hold portions of a regulation designed to protect student borrowers who attended for-profit colleges. Just July 11, environmental groups filed a challenge to the EPA's one-year delay of ozone pollution requirements. And farm workers are fighting an EPA delay of requirements that people applying certain high-risk pesticides receive

training and be certified.

Challenges Filed

Some factors discourage legal action: Lawsuits move slowly and, in some cases, it may take so long to litigate over a delay that the argument becomes moot. Some delays were set for 60 or 90 days, others are for a year or are indefinite. The number of delays also forces would-be challengers with limited resources to pick their battles.

To be sure, Trump's predecessor, Barack Obama, was an active rulemaker. He finalized 90 major, economically significant regulations in his final year—some rushed through in the weeks before Trump was inaugurated.

The Trump administration cites an array of legal authorities to support delays.

When the Department of Transportation postponed a rule requiring more airlines report lost or damaged baggage and wheelchairs, regulators made no secret of their goal to protect airlines: "Industry is facing challenges with parts of this regulation and needs more time to implement it," the department said.

And when the EPA said it was giving farmers at least a year more to comply with the pesticide application rule, the agency blamed a staffing shortage: "EPA still has only one Senate-confirmed official," it said in June.

Reasons for Delays

The Trump administration cited a provision of the Administrative Procedure Act that gives agencies limited authority to forgo notice and comment periods if there is "good cause" to find that compliance would be impractical or contrary to the public interest. And the agencies turned to a section authorizing postponements if "justice so requires" because pending litigation against the regulation is likely to succeed.

The variance suggests agencies may be trying different approaches to see what sticks, said Georgetown Law professor Lisa Heinzerling, an EPA official in the Obama administration.

"Their legal reasoning in some of these cases is so bare bones that it just seems experimental," she said.

The administration may be trying to prevent companies from spending money to comply with requirements that are destined for the trash bin. After all, power plant owners howled when they were forced to buy equipment limiting mercury pollution under a 2012 mandate only to see later that the Supreme Court order the rule be reassessed.

Save Money

But the rapid regulatory pivots can carry costs, too. In February, Trump's Interior Department told companies they need not follow an Obama rule that changed how they report the value of oil and gas unearthed from public land—after it had gone into effect. Companies that had already changed their accounting systems to comply were given until August to revert back.

The U.S. regulatory framework is designed to protect against just those kinds of shifts, said James

Goodwin, a senior policy analyst with the liberal Center for Progressive Reform.

"So much of the broader fabric of administrative law is pointed toward finality," Goodwin said. "And once the rulemaking process has been finalized, the way you promote regulatory certainty is the process ends, and that's when enforcement and compliance begins."

Russia Sanctions Bill Stalled by GOP Over Energy Provisions

Posted July 13, 2017, 02:49 P.M. ET

By Anna Edgerton, Terrence Dopp and Jennifer A. Dlouhy

House Republicans are throwing up new roadblocks to a Russia and Iran sanctions bill over concerns from the energy industry that a provision could block U.S. companies from lucrative foreign oil deals.

A section of the legislation would prevent U.S. companies from doing business anywhere in the world with Russian interests, causing consternation in the capital-intensive energy industry where foreign partnerships are common. That prompted Republicans to push for a fix to the version passed by the Senate before the bill moves forward in the House.

"You're empowering Russia more based upon the way they wrote it, that you can give Russia greater energy power over Europe and everywhere else," House Majority Leader Kevin McCarthy (R-Calif.), said in an interview July 12. "So yes, we do need to change that."

Republicans previously said the measure was stalled over complaints from Democrats that changes to the bill would weaken lawmakers' authority to block the Trump administration from lifting sanctions on Russia. The delay gave time for companies to scale up their lobbying on the energy provision, even as lawmakers from both parties are pushing hard for new constraints on President Donald Trump's ability to ease penalties on the Russian government.

This new fight comes amid controversy over the release of emails related to Donald Trump Jr. accepting a meeting last year with a Russian lawyer who he was told had information from the Russian government that could prove damaging to Democratic presidential candidate Hillary Clinton.

House leadership is considering whether the sanctions bill can be put to a vote as is, with the promise that the energy provisions could be changed administratively, or if the matter needs to be addressed before a vote, according to a GOP aide who was briefed on the issue. House leaders don't want to give the impression they're watering down the bill, the aide said.

98-2 Vote

The sanctions measure, S. 722, passed the Senate last month in an overwhelming 98-2 vote, in an effort to punish Iran and get tough on Russia for its efforts to interfere in the U.S. election.

As the measure stalled in the House, several House Republicans said they have been hearing from

energy companies with complaints about a provision that would allow the president to penalize someone who invests in or helps build Russian energy export pipelines.

Rep. Bill Flores (R-Texas), said he has been approached by "five or six of the majors" based in his state. The energy companies have told him they worry the bill as it stands is overly broad.

"You could restrict the sanctions of those activities within the borders of Russia, that might be a quick fix and also the national security carve out as well," Flores said when asked how the sanctions bill might be changed to address those concerns. "Most of us are fine with having sanctions on U.S. interests operating inside Russia, with Russian companies, but then going outside of Russia is too broad."

House Rules Chairman Pete Sessions said the Senate passed the bill before lawmakers understood its potential consequences and that whoever wrote the energy provisions wasn't familiar with the industry.

"I appreciate my friends in the Senate but this was rushed through," the Texas Republican said in an interview late July 12.

Broader Opposition

The possibility of the pipeline curbs sent a jolt through the traditional oil industry, as well as a broader group of related companies, including equipment providers, tubular piping manufacturers and oilfield services companies, that worry they wouldn't be able to supply projects in which sanctioned Russian companies are involved.

Current sanctions already block oil and gas companies from doing deals in Russia. But the Senate-passed bill would extend the reach of those prohibitions, barring U.S. companies from partnering with sanctioned Russian firms to develop energy projects anywhere around the world.

Richard Sawaya, who studies the impact of sanctions for the Washington-based National Foreign Trade Council, estimated the provision may mean U.S. oil and gas firms could be shut out of as much as $100 billion worth of projects over 10 years. Also at risk may be high-earning jobs and lost investment income, he said. His group advocates against unilateral U.S. sanctions in most cases.

'Loses Sight'

"In any place where Russian companies have a position—U.S. companies couldn't be there," Sawaya said. "It loses sight of the shape of the forest."

Democrats complain that Republicans are stalling, pointing to remarks from White House legislative affairs director Marc Short that the administration is opposed to the bill's provisions that would allow Congress to block some sanctions-related decisions by the president.

Three House Democrats, Minority leader Nancy Pelosi, Minority Whip Steny Hoyer of Maryland and Rep. Eliot Engel of New York, ranking member of the Foreign Affairs Committee, introduced their own measure, which is identical to the Senate version, in an effort to circumvent GOP procedural objections. Republican leaders said that certain revenue-related provisions in the bill meant that it had to originate in the House.

Global Disadvantage

The fight over the energy provision, however, threatens to delay the bill further. The oil industry is warning of potentially widespread consequences—some unintended—that could put U.S. companies at a disadvantage globally, even when they aren't actively collaborating with sanctioned Russian firms.

"This has far-reaching impacts to a variety of companies and industries," said Jack Gerard, president of the American Petroleum Institute. "It has the potential to penalize U.S. interests and advantage Russia."

That broader approach could imperil at least one of Exxon Mobil Corp.'s major exploration projects, a joint venture with Rosneft that's producing oil and gas in waters off Russia's eastern shore. Oil fields there are estimated to contain 2.3 billion barrels of oil and 17.1 trillion cubic feet of natural gas. The project, called Sakhalin 1, doesn't fall under current U.S. sanctions that bar U.S. companies from producing oil in Russian deep-water, Arctic or shale areas.

If the legislation passes without changes, Exxon Mobil would likely have to obtain a special waiver from the U.S. government to maintain production at the site, slated to stretch until 2050.

Neighboring Wells

Industry officials warn that the Senate-passed bill could also jeopardize oil and gas projects far from Russia that have only tangential ties to the country. For instance, they say it could preclude U.S. oil companies from proceeding with offshore projects where sanctioned Russian companies hold neighboring leases because there may be pooled collaboration on pipelines and other infrastructure to support the developments.

"We will continue to comply with all applicable laws, including trade controls and sanctions regulations," said Royal Dutch Shell spokesman Curtis Smith. "We believe that this bill, if endorsed, would be contrary to the objective of providing international markets with reliable access to energy at competitive prices."

The fear is that Russian companies may invest in leases located next to U.S. energy projects as a way to help edge out their American competitors.

Oil industry lobbyists are circulating alternative language on Capitol Hill aimed at addressing these concerns and others. Most of the changes aim to narrow the legislation's reach. They are also seeking a 180-day ramp-up period to ensure companies have adequate time to comply, a narrowed definition of affected pipelines to zero in on oil export pipelines and to change the timeline for prohibitions on dealings in new debt to avoid a jolt to oil and gas trading.

The Senate-passed legislation would also place new penalties on Iran over its ballistic missile program. The bill directs the president to impose sanctions on any entity that knowingly contributes to Iran's ballistic missile program or other programs to develop vehicles to deliver weapons of mass destruction. Those who are sanctioned would have their assets within U.S. jurisdiction frozen and would be barred from entering the country.

Trump Administration Conditionally Approves Eni's Arctic Oil Drilling Plan

Posted July 13, 2017, 12:13 P.M. ET

By Jennifer A. Dlouhy

The Trump administration has conditionally approved Eni SpA's plan to drill up to four oil exploration wells in Arctic waters, with the activity launched from a gravel island in the Beaufort Sea.

The government's letter of approval lays out 13 conditions that Rome-based energy company must first meet, including securing drilling permits from the U.S. Bureau of Safety and Environmental Enforcement and other state and federal authorizations. The safety bureau also must approve Eni's spill response plan.

According to the Bureau of Ocean Energy Management, a site-specific monitoring program is not necessary for the first year of operations, but Eni may have to monitor for bowhead whales during its second year of operations.

Environmentalists pounced on the White House decision, saying it gives short shrift to potential damage from an oil spill in the remote Arctic.

"An oil spill here would do incredible damage, and it'd be impossible to clean up. The Trump administration clearly cares only about appeasing oil companies, no matter its legal obligations or the threats to polar bears or our planet," Kristen Monsell, an attorney with the Center for Biological Diversity, said in an emailed statement.

Eni's leases are set to expire Dec. 3, but a recent Interior Department rule effectively allows extensions of offshore leases for one year from most recent drilling. The company is expected to begin in December and continue throughout the winter months.

Water Infrastructure Bill Approved by House Subcommittee

Posted July 13, 2017, 01:52 P.M. ET

By Catherine Douglas Moran

Draft legislation to reauthorize a program that provides low-interest loans for drinking water infrastructure projects gained approval from a House environment subcommittee.

The bill would aim to improve drinking water systems—many from the mid-1900s—that are nearing the end of their expected lifespans of 75 to 100 years. It would reauthorize the drinking water state revolving fund, which provides financial support to water systems, and make some changes to how that program works.

Rep. John Shimkus (R-Ill.), chairman of the House Energy and Commerce Subcommittee on Environment, said at the July 13 markup that because the Safe Drinking Water Act was last reauthorized in 1996, "it is high time we revisit and update the provisions of this act." The EPA in 2013 estimated that $384.2 billion over 20 years would be needed to keep drinking water quality up.

The Drinking Water System Improvement Act also would amend the Safe Drinking Water Act to add contractual agreements for enforcement of correcting violations and improve the accuracy and availability of compliance data. The bill would also require the Environmental Protection Agency to update technical information and training materials on asset management every five years.

Several members from across the country and on both sides of the political aisle expressed support for the bill prior to the vote, including Reps. Greg Walden (R-Ore.), Frank Pallone (D-N.J.), and Buddy Carter (R-Ga.). The bill was approved by voice vote and moved to the full Energy and Commerce Committee for consideration.

The subcommittee did adopt an amendment, filed by Shimkus, that would:

• require states to reserve 6 percent of available funds for capitalization grants to disadvantaged communities,

• task the EPA administrator to create a grant program to aid local education agencies in replacing older water fountains,

• require the EPA to consider the cost of replacing lead service lines in its periodic review of drinking water infrastructure needs, and

• make the comptroller general submit a report to Congress on compliance demonstrations and enforcement of the act.

Rep. Paul Tonko (D-N.Y.) said before the vote that while he supports aid for disadvantaged communities, he did not agree with the 6 percent minimum. He also said the EPA needs "to provide a better template to give constituents the information they need." Tonko said additional testing is needed as contamination sites increase.

Rep. Joe Barton (R-Texas) said that while he supports the draft legislation, he has "one fly, though, I want to throw into the ointment" with the Shimkus amendment. He said he does not support prevailing wage requirements for projects funded through the state revolving fund.

"I don't think it's appropriate to make it a part of the organic statute," Barton said. "If we were to have a roll call vote, I would vote no for that reason."

Manchin Aims to Tack Appalachian Ethane Hub on Energy Bill

Posted July 13, 2017, 02:20 P.M. ET

By Brian Dabbs

West Virginia Sen. Joe Manchin (D) is ready to take a stab at creating an ethane storage hub in Appalachia that could break ground for more ethane use nationwide, while boosting manufacturing in the region.

Manchin told Bloomberg BNA July 12 he is aiming to propose an amendment on the Senate energy package to qualify a storage facility as a "critical infrastructure project," which would expedite Federal Energy Regulatory Commission licensing.

The facility's supporters, including the American Chemistry Council, argue it will pave the way for more nationwide use of ethane, a liquid derived from natural gas production that is used in

consumer products and chemicals.

Manchin, along with Sen. Shelley Moore Capito (R-W.Va.), introduced the measure as a stand-alone bill (S. 1337) in June.

"That just gives it so much certainty to move forward. It gives it a pathway," Manchin, who described the energy bill as a "perfect vehicle," told Bloomberg BNA.

The energy bill (S. 1460) already contains a provision to compel the Energy Department to study the benefits of a ethane storage facility in the Marcellus, Utica, and Rogersville shale regions, which span from New York to Tennessee, but a spokeswoman for Manchin said the licensing is now the bigger priority.

Both Sens. Lisa Murkowski (R-Alaska) and Maria Cantwell (D-Wash.) are pledging an open amendment process for the energy bill, but timing is so far unclear.

Ex-Newark Watershed Manager Sentenced for Kickback Scheme

Posted July 13, 2017, 02:20 P.M. ET

By David Voreacos

A former manager for a nonprofit that oversaw Newark, New Jersey's water supply was sentenced to eight years in prison for taking kickbacks uncovered by U.S. prosecutors investigating the bankrupt entity's activities.

Donald Bernard Sr. was a consultant and manager of special projects at the Newark Watershed Conservation and Development Corp. He admitted last year in federal court that he took $956,948 for himself and his boss in exchange for helping award work to contractors. He was sentenced July 13 in federal court in Newark U.S. v. Bernard, D.N.J., 14-cr-710, 7/13/17.

Bernard and Linda Watkins Brashear, the former executive director who also pleaded guilty, solicited payments from contractors. At least four people have pleaded guilty to their role in the scandal. Watkins Brashear is scheduled to be sentenced later this year .

In her guilty plea, Watkins Brashear admitted that she took kickbacks from 2007 to 2013 from more than a dozen people who offered printing, marketing, cleaning, media, political and interior design services. A 2015 report by the state comptroller's office said that from 2008 to 2011, the commission "recklessly and improperly spent millions of dollars of public funds with little or no oversight" by its board or the city.

The nonprofit, which got almost $10 million a year to manage the city's 35,000-acre watershed, reservoirs and water-treatment plant, filed for bankruptcy in January 2015.

World's Top Weed Killer Can't Shake Lingering Cancer Questions

Posted July 13, 2017, 01:33 P.M. ET

By Peter Waldman, Lydia Mulvany, and Joel Rosenblatt (Bloomberg), and Tiffany Stecker (Bloomberg BNA)

Every year, farmers spray, on average, almost a pound of the herbicide glyphosate on every acre of cropland in the U.S., and nearly half a pound on every acre of cropland worldwide. Glyphosate is the active ingredient in Roundup, a huge source of income for its manufacturer, Monsanto Co., and the foundation for its epochal foray into genetically modified organisms. If you know nothing else about GMOs and Monsanto, know this: The St. Louis-based company re-engineered the DNA of corn, soybeans, and other crops for the primary purpose of making them resistant to Roundup.

Farmers spray the chemical on crops grown from Monsanto's Roundup Ready seeds. The weeds die; harvests expand; and expensive, laborious tillage is no longer necessary. Large-scale agriculture is built on this model, and not only in the U.S., which is why Bayer AG, the German drug and chemical company, agreed last September to buy Monsanto for $66 billion, pending regulatory approvals. Other than government antitrust objections, about the only thing that could mess up the purchase would be for the U.S. Environmental Protection Agency to reverse its position on the active ingredient of Roundup, glyphosate.

Last December, the EPA convened a panel of outside scientists to peer review the agency's long-standing conclusion that glyphosate is unlikely to cause cancer. The peer reviewers, a mix of academics, federal scientists, and chemical industry consultants, gathered at an EPA conference center in Arlington, Va. From the agency's point of view, this was something of a formality. Federal law requires an EPA health-effects review for every pesticide at least once every 15 years, and glyphosate has enjoyed a clean bill of health since 1991, when the agency cleared the way for Monsanto's GMO breakout by classifying the herbicide as noncarcinogenic to humans.

Its use in global agriculture has soared almost 15-fold since Monsanto introduced Roundup Ready seeds in 1996. As a result, traces of glyphosate have been detected in cookies, crackers, chips, breakfast cereals, and honey, as well as in human urine and breast milk. According to Monsanto, there's nothing to worry about. "Glyphosate is about half as toxic as table salt and more than 10 times less toxic than caffeine," the company said on one of its websites. More than 1,000 farmers and other agricultural workers stricken with non-Hodgkin lymphoma disagree. They're suing Monsanto in state and federal courts across the country, claiming that Roundup caused their cancer. Monsanto is vigorously contesting the claims. "There's never been a more studied herbicide in the history of farming," said Scott Partridge, Monsanto's vice president for strategy. "In more than 700 studies, not one has associated cancer with the use of glyphosate. And in the more than 160 countries that have registered glyphosate for use, not a single government agency has found glyphosate is a carcinogen."

December's Scientific Advisory Panel meeting followed the typical script for a federal peer review, with some twists. Officials from the EPA's Office of Pesticide Programs opened the public hearing by laying out 45 years of study data and describing why, in the agency's view, they indicate that glyphosate is an unlikely human carcinogen at current exposure levels. The agency's conclusion, elucidated in a 227-page issue paper released the previous September, reflects the "weight of evidence," Jack Housenger, then chief of the pesticide office (he retired this year), told the panel. "Now it's your turn to tell us what you think of our analysis," he said, "and hopefully put the subject to bed so we can move on."

Far from settling the matter, eight of the 15 experts expressed significant concerns about the EPA's benign view of glyphosate, and three more expressed concerns about the data. Their skepticism also again raised questions about the independence of the Office of Pesticide Programs, which has the final say on permitting pesticides. The office relies on pesticide manufacturers for the data it uses in making health decisions—and got almost 30 percent of its operating budget from the industry last year.

The EPA paper had a whack-a-mole quality to it. Throughout, the authors included data sets suggesting that glyphosate could cause cancer, only to knock them down. On epidemiology studies, for example, they said farmers' recollection of their own glyphosate exposure was biased and unreliable. On meta-analyses pooling human data from multiple studies to identify trends, the EPA assessors shaved decimal points from the results, which made it possible for them to shrug off data showing exposed farmers had an elevated risk of cancer.

Many of the reasons cited in the paper contradicted the agency's own carcinogenicity guidelines, multiple panelists pointed out. "Every time there's something positive there, you said there's something wrong with the study," Eric Johnson, an epidemiologist at the University of Arkansas for Medical Sciences, scolded EPA officials at the meeting. Lianne Sheppard, a biostatistician at the University of Washington at Seattle, said there was "consensus" on the panel that the EPA hadn't followed its own standards. "The available evidence did not fit with the conclusions drawn in the issue paper, particularly when put in the context of the guidelines," she said.

The EPA's report on the peer review, posted March 16, raises obfuscation to a high bureaucratic art. While spelling out the panel's criticisms, the report gives no indication which, or how many, reviewers felt strongly about which particular problems. Instead, it uses the phrase "some panel members" 76 times—as in "some panel members noted," "some panel members emphasized," "some panel members suggested." The imprecision obscures that the majority of peer reviewers expressed doubts about the EPA's methods or conclusions. Under the law, the agency must consider the panel's input in its final evaluation of glyphosate, scheduled for completion later this year. By enshrining the reviewers' comments in such vague terms, however, the EPA can more easily ignore them.

"I asked for a vote on the main issues to make our guidance clear, but this committee apparently never does that," said Emanuela Taioli, an epidemiologist at Icahn School of Medicine at Mount Sinai in New York and one of the panelists who disagreed with the EPA's interpretation of the evidence. "Not giving a tally leaves them more flexibility to interpret our advice."

Monsanto, a company that has genetically altered vast swaths of cropland to vanquish farm pests, has been struggling to control an invasive species on its own turf lately: scientific doubt. It's an exotic. Ever since President Bill Clinton awarded four Monsanto gene scientists the National Medal of Technology and Innovation in 1998, the company's ag-biotech enterprise has been the closest thing America has to a Japanese-style strategic industry. From Clinton to Bush to Obama, successive administrations mobilized federal agencies and embassies around the world to promote GMOs, often against the vehement opposition of environmentalists and food purists, particularly in Europe.

Dozens of diplomatic cables that WikiLeaks released show how U.S. missions received special funding from Congress to advocate for genetically engineered products and how Monsanto prevailed on U.S. diplomats to lobby on its behalf when problems arose. In Argentina, for example, when the ministry of defense banned the use of glyphosate on its urban farmland in 2009, the U.S. embassy intervened, according to a diplomatic cable to Washington. "Post contacts within the Secretariat of Agriculture assure us that Argentina will continue to support biotechnology," said the cable, signed by Thomas Kelly III, deputy chief of mission at the time.

The first breach in Monsanto's fortress opened in 2015, when the International Agency for Research on Cancer labeled glyphosate a probable carcinogen. IARC, a France-based arm of the World Health Organization, has no regulatory power, but its carcinogenicity studies are widely cited in court cases and government health assessments worldwide. The agency's assessment, based on

published, peer-reviewed research, foreshadowed many of the concerns the EPA's scientific advisory panel expressed last December. IARC acknowledged that the studies were all flawed in different ways, but it concluded that their findings pointed toward cancer and couldn't be dismissed. This led California on July 7 to list glyphosate as a known carcinogen, over Monsanto's objection.

The question now falls to the Trump EPA and the courts. Led by Administrator Scott Pruitt, the former Oklahoma attorney general who sued the EPA more than a dozen times to stop environmental regulations, the agency has already canceled an Obama-era proposed ban on chlorpyrifos, a pesticide linked to cognitive damage in farmworkers and children. The chances that Pruitt will move against glyphosate, with all the attendant repercussions for industrial agriculture, appear slim.

The considerations are much different, however, for U.S. District Court Judge Vince Chhabria in San Francisco. The judge is presiding over multidistrict litigation composed of 310 plaintiff lawsuits against Monsanto filed by cancer victims around the country. (It will likely consolidate hundreds more suits.) Chhabria has told both sides that the question of whether Roundup can cause cancer will turn on the scientific evidence presented at trial, not on what agencies such as IARC and the EPA say. In this instance, the difference between Roundup and glyphosate is crucial. The EPA focuses on the latter. The plaintiffs in the court case claim that Roundup contains ingredients that exacerbate the effects of glyphosate alone.

Chhabria has allowed the plaintiffs wide latitude to collect evidence on Monsanto's health-effects research over the years, which the plaintiffs hope will show the company manipulated the data. In March, he unsealed dozens of Monsanto's confidential documents for the public to see. The records show internal deliberations on how to present the science on glyphosate's health impacts and manage a global public-relations campaign to assure consumers and regulators that Roundup is safe.

Monsanto documents show the company commissioned scientists to publish papers rebutting IARC. Reminiscent of tobacco companies, it also funneled money to front groups, according to a plaintiffs' court filing. The groups, with names such as Genetic Literacy Project and American Council on Science & Health, published articles praising the EPA and attacking IARC, which they called on Congress to defund. The plaintiffs claim that Monsanto established a program called Let Nothing Go, through which it made payments to people with no apparent industry ties to post online comments defending Monsanto, its chemicals, and GMOs in news articles and Facebook posts. "That's simply false," said Monsanto's Partridge. "We don't need to do that type of stuff."

In Washington, where Monsanto has spent almost $60 million on lobbying since 2008, the company cultivates allies on both sides of the aisle and in the relevant federal agencies. It deployed five lobbyists in 2015 to trash IARC's findings at the White House, Congress, and the agencies. Monsanto employees are regular visitors to the EPA's Office of Pesticide Programs, according to logs obtained through the Freedom of Information Act.

Relations were warm, even jocular. "So Jess called me out of the blue this morning," Monsanto's lead EPA liaison, Dan Jenkins, wrote to William Heydens, the company's chief of regulatory research, in an April 2015 email released in the court case. Jess was Jess Rowland, a senior official in the EPA's pesticide office who was chairing the agency's cancer assessment of glyphosate at the time. Heydens had emailed Jenkins the day before, asking his colleague to reach out to the EPA and find out "what area they see as most problematic (e.g., human epidemiology vs. animal bioassays vs. genotoxicity), or just ask if there is anything that would help them defend the situation?"

Rowland was all set, Jenkins reported back to Heydens. “We have enough to sustain our conclusions,” Rowland told Jenkins on the phone, according to Jenkins’s email. “I am the chair of the [cancer review],” he added, “and my folks are running this process for glyphosate.”

On the same call, Jenkins wrote, Rowland said he was working to control a separate glyphosate assessment by another federal unit, the Agency for Toxic Substances and Disease Registry (ATSDR), a division of the Centers for Disease Control and Prevention. “If I can kill this, I should get a medal,” Jenkins quoted Rowland as telling him.

“Wow!” Heydens wrote back to Jenkins. “That’s very encouraging. Thanks for the news update.”

In April 2016, as Rowland was preparing to retire after 26 years at the EPA, his assessment that glyphosate is unlikely to cause cancer leaked online—just in time for Monsanto’s lawyers to cite it at an important court hearing in San Francisco. The EPA quickly characterized the report as “preliminary” and “not final,” but Monsanto’s lawyers still told Judge Chhabria that “the scientists have spoken.” As for the ATSDR review, another internal Monsanto document reported that the CDC division had “agreed, for now, to take direction from EPA.” This May, EPA Inspector General Arthur Elkins Jr. confirmed that he’s investigating if EPA employees colluded with Monsanto. Through his lawyer, Rowland declined to comment for this story. Monsanto’s relationships with Rowland and other EPA employees were professional and proper, Partridge said.

Bayer and Wall Street are betting none of this matters. Monsanto has built the kind of virtuous circle that management experts and business school professors rave about. More sales of Roundup Ready seeds beget more use of Roundup; more herbicide use drives up demand for Monsanto’s GMO seeds. The global chemical dependency could be too big to kick.

It’s hard to quantify what a shift to glyphosate-free farming would look like. A study by chemical industry consultants in the U.K., where about a third of the nation’s wheat fields are sprayed with the herbicide, estimated that yields of the grain would fall 12 percent if glyphosate were banned. A study last year by Andrew Kniss, an associate professor of plant sciences at the University of Wyoming, showed that the yields from organic farms were roughly two-thirds of those from conventional farms for corn, wheat, soybeans, and barley, and less than half for grapes, tomatoes, bell peppers, and onions.

Kniss did another study that found planting genetically modified sugar beets saved farmers $200 an acre, equal to about 15 percent of their revenue, compared with planting non-GMO seeds. With no glyphosate, farmers would have to resort to using more-toxic chemicals for weed control, Kniss said, or revert to grueling tillage by hand. “Getting rid of glyphosate would have a major impact on farmers and their bottom lines,” he said. “It’s not like there’s a risk-free scenario here.”

Robert Fraley grew up on a farm in Hoopeston, Ill., in the 1950s and 1960s, and one of his earliest memories is of the fields turning black each November. He recalls tractors churning up a foot of dark topsoil to keep the weeds from taking over. His dad cranked up the tractor every morning by 4 a.m. and plowed until Fraley got home from school and took over until midnight. In summers, the boy walked the rows of beanstalks with his friends and cousins, pulling the weeds by hand. Fraley, now 64, helped develop Roundup Ready seeds and is Monsanto’s chief technology officer. “Any kid my age who spent time on the farm, the first thing you realize is the greatest challenge is weeds and bugs,” he said. “We freed America’s farm youth.”

By 1980, when Fraley joined Monsanto as a 27-year-old with a doctorate in microbiology and biochemistry, scientists were experimenting with recombinant DNA in yeast and animal cells, but no one had introduced a new gene in a plant. Working with a germ called agrobacterium, which

normally causes blight in plants, Fraley's team isolated the part of the germ that binds to plant cells and can inject its DNA into plants, and eliminated the blight-producing sequence. They worked with petunia plants to fine-tune a gene insertion process, using the flower's color genetics to map the plant's chromosomes. It took more than a decade to develop commercially useful traits such as resistance to insects and glyphosate. The breakthrough finally made glyphosate, which was invented in 1970, a significant commercial power.

Even as environmentalists vilify Monsanto for its link to GMOs, its mantra internally remains stewardship and sustainability. "We get to enjoy more of our forest and wetlands and prairies because we've increased yields on the land we're already farming," Fraley said. The alternative to genetic engineering and the accompanying chemicals, he said, is plowing up an additional 30 million or 40 million acres of land to feed a hungry planet.

That probably overstates the trade-off. Land spared from cultivation is seldom set aside for conservation. And there are alternatives to Roundup Ready farming other than going organic. "It's such a Monsanto-based perspective to say food prices will spike if we use less glyphosate," said Claire Kremen, a conservation biologist at the University of California at Berkeley. "There are other methods, besides organics, that are just as productive as conventional farming and don't rely on toxic chemicals that endanger lives and harm the environment." A more realistic alternative, she said, is finding middle ground between the industrial and organic farming models. Researchers at Iowa State University, for example, have shown that rotating diverse crops in three- and four-year cycles and controlling weeds with limited herbicide spraying produce similar yields and profits to conventional farming—with only 1 percent of the water toxicity. And such alternatives are becoming necessary anyway, because weeds are developing resistance to glyphosate at an accelerating rate.

Nonetheless, a lot of farmers are deeply committed to glyphosate. "The cancer issue doesn't concern me at all," said Paul Jeschke, 64, who farms 4,000 acres of corn and soybeans with his brother-in-law and nephew in Mazon, Ill. Before he started using Roundup in the 1980s, Jeschke said, his topsoil, after constant tillage, would wash away in the rain. The quack grass would get so bad that some farmers would put up a fence around their fields and turn the pigs loose, losing a year's harvest. "Every one of us takes risks every day when we take our car on the road or get on an airplane or dump table salt into something we're cooking," Jeschke said. "Looking at the cost-benefit ratio, I'm extremely reluctant to give up glyphosate."

The first cancer concerns came from within the EPA's Office of Pesticide Programs in 1984. This was despite the traditionally close relationships between the agency and the companies it regulates. Pesticide makers, called registrants, pay the office to review their compounds for registration. In 2016 they provided $47 million, or 28 percent, of OPP's budget. The OPP is also the only EPA branch that does its own health assessments; the agency's National Center for Environmental Assessment is in charge of evaluations for the other EPA branches. The OPP's studies are based, by law, on data provided by pesticide registrants themselves. This has fueled intra-agency criticism that some of its cancer reviews are too lax.

Still, its scientists did come down hard on glyphosate early on. In February 1984, EPA toxicologists sounded the alarm internally when a Monsanto-sponsored study showed that four of 100 mice that were fed large amounts of glyphosate developed rare kidney tumors called tubular adenomas compared with zero of 98 mice given little or no glyphosate. Monsanto insisted glyphosate wasn't the cause, invoking an argument that would become a pillar of its—and the EPA's—defense of the chemical for the next 30 years. The mice with the tumors weren't the problem, the company said. The healthy mice were. The control group ought to have had more tumors.

An OPP statistician was having none of it. "Our viewpoint is one of protecting the public health when

we see suspicious data. It is not our job to protect registrants from false positives," wrote Herbert Lacayo, who analyzed Monsanto's complaints in a memo in February 1985. A week later, OPP's toxicology branch cited the mouse tumors in a "consensus report" naming glyphosate a possible human carcinogen.

Monsanto was apoplectic. The Roundup Ready world that was coming to life inside Fraley's gene-splicing lab depended on the copious use of glyphosate. To change the EPA's mind, the company solicited 10 outside experts to examine the mice in the control group. One of the scientists, who'd been a Monsanto consultant for many years, reported to the company that he'd found cellular changes in the kidney of one mouse. Monsanto argued it was another adenoma. If so, it would render the four tumors in the exposed mice statistically insignificant. The other experts then supported the finding of the single scientist.

The EPA's toxicology branch recut new sections of all the mouse kidneys for another look. Its scientists reconfirmed there was no control adenoma. Nevertheless, in February 1986, the EPA's scientific advisory panel overruled the agency scientists, asserting that the "vast majority" of pathologists who'd looked at the control kidney in question saw a tumor. If the reviewers knew those experts were brought on by Monsanto, they didn't care. The panel reclassified glyphosate as a chemical of uncertain carcinogenicity. Five years later, another EPA panel looked at the same data and a new rat study and reclassified glyphosate again, this time as noncarcinogenic to humans.

By 1999, with Roundup Ready soybean, cotton, and corn seeds already changing global farm markets, Monsanto was facing questions about how glyphosate affected animal genes. Emails unsealed in March by Judge Chhabria show that the company hired James Parry, a prominent genetic toxicologist at Swansea University in Wales, to publicly advocate that the chemical wasn't genotoxic—that is, it didn't have a destructive effect on DNA and RNA. But after reviewing studies that Monsanto provided, Parry reached the opposite conclusion.

He wrote a report for Monsanto that said glyphosate appeared to damage genes through a biochemical process called oxidative stress—the same cancer-causing mechanism IARC identified 16 years later. He recommended Monsanto do a series of studies to find out. If glyphosate was confirmed to be genotoxic, Parry said, the company should analyze the lymphatic cells of exposed humans to check for chromosome damage.

Monsanto scientists deliberated for weeks about their consultant's unwelcome advice. The company was in a "genotox hole," wrote senior toxicologist Donna Farmer in a September 1999 email. "I am concerned about leaving Parry out there with this as the final project/his final impressions."

"Maybe you should invite Parry to St. Louis to get him more familiarized with the complete database," suggested another Monsanto toxicologist.

In an email Monsanto must surely regret, Heydens, the regulatory research chief, wrote that changing Parry's mind would be expensive and probably not worth it. "Let's step back and look at what we are really trying to achieve here," Heydens wrote to Farmer and two others. "We want to find/develop someone who is comfortable with the genetox profile of glyphosate/Roundup and who can be influential with regulators and Scientific Outreach operations when genetox issues arise. My read is that Parry is not currently such a person, and it would take quite some time and $$$/studies to get him there. We simply aren't going to do the studies Parry suggests."

Parry's report was never submitted to the EPA. (He died in 2010.) The episode points to an ongoing concern at Monsanto, which was concisely stated by Heydens in a later email: "Data generated by academics has always been a major concern for us in the defense of our products." Partridge said

Heydens sometimes made “an unfortunate choice of words,” but that subsequent studies by Monsanto resolved Parry’s concerns.

The transcript of the EPA’s scientific advisory panel meeting runs 1,300 pages. Reading the document is the only way to know that four of the six reviewers charged with evaluating the crucial epidemiological data lambasted the EPA. (The four critics are all biomedical researchers at major universities; the two who supported the EPA’s evaluation are private consultants.) The agency disregarded all but one meta-analysis of the epidemiological data, because agency evaluators said the results weren’t statistically valid. When several of the panelists reran the pooled data, they found the EPA was plain wrong. Not only were the meta-analyses statistically significant, but they also showed farmers exposed to glyphosate had an elevated risk ratio for non-Hodgkin lymphoma of 1.27 to 1.5, meaning they were at 27 percent to 50 percent higher risk than control groups.

“For a human epidemiologic study, an association of 1.2 or 1.3 is very meaningful and impactful,” said Mount Sinai’s Taioli. At the meeting, she pointed out that millions of American women no longer take estrogen after menopause, because studies found that it increased the risk of breast cancer by about 22 percent. Sheppard, the biostatistician with the University of Washington, said at the meeting that the EPA’s evidence assessment was “highly imbalanced” and that the agency downplayed statistical findings in favor of other criteria. “The agency’s conclusion is seriously flawed and needs to be strongly revised,” she said.

Several panelists asserted that while glyphosate probably doesn’t initiate cancer by causing gene mutations, it appears to promote malignancies by spurring tumor growth. Such a carcinogen is more dangerous to humans than to rodents, because people live much longer and thus accumulate more lesions susceptible to glyphosate’s catalytic effect, panelist Barbara Parsons, a molecular toxicologist with the U.S. Food and Drug Administration, said at the meeting. She warned that mixing a tumor promoter such as glyphosate in formulations with other chemicals that have “any genotoxic potential would be a significant public-health concern.”

That argument is the crux of the plaintiffs’ case in the consolidated federal suits. Their lawyers said they have evidence that Monsanto knew for years that some of the nonactive ingredients in Roundup are carcinogenic, and thus the danger of those chemicals is compounded when they’re combined with glyphosate. They said that the OPP, by focusing its concerns on the active ingredient instead of on the formulated product, has let Monsanto off the hook. Partridge denies any Roundup ingredients are genotoxic and said potentially carcinogenic impurities in the product are strictly controlled.

The doubt invading Monsanto’s prize product is as strong as it’s ever been, even as Roundup has become instrumental in industrial agriculture. Farmers and consumers have reaped huge savings from productivity gains made possible by taming the scourge of weeds. Improbable as it seems, suppose the EPA now moves glyphosate from the category of unlikely carcinogen to suggestive or even likely. That would trigger extensive cost-benefit analyses. Then the questions get really difficult.

U.S., China Immersed in Talks on LNG Export, Energy Issues

Posted July 13, 2017, 9:17 A.M. ET

By John Butcher

U.S. Secretary of Energy Rick Perry advanced the prospect of expanding American liquefied natural gas exports to China during a July 13 meeting with Executive Vice Premier Zhang Gaoli in Beijing.

LNG exports were among a range of energy issues the pair discussed, during a meeting in Zhongnanhai, the headquarters of China's Communist Party, according to a release by the U.S. embassy in Beijing.

LNG exports to countries that do not have a free trade agreement with the U.S. are restricted, but President Donald Trump last month agreed to lift barriers on those to China as part of a range of trade deals between the two countries. That could offer huge export potential for U.S. LNG suppliers to China, which is the world's largest growth market for gas, according to energy research firm Wood Mackenzie, and may prompt new investment in industry.

It also could benefit China, which seeks alternatives to coal as it tackles a serious problem with air pollution.

Perry's talks with Zhang will be welcome news for U.S. LNG suppliers such as Cheniere Energy, which has been in negotiations with China about increasing exports there.

The Trump administration also hopes it will help them make good on election promises to rebalance trade and deliver jobs. In a statement, released June 5, to kick off his visit to China, Perry said, "By unleashing our domestic energy sector, we are creating, and will continue to create, well-paying, middle-class jobs and economic prosperity, protecting our environment, promoting innovation, and strengthening energy security for America and our allies."

China Seeks Cooperation on Trade, Technology With U.S. States

Posted July 13, 2017, 9:44 A.M. ET

By John Butcher

Chinese President Xi Jinping called for closer trade ties with individual U.S. states July 12 in a meeting with California Gov. Jerry Brown in Beijing.

Local-level exchanges could be a "new engine for growth," Xi said, according to a report today on the website of the State Council Information Office, the chief information provider of the Chinese government.

The meeting, which took place in Beijing's Great Hall of the People, could pave the way for opportunities for U.S. firms, particularly in green industries and technology, both of which Xi specifically mentioned, according to the report. He also urged California firms to get involved in the Belt and Road Initiative global economic blueprint, suggesting the potential for state-level cooperation on the plan, which aims to create a modern day Silk Road of investment an infrastructure, stretching from China to Europe.

The meeting followed several days for Brown in China, where he attended an international clean energy conference in Beijing, and signed nonbinding emissions agreements with China's Ministry of Science and Technology, and with the leaders of two provinces, Sichuan and Jiangsu. Those agreements call for investments in low-carbon energy sources, cooperation on climate research, and the commercialization of cleaner technologies, but do not establish emissions reduction goals.

This was in defiance of President Donald Trump's rejection of the Paris Climate Agreement, which he said favored developing countries at the expense of the U.S.

The Chinese authorities' willingness to engage with Brown at such a high level suggested that they could be welcoming to U.S. states seeking to sidestep the government on climate change.

The mention of cooperation on technology also could suggest that Beijing is seeking allies in its quest to get the U.S. to drop export controls on high-tech goods, which are currently imposed on national security grounds.

Brown said California was "willing to join the construction on the Belt and Road and was looking forward to a stronger cooperative relationship with China in trade, investment, clean technology and environmental protection," the report added.

Green Bonds Face EU Litmus Test Under Sustainable Finance Rules

Posted July 13, 2017, 8:25 A.M. ET

By Jessica Shankleman and Alexander Weber

The European Commission backed recommendations to curb climate risk that could include European Union labels for green bonds and preferential treatment for ecologically sustainable investments.

Green bond labels could be a "powerful tool" to help investors choose assets that are reducing greenhouse gas emissions, said Valdis Dombrovskis, the commissioner in charge of financial-services policy. The commission published a report July 13 urging a "sustainability test" be applied to all future EU financial regulation and policy.

"That would also be a major initiative to hardwire sustainability into our financial policies," Dombrovskis said in an interview in Brussels. "On this, we will probably be front-runners globally."

Creating uniform green bond labeling standards across the Eurozone's $12 trillion economy could help investors get a better handle on the growing market for environmentally sustainable securities. Reassurance is needed because there is no regulator for the green-bond market and fund managers have struggled to monitor hundreds of separate projects around the world themselves.

The 101-page interim report by the EU's High-Level Expert Group on Sustainable Finance is another effort to leverage financial power against the risks posed by unabated climate change. Bank of England Governor Mark Carney, working on the behalf of the Group of 20 countries, published a separate report last month asking executives to tell investors how the rising seas, superstorms, and political upheaval associated with global warming could affect their business.

Accounting Treatment

The Carney task force, which was led by Michael Bloomberg, founder and majority owner of Bloomberg News and its parent Bloomberg LP, said companies affected by climate change should conduct scenario analysis and include results in their financial reports. Every G-20 nation except the U.S. welcomed it July 8 and 11 major banks said July 11 that they'd find ways of putting the advice into practice.

The report, which will feed into a July 18 hearing, could lead to potential changes in the accounting treatment for sustainable investments. Current bookkeeping norms that "require mark-to-market valuations" could be impeding the transition to green power by creating "short-term fluctuations and a reporting maturity mismatch," the document said.

The commission also will look at how to offer preferential capital treatment for green investments, or add capital charges for more polluting investments, Dombrovskis said.

"It's also to steer the investment and to steer the investors' longer-term choices," Dombrovskis said. "We know that the demand for green investment is a very big one."

Daimler Called to German Committee Probing Diesel Emissions

Posted July 13, 2017, 9:28 A.M. ET

By Karin Matussek and Elisabeth Behrmann

Daimler AG executives were called to a German government committee looking into possible diesel-emissions cheating following a Sueddeutsche Zeitung report that prosecutors are focusing attention on two engines that power its popular Mercedes-Benz sport utility vehicles.

Representatives of the carmaker were invited to a special session of the committee July 13, the German transport ministry said in an email.

Authorities across Europe are putting car manufacturers under scrutiny after Volkswagen revealed in September 2015 that it installed software in its autos' diesel engines to bypass pollution rules. Prosecutors and police raided Daimler sites throughout Germany in May. A person familiar with the document said July 13 that the warrant authorizing the search said two diesel engines used in Daimler cars were equipped with so-called defeat devices that would reduce emissions controls. The documents cited the Mercedes GLK 250 and GL 350 SUVs from 2015 as carrying these engines.

The probe of possible fraud and false advertising at Stuttgart-based Daimler, started in March, has identified two technicians at the manufacturer who are suspected to have worked with software that controls the engines' exhaust, said the person, who asked not to be identified because the information isn't public. The warrant doesn't specify the number of vehicles affected, the person said.

Jan Holzner, a spokesman at the Stuttgart prosecutors office, declined to comment on the warrant's details, but said information about the document published in Sueddeutsche Zeitung can't be interpreted as the probe being widened. He confirmed that two people are being investigated. Prosecutors haven't yet started to review the bulk of the material seized as Daimler has filed several court suits against the searches.

Daimler reiterated earlier Thursday that it's cooperating fully with the investigation said Joerg Howe, a spokesman, declining to comment further.

Booming Wind, Solar to Erode Gas Demand in Americas, IEA Says

Posted July 13, 2017, 8:03 A.M. ET

By Patrick Martin

A surge in power from wind, solar and other renewable sources will begin chipping away at natural gas demand growth in the Americas over the next five years, according to the International Energy Agency.

The region's gas consumption will climb just 0.9 percent per year from 2016 through 2022, compared with 2.2 percent annually over the previous six-year period, the agency said in a report released July 13. Rising gas prices and a slowdown in coal plant retirements will also limit demand for the fuel, the IEA said.

A boom in cheaper energy from wind farms and solar arrays is creating competition for gas-fired generators, pummeling electricity prices. While gas has grabbed a bigger share of the power market in the Americas as coal-fired plants shut, the demand surge won't last, according to the IEA.

"There will be weak growth in electricity demand," the agency said in the report. "The level of gas consumed in the power sector is expected to be at broadly the same level throughout the forecast period."

Though U.S. gas futures averaged about $2.55 per million British thermal units last year, the IEA predicts prices will be "significantly higher" through 2022, rising above $3. That'll make gas-fired electricity generation more expensive than power from coal—especially coal supplies from the Powder River Basin in the western U.S., the agency said.

Industrial consumers may represent a bright spot for gas demand, however. Consumption in the sector may rise 1.7 percent a year as new chemical plants using gas as a feedstock are built on the U.S. Gulf Coast, the IEA said.

Meanwhile, gas output from U.S. shale basins will continue to flood the global market, the IEA said. The U.S. will boost production more than any other country over the next five years, accounting for almost 40 percent of global supply growth and more than one-fifth of the world's output by 2022.

Brazil Ownership Law Could Fuel Land Grabbing: Environmentalists

Posted July 13, 2017, 8:42 A.M. ET

By Michael Kepp

A new Brazil law that lets squatters buy public land they've occupied and gives them juridical security in land disputes will fuel deforestation and land-grabbing, especially in the embattled Amazon rainforest, environmental groups claim.

Brazilian President Michel Temer July 11 signed the law, which allows individuals or companies, in

the name of their owner, that occupied public, rural land anywhere in Brazil as of December 2011 to buy up to 2,500 hectares (9.7 square miles) and get title to that land at government-set, below market prices. Those who buy the land also will be able to sell it.

Leonardo Goes, president of the government's Institute of Land Reform, which settles landless peasants on public land, said in a July 12 statement that the new law "by creating rules to legalize land ownership … brings juridical security and tranquility needed for small rural agricultural producers and settled farmers to work their land to generate an income."

A provisional measure that Temer originally sent to Congress in December 2016 set the land-occupying limit at 1,500 hectares. But a coalition of legislators aligned with agribusiness was able to change the limit to 2,500 hectares.

Environmentalists said the new law will fuel both deforestation and future land grabbing.

The law "will allow people to pay relatively little to buy and deforest once-public land that they have grabbed by having occupied it, especially in Amazon," Juliana Batista, a lawyer at the Social-Environmental Institute, told Bloomberg BNA July 12. "Temer signed the law, which Congress changed to favor those who occupy greater parcels of land, because he needs the ruralist coalition to pass other legislation, like fiscal and labor reforms, that he has proposed."

A June 2009 law allowed individuals and companies that could prove they were occupying public Amazon land to buy up to 1,500 hectares and get a title to this land—legislation that caused land-grabbing speculators and settlers to rush into the Amazon.

Cristiane Mazzetti, Amazon campaigner for Greenpeace Brazil, told Bloomberg BNA July 12 that the new law "will further encourage land grabbing because legalizing amnesty for past land grabbing throughout Brazil sends a message to new potential land grabbers to expect the government and Congress to provide similar amnesties in the future."

Subject: EPA staff reshuffle nixes climate adaptation

By Emily Holden and Alex Guillén

09/08/2017 11:10 AM EDT

EPA's climate change adaptation staff will be dissolved into other agency offices under a reorganization of the EPA's policy shop, a spokesman confirmed today.

Samantha Dravis, a longtime political strategist and Administrator Scott Pruitt's top policy aide, announced the changes in a staff-wide memo first reported by E&E News. The policy office will also absorb EPA's environmental justice and National Environmental Policy Act activities.

A reorganization chart obtained by POLITICO eliminates the agency's four-person climate adaptation team.

EPA said those employees were reassigned to the Office of Regulatory Planning and Management and the National Center of Environmental Economics. They will still work under Dravis.

The team formerly focused on preparing for sea-level rise and extreme weather. EPA in April confirmed plans to move the employees into different roles and argued that adaptation should be conducted at the regional and local level. A spokesperson said the work didn't align with Administrator Scott Pruitt's core priorities of clean air and water.

The adaptation office was run by EPA veteran Joel Scheraga, who oversaw the creation of the agency's 2014 adaptation implementation plan and helped write Barack Obama's 2013 climate action plan, which led to the creation of the Clean Power Plan and other regulations.

Expect GOP Plaudits for Pruitt But Not EPA Budget at Hearing

Posted June 09, 2017, 6:00 A.M. ET

By Brian Dabbs

EPA chief Scott Pruitt will likely get a warm welcome from Republican appropriators next week despite bipartisan opposition to the agency's fiscal year 2018 budget, a GOP lawmaker told Bloomberg BNA.

Republicans are applauding the agency's regulatory rollbacks, and that praise will likely set the tone for Pruitt's maiden testimony on Capitol Hill as administrator, said Rep. Tom Cole (R-Okla.), a member of the House Appropriations Subcommittee on Interior, Environment and Related Agencies, which oversees the Environmental Protection Agency's budget.

Members on both sides of the aisle, however, are poised to raise concerns about the wide-ranging cuts in the agency's budget, lawmakers said. Pruitt will defend the request, which was crafted and released by the White House, before the subcommittee on June 15.

'A Very Friendly Reception'

"He'll get, obviously from the Republican side, a very friendly reception because of the regulatory things, but I think there'll be some pretty serious discussions about the size of the cuts," Cole told Bloomberg BNA. "I think at the end of the day, EPA takes a haircut. It's certainly taken several haircuts with a Republican Congress, but it's hard for me to see cuts of the size that were proposed in the president's budget."

The EPA is reviewing rules defining which bodies of water are subject to federal regulation and limiting methane emissions in oil and gas operations, as well as those setting ozone and fuel economy standards. The agency is also reviewing the Clean Power Plan, President Barack Obama's signature rule to combat climate change by limiting power plant emissions.

But the FY18 budget cuts, which total $2.6 billion, hit immediate Republican opposition on Capitol

Hill. That reduction amounts to nearly one-third of the agency's current budget.

"Just trying to substitute agency cuts for policy disagreement is a tool, but it's probably not the longest-lasting, most effective one," Rep. Mark Amodei (R-Nev.), another member of the subcommittee told Bloomberg BNA. "I don't think that any of those people on that committee are going to vote for cuts just because that's the administration's recommendation."

The budget would slash enforcement and zero out funding for programs to restore the Great Lakes, Chesapeake Bay and other bodies of water, while chopping an array of other bedrock programs. The White House is requesting a roughly 80 percent reduction in funding for the Diesel Emissions Reduction Act, which funds clean diesel projects. That program is a favorite of subcommittee Chairman Ken Calvert (R-Calif.).

'The King's Man'

The White House budget also makes deep cuts in Superfund and state grant accounts, both of which Pruitt has singled out as important functions. But the administrator is prepared to vouch for the budget before lawmakers.

"Administrator Pruitt will be testifying in support of the president's proposed budget, which seeks to return EPA to its statutory mission, and reduce redundancies and inefficiencies," EPA spokeswoman Liz Bowman told Bloomberg BNA. "We believe that with better leadership, and reducing inefficiencies and administrative costs, we can accelerate the pace of the clean-ups of [Superfund sites]. It is also worth noting that we believe there is a significant amount of money being wasted in administrative costs in this program."

Agency chiefs regularly disagree with some aspects of a budget they're tasked to defend.

"He works for the president. You take the king's shilling, you become the king's man. That's just the way it works," Cole said. "At the end of the day, if you're going to be part of the administration, you have to defend the president's budget."

General Electric Challenges EPA on $613 Million Cleanup

Posted June 09, 2017, 12:53 P.M. ET

By Sylvia Carignan

General Electric says the Environmental Protection Agency's orders for cleaning up chemical pollution along the Housatonic River are too expensive and too demanding.

EPA's Region 1 office ordered the work, estimated to cost $613 million over at least 13 years.

General Electric is bound by a 2000 consent decree and a 2016 revision of a Resource Conservation and Recovery Act corrective action permit to clean up contaminants such as polychlorinated biphenyls (PCBs).

The company challenged the permit before the EPA's Environmental Appeals Board at the agency's Washington, D.C., headquarters June 8.

The board's judges are currently considering the fate of the permit.

General Electric was directed to address hazardous waste at its former facility on the river, on floodplain properties, and along the river itself.

Region 1 asked General Electric to dispose of contaminated sediment, soil and waste off-site at licensed waste facilities. General Electric filed an appeal of the Region 1 permit in November, triggering an Environmental Appeals Board hearing.

The company said the extensive cleanup actions in the Region 1 permit—including off-site waste disposal and the amount of sediment that needs to be removed—exceed the scope agreed upon in the consent decree. Less demanding remedies would still protect human health, according to General Electric.

"The region has given itself authorities that exceed its powers," said Andrew Nathanson, who represented General Electric on the issue before the Environmental Appeals Board.

Environmental and local interest groups, which also argued their cases before the board, said the same EPA cleanup plan isn't extensive enough because it leaves unsafe levels of contaminants behind.

"Now is the time to get them out of there, to the greatest extent possible," said Peter deFur, representing the Housatonic River Initiative.

The state of Connecticut, represented by Lori DiBella, also seeks a more thorough cleanup.

"We want a swimmable, fishable river, and we don't have that right now," DiBella said.

Siting Hazardous Waste

Nathanson argued General Electric would prefer to dispose of waste on its own property, at a lower cost, instead of the off-site disposal plan.

"It wasn't just expensive, but massively more expensive," Nathanson said, potentially costing the company $180 million to $250 million more for an equally environmentally protective option.

Timothy Conway, EPA's senior enforcement counsel representing Region 1, said they aren't necessarily equal.

"The potential for a landfill near the river potentially leaking made it less protective," he told the board.

The board's judges asked if Region 1 had released more detailed information about how the EPA decided on certain cleanup options.

"The analysis we provided is sufficient for the purposes of what we were charged with doing," Conway said.

The Housatonic River site runs along the western edges of Massachusetts and Connecticut, into the Long Island Sound.

General Electric's facility in Pittsfield, Mass., formerly used to manufacture electrical transformers, is

associated with the release of PCBs.

The RCRA permit addresses contaminants, predominantly PCBs, in the "Rest of River" portion of the site, downstream of General Electric's facility.

According to the EPA, PCBs are a probable carcinogen and are potentially related to health problems involving the immune system, endocrine system, and learning deficits.

Carbon Prices Continue to Drop in Northeast

Posted June 09, 2017, 01:34 P.M. ET

By Gerald B. Silverman

The cost for electricity generators to comply with the Regional Greenhouse Gas Initiative sank to a four-and-a-half-year low in RGGI's latest auction, driven by an oversupplied market and uncertainty over a longstanding program review by the nine states in the initiative.

RGGI carbon allowances sold for $2.53 in the auction, a decline of 15.6 percent from the previous auction and 44 percent from June 2016, RGGI announced June 9.

The trend in RGGI carbon prices has been downward for a couple of years, as a result of an over-supply of allowances, regulatory uncertainty on the federal and state levels and the prices for natural gas and renewables.

Mike Taylor, president of Emission Advisors Inc., told Bloomberg BNA that the decline was not a surprise, given a large bank of unused allowances, declining emissions, and an "underwhelming" program review.

Taylor said "a case can be made for prices to trend up through the remainder of the decade," as the bank of allowances is depleted and the nine RGGI states complete their review of the program.

RGGI states -- Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island and Vermont -- started a program review in 2015 that will determine if the existing emissions cap will be tightened after 2020, when the current cap expires.

EPA's Pruitt Could Face Tough Crowd at G-7 Environment Meeting

Posted June 09, 2017, 6:30 A.M. ET

By Eric J. Lyman

Climate-related issues are just one part of the agenda for this weekend's meeting in Italy of environment ministers from the leading industrial nations, but EPA Administrator Scott Pruitt can expect an earful on the decision of the U.S. to withdraw from the Paris climate change agreement, environmental groups said.

"The ministerial in Bologna is first and foremost an opportunity for the G-7 countries to send a clear signal to Scott Pruitt that these actions are not tolerated, that backsliding doesn't come without consequences," Climate Action Network International Executive Director Wael Hmaidan told Bloomberg BNA.

Environmental officials from the Group of Seven nations—Canada, France, Germany, Italy, Japan, the U.K. and the U.S.—meet in Bologna, Italy, June 11-12.

An outline of the meeting goals released June 8 said they would focus on the "state of implementation of the goals set by the Paris Agreement to fight climate change," sustainable development goals that are part of the United Nations' 2030 agenda, environmental tax reform, and sustainable finance.

Italian ministry officials declined to comment on the priorities at the talks.

'Trump's Crazy Decision'

Trump announced June 1 that the U.S. would withdraw from the Paris Agreement, which has the support of virtually every other nation. The Environmental Protection Agency's Pruitt was among the strongest voices in the Trump administration calling for withdrawal from the Paris accord, agreeing with Trump that the pact would cost U.S. workers jobs, especially in industries like coal mining.

"Despite Trump's crazy decision, the G-7 should strongly afford the need to implement the Paris accord and push countries to put more effort into filling the void left by the United States," Luca Iacoboni, the head of the energy and climate program for Greenpeace-Italy, told Bloomberg BNA.

Angelo Paletta, a business professor at the University of Bologna who is following the talks, said: "It will be important to understand what this means about other countries commitments over the next five years, as well as concerns about finance as the world tries to raise $100 billion per year starting in 2020."

Paletta was referring to the United Nations' Green Climate Fund, which aims to help developing countries adapt to the impacts of climate change.

President Barack Obama had pledged that the U.S. would commit $3 billion over four years to the fund, but Trump has vowed to halt U.S. contributions to the fund.

Exxon Says N.Y. Attorney General Distorts Company's Climate Data

Posted June 09, 2017, 03:17 P.M. ET

By Erik Larson

Exxon Mobil Corp. accused New York Attorney General Eric Schneiderman of wildly distorting in court how the company calculates the long-term financial impact of climate change on its assets.

Schneiderman recently revealed detailed findings from the two-year probe, including "significant evidence" that Exxon may have been using two sets of numbers—one public and one secret—to calculate the impact of climate change on its oil and gas reserves. He also accused Exxon of allowing emails relevant to the probe to be deleted, including those in a secondary account for former Chief Executive Officer Rex Tillerson under his alias Wayne Tracker.

That filing was "filled with inflammatory, reckless, and false allegations of an 'ongoing fraudulent scheme' and 'sham' business practices," Irving, Texas-based Exxon said June 9 in a court filing in Manhattan. The oil giant urged a judge to reject a fresh subpoena in the case.

The attorney general's probe into whether Exxon misled investors about its approach to global warming is a cover for Schneiderman's "transparent political ambitions," Exxon said.

Schneiderman's press office didn't immediately respond to a phone call seeking comment. A hearing in the case is scheduled for June 16 in Manhattan.

Exxon has a separate lawsuit against Schneiderman pending in federal court in New York in which the company seeks to force an end to the probe on the grounds that it was started in "bad faith" as part of an environmental witch hunt.

Lawmakers Aim for Fewer Wildfires, Healthier Forests

Posted June 09, 2017, 02:53 P.M. ET

By Alan Kovski

A reintroduced bill that would make disaster funding available for the largest wildfires garnered support from both sides of the aisle June 8, just one week before another bill addressing forest management issues is set for discussion in the House.

Both bills could prove important to rural communities, the timber industry, and recreation in forests.

Rep. Mike Simpson (R-Idaho) reintroduced the Wildfire Disaster Funding Act (no number assigned yet) would allow wildfire suppression financing to be covered by disaster funds when regularly appropriated money is exhausted. The strategy would end the practice of borrowing funds from other programs, a disruptive process that can undercut programs intended to prevent fires.

Rep. Kurt Schrader (D-Ore.) joined Simpson in introducing the bill, and 16 House members from both parties signed on as co-sponsors.

Many lawmakers also aim to see forest management practices improved to reduce the frequency and severity of forest fires. The House Natural Resources Committee will discuss a draft version of a bill by Rep. Bruce Westerman (R-Ark.) June 15.

Westerman's Resilient Federal Forests Act of 2017 (no number assigned yet) was introduced as a discussion draft. Several provisions are similar to a Westerman bill that the House passed in 2015 but the Senate did not act on. It would expedite environmental reviews of forest management decisions and, unlike the 2015 bill, establish an arbitration procedure as an alternative to litigation for dispute resolution.

The goal of Westerman's bill is to develop healthier forests with less risk of wildfires, but disagreements over the subject, year after year, involve the extent of timber harvesting and efforts to limit the lawsuits that often block logging. Environmental groups worry that such legislation over-relies on logging as a solution.

HIKO Mulling Appeal on $1.8M Fine for Overcharging

Posted June 09, 2017, 02:53 P.M. ET

By Leslie A. Pappas

HIKO Energy LLC may appeal a court's decision to uphold a $1.8 million fine against the company, an attorney for the East Coast electric generation supplier told Bloomberg BNA June 9.

The Pennsylvania Commonwealth Court on June 8 voted 4-3 to affirm the penalty for overcharging thousands of Pennsylvania customers in 2014, ruling that state regulators had the authority to impose a separate fine per each invoice.

The decision affirmed a fine that broke records when the Pennsylvania Public Utility Commission imposed it in 2016. The penalty remains one of the highest state regulators have ever imposed, second only to a $11.4 million penalty levied against Uber Technologies Inc. for operating in Pittsburgh without approval.

The Uber penalty was similar to the one for HIKO because regulators counted each invoice as a violation. The Uber penalty added up because regulators levied a violation for each ride. Uber and the PUC settled that case in April, reducing the penalty to $3.5 million.

HIKO is reviewing its legal options and considering whether to appeal, one of company's attorneys, Vincent E. Gentile of Drinker Biddle & Reath LLP told Bloomberg BNA in an email June 9.

"While we are disappointed with the majority's opinion, the decision concerns events that occurred more than three years ago during the polar vortex of 2014," Gentile said. "HIKO has implemented significant changes to its operating practices and has made full refunds to all customers who were affected during that event."

Cold Winter Charges

HIKO's penalty stemmed from a four-month period from January to April 2014, when the company intentionally overcharged about 5,700 customers who were enrolled in a guaranteed cost-savings plan. Faced with energy price spikes during an unusually cold winter, the company purposefully overcharged its customers more than the fixed price the company guaranteed in writing when the customers signed up for the plan, the order said (HIKO Energy v. Pa. Pub. Util. Comission, Pa. Commw. Ct., No. 5 C.D. 2016, Opinion 6/8/17).

An investigation by the PUC found overcharges on on 14,689 customer invoices, averaging about $124 each. The subsequent $1.8 million penalty was calculated by multiplying the number of invoices by the average overcharged.

HIKO argued that its failure to honor its price guarantee was a single business decision, not 14,689 separate ones, the opinion said.

The Commonwealth Court disagreed, saying, "The imposition of a civil penalty for each overcharge is lawful and appropriate in light of the fact that each overcharge can be feasibly segregated into a discrete violation."

In a dissenting opinion, Judge Mary Hannah Leavitt said the PUC imposed fines ranging from $25,000 to $125,000 on other electric suppliers for the same violation, and called the $1.8 million fine "grossly disproportionate."

HIKO works with about 30 utility companies to deliver electricity to customers in New York, New Jersey, Connecticut, Pennsylvania, Illinois, Ohio, and Maryland.

Trump Climate Critics Wrong on Pulling Out of Paris, Perry Says

Posted June 09, 2017, 02:23 P.M. ET

By Feifei Shen and Tom Mackenzie

Critics of President Donald Trump's move to withdraw the U.S. from the Paris climate change agreement are acting more for political reasons than for the reality of what the accord may achieve, U.S. Energy Secretary Rick Perry said June 9 in an interview where he defended the president's move.

Goldman Sachs Group Inc. Chief Executive Officer Lloyd Blankfein, JPMorgan Chase & Co. Chairman Jamie Dimon and others ranging from General Motors Co. and Ford Motor Co. to Exxon Mobil Corp. are wrong about wanting the U.S. to remain a part of the Paris climate deal, Perry said in a Bloomberg Television interview with Tom Mackenzie.

"When you looked at the cost versus the benefit of what you're going to get from being in the Paris agreement, it wasn't worth it," Perry said in Beijing. "I think they are wrong, because they're coming at it from the political side of it rather than the reality."

Perry was in Beijing June 7 and 8 attending a ministerial-level meeting on clean energy where he made a broad appeal to cooperate on natural gas, nuclear energy and technologies such as carbon capture and storage.

"The reality is we are going to continue to be leaders on clean energy," Perry said, adding that the U.S. will continue to contribute to mitigating climate change. "There's a real story to be told here about the U.S.; it's about what we are doing to reduce emissions."

China Meetings

Earlier in the week, Perry met with Chinese Vice Premier Zhang Gaoli where he emphasized areas where the two countries can cooperate. One area is liquefied natural gas. The U.S. is the world's largest producer of natural gas and within a few years will be the third-largest exporter of the super-chilled version of the fuel.

Companies are proposing dozens of new export plants in the U.S. and need foreign buyers to underpin financing for the multi-billion-dollar projects. China, which is trying to increase gas use instead of coal to help clear smog-choked air, should be interested in U.S. supplies because the projects have the benefit of political stability, Perry said.

Perry also said President Trump is right to look at selling some oil from the Strategic Petroleum Reserve. The Trump administration proposed a budget last month that included selling off 270 million barrels on top of a 190 million-barrel drawdown already planned. The reserve currently has a little less than 700 million barrels of oil.

Strategic Reserves

On the strategic reserve, "the debate is what's the right level," Perry said. "The president is right to

have the conversation. How much of this do we really need to keep on hand, how much of it can we put into the market, and how do you manage all that. That is classic Donald Trump negotiating a better deal for the people of the U.S."

When in Tokyo earlier in the week, Perry sounded a combative tone, challenging China to take up the mantle of leadership on climate change while dodging questions about whether President Trump believes in global warming.

"Those of you that focus on that are chasing a rabbit down a hole," Perry told reporters in Tokyo.

China has transformed itself into one of the world's leaders in renewables in recent years with ambitious bets on wind and solar. The country, which is home to about one out of every three wind turbines in the world, has led in clean-energy spending since 2012. In the first quarter of this year, China outspent the U.S. and Japan combined on clean-energy projects.

Week Ahead: Pruitt Meets the Purse-String Holders

Posted June 09, 2017, 02:14 P.M. ET

By Chuck McCutcheon

EPA Administrator Scott Pruitt will explain to Congress why he believes cutting his agency's budget by 31 percent is a good idea, one of numerous energy and environment events during the week of June 12.

Pruitt is scheduled to appear June 15 before the House Appropriations' Interior, Environment and Related Agencies' Subcommittee to discuss President Donald Trump's fiscal 2018 budget request. Pruitt has defended the proposed cut to the Environmental Protection Agency by saying he has met with many state officials "who are committed to pro-jobs and pro-environment" and who will join in funding a greater share of U.S. environmental protection needs.

Republicans on the Appropriations Committee are expected to give Pruitt a warm reception because of his commitment to overhauling the agency, as Brian Dabbs has reported. However, they have been more dismissive about the magnitude of the proposed cut.

Ken Calvert (R-Calif.), who chairs the EPA funding subcommittee, has said he looks forward to working with the Trump administration. But in President Barack Obama's final year in office, his appropriations subcommittee called for cutting less than $300 million from Obama's EPA budget request—which would have amounted to about a 3.5 percent cut to EPA's budget—while at the same time boosting spending by more than $200 million over what Obama had sought for drinking water state revolving funds.

Calvert is a conservative who has spoken of the need to reduce "job-killing regulations." But he also has a bipartisan side: He has held a seat on the Appropriations Committee since 2007 and has reached across the aisle on votes to raise the debt limit and keep the government running when hardliners threatened a shutdown. With a business background in the real estate and restaurant industries, Calvert is a member of the Republican Main Street Partnership, a coalition of more than

70 members of Congress that backs "advancing positive policies that can command bipartisan support."

Also on Capitol Hill

The Senate Environment and Public Works Committee will hold a hearing June 13 on several of Trump's nominees: Annie Caputo and David Wright to the Nuclear Regulatory Commission (as well as the reappointment of Commissioner Kristine Svinicki); and Susan Bodine to assistant administrator of EPA's Office of Enforcement and Compliance Assurance. Bloomberg BNA will cover.

Environment and Public Works also will hold a hearing June 14 on the renewable fuel standard Reid Vapor Pressure (RVP) waiver. The bill (S. 517) would waive summer restrictions on transportation fuel containing 15 percent ethanol, known as E15, and higher ethanol blends. Among those scheduled to testify is Mike Lorenz, executive vice president of Sheetz Inc. Brian Dabbs will monitor.

Also June 14, the House Energy and Commerce Committee's Energy Subcommittee is set to explore states' roles on energy security planning, emergency preparedness and state energy programs. Rebecca Kern will cover.

The Senate Energy and Natural Resources Committee's Water and Power Subcommittee will meet June 14 to look at a variety of water- and power-related bills, including one aimed at making it easier to build new surface water storage projects. Alan Kovski will cover.

The House Agriculture Subcommittee on Conservation and Forestry will hold a hearing June 13 on small watershed structure. Trump has proposed to zero out funds for the Department of Agriculture's rural wastewater and water infrastructure program in the fiscal year 2018 budget. Amena H. Saiyid will cover.

In Other News

G-7 meeting: Environmental officials from the Group of Seven nations—Canada, France, Germany, Italy, Japan, the U.K. and the U.S.—meet in Bologna, Italy, June 11-12. Climate-related issues are just one part of the agenda, but Pruitt can expect an earful on the decision of the U.S. to withdraw from the Paris climate change agreement. Eric J. Lyman is covering.

European Parliament: European Union lawmakers are scheduled to discuss the U.S. decision to withdraw from the Paris Agreement June 14. Votes also are expected on a variety of environment issues, including greenhouse gas emissions reductions through 2030 for parts of the economy that are not covered by emissions trading as well as the use of pesticides in certain conservation areas. Stephen Gardner will cover.

Methane lawsuit: Environmental groups are asking a federal appeals court to stop the EPA from placing a stay on an Obama-era regulation on methane emissions from oil and gas wells. The agency has until 4 p.m. on June 15 to submit a response to the groups arguing why the stay shouldn't be struck down. David Schultz will handle.

Social cost of carbon: The National Academies' Board on Environmental Change and Society will hold a June 14 symposium on the social cost of carbon and climate impacts. Rachel Leven will track.

Dental amalgam rule: June 14 is the deadline for the EPA to defend its decision to pull the dental

amalgam rule from taking effect, even though former EPA administrator Gina McCarthy had signed the rule. The Natural Resources Defense Council has sued the EPA for pulling the rule without going through notice and comment. The rule in question set federal effluent limits to regulate the 100,000 dental clinics that discard dental fillings containing mercury, a potent neurotoxin, into municipal sewer systems. Amena H. Saiyid will cover.

EPA Review of New Chemicals: EPA's Jeffery Morris discusses during a free June 12 webinar what the agency's Office of Pollution Prevention and Toxics has been doing to slash the backlog of new chemical requests that had piled up following last year's overhaul of the Toxic Substances Control Act and prevent another backlog from occurring. Specialty chemical manufacturers, former EPA officials and Lynn L. Bergeson, managing partner of Bergeson & Campbell P.C., add their perspectives. Pat Rizzuto is moderating the webinar.

Green chemistry: William Feehery, president of DuPont Industrial Biosciences, will deliver the keynote address at the American Chemical Society's 21st Annual Green Chemistry & Engineering Conference June 13-15 in Reston, Va. Bloomberg BNA will cover.

Chemical dispersants: The toxicity and efficacy of chemical dispersants used to respond to oil spills is the subject of a new science review that aims to improve oil spill cleanups. The tools will be studied by a new scientific advisory committee that holds its first meeting June 13-15. The trade-offs for workers, coastal communities and the environment when other cleanup methods are used—or when oil spills are left untreated—also will be discussed by the National Academies' Committee on the Evaluation of the Use of Chemical Dispersants in Oil Spill Response. Pat Rizzuto is following.

Paris Pullout Pits Chamber Against Some of Its Biggest Members

Posted June 09, 2017, 8:30 A.M. ET

By Ari Natter

As President Donald Trump mulled whether to exit the Paris climate accord, companies as varied as Dow Chemical Corp., Exxon Mobil Corp., and Citigroup Inc. prodded him to stay in.

But when Trump announced his decision, he cited research from one business behemoth that's issued a steady stream of criticism to the Paris deal, the U.S. Chamber of Commerce that counts all three companies as members.

That disconnect between corporate executives and the nation's top corporate lobbying force is reviving pressure on the Chamber—and on the companies that remain members despite their differences over climate policy.

"For decades, the U.S. Chamber of Commerce has been big polluters' partisan enforcer in Washington," Democratic Sen. Sheldon Whitehouse, who co-authored a congressional report last year about this corporate disconnect over climate change, said in an emailed statement.

"It's time for member companies to ask themselves whether they want to side with a relentless climate foe, or protect the health and safety of the American people and the reputation of our country," he added.

Public Citizen and other groups said they are starting a petition drive to prod three companies—Walt Disney Co., Gap Inc., and PepsiCo Inc.—to drop their connection to the U.S. Chamber. That organized pressure is reminiscent of 2009, when companies such as Apple Inc. and Exelon Corp

that advocated for federal action to address climate change quit the Washington group as it lobbied to derail cap-and-trade legislation.

"You've got a lot of companies that are really talking out of both sides of their mouth," said Dan Dudis, who heads the Chamber Watch project at Public Citizen.

The U.S. Chamber of Commerce spent nearly $104 million on lobbying last year making it the top lobbying spender among 3,734 groups tracked by the Center for Responsive Politics. Among the issues it has championed are reworking the Affordable Care Act, business tax cuts, and opposition to a minimum wage hike. The group, which has its headquarters across Lafayette Square from the White House, said it was officially neutral on the Paris accord despite its long list of criticisms.

The chamber said in a statement that the business community "stands ready to fashion solutions to keep America prosperous, clean and secure. America should choose a path for an energy future that is achievable, affordable, and most importantly meaningful."

From coal producer Cloud Peak Energy Inc. to electric-automaker Tesla Inc., corporate America has broadly supported the Paris accord, a 2015 agreement of nearly 200 nations to address the threat of climate change. The deal is the first to include pledges from developing nations such as India and China to curtail their emissions, as well as developed nations in North America and Europe.

Among the companies that signed onto an open letter to publicly support the Paris climate agreement were Microsoft Corp. and Google's Alphabet Inc. Ivanka Trump appealed to Dow Chemical's CEO Andrew Liveris to spearhead a late lobbying push to try to save U.S. involvement in the pact. And executives' response to Trump's decision was quick and overwhelmingly negative. Robert Iger, chief executive of Disney, resigned from a White House advisory council. Ford Motor Co. and Microsoft weighed in with their dismay, too.

In response to questions from Bloomberg, companies said they agree with the chamber on some issues, but not all. Others said they are putting pressure on it to change course.

"We have been outspoken in our support for the Paris Agreement and have had a dialogue with the chamber about how its views and advocacy on climate policy are inconsistent with Citi's position," Citigroup spokeswoman Elizabeth Kelly said in an email. "Citi does not expect to be in agreement with every position our trade associations take."

Time to Time

Dow, which gave the chamber $1.8 million for lobbying in 2016, "participates in many trade and business associations," the chemical-maker's spokeswoman Rachelle Schikorra, said in an email. "From time to time, we find ourselves in disagreement with the prevailing views of the majority of the U.S. Chamber's membership, including issues such as climate change."

"PepsiCo's long-standing commitment to addressing climate change will not change," the company said in a statement that didn't address questions about its ties to the chamber.

"No organization speaks for Ford on every issue," said Christin Baker, a Ford spokeswoman. "The chamber has been actively supportive of tax reform, but takes a different view on climate. We will continue to work with the chamber on issues where we are aligned."

Companies may differ with the chamber on climate change, but agree on taxes or labor issues, said Lee Drutman, a senior fellow in the program on political reform at New America, a Washington

research organization. Still, they face the risk of customer blowback.

"Any company with a consumer-facing brand has to worry about its reputation," Drutman said in a phone interview. "If it's on the wrong side of a political issue that its customer base is passionate about, it could find itself losing a lot of customers."

Oil giant Exxon, which disclosed giving the U.S. Chamber of Commerce Foundation $1 million in 2015, advocated for staying in the Paris accord, as its chief executive Darren Woods argued that oil demand will continue to grow in the coming decades even with the agreement in place.

"We believe that the United States is well positioned to compete within the framework of the Paris Agreement, with abundant low-carbon resources such as natural gas, and innovative private industries," spokesman Alan Jeffers, said in an email. He declined to comment on the chamber's report on Paris.

While the chamber said it hadn't made a recommendation on whether the U.S. should remain in Paris, it issued a series of criticisms of the pact since even before it was completed.

In congressional testimony, it said the U.S. pledge to cut greenhouse gas emissions by 26 percent would hike U.S. energy costs and diminish job creation—and that the pact would not do much to actually curtail greenhouse gas emissions. The chamber jointly funded a study in March that determined the deal could slice $3 trillion off U.S. gross domestic product by 2040.

Trump made specific reference to that study, and each of the group's earlier arguments, in announcing his decision to pull the U.S. out of the pact.

"The cost to the economy at this time would be close to $3 trillion in lost GDP and 6.5 million industrial jobs, while households would have 7,000 less income, and in many cases, much worse than that," Trump said in the Rose Garden ceremony June 1.

Kevin Steinberger, a policy analyst with the Natural Resources Defense Council's climate and clean air program, said the chamber's claim that it was neutral on the accord was "disingenuous."

"The report was clearly aimed at attacking the Paris agreement and used an unrealistic scenario to do so," he said.

Mimic Nature to Harness Stormwater Runoff at Parks, EPA Says

Posted June 09, 2017, 01:44 P.M. ET

By Amena H. Saiyid

Harness stormwater at parks by planting rain gardens with native plants and grasses and installing porous pavements, the EPA recommends in a new guidance.

Released June 8, "Green Infrastructure in Parks: A Guide to Collaboration, Funding, and Community Engagement" identifies these and other types of green infrastructure projects that

stormwater agencies can use at parks to manage polluted runoff.

Green infrastructure, an engineering technique that mimics nature, redirects stormwater into the soil through porous pavements, shrubbery on rooftops, or strategically installed sunken grassy areas along the edges of paved sidewalks, roads, and parking lots.

The Environmental Protection Agency, which has been promoting green infrastructure use among municipalities since 2011, said the approach would work in parks because it is "attractive, effective, and beneficial" and requires minimal maintenance other than regular pruning and weeding. Congress also is considering bills that include green infrastructure use.

The guidance discusses how stormwater agencies can use their own funds or tap into state funds to install green infrastructure at parks. It also provides links to other EPA documents that spell out other green infrastructure resources.

EU Panel Classifies Titanium Dioxide as Cancer Risk

Posted June 09, 2017, 01:21 P.M. ET

By Stephen Gardner

Titanium dioxide, which is widely used in the manufacture of paints, paper, and plastics, should be classified as carcinogenic in the European Union, the European Chemicals Agency said June 9.

ECHA's Risk Assessment Committee concluded that titanium dioxide could cause cancer if inhaled, and should be ranked as a Category 2 carcinogen, the lowest classification for carcinogenicity. These substances are suspected of causing cancer compared to category 1B and 1A substances which are presumed to and known to cause cancer, respectively.

The Category 2 carcinogenicity rating would apply EU-wide to all forms of titanium dioxide, including its nanoforms. Companies that sell the substance would be required to bring their product hazard labels into line with EU standards for hazardous substances, which are set out in the EU CLP Regulation (Regulation (EC) No 1272/2008 on classification, labeling, and packaging of substances and mixtures).

France proposed the common EU classification of titanium dioxide and called for it to be considered a Category 1B carcinogen, but the evidence was insufficient for that classification, the chemicals agency said.

From a compliance point of view, there are significant differences between a 1B or 2 classification. Substances classified 1A or 1B cannot be supplied to consumers and might become candidates for phaseout under the EU's REACH law (Regulation No. 1907/2006 on the registration, evaluation, and authorization of chemicals).

Classifying titanium dioxide as Category 2 will have "limited direct consequences," the European Chemicals Agency said in a statement to Bloomberg BNA.

The risk committee's opinion on titanium dioxide will be forwarded to the European Commission, the EU's executive arm, which will formally decide on the classification of the substance, ECHA said.

Study of VW's Cheating on Diesels Examines Role of Bosch Code

Posted June 09, 2017, 12:36 P.M. ET

By Ryan Beene

A study alleges that Robert Bosch Gmbh created the software that enabled Volkswagen AG to evade diesel emissions standards for years.

Technical documents also indicate Bosch code was used in a so-called defeat device for a Fiat Chrysler Automobiles NV model, according to a year-long study by researchers at the University of California, San Diego and Ruhr-Universitat Bochum in Germany. That software set one mode for when a vehicle is being tested—but then allowed tailpipe pollution to spike in real-world driving conditions.

"We find strong evidence that both defeat devices were created by Bosch and then enabled by Volkswagen and Fiat for their respective vehicles," the study said, citing technical documents.

In a statement, Bosch declined to comment on the study, citing "the sensitive legal nature of these matters," adding that it would "not comment further concerning matters under investigation and in litigation." Bosch has previously rejected as "wild and unfounded" claims from vehicle owners that its employees conspired with VW to conceal defeat-device software.

The authors of the study, "How They Did It: An Analysis of Emission Defeat Devices in Modern Automobiles," reached their conclusions by analyzing technical documents bearing Bosch copyright notices, which were posted on a VW portal maintained for repair shops and websites for enthusiasts who alter their engine's software. The authors acknowledged that the documents were not provided or verified by Bosch and that automakers ultimately decide how to use the pollution-control software in their vehicles.

"Since we did not obtain the function sheets directly" from Bosch, the researchers wrote in their study, released May 22, "we cannot be absolutely certain of their authenticity."

Bosch, the world's largest auto-parts supplier, provides engine-control software to manage diesel emissions systems, offering computer precision to fine-tune those historically dirtier engines.

The company has had varying degrees of involvement in engine development work done by its automaker customers, ranging from simply providing software to hands-on technical collaboration, according to Daniel Carder, director of West Virginia University's Center for Alternative Fuels Engines and Emissions. Carder, who was part of the team that first identified VW's diesel cheating, said Bosch's software allowed engineers to tune engine performance with far more precision than previously possible.

Bloomberg News reported in September that the U.S. Justice Department was widening its criminal investigation into VW to probe whether Bosch conspired with the carmaker to evade U.S. pollution tests. Bosch declined to comment at the time.

VW has admitted to installing some 11 million diesel vehicles worldwide with defeat device software that could limit pollution during lab tests while exceeding legal limits on the road. Fiat Chrysler was accused by the Justice Department last month of using defeat devices in Jeep SUVs and Ram pickups, which use Bosch software. Fiat Chrysler denied wrongdoing and says it will defend itself vigorously against the allegation that it sought to cheat.

Bosch was not named as a defendant in the complaint. Fiat Chrysler "frequently engaged in discussions with Bosch regarding calibrations," of the software, the Justice Department said in the complaint.

While the VW and Fiat Chrysler defeat devices analyzed in the study are different from one another, they both allow vehicles to limit nitrogen oxide emissions during laboratory tests while allowing the vehicles to emit higher levels of tailpipe pollution in real-world driving, according to the study. The Bosch-copyrighted documents illustrate how the defeat devices could spot telltale signs of an emissions test, according to Kirill Levchenko, a UC-San Diego computer scientist and an author of the study.

"It's a diagram of a defeat device," Levchenko said, referring to the Bosch schematic design.

The study was supported by the European Research Council and by the U.S. National Science Foundation. It was prepared for an Institute of Electrical and Electronics Engineers Symposium on Security and Privacy in San Jose last month.

Widening Investigation

The study's findings add to scrutiny already surrounding the extent of the Stuttgart, Germany-based Bosch's involvement in the suspect diesel systems. Bosch has been named as a co-defendant in class-action lawsuits filed by owners of diesel vehicles made by VW, Fiat Chrysler, Daimler AG's Mercedes-Benz and, most recently, General Motors Co. In January, Bosch agreed to a $327.5 million settlement with VW owners; it admitted no wrongdoing.

U.S. vehicle owners accused Bosch of conspiring with the automaker to develop and conceal the defeat device software. In 2008, Bosch also asked VW to shield it from legal liability stemming from the use of its software, lawyers representing owners of VW diesels claimed in court filings last September. Bosch declined to comment on the letter at the time.

The Bosch-copyrighted schematics, reproduced in the study, diagram how the VW vehicles detected when they were being tested and limited pollution emissions to permissible levels. When the cars weren't being tested, they released the smog-forming pollutants at up to 40 times the permitted levels, according to the U.S. Environmental Protection Agency.

Separately, the researchers say they discovered code on a diesel Fiat 500x crossover that is sold in Europe but not the U.S. that "amounts to a defeat device." In the Bosch-copyrighted documents, one pollution-control path is called "real driving" and the other is labeled "homologation," a term used for the process of certifying that a product meets regulatory standards.

The testing mode directs the storage catalyst to limit nitrogen oxide emissions more aggressively than in the "real driving" mode. The stricter pollution controls are suspended after a little more than 26 minutes, which is the length of many emissions tests, Levchenko said.

A Fiat Chrysler spokesman declined to comment, and referred to written comments the company delivered last fall for a European Parliament committee hearing into allegations that the 500x deactivated emissions controls after 22 minutes.

"Our vehicles do not detect that they are being tested," the company said at the time. "They also do not deactivate the emission control systems after 22 minutes after cranking, contrary to allegations."

Regulators in Italy and Germany have been trading blows in a months-long dispute over the existence of defeat devices in Fiat Chrysler vehicles, including the 500x. Germany has accused the company of using defeat devices while Italian regulators say their testing reveals no such cheating.

The spat escalated last month when the European Commission opened a proceeding into whether the Italian regulators properly granted emissions approval to the Fiat Chrysler diesels.

EPA's Reconsideration of Power Plant Carbon Rule at White House

Posted June 09, 2017, 10:12 A.M. ET

By Andrew Childers

The White House is reviewing the EPA's plan to roll back carbon dioxide standards on the fleet of existing power plants.

Environmental Protection Agency Administrator Scott Pruitt opposed the Obama-era regulation, known as the Clean Power Plan, while he was Oklahoma attorney general. He has repeatedly said the EPA overstepped its Clean Air Act authority issuing the rule and Congress needs to speak directly to the agency's power to regulate greenhouse gases.

The Clean Power Plan faces a host of legal challenges from states and utility groups. The EPA asked a federal appellate court to indefinitely pause those challenges while it reconsiders the power plant rule.

Merkel Says Trump's Climate Stance Is Lowering G-20 Expectations

Posted June 09, 2017, 12:20 P.M. ET

By Patrick Donahue and Charlie Devereux

German Chancellor Angela Merkel said Group of 20 leaders "won't get everything we wished for" at a summit next month after U.S. President Donald Trump's decision to exit the Paris climate accord.

On a visit to Argentina as part of a tour to rally support among G-20 nations, Merkel cited the difficulty of that task ahead of the July 7-8 summit in Hamburg, since the communique must be signed off by all 20 partners.

"Nobody in this world—no individual person or country—can solve all problems alone," Merkel said at a press conference in Buenos Aires alongside Argentine President Mauricio Macri. "We all have to cooperate."

The German leader signaled a narrowing of expectations in key areas as the U.S. exit from the climate agreement casts a shadow over world leaders' ability to find a common line on issues such as global warming, trade and migration. Merkel, who's due to meet Mexican President Enrique Pena Nieto June 9, is seeking to build as broad a front as possible after leaders failed to persuade Trump

to stick to the climate accord at a Group of Seven summit last month.

As host of the G-20 summit, "I'll naturally have to speak up about differences if we don't agree on certain points," Merkel said at the news conference in Argentina June 8.

Argentina's Opening

Merkel told Macri that she "values very much" Argentina's commitment to the Paris climate treaty, a pointed contrast to her response that Trump's decision was "extremely regrettable." After the fallout at the G-7 summit, Merkel suggested that reliable relations with the U.S. were "to some extent over."

The German and Argentine leaders also drew a contrast on trade, calling for a negotiated accord between the European Union and Mercosur, the South American free-trade bloc. German and Argentine officials have said they want a deal by the end of the year.

Merkel lauded Macri for "setting out on a courageous path of reform." The Argentine leader has lifted currency controls as well as some trade barriers and settled an outstanding legal dispute from Argentina's 2001 debt default.

"Argentina already tried isolationism and it didn't work," Macri said alongside the chancellor.

Merkel said advantages squeezed out by isolationism tend to be short-lived and, in Argentina's case, "weren't good for the people at all."

Macron Said to Push for Franco-German Carbon Emissions Price Floor

Posted June 09, 2017, 12:09 P.M. ET

By Francois de Beaupuy and Helene Fouquet

Emmanuel Macron reached out to Germany to establish a common price floor for carbon dioxide emitted by power utilities as the French president seeks to strengthen his alliance with Angela Merkel after the U.S. decided to exit the Paris climate accord, according to people familiar with the matter.

Macron wants to revive a plan to set up a minimum price of 30 euros ($33.55) per ton of CO2 emissions, about six times the current European level, a French official said, asking not to be named as the matter isn't yet public. France is seeking to convince Germany and other European countries to adopt a similar plan, the person said. It would also make sense for countries such as Belgium, the Netherlands and Luxembourg, said another person who has heard about Macron's initiative.

Merkel and Macron have been leading the international opposition to the disruptive presidency of Donald Trump in the U.S. rallying support for trade and climate action. Macron this week launched an appeal to U.S. environmentalists to come work in France, while Merkel is in Latin America preparing for another meeting with Trump at the Group of 20 summit in Hamburg.

The U.S. decision to exit the Paris climate accord comes after the price of European carbon permits

plunged from their 2008 peak, eroding the penalty for burning coal, the most polluting fuel. Companies from Electricite de France SA to Engie SA have lobbied for a minimum price of at least 30 euros, arguing it would boost the use of cleaner natural gas-fired power stations.

Hard Sell

Spokesmen at Germany's Environment Ministry weren't immediately available for comment. Messages seeking comment from the French president's office weren't immediately replied to.

The proposal may be a hard sell in the short term for German Chancellor Merkel, who faces general elections in September. A floor price for carbon emissions might hurt German utilities RWE AG and Uniper SE, which have said it would lead to job losses because they rely heavily on lignite and coal to produce electricity.

France unsuccessfully tried to convince Germany to adopt a common carbon floor price last year in a bid to supplement the EU's Emissions Trading System, which has failed to provide an efficient incentive to reduce greenhouse gases. A glut of pollution rights pushed prices in the $48 billion market down more than 80 percent since 2008.

France then considered introducing a floor price unilaterally last year before dropping the plan a few months before this year's presidential elections amid labor union protests that it would prompt coal-fired plant closures.

The French and German leaders plan to hold a joint cabinet meeting over the summer.

Generating Revenue

A tax on carbon would generate government receipts, which could be used to mitigate the "social impacts" of the energy transition on the coal industry, EDF Chief Executive Officer Jean-Bernard Levy said June 8 at a conference in Paris organized by the Toulouse School of Economics. By introducing a levy of 18 pounds ($22.88) per ton of CO2 emissions, the U.K. has cut the share of coal in electricity production to 10 percent from 30 percent in two years, he said.

"The time is the right one today for an initiative that maybe could be generated in France, with quick support of Germany, obviously after the September elections," Levy said. "It can be done gradually, and it can be done in such a way that it leads to no massive phasing out of production means in the short term."

India Power Plants Stranded as 50 Million Homes Left in the Dark

Posted June 09, 2017, 10:56 A.M. ET

By Anindya Upadhyay

India is scaling back expectations for power demand growth as it struggles to electrify millions of homes despite a glut in generation capacity.

The world's second-most populous nation is building more power plants than it can utilize as state-level distributors struggle to connect 50 million households, according to Ravindra Kumar Verma, head of the Central Electricity Authority, the power ministry's planning arm. As a result, about 25 gigawatts of coal-fired power-generating capacity is "stranded" and unused, he said. That's equivalent to the entire installed capacity of neighboring Pakistan.

Demand growth for power is slowing as state distribution companies, known as discoms, struggle to purchase enough electricity for the populations they serve. Most discoms lose money selling below cost to poor and agricultural customers and through power theft. The CEA defines demand as the amount of electricity that distributors buy, not necessarily how much would be needed for the whole country, helping explain why millions still lack power and several cities face regular blackouts despite the under-utilized capacity.

"We were thinking that the entire demand will come on the system, but it has not happened that way," Verma said in an interview in New Delhi June 6. "When discoms turn around is the point when we will get close to 24/7 power. That's where all the constraint lies."

Electricity use is estimated to grow 6.2 percent a year over the six years ending March 2022. Consumption over the previous six years expanded 5.3 percent, missing a 7.6 percent forecast, the CEA said in its latest power survey report published this year. The lower-than-expected growth rate led the agency to temper its outlook, Verma said.

"Projections are estimated growth rates worked out on the basis of certain assumptions. If the assumptions slip, then projections are hit," he said.

India is on track to add 102 gigawatts of conventional power projects in the five years ended March 2017, compared with a target of 88.5 gigawatts, according to country's Draft Electricity Plan published in December. At the same time, the country's gas-fired plants, which can generate nearly 25 gigawatts of power, are running at less than a quarter of their capacity, according to the plan. The country's capacity totaled 329 gigawatts, with more than half of that coming from coal-fired plants, according to CEA data.

Concern Raised About Peabody Mine Cleanup on Navajo, Hopi Land

Posted June 09, 2017, 7:00 A.M. ET

By Stephen Lee

Arizona residents and environmentalists are growing increasingly worried about the cleanup of a large coal mine that's moving swiftly toward closure. Peabody Energy Corp., the mine's operator, promises that the reclamation will be done right.

If it's not, locals fear the Navajo and Hopi tribes in the northern part of the state will be left with a parched, ravaged homeland that might never be fully restored.

Peabody's Kayenta Mine in Arizona provides coal to the massive Navajo Generating Station 80 miles to the northwest. In 2015, the mine produced 6.8 million tons of coal.

But cheap natural gas has dented the power plant's profitability, and in February its owners voted to

close it by Dec. 23, 2019. Because the mine has no other customers and no rail link to the outside world, when the plant closes, the mine will close, too.

Peabody told Bloomberg BNA that the company set aside a $235 million surety bond for reclamation at Kayenta. The Office of Surface Mining Reclamation and Enforcement confirmed that amount and said it deems it adequate.

"We are a guest on Navajo and Hopi lands and operate at the behest of the tribes," Peabody said in an emailed statement.

Political leaders at the Navajo and Hopi tribes want the power plant and mine to stay open because their economies rely heavily on them.

Water Dispute

But some environmental advocates question whether the $235 million bond will be enough to reclaim the 35.8 square miles that have been mined at Kayenta once the mine shuts down.

One of them is Brad Bartlett, an environmental law professor at the University of Denver, who says none of the Kayenta lands have reached the final stage of reclamation necessary before Peabody can get its bond back, despite the fact that the mine has been active for 40 years and that the company is supposed to reclaim the land as it goes.

One reason the final stage of reclamation, or Phase III, hasn't been reached is that doing so requires Peabody not only to reclaim the land but also to replace the water it has used, Bartlett told Bloomberg BNA. Peabody says the total water use over the life of both the Kayenta mine and an older mine on the same tract, Black Mesa, will be less than 0.1 percent of the water volume stored in the aquifer. The mine uses 1,200 acre feet of water per year, according to the company.

But Percy Deal, a former Navajo tribal council member who lives near the mine, said he thinks the figure is closer to 6,400 acre feet. Many residents don't have any water and have to haul it in from elsewhere, Deal said.

"Before Peabody moved in, there used to be a lot of natural springs that produced water on their own," Deal told Bloomberg BNA. "It seeped out of the ground. You would see pools of water here and there. None of those are currently working, not one bit."

'An Enormous Amount of Money'

The fundamental water problem is that Peabody has been drawing so much water from the subsurface aquifer that it no longer connects to the surface, according to Bartlett. Peabody denies that, saying the aquifer is recharged every year through the hydrologic cycle by some 13,000 acre-feet per year.

But Bartlett said the aquifer has dropped by 150 feet in some places.

"Where [Peabody] will find that replacement water, I don't know," he said. "It strikes me as an enormous amount of money."

Carolyn Johnson, retired executive director of the Citizens Coal Council, shares those concerns, saying the damage to the underground aquifer is the primary reason Peabody's $235 million bond

won't be enough for a complete reclamation.

"We don't even know that it's fixable," Johnson told Bloomberg BNA. "I'm not sure the techniques are out there. There are other things they can do, which would be very costly, to bring water in for those people. But it's never going to be like it was before mining."

Concerns About Aquifer

Because of the technical uncertainty about how to reclaim a mined-through aquifer, Johnson said she couldn't estimate what it would cost.

"I don't know how to put a number to it," she said. "You're trying to create a number where you don't even have the science. But I know that $235 million isn't going to do it, because it's so many acres, and boy, that mine is huge."

OSMRE didn't respond to questions about how it arrived at the $235 million figure. Ellen Pfister, an affiliate representative of the Northern Plains Resource Council who helped lobby Congress for the passage of the Surface Mine Control and Reclamation Act in the 1970s, said OSMRE's cost estimates are based on what it would cost the agency to complete the work, including equipment and labor costs.

"I don't blame those people for being concerned," Pfister told Bloomberg BNA, referring to the Navajo and Hopi. "I'd want to know where the water is that they're planning to use [to fill the aquifer]. I'd want to know what quality it is, and how much of it is there. I don't think it's unreasonable to question that."

Only 56 percent of the mined lands at Kayenta are subject to Phase III standards for the bond to be released back to Peabody, according to OSMRE documents. The remaining lands are subject to less demanding standards and don't address water. Of all the land mined, OSMRE has approved reclamation on only 18 percent, all subject to the lower standards.

Reclaimed Acres

Other concerns have arisen over the reclamation of the land. Deal said the Kayenta tract used to be home to large groves of pinyon, pine and cedar trees, along with other natural plants and herbs that were used for food, medication and cultural purposes, such as making dye for coloring wool.

But now those trees and plants are gone, and "almost 100 percent" of them haven't been replaced, Deal said. "It looks like a bare spot; it doesn't look natural," he said.

Peabody spokeswoman Beth Sutton denied that charge, telling Bloomberg BNA that the company has restored between 16,000 and 18,000 acres of land at Kayenta. Those lands are now up to 10 times more productive for livestock grazing than native range land, according to a Peabody fact sheet.

But Deal said the new vegetation Peabody has planted is "pure grass—no trees, no plants." Largely as a result, native elk, deer, antelope, turkey, eagles and hawks are now rarely seen, Deal said.

Navajo tribe member Nicole Horseherder agreed with Deal's account.

"You have this huge grassland, and the grass is very sparse," Horseherder told Bloomberg BNA.

"There's a lot of bare spots. The grassland is dying. It's very poor."

Another View

Daniel Benally Jr., also a Navajo tribe member, gave Bloomberg BNA a contradictory account of Peabody's land reclamation efforts. Benally said the company has restored many medicinal plants and improved the land for cattle grazing and sheepherding.

"The vegetation's so good that the wildlife has come back," Benally said. He also said the natural springs at Kayenta have been running.

Benally is a Peabody employee, and he spoke to Bloomberg BNA with Sutton present. When asked to comment on Deal's observations, Sutton told him not to answer and ended the interview.

5:1 Reclamation Rate

Sutton further said Peabody has been reclaiming five acres for every new acre it mines.

But Bartlett said that ratio is "extraordinarily high," and that it could suggest that much of the land that was supposed to be reclaimed years ago is only now being attended to.

The figure also indicates that "there's going to be a lot of jobs going forward" once the mine shuts down, Bartlett said. "To those people who might be worried about losing their jobs, it sounds to me like there's a heck of a lot of reclamation to be done out there."

OSMRE said it has inspected the Kayenta mine "and determined that contemporaneous reclamation [has been] completed well."

Another Reclamation Case

Still, local residents' concerns are exacerbated by the state of Peabody's old Black Mesa Mine, which stands on the same parcel of land and shut down in 2005. Twelve years later, Black Mesa remains largely unreclaimed.

"Everything that Peabody built to carry on the operations—the buildings, a huge water tank, everything—is still there," Deal said. "It's never been decommissioned, never been brought down. The only thing they did was put up a chain link fence and lock and a sign that says 'Keep Out.'"

Sutton said the reclamation at Black Mesa will begin this month, and that preparation for dismantling the structures is underway.

Meanwhile, the Navajo Generating Station's future remains dim. Salt River Project, one of the plant's owners, has imposed a July 1 deadline to hammer out a lease extension with the Navajo Nation, whose land it is on, to keep the plant running until Dec. 23, 2019, with decommissioning and remediation of the facility starting afterward.

Otherwise, SRP says it will have to close the plant immediately in order to decommission it by the end of 2019. The Navajo Nation will hold a vote June 21 on the extension agreement SRP offered.

No outside buyers have stepped forward to take over the plant when the current lease expires, but Peabody is actively looking for a buyer.

Who Will Justice Let Cash in on Environmental Settlements?

Posted June 09, 2017, 7:01 A.M. ET

By Amena H. Saiyid

The National Fish and Wildlife Foundation received a check for $7 million from Princess Cruise Line in April, but not as a typical act of charity. Rather, the payment was part of a $40 million settlement the cruise line made with the federal government to resolve allegations that it violated the Clean Water Act by illegally dumping oil waste and falsifying oil spill records.

The foundation also received $2.554 billion as part of the settlement in criminal cases against BP for its Macondo well that blew out on April 20, 2010, spewing an estimated 4.9 million barrels of oil into the Gulf as the largest U.S. offshore spill.

Payments to organizations that are not parties in enforcement actions involving violations of environmental laws are not uncommon.

Tonawanda Coke Corp. agreed to pay $357,000 to Ducks Unlimited in May 2015 for wetlands acquisition and preservation as part of a $12 million settlement in a civil case alleging air and water pollution violations at its plant near Buffalo, N.Y. In all, the company paid $42 million to resolve enforcement actions that included a landmark criminal prosecution.

These types of penalties may be coming to an end because of a June 7 Justice Department memo prohibiting settlement payments to nongovernmental entities that are not a party to the litigation.

The problem for some, however, is the memo, signed by Attorney General Jeff Sessions, didn't define nongovernmental organization, whether it is a public or private entity. It also wasn't clear if it applied to publicly owned wastewater utilities.

Ambiguous Language

"There's a lot of ambiguity in the memo," Neil McAliley, a shareholder attorney with the Miami office of Carlton Fields Jorden Burt P.A., told Bloomberg BNA June 8.

The memo is based largely on language in the Republican-sponsored Stop Settlement Slush Funds Act of 2017 (H.R. 732) that attempts to bar the federal government from making payments to groups, individuals, or institutions that aren't party to litigation. The bill awaits full House consideration as the House Judiciary Committee reported it out March 30.

"I think this memo is really focused on whom the defendant is paying money as opposed to whether this defendant is a public or private entity," McAliley said. The memo states that payments are not to be made to any nongovernmental entity that is not a party to the dispute.

"This language does suggest that a defendant could be required to send money to a governmental entity that is not a party to the case," McAliley said, but "exactly how one defines a 'governmental entity' may not be as obvious as one might think, and we will need to see how this policy is applied."

McAliley gave as an example nonprofit corporations created by acts of Congress that are designed to accept money for donation to government agencies, such as the National Fish and Wildlife

Foundation, which received the Princess Cruise Lines and BP money, and the National Park Foundation.

"It clearly is broad language, but what we don't know is how is it being explained by the Justice Department," John Cruden, the former acting assistant attorney general for environment and natural resources under President Barack Obama, told Bloomberg BNA in a June 8 telephone interview.

In other words, "Who is making the decision that a certain organization falls within the memo or outside the memo," said Cruden, who now is the president-elect of the American College of Environmental Lawyers.

Exception to the Prohibition

The foundation wasn't a party to the lawsuit, but groups such as these could receive payments under the exception the memo lays out for a payment that "directly remedies … harm to the environment," McAliley said.

"Did the new policy intend to capture those types of entities or not?" he asked.

Other attorneys don't necessarily agree.

At a June 7 webinar discussing Clean Water Act enforcement trends in the Trump administration, Nathan Vassar, an attorney with Lloyd Gosselink Rochelle & Townsend, P.C., said the Department of Justice memo likely will not apply to settlements involving publicly owned wastewater utilities that may be defendants in a Clean Water Act lawsuit. The webinar was organized by the National Association of Clean Water Agencies (NACWA), which represents many of those utilities.

"I am not aware of any payments to third parties in the context of municipal discharger settlements," Vassar said in response to a question posed about the impact of the Justice Department memo on Clean Water Act enforcement.

Erica Spitzig, the association's deputy general counsel, agreed with Vassar that the department's memo will not likely have a significant impact on publicly owned wastewater utilities.

"We are not aware of any settlements requiring publicly owned treatment works to make donations or other cash payments to third parties who are neither impacted by nor involved in the litigation," Spitzig said in a June 8 email to Bloomberg BNA on what she called the association's initial impressions.

Cruden also agreed, saying the government usually settles Clean Water Act violations by requiring money to be spent either upgrading or repairing the part of the system that caused the problem.

"That can get quite expensive, as much as a billion dollars as we saw in the DC Water case," he said.

Nuanced Reading

Also on the NACWA webinar was Andrew Stewart, who until late 2015 served as the acting director of the special litigation and projects division in EPA's Office of Enforcement and Compliance Assurance. His remarks a day after the webinar were more nuanced about the memo's impact on settlements involving public wastewater utilities.

"I agree the memo didn't seem to be focused on publicly owned treatment works (POTWs), but it didn't explicitly carve out POTWs," Stewart, who now serves as a counsel with Vinson & Elkins LLP, told Bloomberg BNA in a June 8 email.

Stewart said the memo broadly applied to payments to third parties under settlements, but Vassar said he thought it applied more to settlements involving private sector defendants, such as Volkswagen, which was referenced by Rep. Bob Goodlatte (R-Va.), the chief sponsor of H.R. 732, as an example of third-party payments.

Goodlatte has repeatedly highlighted the $2 billion included in the Volkswagen diesel emissions settlement to pay for electric vehicle infrastructure, as an example of third-party payments. This funding wasn't justified as "mitigation" spending because the settlement had explicitly set aside a separate $2.7 billion mitigation trust fund, Goodlatte told former Attorney General Loretta Lynch in a Jan 10 letter when requesting a preservation of all documents pertaining to the Justice Department settlements.

Sessions didn't mention the Volkswagen settlement or any other settlement in the memo. Instead, he said, "It has come to my attention that certain previous settlement agreements involving the Department included payments to various nongovernmental. third-party organizations as a condition of settlement with the United States. These third parties were neither victims nor parties the lawsuit."

No Payments for Supplemental Projects

Stewart, unlike a number of attorneys representing environmental groups, said the memo applies to payments made to third parties, but doesn't "explicitly address" supplemental environmental projects. More important, SEPs don't involve cash donations to third parties, he said. Spitzig, of NACWA, and Cruden agreed with him.

"The goal of DOJ memo is to compensate victims of noncompliance," Stewart said. "The fact that the SEPs are designed to benefit the environment impacted by the alleged violation makes these projects consistent with the DOJ memo."

Slashing Permit Wait Time Key to Fixing Infrastructure: Trump

Posted June 09, 2017, 11:54 A.M. ET

By Shaun Courtney

President Donald Trump called for drastic changes to what he described as an "excruciating" regulatory system that slows down permitting of federally funded infrastructure projects, cutting permitting time from an average of 10 years to two.

The president called on federal agencies to streamline review processes and said during a speech today at the Transportation Department that his administration will penalize agencies that "consistently delay" projects by missing deadlines. Trump announced the creation of a new council to help infrastructure project managers navigate the bureaucracy, in part by creating a new online dashboard for project tracking.

"The excruciating wait time for permitting has inflicted enormous financial pain on cities and states—and has blocked many important projects from ever getting off the ground," Trump said in prepared remarks. "To all our state and local leaders here today, I want you to know that help is

finally on the way."

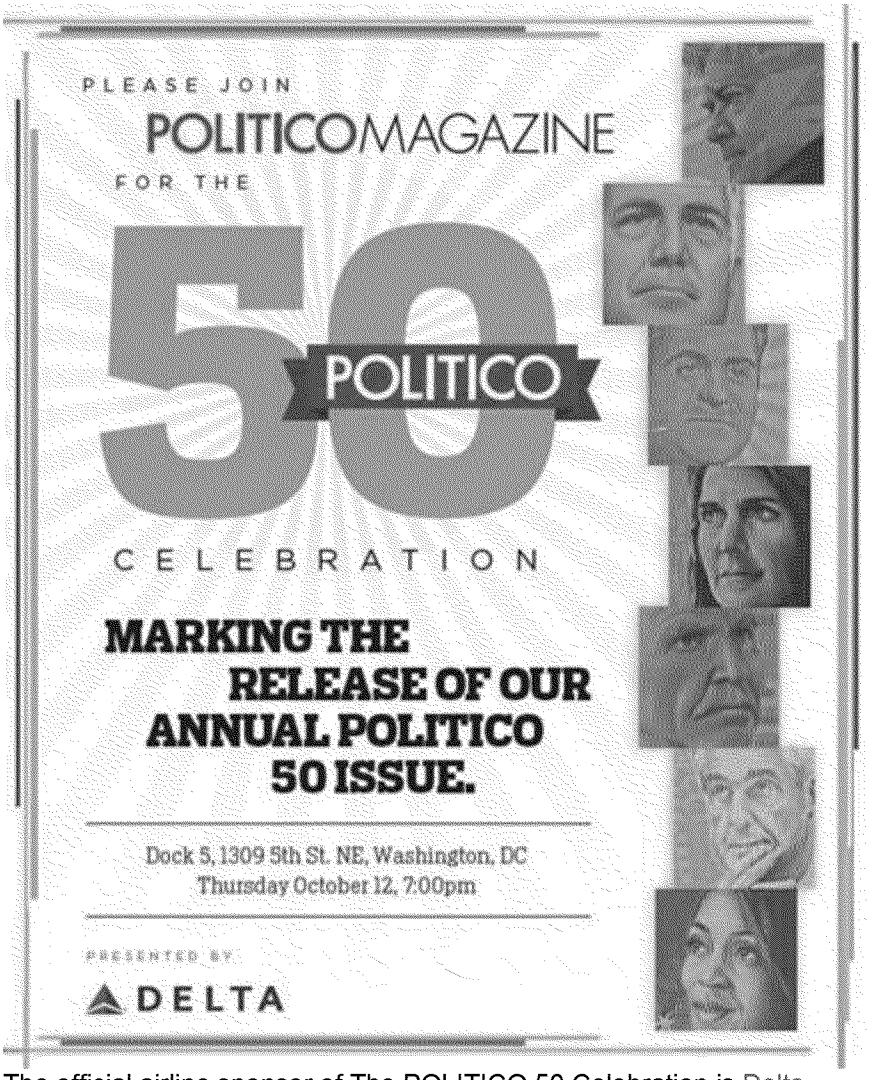
Invitation intended for: Ryan Jackson

Good afternoon,



On behalf of POLITICO Magazine, you are invited to this year's POLITICO 50 Celebration, an event to mark the release of The POLITICO 50, our annual list of thinkers, doers and visionaries who are reshaping American politics in 2017 and beyond. Please reply to this email to confirm your attendance.

Look forward to seeing you there.

Best,
POLITICO

When: Thursday, October 12 – 7 p.m.
Where: Dock 5 at Union Market – 1309 5th St. NE
Attire: Business
*Valet to be provided.

*Please note this invitation is nontransferable and is valid for only the intended recipient.

The official airline sponsor of The POLITICO 50 Celebration is Delta.

EPA Appoints Doug Benevento As Region 8 Administrator

WASHINGTON (October 5, 2017) –Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt announced the appointment of Doug Benevento of Colorado to become regional administrator for Region 8. Mr. Benevento will oversee environmental protection efforts in Colorado, Utah, Wyoming, South Dakota, North Dakota and Montana.

Doug Benevento has spent much of his career working to help protect the environment. As executive director for the Colorado Department of Public Health and Environment, he managed the state's environmental and public health programs. He previously served as the Department's director of environmental programs, where he managed the state's air, water, waste, and consumer protection programs. Since 2010, Mr. Benevento has been working on energy and environmental issues in the private sector at Xcel Energy.

"Doug Benevento's personal connection to the Rocky Mountain state and experience working with environmental leaders across the region will greatly benefit the Agency's mission in protecting the environment in Region 8," **said Administrator Pruitt**.

His nomination is receiving high accolades from across the region:

U.S. Senator Cory Gardner: "Doug Benevento is a great choice to serve as EPA Region 8 Administrator and has the requisite experience as the former Executive Director of the Colorado Department of Public Health and Environment. I look forward to working with Doug to make the communities whole in Southwest Colorado that were impacted by the EPA-born Gold King Mine spill, ensuring the expeditious cleanup of Colorado's Superfund sites remain a top priority for the EPA, and protecting Colorado's environment across all four corners of the state."

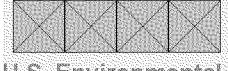
Colorado Governor John Hickenlooper: "Doug Benevento has an extensive background working on important environmental issues in the State of Colorado. He provided leadership at the Colorado Department of Public Health and Environment under former Governor Bill Owens and as a staffer to former Senator Wayne Allard. I look forward to working with Doug and the rest of EPA to improve the health of Coloradans and protect the natural resources we treasure as we live, work, and play in this beautiful state."

U.S. Congressman Mike Coffman: "I first met Doug Benevento when he worked for Governor Bill Owens and I've been inspired by his dedication to his community and the State of Colorado ever since. I know that he will do an outstanding job for EPA."

U.S. Congressman Scott Tipton: "I'm pleased with Doug Benevento's appointment as Region VIII EPA administrator. His record of service to the State of Colorado is distinguished, both as the former executive director of CDPHE and on the staff of Senator Wayne Allard. More importantly, he understands western issues and will bring that important perspective to the position, both in the Region and in Washington, D.C.; I applaud the appointment."

U.S. Congressman Ken Buck: "I'm excited to see Doug Benevento appointed as EPA Region VIII administrator. Doug's experience and faithfulness to the law and Constitution will benefit EPA and the people he serves. I'm eager to work him to better steward Colorado's land and resources."

Colorado Attorney General Cynthia Coffman: "Doug Benevento was a valued colleague and leader at the Colorado Department of Public Health and Environment. He brings to EPA's Region 8 a public health perspective that is important to all Westerners who care about protecting natural resources and the environment."



Former U.S. Senator Wayne Allard: "Doug Benevento is an excellent choice for Region VIII EPA Administrator. During my years in Congress I valued Doug's sound and thoughtful guidance on environmental issues. He was particularly helpful to me as we worked towards an early cleanup and closure of Rocky Flats. I was also impressed with his leadership at the Colorado Department of Public Health and Environment during the Owens Administration. I'm confident that in this role he will bring a broad base of knowledge and experience of western issues to EPA."

Former Colorado Governor Bill Owens: "Administrator Pruitt made a sound choice in choosing Doug Benevento to lead EPA Region VIII. During my two terms as Governor he served my administration well at the Colorado Department of Public Health and Environment. He provided effective leadership at a large organization while implementing the policy direction of my administration. More importantly, I've also known Doug as a friend for over 20 years; and EPA is also getting a fine person as well as an effective leader."

Alan Matheson, Utah Department of Environmental Quality Executive Director: "I'm optimistic that Doug Benevento's experience will serve him well in building the collaborative state-EPA partnership needed to protect public health and the environment. Having run Colorado's health and environment agency, Mr. Benevento appreciates the state interest in meeting environmental standards in ways that reflect local conditions, economies, and values. I'm also encouraged that his experience in industry has fostered a practical approach to ensuring environmental compliance."

James Martin, former Region 8 Administrator: "Doug Benevento is a sound choice to lead EPA Region VIII. As a former regional administrator, I understand the challenges of the position and Doug is well suited to take on those challenges. Over the almost 20 years I've known Doug he's brought a thoughtful approach to environmental policy and regulation. This was evidenced during his tenure at CDPHE in the Owens administration. I'm confident he will provide strong and effective leadership at EPA."

Summaries

AIR
Energy Conservation Standards/Walk-In Cooler and Walk-In Freezer Refrigeration Systems
AIR

Final rule of the Energy Department, Office of Energy Efficiency and Renewable Energy, establishes energy conservation standards for certain refrigeration systems used in walk-in cooler and walk-in freezer refrigeration systems. The rule establishes standards for medium temperature, indoor and outdoor dedicated condensing systems manufactured on or after June 5, 2017. The rule also establishes standards for low-temperature, indoor and outdoor dedicated condensing systems and low- and medium-temperature unit coolers manufactured on or after July 10, 2020. The rule is effective Sept. 8, 2017. Contact: Ashley Armstrong; DOE, Office of Energy Efficiency and Renewable Energy; 202-586-6590; walkin_coolers_and_walk-in_freezers@ee.doe.gov. Citations: 10 CFR 431.306

82 FR 31808 (07/10/2017)

Regulatory Update

AIR
Indiana SIP/Muncie Area 2008 Lead Standards
AIR

Notice of the EPA announces the withdrawal of a May 30, 2017, direct final rule (82 FR 24553) that would have approved revisions to the Indiana SIP and the redesignation of the Muncie nonattainment area in Delaware County to attainment for the 2008 lead NAAQS. The revisions address the plan for maintaining the 2008 lead NAAQS through 2030 and the 2013 attainment year emissions inventory for the area. The withdrawal is in response to receipt of an adverse comment, and the agency will instead proceed with a final rule based on the related proposed rule (82 FR 24635; 05/30/2017). The withdrawal is effective July 10, 2017. Contact: Anthony Maietta; EPA Region 5, Air Programs Branch; 312-353-8777; maietta.anthony@epa.gov. Citations: 40 CFR 52.770, 52.797, 81.315

82 FR 31722 (07/10/2017)

Regulatory Update

AIR
Kentucky SIP/Louisville Metro Air Pollution Control District
AIR

Proposed rule of the EPA would approve revisions to the Kentucky SIP concerning the Louisville Metro Air Pollution Control District's air quality regulations. The revisions add acronyms and abbreviations for consistency with EPA definitions, update open records procedures to reflect current technology options for delivering submissions, and update public hearing procedures to conform to the Strategic Toxic Air Reduction program. In addition, the revisions update restrictions on open burning and solvent cleaning and modify board member obligations and procedures for board hearings. Finally, the revisions modify the volatile organic compounds emissions reduction strategy and combine two performance standards for solvent metal cleaning equipment. Comments are due Aug. 9, 2017. Contact: Sean Lakeman; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9043; lakeman.sean@epa.gov. Citations: 40 CFR 52

82 FR 31736 (07/10/2017)

Regulatory Update

AIR
Minnesota SIP/Prevention of Significant Deterioration
AIR

Proposed rule of the EPA would approve revisions to the Minnesota SIP that incorporate by reference federal prevention of significant deterioration requirements. The approval will not apply to sources located within Indian country. Comments are due Aug. 9, 2017. Contact: Rachel Rineheart; EPA Region 5, Air Programs Branch; 312-886-7017; rineheart.rachel@epa.gov. Citations: 40 CFR 52

82 FR 31741 (07/10/2017)

Regulatory Update

AIR
North Carolina/Concrete Batch Plant and Portable Crusher Permit Exemptions
AIR

Proposed rule of the EPA would approve revisions to the North Carolina SIP concerning exclusionary rules and permit exemptions. The revisions add exclusionary provisions for concrete batch plants to exclude from Title V permitting requirements facilities that operate below a certain annual production rate. The revisions also add permit exemptions for portable crushers under certain operating criteria and for certain non-Title V construction sources. Comments are due Aug. 9, 2017. Contact: Sean Lakeman; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9043; lakeman.sean@epa.gov. Citations: 40 CFR 52

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Alabama/Demopolis Lock and Dam Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of a draft environmental assessment for the Demopolis Lock and Dam Hydroelectric Project at the U.S. Army Corps of Engineers' Demopolis Lock and Dam on the Tombigbee River in Marengo and Sumter counties in Alabama. The project, proposed by Birch Power Co., of Idaho Falls, Idaho, includes construction and operation of an excavated intake channel, two trash racks, a powerhouse containing two 24-megawatt (MW) turbines with a total installed capacity of 48 MW, a substation, a forebay oxygen diffuser line system, an excavated tailrace channel, a retaining wall, a transmission line, and appurtenant facilities. The project has an estimated annual generation of 213,000 MW-hours. The draft EA concludes that constructing and operating the project, with appropriate environmental protection measures, would not constitute a major federal action that would significantly affect the quality of the human environment. Comments are due July 31, 2017. Contact: Adam Peer; FERC; 202-502-8449; adam.peer@ferc.gov

GENERAL ENVIRONMENT AND SAFETY
Emergency Use Authorization/In Vitro Diagnostics for Detection of Zika Virus
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a correction to a June 30, 2017, notice (82 FR 29886) regarding the issuance of emergency use authorizations for two in vitro diagnostic devices for detection of the Zika virus. The authorizations provide conditions for emergency use of the Gene-RADAR® Zika Virus Test, requested by Nanobiosym Diagnostics Inc., of Cambridge, Mass., and for the LIAISON® XL Zika Capture IgM Assay, requested by DiaSorin Inc., of Stillwater, Minn. The secretary of Health and Human Services previously declared that circumstances exist justifying the authorization of emergency use of in vitro diagnostic devices for detection of the Zika virus

(81 FR 10878; 03/02/2016). The authorization for Gene-RADAR® is effective March 20, 2017, and the authorization for LIAISON® XL is effective April 5, 2017. The correction revises the docket number. Contact: Lisa Granger; FDA, Office of Policy and Planning; 301-796-9115

GENERAL ENVIRONMENT AND SAFETY
Maine/Barker's Mill Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of an application for a hydroelectric application from KEI Power Management LLC, of Lewiston, Maine, for a subsequent minor license for the Barker's Mill Hydroelectric Project located on the Little Androscoggin River in Auburn, Maine. The existing project consists of a dam, a reservoir, a 1.5 megawatt generating unit, and an underground power line generating an average of 5,087 megawatt-hours per year. Comments, protests, and motions to intervene are due Aug. 29, 2017. Contact: Karen Sughrue; FERC; 202-502-8556; karen.sughrue@ferc.gov

South Carolina/Line A Abandonment Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of an environmental assessment for the Line A Abandonment Project proposed by Dominion Carolina Gas Transmission LLC, of Cayce, S.C. The project includes the abandonment of approximately 60 miles of natural gas pipeline in Chester, Kershaw, Lancaster, and York counties in South Carolina. The agency concludes that approval of the proposed project, with appropriate mitigating measures, would not constitute a major federal action significantly affecting the quality of the human environment. Comments are due July 31, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlineSupport@ferc.gov

GENERAL ENVIRONMENT AND SAFETY
Texas/Bakersfield Compressor Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a prior notice request by Northern Natural Gas Co., of Omaha, Neb., to install and operate certain natural gas facilities in Peco County, Texas. The project involves a new compressor station, 1.5 miles of 20-inch diameter pipeline, and an interconnect to the discharge side of the Bakersfield compressor station. The project is intended to facilitate transport of 200,000 dekatherms/day of incremental load. The agency plans to complete an environmental assessment or issue a notice of schedule of environmental review by Oct. 10, 2017. Protests and motions to intervene are due Sept. 1, 2017. GENERAL ENVIRONMENT AND SAFETY
Texas/Border Crossing Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the availability of an environmental assessment for the Border Crossing Project, proposed by Valley Crossing Pipeline LLC, of Houston. The project involves the siting, construction, and operation of 1,000 feet of natural gas pipeline that extends into the Gulf of Mexico in Texas state waters to the international boundary between the U.S. and Mexico. The project would connect the Valley Crossing System with the Mexican Marina Pipeline and facilitate the delivery of up to 2.6 billion cubic feet per day of natural gas to Mexico. The agency concluded that approval of the proposed project with appropriate mitigating measures would not constitute a major federal action significantly affecting the quality of the human environment. Comments are due July 31, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlineSupport@ferc.gov

MINING
Pennsylvania Surface Mining Regulatory Program
MINING

Final rule of the Office of Surface Mining Reclamation and Enforcement approves revisions to the Pennsylvania surface coal mining regulatory program. The revisions provide a current list of alternate bonding system (ABS) legacy sites, a process for moving sites from the list of potential ABS legacy sites to the list of ABS legal sites, and mechanisms for adding sites to the list of ABS legacy sites if bond release was improperly granted. The revisions also establish criteria for mines to be removed from the ABS legacy site list and require the Pennsylvania Department of Environmental Protection to request concurrence from OSMRE when adding or removing sites

from the ABS lists. The rule is effective Aug. 9, 2017. Contact: Ben Owens; OSMRE, Pittsburgh Field Division; 412-937-2827; bowens@osmre.gov. Citations: 30 CFR 938.15

Summaries

AIR
Illinois/Clean Air Act Settlement Agreement
AIR

Notice of the EPA announces a proposed settlement agreement with Veolia ES Technical Solutions LLC regarding a Clean Air Act Title V renewal permit issued Jan. 18, 2017, by the EPA for the Veolia facility in Sauget, Ill. The settlement resolves a petition by Veolia with the Environmental Appeals Board (EAB) challenging the operating permit. The agreement requires Veolia to install activated carbon injection systems on two of its incinerators to control emissions of vapor phase mercury in exchange for the EPA requesting a voluntary remand from the EAB of the renewal permit. If the settlement agreement is finalized, the EPA will issue a draft permit that also includes changes to Veolia's procedures for analyzing hazardous wastes burned in the incinerators. Comments are due Dec. 15, 2017. Contact: John Krallman; EPA, Office of General Counsel; 202-564-0904; krallman.john@epa.gov

AIR
Washington State/Clean Air Act Consent Decree
AIR

Notice of the Justice Department announces a proposed consent decree in United States v. U.S. Seafoods LLC (Civil Action No. 17-civ-01677), lodged on Nov. 9, 2017, with the U.S. District Court for the Western District of Washington. The consent decree resolves claims for alleged violations of the Clean Air Act regarding refrigeration equipment owned and operated by the defendants on two commercial fishing vessels. The consent decree requires the defendants to pay a civil penalty of $135,000 and to take measures to prevent future violations. Comments are due Dec. 15, 2017. ENDANGERED SPECIES
Double-Crested Cormorant Depredation
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the availability of an environmental assessment and finding of no significant impact for issuance of depredation permits for double-crested cormorants. The EA concerns a proposal to make decisions on depredation permit applications for annual take of up to 51,571 double-crested cormorants in 37 central and eastern states and the District of Columbia. The finding provides for lethal take of cormorants to alleviate damage at or near aquaculture facilities, to protect human health and safety, to protect threatened and endangered species, and to alleviate damage to property. GENERAL ENVIRONMENT AND SAFETY
EPA Consent Agreement/ENEL Green Power
GENERAL ENVIRONMENT AND SAFETY

Notice of the EPA announces a proposed final order and proposed consent agreement with ENEL Green Power North America Inc. (EGPNA) for voluntary disclosure of violations of the CWA, CAA, RCRA, and EPCRA. EGPNA, of Andover, Mass., is an electric energy producing company specializing in producing clean energy from renewable sources. The agreement addresses the respondent's failure to prepare and implement spill prevention, control, and countermeasure plans under the CWA and to maintain records or report significant losses of isobutane during routine maintenance during operation under a Class II air quality operating permit in Nevada. The agreement also addresses the respondent's failure to conduct waste accumulation and storage inspections, to maintain universal waste disposal and handling practices for spent fluorescent lamps and tubes, and to maintain waste oil at 60 facilities in various states. In addition, the agreement addresses the respondent's failure to provide emergency planning notifications, to submit material safety data sheets, and to submit emergency and chemical inventory forms under EPCRA. The agreement requires the respondent to pay a civil penalty of $76,997. Comments are due Dec. 15, 2017. Contact: Peter Moore; EPA, Office of Civil Enforcement; 202-564-6014; Moore.peter@epa.gov. Marine and Hydrokinetic Applications Forum
GENERAL ENVIRONMENT AND SAFETY

Notice of the Energy Department, Water Power Technologies Office (WPTO), announces a marine and hydrokinetic (MHK) distributed and alternate applications forum. The forum is intended to gather information on potential high-priority alternative markets for MHK technologies and will

bring together representatives from such markets, MHK technology developers and academia, and department and national laboratory staff. The agenda includes presentations and discussions concerning biofuels and aquaculture; potential markets for subsea sensors, autonomous underwater vehicle recharging, and subsea data centers; and desalination of seawater and seawater mineral extraction. The WPTO will produce a report summarizing potential market opportunities after the forum has concluded. The forum is scheduled for Dec. 5-7, 2017, in Washington, D.C. Comments are due Dec. 5, 2017. Subject: BREAKING NEWS: Trump abstains from G7 declaration on Paris climate accord

TAORMINA, Sicily - President Donald Trump refused to join his counterparts in the G7 Saturday in a pledge to uphold the 195-nation Paris accord on climate change, breaking the unified front of the world's most exclusive geopolitical club.

Trump, posting on Twitter, said he would make a decision on whether the U.S. would remain in the climate change next week, after he returns to Washington. The other six members of the G7 - Canada, France, Germany, Italy, Japan and the U.K. - reaffirmed "strong commitment" to the agreement, which former President Barack Obama signed in 2015.

While the declaration included remarkable language, highlighting that the U.S. stood apart, the other allies expressed some relief that Trump had not outright rejected the accord and said they remained hopeful he would come around to supporting the Paris agreement in the coming days.

Subject: Morning Energy, presented by ExxonMobil: Energy big focus for Trump in Poland — Proposed RFS has something for everyone — Perry tours West Virginia coal site today

By Anthony Adragna | 07/06/2017 05:56 AM EDT

With help from Sara Stefanini, Anca Gurzu and Eric Wolff

TRUMP'S LNG PITCH: President Donald Trump is in Warsaw, Poland, this morning, where he said in a press conference alongside Polish President Andrzej Duda that the U.S. "stands ready to help Poland and other European nations diversify their energy supplies so that you can never be held hostage to a single supplier, or as we sometimes we call it, a monopoly."

Poland received its first shipment of U.S. LNG last month and Trump said there are "many more coming." Asked when more LNG shipments should be expected to arrive in Poland, the U.S. president said the two nations could sign a contract "within the next 15 minutes." Duda, however, pointed out that the contract won't be signed by the Polish and U.S. presidents, but by companies.

Trump later used a meeting of the 12 countries on the Baltic, Adriatic, and Black Seas to make a pitch for U.S. gas exports, saying the U.S. would be a "faithful and dependable partner" in helping the nations achieve energy security. "We are sitting on massive reserves of energy and we are now an exporter of energy, so whenever you need energy just give us a call," he told the Three Seas Initiative conference.

He took another shot at Russia there, though he never mentioned the country by name. "Let me be very clear about one crucial point: The United States will never use energy to coerce your nations, and we cannot allow others to do so. You don't want to have a monopoly or a monopolistic situation," he said.

Thomas Wright, a senior fellow at the Brookings Institution, writes in POLITICO Agenda the Three Seas meeting is an effort by those nations to figure out how to create the regional infrastructure to reduce their energy dependence on Russia, and that there are hopes for a deal on exports of LNG that could undermine the proposed Nord Stream 2, the controversial German-Russian energy pipeline. Look for Trump to again make the case for U.S. energy dominance and LNG exports during an outdoor speech in Warsaw at about 7:15 a.m. Washington time.

After he finishes up his whirlwind 16 hour-trip to Poland, Trump heads over to Hamburg where he'll meet with German Chancellor Angela Merkel ahead of the two-day G-20 summit that starts Friday. Both leaders held an "extensive" conversation earlier this week on topics including climate change, and Merkel has warned previously that the gathering will "not be easy talks," a not-so-veiled jab at the U.S.

EU reaffirms Paris commitment: The EU will reassure its G-20 partners it "remains steadfastly determined" to implement the Paris Accords and speed up efforts to cut emissions and move

toward green energy, the heads of the European Council and Commission said in a letter to EU heads of state and government Wednesday. For the EU, the Paris deal is a "corner stone" of global efforts to fight climate change and implement the U.N.'s Sustainable Development Goals, and "cannot be renegotiated," Council President Donald Tusk and Commission President Jean-Claude Juncker said. The EU will also support an ambitious joint action plan on climate and energy that was prepared in the run-up to the summit, and welcome further work on green finance and ways to improve resource efficiency.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and the Bagley Group's Jack Bagley was the first of many to identify Columbia as the state capital that shares its name with a NASA space shuttle. For today: Which state capital shares its name with a tunnel underneath the Hudson River, an American luxury automobile brand, and a DC restaurant? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy , and @POLITICOPro.

SOMETHING FOR EVERYONE TO CHEER/WORRY ABOUT RFS PROPOSAL: EPA gave a little bit to everyone when it proposed how much biofuel would go into the nation's fuel system in 2018 on Wednesday. Big RFS backer Iowa Sen. Chuck Grassley called the proposal "a mixed bag" in his statement. Pro's Eric Wolff breaks down who got what.

Ethanol gets...15 billion gallons! All ethanol producers wanted for Independence Day was a continuation of the Obama administration's requirement that 15 billion gallons of ethanol go into the nation's fuel system, and EPA Administrator Scott Pruitt gave it to them. "It's a strong signal to the marketplace, and it reaffirms the commitment the president made on ethanol," Growth Energy's Chris Bliley told ME. Team Ethanol is banking on a major market opening up in China, so a stable domestic market promises to keep it on stable footing.

Oil gets... a 40 million gallon reduction!: Pruitt, a long time ally of the oil industry, made one change since June when the volumes were supposed to go out: Instead of increasing the required volume of advanced biofuels, he decided to cut them by 40 million gallons, reducing the overall amount of biofuel required under the program. Oil interests decided to score that shift (of about four days' worth of gasoline consumption) as a win. "We are pleased the Environmental Protection Agency has, for the first time in the history of the RFS, proposed a reduction in the amount of biofuels that must be used in the U.S.," Chet Thompson, CEO of American Fuel and Petrochemical Manufacturers, said in a statement.

Advanced biofuels get... rocks: Pruitt reduced overall advanced biofuels in 2017, kept advanced biodiesel steady in 2019, and cut by about a quarter the cellulosic ethanol mandate for fuels from agricultural products that have a much smaller carbon footprint. That set off alarm bells for advanced biofuel promoters like Brooke Coleman, who said EPA risked "fumbling the cellulosic ball."

Shadows on the horizon: Eric reports that Pruitt also opened the door to significant changes down the road, launching an analysis for a "reset" of the volumes allowed under the law, asking for comment on imported ethanol and biodiesel, and for an examination of the market for zero percent ethanol.

It's only a proposal: EPA often modifies its proposed volumes when it issues a final rule. Now the agency has until Nov. 30 to take comment and produce a final rule. The clock is ticking.

TAKING THE LONGVIEW: Energy Secretary Rick Perry makes his first official to West Virginia today where he'll tour the 700-megawatt Longview power plant and the National Energy Technology Laboratory in the Morgantown area. But he won't be alone on his tour: West Virginia Sens. Joe Manchin (D) and Shelley Moore Capito (R), as well as Rep. David McKinley (R), are expected to participate as well.

Manchin previewed the visit on West Virginia radio Tuesday. "We will show him a clean power plant and what it can do and why it works so well with the energy mix that we need," he told MetroNews Talkline with Hoppy Kercheval. Manchin added that while the Trump administration has been "very good on energy, trying to find a pathway forward," the U.S. has "got to be careful to find that balance between the environment and economy. You can't throw caution to the wind with either one." (Discussion occurs around 55:30 mark of the recording here).

TWO STATES SUE OVER BLM'S METHANE STAY: The attorneys general of California and New Mexico sued Interior Wednesday over what they said is the "illegal" postponement by BLM earlier in June of certain portions of its methane waste rule. Both states argue the Trump administration violated the Administrative Procedure Act in delaying certain compliance dates associated with the rule indefinitely because the overall regulation had already taken effect in January 2017. The Senate came up short in its bid to block the regulation using the Congressional Review Act back in May.

** **Presented by ExxonMobil**: Biofuel refined from algae could transform how we power automobiles and jet planes. It's energy-rich and emits significantly less CO_2 than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're actively researching this technology to move it from the petri dish to the fuel tank: EnergyFactor.com**

ME FIRST — LAWSUIT FILED FOR NOAA RECORDS: Cause of Action Institute, a non-profit that advocates for limited government, is filing a lawsuit this morning seeking NOAA guidance on retention of instant messaging records, as well as specific employee communications during an April New England Fishery Management Council meeting. The group argues the agency has failed to adequately respond to two FOIA requests within statutory deadlines. "NOAA appears to have created an internal messaging platform to hide records from public disclosure," Julie Smith, the group's vice president, said in a statement. "Any directive to make certain communications be considered 'off-the-record' clearly violates transparency laws."

ZINKE'S SCHEDULE RELEASED: Glancing through Interior Secretary Ryan Zinke's calendar shows a bevvy of meetings with fossil fuel industry groups and companies, members of Congress and governors, Pro's Esther Whieldon reports. Among the highlights: a half-hour May 22 meeting with officials from the American Petroleum Institute and sessions with nearly a dozen lawmakers, including Senate Environment and Public Works Chairman John Barrasso (R-Wyo.), House Energy and Commerce Chairman Greg Walden (R-Ore.). Zinke also met with

Oregon Gov. Kate Brown, a Democrat, and Sens. Angus King (I-Maine), Susan Collins (R-Maine) and Catherine Cortez Masto (D-Nev.), among others.

LCV HITS GOP ON MONUMENT REVIEW: The League of Conservation Voters is launching a $75,000 campaign across various media, including Snapchat, Instagram and Facebook, urging Republican Sens. Dean Heller, Jeff Flake, Jim Risch and Mike Crapo to reject efforts to alter national monuments in their states. Samples of the Instagram and Facebook ads here and here.

MAIL CALL! GROUPS URGE CLEAN SPENDING BILLS: A broad coalition of 173 groups, including environmental advocates Oceana, Defenders of Wildlife, Clean Water Action and Union of Concerned Scientists, sent a letter to members of Congress Wednesday urging them to pass spending bills without policy riders. "Contentious poison pill riders are intended to advance the priorities of special interest donors and supporters and should not be included in funding bills," they wrote.

HAPPY BIRTHDAY! The National Renewable Energy Laboratory celebrates its 40th anniversary this week. "Your work shows it's possible to grow our economy and protect natural resources at the same time," Perry tweeted Wednesday. NREL released a list of its accomplishments in honor of the anniversary.

SHOULD I STAY OR SHOULD I GO NOW? New York Magazine published an interesting look from six federal employees, including one from EPA, about how they're handling their duties and whether they've considered leaving in the Trump era. "Kind of surprisingly, nobody has said, 'I can't take it,' and left," the EPA employee involved in research and policy matters said. "I really love my job, and I thought I would just stay. But now that I've started interviewing for stuff, it just feels like, if I don't really sell myself and get out sooner rather than later, I might be stuck." A DOE employee described the situation as "quite depressing" and warned of "hearing about the potential for losing the next generation of scientists and engineers."

EXPLORING CASE STUDIES ON COAL'S DECLINE: The Wilderness Society is out with a report this morning examining four cases studies of what it says are the social and environmental costs of burning publicly owned coal and why it's unlikely the industry can ever recover. The report looks at the Reid Gardner Generating Station in Nevada, the Valley Power Plant in Milwaukee, the J.T. Deely Station in San Antonio, and C.P. Crane Generating Station in Baltimore. "The reduction in demand for coal from plants like these, coupled with cost competitiveness from alternative forms of energy like solar, wind and natural gas, propels an inevitable decline in coal mining on our public lands," it concludes.

MOVERS, SHAKERS: David Asmus has joined Sidley Austin LLP as co-leaders of the firm's energy practice. He's past president of the Association of International Petroleum Negotiators and a past chair of the Institute for Energy Law. Also joining the firm as a partner is Brian Bradshaw. "Their reputations in the energy field globally bring an important added dimension to our energy practice," Kevin Lewis, co-managing partner of Sidley's Houston office, said in a statement.

Back

EPA proposes trimming advanced biofuel volumes for 2018 Back

By Eric Wolff | 07/05/2017 04:09 PM EDT

EPA today proposed reducing its volume mandate for use of advanced biofuels under the Renewable Fuel Standard next year, but kept the requirements for ethanol at the maximum level set under the law.

The agency put the overall 2018 biofuel volume mandate at 19.24 billion gallons, with 15 billion gallons of that in conventional biofuels, or ethanol, and 4.24 billion gallons in advanced biofuels. That put the reduction in advanced fuels at 40 million barrels from the level set for this year.

"Increased fuel security is an important component of the path toward American energy dominance," EPA Administrator Scott Pruitt said in a statement. "We are proposing new volumes consistent with market realities focused on actual production and consumer demand while being cognizant of the challenges that exist in bringing advanced biofuels into the marketplace."

The mandate for cellulosic ethanol, which is included in the advanced biofuel figure, was cut to 228 million gallons, down 23 percent from 2017.

Volumes for advanced biodiesel, also an advanced biofuel, were previously set at 2.1 billion gallons for 2018 and would stay at that level in 2019.

An executive summary attached to the Renewable Volume Obligations said the reduction in advanced biofuels was a move to enhance domestic production at the expense of foreign.

Pruitt also reiterated his promise to get the final rule out by Nov. 30.

WHAT'S NEXT: The agency will take public comment and then try to finalize the rule before the Nov. 30 statutory deadline.

Pruitt signals new effort to start biofuel rule reset Back

By Eric Wolff | 07/05/2017 04:28 PM EDT

EPA Administrator Scott Pruitt's announcement laying out the proposed 2018 biofuel volumes today appears to foreshadow a forthcoming shakeup of the Renewable Fuel Standard.

In his statement, Pruitt said that EPA will conduct a technical analysis to "inform a future rule"

for a reset. The RFS allows EPA to reset volumes when targets set in statute are missed by 20 percent or more two years in a row, or by 50 percent in one year. While conventional biofuels — mostly corn-based ethanol — have kept pace with EPA demand, advanced biofuels, such as cellulosic ethanol, have not.

"The Clean Air Act requires EPA to reset volume targets when certain conditions are met. We expect those conditions to be met in the near future, so we are conducting technical analysis now, to inform future reset rules," Pruitt said.

The announcement also said the agency will be "assessing higher levels of ethanol free gasoline," although the announcement did not make clear what that entailed. Opponents of the RFS have argued that gasoline blended with ethanol poses a danger to small engines like lawnmowers, snow mobiles and small boat motors.

EPA is also taking comment to "address concerns" that some RFS obligations are met with imported fuel from Brazil, Argentina and Indonesia. The National Biodiesel Board, a trade association for biodiesel producers, has lodged a trade complaint against Argentina and Indonesia.

The agency will also seek to "bolster" cooperation between EPA and the Commodities Futures Trading Commission to help manage transactions in RFS credits. RFS opponents, notably including Trump adviser Carl Icahn, have complained about fraud in the credits market.

Senate fails to overturn Obama-era methane rule Back

By Nick Juliano, Darius Dixon and Ben Lefebvre | 05/10/2017 12:12 PM EDT

Republicans' last chance to block an Obama-era energy rule may have just evaporated into thin air.

The Senate on Wednesday unexpectedly failed to advance a filibuster-proof resolution that would have allowed them to prevent the Interior Department from cracking down on the amount of methane oil and gas companies release from their wells and pipelines. Three Republicans — John McCain, Lindsey Graham and Susan Collins — joined all Democrats in blocking the resolution.

Had the vote succeeded, it would have been the 15th time this year that lawmakers deployed the Congressional Review Act to help President Donald Trump erase his predecessor's late-term regulations. The CRA, which had only been used once before this year, gives Congress a short amount of time to block rules completed since about the middle of last year, but that clock runs out on Thursday

The methane resolution narrowly passed the House last February, but John Barrasso, who sponsored the Senate companion, had been unable to round up the votes he needed from his colleagues. It was the only such measure to come to a vote and fail, although Republicans targeted numerous other Obama rules with CRA resolutions that never made it to the floor of either chamber.

For now, the Bureau of Land Management's methane rule remains in place, but Trump has directed his administration to consider repealing it.

"It's disappointing but I'm going to call on the secretary of Interior to withdraw the rule immediately," Barrasso said after the vote.

While Collins and Graham had announced their opposition weeks ago, McCain's vote came as a surprise. Other closely watched GOP moderates, including Jeff Flake (Ariz.) and Dean Heller (Nev.), who are up for reelection next year, backed the resolution. But there was no aisle-crossing from Democrats facing tough races in energy-producing states, such as Heidi Heitkamp and Joe Manchin.

In a statement, McCain said he voted no over concerns that Interior would not be able to rewrite a new version of the rule.

"While I am concerned that the BLM rule may be onerous, passage of the resolution would have prevented the federal government, under any administration, from issuing a rule that is "similar,' according to the plain reading of the Congressional Review Act," he said.

McCain, who labelled methane emissions an "important public health and air quality issue," called on Interior to "revise and improve the BLM methane rule."

John Hoeven, who had been helping whip votes for the measure, said McCain had told Barrasso Tuesday night that he had concerns with the resolution. But Hoeven said they took a chance, hoping that some undecided Democrats would join them in voting for it.

"We had to go because May 11 — that's the last day we could do it. So, we had to go. ... And we had some Ds that were undecided so we thought we might still get it," Hoeven told reporters after the vote.

Tom Carper, the top Democrat on the Environment and Public Works Committee, said he was not completely surprised by McCain's maverick vote.

"I think the Republican leader was looking at that time running out on the ability to bring up the CRAs and decided to roll the dice," Carper said. "I applaud those who saw the issues as we did and voted with us."

The methane rule adjusts how the government collects royalties for oil and gas extracted from public land to prevent drilling companies from wasting excess gas by flaring it off or venting

methane straight into the atmosphere. Environmentalists and other rule supporters say the rule helps limit emissions of a powerful greenhouse gas and ensures taxpayers get a fair return for oil and gas extracted from public lands, though the energy industry argued that collecting the gas increases costs and could impede oil production.

"While it is disappointing that the Senate did not act to correct the rule more quickly, we look forward to working with the administration on policies that continue our commitment to safely produce the energy that Americans rely on, help consumers, create jobs, strengthen our national security, and protect our environment," said Erik Milito, of the American Petroleum Institute.

Democrats were elated at the resolution's failure.

"Today's vote is a win for American taxpayers, a win for public health and a win for our climate," Ed Markey (D-Mass.) said in a statement. "When it comes to natural gas production on public lands, the oil industry should embrace the slogan 'waste not, want not.' These commonsense rules issued by the Obama administration ensure that we can reduce methane emissions that contribute to climate change and ensure that taxpayers receive their fair share for their precious natural resources."

The Sierra Club and other green groups said they had been surprised by McCain's vote though they had been lobbying the Arizona senator as part of its campaign against the CRA in western states.

"We had high hopes on McCain, given his past history of action on climate change," said Lena Moffitt, director of the group's Dirty Fuels campaign. "But he remained mum" on his vote.

The resolution was briefly hung-up this month by requests from corn-state Republicans for help securing an EPA waiver that would benefit sales of higher-blend ethanol in exchange for their support. But John Thune (R-S.D.) said those lawmakers relented after receiving assurances from leadership.

While the result was disappointing for the oil industry, one lobbyist took solace in the diminished likelihood of an ethanol deal taking shape.

"Looks like we won't have to do the [ethanol waiver] circus at EPW after all," said Stephen Brown, with refining company Tesoro.

Rob Portman, (R-Ohio) another longstanding holdout, surprisingly announced his support for the resolution on Monday, after Secretary Ryan Zinke sent him a letter promising to look for ways to limit methane emissions that would not have as large of an economic impact on the industry. But experts said that reassurance rested on shaky ground given the untested nature of the Congressional Review Act's prohibition on re-issuing regulations that are overturned.

First enacted in 1996, the CRA had been used just once before this year, to block a Clinton-era ergonomics rule in the first year of George W. Bush's presidency. The law prevents agencies from writing new rules that are "substantially the same" as those Congress overturns, but courts

have never tested those limits nor weighed in on how to address a conflicting law telling an agency to write a rule Congress has blocked.

While Congress managed to block 14 Obama regulations so far this year, Democrats took solace in the fact that their last attempt came up short.

Carper plans to thank McCain the next time he sees him.

"He and I served in the Vietnam War together — both Navy veterans," Carper said. "When I see him I'll give him a hug. If not that, a salute."

Alex Guillen, Eric Wolff and Esther Whieldon contributed to this report.

Zinke in May met with fossil industry, lawmakers Back

By Esther Whieldon | 07/05/2017 04:52 PM EDT

Interior Secretary Ryan Zinke in May met with fossil fuel industry groups and companies, members of Congress and governors, among others, according to a copy of his calendar released today.

Zinke on May 22 met for a half an hour in his office with officials from the American Petroleum Institute. Earlier that day, he welcomed representatives of White Stallion Energy Center, a company that in 2013 abandoned efforts to build a 1,200-megawatt, coal-fired power project in Texas. White Stallion Energy also contributed $175,000 toward President Donald Trump's inauguration.

With Trump's encouragement, Zinke has taken steps to promote the fossil-fuel industry including by ending the agency's moratorium on new coal leases on federal lands. The calendar item does not say what topics were discussed at both meetings, nor did it list the names of non-agency attendees.

Zinke in May also met or held calls with nearly a dozen U.S. lawmakers and governors, including Senate Environment and Public Works Chairman **John Barrasso (R-Wyo.), House Energy and Commerce Chairman Greg Walden (R-Ore.). He also met with Oregon Gov. Kate Brown, a Democrat, and Sens. Angus King (I-Maine), Susan Collins (R-Maine) and Catherine Cortez Masto (D-Nev.), among others.**

Zinke met on May 4 with NRA CEO Wayne LaPierre and the gun rights' group's top lobbyist, Chris Cox. Zinke has met with Cox before, including in March, and Zinke spoke in April at the NRA-ILA's leadership forum in Atlanta.

Subject: EPA methane rule back on ice as court gives agency time to appeal

By Alex Guillén

07/13/2017 02:52 PM EDT

Key leak requirements under EPA's methane emissions rule for new oil and gas wells are once again on hold after a federal court temporarily granted EPA's plea to reinstate Administrator Scott Pruitt's stay.

A split panel of the D.C. Circuit Court of Appeals on July 3 sided with environmentalists in declaring Pruitt's 90-day stay of key regulatory requirements unlawful. The judges at that time ordered EPA to immediately reinstate the full methane rule, but EPA argued that it should have been given more time to appeal that decision before the requirements went back into effect.

The panel today agreed with EPA on the timing issue, and said it would not order EPA to enforce the methane rule for at least two more weeks. That gives the agency time to mount some kind of appeal, but it is significantly less than the 45 days or more that EPA sought.

"To stay issuance of the mandate for longer would hand the agency, in all practical effect, the very delay in implementation this panel determined to be" unlawful, the court said in its order.

The court has not reversed its earlier decision that Pruitt's stay is unlawful. EPA is now free to seek a rehearing before the three-judge panel or before the full D.C. Circuit, or to "pursue other relief," the court said.

WHAT'S NEXT: EPA has two weeks to decide whether and how to appeal the matter. Meanwhile, EPA is working to establish a two-year stay of the rule that is expected to face its own legal challenge.

Subject: BREAKING NEWS: Franken apologizes after woman alleges he groped her

A female radio broadcaster said Thursday that Sen. Al Franken groped and kissed her without her consent during a 2006 trip abroad.

Leeann Tweeden, a radio anchor for Los Angeles' KABC, wrote Thursday that Franken's misconduct came while they toured the Middle East to entertain military personnel in 2006. After they returned from the trip, she discovered a picture of the senator groping her as she slept.

In response, Franken said in a statement, "I certainly don't remember the rehearsal for the skit in the same way, but I send my sincerest apologies to Leeann. As to the photo, it was clearly intended to be funny but wasn't. I shouldn't have done it."

Subject: EPA's Weekly Round-Up For 06/09/17

EPA's Weekly Round-Up

From discussing how President Trump's decision to leave the Paris Accord puts America First, to announcing brownfield grants and clearing out the chemical backlog it's been a successful week at the EPA.

NATIONAL NEWS …

On ABC's This Week, Pruitt discussed how small businesses across the country are celebrating President Trump's decision to pull out of the Paris accord. "Well, when you look at, even The New York Times had an article, I think, within the last couple of days that talked about small business celebrating, euphoria with respect to the president's decision."

On Fox News Sunday, Pruitt explained how the U.S. is the energy technology leader of the world and that if China and India want to reduce their CO2 footprint, they should follow us. "If China and India want to reduce their CO2 footprint, they should learn from us," Pruitt told Fox News' Chris Wallace."

Administrator Scott Pruitt was on MSNBC's Morning Joe where he said the Paris Accord put our economy at a disadvantage. "When you look at what was agreed to in Paris, it put this country, our country at a disadvantage economically."

Breitbart reports that Pruitt was on SiriusXM radio where he said the Paris Accord would have driven more regulation through litigation. "Regulation through litigation, if you will, which, I think, is an abuse of executive authority, an abuse of the rulemaking process," Pruitt said."

The Huffington Post reports that President Trump's EPA is doing a good job at regulating new chemicals. "The Environmental Protection Agency plans by next month to clear its backlog of hundreds of new chemicals waiting to be deemed safe enough to sell to the public."

- **Additionally, Scientist Richard Denison penned an op-ed for the Environmental Defense Fund saying the EPA has made enormous progress regarding the chemical backlog.** "The Environmental Protection Agency (EPA) yesterday updated its website to provide a current snapshot of the status of new chemical reviews it has been conducting under last year's amendments to the Toxic Substances Control Act (TSCA). The statistics show that, despite being faced immediately with a substantial increase in responsibilities and workload as

a result of the major changes made to TSCA, EPA has made enormous progress in implementing the new requirements."

The Washington Free Beacon reports that the EPA is responding to inquiries from Senate EPW Committee in a timely manner. "The Environmental Protection Agency has responded to half of a Senate oversight committee's information requests, undermining a top Democrat's claim that he is blocking nominees because the agency has not answered his letters."

- **Additionally, the Washington Examiner reports the EPA has been incredibly responsive to inquires received for the Senate EPW Committee.** "Normally, that's a perfectly reasonable way for the Senate to exercise oversight of a stonewalling administrative agency. Except that's not happening. According to EPA records shared with the Washington Examiner, the agency has received 20 letters from Carper, responded to 10 already, and just mailed another Friday."

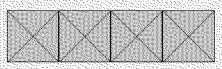
The Daily Caller reports that the Trump Administration delayed one of the most expensive EPA regulations ever. "The Trump administration announced Tuesday evening it would delay the implementation of a smog rule that's been called one of the costliest clean air regulations ever."

- **Senate Majority Leader Mitch McConnell applauded the EPA's move to delay this rule.** "I applaud Administrator Scott Pruitt for his decision to delay this Obama Administration issued regulation, which was finalized in October 2015."

- **Additionally, members of the House Western Caucus praised the EPA for their action.** "When pristine national parks like the Grand Canyon, Yosemite and Rocky Mountain are in danger of being in nonattainment under the proposed Obama standard, there is a serious problem with the numbers," said Chairman Paul Gosar. "I am glad to see common sense finally prevail at the EPA with the announcement that the agency is postponing and reevaluating the job-killing Ozone Rule promulgated by President Obama."

TO THE STATES ...

In Georgia, the Atlanta Journal-Constitution reports that the EPA awards Atlanta with $300,000 for the community-wide brownfield cleanup activity. "The U.S. Environmental Protection Agency recently selected the city of Atlanta to receive a brownfields revolving loan fund grant totaling $300,000. This is in addition to the more than $1.7 million in grant funding for community-wide brownfields assessment activities and cleanup planning that seven communities in Georgia were selected to receive on May 31."



In Indiana, the Greensburg Daily News reports that the EPA has given $475,000 for potential brownfield assessments. "The Southeastern Indiana Regional Planning Commission (SIRPC) will receive a $475,000 grant to investigate environmental conditions at vacant and unused properties with redevelopment potential in the Greensburg industrial commercial district as well as other locations in the state, Environmental Protection Agency (EPA) officials said."

In Texas, the Gilmer Mirror reports that students from Pearland received the President's Environmental Youth Award. *"Teenagers from Pearland, Katy and Houston, Texas, are*

among the national winners of the 2016 U.S. Environmental Protection Agency (EPA) and the White House Council on Environmental Quality's President's Environmental Youth Award (PEYA)."

In Utah, NPR Utah reports that Pruitt is giving flexibility to comply with this regulation from the Obama Administration. "Federal regulators are giving states like Utah another year to sort out their ozone-pollution solutions. The U-S Environmental Protection Agency is extending a deadline for states that are have been poised to write ozone cleanup plans. … EPA's Pruitt said he wants more "flexibility" for communities struggling with ozone, and he's creating a task force to review the ozone limits set during the Obama administration."

Good Wednesday afternoon. WALK BACK WEDNESDAY ...

-- REX TILLERSON, after an NBC report that he considered resigning and that he called the president a moron: "The vice president has never had to persuade me to remain as secretary of state because I have never considered leaving this post." When asked if he called the president a "moron," he said "We don't deal with that kind of petty nonsense." ***The NBC report*** http://nbcnews.to/2fQsbmY

-- @realDonaldTrump at 6:25 a.m.: "A great day in Puerto Rico yesterday. While some of the news coverage is Fake, most showed great warmth and friendship." ... **at 7:29 a.m.:** "Wow, so many Fake News stories today. No matter what I do or say, they will not write or speak truth. The Fake News Media is out of control!" ... **at 10:47 a.m.:** "NBC news is #FakeNews and more dishonest than even CNN. They are a disgrace to good reporting. No wonder their news ratings are way down!" ... **at 11:18 a.m.:** "The @NBCNews story has just been totally refuted by Sec. Tillerson and @VP Pence. It is #FakeNews. They should issue an apology to AMERICA!"

-- V.P. MIKE PENCE pushes back, via Jarrod Agen: "The Vice President values the service of the Secretary of State Rex Tillerson and is grateful for his strong affirmation of President Trump's America First foreign policy agenda. The Vice President can also confirm that, as the Secretary of State asserted, at no time did he and the Secretary discuss the prospect of resignation. Any reporting to the contrary is categorically false. In addition, any assertion that the Vice President questioned Ambassador Nikki Haley's value to the Trump Administration is also categorically false. The Vice President has known Ambassador Nikki Haley for many years and holds her in the highest personal and professional regard. The Vice President appreciates her strong contribution and service to the administration at the United Nations."

-- MICK MULVANEY on bailing out Puerto Rico: "I think what you heard the president say is that Puerto Rico is going to have to figure out a way to solve its debt problem. ... We are not going to bail them out. We are not going to pay off those debts. We are not

going to bail out those bond holders." https://bloom.bg/2fQTZI9

-- THAT'S not what Trump said, though.

HMM -- RICHARD HAASS, president of the Council on Foreign Relations (@RichardHaass): "Rex Tillerson has been dealt a bad hand by the Potus & has played it badly. For both reasons he cannot be effective SecState & should resign".

PRESIDENT TRUMP is wheels down in Las Vegas. He will meet with patients, doctors and first responders this afternoon.

TRUMP INC. -- "Ivanka and Donald Trump Jr. Were Close to Being Charged With Felony Fraud: New York prosecutors were preparing a case. Then the D.A. overruled his staff after a visit from a top donor: Trump attorney Marc Kasowitz," by ProPublica's Jesse Eisinger and Justin Elliott and WNYC's Andrea Bernstein and Ilya Marritz: "In the spring of 2012, Donald Trump's two eldest children, Ivanka Trump and Donald Trump Jr., found themselves in a precarious legal position. For two years, prosecutors in the Manhattan District Attorney's office had been building a criminal case against them for misleading prospective buyers of units in the Trump SoHo, a hotel and condo development that was failing to sell. Despite the best efforts of the siblings' defense team, the case had not gone away.

"An indictment seemed like a real possibility. The evidence included emails from the Trumps making clear that they were aware they were using inflated figures about how well the condos were selling to lure buyers. ... On May 16, 2012, Kasowitz visited [Manhattan District Attorney Cyrus Vance Jr's] office at One Hogan Place in downtown Manhattan -- a faded edifice made famous by the television show, 'Law & Order.' Dan Alonso, the chief assistant district attorney, and Adam Kaufmann, the chief of the investigative division, were also at the meeting, but no one from the Major Economic Crimes Bureau attended. Kasowitz did not introduce any new arguments or facts during his session. He simply repeated the arguments that the other defense lawyers had been making for months. Ultimately, Vance overruled his own prosecutors." http://bit.ly/2xgCWqb

SENATE INTELLIGENCE COMMITTEE CHAIR RICHARD BURR and vice chair Mark Warner held a press conference on the committee's Russia investigation. Burr said they "hit a wall" on the infamous Steele dossier because they have not received a response from the author. They said the investigation is ongoing.

****** **A message from Koch Industries:** As an employer of over 70,000 people across all 50 states, Koch companies innovate new ways to make everyday products better while using fewer natural resources. Our diverse businesses help improve basic necessities like food, clothing, shelter, transportation and more. See how we are focused on the future at ChallengeAccepted.com. ******

MIDDLE EAST PEACE ALERT -- "Trump to UN Chief: Netanyahu Proving More

Difficult Than Abbas in Peace Efforts," by Haaretz's Barak Ravid: "In a meeting last month with UN Secretary-General Antonio Guterres, U.S. President Donald Trump termed Prime Minister Benjamin Netanyahu the harder side to convince in his efforts to broker an Israeli-Palestinian peace deal, according to seven Western and Israeli sources who were either present at or briefed on the meeting. 'Trump said both leaders are problematic,' said one Western diplomat who was briefed on the meeting. 'But the general context was that from the two of them, Netanyahu is the bigger problem.'

"A senior White House official disputed the account of the meeting, saying, 'This was a short but productive meeting that primarily focused on UN reforms and the great job [U.S. Ambassador to the UN Nikki] Haley has been doing.'" http://bit.ly/2xfoqyR

THE LATEST ON PUERTO RICO -- "Puerto Rico's schools struggle to recover from hurricane destruction," by Mel Leonor: "Among 1,112 public schools, just over 450 are accounted for, which means more than half haven't yet been surveyed as to their condition. Teachers and school administrators in the U.S. territory are struggling to get back on track, following the devastating landfall of Hurricane Maria on Sept. 20. ... In an attempt to kick start the recovery, education officials have asked students near the approximately 22 schools with running water and basic supplies to report back to school on Wednesday for informal classes." ***More for Pros*** http://politico.pro/2fPsePU

NUMBERS TRUMP WON'T LIKE -- "AP-NORC Poll: Low marks for Trump's Puerto Rico response," by the AP's Laurie Kellman and Emily Swanson: "Americans are more likely to disapprove than approve of President Donald Trump's handling of the Puerto Rico hurricane relief effort. According to a poll by the Associated Press-NORC Center for Public Affairs Research, just 32 percent approve of how Trump is handling disaster relief in the U.S. territory, while 49 percent disapprove. ...

"Trump drew better marks for his handling of the recoveries after hurricanes Harvey and Irma. Forty-eight percent of Americans approve and just 27 percent disapprove of Trump's handling of recoveries in U.S. states, including Texas and Florida. The poll was conducted before Trump on Tuesday made his first trip to Puerto Rico, an island 1,000 miles from the mainland, after Hurricane Maria roared ashore Sept. 20 and knocked out all power." http://bit.ly/2xfpu5Z

HOT DOC -- FORMER FLORIDA GOP REP. CLIFF STEARNS, who has been out of Congress since 2012, paid his wife $1,000 in both July and August, and $2,000 in September using campaign funds.

ROBOCALLS -- AMERICAN ACTION NETWORK is launching 1 million robocalls today targeting 45 districts (http://bit.ly/2fKAltG) on tax reform. Their message: the Republican plan will help put money in the middle class's pockets, will bring bring jobs back from overseas and help grow the economy. ***Audio example of the robocall*** http://bit.ly/2wxL418

THINK TANK NEWS -- RETIRED GEN. JOHN ALLEN has been named the next

president of the Brookings Institution. ***Release*** http://brook.gs/2fQU0f2

WHAT ABOUT THE EMAILS? -- "Jared Kushner's personal email re-routed to Trump Organization computers amid public scrutiny," by USA Today's Brad Heath: "President Trump's son-in-law Jared Kushner and daughter Ivanka Trump re-routed their personal email accounts to computers run by the Trump Organization as public scrutiny intensified over their use of private emails to conduct White House business, internet registration records show. The move, made just days after Kushner's use of a personal email account first became public, came shortly after special counsel Robert Mueller asked the White House to turn over records related to his investigation of Russia's interference in the 2016 election and possible collusion with Trump associates." https://usat.ly/2fQG3he

EDUCATION WATCH -- "DeVos Keeps Higher Ed -- and Reporters -- at Arm's Length," by the Chronicle of Higher Education's Adam Harris: "Since being confirmed as education secretary, [Betsy DeVos] has rarely given interviews. But that changes when she gets outside of the Washington, D.C., bubble, where she sits down for local television news, chats with columnists, and appears at gaggles with reporters. Journalists outside of the northeast corridor are 'more balanced and fair,' she told The Detroit News last month.

"She has, on occasion, granted interviews to national outlets -- CBS News, the Associated Press, and Fox News, among them -- but for higher-ed observers looking for details on the daily administration of federal policy, few are to be found. " http://bit.ly/2xha6pW

MEDIAWATCH -- "Rupert Murdoch Is The Media's Unlikely Hero In The War Against Facebook And Google," by BuzzFeed's Steven Perlberg and Mark Di Stefano: "Murdoch and his chief newspaper lieutenant, News Corp CEO Robert Thomson, have taken a central role in the news industry's corporate war against Facebook and Google, technology leviathans that have eaten journalism's business model and forever changed how readers consume information. ...

"Now media executives are sensing blood in the water -- hoping that Facebook and Google's legitimate public relations nightmare might give news outlets more leverage in business negotiations, and that Washington lawmakers and the public at large will come to see tech giants as public utilities that require regulation. As the most well-connected media mogul in Washington, the news industry might need Murdoch now more than ever." http://bzfd.it/2xh6sfC

-- "Los Angeles Times Newsroom, Challenging Tronc, Goes Public With Union Push," by NYT's Sydney Ember http://nyti.ms/2xg4njW

TODAY'S BEYOND THE BELTWAY -- Illinois Republican congressional delegation slams Rauner -- Murphy leads Guadagno by 14 in new N.J. gubernatorial poll http://politi.co/2xfA8cN

AFTERNOON READ -- "They thought they were going to rehab. They ended up in chicken plants," by Reveal's Amy Julia Harris and Shoshana Walter: "Across the country, judges increasingly are sending defendants to rehab instead of prison or jail. These diversion courts have become the bedrock of criminal justice reform, aiming to transform lives and ease overcrowded prisons.

"But in the rush to spare people from prison, some judges are steering defendants into rehabs that are little more than lucrative work camps for private industry, an investigation by Reveal from The Center for Investigative Reporting has found. The programs promise freedom from addiction. Instead, they've turned thousands of men and women into indentured servants." http://bit.ly/2fPtfaG

SPOTTED: John Boehner smoking while crossing Louisiana Ave this morning ... Geraldo Rivera this morning at DCA.

TRANSITIONS -- J. Toscano has started at 76 Words, a Democratic media firm. He spent 20 years at GMMB. ... **Christopher Hill** was appointed chief adviser to the chancellor for global engagement and professor of the practice in diplomacy at the University of Denver. Hill, the former U.S. ambassador to Iraq and South Korea, was previously dean of the university's international studies school. ... **Christian Marrone** has been named senior fellow at GW's Center for Cyber & Homeland Security. He is currently CSRA's senior vice president and chief of staff.

WELCOME TO THE WORLD - Ayesha Rascoe, White House correspondent at Reuters, and **Patrick Trice** on Tuesday evening welcomed Annalise Iman Trice. "She is 6lbs, 14 oz and a total sweetheart. Her father and I are over the moon about our latest addition. She joins a brother and sister at home." ***Pics*** http://politi.co/2yYrv3V ... http://politi.co/2hLprYw

--Miami Beach Mayor **Philip Levine** and **Caro Murciano,** a clothing designer, have welcomed Henry Joel Levine. ***Pic*** http://bit.ly/2yWKwDv

WEEKEND WEDDING -- Sarah Hodgkins, a legislative assistant for Rep. Mario Diaz-Balart (R-Fla.), got married this weekend to **Austin Ankney,** a data scientist for the government. "The ceremony was at Bethany United Methodist Church in Somerset, Pennsylvania and the reception was a good old-fashioned barn party at Horizon View Farms in Rockwood, Pennsylvania. Sarah and her now husband met at Juniata College 2 months before they graduated in 2012." ***Pics*** http://politi.co/2xYRMAW ... http://bit.ly/2hL7Z6J

****** **A message from Koch Industries:** According to the World Health Organization, 633 million people lack access to safe water worldwide. At Koch, we are addressing this global crisis with innovative membrane filtration technologies to help turn surface and wastewater back into clean drinking water. It's already making a difference in places such as São Paulo, Brazil, one of the world's largest cities. This is one of the many

challenges that our more than 70,000 employees across America are working on each day. From water and agriculture, to renewable fuels, energy efficiency and other advancements that help people improve their lives, our team members are encouraged to think like entrepreneurs and challenge the status quo. Here, everyone is encouraged to speak up with ideas to create greater long-term value for society, our customers and businesses, while also reducing waste so more natural resources are available to meet future needs. Go behind the scenes at **ChallengeAccepted.com**. ******

Regulatory Update

WATER
Time Limited Water Quality Standards
Illinois WATER

Proposed rule of the Pollution Control Board adopts regulations under 35 IAC 104.500 through .590 regarding time limited water quality standards (TLWQS), a regulatory relief mechanism for adoption of federally approvable water quality standard variances. The rule establishes the applicability and uses of a TLWQS, the different parties to a TLWQS proceeding, and the types of notice and service required for such proceedings. The rule also provides that a TLWQS may be sought for multiple uses and multiple parameters and allows for stay from the effectiveness of a standard from which relief is sought. In addition, the rule establishes provisions concerning petition criteria, agency response, board-established classes and deadlines, substantial compliance assessments, and recommendations and response. Finally, the rule addresses hearings, burden of proof, opinion and order, federal EPA review, coverage, reevaluation, appeal rights, and extensions. Comments are due Oct. 23, 2017. Contact: PCB; 312-814-3620

Montana

WATER

Water Right Permitting
Montana WATER

Proposed rule of the Department of Natural Resources and Conservation amends regulations under ARM 36.12.101 through .1801 (nonconsecutive) and repeals regulations under ARM 37.12.106 to update water rights permitting standards and procedures. The rule adds notice requirements for temporary appropriations of water for emergency fire training and clarifies that no filing fee refunds will be authorized after the department has issued a deficiency letter to applicants. The rule also adds requirements for objections concerning adverse effects to instream flow rights for fish, wildlife, and recreation; clarifies aquifer testing requirements; and adds permit application requirements for projects in sage grouse habitats. In addition, the rule clarifies deficiency letter timelines and outcomes and acceptable surface water measurement data and removes duplicative provisions concerning testing and monitoring. Finally, the rule updates the definition of "combined appropriation" and removes the definition of "municipal use" to conform with judicial decisions. A hearing is scheduled for Oct. 6, 2017, in Helena. Comments are due Oct. 6, 2017. Contact: Millie Heffner; DNRC; 406-444-0581; mheffner@mt.gov

TOXIC SUBSTANCES
Asbestos Licensing Regulations
Virginia TOXIC SUBSTANCES

Notice of the Department of Professional and Occupational Regulation, Board for Asbestos, Lead, and Home Inspectors, announces a correction to a Sept. 4, 2017, proposed rule to amend regulations under 18 VAC 15-20-10 through -459.4 (nonconsecutive) and adopt regulations under 18 VAC 15-20-33.1, -33.2, and -456.1 regarding asbestos licensing. The rule revises the definition of "person" to clarify requirements for entities required to obtain a license for asbestos-related work, revises licensure requirements for asbestos analytical laboratories with multiple locations, updates the asbestos firm entry requirements for consistency with similar standards applicable to firms, and revises the information required for licensure of applicants. The rule also specifies the transferability and validity of certain firm licenses and expands the responsibilities of asbestos project monitors to include changes to air sample reporting requirements. In addition, the rule adds provisions concerning specific entry requirements for asbestos contractors and asbestos analytical laboratories and conduct during onsite analysis. The correction revises a reference to the renewal fee for asbestos analytical laboratory branch offices. Regulatory Update

WATER
Runoff Management/Animal Feeding Operations
Wisconsin WATER

Notice of the Department of Natural Resources announces an extension of the comment period for a Sept. 5, 2017, proposed rule to amend regulations under WAC NR 151.015 and adopt regulations under WAC NR 151.075 and 243.143 to establish performance standards for mechanical application of manure by crop and livestock producers to Silurian bedrock cropland and pasture areas. The rule specifies Silurian bedrock maximum liquid manure application rates based on soil depth and texture; requires manure to be applied in conformance with a nutrient management plan; and prohibits application of manure for soils with less than two feet to Silurian bedrock, where application will cause fecal contamination of water in a well, and within certain distances of water systems and groundwater conduits. The rule also requires concentrated animal feeding operations in Silurian bedrock areas to comply with performance standards through their Wisconsin Pollutant Discharge Elimination System permit regardless of any local ordinance and absent cost sharing. In addition, the rule requires nonpermitted farms in Silurian bedrock areas to comply with performance standards in specified circumstances. Comments now are due Oct. 4, 2017. WATER
Waiver of Waste Discharge Requirements/Disaster-Related Wastes
California Regions WATER

Notice of the North Coast Regional Water Quality Control Board announces a proposed order (R1-2017-0056) concerning conditional waiver of waste discharge requirements for emergency disposal of disaster-related wastes. The waiver also addresses temporary waste piles at regulated and nonregulated facilities, temporary surface impoundments at nonregulated facilities, discharges of diseased mass mortality wastes to emergency landfills, and emergency wastes not from emergency-declared disaster areas. The waiver is intended to facilitate prompt disposal of waste generated during the emergency response and cleanup of federally- or governor-declared disaster areas and local state of emergencies. A hearing is scheduled for Dec. 13, 2017, in Santa Rosa. Comments are due Nov. 27, 2017. Contact: North Coast RWQCB; 707-576-2220

AIR
Puget Sound Clean Air Agency/Public Records
Washington AIR

Final rule of the Puget Sound Clean Air Agency amends Regulation 1, Sections 14.03 through

14.07, regarding the availability of public records. The rule allows the agency to request customized service charges in the amount of actual cost of service used. The rule also clarifies that members of the public may request records orally or through the agency's website. In addition, the rule provides that the agency may request members of the public to prioritize requests if more than one is submitted within a 30-day period and adds requirements concerning response burden estimates. Finally, the rule updates the list of exemptions applicable to public records and fees. The rule is effective Dec. 1, 2017. Contact: Kyle Ponton-Welty; PSCA; 206-689-4040

Regulatory Update

AIR
Spokane Regional Clean Air Agency/Intimidation of Staff
Washington AIR

Proposed rule of the Spokane Regional Clean Air Agency would adopt regulations under Regulation I, Section 2.15, to allow for the issuance of a notice of violation if agency staff are directly or indirectly assaulted, intimidated, threatened, coerced, harassed, or unlawfully imprisoned. The rule would allow the notices to be issued regardless of any criminal charges or convictions related to the conduct and allow a civil penalty of $5,000 to be assessed for violations. The rule also would add related definitions. A hearing is scheduled for Dec. 7, 2017, in Spokane. Comments are due Dec. 7, 2017. Contact: Margee Chambers; SRCAA; 509-477-4727; publiccomment@spokanecleanair.org

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Citation and Notice Appeals
Washington OCCUPATIONAL SAFETY AND HEALTH

Final rule of the Department of Labor and Industries amends regulations under WAC 296-900-17005 to update procedures for appealing a citation and notice for workplace safety and health violations. The rule increases the appeal extension period to up to 45 working days and increases the total reassumption time period to up to 75 working days if all parties agree to the 45-day extension. The rule also allows appeals to be filed electronically. The rule is effective Jan. 1, 2018. Contact: Chris Miller; DLI; 360-902-5516; christopher.miller@lni.wa.gov

—Washington State Register (11/15/2017)

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Safety Standards, Permissible Exposure Limits for Airborne Contaminants/Crystalline Silica
Washington OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Department of Labor and Industries would amend regulations under WAC296-307-62625 and -841-20025 and adopt regulations under WAC 296-840-095 through -165

regarding air contaminant standards and permissible exposure limits for respirable crystalline silica. The rule would incorporate June 23, 2016, federal amendments to standards under 29 CFR 1910 and 1926 regarding occupational exposure to respirable crystalline silica for construction, general industry, and maritime workers. The amendments establish workplace exposure limits and requirements for exposure control methods, respiratory protection, hazard communication, and medical surveillance. A hearing is scheduled for Dec. 15, 2017, in Tumwater. Comments are due Dec. 22, 2017. Contact: Chris Miller; DLI; 360-902-5090; christopher.miller@lni.wa.gov

—Washington State Register (11/15/2017)

Regulatory Update

RADIATION
Radiation Protection/Air Emissions
Washington RADIATION

Proposed rule of the Department of Health would amend regulations under WAC 246-247-010 through -120 (nonconsecutive) and repeal regulations under WAC 246-247-045 to incorporate national emission standards for hazardous air pollutants for radionuclides under 40 CFR 61, Subparts H and I. The rule also would update agency contact information, make technical corrections, and remove a discontinued national publication. A hearing is scheduled for Dec. 5, 2017, in Tumwater. Comments are due Dec. 5, 2017. Contact: John Martell; DOH; 509-946-3798

Subject: BREAKING NEWS: Carter adviser Zbigniew Brzezinski dies at 89

Zbigniew Brzezinski, former national security adviser to President Jimmy Carter, died on Friday, his daughter announced.

Brzezinski was a Polish-born American who served in both the Carter and Lyndon Johnson administrations as a strategic theorist through the Iran hostage crisis and the Cold war. He was 89.

"My father passed away peacefully tonight," Mika Brzezinski, a host of MSNBC's "Morning Joe," announced on Instagram late Friday. "He was known to his friends as Zbig, to his grandchildren as Chief and to his wife as the enduring love of her life."

She added: "I just knew his as the most inspiring, loving and devoted father any girl could ever have."

Subject: EPA sues Fiat Chrysler over emissions cheating allegations

By Alex Guillén

05/23/2017 03:49 PM EDT

The Justice Department and EPA today sued Fiat Chrysler, contending the automaker sold almost 104,000 diesel vehicles equipped with software designed to cheat on emissions testing, threatening the Italian-owned company with billions of dollars in fines.

The agencies first went public with their allegations in January, when Obama-era officials demanded Fiat Chrysler explain whether its "auxiliary emission control devices" were acting as defeat devices on Ram 1500 and Jeep Grand Cherokee models.

Those defeat devices, consisting of at least eight software features that were undisclosed to EPA during the company's certification process, boost performance under real-world driving conditions by increasing nitrogen oxide emissions, according to DOJ.

Fiat Chrysler faces fines of $37,500 to $45,268 per vehicle sold, along with further penalties for each undisclosed software device and for reporting violations, which could add up to billions of dollars.

Fiat last week said it was in talks with the DOJ to settle the allegations, though today's filing does not indicate the parties have reached a deal. DOJ said in a release the talks continued but that timing was unclear.

Fiat on Friday announced it has taken a first step toward getting its 2017 model year diesel vehicles approved by EPA and the California Air Resources Board, and will install updated emissions software in 2014-2016 vehicles.

The Fiat allegations come after Volkswagen settled its own emissions cheating scandal for a record $4.3 billion.

Today's Playbook Power Briefing presented by Samsung
06/07/2017 01:54 PM EDT

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BREAKING -- JIM COMEY'S opening statement from tomorrow is up. http://bit.ly/2rMG1bK

PLAYBOOK SCOOP -- GREAT INTRIGUE -- FORMER SPEAKER JOHN BOEHNER was hanging out at CXIII REX, the private cigar bar in Old Town last night, and was riffing on politics. **BOEHNER** said he would "rather be dead than run for the Senate." He also said President Donald Trump would have to "grow ears and listen" for him to go to the White House and serve as chief of staff.

SPOTTED lunching this afternoon: **KELLYANNE CONWAY** and **COREY LEWANDOWSKI** at Bobby Van's on 15th Street, NW.

Good Wednesday afternoon. TRUMP'S PICK FOR FBI -- "Trump taps Christopher Wray to head FBI," by Louis Nelson: "Wray served as an assistant attorney general from 2003 to 2005 during the tenure of former President George W. Bush. He is currently a partner at the law firm King & Spalding, where he chairs its special matters and government investigations practice group.

"At the Justice Department, Wray was the assistant attorney general in charge of the department's criminal division. He was a member of Bush's corporate fraud task force and led the task force charged with investigating the Enron scandal. More recently, Wray acted as New Jersey Gov. Chris Christie's personal attorney during the federal investigation into lane closures on the George Washington Bridge that were put in place by members of Christie's administration as political retribution for a mayor who did not support the governor's reelection campaign." http://politi.co/2sDUQNB ... ***Wray's law firm bio*** http://bit.ly/2s4tT8G

-- Former Obama DOJ spokesman @matthewamiller: "Wray probably the best choice from the WH short list. His record in the Bush DOJ deserves scrutiny, but he's a serious, respectable pick."

GET SMART FAST -- "5 things to know about Trump's FBI pick Christopher Wray," by Josh Gerstein http://politi.co/2sDUXsP

-- NO SENIOR REPUBLICANS OR DEMOCRATS, that we can tell, were given a heads up on this selection. Speaker Paul Ryan said this morning he doesn't know Wray but he seems good. **CHUCK GRASSLEY (R-IOWA)** and **DIANNE FEINSTEIN (D-CALIF.)**, the top two senators on the Senate Judiciary Committee, were not told about Wray's nomination in advance, our colleague Seung Min Kim (**@seungminkim)** tweeted.

TODAY'S HEARING -- ROSENSTEIN, MCCABE, ROGERS AND COATS -- LOTS OF 'WE WON'T DISCUSS THAT' -- Admiral Mike Rogers, director of the National Security Agency: "Today I am not going to talk about theoreticals. I am not going to discuss the specifics of any interactions or conversations that I may or may not have had with the president was United States, but I will make the following comment. In the three-plus years that I have been director of the National Security Agency, to the best of my recollection, I have never been directed to do anything I believe to be illegal, immoral, unethical or inappropriate and to the best of my recollection during that same period of service I do not recall ever feeling pressured to do so."

-- DNI DAN COATS was asked about today's Washington Post story (http://wapo.st/2rTQxjk), which said Trump asked him to intervene with the FBI about its Russia investigation. He said he would not discuss it in open session, but if you read between the lines, it seemed that he might discuss it in the closed session that's happening this afternoon.

JUST ASKING ... Which senator is going to spill the beans on the non-classified info said in the closed session.

-- WORTH NOTING: On several occasions, the witnesses cited the special counsel's investigation as a reason for not being able to answer questions.

-- SEN. JOHN MCCAIN (R-ARIZ.), after being told by Coats he would not discuss the Washington Post story, but might in a closed session: "You know, it is just showing what kind of an Orwellian existence that we live in. It is detailed -- as you know -- from reading the story as to when you met, what you discussed, et cetera et cetera, yet here in a public hearing before the American people we can't talk about what was described in detail in this morning's Washington Post. Do you want to comment on that?" ... Chair **RICHARD BURR (R-N.C.),** closing out the hearing: "At no time should you be in a position where you come to Congress without an answer." ***More key moments from Nolan McCaskill*** http://politi.co/2sT5eAs

****** **A message from Samsung:** Samsung is committed to creating high-skilled jobs, investing in cutting-edge manufacturing and R&D, and forming trusted partnerships nationwide. Samsung's footprint in the U.S. has been growing for nearly 40 years, with 18,500 employees across the country. Our Austin, TX semiconductor facility is one of the single-largest U.S. FDI's. Visit Samsung.com/VisionForTomorrow for more. ******

POTUS IN OHIO -- President Trump avoided mentioning his new pick for FBI director -- or James Comey's testimony tomorrow -- in a speech in Cincinnati. By this president's standards, this was a fairly standard speech. He talked up America's history of great infrastructure projects and said that "the future is going to be beautiful and the future is going to be bright" with his infrastructure plan, while decrying the decay of America's infrastructure. He promoted Saudi Arabia taking the lead in the fight against terrorism and "radical Islam." He also slammed Obamacare, saying it is in a "death spiral" and called Democrats obstructionists.

COMING ATTRACTIONS -- "3 senior FBI officials can vouch for Comey's story about Trump," by Murray Waas in Vox: "One by one this winter, then-FBI Director James B. Comey pulled aside three of the bureau's top officials for private chats. In calm tones, he told each of them about a private Oval Office meeting with President Trump - during which, Comey alleged, the president pressed him to shut down the federal criminal investigation of Trump's then-national security adviser, Michael Flynn.

"Those three officials, according to two people with detailed, firsthand knowledge of the matter, were Jim Rybicki, Comey's chief of staff and senior counselor; James Baker, the FBI's general counsel; and Andrew McCabe, then the bureau's deputy director, and now the acting director, following Trump's firing of Comey last month. Comey spoke to them within two days of his Oval conversation with Trump, the sources said, and recounted the president's comments about the Flynn investigation." http://bit.ly/2sTokXm

THE PIVOT -- @realDonaldTrump at 8:17 a.m.: "Getting ready to leave for Cincinnati, in the GREAT STATE of OHIO, to meet with ObamaCare victims and talk Healthcare & also Infrastructure!"

HOT DOC -- The Office of Government Ethics disclosed Wednesday roughly two dozen ethics waivers given to top executive branch officials. http://bit.ly/2r2Fe9u

THINGS PUTIN SAYS - per Bloomberg's Jake Rudnitsky, Ilya Arkhipov, and Henry Meyer: "While Putin expounds on favorite subjects including U.S. geopolitical overreach, he's also shown staring stone-faced at the classic Cold War doomsday satire Dr. Strangelove. He explained that he never has an off day as president because he's a man. 'I am not a woman, so I don't have bad days,' he tells [Oliver] Stone while giving a tour of the Kremlin's gilded throne room. 'I am not trying to insult anyone. That's just the nature of things. There are certain natural cycles.'" https://bloom.bg/2rKLCPy

NEW POLLS -- "Post-ABC Poll: Most say Trump is interfering with Russia investigations," by WaPo's Scott Clement and Emily Guskin: "A 56 percent majority of U.S. adults say Trump is interfering with such investigations rather than cooperating, while 61 percent say Trump fired Comey to protect himself rather than for the good of the country. Comey also faces serious credibility problems ahead of his highly anticipated Senate testimony Thursday, with 36 percent of Americans saying they trust

what he says about Russia and the election 'a great deal' or 'a good amount,' while 55 percent trust him less or not at all. The poll finds substantial skepticism across party lines, evidence that his role investigating the campaigns of Hillary Clinton and Donald Trump has taken a toll." http://wapo.st/2sDpbfr

-- A new Quinnipiac poll found that 31 percent of American voters say Trump did something illegal in his relationship with Russia, while 29 percent said he did something unethical but not illegal. 32 percent said he did nothing wrong. ***More on climate change and Trump and the media*** http://politi.co/2sEb6OL

BIG BUSINESS -- FORTUNE has released its 63rd edition of the Fortune 500, its annual list of the largest corporations in the U.S. Combined, the companies have a total market value of $19.4 trillion dollars and employ 28.2 million people. Wal-Mart takes the top spot for the fifth year in the row, followed by Berkshire Hathaway, Apple, Exxon Mobil, McKesson, UnitedHealth Group, CVS Health, General Motors, AT&T and Ford. ***The list*** http://for.tn/2s3Xn6W ... ***The cover*** http://bit.ly/2s4eSDX

BIPARTISAN KUMBAYA- "Former VP Joe Biden to headline Mitt Romney summit in Park City," by AP's Steve Peoples: "Just days after launching a new political action committee, former Democratic Vice President Joe Biden will join Republican officials and donors at a weekend retreat hosted by former GOP presidential nominee Mitt Romney. Biden will be interviewed by Romney during a Friday evening event in Park City, at the invitation-only summit, according to a Biden spokesman and participants briefed on the schedule." http://bit.ly/2sCH91E

D.C. MAYOR MURIEL BOWSER SPEAKS -- A big thank you to D.C. Mayor Muriel Bowser for joining us last night at the first Playbook University event at Howard University's IN3 space. Bowser touched on everything from the honoring the Paris climate deal to her message to Trump and Congress to leave D.C. alone. And, the **HOT TOPIC** for many of our readers -- yes, she addressed the D.C. rat problem. ***Videos -- Paris*** http://politi.co/2rB3lLa ... ***Her message to Trump, Congress*** http://politi.co/2sSYJh6 ... ***And on D.C. rats*** http://politi.co/2sDEZia **... *The full event*** http://politi.co/2s4uxTZ

IN THE ROOM WHERE IT HAPPENS -- "A Look Inside the Senate Hearing Room Where James Comey Will Testify Thursday," by NBC4 Washington's Scott MacFarlane and Andrea Swalec http://bit.ly/2sDzT5w

BRAD PARSCALE PROFILE - "Donald Trump's Michael Bay," by BuzzFeed's Henry J. Gomez: "Brad Parscale isn't a mysterious strategist like Steve Bannon. He doesn't live on TV like Kellyanne Conway. He's not even all that into politics. But the digital marketing specialist's loyalty to Donald Trump, his children, and his brand earned Parscale a central role in a winning White House campaign. How far will loyalty lead him?" http://bzfd.it/2qVYktG

TIM MILLER HEADS WEST - "Republican political operatives want to sell the dark

arts of opposition research to tech companies," by Recode's Tony Romm: "The newest startup setting up shop in the Bay Area is Definers Public Affairs, a Washington, D.C.-based outfit that seeks to apply the dark science of political opposition research to the business world. ... To the GOP-led political venture, Silicon Valley is a natural target for their so-called 'oppo' efforts. The tech industry is characteristically hyper-competitive, with boardroom squabbles, takeover attempts, and legal wars over employees and patents and regulations. ... [T]he firm's new Oakland-based operative [is] Tim Miller, who previously served as communications director to GOP presidential contender Jeb Bush." http://bit.ly/2r2DzAG

TODAY'S BEYOND THE BELTWAY -- Cuomo rallies with Pelosi -- AFL-CIO endorses J.B. Pritzker in Illinois gubernatorial race http://politi.co/2s4s0J9

MEDIAWATCH -- "Why Breitbart Fired an Editor for a Tweet," by The Atlantic's Rosie Gray: Katie "McHugh's termination primarily reflects the site's change in leadership. The fact that under [Alex] Marlow, the site has to some extent bowed to public pressure, further underscores Bannon's absence at the helm." http://theatln.tc/2sEcP6G

ON THE HILL -- "Inside the heaving, jostling Capitol media mob: 'We are one tripped senator away' from disaster," by WaPo's Elise Viebeck and Ben Terris: "Once thought to be going the way of the dodo bird or zeppelin repairman, journalists of the Trump era are crowding legislative hallways at such a startling density that the endangered species is starting to seem like ... an invasive one. ... While events like the Comey hearing naturally limit the number of reporters present - only so many people can actually fit into the room - the Capitol itself does not. Anyone with an active press credential can roam the grounds and the building. To a visiting White House reporter, the recent typical day on Capitol Hill might seem like anarchy." http://wapo.st/2sT0uL5

-- @pkcapitol: "So it begins. They're setting up corrals to pen in reporters in Senate basement. We did this to ourselves & deserve this treatment." http://bit.ly/2sTqUwi

TRANSITIONS -- FIRST IN PLAYBOOK -- EMILY HORNE is joining Twitter as its global policy communications director. She is going to be the top spokesperson on topics like data, privacy and advocacy initiatives. She'll be based in D.C. Horne (@emilyjhorne) was the assistant press secretary and director for strategic communications at the National Security Council. She's a State Department alumna, and worked for Gen. John Allen. Emily is a GW alum.

WELCOME TO THE WORLD - Alexa Marrero, director of operations for corporate comms at Boeing and alum of the House Energy and Commerce Committee and House Education and Labor committees, and **Miguel Marrero,** director of technology development for REM-Fit, email friends and colleagues: "José Callin (Cal) Marrero arrived at 10:29 [Tuesday] morning, clocking in at 22 inches and 10 lb. 3 oz. He spent his first day at NorthShore Evanston hospital winning top honors for best hair and entertaining NFL scouts. He is an aviation and tech enthusiast like his father with a type

A, schedule-driven personality like his mother. We are thrilled to welcome this big little man, named for his father and both his grandfathers, to the world." ***Pics*** http://bit.ly/2r1wb8F ... http://bit.ly/2r5aZKb

OUT AND ABOUT -- From Jewish Insider: "American Friends of Lubavitch (Chabad), led by Rabbi Levi Shemtov, held their annual Lamplighter Awards dinner at the Andrew W. Mellon Auditorium in DC. Honorees included House Speaker Paul Ryan, World Bank CEO Kristalina Georgieva, and former DC Mayor Anthony Williams. One notable bipartisan highlight of the evening featured Democratic Whip Steny Hoyer introducing Speaker Ryan. Hoyer thanked Ryan for his service and leadership to the country and noted that both he and the Speaker are 'institutionalists' who respect the traditions and decorum of the Congress. Ryan returned the compliment explaining that 'among both Republicans and Democrats, Steny Hoyer's word is gold.' Israeli Ambassador Ron Dermer also delivered remarks focusing on the change in US policy towards Iran and at the UN."

SPOTTED: UAE Ambassador Yousef al-Otaiba, Veterans Affairs Secretary David Shulkin, Sen. James Lankford (R-Okla.), Reps. Jan Schakowsky (D-Ill.), Debbie Wasserman Schultz (D-FL), Josh Gottheimer (D-NJ), and David Kustoff (R-Tenn.), Rhoda Dermer, Howard Friedman, Dov Zakheim, Nancy Jacobson, Lisa and Charlie Spies, Tevi and Kami Troy, William Daroff, Steve Rabinowitz, Aaron Keyak, Dan Glickman, Bill Knapp, Azerbaijan's Ambassador Elin Suleymanov, Bulgarian Ambassador Tihomir Stoytchev.

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years. Today, we employ more than 18,500 people across the country, covering nearly every state. Samsung Austin Semiconductor (SAS) hosts 6,000+ manufacturing and engineering jobs and has become a $17bn investment - making it one of the largest single FDI's in the U.S. We're also committed to building strong communities through citizenship and support of programs for children's health, STEAM education, veterans and military families. Visit Samsung.com/VisionForTomorrow for more. ******

Senate Panel Advances FERC, Interior, Energy Nominees

Posted June 06, 2017, 12:39 P.M. ET

By Alan Kovski

A Senate committee voted June 6 to advance two nominations for the Federal Energy Regulatory Commission, a step toward restoring the quorum the commission needs to make basic decisions on electric grid regulation, natural gas pipeline projects and more.

The votes of the Senate Energy and Natural Resources Committee for Neil Chatterjee and Robert Powelson to be FERC commissioners were by identical lopsided margins of 20-3, possibly reflecting the commission's relatively unpoliticized nature.

The committee also voted 14-9 to support the nomination of David Bernhardt to be deputy secretary of the Interior Department and 17-6 for Dan Brouillette to be a deputy secretary of energy.

Welcoming the FERC nomination votes, Don Santa, president of the Interstate Natural Gas Association of America, said in a statement, "We estimate that about $14 billion in private capital—ready to be deployed on energy infrastructure projects—is being held on the sidelines while FERC lacks a quorum and cannot act on major projects."

Votes by the full Senate have not yet been scheduled for the nominees.

Cantwell Opposes Bernhardt

Sen. Maria Cantwell (D-Wash.), ranking member of the committee, opposed Bernhardt out of concern for what she called the risk, or at least the appearance, of conflicts of interest because of his work as an attorney for energy, water and mining companies.

He has represented energy companies including Noble Energy Inc., Cobalt International Energy Inc., NRG Energy Inc. and Sempra Energy (parent of San Diego Gas & Electric utility and Southern California Gas Co.), among others. Their work intersects Interior regulation in various ways, such as when Noble Energy or Cobalt seek to produce oil and gas in the Interior-regulated federal offshore.

Cantwell criticized him for having helped sue the Interior Department on behalf of clients, including the Westlands Water District, a large water distribution district that relies on contractual water

supplies controlled by the Bureau of Reclamation, an Interior agency.

Bernhardt has promised to avoid participation in decisions affecting former clients for two years, Cantwell said, but she took the position that the revolving door of government and private-sector employment made the two-year restraint inadequate.

Cantwell also reminded listeners that Bernhardt had been Interior counselor during the administration of President George W. Bush, during which controversies emerged over staff misbehavior and a political appointee tampering with the wording of scientific assessments.

"I know there is no evidence Mr. Bernhardt personally participated in these activities," Cantwell added.

Murkowski Likes Four, Seeks More

Sen. Lisa Murkowski (R-Alaska), chairman of the committee, had brief words of praise for all of the nominees. She and Cantwell were the only senators who spoke at the hearing.

"I believe all four of these nominees are capable, competent, and well-qualified for the roles that they have been selected for," Murkowski said.

She was critical of the slow pace of nominations from the Trump administration, however. "I don't think that's an acceptable pace," she told reporters after the votes.

Chatterjee, a long-time energy staffer for Senate Majority Leader Mitch McConnell (R-Ky.), and Powelson, the president of the National Association of Regulatory Utility Commissioners and a member of the Pennsylvania Public Utility Commission, were nominated for FERC terms expiring in 2021 and 2020, respectively.

Brouillette is senior vice president of the United States Automobile Association, an organization providing financial services to military personnel, veterans, and their families. Before that he was a vice president of Ford Motor Co. He served in the Energy Department in the George W. Bush administration as an assistant secretary of energy for congressional and intergovernmental affairs from 2001 to 2003.

He previously worked in Congress for the House Energy and Commerce Committee and for lobbying firms, including FleishmanHillard Inc. His clients at that firm included Entergy Corp., Allegheny Energy Inc. and Peabody Energy Corp., according to OpenSecrets.org, a project of the Center for Responsive Politics that tracks money in politics.

Paris Climate Deal Needs New Rules and Clarity, Scientists Say

Posted June 06, 2017, 11:33 A.M. ET

By Jonathan Tirone

The Paris climate accord needs to be strengthened through new negotiations and national commitments to transparency, scientists argued in a report.

Uncertainty about the pledges made by almost 200 countries in the landmark climate deal means the world could fail to mitigate runaway global warming, according to the report by six scientists

published June 6 in the journal Nature Communication.

"In many cases the actions described in these pledges are ambiguous or imprecise," wrote Joeri Rojelj, the lead author of the paper titled "Understanding the Origin of Paris Agreement Emission Uncertainties." The scientists urged countries to implement a "robust process that keeps track of where emissions are heading."

While President Donald Trump expressed willingness to negotiate a new version of Paris the agreement, the steps urged in the study are unlikely to gain traction in Washington. Trump derided the agreement's framework of voluntary emission cuts as being unfair to American workers. The scientific study wants the accord strengthened by imposing even more accountability.

To keep temperature rises well below 2 degrees Celsius (3.6 degrees Fahrenheit), the scientists argue that countries need to streamline and remove uncertainties from pledges called "nationally determined contributions."

"Some pledges focus on improving 'emissions intensity,' meaning reducing the emissions per dollar of economic output, but assumptions about socioeconomic growth are often implicit or unknown," said Rojelj, who advises the United Nations and researches at the International Institute for Applies Systems Analysis outside of Vienna.

"Other countries focus on absolute emissions reductions, which are simpler to understand, or propose renewable energy targets, which can be expressed in different ways," he said. "Questions also remain about how much land-use-related climate mitigation will contribute, such as reducing deforestation or preserving forests."

Countries will need to improve their reporting by 2030 or risk having to increase emission reduction targets by factors of four to 25 thereafter, according to the report.

Google, Facebook Join Cities in Challenging Trump on Climate

Posted June 06, 2017, 8:40 A.M. ET

By Joe Ryan

Alphabet Inc.'s Google, Microsoft Corp. and Facebook Inc. are among dozens of companies that pledged their support for policies combating climate change following President Donald Trump's decision to withdraw from the Paris accord.

The "We Are Still In" coalition also features nine states, including California and New York, scores of universities, and leaders of 125 cities from Los Angeles to Chicago, according to a statement released June 5.

The initiative is an attempt to coordinate the widespread backlash to Trump's withdrawal from the landmark environmental agreement. Many of the companies and politicians who signed up have been advocating for months for the U.S. to uphold its climate change commitments. The statement is intended to demonstrate to other nations that U.S. businesses and local governments remain on board, no matter what the president does.

"We remain steadfastly committed to the sustainability, carbon and energy goals that we have set as a company and to the Paris Agreement's ultimate success," Microsoft President Brad Smith said in the statement.

UN Letter

Former New York City Mayor Mike Bloomberg, founder and majority owner of Bloomberg LP, the parent company of Bloomberg BNA, submitted a letter June 5 to UN Secretary General Antonio Guterres, expressing support for the Paris accord on behalf of the group. Bloomberg also plans to work with cities, states and businesses to set a collective emissions-cutting goal to submit to the UN as "America's Pledge" under the Paris accord.

Trump, who has called climate change a "hoax," campaigned on the pledge to exit the 2015 pact, saying it damaged America's economic competitiveness. Last week, he announced his intention to withdraw, saying the deal favors other nations at the expense of American workers.

In response, the governors of New York, California and Washington state announced plans to form a coalition to fight global warming and more have since signed up. Dozens of mayors from cities including Boston, Seattle and Cleveland vowed to do the same.

The Paris accord is broader than any previous climate agreement. It calls for nations to voluntarily reduce carbon dioxide emissions in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above temperatures at the outset of the Industrial Revolution.

California Biodiesel Credits on Hold as Court Orders New Analysis

Posted June 06, 2017, 7:01 A.M. ET

By Carolyn Whetzel

Biodiesel producers are going to have to wait a little longer to get more California credits under the state's low-carbon fuel standard.

That's because California's analysis of biodiesel-related emissions associated with the fuel standard still falls short, leaving the state in violation of its environmental review law, a state appellate court ruled, ordering a redo of the analysis—again.

But, companies can still get federal credits for selling their fuel in California, an environmental attorney said.

The decision comes in a lawsuit challenging the California Air Resources Board's 2015 effort to correct the same flaw the state's Fifth Appellate District found in 2013.

CARB's re-adoption and revisions to the low-carbon fuel standard "did not cure" the California Environmental Quality Act violation it was ordered to correct the first time, the court said. The California Superior Court shouldn't have "discharged the writ of mandate," the May 30 majority opinion said.

The May 30 ruling means the biodiesel portion of the low-carbon fuel standard is blocked until CARB does the nitrogen oxide analysis again, David Pettit, a Natural Resources Defense Council attorney and intervenor in the case, told Bloomberg BNA June 5 (POET LLC v. CARB, Cal. Ct. App., F073340, 5/30/17).

The court wants CARB to look at the nitrogen oxide emissions since 2009, and identify how much of the increase in emissions is due to the low-carbon fuel standard and then attributable to the federal biodiesel incentives, Pettit said.

"That means California credits for biodiesel are on ice until then," Pettit said.

POET LLC, a South Dakota corn ethanol producer, filed the lawsuits challenging the initial fuel standard and the 2015 replacement regulation.

"This decision will require regulators to sit down, take a look at the science and finally get this right so there is a full range of renewable options available to California drivers who care deeply about their health and their climate," the company said in a prepared statement.

CARB didn't respond to Bloomberg BNA's request for comment on the court order.

NuScale CEO: Energy Department Must Keep Funding Small Reactor

Posted June 06, 2017, 11:32 A.M. ET

By Rebecca Kern

The Energy Department must keep its public-private funding commitment to NuScale Power LLC, which is developing the country's first small modular nuclear reactor, the company's CEO said June 6.

"We need our government on our side to finish what we started in 2013 with the SMR licensing and technical support program award," NuScale CEO John Hopkins said at the U.S. Nuclear Infrastructure Council's Global Nuclear Energy Markets summit in Washington.

But the Trump administration's fiscal year 2018 budget proposal doesn't include any Energy Department funding to research small modular reactors or advanced nuclear reactors.

NuScale's small light-water nuclear technology is under review at the Nuclear Regulatory Commission. The company received a $217 million funding award from the Energy Department in 2013, which will last until fiscal year 2017. Fluor Corp., which bought NuScale in 2011, has invested approximately $400 million to date in the technology.

"So I need to figure out how to get through 2018," Hopkins said. "This is a public-private partnership. We've got to keep things moving forward."

"As long as the business model continues to stay, I just met with the Fluor board, and they're willing to invest," but we need the government to stay behind it as well, he said.

NuScale submitted its design certification application to the NRC in January, and expects an approximately 3.5-year review. The company aims for its first reactor to licensed and operational in

2025-2026 at the Idaho National Lab, Hopkins said.

NuScale's small, 50-megawatt reactors can be scaled up to 12 reactors generating up to 600 megawatts of electricity. The company says they will be quicker to build and potentially less costly than traditional large-scale nuclear reactors now on the market.

Hopkins said Energy Secretary Rick Perry told him in a recent meeting that he supported the technology.

David Vitter Tackles Energy Issues at New Orleans Law Firm

Posted June 06, 2017, 11:30 A.M. ET

By Rachel Leven

Former Sen. David Vitter (R-La.) has joined Butler Snow LLP to work on energy issues, the law firm announced June 6.

Vitter, who served as ranking member of the Senate Environment and Public Works Committee from 2013 to 2015, will practice law in the firm's New Orleans office. He will also keep his job as co-chairman of Mercury Public Affairs, where he is registered to lobby the Trump administration on behalf of the American Chemistry Council and others.

"David has a long and successful track record as a legislator and political leader," Donald Clark, Jr., chairman of Butler Snow, said in a statement. "His significant experience, especially in helping lead major public policy and economic development initiatives, makes him a really valuable addition to Butler Snow in Louisiana."

Vitter left the Senate following a failed run to be Louisiana's governor. He served in the House from 1999 to 2005 and Senate from 2005 to 2017, and is known for his leading role in helping pass legislation including a landmark chemical law—the Frank R. Lautenberg Chemical Safety for the 21st Century Act (Pub. L. No. 114-182)—and for holding up then-President Barack Obama's nominee to be EPA administrator, Gina McCarthy, for more than 100 days due to transparency concerns.

Historic California Gas Leak Spurs Boom in Big Batteries

Posted June 06, 2017, 9:13 A.M. ET

By Joe Ryan

Installations of large-scale energy-storage systems surged to record levels during the first quarter as power companies and state officials pushed to better incorporate electricity from wind and solar farms.

U.S. homes and businesses—mostly utilities—installed storage systems with 234 megawatt-hours of capacity during January, February and March—more than 50 times the amount installed a year earlier, according to a study released Tuesday by GTM Research and the Energy Storage Association.

The lion share of installations were in Arizona, Hawaii and California. A key driver in the Golden

State was the continued closure of the Aliso Canyon gas field—site of the biggest leak in U.S. history—which prompted Sempra Energy's San Diego Gas & Electric Co. and Edison International's Southern California Edison to installed powerful batteries to make up for anticipated electricity shortfalls. Despite the robust start, storage installations appear to have already their high-water mark for the year, Ravi Manghani, GTM Research's director of energy storage, said in a statement.

"The industry shouldn't get too comfortable," Manghani said. "There aren't that many 10+ megawatt-hour projects in the 2017 pipeline, indicating that the first quarter may be the largest quarter this year."

Leading States

California, which has a goal to install 1.3 gigawatts worth of batteries by 2020, remains the national leader in energy storage, with 238 megawatts installed. It's followed by Arizona, Hawaii, Massachusetts, New York and Texas.

Nearly all the systems installed in the last year used lithium ion batteries, according to GTM. The study didn't include pumped-storage hydroelectricity systems, which draw water to hilltop reservoirs and then release it later to power electric generators.

U.K. Election Results, Emissions Plan Are Up in the Air

Posted June 06, 2017, 02:55 P.M. ET

By Ali Qassim

The only thing certain about the U.K.'s general election this week is nobody's sure what's going to happen.

Will the June 8 election put a party in power that will nimbly plot the nation's path on major issues, including climate change, or will voters once again surprise London oddsmakers and go a different route?

It wasn't so long ago that things were on course. Less than a week after the U.K. shocked the world and voted to leave the European Union last June, the government approved the Fifth Carbon Budget, legally restricting the total amount of greenhouse gases the country can emit.

But Brexit also sparked the resignation of Prime Minister David Cameron, leaving in charge a new government headed by Theresa May that came under fire for disbanding the Department of Energy and Climate Change, appointing an energy minister who questioned the reality of climate change, and failing to decide on a plan to cap the country's escalating emissions.

The new Conservative government's initial promise to produce a nationwide plan to cut greenhouse gas emissions by the end of 2016 was pushed to March 2017, then April. May took everyone by surprise that month and called a snap general election—three years ahead of schedule.

The government that's formed after the U.K.'s June 8 snap election will be charged with publishing a long-awaited plan to meet its long-term emissions targets.

The plan must not only fulfill the U.K.'s commitment to the Paris Agreement on climate change but also include a framework to attract investors for renewable energy projects for at least the next decade, representatives from business, the low-carbon sector and environmental groups told Bloomberg BNA.

Last Chance?

The U.K.'s previous failure to produce an emissions reduction plan, now dubbed the Clean Growth Plan (CGP), has "potentially significant legal consequences," Frank Gordon, policy manager at the Renewable Energy Association, told Bloomberg BNA.

Under the 2008 Climate Change Act, the government must pass carbon budgets every five years that set out plans on how it intends to cut emissions by 57 percent by 2032 compared to 1990 levels.

The CGP "may realistically be our last good chance to get back on track, otherwise there is a serious risk we will miss our future emissions targets," Jonathan Church, a lawyer at activist organization ClientEarth, told Bloomberg BNA.

The U.K. has achieved big emissions reductions, but they're due in some part to the 2008 recession and downturn in manufacturing, Church said.

And that bump won't be enough as 2016 projections show that without the full push of the government behind it, the U.K. could miss its Fourth Carbon Budget for 2023–2027 by 146 metric tonnes of carbon dioxide-equivalent and the Fifth Carbon Budget for 2028–2032 by 247 metric tonnes, he said.

This is raising concern among business and environmental organizations in the U.K.

Call for Clarity

Nick Molho, executive director of the Aldersgate Group, a coalition of businesses and environmentalists, said, "Given that there is currently no policy clarity on energy efficiency and very little clarity on policy support for renewable energy outside of offshore wind, it would be concerning if the plan did not come out by the end of 2017."

The government is not allowed on-the-record statements during an election campaign under a practice known as purdah. Just before campaigning was launched, Nick Hurd, minister of state for climate change and industry, said before a Department of Business, Energy and Industrial Strategy committee that work to deliver a Clean Growth Plan was "well-advanced."

Plan Must Attract Investors

The linchpin to a Clean Growth Plan is ensuring that policies are detailed and long-term enough to attract the higher levels of affordable private-sector investment the U.K. needs in the next 15 years, according to Molho.

"It's a very complex task as the plan needs to be sufficiently detailed to attract affordable private-sector investment in the energy efficiency, low-carbon energy and low-carbon transport infrastructure the U.K. needs to meet its Fifth Carbon Budget," he said.

Michelle Hubert, head of infrastructure and energy at the Confederation of British Industry, agreed. Companies need clarity on what 2030 as it's only an investment cycle or two away, she told Bloomberg BNA.

Businesses also "want to see a fresh approach to the emissions reduction plan, to deliver policies fit for the future. In an increasingly interconnected world—where we might see homes and businesses generate, store, and use their energy in new innovative ways—the economy should be more joined up, with cross-cutting technologies being put to greater use," she said.

The government also should commit to promoting the Enterprise Investment Scheme, which offers tax relief to investors that buy shares in smaller higher-risk trading companies for renewable power projects, according to the Renewable Energy Association's Gordon.

"It can be removed if desired, once successor funding schemes are introduced but would provide certainty and allow for continuity in planning project pipelines," he said.

Power and Heat

There is a "strong consensus" among groups on how a CGP should work for the power sector, said Dustin Benton, acting deputy director of the think tank Green Alliance.

"The good news is this will mostly be cheaper than fossil fuel alternatives. The challenge is that government needs to support zero carbon flexibility to enable this to work, including via interconnection to the U.K.'s EU neighbors," he said.

There's also some disagreement about the picture after 2025, with policy still assuming nuclear will be cheap and available by then, but complications related to, for instance, U.K.'s probable exit from the European Atomic Energy Community "raises serious questions about this assumption."

Speaking for the renewables industry, Gordon said the next government should lay out a clear plan in 2018 to reduce carbon emissions from heating and cooling by 40 percent by 2030 and achieve the U.K.'s 2020 renewable energy target, which includes 12 percent of heat produced from low-carbon sources.

If the new government starts focusing on the Clean Growth Plan soon after the election, there still would be "time to do large-scale experiments on the three core technology families: district heating, heat pumps, and hydrogen heat. We think it should do low-carbon heat trials involving tens of thousands of consumers before 2020, to figure out what works and to provide an incentive for cost reduction," Benton said.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

June 15, 2017

Latest News

EPA Advances TSCA Guide For Industry-Led Chemical Risk Evaluations

EPA has sent for White House review a guidance document for companies that want to conduct their own chemical risk evaluations of chemicals for EPA to consider in addition to or rather than the agency performing the reviews under its new Toxic Substances Control Act (TSCA) authority, a further step in the Trump EPA implementing the revised law.

Divisions Among Senators, Biofuels Groups Create Uncertainty Over E15 Bill

Divisions among Republican and Democratic senators, as well as between advanced biofuels groups, are creating uncertainty over the fate of Senate legislation that would lift summertime restrictions on the sale of 15-percent ethanol (E15), with lawmakers downplaying prospects for the bill after a Senate hearing that highlighted the splits.

Groups Spar Over E15 Fuel As EPA, Congress Consider Lifting Restriction

Ethanol industry groups and their oil sector opponents are clashing over a biofuels industry push to lift summertime restrictions on sales of 15 percent ethanol (E15) fuel, as EPA considers the legality of the move and the Senate's Environment & Public Works Committee (EPW) debated the question at a June 14 hearing.

Pruitt Faces Questions Over Use Of Special SDWA Power To Speed Hiring

EPA Administrator Scott Pruitt has been seeking to speed his hiring of senior personnel using a special statutory provision that allows a limited number of “administratively determined” (AD) hires under expedited procedures, but the effort is facing intensifying concern because the authority appears to allow these hires to be temporarily exempt from the Trump administration's ethics requirements.

Scope Of 'Use' In TSCA Revision Seen Driving New Industry Data-Sharing

If EPA opts to narrowly consider chemicals' "uses" when it reviews their safety under the reformed Toxic Substances Control Act (TSCA), it could prompt manufacturers to enter data-sharing deals on how their products are used and disposed of, and even

limit some uses, in order to ensure they stay within the assessments' scope, an industry attorney says.

EPA Urges District Court To Uphold Novel Anacostia River Trash TMDL

EPA is defending its approval of a novel total maximum daily load (TMDL) trash cleanup plan for the Anacostia River that flows through Maryland and the District of Columbia, urging a federal district court to uphold the TMDL because the approval is based on "a reasoned explanation with solid support in the administrative record."

Emissions Control Makers Ready Voluntary Aftermarket Catalyst Program

SARATOGA SPRINGS, NY -- Makers of aftermarket catalytic converters that cut vehicle emissions are preparing a voluntary industry program to improve the catalysts' performance in reducing emissions in the event that the Ozone Transport Commission (OTC) fails in its push for EPA to issue stricter federal standards for catalysts.

Subject: BREAKING NEWS: Scalise readmitted to hospital

House Majority Whip Steve Scalise, who was severely injured in a shooting last month at a suburban Washington baseball field, has been readmitted to intensive care because of concerns related to infection, according to a statement late Wednesday from MedStar Washington Hospital Center.

"Congressman Steve Scalise has been readmitted to the Intensive Care Unit at MedStar Washington Hospital Center due to new concerns for infection," read the statement, released by the Louisiana Republican's office. "His condition is listed as serious. We will provide another update tomorrow, July 6."

Scalise was critically wounded in the June 14 shooting along with two police officers, a congressional aide and a lobbyist during a GOP practice in advance of the annual congressional baseball game. The third-ranking House Republican had been transferred out of the ICU on June 22, and MedStar said at the time that Scalise was in "fair condition."

Subject: Playbook Power Briefing, presented by Better Medicare Alliance: TRUMP and MACRON meet in PARIS -- THE NEW SENATE HEALTH CARE BILL -- DON JR. invited to testify before Senate -- CBO says Trump budget ask doesn't balance out

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Better Medicare Alliance

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

PRESIDENT DONALD TRUMP and **FRENCH PRESIDENT EMMANUEL MACRON** gave joint statements after a series of meetings and photo opportunities. Macron said Trump's visit was "both a symbol and very important that the president of the United States could be with us tomorrow" for Bastille Day and thanked Trump for visiting.

-- Macron, giving his statement in French, said the pair talked about implementing "free and fair trade" and pledged to tackle international security challenges, including "fighting against propaganda" online and continuing "the fight against terrorism." Macron briefly addressed climate change, saying "I think it is important that we can continue to talk about it" and that he remains committed to the Paris accords.

TRUMP thanked Macron and commented that the buildings he saw on his tour included "some of the most incredible buildings anywhere in the world." He said the relationship between the two nations are "very good" and talked about the war on terror. He praised Macron for his "chant" of "less bureaucracy" and said "we can use it too." Trump said, "The friendship between our two nations -- and ourselves, I might add -- is unbreakable. Our occasional disagreements are nothing compared to the immortal bonds of culture, destiny, and liberty that unite us."

-- @maggieNYT: "'France helped us secure our independence, a lot of people forget,' Trump says."

IN RESPONSE to a question from a French journalist, Trump said "something could happen with respect to the Paris accord." He also reiterated his past statement that "if it doesn't, that'll be okay too."

-- TRUMP, responding to a question on Russia, said that his "son is a wonderful young man" and that "most people would have taken that meeting. It's called opposition research. ... That's very standard in politics."

-- OPPOSITION RESEARCH from someone who is an agent of another government is

not standard, from people we've spoken to.

TRUMP also praised Macron and Chinese President Xi Jinping in response to other questions.

TRUMP AND MACRON also earlier held bilateral meetings and had a pool spray in Macron's office. More on the office spray, from NYT's Maggie Haberman, one of the day's poolers: "POTUS asked your pooler why she didn't use what he has said last night [on Air Force One]. Your pooler reminded him last night was off the record. POTUS asked if I had heard him say it could be on-record; your pooler replied truthfully no (co-poolers also were not under impression it was on-record, since Sarah Sanders had declared it off record).

"Macron and Trump posed for another picture, and shook hands again (Gary Cohn reminded them to shake hands before they sat down). ... The grip by both was less feral than the initial handshake weeks ago. POTUS unclasped hands first."

BANNON'S GUY? -- YAHOO'S JON WARD and **OLIVER KNOX:** "[T]he admiration for Macron inside the White House goes beyond symbolism. [Steve] Bannon told Yahoo News that while Macron ran as a 'globalist,' he has made a number of nationalist gestures, all in the name of positioning France as the preeminent nation in Europe.

"'Populist nationalist is the right side of history,' Bannon said in a phone interview, and asserted that the only question is whether the leftist version of nationalism championed by Jeremy Corbyn in Britain and Sen. Bernie Sanders in the U.S. wins the day - or something closer to Trump and Bannon's version. Bannon said Macron, a centrist, is closer to Trump's philosophy than he is to the progressive version because he does not want the state to run the economy." https://yhoo.it/2vgqiCl

THE NEW HEALTH CARE BILL -- "Senate Republicans release new Obamacare repeal bill," by Burgess Everett, Jen Haberkorn and Sarah Karlin-Smith: "Senate Republicans released a new draft of their bill to repeal Obamacare Thursday, which tentatively includes a controversial amendment from Ted Cruz. The change is aimed at building enough GOP support to open debate on the bill next week, but it's not clear the votes will be there. Some senators aren't even sure the bill will get a vote next week given opposition from a cross-section of Republicans. 'I don't even know that it's going to get to a vote,' said GOP Sen. John McCain of Arizona.

"Senate Majority Leader Mitch McConnell unveiled the plan on Thursday morning at a closed-door, GOP members-only meeting before posting the text online. Unlike their previous bill, which faced stiff resistance across the conference, it would maintain some Obamacare taxes on the wealthy, provide new financial support to help low-income people purchase health insurance, allow people to pay for insurance with pre-tax money and spend billions more to fight opioid addiction. The amendment from Cruz (R-Texas) could be altered or removed later, sources said. The amendment would allow the sale of cheap, deregulated insurance plans as long as Obamacare-compliant plans are still

sold. ...

"Some Republican senators now believe it will be a victory to even open debate on the legislation passed by the House, one senator familiar with the negotiations said. If that procedural vote is successful, a freewheeling amendment process will begin. At some point, McConnell will introduce a substitute that will represent the Senate's draft bill. It may be different than what is introduced on Thursday and could be subject to amendment on the Senate floor next week. The bill, in other words, will be a work-in-progress until the final vote." http://politi.co/2ungFW2 ... ***The full 172 pages*** http://politi.co/2un4vwj

-- **@burgessev**: Cruz: "'if this is the bill, I will support it'"

-- **@arogDC:** "Portman is a no on motion to proceed on revised Senate health care bill, says he's in the same position as he's been and reviewing language"

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

WHAT YOU NEED TO KNOW -- "Revised Senate repeal bill keeps Obamacare taxes, adds funding for poor and opioid epidemic," by Paul Demko: "Senate Republicans' latest health bill keeps some Obamacare taxes on the wealthy and directs more than $100 billion in new spending to help low-income Americans buy coverage and combat the opioid epidemic.
A revised Obamacare repeal plan also includes a proposal, designed to mollify conservatives, that would allow insurers that sell plans meeting Obamacare's coverage requirements to also sell skimpier, less expensive plans that don't comply with the law.

"The new proposal seeks to thread the needle between conservatives and moderates after the Senate's original repeal package sparked opposition from all corners of the GOP caucus. Republicans hope to vote on the new bill next week.It would keep Obamacare's net investment income tax and an additional Medicare Health Insurance Tax, and it would no longer scrap a tax break for high-earning health insurance executives.

"The latest draft, however, doesn't make any significant changes to the Medicaid overhaul proposed in the original plan, which would cut nearly $800 billion from the entitlement by rolling back Obamacare's expansion of the program and capping payments for each enrollee." http://politi.co/2un4RmK

GOOD POINT BY JMART, that we wanted to echo and amplify**:** "Landmark healthcare vote days away, zero public salesmanship or pressure by Trump in any state (and VP is in Ky, home of a sure-fire 'no')"

WITH THE HEALTH CARE VOTE JUST A FEW DAYS AWAY, President Donald Trump told Pat Robertson he'll be mad if the Senate doesn't pass the bill. But we aren't seeing an all-out push from the White House to get the legislation passed. VP Mike Pence has been up on the Hill -- but he always is. Reince Priebus is in Paris. Anyone hear from Tom Price? Jared and Ivanka are en route to Sun Valley.

-- "Graham, Cassidy unveil details of alternative health care plan," by CNN's Dana Bash: "With the prospects for passing the current Senate Republican health care bill still in jeopardy, Sen. Lindsey Graham, R-South Carolina, and Sen. Bill Cassidy, R-Louisiana, are working with their GOP colleagues on an alternative approach to replacing Obamacare: keeping much of the federal taxes in place and sending that money to the states to control. Graham and Cassidy, who have been working closely with former Sen. Rick Santorum, argue that one of the main reasons that Republicans are having such a hard time agreeing is because they are working from the Obamacare template -- particularly federal control of health insurance.

"Graham told CNN that he believes their new idea would address the problems found in the original bill. First, it would maintain taxes on wealthy Americans put in place by Obamacare, taxes intended to help pay for insurance subsidies. That revenue, which they estimate to be about $500 billion, would be sent to the states ... The Obamacare tax levied on medical device makers would be repealed, as would the financial penalty for individuals who don't comply with the mandate to have insurance and for employers to provide affordable coverage. Graham and Santorum say that would amount to about $220 billion in revenue cuts. Graham and Santorum argue those tax penalties not only funded the Affordable Care Act mandate conservatives despise, but they also ended up hitting working people." http://cnn.it/2uVxd4c

BUT BUT BUT -- "Despite doomsday rhetoric, Obamacare markets are stabilizing," by Paul Demko: "Reports of [Obamacare's] demise appear to be premature. For the first time ever this year, insurers selling plans in Obamacare's markets appear to be on a path toward profitability. And despite the drumbeat of headlines about fleeing insurers, only about 25,000 Obamacare customers live in communities facing the prospect of having no insurer next year. Insurers in the Obamacare marketplaces spent 75 percent of premiums on medical claims in this year's first quarter, an indication the market is stabilizing and insurers are regaining profitability, according to a Kaiser Family Foundation study released this week. By comparison, in the prior two years, insurers spent more than 85 percent of premiums on medical costs during the same period, which translated into huge losses. 'We're not seeing any evidence of a death spiral or a market collapse,' said Cynthia Cox, Kaiser's associate director of health reform and private insurance. 'Rather, what it looks like is insurers are on track to have their best year since the [Affordable Care Act] began.'" http://politi.co/2vgA47m

CBO VS. WHITE HOUSE, CONTINUED -- "Trump budget request doesn't balance, CBO says," by AP's Andy Taylor: "Thursday's [CBO] report says that Trump's budget, if

followed to the letter, would result in a $720 billion deficit at the end of 10 years instead of the slight surplus promised. CBO said Trump's budget would reduce the deficit by a total of $3.3 trillion over 10 years instead of the $5.6 trillion deficit cut promised by the White House. The nonpartisan scorekeeper estimated that deficits in each of the coming 10 years will exceed the $585 billion in red ink posted last year." http://bit.ly/2umXVpu

TWEET DU JOUR -- @VP: "Back at Capitol w/ @SpeakerRyan & @cathymcmorris & said hello to visitors. @POTUS & I are working for a stronger US for all Americans." ***Pic*** http://bit.ly/2tjr2VO

ON RUSSIA -- "Pence did not meet with Russians during campaign, spokesman says," by Matt Nussbaum http://politi.co/2umQZJ1

THE DOUGH -- TEAM RYAN the speaker's joint fundraising account, raised $10.5 million in the second quarter, including $494,400 from Robert and Diana Mercer. *Other big donors:* Nike's Phil Knight ($100,000), Sam Zell ($100,000), Jimmy Haslam ($75,000), Daniel Loeb ($50,000), Sheldon and Miriam Adelson ($67,800) ... **PAUL RYAN**'s campaign committee raised $3.4 million in the second quarter of 2017, per an FEC report. He has $11 million on hand ... **THE RYAN MCCARTHY VICTORY** account -- a joint-fundraising account -- pulled in $385,100. Sixteen of the 20 donations were from Goldman Sachs employees. Seven of the checks were for $44,300.

BEYOND THE BELTWAY -- "Illinois braces for most expensive election in U.S. history," by Natasha Korecki and Alex Isenstadt: "The Illinois governor's race is on pace to be the most expensive statewide election in U.S. history, a spending bonanza expected to cost more than a quarter-billion dollars next year. Some Illinois and Washington party officials think the contest might run well in excess of $300 million, blowing away the current record-holder for statewide office - the $280 million California governor's race between former eBay executive Meg Whitman and Jerry Brown in 2010. Consider this: The various campaigns on both sides have already raised upward of $90 million - and the general election is still 16 months away." http://politi.co/2tiQz1u

-- BETO O'ROURKE's Texas senatorial campaign raised $2.1 million in the second quarter with over 46,000 individual donations (average contribution: $44) and 81 percent of the money coming from within Texas. ***Video of Beto*** http://bit.ly/2udvKc5

-- JASON KANDER's group grows: Voting rights group iVote, founded by Ellen Kurz and former Obama field director Jeremy Bird, will now be a "special project" of Let America Vote, started by former Missouri Sec. of State and U.S. Senate candidate Jason Kander. iVote says it plans to use its IE to focus on 2018 secretary of state races in Iowa, Michigan, Nevada, New Mexico and Ohio and continue its push for automatic voter registration in states like Nevada. http://politi.co/2sUmW79

SUNDAY SO FAR -- NBC'S "MEET THE PRESS": Senate Majority Whip John Cornyn (R-Texas) will be on NBC's "Meet the Press" this Sunday.

ABOUT DON JR. -- MOLLY BALL in The Atlantic **-- "The Troublemaker":** "Many years ago, when his eldest son was still a boy, Donald Trump was interviewed by Barbara Walters, along with his family. Which child, she asked the real-estate mogul, did he consider the troublemaker in the family? Trump didn't hesitate for a moment. 'Don,' he shot back, according to the story Don himself-Donald Trump Jr., now a 39-year-old businessman-loves to tell. Don Jr. told me the story with a grin when I interviewed him for a profile last year. 'I was the wild one of the three,' he said of his siblings. 'I always made good grades and did well, but I had a lot of fun.'

"Brash, strong-willed, risk-taking: These qualities made Don Jr. the most visible of the Trump children during the campaign. But this week's revelations-the June 2016 email exchange, published Tuesday, in which Don, presented with potential campaign assistance from a supportive Russian government, replied, 'I love it'-cast those same qualities in a different light. Once again, Don Jr. is his father's troublemaker, but this time the trouble is much more than fun and games. On Wednesday, I texted Don and asked how he was doing. 'Fantastic,' he wrote back-followed by the 'laughing crying' emoji. He declined to comment further." http://theatln.tc/2vgSYuW

-- "Donald Trump Jr. invited to testify before Congress as early as next week," by Austin Wright and John Bresnahan: "President Donald Trump's eldest son has been invited to testify as early as next week before the Senate Judiciary Committee amid a growing scandal over a meeting he attended last year with a Russian lawyer. Senate Judiciary Chairman Chuck Grassley told reporters Thursday he was sending Donald Trump Jr. a letter asking him to testify - and that he was willing to subpoena him if necessary." http://politi.co/2uncrxB

-- "How Donald Trump Jr. Got Stuck In His Father's Shadow," by Trump biographer Gwenda Blair in POLITICO Magazine http://politi.co/2vgB8bk

HAPPENING TONIGHT -- Former Presidents George W. Bush and Bill Clinton will participate in a conversation on leadership that's moderated by David Rubenstein at the George W. Bush Presidential Center. ***Livestream at 6 p.m.*** http://bit.ly/2unbVQj

REMEMBER THIS? -- "White House opioid commission to miss deadline for second time," by CBS News' Jacqueline Alemany: "President Trump's commission to fight the opioid epidemic will miss a deadline to file an interim report on the crisis for a second time, according to a notice set to be released Friday. ... The executive order set a deadline of 90 days, or June 27, for the commission to file an interim report outlining a federal strategy to combat the epidemic. The commission failed to issue the report before the initial deadline, announcing instead it would issue its interim assessment during a conference call on July 17. According to a notice scheduled to appear in the Federal Register on Friday, the commission is rescheduling the July 17 call until 31, missing the extended deadline." http://cbsn.ws/2un9xsl

NOBEL PEACE WINNER LIU XIAOBO DEAD AT 61 -- NYT's Chris Buckley: "Liu Xiaobo, the renegade Chinese intellectual who kept vigil on Tiananmen Square in 1989

to protect protesters from encroaching soldiers, promoted a pro-democracy charter that brought him an 11-year prison sentence and was awarded the Nobel Peace Prize of 2010 while locked away, died on Thursday. He was 61. ... The Chinese government revealed he had liver cancer in late June only after it was virtually beyond treatment. Officially, Mr. Liu gained medical parole. But even as he faced death, he was kept silenced and under guard in a hospital, still a captive of the authoritarian controls that he had fought for decades." http://nyti.ms/2vgr5DI

-- Katie Stallard (@skystallard): "Shenyang judicial website confirms Liu Xiaobo has died. The last Nobel Peace Prize winner to die in custody was in Nazi Germany in 1938."

COMING ATTRACTIONS -- @jacobkornbluh of Jewish Insider: "NEW in #KafeKnesset: @jdgreenblatt45 says in meetings that U.S. plan & goal is to renew peace process 'in the fall'" http://bit.ly/2uea9jX

REMEMBER THE DRESS CODE KERFUFFLE? -- @AlexNBCNews: "Wow... Speaker Ryan announces that his office is working with SAA office to modernize dress code rules in Speaker's Lobby" ... **@NancyPelosi:** "Glad to see @SpeakerRyan is updating the dress code for the House Floor. These unwritten rules are in desperate need of updates." ... ***Story from Rachael Bade*** http://politi.co/2t7KrxO

DESSERT -- "Here Are Your 2017 Emmy Nominations," from Vulture. ***Westworld and SNL are tied with 22 nominations each*** http://bit.ly/2umZGTB

MEDIAWATCH -- CBS NEWS announced a new partnership with the **BBC** that "allows both organizations to share video, editorial content, and additional newsgathering resources in New York, London, Washington and around the world. The relationship between CBS News and BBC News will also allow for efficient planning of newsgathering resources to increase the content of each broadcaster's coverage of world events." ***The release*** http://cbsn.ws/2vgapf4

-- Dan Oshinsky, the director of newsletters at BuzzFeed, is leaving to join The New Yorker as their director of newsletters next month, a newly created position.

OUT AND ABOUT -- SPOTTED at Third Way's annual summer party at Long View Gallery last night, which featured songs from DJ Soul Call Paul of Showtime fame: Sen. Joe Manchin (D-W.Va.), Reps. Brad Schneider (D-Ill.), Ruben Gallego (D-Ariz.), Tom Suozzi (D-N.Y.), Josh Gottheimer (D-N.J.), Hakeem Jeffries (D-N.Y.), Stephanie Murphy (D-Fla.) and Nanette Barragan (D-Calif.), former Sen. Blanche Lincoln (D-Ark..), Ty Matsdorf, Elizabeth Falcone, Rachel Laser, Leah Chandler, Matt Bennett, and Jim

Kessler.

-- Nobuko Sasae, spouse of Japanese Ambassador, who founded the Nobuko Forum to celebrate when women liberate their talents. strength and intellect held an event at the Japanese ambassador's residence last night. **SPOTTED:** Kate Goodall, Dr. Sachiko Kuno, Capricia Marshall, Coach Kathy Kemper, Gouri Mirpuri, Susan Blumenthal, Jane Cafritz, Tina Tchen, Rosemarie Pauli, Wendy Teramoto, Tracy Bernstein and Emily Lovell, Ambassador Julia Chang Bloch, Eric Branstad, Irene Hirano Inouye, Emily Heil and Annie Totah.

--SPOTTED last night at a screening on the Hill hosted by Rep. Derek Kilmer (D-Wash.) of the new Netflix film "Chasing Coral" (***trailer:*** http://bit.ly/2vh987k) - the documentary about the huge die-off of coral reefs is made by the same director who did "Chasing Ice": Reps. Suzanne Bonamici (D-Ore.), John Delaney (D-Md.), Beto O'Rourke (D-Texas), Kathleen Rice (D-N.Y.), Darren Soto (D-Fla.) and Donald Norcross (D-N.J.)

-- Global Policy Link hosted a reception for Joel Backaler, author of "China Goes West: Everything You Need to Know About Chinese Companies Going Global" (***$33.82 on Amazon*** http://amzn.to/2vgjPaj), at Woodward Table last night. **SPOTTED:** Jamian Ronca Spadavecchia, Marc Ross, Joshua Berlin, Bill Black, Steve Foerster, Ellen Huber, Kimberly Kowal, EJ Thomas and Allen Wolff.

WELCOME TO THE WORLD - Phil Mattingly, CNN congressional correspondent and a Bloomberg alum, and **Chelsea Mattingly,** senior business development manager at Bloomberg, welcomed Carter James Mattingly. ***Pic*** http://politi.co/2vgUxsy ... ***Carter meeting his big brother T.J.*** http://bit.ly/2un3zli ... ***Instapic of the whole family*** http://bit.ly/2udq2qw

WEEKEND WEDDING -- Internet civil-liberties lawyer **Mike Godwin** married hotel leasing manager **Sienghom "Jessy" Ches.** Godwin is a senior fellow at the R Street Institute who was the first staff lawyer for the Electronic Frontier Foundation. Pool report: "Godwin flew halfway around the world in 2015 for Freedom House (and later for R Street Institute) to help Cambodian activists develop an 'internet Bill of Rights' that could be used to frame the country's digital agenda. ... Ches, then working the front desk at Phnom Penh's Sunway hotel near the U.S. Embassy, helped Godwin make color copies in the hotel's business center, and the two struck up a conversation that led to many Facebook messages and emails. And, eventually, to Ches's applying for a visa to come to the United States." ***Pic*** http://politi.co/2uglFcT

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

Subject: BREAKING NEWS: Trump publicly commits to NATO mutual-defense provision

Weeks after omitting any mention of NATO's collective defense provisions during a speech at the treaty organization's headquarters, President Donald Trump on Friday explicitly recommitted the U.S. to its Article 5 obligations.

"Well, I'm committing the United States, and have committed, but I'm committing the United States to Article 5," the president said in response to a question from a Romanian reporter. "Yes, absolutely I'd be committed to Article 5."

Trump been critical of NATO since his presidential campaign, when he labeled the treaty "obsolete" and openly questioned whether the U.S. would make good on the treaty's communal defense obligations for nations who have not spent enough on their own militaries. As president, he has railed against NATO members who do not meet the agreed-upon 2 percent of their gross domestic product on defense and has claimed credit for increasing military spending among member states.

"Certainly we are there to protect and that's one of the reasons that I want people to make sure we have a very, very strong force, by paying the kind of money necessary to have that force," Trump said.

Summaries

AIR
California SIP/Bay Area AQMD Emission Reduction Credit Banking
AIR

Proposed rule of the EPA would conditionally approve a revision to the Bay Area Air Quality Management District (AQMD) portion of the California SIP. The revision concerns the issuance and banking of emission reduction credits for use in the review and permitting of major sources and major modifications. The EPA determined that the Bay Area AQMD rule is deficient in three respects but that conditional approval of the revision would not interfere with the continued attainment of the NAAQS in the area. The approval is conditioned on the district submitting the required measures by Nov. 1, 2018. Comments are due Oct. 16, 2017. Contact: Laura Yannayon; EPA Region 9; 415-972-3534; yannayon.laura@epa.gov. Citations: 40 CFR 52.220, 52.232

Regulatory Update

AIR
California SIP/South Coast AQMD
AIR

Final rule of the EPA approves revisions to the South Coast Air Quality Management District portion of the California SIP regarding nitrogen oxide (NOx) and sulfur oxide (SOx) emissions from facilities that emit four or more tons per year of NOx or SOx. The rule approves revisions to the district's Regional Clean Air Incentives Market (RECLAIM) program that lower the NOx emission cap, allow electric generating facilities to exit RECLAIM, add provisions regarding facility shutdowns, and create a regional new source review holding account for existing electricity generating facilities constructed after 1993. The rule is effective Oct. 16, 2017. Contact: Nicole Law; EPA Region 9; 415-947-4126; law.nicole@epa.gov. Citations: 40 CFR 52.220

82 FR 43176 (09/14/2017)

Regulatory Update

AIR
Montana SIP/Missoula Carbon Monoxide Limited Maintenance Plan
AIR

Direct final rule of the EPA approves a revision to the Montana SIP. The revision consists of a second 10-year limited maintenance plan for the eight-hour carbon monoxide NAAQS for the Missoula area. The plan includes an emissions inventory for the base year 2010, an alternative monitoring strategy utilizing average daily traffic vehicle counts, and a contingency plan and demonstrates that the area will maintain the standards into the future. The rule is effective Nov. 13, 2017, unless adverse comments are received by Oct. 16, 2017. Contact: Adam Clark; EPA Region 8, Air Program; 303-312-7104; clark.adam@epa.gov. Citations: 40 CFR 52.1373

Regulatory Update

AIR
New York SIP/2008 Eight-Hour Ozone NAAQS
AIR

Proposed rule of the EPA would conditionally approve revisions to the New York SIP regarding reasonably available control technology (RACT) requirements under the 2008 eight-hour ozone NAAQS. The conditional approval is contingent on the state submitting revised RACT control techniques guidelines (CTG) requirements for control of volatile organic compounds from industrial cleaning solvents within one year of the rule's effective date. The rule also fully approves revisions concerning RACT for non-CTG major sources and major sources of nitrogen oxides and the state's nonattainment new source review certification. Comments are due Oct. 16, 2017. Contact: Anthony Gardella; EPA Region 2; 212-637-3892; Gardella.Anthony@epa.gov. Citations: 40 CFR 52

82 FR 43209 (09/14/2017)

Regulatory Update

AIR
Utah SIP/Fine Particulate Matter and Fugitive Dust
AIR

Proposed rule of the EPA would approve portions of the Utah SIP regarding fine particulate matter (PM-2.5) and a related fugitive dust control rule. The rule also would approve an associated reasonable available control measures (RACM) determination. The agency is not proposing to determine that the state's PM-2.5 attainment plan has met all requirements regarding RACM. Comments are due Oct. 16, 2017. Contact: Crystal Ostigaard; EPA Region 8; 303-312-6602; ostigaard.crystal@epa.gov. Citations: 40 CFR 52

82 FR 43205 (09/14/2017)

Regulatory Update

ENDANGERED SPECIES
Texas/Incidental Take Permit Application
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces an incidental take permit application and the availability of a conservation plan for the green turtle and Kemp's ridley sea turtle. Barney M. Davis LP, of Corpus Christi, Texas, seeks a 10-year incidental take permit in association with the operation of their power station in Corpus Christi. The station, a natural gas-fired electric power generating facility, monitors the intake canal on Laguna Madre in an effort to intercept sea turtles prior to their fatal contact with the facility's cooling water intake structure. The applicant coordinates with Texas Parks and Wildlife Department to collect and relocate the turtles. Comments are due Oct. 16, 2017. Contact: Ron Dean; NMFS, Office of Protected Resources; 301-427-8445

GENERAL ENVIRONMENT AND SAFETY

Environmental Review and Permitting of Infrastructure Projects/CEQ Initial List of Actions

GENERAL ENVIRONMENT AND SAFETY

Notice of the Council on Environmental Quality announces the availability of the initial list of actions it will take to enhance and modernize the federal environmental review and authorization process, as required under Executive Order 13807 (82 FR 40463; 08/24/2017). The CEQ proposes to develop a framework for the implementation of One Federal Decision for environmental review and refer state projects that qualify for high-priority designation to the Permitting Council, the Transportation Department, and U.S. Army Corps of Engineers, as appropriate. The CEQ also intends to revise its guidance on categorical exclusions under National Environmental Policy Act, preparation of environmental assessments, environmental rule procedures, and use of mitigation and monitoring. In addition, the CEQ intends to review its existing regulations and issue additional guidance to simplify and accelerate the NEPA process for infrastructure projects. Finally, the CEQ proposes to convene an interagency working group to review agency NEPA implementing regulations and other environmental review and authorization procedures and policies. Federal agencies involved in the working group would be required to develop action plans and timelines for completing identified actions and to establish procedures for a regular review and update of categorical exclusions. Contact: Ted Boling; CEQ; 202-395-5750; NEPA@ceq.eop.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY

FDA-Regulated Product Focus Groups

GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the submission of a continuing information collection request to the OMB regarding FDA-regulated product focus groups. The collection addresses data gathered from patients and consumers through focus group interviews on regulated products, including drugs, biologics, devices, food, tobacco, and veterinary medicine. The collection also seeks to obtain patient and consumer information useful in developing variables and measures for quantitative studies, to develop a better understanding of patients' and consumers' attitudes and emotions in response to topics and concepts, and to further explore findings obtained from quantitative studies. Comments are due Oct. 16, 2017. Contact: Amber Sanford; FDA, Office of Operations; 301-796-8867; PRAStaff@fda.hhs.gov

82 FR 43243 (09/14/2017)

Regulatory Update

WATER

Waiver of Compliance with Navigation Laws/Hurricanes Harvey and Irma
WATER

Notice of the Department of Homeland Security announces an immediate seven-day waiver of provisions of the Jones Act, which requires certain vessels providing transportation of merchandise by water or by water and land between points in the U.S. to have a coastwise endorsement, or the vessel was built in and documented under U.S. laws and is wholly owned by U.S. citizens. The waiver is being provided due to severe disruptions in both the midstream and downstream sectors of the Gulf Cost oil supply system due to Hurricane Harvey and the potential imminent shortage of energy supply in areas affected by Hurricane Irma. The waiver is intended to facilitate movement of refined petroleum products, including gasoline, diesel, and jet fuel, to be shipped from Louisiana, New York, Pennsylvania, and Texas to Florida, Georgia, Puerto Rico, and South Carolina. The waiver is effective Sept. 8, 2017. Contact: DHS; 202-282-8010

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

INBOX -- SHOCKING TO ABSOLUTELY NO ONE -- "FOX NEWS CHANNEL SIGNS CONGRESSMAN JASON CHAFFETZ (R-UTAH) TO CONTRIBUTOR ROLE"

Good Wednesday afternoon. WHAT SPICER IS DOING THIS WEEKEND -- THE RHODE ISLAND REPUBLICAN PARTY is hosting a reception honoring "RI native" Sean Spicer. The event is Sunday, July 2. The minimum contribution is $200, and for $1,000 you get a private VIP reception. ***Invite*** http://bit.ly/2tkBwrQ

SCOOP -- BLOOMBERG'S MARGARET TALEV and **SHANNON PETTYPIECE -- "Trump Said to Postpone Filing Complaint About Comey's Conduct":** "Donald Trump's lawyers will postpone filing a complaint against former FBI Director James Comey with the Justice Department, according to a person familiar with the decision -- a bid to stop antagonizing the special counsel who's investigating ties between the president's campaign and Russian officials.

"Trump's lawyer, Marc Kasowitz [whose birthday is today], planned to file a complaint with the Justice Department's inspector general about Comey. The ousted FBI director told the Senate on June 8 that he had arranged for memos he wrote documenting conversations with the president to be described to news reporters. ... The president's lawyers still intend to file a complaint at some point, the person familiar with the matter said. ...

"The delay is a professional courtesy to the special counsel, Robert Mueller, and a signal that the White House understands he needs space to do his job, the person said." https://bloom.bg/2tYgJI4

HEALTH CARE TIMELINE -- "McConnell is trying to revise the Senate health-care bill by Friday," by WaPo's Paige Winfield Cunningham and Sean Sullivan: "Senate Majority Leader Mitch McConnell is aiming to send a revised version of his health-care bill to the Congressional Budget Office by as soon as Friday, according to Capitol Hill

aides and lobbyists. The effort reflects the tight timeline McConnell faces in his attempt to hold a vote before the August recess - and the pressure he is under to make changes that improve the CBO's measure of the bill's impact on coverage levels and federal spending.

"McConnell is trying to move quickly to produce a new CBO score by the time lawmakers return to Washington in mid-July, giving the Senate about two weeks to fulfill the majority leader's goal of voting before the August recess. McConnell and his aides plan [to] continue negotiations through the end of the week and will be in frequent communication with the CBO, according to McConnell spokesman David Popp.

"It remains unclear exactly what parts of the Better Care Reconciliation Act are being revised - or whether McConnell is trying to move the measure to the right, with greater savings or regulatory adjustments, or to the left, with more coverage protections. McConnell needs to bring on board about nine senators who have said they wouldn't vote for the bill in its current form. Moving to the right would appease conservatives in the Senate - but also in the House, where any Senate bill would also have to pass." http://wapo.st/2tpygw3

PAUL KANE'S BIG PICTURE -- "McConnell is known as a deal-closer, but he's never done policy this big": "For the last decade, Senate Majority Leader Mitch McConnell has forged a reputation as a closer on big deals. There was the Wall Street bailout just before the 2008 elections. There was the pact over the summer of 2011 to slash spending and avoid a federal default. And there was the 2012 New Year's Eve 'fiscal cliff' compromise to avoid massive tax increases. ...

"For weeks, McConnell has privately argued that the more they wait, the less likely they are to repeal the 2010 health-care law that President Barack Obama and Democrats approved on party-line votes. Even President Trump, after he summoned GOP senators to the White House on Tuesday, openly questioned whether Republicans will ever live up to one of the central tenets of their party's orthodoxy by 'repealing' what they deride as Obamacare.

"If they can't, it will be a humbling defeat for a Senate leader who thrives on his ability to play the behind-the-scenes game. It illustrates how, 10 years after taking over as Republican leader, McConnell still struggles to corral his caucus and how this has left something missing in his legacy: a sweeping rewrite of big policy along the lines of revamping the health-care system." http://wapo.st/2tkJell

THERE IS SUDDENLY a ton of talk about a bipartisan deal on health care. Democrats have expressed next to zero interest in working with Trump.

TRUMP is going to Paris for Bastille Day on July 14.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study projects pharmacy benefit managers (PBMs) will save Medicare Part D $896

billion over ten years. PBMs drive savings for taxpayers and seniors by negotiating discounts from drug manufacturers; by encouraging the use of lower cost, clinically equivalent drugs; and by providing clinical programs that improve health outcomes. Learn more at affordableprescriptiondrugs.org ******

STATEMENTS FROM THE WHITE HOUSE -- @realDonaldTrump at 6:49 a.m.: "The failing @nytimes writes false story after false story about me. They don't even call to verify the facts of a story. A Fake News Joke!" ... **at 6:58 a.m.:** "Some of the Fake News Media likes to say that I am not totally engaged in healthcare. Wrong, I know the subject well & want victory for U.S." ... **at 9:06 a.m.:** "The #AmazonWashingtonPost, sometimes referred to as the guardian of Amazon not paying internet taxes (which they should) is FAKE NEWS!"

ATTENTION TRAVELERS -- "U.S. announcing enhanced security measures aimed at avoiding laptop ban," by Reuters' David Shepardson: "U.S. Homeland Security officials on Wednesday will unveil enhanced security measures for foreign flights arriving in the United States, in a bid to avoid an expansion of an in-cabin ban on laptops and other large electronic devices because they might carry bombs, sources briefed on the matter said Wednesday. The decision not to impose new restrictions on laptops is a boost to U.S. airlines, which have worried that an expansion of the ban to Europe or other locations could cause significant logistical problems and deter some travel. Airlines that failed to satisfy new security requirements could still face future in-cabin electronics restrictions, sources said." http://reut.rs/2tYDwDK

FOGGY BOTTOM WATCH -- MARK PERRY in **THE AMERICAN CONSERVATIVE -- "Tillerson and Mattis Cleaning Up Kushner's Middle East Mess":** "The Qatar intervention [in 2011] has not been forgotten at the Pentagon and is one of the reasons why Defense Secretary James Mattis has worked so diligently to patch up the falling out between them and the coalition of Saudi-led countries (including the UAE, Bahrain and Egypt), that have isolated and blockaded the nation. In fact, Mattis was stunned by the Saudi move. 'His first reaction was shock, but his second was disbelief,' a senior military officer says. 'He thought the Saudis had picked an unnecessary fight' ... At the time of the Saudi announcement, Mattis was in Sydney with Secretary of State Rex Tillerson ... When the burgeoning split between the Saudis and Qataris was mentioned, Tillerson described it as no more than one of 'a growing list or irritants in the region' that would not impair "the unified fight against terrorism' ...

"But while Tillerson's answer was meant to soothe concerns over the crisis, behind the scenes he and Mattis were scrambling to undo the damage caused by Saudi action. The two huddled in Sydney and decided that Tillerson would take the lead in trying to resolve the falling out. Which is why, three days after the Sydney press conference, Tillerson called on Saudi Arabia, the UAE, Bahrain and Egypt to ease their anti-Qatar blockade and announced that the U.S. supported a Kuwaiti-led mediation effort. The problem for Tillerson was that his statement was contradicted by Donald Trump. ...

"A close associate of the secretary of state says that Tillerson was not only 'blind-

sided by the Trump statement,' but 'absolutely enraged that the White House and State Department weren't on the same page.' Tillerson's aides, I was told, were convinced that the true author of Trump's statement was U.A.E. ambassador Yousef Al Otaiba, a close friend of Trump son-in-law Jared Kushner. 'Rex put two-and-two together,' his close associate says, 'and concluded that this absolutely vacuous kid was running a second foreign policy out of the White House family quarters. Otaiba weighed in with Jared and Jared weighed in with Trump. What a mess.'" http://bit.ly/2uim10m

THE NEXT MEMBER OF CONGRESS -- "Gomez to be sworn in to House on July 11," by Kyle Cheney http://politi.co/2tYhscn

SWAMP DRAINING UPDATE -- "Kushner lawyer seasoned in navigating Washington scandals," by the AP's Eric Tucker and Chad Day: "In selecting [Abbe] Lowell to represent him in Russia-related investigations before Congress and special counsel Robert Mueller, Kushner has turned to one of the best-known trial lawyers in the nation's capital and perhaps the country. Kushner has not been accused of any wrongdoing, and there's no indication he's at risk of being charged. But his pick of Lowell suggests he's bracing for lengthy government probes and wants in his corner someone with decades worth of experience confronting thorny and contentious congressional and Justice Department investigations. It also gives him a lawyer more seasoned in navigating Washington scandals than the members of Trump's own legal team." http://apne.ws/2sRpK7z

PIC DU JOUR -- @SenTedCruz: "Great to host Tom Ricketts. Congrats on the World Series. (Should have been the @Astros!)" http://bit.ly/2tkCDaC

AFTERNOON READ -- BEN SCHRECKINGER'S latest for **POLITICO MAG -- "Has a Civil Rights Stalwart Lost Its Way?":** "Since 1971, the SPLC has fought racial discrimination in the South and established itself as the nation's most prominent hate-group watchdog, most notably winning legal fights that put some of the last nails in the coffin of the Ku Klux Klan. It has also built itself into a civil rights behemoth with a glossy headquarters and a nine-figure endowment, inviting charges that it oversells the threats posed by Klansmen and neo-Nazis to keep donations flowing in from wealthy liberals.

"Now the election of Donald Trump has vaulted the SPLC back into the center of the national conversation, giving the group the kind of potent foil it hasn't had since the Klan. Trump swept into the Oval Office by disparaging Mexican immigrants, fanning Islamophobia and activating a resurgent strain of racism rebranded as 'alt-right.' Suddenly the SPLC, whose biggest fights seemed to be behind it, is all over the news-warning of an increase in hate crimes, publishing sleek reports about anti-Muslim extremists and taking the leaders of the alt-right to court. The group is in the process of adding 50 staffers, expanding legal services for immigrants facing deportation across the South and bringing a legal hammer down on alt-right trolls. Since the election, the SPLC says it has more than doubled its following on Twitter and jumped from 650,000 Facebook followers to more than a million. ...

"[As Morris Dees, the founder of the SPLC] navigates the era of Trump, there are new questions arising around a charge that has dogged the group for years: that the SPLC is overplaying its hand, becoming more of a partisan progressive hit operation than a civil rights watchdog. Critics say the group abuses its position as an arbiter of hatred by labeling legitimate players 'hate groups' and 'extremists' to keep the attention of its liberal donors and grind a political ax. Which means that just as the SPLC is about to embark on its biggest fight in decades, taking on rising racism and prejudice across the country, its authority to police the boundaries of American political discourse is facing its greatest challenge yet." http://politi.co/2tkSoyf

HISTORY DEPT. -- "How Donald Trump and Roy Cohn's ruthless symbiosis changed America," by Marie Brenner in Vanity Fair's August issue: "How to explain the symbiosis that existed between Roy Cohn and Donald Trump? Cohn and Trump were twinned by what drove them. They were both sons of powerful fathers, young men who had started their careers clouded by family scandal. Both had been private-school students from the boroughs who'd grown up with their noses pressed against the glass of dazzling Manhattan. Both squired attractive women around town. (Cohn would describe his close friend Barbara Walters, the TV newswoman, as his fiancée. 'Of course, it was absurd,' Liz Smith said, 'but Barbara put up with it.') Sometime during the 2016 presidential campaign, [lawyer and journalist Steven] Brill noticed that Donald Trump was using Cohn's exact phrases. 'I began to hear, 'If you want to know the truth,' and 'that I can tell you ...' and 'to be absolutely frank'--a sign that the Big Lie was coming,' Brill said.

"Cohn--possessed of a keen intellect, unlike Trump--could keep a jury spellbound. When he was indicted for bribery, in 1969, his lawyer suffered a heart attack near the end of the trial. Cohn deftly stepped in and did a seven-hour closing argument--never once referring to a notepad. He was acquitted. 'I don't want to know what the law is,' he famously said, 'I want to know who the judge is.'" http://bit.ly/2tYFynw

TODAY'S BEYOND THE BELTWAY -- Massachusetts incumbents look good in 2018 -- California Democrats push back against 'age tax' http://politi.co/2tpvHtX

WHAT MOSHEH OINOUNOU IS UP TO -- MEMO FROM DAVID RHODES: "We are announcing today that CBSN: ON ASSIGNMENT will launch on July 31st and run for four consecutive Mondays at 10pm on the CBS Television Network. This is a big milestone for CBSN as it brings the best of the stream's immersive and dynamic storytelling to a mass broadcast platform.

"CBSN: ON ASSIGNMENT will stream live on CBSN simultaneous with broadcast and will be available on all of our digital platforms including CBS All Access.

"Already a great deal of work has been done in the field to bring serious original reporting to this primetime program. I've seen some of the elements - from colleagues around the news organization on assignments around the world. It's thoughtful, it's thorough - and it's exciting. We'll be able to reveal aspects of these stories as we get

closer to the premier date at the end of next month. CBSN launched long-form documentary style programs a little more than a year ago, and this has become an important part of our digital offering. We're keeping new audiences for longer on devices and over-the-top TV. Tremendous gratitude to Nancy, Mosheh, Christy, and everyone on the digital side for helping pull together this project on a short timeline."

CONGRATS to former VA secretary **Jim Nicholson** and his wife **Suzanne**, who this week celebrate their 50th wedding anniversary. They're celebrating with a family reunion at the Broadmoor in Colorado Springs. ***Pic*** http://bit.ly/2ui3TUK ... **Jeff Goldberg** and his wife **Pamela** celebrated their anniversary yesterday.

MEDIAWATCH -- Meredith Bennett has been hired by NBC News to be the editor of THINK, their upcoming platform for "opinion, ideas and conversations," which is set to debut in the fall. Bennett was previously an editor at Quartz and Mic.

TRANSITIONS -- Jamie Kirchick is joining the Brookings foreign policy program as a visiting fellow. Kirchick, author of "The End of Europe: Dictators, Demagogues, and the Coming Dark Age," is also a columnist at Tablet Magazine and a correspondent at the Daily Beast. ... **Kathleen Gasperine** and **Giulia Marchiori Ceresa** have co-founded Paradigm Political Management and Philanthropy with offices in Boston and London. **Julia Leja** is a senior adviser.

WASHINGTON INC. -- TARGETED VICTORY's NEW DIGS - The Republican digital agency, which employs nearly 40 people, has moved into a new office in Rosslyn at 1101 Wilson Blvd; They previously were based in Old Town but said they outgrew their former space. *Pix* http://bit.ly/2sQkEbs

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study estimates that Medicare Part D costs would be 58 percent higher without pharmacy benefit managers' (PBMs') clinical tools and price negotiations with drug manufacturers and pharmacies. The study shows PBMs significantly lower premiums and out-of-pocket costs for Medicare beneficiaries. In fact, PBMs are projected to save Medicare Part D $896 billion over the next decade. Thanks to PBMs, Medicare Part D continues to drive savings and value for taxpayers and beneficiaries, ensuring that more than 39 million American seniors can access the prescription drugs they need. TRUMP'S EPA: Agency at a crossroads -- Complete coverage

July 10, 2017

Latest News

Former EPA Risk Assessor Said To Be Top Contender For Toxics Chief

Michael Dourson, a former EPA risk assessor and founder of a leading risk assessment consulting group, is the leading contender for the appointment to head EPA's Office of Chemical Safety and Pollution Prevention (OCSPP), which is responsible for implementing the Toxic Substances Control Act (TSCA) reform law that President Obama enacted last summer.

Citing Industry Risk, EPA Asks Court To Recall Methane NSPS Vacatur

EPA is urging the federal appellate court panel that vacated its administrative stay of Obama-era methane standards for new oil and gas sources to recall its mandate for the agency to immediately lift the stay, particularly as EPA is evaluating options for appeal, suggesting the immediate nature of the court's mandate places industry at risk.

Court Vacatur Of EPA Methane NSPS Stay Leaves Oil & Gas Sector In Limbo

The recent federal appellate court ruling vacating EPA's 90-day administrative stay of Obama-era methane standards for new oil and gas sources is leaving the industry in regulatory limbo and vulnerable to citizen suits, with the rule's compliance deadlines restarting even as EPA advances what some see as a legally risky proposal to delay the regulation by an additional two years.

EPA Expected To Cite '112 Exclusion' In CPP Repeal To Exempt Coal Plants

The draft EPA proposal to repeal the Clean Power Plan (CPP) currently under review by the White House is thought to include as one justification for rolling back the Obama-era rule the argument that EPA is barred from regulating coal plants' greenhouse gases under section 111(d) of the Clean Air Act because it already regulates their air toxics under section 112.

Appeals Court Reinstates Bush-Era DSW Third-Party Recycler Exclusion

In a 2-1 decision, a federal appeals court has partially sided with industry in vacating

most of the verified recycler exclusion contained in the Obama EPA's definition of solid waste (DSW) rule, instead reinstating a more relaxed Bush-era exclusion for third-party recyclers of hazardous secondary material that allows them to avoid stringent regulation as solid waste.

Seeking Flexibilities, POTWs, Regulators Pause CWA Enforcement Talks

Federal regulators and several municipalities are pausing consent decree negotiations over longstanding combined sewer overflow (CSOs) noncompliance issues, hoping that Trump administration enforcement nominees will agree to provide flexible enforcement approaches as they wait for Congress to act on pending bipartisan legislation that could ease requirements.

Municipalities Raise Concerns About CWA 'Integrated Planning' Legislation

Some municipalities are raising concerns that pending legislation to codify EPA's 2012 Clean Water Act (CWA) integrated planning guidance could have the unintended consequence of limiting the compliance flexibility approach only to actions intended to improve water quality, closing the door to addressing other issues connected to water treatment such as energy recovery, drinking water and others.

Subject: EPA watchdog calls for better management of chemical safety research tools

By Alex Guillén

06/23/2017 10:39 AM EDT

EPA needs to better coordinate its efforts to create computer programs that help researchers study the health risks of chemicals, according to a new report from the agency's inspector general.

EPA's Office of Research and Development helps create "research products" for the Office of Chemical Safety and Pollution Prevention, which tests both commercial chemicals under the Toxic Substances Control Act and pesticides under another federal law.

These products "support risk analyses, search for chemical testing data across multiple databases, and compare previous research results to current risk assessments," according to the IG. The report specifically praised a recently developed modeling program for endocrine disruptors.

However, investigators concluded OCSPP needs better "management controls" — a process to ensure it works consistently with the R&D office. The chemicals office also should identify its own priorities for developing new programs.

"Without management controls that ensure consistent interoffice collaboration and assess CSS product needs, OCSPP is at risk of not effectively incorporating products in a way that could rapidly improve how the EPA assesses chemical risks to human health and the environment," the report concludes.

The report says EPA agreed with its recommendations and has taken appropriate action.

EPA on Thursday released a suite of regulations that lay out how the agency will carry out future chemical risk evaluations under the reformed TSCA law. Though the IG's report is not directly connected to that, the research products in question will be used by EPA researchers to evaluation chemical risks.

Subject: Zinke to unveil Interior 'century' reorganization plan

By Esther Whieldon and Annie Snider

05/23/2017 03:00 PM EDT

Interior Secretary Ryan Zinke said today he will begin releasing proposals in the next couple of months to reorganize the agency.

"I view this as a century reorganization to look at how best to manage, protect, use our public lands in the next 100 years given that we have a number of challenges," Zinke said in a conference call about the fiscal 2018 budget proposal.

Zinke said the reorganization will be aimed at coordinating on issues like wildlife corridors, watersheds and trail systems that span multiple federal agencies, as well as state and local ones.

He said his staff has already begun exploring ways of applying military models, he said, and for natural resources, the concept could be based around different watersheds to push more authority down to the "front lines."

Zinke has met with White House officials and interest groups including from the energy industry and environmental sectors about a reorganization options. And he met with Agriculture Secretary Sonny Perdue to discuss fighting forest fires. POLITICO in January reported Zinke was mulling proposing congress move USDA's Forest Service to the Interior.

WHAT'S NEXT: With a few exceptions, Zinke will need congressional approval for any major reorganization of the Interior's nine bureaus or for bringing over bureaus from other agencies.

Senate Panel Advances FERC, Interior, Energy Nominees

Posted June 06, 2017, 12:39 P.M. ET

By Alan Kovski

A Senate committee voted June 6 to advance two nominations for the Federal Energy Regulatory Commission, a step toward restoring the quorum the commission needs to make basic decisions on electric grid regulation, natural gas pipeline projects and more.

The votes of the Senate Energy and Natural Resources Committee for Neil Chatterjee and Robert Powelson to be FERC commissioners were by identical lopsided margins of 20-3, possibly reflecting the commission's relatively unpoliticized nature.

The committee also voted 14-9 to support the nomination of David Bernhardt to be deputy secretary of the Interior Department and 17-6 for Dan Brouillette to be a deputy secretary of energy.

Welcoming the FERC nomination votes, Don Santa, president of the Interstate Natural Gas Association of America, said in a statement, "We estimate that about $14 billion in private capital—ready to be deployed on energy infrastructure projects—is being held on the sidelines while FERC lacks a quorum and cannot act on major projects."

Votes by the full Senate have not yet been scheduled for the nominees.

Cantwell Opposes Bernhardt

Sen. Maria Cantwell (D-Wash.), ranking member of the committee, opposed Bernhardt out of concern for what she called the risk, or at least the appearance, of conflicts of interest because of his work as an attorney for energy, water and mining companies.

He has represented energy companies including Noble Energy Inc., Cobalt International Energy Inc., NRG Energy Inc. and Sempra Energy (parent of San Diego Gas & Electric utility and Southern California Gas Co.), among others. Their work intersects Interior regulation in various ways, such as

when Noble Energy or Cobalt seek to produce oil and gas in the Interior-regulated federal offshore.

Cantwell criticized him for having helped sue the Interior Department on behalf of clients, including the Westlands Water District, a large water distribution district that relies on contractual water supplies controlled by the Bureau of Reclamation, an Interior agency.

Bernhardt has promised to avoid participation in decisions affecting former clients for two years, Cantwell said, but she took the position that the revolving door of government and private-sector employment made the two-year restraint inadequate.

Cantwell also reminded listeners that Bernhardt had been Interior counselor during the administration of President George W. Bush, during which controversies emerged over staff misbehavior and a political appointee tampering with the wording of scientific assessments.

"I know there is no evidence Mr. Bernhardt personally participated in these activities," Cantwell added.

Murkowski Likes Four, Seeks More

Sen. Lisa Murkowski (R-Alaska), chairman of the committee, had brief words of praise for all of the nominees. She and Cantwell were the only senators who spoke at the hearing.

"I believe all four of these nominees are capable, competent, and well-qualified for the roles that they have been selected for," Murkowski said.

She was critical of the slow pace of nominations from the Trump administration, however. "I don't think that's an acceptable pace," she told reporters after the votes.

Chatterjee, a long-time energy staffer for Senate Majority Leader Mitch McConnell (R-Ky.), and Powelson, the president of the National Association of Regulatory Utility Commissioners and a member of the Pennsylvania Public Utility Commission, were nominated for FERC terms expiring in 2021 and 2020, respectively.

Brouillette is senior vice president of the United States Automobile Association, an organization providing financial services to military personnel, veterans, and their families. Before that he was a vice president of Ford Motor Co. He served in the Energy Department in the George W. Bush administration as an assistant secretary of energy for congressional and intergovernmental affairs from 2001 to 2003.

He previously worked in Congress for the House Energy and Commerce Committee and for lobbying firms, including FleishmanHillard Inc. His clients at that firm included Entergy Corp., Allegheny Energy Inc. and Peabody Energy Corp., according to OpenSecrets.org, a project of the Center for Responsive Politics that tracks money in politics.

Paris Climate Deal Needs New Rules and Clarity, Scientists Say

Posted June 06, 2017, 11:33 A.M. ET

By Jonathan Tirone

The Paris climate accord needs to be strengthened through new negotiations and national

commitments to transparency, scientists argued in a report.

Uncertainty about the pledges made by almost 200 countries in the landmark climate deal means the world could fail to mitigate runaway global warming, according to the report by six scientists published June 6 in the journal Nature Communication.

"In many cases the actions described in these pledges are ambiguous or imprecise," wrote Joeri Rojelj, the lead author of the paper titled "Understanding the Origin of Paris Agreement Emission Uncertainties." The scientists urged countries to implement a "robust process that keeps track of where emissions are heading."

While President Donald Trump expressed willingness to negotiate a new version of Paris the agreement, the steps urged in the study are unlikely to gain traction in Washington. Trump derided the agreement's framework of voluntary emission cuts as being unfair to American workers. The scientific study wants the accord strengthened by imposing even more accountability.

To keep temperature rises well below 2 degrees Celsius (3.6 degrees Fahrenheit), the scientists argue that countries need to streamline and remove uncertainties from pledges called "nationally determined contributions."

"Some pledges focus on improving 'emissions intensity,' meaning reducing the emissions per dollar of economic output, but assumptions about socioeconomic growth are often implicit or unknown," said Rojelj, who advises the United Nations and researches at the International Institute for Applies Systems Analysis outside of Vienna.

"Other countries focus on absolute emissions reductions, which are simpler to understand, or propose renewable energy targets, which can be expressed in different ways," he said. "Questions also remain about how much land-use-related climate mitigation will contribute, such as reducing deforestation or preserving forests."

Countries will need to improve their reporting by 2030 or risk having to increase emission reduction targets by factors of four to 25 thereafter, according to the report.

States to Pruitt: Don't Reverse Course on Dow Insect-Killer

Posted June 06, 2017, 11:26 A.M. ET

By Tiffany Stecker

Seven states want the EPA to ban most uses of the pesticide chlorpyrifos, challenging the agency's decision not to further regulate the chemical.

Attorneys general for California, Maine, Maryland, Massachusetts, New York, Vermont, and Washington filed objections June 5 asking Environmental Protection Agency Administrator Scott Pruitt to make a safety determination on the use of chlorpyrifos.

Pruitt on March 29 declined to further regulate the insect-killer, which is linked to neurodevelopmental effects, until Oct. 1, 2022. The move was a U-turn from the EPA's work to revoke the legal tolerances for the pesticide on food under President Barack Obama. In November

2016, two months before Obama left the White House, the EPA released a scientific assessment indicating that levels of chlorpyrifos on most food crops exceeded the legal safety standard. A year earlier, the agency proposed a ban, but didn't finalize the move before the new administration came in.

In their appeal, the states argue that a strong federal policy on pesticides is necessary given the nationwide distribution of the food system.

"Action by the states to curtail human exposure would not be fully effective, given the national markets for foods," the document said. "The states have a strong interest in assuring appropriate federal regulatory action, including a final decision by the administrator about whether existing chlorpyrifos food tolerances are safe and may remain in effect."

The administrative appeal from the states follows similar objections filed June 5 by a coalition of environmental and farmworker advocacy groups. The filing challenges Pruitt's order, detailing the scientific and legal justification for a ban. Separately, the organizations filed a lawsuit challenging the EPA's denial in the U.S. Court of Appeals for the Ninth Circuit (LULAC v. Pruitt, 9th Cir., 17-71636, 6/5/17).

The agency struck a deal with manufacturers in 2000 to suspend indoor uses of the chemical, such as in roach and ant baits. But environmental organizations said the move did not go far enough to protect rural and farmworker communities, and the Natural Resources Defense Council and Pesticide Action Network petitioned the EPA in 2007 to revoke uses of the insecticide for food crops.

After a seven year delay, the organizations sued the EPA in 2014 in the Ninth Circuit.

Dow Agrosciences, the original maker of chlorpyrifos, has criticized the science used to justify restrictions, saying the EPA depended on unreliable studies to propose a ban on the pesticide.

NuScale CEO: Energy Department Must Keep Funding Small Reactor

Posted June 06, 2017, 11:32 A.M. ET

By Rebecca Kern

The Energy Department must keep its public-private funding commitment to NuScale Power LLC, which is developing the country's first small modular nuclear reactor, the company's CEO said June 6.

"We need our government on our side to finish what we started in 2013 with the SMR licensing and technical support program award," NuScale CEO John Hopkins said at the U.S. Nuclear Infrastructure Council's Global Nuclear Energy Markets summit in Washington.

But the Trump administration's fiscal year 2018 budget proposal doesn't include any Energy Department funding to research small modular reactors or advanced nuclear reactors.

NuScale's small light-water nuclear technology is under review at the Nuclear Regulatory Commission. The company received a $217 million funding award from the Energy Department in 2013, which will last until fiscal year 2017. Fluor Corp., which bought NuScale in 2011, has invested approximately $400 million to date in the technology.

"So I need to figure out how to get through 2018," Hopkins said. "This is a public-private partnership. We've got to keep things moving forward."

"As long as the business model continues to stay, I just met with the Fluor board, and they're willing to invest," but we need the government to stay behind it as well, he said.

NuScale submitted its design certification application to the NRC in January, and expects an approximately 3.5-year review. The company aims for its first reactor to licensed and operational in 2025-2026 at the Idaho National Lab, Hopkins said.

NuScale's small, 50-megawatt reactors can be scaled up to 12 reactors generating up to 600 megawatts of electricity. The company says they will be quicker to build and potentially less costly than traditional large-scale nuclear reactors now on the market.

Hopkins said Energy Secretary Rick Perry told him in a recent meeting that he supported the technology.

Google, Facebook Join Cities in Challenging Trump on Climate

Posted June 06, 2017, 8:40 A.M. ET

By Joe Ryan

Alphabet Inc.'s Google, Microsoft Corp. and Facebook Inc. are among dozens of companies that pledged their support for policies combating climate change following President Donald Trump's decision to withdraw from the Paris accord.

The "We Are Still In" coalition also features nine states, including California and New York, scores of universities, and leaders of 125 cities from Los Angeles to Chicago, according to a statement released June 5.

The initiative is an attempt to coordinate the widespread backlash to Trump's withdrawal from the landmark environmental agreement. Many of the companies and politicians who signed up have been advocating for months for the U.S. to uphold its climate change commitments. The statement is intended to demonstrate to other nations that U.S. businesses and local governments remain on board, no matter what the president does.

"We remain steadfastly committed to the sustainability, carbon and energy goals that we have set as a company and to the Paris Agreement's ultimate success," Microsoft President Brad Smith said in the statement.

UN Letter

Former New York City Mayor Mike Bloomberg, founder and majority owner of Bloomberg LP, the parent company of Bloomberg BNA, submitted a letter June 5 to UN Secretary General Antonio Guterres, expressing support for the Paris accord on behalf of the group. Bloomberg also plans to work with cities, states and businesses to set a collective emissions-cutting goal to submit to the UN as "America's Pledge" under the Paris accord.

Trump, who has called climate change a "hoax," campaigned on the pledge to exit the 2015 pact,

saying it damaged America's economic competitiveness. Last week, he announced his intention to withdraw, saying the deal favors other nations at the expense of American workers.

In response, the governors of New York, California and Washington state announced plans to form a coalition to fight global warming and more have since signed up. Dozens of mayors from cities including Boston, Seattle and Cleveland vowed to do the same.

The Paris accord is broader than any previous climate agreement. It calls for nations to voluntarily reduce carbon dioxide emissions in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above temperatures at the outset of the Industrial Revolution.

California Biodiesel Credits on Hold as Court Orders New Analysis

Posted June 06, 2017, 7:01 A.M. ET

By Carolyn Whetzel

Biodiesel producers are going to have to wait a little longer to get more California credits under the state's low-carbon fuel standard.

That's because California's analysis of biodiesel-related emissions associated with the fuel standard still falls short, leaving the state in violation of its environmental review law, a state appellate court ruled, ordering a redo of the analysis—again.

But, companies can still get federal credits for selling their fuel in California, an environmental attorney said.

The decision comes in a lawsuit challenging the California Air Resources Board's 2015 effort to correct the same flaw the state's Fifth Appellate District found in 2013.

CARB's re-adoption and revisions to the low-carbon fuel standard "did not cure" the California Environmental Quality Act violation it was ordered to correct the first time, the court said. The California Superior Court shouldn't have "discharged the writ of mandate," the May 30 majority opinion said.

The May 30 ruling means the biodiesel portion of the low-carbon fuel standard is blocked until CARB does the nitrogen oxide analysis again, David Pettit, a Natural Resources Defense Council attorney and intervenor in the case, told Bloomberg BNA June 5 (POET LLC v. CARB, Cal. Ct. App., F073340, 5/30/17).

The court wants CARB to look at the nitrogen oxide emissions since 2009, and identify how much of the increase in emissions is due to the low-carbon fuel standard and then attributable to the federal biodiesel incentives, Pettit said.

"That means California credits for biodiesel are on ice until then," Pettit said.

POET LLC, a South Dakota corn ethanol producer, filed the lawsuits challenging the initial fuel

standard and the 2015 replacement regulation.

"This decision will require regulators to sit down, take a look at the science and finally get this right so there is a full range of renewable options available to California drivers who care deeply about their health and their climate," the company said in a prepared statement.

CARB didn't respond to Bloomberg BNA's request for comment on the court order.

California Governor Says China `On the Move,' U.S. Role Reduced

Posted June 06, 2017, 10:40 A.M. ET

By Bloomberg News

California Governor Jerry Brown said "America can't rest on its laurels" as competitive pressures from China become more intense, particularly in light of the U.S. moving away from the Paris climate change agreement.

"The role of America in the world has been reduced because of Trump's pullout from the Paris accord," Brown said in a Bloomberg Television interview with Tom Mackenzie June 6 in Beijing. "The Chinese are on the move. They're a rising power."

Brown, a Democrat, is traveling across China to forge new links on clean energy between the state and the world's most populous country and largest car market, urging it to take environmental cues from Sacramento, not the White House. President Donald Trump's withdrawal from the Paris climate pact is "an insane move," he told reporters on the eve of his trip to Chengdu, Nanjing and Beijing.

"They're not sitting there and making a one-to-one: Trump down, China up," he said of his talks with Chinese officials. "They're just saying 'China is on the move.'"

Brown leads a $2.5 trillion economy that on its own would be the world's sixth-largest, narrowly trailing the U.K. after overtaking France in 2015. California was responsible for roughly a third of the country's $347 billion trade deficit with China last year, according to the U.S. Department of Commerce.

Clean Energy

He said in the Bloomberg interview that he and Chinese President Xi Jinping discussed "clean energy technology, trade and investment, open trading rules and a general spirit of getting things done together and in collaboration," adding the two men spoke about Chinese investment in infrastructure projects in California.

"We can't reduce our carbon footprint unless we deal with transportation," according to Brown. He said he is open to joint ventures with China on electric vehicles and sees more Chinese businesses coming to California as a result of his visit.

U.S. business leaders have warned that walking away from the landmark climate accord could put the country at a disadvantage in the race to develop and deploy clean energy technology.

Brown met President Xi in Beijing earlier June 6 to discuss expanding cooperation on green

technology, innovation and trade. They agreed to work together on expanding bilateral cooperation, particularly on green development, according to statement from governor's office.

Xi highlighted "the strong sub-national relationship" between California and Chinese provinces, according to the statement. Brown said California is pushing to cut emissions to 40 percent of 1990 levels by 2030 and achieve 50 percent renewable energy.

Brown signed an agreement with China that seeks to improve cooperation in electric vehicles, Wan Gang, minister of science and technology, said at the International Forum on Electric Vehicle Pilot Cities and Industrial Development in Beijing.

Brown, along with the governors of New York and Washington, formed a coalition to fight global warming in response to Trump's decision to withdraw from the Paris accord. The alliance now includes 13 members.

David Vitter Tackles Energy Issues at New Orleans Law Firm

Posted June 06, 2017, 11:30 A.M. ET

By Rachel Leven

Former Sen. David Vitter (R-La.) has joined Butler Snow LLP to work on energy issues, the law firm announced June 6.

Vitter, who served as ranking member of the Senate Environment and Public Works Committee from 2013 to 2015, will practice law in the firm's New Orleans office. He will also keep his job as co-chairman of Mercury Public Affairs, where he is registered to lobby the Trump administration on behalf of the American Chemistry Council and others.

"David has a long and successful track record as a legislator and political leader," Donald Clark, Jr., chairman of Butler Snow, said in a statement. "His significant experience, especially in helping lead major public policy and economic development initiatives, makes him a really valuable addition to Butler Snow in Louisiana."

Vitter left the Senate following a failed run to be Louisiana's governor. He served in the House from 1999 to 2005 and Senate from 2005 to 2017, and is known for his leading role in helping pass legislation including a landmark chemical law—the Frank R. Lautenberg Chemical Safety for the 21st Century Act (Pub. L. No. 114-182)—and for holding up then-President Barack Obama's nominee to be EPA administrator, Gina McCarthy, for more than 100 days due to transparency concerns.

U.K. Election Results, Emissions Plan Are Up in the Air

Posted June 06, 2017, 02:55 P.M. ET

By Ali Qassim

The only thing certain about the U.K.'s general election this week is nobody's sure what's going to happen.

Will the June 8 election put a party in power that will nimbly plot the nation's path on major issues, including climate change, or will voters once again surprise London oddsmakers and go a different route?

It wasn't so long ago that things were on course. Less than a week after the U.K. shocked the world and voted to leave the European Union last June, the government approved the Fifth Carbon Budget, legally restricting the total amount of greenhouse gases the country can emit.

But Brexit also sparked the resignation of Prime Minister David Cameron, leaving in charge a new government headed by Theresa May that came under fire for disbanding the Department of Energy and Climate Change, appointing an energy minister who questioned the reality of climate change, and failing to decide on a plan to cap the country's escalating emissions.

The new Conservative government's initial promise to produce a nationwide plan to cut greenhouse gas emissions by the end of 2016 was pushed to March 2017, then April. May took everyone by surprise that month and called a snap general election—three years ahead of schedule.

The government that's formed after the U.K.'s June 8 snap election will be charged with publishing a long-awaited plan to meet its long-term emissions targets.

The plan must not only fulfill the U.K.'s commitment to the Paris Agreement on climate change but also include a framework to attract investors for renewable energy projects for at least the next decade, representatives from business, the low-carbon sector and environmental groups told Bloomberg BNA.

Last Chance?

The U.K.'s previous failure to produce an emissions reduction plan, now dubbed the Clean Growth Plan (CGP), has "potentially significant legal consequences," Frank Gordon, policy manager at the Renewable Energy Association, told Bloomberg BNA.

Under the 2008 Climate Change Act, the government must pass carbon budgets every five years that set out plans on how it intends to cut emissions by 57 percent by 2032 compared to 1990 levels.

The CGP "may realistically be our last good chance to get back on track, otherwise there is a serious risk we will miss our future emissions targets," Jonathan Church, a lawyer at activist organization ClientEarth, told Bloomberg BNA.

The U.K. has achieved big emissions reductions, but they're due in some part to the 2008 recession and downturn in manufacturing, Church said.

And that bump won't be enough as 2016 projections show that without the full push of the government behind it, the U.K. could miss its Fourth Carbon Budget for 2023–2027 by 146 metric tonnes of carbon dioxide-equivalent and the Fifth Carbon Budget for 2028–2032 by 247 metric tonnes, he said.

This is raising concern among business and environmental organizations in the U.K.

Call for Clarity

Nick Molho, executive director of the Aldersgate Group, a coalition of businesses and environmentalists, said, "Given that there is currently no policy clarity on energy efficiency and very little clarity on policy support for renewable energy outside of offshore wind, it would be concerning if the plan did not come out by the end of 2017."

The government is not allowed on-the-record statements during an election campaign under a practice known as purdah. Just before campaigning was launched, Nick Hurd, minister of state for climate change and industry, said before a Department of Business, Energy and Industrial Strategy committee that work to deliver a Clean Growth Plan was "well-advanced."

Plan Must Attract Investors

The linchpin to a Clean Growth Plan is ensuring that policies are detailed and long-term enough to attract the higher levels of affordable private-sector investment the U.K. needs in the next 15 years, according to Molho.

"It's a very complex task as the plan needs to be sufficiently detailed to attract affordable private-sector investment in the energy efficiency, low-carbon energy and low-carbon transport infrastructure the U.K. needs to meet its Fifth Carbon Budget," he said.

Michelle Hubert, head of infrastructure and energy at the Confederation of British Industry, agreed. Companies need clarity on what 2030 as it's only an investment cycle or two away, she told Bloomberg BNA.

Businesses also "want to see a fresh approach to the emissions reduction plan, to deliver policies fit for the future. In an increasingly interconnected world—where we might see homes and businesses generate, store, and use their energy in new innovative ways—the economy should be more joined up, with cross-cutting technologies being put to greater use," she said.

The government also should commit to promoting the Enterprise Investment Scheme, which offers tax relief to investors that buy shares in smaller higher-risk trading companies for renewable power projects, according to the Renewable Energy Association's Gordon.

"It can be removed if desired, once successor funding schemes are introduced but would provide certainty and allow for continuity in planning project pipelines," he said.

Power and Heat

There is a "strong consensus" among groups on how a CGP should work for the power sector, said Dustin Benton, acting deputy director of the think tank Green Alliance.

"The good news is this will mostly be cheaper than fossil fuel alternatives. The challenge is that government needs to support zero carbon flexibility to enable this to work, including via interconnection to the U.K.'s EU neighbors," he said.

There's also some disagreement about the picture after 2025, with policy still assuming nuclear will be cheap and available by then, but complications related to, for instance, U.K.'s probable exit from the European Atomic Energy Community "raises serious questions about this assumption."

Speaking for the renewables industry, Gordon said the next government should lay out a clear plan in 2018 to reduce carbon emissions from heating and cooling by 40 percent by 2030 and achieve the U.K.'s 2020 renewable energy target, which includes 12 percent of heat produced from low-carbon sources.

If the new government starts focusing on the Clean Growth Plan soon after the election, there still would be "time to do large-scale experiments on the three core technology families: district heating, heat pumps, and hydrogen heat. We think it should do low-carbon heat trials involving tens of thousands of consumers before 2020, to figure out what works and to provide an incentive for cost reduction," Benton said.

Historic California Gas Leak Spurs Boom in Big Batteries

Posted June 06, 2017, 9:13 A.M. ET

By Joe Ryan

Installations of large-scale energy-storage systems surged to record levels during the first quarter as power companies and state officials pushed to better incorporate electricity from wind and solar farms.

U.S. homes and businesses—mostly utilities—installed storage systems with 234 megawatt-hours of capacity during January, February and March—more than 50 times the amount installed a year earlier, according to a study released Tuesday by GTM Research and the Energy Storage Association.

The lion share of installations were in Arizona, Hawaii and California. A key driver in the Golden State was the continued closure of the Aliso Canyon gas field—site of the biggest leak in U.S. history—which prompted Sempra Energy's San Diego Gas & Electric Co. and Edison International's Southern California Edison to installed powerful batteries to make up for anticipated electricity shortfalls. Despite the robust start, storage installations appear to have already their high-water mark for the year, Ravi Manghani, GTM Research's director of energy storage, said in a statement.

"The industry shouldn't get too comfortable," Manghani said. "There aren't that many 10+ megawatt-hour projects in the 2017 pipeline, indicating that the first quarter may be the largest quarter this year."

Leading States

California, which has a goal to install 1.3 gigawatts worth of batteries by 2020, remains the national leader in energy storage, with 238 megawatts installed. It's followed by Arizona, Hawaii, Massachusetts, New York and Texas.

Nearly all the systems installed in the last year used lithium ion batteries, according to GTM. The study didn't include pumped-storage hydroelectricity systems, which draw water to hilltop reservoirs and then release it later to power electric generators.

Prince on Funding Solar Power: Let's Go Crazy

Posted June 06, 2017, 02:09 P.M. ET

By Brian Eckhouse

Before his abrupt death a year ago, the pop musician Prince made an investment in green energy that's now helping solar start-ups weather an assault from President Donald Trump.

It started with a conversation in 2011 between Prince and his friend Van Jones, a CNN commentator and California human rights agitator and onetime green-jobs adviser to President Barack Obama.

"He asked, 'If I have a quarter-million dollars, what can I do with it?'" Jones recalled in an interview. "My wife said he should put solar panels all over Oakland."

That led to the creation of Powerhouse, a rare for-profit incubator dedicated to putting clean-tech entrepreneurs together with investors. The company has helped 43 start-ups get on their feet in an era when venture capital funding for renewables has plunged and Trump is working to slash funds for early-stage entities from the U.S. Department of Energy.

It's an example of how fledgling solar companies are relying on angel investors, foundations and family offices for seed money. And it has helped make Oakland, across a bay from San Francisco, a hive for clean-tech finance with 13 companies and six industry organizations working near Powerhouse's offices.

Move to Oakland

With a grant from Prince, Jones brought in Billy Parish, founder and chief executive officer of Solar Mosaic Inc., then a rookie crowdfunding loan provider working in Arizona. Parish moved Solar Mosaic to Oakland, where he met Emily Kirsch. She was a green jobs campaigner at the Ella Baker Center for Human Rights, a non-profit that Jones co-founded. Kirsch worked with Solar Mosaic on its first four projects then had the idea to make money helping young companies.

"If my support could help one company, what if our network could help 10 or 50 companies?" said Kirsch, 31.

That's where the story ended for Prince, who died in April 2016 at age 57. Jones said Prince wanted his involvement to remain anonymous.

Powerhouse found its initial home in the office of another emerging solar company, Sungevity Inc. Mosaic, an early Powerhouse company, was also based there at the time.

The incubator emerged as venture capital dried up following unprofitable investments in solar manufacturing and biofuel start-ups. VCs provided $4.3 billion for clean-energy last year, less than a tenth of the $50.2 billion peak in 2007, according to Bloomberg New Energy Finance.

Trump has signaled he wants to cut seed money flowing from DOE programs, and that is apt to cut the number of investors willing to back the industry. A DOE spokeswoman didn't comment.

"The tourists are out," said Nancy Pfund, founder and managing partner of DBL Partners LP, a clean-tech venture capital firm that invested and early backer of Elon Musk companies including

Tesla Inc.

Venture is Thriving

Even so, Powerhouse is thriving. Kirsch says it's making money, though she declined to say how much. About half of the entrepreneurs it's backed were founded by women and minorities—above the industry norm, Kirsch said. Those companies include:

• BrightCurrent, which offers field marketing and call-center support for home-energy management;

• PVComplete, which designs and engineers solar projects for other companies;

• UtilityAPI, which provides energy data to solar and storage companies; and

• Hot 4 Solar, which helps identify neighborhoods ripe for rooftop solar.

For the entrepreneurs involved, Powerhouse has helped them shift careers after they had identified gaps in the market, using skills from bigger companies like the now bankrupt SunEdison Inc.

At SolarCity Corp., a rooftop panel installer now woven into Tesla, George Zviagin wanted to develop software for cash-flow forecasts and energy production. While senior executives embraced the idea, funds were lacking, he said. So, he went out on his own.

"I was already at the biggest company, and was fortunate to have joined before it IPO-ed," said Zviagin, who founded Ra Power Management. "I got some early validation, sold my stock, and used that to bootstrap us for the first year."

Claudia Eyzaguirre, co-founder and CEO of PVComplete, has hired from within the Powerhouse community. Her company employs 11, including five at Powerhouse. "The cross-fertilization is strong," she says.

BrightCurrent CEO John Bourne, who used to work at SunEdison, now has 125 workers including eight at Powerhouse nearby.

"We are like the kids who came back to live at home because we love our parents," Bourne said.

At Powerhouse's office, a short walk from the headquarters of the music streaming business Pandora Media Inc., the decor is decidedly techy, with conference tables made from reconstituted solar panels. A replica of the Millennium Falcon sits on a coffee table, and Polaroid photos of the 107 members of the Powerhouse community are fastened to strings on the wall behind Kirsch's standing desk.

The mood remains optimistic even with funding cuts looming. After a period of rapid growth in solar installations, SunEdison's collapse rattled confidence. Some executives say the industry would benefit from specialists like those at Powerhouse with a sober approach to funding.

"We had this huge, huge party—it was 'Party Like it's 1999,'" says PVComplete's Eyzaguirre. "A correction in this sector wouldn't be a terrible thing."

Germany Rejects Curbing Wind Auctions as Clean Power Surges

Posted June 06, 2017, 02:04 P.M. ET

By Jessica Shankleman and Brian Parkin

Germany's ruling coalition has no plans to curb auctions of onshore wind power even though capacity coming online has strained the electricity grid.

Rainer Baake, a deputy economy and energy minister, said grid upgrades are keeping pace with the growth of onshore wind capacity and there are no plans to cap auction amounts. Coalition lawmakers including Deputy Christian Democratic caucus whip Michael Fuchs have called for the pace of new tenders to be cut to give the network more time to accommodate additional supply.

"I don't expect any changes," said Baake June 5 at a clean energy conference in London. "Everyone is working very hard now on implementing these grid plans—but it's a constant race."

Germany auction strategy may be headed for a review after the general election due in September, regardless of Baake's confidence in the current system. Green power supply is shooting past ceilings set by the government last year, driven by new wind power installations. That's made the electricity market a rising priority for the government that takes office after the vote.

Clean power may jump to 35 percent or more of the nation's electricity consumption this year, up from 32 percent last year, said Baake. Chancellor Angela Merkel's administration rolled out auctions for onshore and offshore wind this year to control the pace of renewables expansion. The new system set a limit on the share of green energy in the power mix at 40 percent to 45 percent by 2025, in contrast with previous feed-in tariff structure where all projects that qualified could get subsidized power purchase agreements.

The lower threshold of 40 percent may be realized in 2020 or even earlier, according to the Christian Democrats. They note transition rules cobbled last year to ease the switch from feed-in tariffs to auctions have been generous to developers.

Green-project developers rushed to reach a Dec. 31 deadline for getting contracts under the old subsidy system, putting the grid on track to absorb almost 9 gigawatts of new capacity by the end of 2018. That's on top of another 2.8 gigawatts of onshore power that's being auctioned each year starting in 2017, giving Germany the biggest boost in clean energy in two decades.

The speed of the increase in green power supply is alarming Merkel's party, since wind and solar have traditionally been more expensive than fossil-fuel generation such as coal. Germany's planned "super power highway," which is designed to ship wind and solar power from the north to the south, won't start before 2020 and isn't set to be complete until 2025.

Indian State Introduces First Emissions Rating System for Factories

Posted June 06, 2017, 11:12 A.M. ET

By Madhur Singh

The heavily industrialized state of Maharashtra launched India's first emissions rating system for factories in eight sectors identified as highly polluting.

Home to 75,000 factories, Maharashtra is using pollution data the government is collecting under a continuous emissions monitoring system for particulates to rate its factories' performance on a five-star scale—one for the worst performers and five for the best. The first ratings were made public June 5.

The eight sectors under evaluation are cement, chemicals, metal works, paper, pharmaceuticals, power, sugar and distilleries, and textiles. About 12,500 factories among these sectors have been identified as high polluting.

Hindustan Unilever Ltd.'s chemicals plant at Akola in central Maharashtra is among those given a single star in its category. "We will engage with Maharashtra Pollution Control Board to understand the basis of its findings," a company spokesperson told Bloomberg BNA in an email June 5.

Independent Labs Hired

The MPCB hired independent laboratories that used stack tests to measure the gas stream from a single location within a factory to determine emissions. Maharashtra's program so far has rated only those factories in which at least four recent stack samples have been taken.

The ratings will help plant managers improve environmental quality and sustain regulatory compliance, make it possible to share industry best practices, and bring about transparency and raise awareness among the public about industrial emissions, according to the Energy Policy Institute at the University of Chicago, which is collaborating on the program with Maharashtra Pollution Control Board (MPCB), MIT's Jameel Poverty Action Lab, Yale University, and Evidence for Policy Design at Harvard University.

"The star-rating program would ensure that these industries are reliably identified and targeted for remedial action, such as more frequent monitoring or upgradation of air pollution control equipment," the institute said in a statement. It also urged residents living near a one-star industry to contact the MPCB's regional offices and request monitoring and cleanup actions.

"As we collect more data, we will also be able to add more industries to the program," the email said, adding, "MPCB is also looking into expanding the star rating system to other pollutants, and incorporating the star-rating index into other MPCB programs."

It's not known yet if this program will be introduced in other states.

Good Thursday morning. THE LATEST ON STEVE SCALISE -- "Scalise remains in critical condition after mass shooting," by Louis Nelson, John Bresnahan, and Jake Sherman: "House Majority Whip Steve Scalise is in critical condition in a Washington hospital, and will require additional surgeries after a bullet pierced his hip, injured organs and caused 'severe bleeding,' according to a statement Wednesday night. Scalise, a Louisiana Republican, is in MedStar Washington Hospital Center in Northwest D.C., where he has had at least two procedures, and 'multiple units of blood transfusion,' the hospital said Wednesday night. Scalise was brought to the hospital in 'shock,' the statement said. President Donald Trump and first lady Melania Trump visited the hospital Wednesday night, and brought the Scalise family flowers." http://politi.co/2ru9BWi

-- @realDonaldTrump at 9:41 p.m.: "Just left hospital. Rep. Steve Scalise, one of the truly great people, is in very tough shape - but he is a real fighter. Pray for Steve!"

STATEMENT FROM MATT MIKA'S FAMILY: "Matt suffered multiple gunshot wounds. He recently came out of surgery but remains in the ICU in critical condition and we expect him to stay there for at least several days. Our family is now here with him and we continue to ask for privacy and understanding while we focus on Matt and his recovery.

"Many have asked about Matt and what we can share about him. While the attack today was a terrible surprise, Matt's presence on the ball field, helping longtime colleagues and friends was not. He is a very thoughtful, fun-loving person who is

competitive and loyal; all things which contributed to his continued commitment to the Congressional Baseball Game."

-- "Who were the people injured at Wednesday's baseball practice shooting?," by Rachael Bade, Theo Meyer, John Lauinger, and Kyle Cheney: http://politi.co/2tppcmG

THE VENEER, SHATTERED. Members of Congress have long thought of Washington as a safe space, of sorts. Sure, they engage in heated rhetoric in the Capitol, waging partisan war from early in the morning until late at night. But their life in Washington is quite sheltered: they exercise in a members-only gym. Many of them sleep in their offices in the Capitol complex. They eat and drink together at partisan social clubs. But we're hearing a refrain we first heard in 2011, when Gabby Giffords was shot: we're sitting ducks.

-- FROM USA TODAY'S HEIDI PRZYBYLA: "[L]awmakers including Cedric Richmond, D-La., had expressed fears last week about member safety. Richmond, who chairs the Congressional Black Caucus, raised his concerns directly to House Speaker Paul Ryan, R-Wis." https://usat.ly/2rjOi5E ***Richmond is a good friend of Scalise's, as well.***

THE SENSE OF SHOCK in the Capitol -- especially the House -- is extraordinarily palpable. The mood was tense all day, and remained uncertain at night. Several House Republicans were texting us throughout the evening, wondering about the severity of Scalise's injuries. Lawmakers are extraordinarily shaken. Forget party affiliation: Congress -- and Washington -- is a big saga with a set of predictable characters: lawmakers, aides, lobbyists, reporters. And when one gets hurt, sick, injured -- many realize it could easily be them. And a shooting like this is causing lawmakers and staff to take stock of their own safety. Countless lawmakers we spoke to throughout the day yesterday were rethinking their out-in-front, prominent roles in today's political scene.

CAPITOL HILL REPORTERS were shaken up, as well. First of all, dozens of reporters work in the Capitol every day. And unlike the White House -- which regularly dumps all over reporters and decries their work product as phony -- lawmakers on the Hill are generally cordial with journalists in the Capitol and respect the job we do. We spend years covering lawmakers up close and oftentimes develop an easy rapport with people like Scalise -- savvy pols who successfully make their way up the leadership ladder. Scalise shows up at off-the-record happy hours for reporters at the annual Republican retreat. His office, like others, throws cocktail receptions to get to become better acquainted with Capitol Hill reporters. That doesn't mean the relationship isn't adversarial at times -- it most definitely is. It means building a personal relationship -- getting to know each other as human beings -- is important to both sides. We know Scalise, Paul Ryan, Kevin McCarthy, Nancy Pelosi and Steny Hoyer as politicians, but most of us have had many occasions to talk to them on a personal level, as well.

--"Photos: Following the aftermath of the congressional shooting" -- ***43 pix***
http://politi.co/2sdsCd0

PRESIDENT DONALD TRUMP is getting bipartisan plaudits so far for his strong speech Wednesday, and his visit to Scalise family in the hospital Wednesday night.

HAPPENING TODAY -- Trump is giving a speech and signing an executive order on apprenticeships. Vice President Mike Pence will be in Miami to give the keynote address at the Conference on Prosperity and Security, a gathering focused on Central American political and security issues.

THE HOUSE is out of session after 4 p.m. today. The Congressional Baseball Game is on. Doors open at 5:30 p.m. and first pitch is set for 7:05 p.m. at Nationals Park. ***More info and tickets here*** http://atmlb.com/2sCV4aM

--"The Congressional Baseball Game: A History in Pictures: How the most bipartisan event in Washington has changed over time" -- ***10 pix*** http://politi.co/2rucdng

THE POLITICS -- "Democrats wary of reviving gun debate too soon," by Seung Min Kim, Burgess Everett and Heather Caygle: "One year ago, Sen. Chris Murphy sprang into action almost immediately after a gun massacre at an Orlando nightclub - accusing Congress of an 'unconscionable deafening silence' and launching a 15-hour filibuster on the Senate floor. But the gun-control advocate who once argued that lawmakers should put forward 'legislative action within an hour of a shooting' was more circumspect on Wednesday after a shooting at a congressional baseball practice in the suburbs of Washington. One tragic incident, he acknowledged, won't move the needle - even one that affected one of their own, House Majority Whip Steve Scalise (R-La.). ...

"[T]he tone among even the most ardent proponents of stricter gun laws was dramatically different. In multiple interviews, several Democratic lawmakers urged that no, today was not the day to revive the dormant gun control debate. It was too soon, it hit too close to home - and lawmakers simply didn't want to stand accused of politicizing a shooting that injured a colleague and friend." http://politi.co/2t50qZx

-- JONATHAN MARTIN on A18 of the NYT: **"Their Own Targeted, G.O.P. Lawmakers Want Looser Gun Laws, Not Stricter Ones."** http://nyti.ms/2s3RtBh

ON THE HOUSE FLOOR TODAY -- HOUSE MAJORITY LEADER KEVIN MCCARTHY will "offer a resolution to commend the heroic actions of Capitol Police and other first responders, and recognize everyone affected by this tragic incident."

****** **A message from POET - one of the world's largest ethanol producers:** Led by scientists and engineers, POET operates 30 biofuel facilities & America's first cellulosic biofuel plant. BEHIND THE SCENES -- FROM KYLE CHENEY, our incredibly versatile House reporter who spent the day in Alexandria reporting on the shooting: "In the course of reporting from Alexandria, I had two eye-opening encounters with witnesses that really

gnawed at me during such a harrowing moment. I arrived at the ballpark less than an hour after the shooting and overheard one witness - a man possibly in his mid-20s -- excitedly describing the incident in vivid detail over the phone. It was still a murky situation at that point, so as soon as he hung up, I asked him if he could repeat to me what he had seen.

"The man immediately tensed up and told me that there was no way he'd talk to the media because he can't stand the press and he thinks we're all complicit in leaking (of what, I'm not sure). I told him I personally hadn't 'leaked' anything but in fact knew and reported on some of the people on the field that morning - and that his information might help provide some clarity at a critical moment. He still refused. A short while later, while holed up in a coffee shop across from the field, I chatted with a young woman who also witnessed the aftermath. She said she took comfort when she found out the assailant had targeted members of Congress - not because she wished them any harm but because it would've been more unnerving, she said, had the violence been random. Both conversations were revealing about some of the sad realities we now live with.

"It's only fair if I also mention that these encounters were exceptions on a day of many kindnesses. Most witnesses were forthcoming with as much detail as they could muster, and I watched as random passersby delivered Gatorade, iced tea and even a bag full of Chick-fil-A to police on the scene. And the police then shared the spoils with journalists, pedestrians and others baking in the Alexandria sun."

WAPO SCOOP -- "Special counsel is investigating Trump for possible obstruction of justice, officials say," by Devlin Barrett, Adam Entous, Ellen Nakashima and Sari Horowitz: "The move by special counsel Robert S. Mueller III to investigate Trump's conduct marks a major turning point in the nearly year-old FBI investigation, which until recently focused on Russian meddling during the presidential campaign and on whether there was any coordination between the Trump campaign and the Kremlin. Investigators have also been looking for any evidence of possible financial crimes among Trump associates, officials said. ...

"Five people briefed on the interview requests, speaking on the condition of anonymity because they were not authorized to discuss the matter publicly, said that Daniel Coats, the current director of national intelligence, Mike Rogers, head of the National Security Agency, and Rogers's recently departed deputy, Richard Ledgett, agreed to be interviewed by Mueller's investigators as early as this week. The investigation has been cloaked in secrecy, and it is unclear how many others have been questioned by the FBI. ...

"The White House now refers all questions about the Russia investigation to Trump's personal attorney, Marc Kasowitz. 'The FBI leak of information regarding the president is outrageous, inexcusable and illegal,' said Mark Corallo, a spokesman for Kasowitz." http://wapo.st/2rjkqqo

-- WSJ's Del Quentin Wilber, Shane Harris and Paul Sonne: "The special counsel

also plans to interview Rick Ledgett, who recently retired as the deputy director of the NSA ... While Mr. Ledgett was still in office, he wrote a memo documenting a phone call that Mr. Rogers had with Mr. Trump, according to people familiar with the matter. During the call, the president questioned the veracity of the intelligence community's judgment that Russia had interfered with the election and tried to persuade Mr. Rogers to say there was no evidence of collusion between his campaign and Russian officials." http://on.wsj.com/2sD4vXP

HUFFPOST and **DRUDGE** earlier this morning had pretty much the same banner - **HuffPo**: "BDAY PRESENT FOR PREZ: OBSTRUCTION INQUIRY" ... **Drudge**: "WASH POST BDAY PRESENT TO TRUMP: MUELLER PROBES OBSTRUCTION".

CAN'T STOP, WON'T STOP -- "Manafort still doing international work," by Ken Vogel: "Paul Manafort is at the center of an FBI investigation into ties between President Donald Trump's team and the Russians, but that hasn't stopped him from doing business with international figures and companies, partly by claiming continued access to Trump, according to people familiar with his dealings.

"Manafort in recent weeks has either consulted or worked with a Chinese construction billionaire looking to expand his business overseas and a telecommunications firm interested in regulatory approval from governments in Asia and the Middle East, as well as an investment fund claiming links to the Chinese government, according to documents and interviews.

"Manafort quietly consulted on a proposal under which the Chinese fund - the China Development Fund - would invest $30 billion or more in the Puerto Rican government's bond debt and possibly the island's critical infrastructure, according to documents and interviews with four people familiar with the negotiations, including a Manafort business partner.

"One of the people, a lawyer involved in the discussions, said Manafort indicated that he could convince the Trump administration to support any resulting deal, because he's remained in contact with Trump's team, and that he played a role in helping to soften Trump's tough campaign rhetoric on China. 'He's going around telling people that he's still talking to the president and -- even more than that -- that he is helping to shape Trump's foreign policy,' said the lawyer involved in the discussions." http://politi.co/2rjtsDO

TARA PALMERI AND KEN VOGEL: "Trump huddled with donors on day of Comey testimony": "On the same day last week that fired FBI Director James Comey delivered his damaging Senate testimony, President Donald Trump's team summoned about a dozen top donors to the White House to rally support for Trump's agenda. The donors -- including Ken Griffin, Doug DeVos, Tom Hicks, Jr., Bekah Mercer, Todd Ricketts, Tom Saunders, Paul Singer and Dick Uihlein -- gathered in the Roosevelt Room on June 8 for a briefing from Trump's legislative director Marc Short, according to a senior administration official and other people familiar with the event.

"These people said that Trump himself stopped by the briefing to greet the donors, while Vice President Mike Pence, White House Chief of Staff Reince Priebus and presidential counselor Kellyanne Conway also spent time at the event. ... A White House spokesperson did not respond to a request for comment on the donor briefing. But a senior administration official said that topics covered during the briefing included healthcare, tax reform, the confirmation of Supreme Court justice Neil Gorsuch, pending judicial nominations, the Paris accord and the Saudi arms sale. '[It was a] 'here's what we see as the legislative calendar and how you can be helpful' type of meeting,' the official said." http://politi.co/2rtB8HL

COMING ATTRACTIONS -- "Jeh Johnson to testify publicly in House Russia probe," by Austin Wright: "Former Homeland Security Secretary Jeh Johnson is set to testify publicly next Wednesday before the House Intelligence Committee as part of its investigation into Russia's election meddling, according to a congressional source. Johnson appeared earlier this week before the Senate Intelligence Committee, but the session was closed." http://politi.co/2sCSeCE

IMPORTANT READ -- MEGYN KELLY SPEAKS -- NYT'S JIM RUTENBERG: "Megyn Kelly, Alex Jones and a Fine Line Between News and Promotion": "Where's the line between covering a scoundrel as a news figure and giving him a promotional platform? The question has consumed Megyn Kelly this week, after she showed a trailer Sunday night of her coming feature on NBC about Alex Jones, the conspiracy theorist who has questioned whether the Sandy Hook school massacre truly happened and asserted that Sept. 11 was an inside job....

"'What we do as journalists is we shine a light on those with power, those with influence, those who have become culturally relevant,' she said. 'Of course, it's upsetting to know that doing that causes any upset to the Newtown families, many of whom I know well. But I have to do my job.'... 'As journalists, we don't get to interview only the good guys - that's not journalism,' ... 'It's going to be very difficult for us to keep an eye on the more controversial figures of our time if we never talk to them.'" https://nyti.ms/2tmhgmj

THE JUICE ...

-- HAPPY BIRTHDAY, MR. PRESIDENT: Trump celebrated his 71st birthday with dinner at the White House before going to visit Scalise in the hospital, per a pool report. Eric, Donald Jr., Ivanka and Jared Kushner, their kids and Tiffany were all there.

-- ISAAC DOVERE is reporting that Lambda Legal is opening up a D.C. office and plans to raise an additional $25 million over the next for years in an effort to ratchet up the fight against the Trump administration. Sharon McGowan, who was until January a top attorney in the Justice Department's civil rights division under President Barack Obama, is running the office. http://politi.co/2sdDcRd

-- **SPOTTED:** Chris Ruddy, Rep. Peter King (R-N.Y.) and Sen. Lindsey Graham (R-S.C.) having an animated conversation in the lobby of Trump Hotel on Tuesday night.

-- **SENATE LEADERSHIP FUND** reported dropping $443,104 to boost Sen. Luther Strange's (R-Ala.) candidacy. ... The **CHAMBER OF COMMERCE** reported $153,491 in spending on behalf of Karen Handel in Georgia.

Playbook Reads

PHOTO DU JOUR: President Donald Trump and first lady Melania Trump talk with Dr. Ira Y. Rabin after visiting MedStar Washington Hospital Center in Washington on June 14 where House Majority Whip Steve Scalise was taken after being shot in Alexandria, Va., during a Congressional baseball practice. | Pablo Martinez Monsivais/AP Photo

THE ALLEGED SHOOTER -- "James Hodgkinson's long descent into rage: 'Nobody really knew anything about him,'" by Lorraine Woellert, Josh Meyer and Alan Greenblatt: "James T. Hodgkinson lived a seemingly comfortable existence back home. He had a wife, friends and a pool where he hosted parties. How and why his life ended on a blood-soaked field halfway across the nation remains largely a mystery to investigators trying to piece together his life. Anger, plain and simple, seemed to be one driver. A man prone to aggressive outbursts, Hodgkinson had grown increasingly angry at the political order in recent years, lashing out online against President Donald Trump and other Republicans. ...

"Hodgkinson was no stranger to law enforcement. He had a lengthy arrest record and seemed prone to violent fits. Most recently, he had been warned about shooting a high-powered gun in the vicinity of his neighbors' houses. ... In April 2006, he was arrested on firearms and battery charges after he allegedly punched his girlfriend in the face and pulled a 12-gauge shotgun on a witness, Joel Fernandez, who had attempted to intervene." http://politi.co/2s4g6Ot

THE BIG PICTURE -- "How an Annual Ballgame Has Kept Congress Civil," by Ben Strauss for Politico Magazine: "What might seem like just a bunch of middle-aged men reliving their high school glory, has become in recent years a meaningful tribute to the painfully nostalgic notion of old-fashioned bipartisanship in an increasingly divided nation. And so while one baseball team -- this one made up of Republican Congressmen and Senators -- cowered behind fences and trees to save their lives, their ostensible opponents -- a group of Democratic lawmakers -- gathered in a dugout 10 miles away in Northeast Washington. They stood arm in arm, and prayed for their colleagues." http://politi.co/2sviQpp

-- "Obama reaches out to Sen. Flake after shooting," by Elana Schor: "Former President Barack Obama reached out to Sen. Jeff Flake Wednesday morning in the

wake of the shooting at the GOP's congressional baseball game practice to extend his 'best wishes and prayers' for the victims, the Arizona Republican said." http://politi.co/2t4QeQM

****** **A message from POET - one of the world's largest ethanol producers:** Led by scientists and engineers, POET is a biofuels company built from innovation. POET operates 30 biofuel facilities across eight states & America's first cellulosic biofuel plant. Across the country, we support 40,000 renewable energy jobs producing a cleaner fuel for millions of drivers, every day. Inside the Beltway, we advocate for pro-biofuel policies to remove barriers to consumer fuel choices with a Reid Vapor Pressure (RVP) fix, support a strong Renewable Fuel Standard, and open new markets for U.S. exports and trade. We are securing a cleaner future for all of us. We are POET and we're driving innovation, from the ground up. Learn more here. ******

GARRETT GRAFF in POLITICO Magazine, "How Congress Failed to Plan for Doomsday: What would happen if some crazed gunman or terrorist massacred Congress? We don't really know-and that's bad news for our democracy": "One idea floated was that each member of Congress should designate his or her own list of successors in case of incapacitation-with those successors serving until either the next regular election or the member regained the ability to hold office. Several states, including Delaware and Texas, had passed similar bills during the 1950s and 1960s at the height of the Cold War to reconstitute their state legislatures following a nuclear attack. Two former House speakers, Thomas Foley and Newt Gingrich, endorsed that 'expeditious path' to solving the congressional continuity issue and preserving the House's directly elected 'legitimacy.'" http://politi.co/2rjrgfy

FOR YOUR RADAR -- "Turkish Guards Will Be Charged in Embassy Protest, Officials Say," by NYT's Nick Fandos: "Law enforcement officials plan to announce charges Thursday against a dozen members of the Turkish president's security detail for their involvement in a brutal attack on protesters outside the Turkish ambassador's residence here last month, two American officials said on Wednesday. ... The police planned to announce the charges at a news conference on Thursday morning." http://nyti.ms/2s3N6GE

NOT THE ONION -- "Rodman gives Kim the gift of Trump: 'The Art of the Deal,'" by AP's Eric Talmadge in Pyongyang: "Dennis Rodman has delivered a message from President Donald Trump to North Korea -- sort of. On Thursday, the former NBA player gave the country's sports minister a copy of Trump's book 'The Art of the Deal,' a present intended for North Korean leader Kim Jong Un. It wasn't signed by Trump, who was Rodman's boss for two seasons of the 'Celebrity Apprentice' reality TV show. Rodman has said his visit has nothing to do with the White House." http://apne.ws/2rz07EJ

MEDIAWATCH -- GABE SHERMAN in NYMag, "Fox News Is Dropping Its 'Fair & Balanced' Slogan": "As Fox News moves further into the post-Roger Ailes era, the network is shedding one of its most iconic elements. According to network executives,

Fox News has abandoned the marketing slogan 'Fair & Balanced.' ... [One] executive explained that the tagline was 'too closely associated with Roger.' Fox executives have been instructed by management to market the network by its other tagline: 'Most Watched. Most Trusted.' It is hard to overstate the significance of what shedding 'Fair & Balanced' means for Fox News. (It would be like the New York Times giving up 'All the News That's Fit to Print.') Ailes invented the slogan when he launched the network in 1996, and over the years it became a quasi-religious doctrine among Fox's anchors and viewers. ... In the annals of modern advertising, 'Fair & Balanced' will be considered a classic." http://nym.ag/2sdxEWZ

Playbookers

SPOTTED last night at the Third Annual Sandy Hook Promise Gala at the Mellon Auditorium: The three co-chairs: Sen. Chris Murphy (D-Conn.), Sen. Richard Blumenthal (D-Conn.) and Rep. Elizabeth Esty (D-Conn.). Sen. Joe Manchin (D-W.Va.) and Sen. Susan Collins (R-Maine), who were honored for the Toomey-Manchin bill and No Fly No Buy, respectively. Emcees were Sandy Hook parents Mark Barden and Nicole Hockley, who replaced Megyn Kelly after she interviewed Alex Jones, the media figure who alleges the massacre is a hoax. **ALSO SPOTTED:** Sen. Pat Toomey (R-Pa.), House Minority Whip Steny Hoyer (D-Md.), Rep. Jim Himes (D-Conn.), Rep. Sheila Jackson Lee (D-Texas), Rachel Kelly, Joe Dunn, David Bonine, Cynthia Pullom, Ian Rayder, Lou Constantino, Francis Creighton, Cindy Brown, Bruce Heiman, Liz Allen and Nasim Fussell.

OUT AND ABOUT -- On the near 45th anniversary of the Watergate break-in (June 17, 1972), Steve Clemons held a discussion last night at the Watergate Hotel titled "Watergate Then and Now," where Steve interviewed Scott Stossel, Jennifer Rubin, McKay Coppins and Thomas Mallon. **SPOTTED** : Rakel and Jacques Cohen, Jeff David, Rep. Debbie Dingell (D-Mich.), Kevin Baron, Sally Quinn, Quinn Bradlee, Harris Wofford, Matthew Charlton, Yael Luttwak, James Barbour, Kathy Gilsinan, Will Hiley, Robb Harleston, Ron Christie, Neil Munro, Jed Shein, Annie Groer, David and Danielle Frum, Tomicah Tillemann, Indira Lakshmanan, Allen Abel, Kevin Chaffee, Grover Norquist, Michael Mael, Gary Silversmith, U.K. Ambassador Kim Darroch, Armanda Downes, Max Neuberger.

OUT AND ABOUT IN NYC -- The Hudson Institute Wednesday night hosted its spring reception in New York at the home of Joe and Marlene Ricketts. UN Ambassador Nikki Haley sat down with Hudson CEO Ken Weinstein for an off-the-record chat about her role as U.S. Ambassador to the UN. Haley said she told Trump "I'm not going to be a talking head or a wallflower" when he offered her the job. On Jim Mattis, she said "I think he's the coolest guy I've ever met ... other than (her husband) Michael." **SPOTTED:** Joe and Marlene Ricketts, Todd Ricketts, Silvie Legere, Paul Singer, BofA's Jeffrey Peek, Annie Dickerson, Angela Meyers, Ed Cox, Deputy UN Ambassador Jon Lerner, Hudsonians Ken Weinstein, John Walters, Scooter Libby, Walter Russell Mead,

Chris DeMuth

SPOTTED at a Greenberg, Quinlan, Rosner party last night for new COO Lindsey Reynolds (longtime COO of the DNC) and new partners Elizabeth Sena and Kristi Lowe: Anna Greenberg, John Hagner, Al Quinlan, Lauren Dillon, Jeremy Rosner, Dan Sena, Earl Fowlkes, Jeremy Baker, and Maureen Garde.

SPOTTED Tuesday night aboard the super yacht of philanthropists John Evans and Steve Wozencraft for New America's Bretton Woods II at Sea event where attendees discussed how to address global risks though strategic investments in social impact and development: Canada's UN Ambassador and Canadian PM Justin Trudeau's confidant Marc-Andre Blanchard, top World Bank official Aly Rahim, Bretton Woods II director Tomicah Tillemann, Facebook's Craig Mullaney, Sovereign Investor Institute chairman Scott Kalb, Edelman's Peter Segall, Georgetown Dean Joel Hellman, and representatives from the White House, State Department and USAID.

TRANSITIONS -- LIZ JOHNSON has joined U.S. Immigration and Customs Enforcement as director of its office of public affairs, where she will direct the agency's global communications efforts. She was previously the communications director for former Sen. Kelly Ayotte (R-N.H.) and most recently served as spokeswoman for Supreme Court nominee Neil Gorsuch during the Senate confirmation process. ... **Jessica Jennings,** formerly with the Dem Convention and HFA, is the new director of communications at the University of Maryland. She's been working with Indivisible since their launch post-election and was previously press secretary at the British Embassy in Washington.

... **Briannon Gillis** has recently joined Emergent BioSolutions as PAC manager on the government affairs team. Previously she was a PAC fundraiser for Sens. Chuck Schumer, Dianne Feinstein, and Mark Udall, Reps. Paul Tonko, Matt Cartwright, Bonnie Watson-Coleman, Tom Suozzi, and Louise Slaughter, as well as finance director for Kathleen Matthews. ... **Henry Darwin** has been hired to serve as chief of operations for the EPA. He previously was COO for the Doug Ducey administration since August 2015. ... **Julie Kearney,** VP of regulatory affairs for the Consumer Technology Association, was picked yesterday as the new president of the Federal Communications Bar Association.

--"Emily's List taps a Washington outsider as executive director," by WaPo's Philip Rucker: "Emily Cain, who helped lead fellow Democrats to the majority in the Maine House of Representatives in 2012, has been tapped to try to do the same for Democrats nationally at the helm of Emily's List, which works to elect pro-choice Democratic women to offices ranging from city councils to the presidency." http://wapo.st/2t4xW2b

WELCOME TO THE WORLD -- Becca Ginsberg Rutkoff, head of D.C. and regional communications for Google (and a birthday girl today), and **Robby Rutkoff**, VP for corporate social responsibility at Guggenheim Partners, welcomed their first child, Henry Langer Rutkoff late Monday night. Henry, Mom and Dad are home from the hospital and

eating like champs. ***Pics*** http://bit.ly/2sCOiSl ... http://bit.ly/2ryHOPX

BIRTHDAY OF THE DAY: Dana Bash, CNN's chief political correspondent. How she's celebrating: "My birthday falls on my son's last day of kindergarten this year. It's a half day, which means I get to spend most of it with him. What could be better?" ***Read her Playbook Plus Q&A*:** http://politi.co/2s4msxq

BIRTHDAYS: Adam Jentleson, former deputy chief of staff for Harry Reid now senior strategic advisor at CAP Action ... Dan Schwerin (hat tip: brother Josh) ... Sarah Hurwitz (h/t Michael Kikukawa) ... Becca Ginsberg Rutkoff, Google comms. maven ... Ryan Chittum, reporter for International Consortium of Investigative Journalists ... Fox News star Marie Harf, the pride of Granville, Ohio and former senior advisor for strategic comms. to Secretary Kerry (h/t Steve Clemons) ... Alyssa Farah, comms director and senior adviser for the House Freedom Caucus, is 28 (but actually ageless) ... AP's Evan Vucci ... Johnny Hallyday ... former House Majority Whip Tony Coelho, now an advocate for the disabled, is 75 ... ABC News digital journalist Ali Rogin is 3-0 ... Politico's Brian Faler ... Reps. Adam Smith and Rick Larson (D-Wash.) are both 52 ... Rep. Jim Bridenstine (R-Okla.) is 42 ... NYT's Clifford Levy is 5-0 ...

... MSNBC producer William Rabbe ... Joseph Brazauskas, staff director for the subcommittee on environment for the House Science, Space, and Technology Committee, is 35, celebrating by playing the Pizza Party game and Mall Madness over happy hour on Friday night with friends (h/t Kristina Baum) ... former Rep. Todd Tiahrt (R-Kans.) is 66 ... former Rep. Tony Coelho (D-Calif.) is 75 ... Jamie Greenheck, global managing director of food, beverage and ag at FleishmanHillard ... Susan Toffler, a CNN alum ... former Virginia Gov. Bob McDonnell is 63 ... Tim Wilson is 36 ... Sara Libby ... Abigail Wuest ... Jana Plat ... David Dreyer ... Deborah Lukovich ... Sue Grady (h/ts Teresa Vilmain) ... former Va. Lt. Gov. Bill Bolling is 6-0 ... Morgan Feist ... Steven Stafford ... Karen Townsend ... Nick Luna ... Scott Monaghan is 6-0 ... Jim Belushi is 62 ... actress Helen Hunt is 54 ... Courteney Cox is 53 ... Ice Cube is 48 ... Neil Patrick Harris is 44 (h/ts AP)

Subject: BREAKING NEWS: Trump: 'Most people' would have taken Russian lawyer meeting

President Donald Trump defended his eldest son, saying on Thursday that "most people" would have taken the June 2016 meeting with the Russian lawyer that has enveloped Donald Trump Jr. in controversy this week.

"I think from a practical standpoint, most people would have taken that meeting. It's called opposition research or even research into your opponent," Trump said during a press conference in Paris. His son said he took the meeting because he was told the lawyer, who has been alleged to have ties to the Kremlin, had information that could be detrimental to Trump's 2016 rival Hillary Clinton.

Subject: BREAKING NEWS: Trump says Comey said things that 'just weren't true' in Senate testimony

President Donald Trump accused former FBI Director James Comey on Friday of saying things that "just weren't true" in his testimony Thursday before the Senate Intelligence Committee but added that Comey also "confirmed a lot of what I said."

"No collusion, no obstruction, he's a leaker, but we want to get back to running our great country," Trump said in a news conference from the Rose Garden alongside Romanian President Klaus Iohannis. "Yesterday showed no collusion, no obstruction."

Trump claimed "total and complete vindication" in a tweet Friday morning that called Comey a "leaker" and suggested he made "so many false statements and lies" when he testified this week.

Driving the Day

Good Thursday morning. STOP US IF YOU'VE HEARD THIS BEFORE: PRESIDENT DONALD TRUMP, CHUCK SCHUMER AND NANCY PELOSI walk into a Chinese dinner on Pennsylvania Avenue....

LET'S GO OVER THE SEQUENCE OF EVENTS ...

-- THE DINNER: The White House served Trump, Schumer and Pelosi Chinese food at a rectangular table in the Blue Room of the White House. Trump sat at the head, flanked by Pelosi on the right and Schumer on the left. Eleven people attended the dinner -- all men besides Pelosi. They talked about China trade issues, in addition to immigration policy.

-- AROUND 9:30 LAST NIGHT, the White House put out a statement about the dinner, saying the president had a "constructive working dinner with Senate and House Minority Leaders, Chuck Schumer and Nancy Pelosi as well as administration officials to discuss policy and legislative priorities. These topics included tax reform, border security, DACA, infrastructure and trade."

-- AT ROUGHLY 9:45, Nancy Pelosi and Chuck Schumer's offices put out a statement saying that **PRESIDENT TRUMP** agreed to quickly "enshrine the protections of DACA into law" with "a package of border security excluding the wall, that's acceptable to both sides." **THE ASSOCIATED PRESS** sent a bulletin at 9:52 p.m. saying a deal had been cut. A source briefed on the meeting told us around 10 p.m. that the "President and the leaders agreed to pair the bipartisan DREAM Act with some border security, excluding the wall."

-- BEHIND THE SCENES, Washington started to explode. The White House legislative affairs team was sending text messages and emails to Republican Hill staff, saying the president had only agreed to work on fixing DACA soon. He didn't give up on the wall funding, but the White House conceded he said he wouldn't insist it be part of this package.

-- THE KIND-OF-SORT-OF PRESIDENTIAL PUSHBACK: **TRUMP TWEETED at 6:11 a.m.** : "No deal was made last night on DACA. Massive border security would have to be agreed to in exchange for consent. Would be subject to vote." ... **at 6:20 a.m.:**"The WALL, which is already under construction in the form of new renovation of old and existing fences and walls, will continue to be built." ...

... at 6:28 a.m.: "Does anybody really want to throw out good, educated and accomplished young people who have jobs, some serving in the military? Really!....." ... **at 6:35 a.m.:** "...They have been in our country for many years through no fault of their own - brought in by parents at young age. Plus BIG border security"

... NOW LET'S TALK ABOUT WHAT THIS MEANS...

-- WAS THERE EVER A DEAL? ARE THEY CLOSE TO A DEAL? Only time will tell. And what's a deal mean, anyway? Neither side put out any specifics. Paul Ryan and Mitch McConnell are the leaders of the Republican majority, so if you want something done, you need to conduct business with them. As McConnell told the NYT's Carl Hulse earlier this week: "One of the advantages of being the majority leader is you control the paper." That's well put, and very true. The minority has ways to try to force votes, but if you're in the minority, you don't have a say of what gets onto the House or Senate floor, by and large. And Republicans were already complaining the Trump had handed over the governing keys to Democrats.

-- YES, REPUBLICANS WERE BLINDSIDED. Paul Ryan and Mitch McConnell were not part of this discussion. Ryan sat down with Democrats Wednesday to try to begin to discuss this deal. They didn't make much progress. ***See Heather Caygle and John Bresnahan's story for more*** http://politi.co/2h4y1xM Then Pelosi and Schumer went to the White House and tried to make some progress. A senior Democratic aide told us last night that it's incumbent on the White House to coordinate with Hill Republicans and keep them in the loop.

-- THIS IS A SMART MOVE FOR DEMS. It ratchets up pressure on the GOP leadership to do something.

-- CONSERVATIVES ARE ALREADY WORRIED. Jake was texting late into the night with Hill sources of all stripes. Conservatives are particularly worried. One particularly plugged in aide pointed out that conservatives ditched Trump on health care once, and immigration is much more of a sacred cow than Obamacare. "If it's weak at all they'll flip ... [I]f it's the typical give a little more $ to ICE and call it a day they will revolt." **THE REAL STICKING POINT:** Can Republicans and Democrats agree what "real" border

security is?

IOWA REPUBLICAN STEVE KING came out almost immediately against any deal. King tweeted: "@RealDonaldTrump If AP is correct, Trump base is blown up, destroyed, irreparable, and disillusioned beyond repair. No promise is credible." ... **CHUCK GRASSLEY:** "@realDonaldTrump Morn news says u made deal w Schumer on DACA/hv ur staff brief me/ I know u undercut JudiCimm effort 4 biparty agreement" ... ***See Bob Costa's story from late last night*** http://wapo.st/2fjLamm

-- ANY DEAL ON DACA COULD BE A PROBLEM FOR REPUBLICAN LEADERS. John Boehner and Eric Cantor were thrown to the wolves a few years ago for even toying with some sort of immigration reform package. Paul Ryan promised conservatives when he won the speakership in 2015 that he would not pursue and immigration package unless it had the support of the majority of Republicans. That means whatever deal Trump cut -- or will cut -- with Schumer and Pelosi needs to have the support of 121 House Republicans. **REMEMBER:** Paul Ryan is ***always*** under the threat of an immediate referendum vote of his speakership. Immigration isn't like touching the third rail. It's like hugging an electrified pole while wearing soaking wet clothing.

-- THE REGULAR ORDER ISSUE. Republicans are notoriously uneven when it comes to putting bills through the committee process, but conservatives -- and even GOP leaders -- will say that something this significant has to go through the committees, not get crafted over crispy beef at the White House. McConnell has privately promised senators that this kind of deal would go through the committee process.

THE TIME ISSUE. Republicans have until March to get this done. They'll want to take time to get this right. But if this drags on until March, it will slow the rest of their agenda.

IT'S WORTH NOTING -- It can't be overstated: this isn't how Washington usually works. A Republican president cutting out his own party's leadership on a politically sensitive issue to work directly with Democrats is unheard of and would otherwise be considered politically perilous. We bet that this will get hashed out between Ryan, Pelosi, McConnell and Schumer at some point in the next few months.

HOW IT PLAYED -- NYT: "Democrats Say Trump Agreed to Make Deal on 'Dreamers'" http://nyti.ms/2fkobaZ ... **WAPO:** "Trump, top Democrats agree to work on deal to save 'dreamers' from deportation" http://wapo.st/2x162GM ... **WSJ:** "Trump, Democrats Shape Agreement to Protect 'Dreamers'" http://on.wsj.com/2h4w5ZT

BREITBART HEADLINE -- "AMNESTY DON" http://bit.ly/2wc40GI

****** **A message from CTIA and America's wireless industry:** The global race to deploy 5G wireless is on-and America needs to win. Government action on spectrum and infrastructure policy will allow U.S. wireless companies to invest $275 billion, create more than 3 million jobs, and add $500 billion to the economy, according to Accenture.

Learn more at CTIA.org. ******

TRUMP'S NOT THE ONLY GAME IN TOWN -- "Moderate Republicans quietly form working group to craft immigration plan," by Seung Min Kim and Rachael Bade: "Moderate House Republicans angling for a legislative fix to the Deferred Action for Childhood Arrivals program have quietly created an informal working group to try and craft an immigration plan that could pass Congress, according to GOP sources.

"The lawmakers have met off and on for months. But it was in anticipation of President Donald Trump's eventual decision last week to phase out the Obama-era executive action that granted hundreds of thousands of young undocumented immigrants work permits and deportation protections, said one person familiar with the group's workings. Now that Trump has made his DACA decision official, the group will be meeting more frequently.

"Republicans who have engaged in the casual talks include Reps. Carlos Curbelo and Mario Diaz-Balart of Florida; Jeff Denham and David Valadao of California, Mark Amodei of Nevada and Dan Newhouse of Washington, among other lawmakers. The GOP leadership is aware of these discussions, although it's not a group led by Speaker Paul Ryan (R-Wis.) nor his top deputies." http://politi.co/2x1G7Pj

WHAT TRUMP DID TWEET ABOUT LAST NIGHT -- @realDonaldTrump at 10:47 p.m.: "Crooked Hillary Clinton blames everybody (and every thing) but herself for her election loss. She lost the debates and lost her direction!" ... **at 10:52 p.m.:** "The 'deplorables' came back to haunt Hillary.They expressed their feelings loud and clear. She spent big money but, in the end, had no game!"

MEANWHILE, AT THE NAVAL OBSERVATORY ... -- VP MIKE PENCE hosted a dinner of his own ... with Republicans! **IN ATTENDANCE:** House Freedom Caucus Chairman Mark Meadows (N.C.), Reps. Jim Jordan (Ohio), Andy Barr (Ky.), Liz Cheney (Wyo.), Bob Goodlatte (Va.), Andy Harris (Md.), Vicky Hartzler (Mo.), French Hill (Ark.), Gary Palmer (Ala.), Jason Smith (Mo.) and Mark Walker (N.C.).

MUELLER UPDATE -- "Mueller Probe Has 'Red-Hot' Focus on Social Media, Officials Say," by Bloomberg's Chris Strohm: "Intelligence Committee Chairman Richard Burr, a North Carolina Republican, said Tuesday that it's 'probably more a question of when' than if there will be a hearing with Facebook officials as part of his panel's probe. Mark Warner, the committee's top Democrat and a former telecommunications company founder, said Facebook's revelation appears to be 'the tip of the iceberg. I think there's going to be much more.' 'This is the Wild, Wild West,' Warner said." https://bloom.bg/2y0U6UM

-- "Trump Administration Launches Broad New Anti-Leak Program," by BuzzFeed's Chris Geidner: "The top US national security official has directed government departments and agencies to warn employees across the entire federal government next week about the dangers and consequences of leaking even

unclassified information. ...

"The latest move is a dramatic step that could greatly expand what type of leaks are under scrutiny and who will be scrutinized. In the memo about leaks that was subsequently obtained by BuzzFeed News, National Security Adviser H.R. McMaster details a request that 'every Federal Government department and agency' hold a one-hour training next week on 'unauthorized disclosures' - of classified and certain unclassified information." http://bzfd.it/2eXlNGl

TREASURY SECRETARIES ARE JUST LIKE US... "Treasury Secretary Mnuchin asked for government jet for honeymoon," by Henry C. Jackson and Josh Dawsey: "Treasury Sec. Steve Mnuchin asked for a military jet to take him and his wife, actress Louise Linton, on their European honeymoon earlier this summer, the Treasury Department confirmed on Wednesday. ABC News, citing anonymous sources, first reported that Mnuchin put the request in writing and that it led to an 'inquiry' by the Treasury Department's Office of Inspector General. Mnuchin and Linton traveled to Scotland, France and Italy after their late-June wedding.

"The request for a military plane was eventually deemed unnecessary after further consideration. A Treasury Department spokesman released a statement Wednesday evening acknowledging that Mnuchin had requested the jet, but said the secretary had done so because he wanted to maintain secure communications during extended travel." http://politi.co/2war74n ... ***The ABC story*** http://abcn.ws/2x3negl

-- MNUCHIN speaks to Ben White at the POLITICO Pro Policy Summit today. http://politi.co/2xArUvZ

ESSENTIAL READING -- DIFFERENT SONG SHEET ALERT -- "GOP to Release Tax Overhaul as Trump Says Rich Won't Benefit: Republicans prepare for legislative sprint on a plan they expect would cut taxes for the wealthy," by WSJ's Rich Rubin: "President Donald Trump said Wednesday the emerging Republican tax proposal won't cut taxes for the wealthy, and they may go up, an assurance that appeared to contradict the plan that his administration and GOP leaders are drafting.

"Mr. Trump, speaking before a meeting with a bipartisan group of House members, said he expects wealthy Americans 'will not be gaining at all' under the tax overhaul he wants Congress to pass with a view toward creating new jobs and helping middle-class taxpayers. 'The wealthy will be pretty much where they are,' Mr. Trump, a Republican, said. 'If we can do that, we'd like it. If they have to go higher, they'll go higher, frankly.'" http://on.wsj.com/2x3KriL

-- COUNTDOWN: A MAXIMUM OF 15 DAYS until the Big Six is slated to release its tax plan, and the president is saying something that flies directly in the face of what his aides and Hill leaders are drafting.

TRUMP'S THURSDAY -- THE PRESIDENT is going to Florida this morning. He flies to

Fort Myers, and goes to Naples. When he gets back to D.C. he hosts a reception and dinner for the White House Historical Association.

THE JUICE ...

-- SPOTTED: Ivanka and Jared having dinner with Sen. Ted Cruz (R-Texas) and his wife Heidi at a corner table at Fiola Mare last night.

-- SEAN SPICER on **JIMMY KIMMEL** last night -- From the show: "Sean talks about Donald Trump's tweeting, his Inauguration crowd size, fake news, Melissa McCarthy's impersonation of him, Anthony Scaramucci and more." ***YouTube video of the full interview*** http://bit.ly/2f7GN19

-- AMB. BOB KIMMITT and **DAVID MCCORMICK** hosted a book party for **RAY DALIO** last night at the Metropolitan Club for his new book "Principles: Life and Work." ***$18 on Amazon*** http://amzn.to/2x1quaF ... ***NYT's Sunday Business cover story "Bridgewater's Ray Dalio Spreads His Gospel of 'Radical Transparency'"*** http://nyti.ms/2eXtZGO

SPOTTED: Jared Kushner and Ivanka Trump, Gary Cohn, Wilbur Ross, HR McMaster and Katie McMaster, Dina Powell, Reed and Maggie Cordish, Chris and Renee Lidell, Rob Porter, Jeremy Katz, Josh Raffel, Sen. Ted Cruz (R-Texas) and Heidi Cruz, Sen. Richard Blumenthal (D-Conn.), Sen. Dan Sullivan (R-Alaska), Sen. Rob Portman (R-Ohio), Katherine Bradley, Wolf Blitzer, Steve Case, Amb. Jeanne Johnson Phillips, Jack Oliver, Marc Esper, Juleanna Glover, Tom Nides, Matt Schlapp, Richard Fontaine, Eric Cantor, Tom Donilon, Bruce Mehlman, Marcus Brauchli, John McConnell, Tony Fratto, Anne Marie Hauser, Margaret Carlson, Julie and Wynn Radford, Amy Little Thomas, Marc Lampkin, Steve Clemons, Jeff Mason, Nihal Krishan, Wayne Berman, David Urban, Anton Vuljaj, Fred Ryan, Jim and Autumn VandeHei, Mike Allen, Jonathan Swan, Kristen Silverberg and Paul Lettow.

JOE BIDEN ALERT! -- "Joe Biden: Reclaiming America's Values" http://nyti.ms/2y9KU1o

BIG SCOOP -- CNN'S "MOSCOW" MANU RAJU -- "Exclusive: Rice told House investigators why she unmasked senior Trump officials": "Former national security

adviser Susan Rice privately told House investigators that she unmasked the identities of senior Trump officials to understand why the crown prince of the United Arab Emirates was in New York late last year, multiple sources told CNN.

"The New York meeting preceded a separate effort by the UAE to facilitate a back-channel communication between Russia and the incoming Trump White House. The crown prince, Sheikh Mohammed bin Zayed al-Nahyan, arrived in New York last December in the transition period before Trump was sworn into office for a meeting with several top Trump officials, including Michael Flynn, the president's son-in-law, Jared Kushner, and his top strategist Steve Bannon, sources said." http://cnn.it/2wYQICr

SCOOP -- "Trump ethics watchdog moves to allow anonymous gifts to legal defense funds," by Darren Samuelsohn: "The U.S. Office of Government Ethics has quietly reversed its own internal policy prohibiting anonymous donations from lobbyists to White House staffers who have legal defense funds. The little-noticed change could help President Donald Trump's aides raise the money they need to pay attorneys as the Russia probe expands - but raises the potential for hidden conflicts of interest or other ethics trouble. 'You can picture a whole army of people with business before the government willing to step in here and make [the debt] go away,' said Marilyn Glynn, a former George W. Bush-era acting OGE director who worked in the office for 17 years." http://politi.co/2y0QQZF

ISRAEL, CHINA, OPIOIDS AND NOW PRISONS -- "Kushner to gather bipartisan group to come up with ideas for federal prisons," by WaPo's Beth Reinhard: "President Trump's son-in-law and senior adviser, Jared Kushner, will convene a roundtable Thursday at the White House to gather recommendations for improving mentoring and job training in federal prisons, a departure from the administration's focus on more punitive crime-fighting measures. A bipartisan group of about two dozen elected officials, religious leaders and business leaders were invited to the first major criminal justice-related event held by the Kushner-led Office of American Innovation, which in recent months has brought together technology executives to search for ways to make government more efficient. ...

"'There is a lot of agreement from the left and the center and the right that once a person has committed a crime we should make sure we give them the best opportunities to try to live a productive life after serving their time,' Kushner told The Washington Post in a telephone interview. 'We're not looking to train better criminals.'" http://wapo.st/2y0ancC

JARED and **IVANKA** speak to the FT's Courtney Weaver for a cover feature for the weekend magazine -- "I will not be distracted by the noise'" - Ivanka on her ability to change her father's policies: "Some people have created unrealistic expectations of what they expect from me. That my presence in and of itself would carry so much weight with my father that he would abandon his core values and the agenda that the American people voted for when they elected him. It's not going to happen. To those critics, shy of turning my father into a liberal, I'd be a failure to them."

--On why she so rarely publicly criticizes her father: "To voice dissent publicly would mean I'm not part of the team. When you're part of a team, you're part of a team. That doesn't mean everyone in the White House has homogeneous views -- we don't, and I think that's good and healthy -- but that doesn't mean we're publicly undermining [each other] and this administration." http://on.ft.com/2h5ON3n

MORE KUSHNER DRAMA -- "Kushner's White House role 'crushed' efforts to woo investors for NYC tower," by WaPo's Michael Kranish and Jonathan O'Connell: "Jared Kushner and his family company seemed close to striking a deal in 2016 to transform their aging, money-losing 41-story Manhattan office tower into a new and profitable Fifth Avenue skyscraper twice as tall. A team led by Kushner and his father, Charles, courted global investors and prospective tenants. Then Donald Trump became president and Kushner became his father-in-law's senior White House adviser. Problems ensued. ...

"'They were crushed by this,' said Thomas Barrack, a friend of Trump and Kushner's and former project investor. Kushner's move to the White House 'just about completely chilled the market, and [potential investors] just said, "No way - can't be associated with any appearances of conflict of interest," even though there was none.' Laurent Morali, who became president of Kushner Cos. last year, said in an interview that he is marketing a 60-year-old aluminum-clad building 'that is not competitive' with more-modern properties. He said the company will decide soon whether to proceed with its ambitious redevelopment plan or scale back." http://wapo.st/2jpstll

****** **A message from CTIA and America's wireless industry:** Tomorrow's 5G networks will create 3 million jobs, add $500 billion to the economy, and fuel innovation and entrepreneurialism across every sector. If policymakers move quickly to release more spectrum and modernize infrastructure rules, the wireless industry stands ready to invest $275 billion to build these next-gen networks, according to Accenture. This will drive breakthrough advancements in remote health care, connected vehicles, energy, education and beyond-making our lives better and safer. But the race to deploy 5G wireless networks is underway-and we're at a critical moment. The EU, China, Japan, South Korea and others are doing everything they can to win. If policymakers act now, the U.S. can continue our global leadership in wireless. Learn how at CTIA.org. ******

DAVID REMNICK interviews **HILLARY CLINTON** for The New Yorker - "Hillary Clinton Looks Back in Anger: She talks about Trump, Comey, collusion, 'deplorables,' and the power of sexism": "I think the President and his Administration pose a clear and present danger to our democracy ... I hoped, back on the day after that election, that I wouldn't be sitting here, all these months later, feeling compelled to say that with a sense of urgency. But I am, and I do." ...

President Trump is "being played by the Putins and the Kim Jong Uns of the world. I'm not even sure he's aware of that. Because he has such a limited understanding of the world. Everything is in relation to how it makes him feel. And therefore he has little objective distance, which a leader must have. ... I think Trump has behaved in a

deplorable manner, both during his campaign and as President ... I think he has given permission to others to engage in deplorable behavior, as we did see in Charlottesville and elsewhere. So I don't take back the description that I made of him and a number of his core supporters." ...

"Mitch McConnell, in what I think of as a not only unpatriotic but despicable act of partisan politics, made it clear that if the Obama Administration spoke publicly about what they knew, he would accuse them of partisan politics, of trying to tip the balance toward me ... McConnell basically threatened the White House."

Two other quotes from the interview -- her view of the Obama Administration's response to Russian hacking, she said, "I think we were mushy." ... What it was like to write the book: "Literally, at times when I was writing it, I had to go lie down ... I just couldn't bear to relive it." http://bit.ly/2xANvEt ... ***The cover, titled "The First" and by Malika Favre, is what the New Yorker would have published had Clinton won*** http://bit.ly/2eWKEdz

**UPDATE -- "Anthony Weiner Says His Actions 'Crushed the Aspirations of My Wife'," by NYT's Benjamin Weiser: "Lawyers for Anthony D. Weiner, the former Democratic congressman whose lewd text exchanges with a teenage girl led to his prosecution and embroiled him in an F.B.I. investigation of Hillary Clinton before the presidential election, asked a judge on Wednesday night to spare him a prison sentence.

"In asking that Mr. Weiner receive probation , his lawyers described his behavior as 'inexcusable,' but cited his 'remarkable progress' over the past year. Mr. Weiner, 53, writing separately to the judge, cited his 'profound' regret for endangering the well-being of the girl, whom he understood to be 15. He added, 'My continued acting out over years crushed the aspirations of my wife and ruined our marriage.' And, he said, his young son 'will forever have to answer questions about the public and private failings of his father.' ... Prosecutors are expected to make their sentencing recommendation next week. The office of Joon H. Kim, the acting United States attorney in Manhattan, said in Mr. Weiner's plea agreement that a sentence in the range of 21 to 27 months would be 'fair and appropriate.'" http://nyti.ms/2y0tXp5

PORTMAN PROFILE -- "How An Old-Fashioned Senator Is Living In Donald Trump's Washington," by BuzzFeed's Henry J. Gomez: "Asked how he learns about President Donald Trump's disruptive and frequently combative tweets, the Ohio Republican grinned. 'I get it two ways,' he began, as he rose from a chair in his office. He walked behind his desk and grabbed his iPhone. 'I can't follow everybody, right? But guess who I do follow? Donald Trump,' Portman continued as he returned to his seat. 'So every one of his tweets, I get on my phone. I have an alert,' Portman confirmed as he tapped away at the screen. 'You know why? Because when I didn't have an alert, I would be in the middle of an interview with someone like you, and they would ask me about something he tweeted, and I would be caught flat-footed.'" http://bzfd.it/2jqs3vw

NARAL's ILYSE HOGUE: **'WE ARE VERY, VERY PLEASED' by single-payer bill.** The abortion-rights advocate tells POLITICO's Dan Diamond that guaranteed coverage of abortion and contraception is a major step from Democrats' approach even eight years ago. "We think the Sanders bill positions reproductive health care right where it's supposed to be ... a non-negotiable part of a health care system where everybody's needs are covered. I think that's a huge achievement. We went from a Stupak amendment that nearly derailed [reproductive] health care in 2009 ... [to] the whole host of reproductive health care that we know helps women thrive." http://bit.ly/2eWVKzh

MEDIAWATCH -- Tom LoBianco is joining the AP's Washington bureau starting Monday. He rejoins AP from CNN. LoBianco previously worked for the AP as a politics reporter in Indiana.

TV TODAY -- CHUCK TODD is joining former New York City Mayor Michael Bloomberg, who is traveling to the U.S. Virgin Islands of St. Thomas and St. John to survey the damage caused by Hurricane Irma and provide help. Some of the interview will air Friday on MSNBC's "MTP Daily," with more on Sunday's "Meet the Press."

****** **A message from CTIA and America's wireless industry:** We need new rules for new 5G networks. New policies that will allow the U.S. to win the race to 5G and enable breakthrough advancements in healthcare, transportation, energy and more. First, a pipeline of low-, mid-, and high-band spectrum will help meet today's mobile needs and enable the 5G networks of tomorrow. Second, every level of government must modernize their rules for the building of small cell wireless infrastructure. Third, permanent and common sense federal regulations for interstate services like mobile broadband will preserve an open internet and protect consumer privacy while promoting innovation and investment. Finally, America's tax structure must be updated to spur billions of dollars in new 5G investment. Learn more about how wireless is working to invest in America's future at CTIA.org. ******

Subject: Unions press Trump administration for more limited carbon rule

By Alex Guillén

06/28/2017 12:54 PM EDT

A coalition of unions this week asked the Trump administration to rescind EPA's Clean Power Plan and then write a more limited version of the landmark power plant rule.

The unions, including the United Mine Workers of America, Utility Workers Union of America and the AFL-CIO, said in a June 26 meeting with OMB officials that repealing the CPP "is a critical step in reducing future job losses in the coal generation, transportation, and mining sectors," according to documents posted on OMB's website.

The unions went on to note that Supreme Court precedents and EPA's 2009 endangerment finding require EPA to regulate in some manner. EPA should instead write a rule that obtains "inside the fence" reductions by achieving efficiency improvements at existing coal-fired power plants, according to the unions.

However, the unions acknowledged, heat rate improvements at coal plants "are not very effective in reducing CO2 emissions" and would only achieve a 2-3 percent emissions reduction. EPA said the CPP would have secured a 32 percent reduction in power generation emissions, although utilities have already achieved some of that.

EPA could allow trading to minimize costs and should "provide credit for past reductions," the unions suggested. They also called for reforms to EPA's New Source Review permitting program.

In addition, OMB and EPA officials met March 22 with advocates from the NRDC. Documents from that meeting showed that the environmental group advocated against rescinding the CPP.

WHAT'S NEXT: OMB will continue to review EPA's proposed rule to withdraw the CPP before its anticipated release later this summer.

Driving the Day

Good Monday morning. WELCOME TO 3 VERY CONSEQUENTIAL WEEKS . Let's be brutally honest: there is a better than even chance Congress leaves town at the end of this month without a single major legislative achievement to talk about back at home. Not one. The Senate is squirming on health-care reform, and faces long odds in their quest to pass an overhaul to Obamacare. The $1-trillion infrastructure plan that, seven weeks ago, the Trump administration promised would be out in the "next several weeks" has not come out. Tax reform is still in the hearing phase, and the Trump administration still says it will be done by the end of the calendar year.

-- CRISIS MODE: DEBT CEILING UNLIKELY TO HAPPEN BEFORE AUGUST RECESS: Capitol Hill has not been able to chart a path forward on lifting the nation's debt limit because of infighting in the administration about whether it should come with or without strings. **THE TRUMP ADMINISTRATION** is pushing for Congress to take action before the August recess, but most Hill aides we speak to say it won't happen. **THE LIKELY GAMEPLAN, AS IT STANDS NOW:** the Senate will push a clean debt limit increase to the House in the fall, and after a day or two of squirming and posturing, the GOP will pass it with Democratic votes. Congress has until October to get this done, so hold your horses.

-- GOV'T FUNDING : Government funding needs to be reupped by the end of September. As of now, we've heard from people in the House and Senate that Congress will likely extend funding until December, and then fight over the rest of the year's funding in the final month of the year. That could impact tax reform, which, under the Trump administration's schedule, will also need to be finished by the end of the year.

-- THE TAKEAWAY: The year is quickly being eaten up by must-do housekeeping instead of big-picture legislating.

NEWS -- JAKE AND ANNA ARE WRITING A BOOK! Congress is the most exhilarating, exciting and juicy story in town. The backstory about how deals get done -- or don't get done -- is filled with intrigue, twists, turns and personality clashes. After more than seven years of talking about writing a book about Capitol Hill, we decided this is our time to do it. We'll chart the first two years of Trump's presidency, through the lens and prism of lawmakers and aides on Capitol Hill. This is a book about people and personalities, political chess and the battle for power in Congress. It's a snapshot of official Washington in the era of Donald Trump.

IN MANY WAYS, this is a book we've been writing in our head since 2010. Congress is an institution we've spent a lot of time observing, studying and thinking about. We hope you come along for the ride.

CROWN, which published our friends Jon Allen and Amie Parnes' books about Hillary Clinton, will publish our work. We anticipate it will be released in March of 2019 -- just months after the midterm elections. **DAVID LARABELL** and **RACHEL ADLER** of CAA represented us.

-- VANITY FAIR: "HOW POLITICO'S NEXT GENERATION TOOK OVER WASHINGTON: Inside the transfer of power at Playbook, the most influential newsletter in politics," by Sarah Ellison. http://bit.ly/2t4mz9b

THE STORY EVERYONE IS TALKING ABOUT -- NYT'S JO BECKER, MATT APUZZO and **ADAM GOLDMAN -- "Trump's Son Met With Russian Lawyer After Being Promised Damaging Information on Clinton":** "President Trump's eldest son, Donald Trump Jr., was promised damaging information about Hillary Clinton before agreeing to meet with a Kremlin-connected Russian lawyer during the 2016 campaign, according to three advisers to the White House briefed on the meeting and two others with knowledge of it. The meeting was also attended by his campaign chairman at the time, Paul J. Manafort, and his son-in-law, Jared Kushner. Mr. Manafort and Mr. Kushner recently disclosed the meeting, though not its content, in confidential government documents described to The New York Times. ...

"It is unclear whether the Russian lawyer, Natalia Veselnitskaya, actually produced the promised compromising information about Mrs. Clinton. But the people interviewed by The Times about the meeting said the expectation was that she would do so.

"When he was first asked about the meeting on Saturday, Donald Trump Jr. said that it was primarily about adoptions and mentioned nothing about Mrs. Clinton. But on Sunday, presented with The Times's findings, he offered a new account. In a statement, he said he had met with the Russian lawyer at the request of an acquaintance from the 2013 Miss Universe pageant, which his father took to Moscow. 'After pleasantries were exchanged,' he said, 'the woman stated that she had information that individuals

connected to Russia were funding the Democratic National Committee and supporting Mrs. Clinton. Her statements were vague, ambiguous and made no sense. No details or supporting information was provided or even offered. It quickly became clear that she had no meaningful information.'

"He said she then turned the conversation to adoption of Russian children and the Magnitsky Act, an American law that blacklists suspected Russian human rights abusers. The 2012 law so enraged President Vladimir V. Putin of Russia that he halted American adoptions of Russian children. 'It became clear to me that this was the true agenda all along and that the claims of potentially helpful information were a pretext for the meeting,' Mr. Trump said. Two people briefed on the meeting said the intermediary was Rob Goldstone, a former British tabloid journalist and the president of a company called Oui 2 Entertainment who has worked with the Miss Universe pageant. He did not immediately respond to messages seeking comment. Mark Corallo, a spokesman for the president's lawyer, said on Sunday that 'the president was not aware of and did not attend the meeting.'" http://nyti.ms/2t4CRyN

-- IF YOU'RE KEEPING SCORE: Washington Post's Roz Helderman and Tom Hamburger broke the story that Goldstone was the intermediary between Trump Jr. and the Russian lawyer.

-- SOMEONE GOT TO HIM! -- TRUMP at 8:45 last night: "The fact that President Putin and I discussed a Cyber Security unit doesn't mean I think it can happen. It can't-but a ceasefire can,& did!" ...

... **BUT, BUT, BUT: 22 HOURS AGO** the president said the cyber-security unit would be "impenetrable" and would prevent "election hacking" and "many other negative things."

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

THE GOP DONOR PAPER -- WSJ EDITORIAL: "Putin Is Not America's Friend": "We'll find out in the coming weeks how Vladimir Putin sized up Donald Trump in their first mano a mano meeting on Friday, but one bad sign is the Trump team's post-meeting resort to Obama-like rhetoric of cooperation and shared U.S.-Russia purposes. Secretary of State Rex Tillerson frequently lapses into this form of John Kerry-speak as he did trying to sell the new U.S.-Russia-brokered cease-fire in a corner of Syria. 'I think this is our first indication of the U.S. and Russia being able to work together in Syria,' Mr. Tillerson told reporters.

"He added: 'I would tell you that, by and large, our objectives are exactly the same. How we get there, we each have a view. But there's a lot more commonality to

that than there are differences. So we want to build on the commonality, and we spent a lot of time talking about next steps. And then where there's differences, we have more work to get together and understand. Maybe they've got the right approach and we've got the wrong approach.' The same objectives? The Russians want to help their client Bashar Assad win back all of Syria while retaining their military bases. If they are now talking about a larger cease-fire, it's only because they think that can serve Mr. Assad's purposes. The Trump Administration doesn't seem to know what it wants in Syria after Islamic State is ousted from Raqqa, and we hope Mr. Tillerson isn't saying the U.S. shares the same post-ISIS goals as Russia.

"Congress can play a fortifying role here by moving ahead with the bill toughening sanctions against Russia for its election meddling. The Senate passed the bill 98-2, and Republicans can move it quickly in the House with some fixes for oil investments. The White House objects that the bill takes away discretion from Mr. Trump to reduce sanctions unilaterally. But that discretion shouldn't be granted until Messrs. Trump and Tillerson show that they understand that Mr. Putin is not America's friend." http://on.wsj.com/2v2hU9f

-- THE WHITE HOUSE has been working behind the scenes to try to exert influence over the Hill in regards to this sanctions bill. That is going to be increasingly difficult. This legislation can -- and probably will -- pass with veto-proof margins.

SUSAN GLASSER'S THE GLOBAL POLITICO -- "Does Trump Have a Point About Obama and Russia?: Tom Donilon, former national security adviser, says 'no doubt about it' Obama should have done more about Russia hacking of 2016 election": "Normally cautious, careful and exacting, Donilon argues that Obama as early as last summer should have made "aggressive public attribution" that Russia was responsible, long before the president ultimately did so last October just a few weeks before the election.

"'Given the fact that they were attacking a fundamental element of our democracy ,' Donilon says in the interview, the Obama administration should have been 'pushing back harder and publicly' rather than worrying so much about appearing to use the national security apparatus for partisan ends or assuming a Clinton victory would end the matter. That 'would have been a better course of action, frankly.'" http://politi.co/2u3T6R5 ... ***Subscribe*** http://apple.co/2kJ9q1U

ALEX ISENSTADT SCOOPS: "President Trump's enemies list: The president remembers every political slight - and the politicians who abandoned him during the Access Hollywood scandal": "Donald Trump is less than six months into his presidency, yet one of the organizing principles of his political operation is already becoming clear: Payback. In private, Trump spoke of spending $10 million out of his own pocket to defeat an incumbent senator of his own party, Jeff Flake of Arizona, according to two sources familiar with the conversation last fall. More recently, the president celebrated the attacks orchestrated by a White House-sanctioned outside group against another Republican senator, Dean Heller of Nevada, who has also been openly critical of him.

Fear of Trump reprisals has led one Republican congresswoman, Martha Roby of Alabama, to launch an intense campaign to win over a president who remembers every political slight." http://politi.co/2v2zJ8m

JONATHAN MARTIN and **ALEX BURNS -- "Alabama's Special Senate Election Is All About Wooing Trump":** "[T]he contest may boil down to a single question: How will President Trump respond to the candidate who denounced him for 'serial adultery'?

"The campaign for the Senate seat once held by Attorney General Jeff Sessions is ostensibly playing out between Muscle Shoals and Mobile Bay. But the battle is being waged just as fiercely inside the White House, where Mr. Trump's endorsement could determine who will serve as the state's junior senator for the next three years. The Republican race has pitted the current, appointed senator, Luther Strange, against Representative Mo Brooks, a conservative firebrand whose brash, anti-immigrant, pro-gun politics are distinctly Trumpian -- save that 'serial adultery' jab.

"That has created tensions between Senator Mitch McConnell of Kentucky , the majority leader who strongly backs Mr. Strange, and the West Wing, where some sympathies lie with Mr. Brooks. What Mr. Trump does will beam a message to his supporters well beyond Alabama about which Republican faction he favors: the pragmatic establishment or uncompromising hard-liners. And in Alabama, Mr. Trump's preference matters. He may be saddled with national disapproval ratings that no modern president has seen this early in an administration, but among Alabama conservatives, the president ranks up there with college football, air-conditioning and pork shoulder." http://nyti.ms/2tYUEvW

-- COMING ATTRACTIONS: "Mo Brooks in Senate Ad: Fund President Trump's Border Wall or Face Government Shutdown," by Breitbart's Matt Boyle: "Rep. Mo Brooks (R-AL), a Republican candidate for U.S. Senate in Alabama, is threatening to shut the government down in the U.S. Senate if his colleagues do not fund President Donald J. Trump's planned border wall along the U.S. border with Mexico. Mo Brooks, one of three major candidates in the race to succeed now Attorney General Jeff Sessions for Sessions' seat, made the threat in a new ad set to air statewide in Alabama on television soon." ***With the ad*** http://bit.ly/2tyvX8N

THE JUICE ...

-- DEFINERS PUBLIC AFFAIRS , founded by Matt Rhoades, Romney-Ryan 2012 campaign manager, and Joe Pounder, former RNC research director, is expanding to London. Its affiliate UK Policy Group will "produce campaign-style research, media monitoring, opinion research, and communications strategy advice for private sector clients." Trygve Olson of Viking Strategies and Andrew Goodfellow, former director of research for the Conservative Party will serve as UKPG's vice president. ... ***The Politico Europe story*** http://politi.co/2sWh8Ox

-- @JoePerticone: "Walking along Mass Ave, casually overhead Mitch McConnell

walking w/ wife Elaine Chao say 'I'd really like to get that Kennedy slot'"

-- SAVE MY CARE , which is working to stop the repeal of Obamacare, is launching what they say is a "seven-figure TV ad buy" in Alaska, Nevada, Maine and West Virginia to target Lisa Murkowski, Dean Heller, Susan Collins and Shelley Moore Capito. The ad urges the senators to "keep your promise, vote no on health care repeal." ***Nevada*** http://bit.ly/2tYZklx ... ***Alaska*** http://bit.ly/2tydokS ... ***Maine*** http://bit.ly/2sVYCG8 ... ***West Virginia*** http://bit.ly/2u3V9nY

#PLAYBOOKLOYAL: It's been one year since we took over Playbook and we want to thank you for reading. We want to hear from you -- so we're creating a competition. The prize: a signed copy of one POLITICO's Pulitzer Prize winning cartoonist Matt Wuerker's famous cartoons. **HERE'S HOW IT WORKS:** Tweet or post a message to us on Facebook using the hashtag #PlaybookLoyal -- each time you post with the hashtag will increase your chances of winning! Post as often as you wish from today until Friday, July 14. So get to sharing and tell us why you're #PlaybookLoyal and include this link http://politi.co/2IBIFIV

Playbook Reads

PHOTO DU JOUR: Iraqi Special Forces soldiers celebrate after reaching the bank of the Tigris river as their fight against Islamic State militants continues in parts of the Old City of Mosul, Iraq on July 9. | Felipe Dana/AP Photo

THE RESISTANCE -- "Obama returns to politics with redistricting group fundraiser," by Isaac Dovere: "Barack Obama will make the first official political move of his post-presidency on Thursday, headlining a private fundraising for the National Democratic Redistricting Committee at a private home in Washington. The event, which will also be attended by NDRC chair Eric Holder and House Minority Leader Nancy Pelosi, is to support the group he's helping back to coordinate Democratic efforts in state races and lawsuits to push back on Republican success in gerrymandering over many cycles. In many statehouses and Congress, that's left Democrats at a baked-in disadvantage." http://politi.co/2u3ED7N

TRUMP'S WHITE HOUSE -- "The Scholar Who Will Help Lead Trump's Assault on Rules," by NYT's Steve Eder: "When George Mason University changed the name of its law school last year to honor Antonin Scalia, the late conservative Supreme Court justice, the tribute rankled many liberal faculty members and students. ... One outspoken advocate for the name change was Neomi Rao, an associate law professor who had come to know Mr. Scalia while serving as a clerk for Clarence Thomas, another conservative member of the court. ... [Q]uietly, Ms. Rao also worked to win over liberal critics. In a public relations coup, she helped secure an endorsement for the

name change from Ruth Bader Ginsburg, one of the Supreme Court's most liberal justices and a longtime friend of Mr. Scalia. ...

"Ms. Rao's ability to work both sides of the ideological divide, emblematic of her career in academia and government, is about to be tested anew. On Monday, the Senate is expected to approve Ms. Rao's nomination to lead an obscure but powerful White House agency called the Office of Information and Regulatory Affairs - placing her at the heart of President Trump's politically contentious agenda to overhaul government rules and regulations." http://nyti.ms/2tyPYfn

JOSH GREEN with an excerpt from his new Bannon book in NYMag, **"Attack, Attack, Attack:** Why does Trump double-down every time it seems like he should retreat? Because Steve Bannon is back in his boss's good graces": "On May 22, just as a strange photo of President Trump, Saudi king Salman, and Egyptian president Abdel Fattah el-Sisi touching a glowing orb reached the apex of its memehood, Steve Bannon, who was lurking somewhere beyond the orb's glow, got on a plane in Riyadh and flew back to his book-stuffed apartment in a glass high-rise in Arlington, Virginia. ... His former position largely restored, Bannon is now back in his natural element, at the center of the chaos. He modeled Trump's war room after the one set up by Bill Clinton to handle Ken Starr's Whitewater probe. Bannon was convinced that Trump needed his own Lanny Davis - Clinton's pit-bull lawyer and TV surrogate - to go against Mueller, according to a source familiar with his thinking. (Bannon even called Davis to consult him.) ...

"Despite his portrayal as Trump's Rasputin, Bannon's return was prompted less by his own influence than by the president's needs. ... Bannon is less 'The Great Manipulator' than Trump's indispensable henchman, the man he turns to when everything's going to hell. Bannon is astute enough to discern Trump's desires and heedless enough to carry it out. 'If the whole White House is backed up against the wall facing a firing squad, Steve will stay there,' says Ken Cuccinelli, president of the Senate Conservatives Fund. 'Reince [Priebus] and the other guys will run.'" http://nym.ag/2tES1N7 ... ***$21.90 on Amazon*** http://amzn.to/2utkR30

LARRY SUMMERS in the FT, "Donald Trump's alarming G20 performance": "A corporate chief executive whose public behaviour was as erratic as that of Mr Trump would already have been replaced. The standard for democratically elected officials is appropriately different. But one cannot look at the past months and rule out the possibility of even more aberrant behaviour in the future. The president's cabinet and his political allies in Congress should never forget that the oaths they swore were not to the defence of the president but to the defence of the constitution." http://on.ft.com/2tYR98N

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are

required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

MEDIAWATCH -- RESTUCCIA, COOK and **MCCASKILL TO W.H. TEAM -- CARRIE BUDOFF BROWN** emails the staff: "Since the start of the year, our White House team has delivered a nonstop diet of powerful coverage dominating attention in Washington and around the world. ... We've been looking for ways to build on that success and are excited to announce several additions to the White House team from within our ranks: Andrew Restuccia and Nancy Cook, who helped anchor our coverage of the Trump transition and the mechanics of the new administration as senior policy reporters, and Nolan McCaskill, who has brought a keen sense of observation to coverage of Trump world from his perch on the breaking news desk."

JIM ACOSTA PROFILE -- "'Grandstanding' or truth teller? CNN's Acosta walks a fine line with Trump," by WaPo's Paul Farhi: "At a time when CNN is under attack by President Trump and his supporters, Acosta has been fighting back. He has said on the air that White House press secretary Sean Spicer's unresponsive answers were rendering him "just kind of useless' as a credible source; that the ever-briefer briefings have become 'basically pointless'; that covering this White House has at times been like 'covering bad reality television.' ... He has repeatedly needled Spicer on Twitter, too: 'I can't show you a picture of Sean,' he tweeted, over a photo of his ankles, during a blacked-out briefing on June 19. 'So here is a look at some new socks I bought over the wknd.'" http://wapo.st/2u8Pii6

-- "How Antitrust Undermines Press Freedom," by News Media Alliance president and CEO David Chavern in WSJ: "Whenever President Trump attacks CNN or berates the Washington Post, journalists and free-speech advocates rise up to defend the media and the First Amendment. Meanwhile, a greater threat to America's news industry looms mostly unnoticed: Google and Facebook's duopolistic dominance of online advertising, which could do far more damage to the free press than anything the president posts on Twitter. ... The News Media Alliance, which represents digital and print publishers ... is proposing a solution: a new law granting a limited safe harbor under antitrust for publishers to negotiate collectively with dominant online platforms. This would grant media organizations the flexibility to expand innovative digital models of news distribution, while also giving them more ways to sustain high-quality journalism." http://on.wsj.com/2u3nPhg

Subject: First Move: Tat Spat in EU • Departures in Bonn • Elections and Carbon Emissions

What you need to know to start your day.

Tat Spat in EU • Departures in Bonn • Elections and Carbon Emissions

By Chuck McCutcheon

Questions about potential health dangers in tattoos are prompting regulators for 28 European countries to ponder stamping some form of restrictions on the skin signatures.

A man has his arm tattooed during a fair at the Diagora Labege centre in Toulouse on Jan. 10, 2016.
Photo: Remy Gabalda/AFP/Getty Images

European Union regulators are concerned that tattoo inks and colorants may be harmful even years after tattoos have been applied, Adam Allington explains in a story being published today.

In the U.S., the Food and Drug Administration has the authority to regulate tattoos, but it has left that up to local governments. The EU, however, has more regulatory skin in the game.

The EU asked Europe's chemicals agency to look into the risks of tattoo inks and permanent makeup on human health. The agency recommended restrictions on some 4,000 substances when used in tattoo inks and permanent makeup—which, if enacted, would become the world's strongest restrictions of their kind.

The U.N. climate talks in Bonn are entering their final days, and the U.S. delegation must weather a new complication—its original top negotiators aren't there.

Divisions arose between the differing priorities of official negotiators and a group of Trump administration political appointees who said they were being shut out of the process. Now Dean Scott reports that State Department diplomat Tom Shannon did not travel to Germany for the talks, while State climate negotiator Trigg Talley left due to a family emergency.

Shannon's replacement is Judith Garber, an acting State Department assistant secretary. But Garber has neither the stature nor the political connection to the

Trump administration that Shannon held.

Elections have consequences, and last week's results in the New Jersey and Virginia governors' races are expected to mean an expansion of efforts among Northeast states to reduce greenhouse gas emissions.

With the election of Democrats Phil Murphy in New Jersey and Ralph Northam in Virginia, the two states could join or become affiliated with the Regional Greenhouse Gas Initiative as early as next year, Gerald Silverman reports in a story being published this morning. The initiative is a partnership among nine states to cap and reduce the power sector's carbon dioxide emissions. New Jersey used to belong, but GOP Gov. Chris Christie pulled his state out six years ago.

Other Stories We're Covering

- President Trump's pick to head the Mine Safety and Health Administration is expected to get a Senate confirmation vote today; Stephen Lee is tracking.
- Evaluating green bonds and the financial risks of moving from fossil energy toward renewable sources are among the topics at Bloomberg's two-day Sustainable Business Summit: London, which kicks off today in the British capital. Michael Liebreich, founder and chairman of the advisory board of Bloomberg New Energy Finance, also will discuss the impacts of President Trump's decision to have the U.S. exit the Paris climate deal. Ali Qassim is covering.
- The Senate's energy committee takes up legislation to drill in Alaska's Arctic National Wildlife Refuge as part of the GOP's massive tax proposal. David Schultz is covering.
- The multistate Ozone Transport Commission, which advises the EPA on air issues, meets jointly with Mid-Atlantic Northeast Visibility Union to discuss reducing ozone and regional haze. Jennifer Lu is covering.
- The environment panel of the House's energy committee will mark up four bills today, including legislation dealing with brick kiln emissions. Jennifer Lu is monitoring.

Quote of the Day

"It's one thing to be responsive in the immediate aftermath of a hurricane, it's another thing to be engaged in something that we would all call gouging of the taxpayer."
—Alaska Republican Sen. Lisa Murkowski, questioning the Puerto Rico Electric Power Authority's sole-source $300 million contract with Whitefish Energy Holdings.

Today's Events

- **8 a.m. • Energy** • West Virginia Democratic Sen. Joe Manchin, FERC Chairman Neil Chatterjee, and others speak at CQ News/Roll Call forum on

energy policy.

- **10 a.m. • ARPA-E** • Information Technology & Innovation Foundation holds forum on the Energy Department's Advanced Research Projects Agency's role in clean energy innovation.
- **10 a.m. • Air Emissions** • The Senate's environment committee will hear about ways to reduce air emissions through innovation.

Around the Web

- Three hundred days into Trump's administration, the EPA, Interior Department, and Department of Energy only have 11 Senate-confirmed officials in place out of a total of 52, according to data compiled by the Partnership for Public Service.
- Apple, Walmart, CVS, Ikea, Whole Foods Market, and Target scored the highest in a group's report card on reducing toxic chemicals in consumer products.
- Volkswagen will pay New Jersey $69 million to settle a state lawsuit over vehicle-emissions cheating.
- Nuclear regulators want small modular reactors and other new technologies to be ready to deal with emergencies.
- A conservation group warns regulators and the South Carolina Electric & Gas Co. that it intends to sue over coal tar at the bottom of South Carolina's Congaree River.

Chemicals
EPA to Clear Backlog of New Chemical Approvals by July
The backlog of new chemicals being reviewed by the Environmental Protection Agency is expected to be cleared by July due to staffing, policy and procedural changes the agency has made.

News

Air Pollution
Bosch Tied to Diesel-Cheating Claims Against Fourth Carmaker
Robert Bosch GmbH, the world's largest auto-parts supplier, was linked to emissions-cheating allegations against a fourth automaker on May 25, raising questions about the German company's role in the scandal gripping the car industry.

Energy
IRS Sets Tax Credit Values for Captured CO2
The 2017 tax credit for carbon dioxide captured and sequestered in secure geological storage is $22.48, the Internal Revenue Service said.

Energy
Release—Finally—of Appliance Efficiency Standards Applauded
Energy efficiency advocates and industry groups are breathing a sigh of relief after the Trump administration lifted a temporary hold on appliance standards for ceiling fans, pool pumps, air conditioners and refrigeration products.

Environmental Justice

Exxon Refinery Neighbor Group Scoffs at Texas-EPA Agreement

Environmental groups say a settlement between the Texas state environmental regulator and the EPA over a potential civil rights violation in permitting of an Exxon Mobil Corp. refinery is too little, too late.

General Policy

Week Ahead: Lawmakers May Get Earful on Energy, Environment

Members of Congress holding town hall meetings in their home districts during the week of May 29 are expected to hear about energy and environment concerns as part of the public's reaction to President Donald Trump's new budget proposal.

International Climate

Six to One Against Trump on Climate in 'Honest' Exchange at G-7

German Chancellor Angela Merkel said Donald Trump was isolated on climate change at the Group of Seven, as the president said he's in no rush to decide whether to scrap U.S. involvement in the Paris Agreement.

Mining

No Gold in Them Hills, Mine Co's Superfund Claim Tossed

Mining company Federal Resources Corp. can't recoup any of its Superfund cleanup costs from the government for contamination at a former mine in Idaho, the Ninth Circuit ruled (United States v. Fed. Res. Corp., 2017 BL 175794, 9th Cir., No. 15-35192, unpublished 5/25/17).

Motor Vehicles

Bipartisan Senate Bill Tweaks Fuel Efficiency Standards

A bipartisan Senate bill meant to standardize the federal government's regulation of fuel efficiency in cars and trucks would effectively loosen the efficiency standards that apply to automakers, allowing them to build and sell larger vehicles, according to environmentalists.

Natural Gas

Florida Pipeline's Legal Battles Persist After Construction

The owners of almost 700 miles of new pipeline into Florida aim to start the flow of natural gas in June—if federal regulators give the go-ahead despite objections and lawsuits from the Sierra Club and others.

Oil & Gas

Fire Kills One, Injures Three at Anadarko Tank Battery in Colorado

An Anadarko Petroleum Co. oil tank battery caught fire in Mead, Colo., killing one worker and injuring three others.

Regulatory Policy

Coal Ash Disposal Guidance Document Under White House Review

An Environmental Protection Agency's guidance for the approval of states' coal ash disposal permitting programs is under review at the White House Office of Management and Budget.

Renewable Energy

Energy-Generating Kites Backed by Shell Set for Test in Scotland

Power-generating kites backed by Royal Dutch Shell Plc, Schlumberger Ltd. and EON SE will start tests in the U.K. this summer, with the aim of developing a technology that could eventually replace offshore wind turbines.

Stormwater

Permit Should Cover Stormwater Pollutants, Not Flow, Builders Say

A new EPA permit for storm runoff in New Hampshire goes too far and actually regulates stormwater flow as opposed to the pollutants found in it, homebuilders' groups say in a lawsuit.

Toxic Substances

Canada Proposes Designating Cobalt and Compounds as Toxic

Canada proposed designating cobalt and water-soluble compounds containing cobalt as toxic and will collect additional information on releases to determine if regulatory measures are needed.

Vehicle Fuels

Shell Sees Solution to Energy-System Gaps in 'Hydrogen Grid'

Royal Dutch Shell Plc is looking to build a hydrogen empire in a bid to fix the biggest problem the energy transition faces: the question of how to store power in the long term.

Water Pollution

EPA Seeks Input on Postponing Utility Wastewater Limits

The EPA is moving ahead with its proposal to postpone compliance deadlines for a regulation governing wastewater discharges from steam-generating power plants, giving the power sector and the public 30 days to comment on the plan.

Subject: Morning Media: 'Fair & Balanced,' 1996-2017 — Bergman blames the media — Intercept investigates itself

By Joe Pompeo | 06/15/2017 06:06 AM EDT

With Alex Weprin

FAREWELL AND BALANCED - Fox News has traded "Fair and Balanced" for a new marketing slogan, "Most Watched. Most Trusted," according to tireless Fox News chronicler Gabe Sherman , who explained the significance of this seismic change in his scoop yesterday: "As Fox News moves further into the post-Roger Ailes era, the network is shedding one of its most iconic elements. ... It would be like the New York Times giving up 'All the News That's Fit to Print.' Ailes invented the slogan when he launched the network in 1996, and over the years it became a quasi-religious doctrine among Fox's anchors and viewers. ... In the annals of modern advertising, 'Fair & Balanced' will be considered a classic."

TODAY IN MEGYN KELLY - "What we do as journalists is we shine a light on those with power, those with influence, those who have become culturally relevant," the NBC News anchor told Jim Rutenberg in a piece about the backlash around Kelly's interview with Alex Jones this Sunday. "Of course, it's upsetting to know that doing that causes any upset to the Newtown families, many of whom I know well. But I have to do my job. ... As journalists, we don't get to interview only the good guys -- that's not journalism. It's going to be very difficult for us to keep an eye on the more controversial figures of our time if we never talk to them."

Rutenberg: "Where's the line between covering a scoundrel as a news figure and giving him a promotional platform? ... The test for Ms. Kelly, of course, will come in that interview, how it's packaged on Sunday night and how aggressively she questions him." More: "Megyn Kelly, Alex Jones and a Fine Line Between News and Promotion"

REVOLVING DOOR: HUFFPOST LAYOFFS ROCK WASHINGTON BUREAU - Michael Calderone reports : "On Wednesday morning, [EIC Lydia] Polgreen visited HuffPost's D.C. bureau, which is significantly smaller than the New York headquarters and was hit hard by the cuts. More than six journalists who work in or report to the bureau were laid off, including senior military correspondent David Wood. He won the site's first and only Pulitzer Prize in 2012 for a multimedia series on military veterans." Overall, 39 pink slips were handed out at the publication yesterday related to parent company Verizon's acquisition of Yahoo, which is expected to result in more than 2,000 job losses overall.

One of the people let go in D.C. was Jason Linkins, one of the last remaining newsroom

figures who'd been with HuffPost since the early days. Senior politics editor and de facto D.C. bureau leader Sam Stein tweeted: "Today, we lost a number of really great reporters, from HuffPost at large and the DC bureau specifically. It's been the hardest day I've had helping run this operation."

Also laid off yesterday: The entire editorial staff of Vocativ.

-- "Virginia Shooting Suspect Was Distraught Over Trump's Election, Brother Says" [NYT]

-- "How the U.S. Triggered a Massacre in Mexico" [NatGeo/ProPublica]

-- "Meet the Goopies" [NYT]

REP. JACK BERGMAN, WITNESS TO ALEXANDRIA SHOOTING, BLAMES THE MEDIA - "Unfortunately, and I'm looking in the eye of all the media when I say this, friendships and cordial relationships don't make good news. I can tell you ... we are united along with our Democratic freshmen counterparts to bring civility back to the 115th's congress." Bergman, who was at the softball practice where the attack occurred, said that in an interview about the shooting with Fox News/Business anchor Melissa Francis. The context was a question on whether Bergman agreed with a congressional colleague's assessment of "hateful rhetoric" helping to fuel incidents like this.

Francis: "So you think it's the media's fault?"

Bergman: "I think the media is complicit if they keep inciting instead of informing."

Francis: "So when we report, or quote hateful things that are said, we are adding to it? We should just ignore it and not report it?"

Bergman: "No that's not what I said. I just think you need to make sure that you think twice about how your words and inflections and phrases are gonna affect all the people who might see it." Clip.

FEEL GOOD HIT OF THE SUMMER - A few days ago, newly appointed New York Times D.C. bureau intern Emily Cochrane was writing a story about ducks. Yesterday, she was racing to the scene of the Alexandria shooting and sharing a byline on what was arguably the most high-profile and most talked-about story of the day. "Not a bad way to start your summer," said a Times source who shared this fun little anecdote with us.

INTERNAL INVESTIGATION AT THE INTERCEPT - Co-founders Glenn Greenwald and Jeremy Scahill announced in a joint statement yesterday that the website is "currently conducting an internal investigation" into the handling of a June 5 article, based on classified NSA documents, that led to the arrest of accused leaker Reality Winner. The Intercept's reporting methods on the story came under heavy scrutiny because it appeared the reporting had at least

partly compromised the article's anonymous source. (Literally anonymous: Even The Intercept didn't know the identify of the person who provided the documents.)

I was chatting with a journalist in NatSec circles yesterday, and I asked if this is a situation where it seems like a reprimand of some sort might be warranted. The tricky part, this journalist said, is that reprimanding an Intercept reporter could potentially aid the prosecution's case, which a news outlet with an alleged source facing jail time wouldn't be inclined to do, "So it's touchy."

JAMES COMEY GETS BETTER RATINGS THAN JEFF SESSIONS - The former FBI director's Senate testimony last week was viewed by millions more people than the Attorney General's Senate testimony on Tuesday. On average, 19.5 million people tuned in to Comey versus just over 12 million viewers for Sessions. (Neither NBC for nor the Fox broadcast network broke into regular coverage to carry Sessions.) All told, Fox News had the most viewers for Sessions, averaging 3.2 million, followed by CNN and MSNBC, each with just over 2.2 million. In the core news demo of adults 25-54, CNN led the way with 614,000 viewers, compared to 476,000 for Fox and 436,000 for MSNBC. CBS averaged 2.4 million viewers, while ABC averaged 2.1 million.

SOUND BITES:

-- "Stephen King has been blocked by Trump on Twitter. I guess his book about a scary clown hit too close to home." [Stephen Colbert]

-- "The President of the United States is reportedly under investigation for obstructing justice, and it's the second biggest story of the day." [Gregory Korte]

-- "i would suspect that peter thiel planted a story falsely denying a report on his interest in young blood--but who could be so underhanded!?" [John Cook]

DEPARTMENT OF UNREASONABLY ONEROUS (AND PROBABLY UNENFORCEABLE) NONCOMPETE CLAUSES - via CNN's Oliver Darcy : "Executives at the Independent Journal Review, the conservative millennial-focused news website, have asked employees to sign a new noncompete agreement as the upstart website continues to see an exodus of its top talent. The updated noncompete agreement, obtained by CNN, bars employees from working at any competing business 'anywhere in the world' for six months after employment at IJR, unless the person obtains explicit 'written consent' from the company granting them permission to do so. ... All employees -- even entry-level staffers who start at an annual salary of approximately $35,000 -- were notified in mid-May ... When employees read over the terms of the new noncompete agreement, some were upset."

BLOOMBERG BUSINESSWEEK REBOOT DEBUTS TODAY - EIC Megan Murphy's editor's letter promises "sharper storytelling, cleaner and more consistent design, and richer graphics and photography. The new Bloomberg Businessweek is more global, with American, European, and Asian editions. We've revamped our sections so you can easily find the stories you are looking for on business, finance, technology, economics, and politics. And at the back of the magazine, introduced Pursuits to help you live a better life away from your desk, with advice

on travel, food, art, and more."

THE GHOST OF PHONE-HACKING PAST - Missed this one on Tuesday, via The Guardian : "The owner of the Sun has been ordered to hand over thousands of invoices relating to the use of private investigators by the newspaper and its former sister title, the News of the World, before a new hacking trial later this year. Mr Justice Mann made a judgment on Tuesday that News Group, part of Rupert Murdoch's News Corp, must disclose invoices from between 2000 and 2010 for the use of private investigators that have been found to have connections with phone hacking and unlawfully obtaining personal information. The judge also said that News Group must explain why it has made redactions on hundreds of documents relevant to the hacking case and that laptops used by James Murdoch."

Subject: EPA memo details more spending changes in House bill

By Alex Guillén

07/13/2017 12:53 PM EDT

The House's 2018 Interior-EPA spending package boosts funds for several programs with bipartisan support that the White House had sought to cut, according to an internal EPA memo obtained by POLITICO.

The Superfund program would get a $28.6 million boost, up to $1.09 billion, and Brownfields projects would get an extra $10 million, up to $90 million for 2018, according to the memo, from EPA's acting chief financial officer, David Bloom. EPA Administrator Scott Pruitt has said he will prioritize those cleanup programs, although the administration's budget request sought to cut the Superfund budget by about a third.

House Republicans also would give an extra $15 million for the diesel emissions reduction grant program, which would receive $75 million in 2018, according to the memo.

For other programs, the House bill proposes cuts to programs that Trump sought to keep fully funded, such as the Clean Water State Revolving Fund. The House bill would cut $250 million from the clean water SRF, dropping it to $1.14 billion. The other SRF, for drinking water, would see its funding stable at $863 million.

The bill would leave untouched a slate of categorical grants that help states pay for implementing and enforcing environmental laws and for environmental projects, according to the memo.

At least two programs targeted by Trump are still in line for belt-tightening: a Mexican border initiative that would be zeroed out and a $10 million cut for a program to pay for water and wastewater infrastructure in Alaska Native villages.

WHAT'S NEXT: The House Appropriations Committee will mark up the bill on July 18.

Annie Snider contributed to this report.

Subject: [SPAM] Federal Insider: Staff shortages, solitary confinement increase risks for federal prisoners and public

Staff shortages, solitary confinement increase risks for federal prisoners and public

By Joe Davidson

Michael Horowitz, Justice Department inspector general, in 2014. (Bill O'Leary/The Washington Post)

Once again, Uncle Sam has demonstrated that skimping on his workforce is a good way to cheat his consumers.

In this case, the unwilling consumers are a group who generate little sympathy and exercise even less power — prisoners.

A new report from the Justice Department's internal watchdog shows how understaffed mental health services for particularly vulnerable inmates, coupled with discredited solitary confinement conditions, can ricochet on the law-abiding.

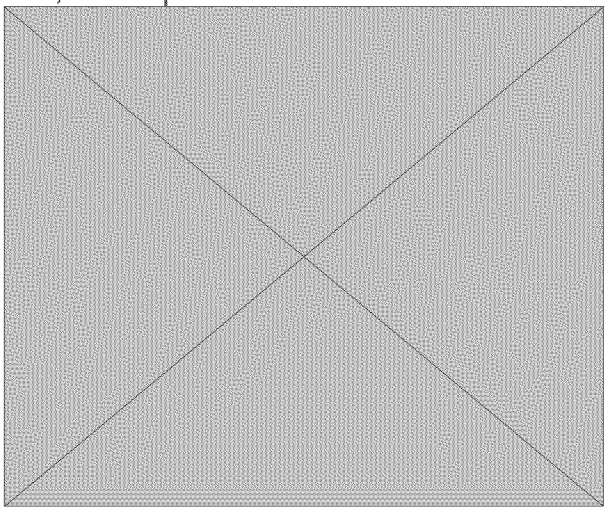
"First, although the BOP (Bureau of Prisons) has stated that it does not practice solitary confinement," said Inspector General Michael Horowitz, "we found inmates, including those with mental illness, who were housed in single-cell confinement for long periods of time, isolated from other inmates, with limited human contact."

About 9,750 inmates were in some form of restricted BOP housing in June 2016, according to the report. They were confined to their cells almost 24/7, sometimes for years. For the purposes of its analysis, the IG's office considered "solitary confinement to be an inmate alone in a cell for 22 hours or more per day with limited human contact."

At the federal supermax prison in Florence, Colo., the investigators "learned of an inmate with serious mental illness who spent about 19 years" in restrictive housing.

ADVERTISEMENT

That kind of punishment can backfire.



“Research shows that ‘time spent in solitary confinement contributes to elevated rates of recidivism’ and that many inmates released into the community from RHUs (restricted housing units) ‘come out of these units damaged and functionally disabled,’ which can be a public safety concern,” the report added.

The psychological damage can lead to “anger, aggression, and rage.” That fuels increased recidivism, which means more crime because the correctional system didn’t adequately do its job.

The job isn’t getting done in part because “mental health staffing does not support the treatment needs of inmates with mental illness,” the report said.

Many facilities fall far short of BOP’s standard of one psychologist for every 500 inmates. One 1,200-prisoner institution had one psychologist. A medical center “housing some of the BOP’s most seriously mentally ill inmates had filled only 12 of its 21 full-time mental health staff positions as of December 2015.”

We asked BOP a series of questions about its policies and requested updated data, but it provided no information.

DOJ watchdog report criticizes solitary confinement

The IG’s office said it was “also concerned about the BOP’s challenges in recruiting and retaining Psychiatrists. … As of October 2015, the BOP had filled only 28 of 49 (57 percent) of its authorized fulltime Psychiatrist

The report says the Bureau of Prisons' policies “do not adequately

positions nationwide."

Eric Young, president of the American Federation of Government Employees' Council of Prison Locals, defended what other reasonable folks call solitary confinement. "Without restrictive housing, we would have anarchy inside our nation's prisons," he said. "Our staff deal with angry, aggressive and violent inmates every day; inmates act out for lots for various reasons and when they do so it is vital to remove them out general population to maintain security and good order in our facilities. So long as we are given the appropriate staff resources we can handle it. If legislators want us to do more they have to commit more funding to us for that purpose."

Reports of BOP staffing shortages are not limited to psychologists and psychiatrists. A March 2016 IG study found that "recruitment and retention of medical professionals is a serious challenge for the BOP, in large part because the BOP competes with private employers that offer higher pay and benefits." An April 2015 IG report said low staffing contributed to a 2009 riot at the Reeves County Detention Center, a Texas facility that operated under a BOP contract.

While BOP officials have taken "a number of steps to address mental health concerns for inmates in restrictive housing," Horowitz said "there are still significant problems with the policies and practices at BOP."

Among the problems cited in the report:

- "BOP does not sufficiently track or monitor" inmates with mental illnesses.
- "Mental Health staff do not always document inmates' mental disorders."
- BOP is "unable to accurately determine the number of inmates with mental illness."
- BOP is unable to "ensure that it is providing appropriate care" to inmates with mental illness.

The agency agreed with all 15 IG recommendations. They included determining the needed steps "to prioritize and incentivize the hiring of mental health staff," tracking "all inmates in single-cell confinement" and monitoring "the cumulative amount of time inmates with mental illness spend in restrictive housing."

We believe,” the report concluded, “that significant additional steps are required to screen, treat, and monitor inmates with mental illness in these restrictive environments, especially those in single-cell confinement.”

Subject: ECOS chief picked to lead EPA's New England region

By Alex Guillén

11/16/2017 10:49 AM EDT

EPA Administrator Scott Pruitt has picked Alexandra Dunn, executive director of the Environmental Council of States, to run EPA's Region 1, which covers Maine, New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut.

Earlier this year, ECOS, a state-focused nonprofit group, called for a "recalibration" of the roles of EPA and the states on environmental regulation, which the group called "cooperative federalism 2.0." That echoed Pruitt's call for states to take on a greater role in both regulation and enforcement.

Dunn has been at ECOS since 2014, and was recently elected to the American College of Environmental Lawyers' Board of Regents. Prior to ECOS, Dunn headed the Association of Clean Water Administrators and was an attorney for the American Chemistry Council.

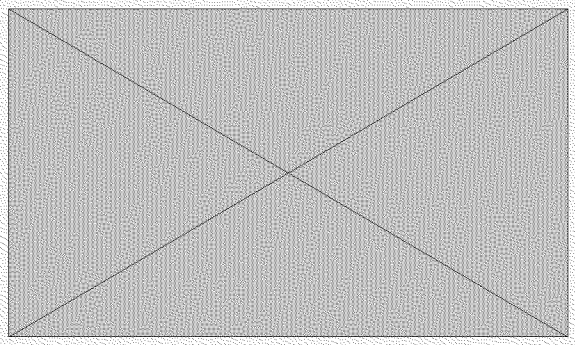
Subject: AEI Today: Kim Jong Un must go. It's time to reunify.

The Trump administration has done a laudable job handling the North Korea crisis it inherited.

AEI's daily publication of independent research, insightful analysis, and scholarly debate

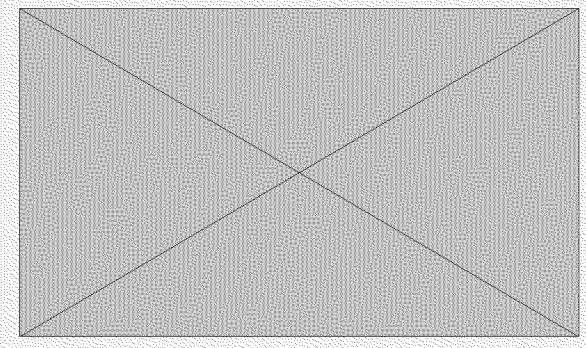


Reuters

Kim Jong Un must go. It's time to reunify.

Dan Blumenthal | The Weekly Standard

The Trump administration has done a laudable job handling the North Korea crisis it inherited. The Obama administration had neglected the gathering North Korean threat under a policy called "strategic patience." The dark lesson of the North Korea experience is that a dictator hell-bent on acquiring nuclear weapons will gain one, despite America's supposed fundamental interest in stopping the world's worst regimes from gaining the worst weapons.

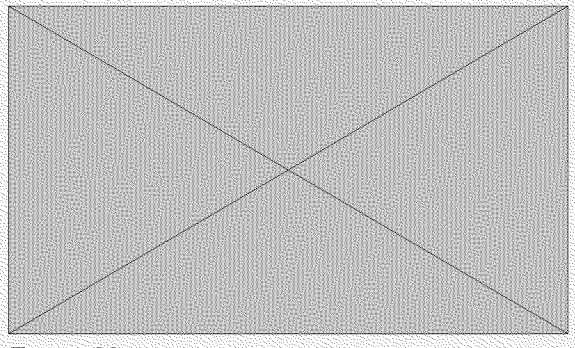


Twenty20

Why our Ivy League obsession falls flat

Jason D. Delisle and Preston Cooper | Forbes

More and more we hear the following justification for the outsized attention we pay to Ivy League schools and their peers: Society's leaders attend these elite universities at high rates. We should be concerned about what happens there, the argument goes, because their ranks hold America's future CEOs and political leaders. It's a plausible argument, and it could be a compelling one — if it were true.



Reuters

'Dreamers' make the US economy stronger

Michael R. Strain | Bloomberg View

Economics can be used to identify trade-offs in public policy by detailing costs and benefits. President Trump's decision to discontinue the Deferred Action for Childhood Arrivals program will create economic costs if Congress does not act. So what are the economic benefits of deporting 690,000 people whose families brought them here illegally when they were children? Easy: There are none.

Twenty20

The invisible cost of education reform

Frederick M. Hess | Education Next

A private survey of Nevada school leaders recently found that they were spending 19 days a year (!) on superfluous paperwork stemming from the state's new teacher-evaluation system. "Superfluous" is the appropriate word because those 19 days do not include the time devoted to actually observing teachers or giving them feedback, which should be useful — it's simply additional end-of-year paper pushing.

Subject: BREAKING NEWS: Goodlatte to retire after 2018

Rep. Bob Goodlatte will not seek reelection to the House in 2018, he announced Thursday.

The Virginia Republican leads the powerful House Judiciary Committee, but his term as chairman ends next year. "This is a natural stepping-off point," he said.

Goodlatte's district has long been a safe seat for Republicans.

Subject: Morning Media: Sinclair triples down on Boris — Russian Runaround — Newspapers team up to take on Google, Facebook

By Hadas Gold | 07/10/2017 06:07 AM EDT

With Alex Weprin

SINCLAIR TRIPLES DOWN ON BORIS EPSHTEYN: Sinclair Broadcasting chief political analyst and former Trump White House official Boris Epshteyn (whose short tenure was marked by his combative and controversial style) will now appear on Sinclair stations across the country nine times per week for his "Bottom Line with Boris" segments, the company confirms. The segments, which currently run three times per week on the stations, will now feature a mix of his political commentary as well as 'interviews' with members of Congress and other people. The segments will have a "billboard," meaning they're sponsored, but they're not sponsored content. Epshteyn's segments are "must runs" so all the Sinclair stations across the country will air them along with their other "must run" segments like conservative commentary from Mark Hyman and the "Terrorism Alert Desk" segments. Sinclair is in the midst of a major expansion as it pursues its acquisition of the Tribune Media local stations.

Speaking of those must runs I've got Sinclair's first official reaction to comedian John Oliver, who skewered Sinclair on his HBO show last week for forcing its stations to air the segments nationwide:

"While we appreciate John Oliver's unique brand of humor, we stand by our approach to sharing content among our stations to supplement the excellent work our newsroom staffs do every day in service to their local communities."

And speaking of John Oliver, over the weekend Sinclair released an Epshteyn "must run" segment where he responded to Oliver's critiques of their "Terrorism Alert Desk," (Hyman also had his own segment responding to Oliver.) "The bottom line is that Sinclair strives to keep its viewers informed as well as protected, and it is vital that viewers do not stick their heads in the sand and are aware of the threat facing each and every one of us," Epshteyn said.

Good morning everyone and welcome to Morning Media with me, **Hadas Gold!** I'm thrilled and honored to be here. I, along with my esteemed colleagues, will bring you the most important news where media meets politics. We'll have scoopy tidbits, the must reads around the beat and things to look out for. This newsletter is nothing without you, dear readers, and throughout the next few weeks as I take on this project and make my own tweaks to it, I need your help! Email me with your news tips and suggestions for how you want to experience this newsletter. I want to hear it all - the good, the bad and the incredibly flattering: **hgold@politico.com** / **@Hadas_Gold**. **Morning Media** is edited by **Alex Weprin** (**@alexweprin** / **aweprin@politico.com**) and produced with writing/reporting help from **Cristiano Lima**. (**clima@politico.com** / **@ludacristiano**). **Archives**. **Subscribe.**

RUSSIAN RUNAROUND: President Donald Trump and Russian President Vladimir Putin finally had their big face to face meeting on Friday during the G-20 in Hamburg. But reports on what was said in that meeting have been disjointed, with the Russians and our own government giving slightly differing accounts. For example: Secretary of State Rex Tillerson told reporters in an audio-only briefing afterward that Trump told Putin that members of Congress were pushing for additional sanctions against Russia over the election issue.

But wait, there are tweets. In one of his signature tweetstorms Trump claimed "sanctions were not discussed at my meeting with President Putin. Nothing will be done until the Ukrainian & Syrian problems are solved!"

What could help clear this up? A press conference by the president. But Trump eschewed the traditional presidential press conference at the G-20, instead sending off his usual stream of tweets. Trump has not held a free form press conference (i.e. not in a bilat situation with another foreign leader) in nearly five months. We'll find out in a couple hours whether the White House will have an on-camera briefing today.

MEANWHILE, THE NEWSPAPER SCOOP WARS CONTINUE. This time the point goes to The New York Times, which had readers riveted over the weekend as it first reported on Saturday that the president's son, Donald Trump Jr. met with a Russian lawyer who has deep ties to the Kremlin during the campaign. On Sunday the Times team added an even bigger bombshell: That lawyer promised damaging information on Hillary Clinton as pretext for the meeting. Trump Jr.'s explanations of the meetings also changed from Saturday to Sunday, leading to a devastating front page for Trump's eldest son.

The Washington Post got in on the game too, revealing that the acquaintance who introduced Trump Jr. to the Russian lawyer is Rob Goldstone, a music publicist and manager to a Russian popstar and son of a wealthy Moscow developer.

NEWSPAPERS TEAM UP TO NEGOTIATE DIRECTLY WITH GOOGLE AND FACEBOOK: Via Jim Rutenberg's Monday mediator column in the Times: "This week, a group of news organizations will begin an effort to win the right to negotiate collectively with the big online platforms and will ask for a limited antitrust exemption from Congress in order to do so. It's an extreme measure with long odds. But the industry considers it worth a shot, given its view that Google and Facebook, regardless of their intentions, are posing a bigger threat economically than President Trump is (so far) with his rhetoric."

The Newspaper Alliance is leading the effort, which has buy-in from a wide array of papers, from the New York Times, Wall Street Journal, and Washington Post to the Star Tribune of Minneapolis and more.

DESPITE THE INTERNAL TURMOIL, FOX NEWS IS STILL DOMINATING THE RATINGS and even saving money to boot. Tucker Carlson may have slightly fewer overall viewers than predecessor Bill O'Reilly, but he pulls in more viewers in the demo that advertisers covet and is less expensive for Fox than O'Reilly's extra-large $25 million a year contract, Joe Flint at the Wall street Journal reports. Same goes for panel show "The Five," which is cheaper

to produce at 9 p.m. than Megyn Kelly's old show.

Of note: Fox News is full steam ahead on its programming and tone. Despite fears internally that the younger Murdoch sons could try to change the Fox brand (particularly the pro-Trump opinion shows), Carlson told Flint that James and Lachlan are hands off.

JIM ACOSTA: GRANDSTANDER OR TRUTH TELLER? That's the question The Washington Post's Paul Farhi asks about CNN's White House correspondent whose remarks (and tweets) about the White House "aren't just blunt; they're unusual. Reporters are supposed to report, not opine. Yet Acosta's disdain has flowed openly..." Acosta told Farhi he's just "covering a story, honestly," and asking tough and hard questions in the face of a President who assails the free press.

White House Press Secretary Sean Spicer had a different take, saying "he's gone well beyond the role of reporter and steered into the role of advocate" and if he "were a mainstream, veteran reporter, I'd be advocating for him to knock it off. It's hurting the profession."

Farhi notes that Acosta was also often jostled with former President Barack Obama and his press team, even landing himself as a highlight in conservative media accounts and in Republican National Committee emails. But Farhi says Acosta's actions aren't uniting the White House press corps behind him - he's getting "relatively tepid support" from his fellow White House scribes. Read the full thing here.

SOUNDBITE: "If I work for President Trump and his campaign and I thought the Russians have information that would expose Hillary for being a liar, and I said 'could you release that,' is that a crime?" [Sean Hannity last month]

JOSH GREEN IS OUT WITH ANOTHER EXCERPT OF HIS STEVE BANNON BOOK, this time in New York magazine. A few of the juicy tidbits:

-- Rupert Murdoch dismissed the idea of Donald Trump running for president when Ivanka Trump had lunch with him ahead of the launch to give him a heads up. That slight bugged Trump for months.

-- Ann Coulter helped write a white paper on Trump's immigration policies during the campaign, then praised it without divulging she helped write it.

-- Breitbart was gleefully posting anti-Megyn Kelly articles during the height of the Trump/Fox News fight (remember when?), leading to former Fox News chief Roger Ailes dispatching his personal lawyer, Peter Johnson Jr., to the Breitbart embassy in D.C. to tell Bannon to drop his attacks on Kelly, threatening that Bannon would never be on Fox again if he didn't call of the Breitbart attack dogs. Bannon warned Johnson Kelly would "turn on [Ailes] one day."

Read the full piece here.

TIL: A total solar eclipse is coming to parts of the U.S. on August 21, a once in a lifetime

opportunity. Some hotels in my husband's hometown of Kansas City are double their normal price and other small towns across the country are suddenly the most popular places to be.

Driving the Day

THE GLOBAL MOOD -- DAVID SIDERS, EMILY HOLDEN and **KALINA OROSCHAKOFF** in Bonn, Germany: "**Trump is blasted at climate talks, but Paris accord lives on":** "President Donald Trump is taking a beating at the United Nations climate conference here.

"Politicians from across the globe mischievously pose for photographs beside a sign at a French pavilion that reads 'Make Our Planet Great Again.' Climate activists repeatedly chastise Trump in panel conversations and throughout the convention halls. The leaders of Mexico and Canada formalized an agreement to circumvent the president and work directly with mostly Democratic governors of climate-minded states.

"Yet despite the vitriol and disregard for Trump -- and his announced withdrawal from the Paris climate agreement -- the diplomats and other officials in Bonn are breathing a sigh of relief. Climate advocates had feared the worst - that the White House would make moves to undercut the pact, a disruptive posture that might do serious damage to the international accord.

"Instead, the Trump administration made no notable efforts other than to hold a single public event promoting clean coal, leaving hope here that the Paris agreement would endure. 'They haven't thrown a bomb yet, have they?' said California Gov. Jerry Brown, who was at the conference promoting state- and regional-level efforts to address climate change. 'So that's good.'" http://politi.co/2zDzG8P

Good Wednesday morning. BREAKING... "China sending envoy to North Korea following Trump visit," by AP's Christopher Bodeen in Beijing: "Following President Donald Trump's visit to Beijing, China said Wednesday that it would send a high-level

special envoy to North Korea amid an extended chill in relations between the neighbors over Pyongyang's nuclear weapons and missile programs." http://bit.ly/2AI9jLM

CEOS YAWN AT GOP TAX PLAN -- NATALIE ANDREWS (@natalieWSJ): "VIDEO: CEOs asked if they plan to increase their company's capital investments if the GOP's tax bill passes. A few hands go up. 'Why aren't the other hands up?' Gary Cohn asks. #WSJCEOCouncil". ***20-second video*** http://bit.ly/2yErBgo

IMPORTANT TAX REFORM DEVELOPMENTS -- "New Hatch plan makes host of individual tax cuts temporary," by Brian Faler: "A host of tax cuts for individual taxpayers would now be temporary, expiring after 2025, under a major revision late Wednesday to the Senate tax reform plan by Finance Committee Chairman Orrin Hatch. It's an effort to bring the legislation into compliance with arcane budget rules in the Senate barring the legislation from adding to the government's long-term debt. But because Hatch would simultaneously make tax cuts for businesses permanent, it's certain to be attacked by Democrats as siding with big business over average Americans." http://politi.co/2jrFYC4

-- OTHER CHANGES: "He is beefing up the child tax credit more than he had proposed, to $2,000 per child, while reducing the income threshold at which it would begin to phase out to $500,000 from $1 million. Hatch is also tweaking the rates and incomes at which his various tax brackets would kick in. And he's added provisions allowing people to set up 529 education savings accounts for unborn children. The revised plan drops provisions related to deferred compensation opposed by Silicon Valley. Other provisions would make it easier for businesses known as 'pass-throughs' to claim his reduced business rate."

ABOUT THAT CHILD TAX CREDIT -- A GOP aide notes: "Hatch's revised version also doubles the child tax credit to $2,000 from the current $1,000 -- a change that presidential daughter Ivanka Trump has pushed for. The credit would rise to $1,600 under the House bill."

-- "Hatch adds repeal of Obamacare mandate to tax bill," by Jen Haberkorn, Seung Min Kim and Bernie Becker: "Senate Republicans have added the repeal of Obamacare's individual mandate to the latest version of their tax bill, with several key swing votes saying they're open to the idea. Late on Tuesday, the chairman of the Senate Finance Committee, Orrin Hatch of Utah, released a new bill that would eliminate the mandate's fines beginning in 2019. The addition was discussed at a closed-door party lunch meeting earlier in the day, and several Republican senators said no one spoke out publicly against repealing the mandate. The GOP views the repeal as both a down payment on its campaign pledge to undo the Affordable Care Act and as a source of revenue: It would generate $338 billion to help pay for changes in the tax plan." http://politi.co/2zFT0lw

NEW YORK REP. PETER KING -- @RepPeteKing: "From Sandy aid to tax reform @MickMulvaneyOMB tries to screw New York. Probably feels inferior because New

York subsidizes his state of South Carolina."

TAX POLITICS -- REPUBLICANS' TOUGH SQUEEZE -- The Senate's decision to add the individual repeal to their tax plan is not a sure-fire winner. Here's why: House conservatives are wary of Alexander-Murray, which props up insurance payments for low-income earners. The big question is whether they'll be OK voting for a tax plan with the individual repeal, all while propping up the health-care law. After a quick round of conversations last night, we think the answer is no. **REMEMBER:** The Senate and House bills need to be reconciled and meshed together. That will happen down the road.

NEW POLITICO/MORNING CONSULT POLL -- "Poll: Voters think Trump will benefit from tax plan," by Steven Shepard: "Majorities of voters think President Donald Trump and the company he built will benefit from proposed changes to the tax code, but fewer than three in 10 expect those changes to help them. And voters still want to see Trump's tax returns before a tax bill moves forward. That's according to a new POLITICO/Morning Consult poll, conducted last week, that also shows opposition to the plan continuing to increase modestly among voters familiar with it, even though a plurality support the proposal." http://politi.co/2htSxbw

-- DON'T FORGET! JUST 23 DAYS until Congress needs to lift the debt limit and fund the government.

WALL ST. NOT BANKING ON TAX REFORM -- "One of Wall Street's biggest titans gives President Donald Trump minimal credit for the past year's surge in stock prices. And he's not as worried as many investors about a reckoning if the GOP fails to deliver tax cuts. 'An awful lot of it is not related to Trump,' said Hamilton 'Tony' James, president of private equity giant Blackstone Group, in an interview for the latest 'POLITICO Money' podcast. 'We've had nine years of run-up and he's been president during one of them.'

"While stock prices have built in some expectation for corporate tax cuts, James said he doesn't think Wall Street will tank if the Republican effort to overhaul taxes falls apart - a warning offered even by Trump's own Treasury secretary. 'If we don't get it, I think it's a modest negative for the market,' the Blackstone executive said. 'But I don't think it's a huge driver for the market. I don't think the market is going to tank by any means.'" http://politi.co/2zEp21K+

****** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat- buckwheat. Watch the video: http://politi.co/2ArIBXv ******

TRUMP IS BACK ON EAST COAST TIME -- @realDonaldTrump at 5:40 a.m.: ".@foxandfriends will be showing much of our successful trip to Asia, and the friendships & benefits that will endure for years to come!" ... **at 5:45 a.m.:** "While in the Philippines I was forced to watch @CNN, which I have not done in months, and again

realized how bad, and FAKE, it is. Loser!"

-- THE PRESIDENT appears to have first-hand knowledge of the broadcast plans of "Fox and Friends."

STEVE SHEPARD: " Poll: Biden leads Trump in prospective 2020 matchup": "Only 35 percent of voters would choose to reelect Trump in 2020, the poll shows - substantially fewer than the 46 percent who would vote instead for Biden, who said Monday that he is 'not closing the door' on a third attempt at the presidency in 2020. One in 5 voters are undecided." http://politi.co/2mt0sex

OUR MAN IN NEWARK -- MATT FRIEDMAN: "No verdict in Menendez case; jury will resume deliberations Wednesday": "Jurors in the federal corruption trial of U.S. Sen. Robert Menendez went home Tuesday without reaching a verdict, a day after telling the court they were deadlocked on all charges. Jurors sent no notes and asked no questions during their 5 1/2 hours of deliberations on Tuesday, giving no clue as to whether they were any closer to reaching a verdict on the 12 counts against Menendez, a Democrat and New Jersey's senior senator, and the 11 counts against his co-defendant, Florida eye doctor Salomon Melgen." http://politi.co/2zLn7pD

THE LATEST ON MOORE ...

-- WHAT MCCONNELL IS THINKING: "McConnell predicts expulsion if Moore wins," by Seung Min Kim and John Bresnahan: "Senate Majority Leader Mitch McConnell and Senate Republicans say that Alabama Senate GOP candidate Roy Moore is virtually certain to face a formal ethics complaint - which would lead to expulsion proceedings - should he be elected next month. ... One option that McConnell floated during the meeting was for a Democrat, such as Senate Minority Leader Chuck Schumer of New York, to initiate the process by filing the complaint, according to the sources. Democrats are not entertaining that option before the Dec. 12 special election because the party's candidate, Doug Jones, could win." http://politi.co/2hzaoBF

-- "McConnell: 'Roy Moore Should Withdraw,'" by WSJ's Siobhan Hughes: "At The Wall Street Journal CEO Council, the Kentucky Republican suggested he wanted Attorney General Jeff Sessions to run as a write-in candidate instead for his old seat ... 'His campaign is collapsing," said Mr. McConnell, who said that President Donald Trump had called him from Vietnam on Friday mostly to discuss the dilemma the party was facing. 'Obviously we're in a discussion here about how to salvage this seat if possible.'" http://on.wsj.com/2iXvoPg

-- DECISION TIME FOR THE WHITE HOUSE: Alex Isenstadt, Eliana Johnson and Josh Dawsey: "White House officials plan to convene a meeting to talk through their options soon, and Trump is widely expected to address the predicament publicly when he returns from abroad. In order for the president to get involved, some aides to the president say, he would need an airtight plan that limits his political exposure to any fallout. Trump spoke with Senate Majority Leader Mitch McConnell from Asia last week,

and the Senate leader made an urgent plea: Please help push Moore out of the contest." http://politi.co/2jsdKqT

-- THE PARTY COMMITTEE: "RNC cuts off Moore," by Alex Isenstadt: "The [RNC] is withdrawing its support for besieged Alabama Senate candidate Roy Moore, leaving him increasingly isolated as he confronts charges of sexual misconduct with teenagers. The RNC is pulling out of a joint fundraising agreement it had with Moore, according to a senior party official briefed on the decision. It is also canceling a field program it had set up ahead of the state's Dec. 12 special election. The committee had about a dozen paid canvassers in Alabama working for Moore. It will no longer transfer any money to the race." http://politi.co/2AJ8IKJ

-- THE RIGHT FLANK RECEDES: "Hannity gives Moore '24 hours,'" by Akela Lacy: "Fox News host Sean Hannity walked back Tuesday night his original remarks insinuating that the five women accusing Alabama Senate candidate Roy Moore of sexual assault when they were teenagers might be lying. 'For me, the judge has 24 hours,' Hannity said. 'You must immediately and fully come up with a satisfactory explanation for your inconsistencies that I just showed.'" http://politi.co/2AHCRJD

-- "Steve Bannon and Allies Have Second Thoughts About Roy Moore, Sources Say," by The Daily Beast's Lachlan Markay and Asawin Suebsaeng: "Over the past few days, Bannon has begun privately taking the temperature of those in his inner circle to see what they think of the Moore allegations and to get their sense of how to proceed, according to four knowledgeable sources. Late last week, the Breitbart chairman said, 'I will put him in a grave myself,' if he determines that Moore was lying to him about the numerous accusations, a source close to Bannon relayed. ... Bannon is currently in Japan, where he went to deliver a speech. He is scheduled to fly back at the end of the week." http://thebea.st/2AJFFpg

-- @ABC: "Asked whether he believes Roy Moore over his accusers, Rep. Mo Brooks tells @TomLlamasABC, 'I believe the Democrats will do great damage to our country.'" http://bit.ly/2htTb9i

DEPT. OF DIRTY TRICKS -- "He said he was a Washington Post reporter offering a reward for dirt on Roy Moore. But it wasn't true," by WaPo's Marwa Eltagouri and Herman Wong: "A pastor in Alabama said he received a voice mail Tuesday from an individual falsely claiming to be a reporter with The Washington Post and seeking women 'willing to make damaging remarks' about Republican Senate candidate Roy Moore in exchange for money. ... Pastor Al Moore of Creola, Ala., said that he received the call on his cellphone a little after 7 a.m. Tuesday from a private number, which he did not answer. The caller, claiming to be 'Bernie Bernstein,' left a 27-second voicemail, which Moore played for local CBS-affiliate WKRG.

"'I'm a reporter for the Washington Post calling to find out if anyone at this address is a female between the ages of 54 to 57 years old, willing to make damaging remarks about candidate Roy Moore for a reward of between 5,000 and 7,000 dollars,' the caller

said in the voice mail." http://wapo.st/2zFcK8Z

TAKING STOCK OF TRUMP'S ASIA SWING -- "Trump returns home from Asia with few clear wins: The president says he strengthened his friendships and pointed to billions in new deals - but he failed to extract major concessions from China and others abroad," by Andrew Restuccia: "And yet, as he flies home to Washington, former diplomats and Asia experts were talking about how China came out ahead - and they noted he is returning to Washington largely empty-handed. 'The principal takeaway from Trump's big Asia trip: virtually zero progress on any issue that matters to the Americans,' Eurasia Group president Ian Bremmer wrote in a report. 'Ultimately, that's the biggest win for China.'" http://politi.co/2hA70GK

--"Trump in Asia: A 'Very Epic' Charm Offensive," by NYT's Julie Hirschfeld Davis: "Like most things that Mr. Trump undertakes, the president treated the grueling 12-day trip through Asia that he wrapped up here on Tuesday as a test of his own personal charisma and stamina, a marathon charm offensive that he vowed would yield quick results. Never mind that it is not at all clear what he actually achieved." http://nyti.ms/2hBPbqZ

DOJ INTERFERENCE WATCH -- "'Lock Her Up' Becomes More Than a Slogan," by NYT's Peter Baker: "President Trump did not need to send a memo or telephone his attorney general to make his desires known. He broadcast them for all the world to see on Twitter. The instruction was clear: The Justice Department should investigate his defeated opponent from last year's campaign. However they were delivered, Mr. Trump's demands have ricocheted through the halls of the Justice Department, where Attorney General Jeff Sessions has now ordered senior prosecutors to evaluate various accusations against Hillary Clinton and report back on whether a special counsel should be appointed. ...

"The request alone was enough to incite a political backlash, as critics of Mr. Trump quickly denounced what they called 'banana republic' politics of retribution, akin to autocratic nations where election losers are jailed by winners." http://nyti.ms/2ih51UQ

WAPO'S DEVLIN BARRETT: "Appointing a second special counsel could rattle Justice Department": "Peter R. Zeidenberg, who once served as deputy special counsel in the probe of former White House aide Lewis 'Scooter' Libby, said 'the best-case scenario' is that the attorney general is trying simply to mollify an angry president and doesn't really plan to name a special counsel. If one is appointed to probe Clinton matters, 'I think the vast majority of people at DOJ would be completely disgusted and demoralized by it," said Zeidenberg, referring to the Justice Department. 'They don't like feeling that they are political tools to be used by the president.'" http://wapo.st/2hACMTW

-- @MattGertz: "Shep Smith just took apart the Uranium One conspiracy theory in what amounts to a methodical annihilation of his own network's coverage of the story." http://bit.ly/2yDMiJd

-- "Clinton aides try to keep focus on Trump over special counsel threat," by Annie Karni: "'Democrats' response needs to be broader than defending Hillary Clinton on Uranium One,' said Ron Klain, a former Clinton campaign adviser who was also the final pick to serve as White House chief of staff in the Clinton administration that never was. 'It needs to convey that - if Trump makes good on this threat - any person out marching with their sign is at risk of having the Justice Department come and get them. That is a dangerous turn in American politics.'" http://politi.co/2A09Kol

FOR YOUR RADAR -- "Zimbabwe army has Mugabe, wife in custody, controls capital," by AP's Farai Mutsaka in Harare: "Zimbabwe's army said Wednesday it has President Robert Mugabe and his wife in custody and is securing government offices and patrolling the capital's streets following a night of unrest that included a military takeover of the state broadcaster. The night's action triggered speculation of a coup, but the military's supporters praised it as a 'bloodless correction. For the first time, this southern African nation is seeing the military oppose Mugabe, the world's oldest head of state and one of the longest-serving authoritarian rulers." http://bit.ly/2mtGJvd

-- AP at 5:55 a.m.: "HARARE, Zimbabwe (AP) - South Africa president speaks with Mugabe, is 'fine' but confined to his home."

-- "The Upstart Saudi Prince Who's Throwing Caution to the Winds," by NYT's Ben Hubbard in Riyadh and David D. Kirkpatrick in London: "The crown prince has moved so quickly that American officials and others worry that he is destabilizing the region. Signs of potential blowback are growing. Investors, nervous about his plans, have been moving money out of the kingdom. Prince Mohammed has sought to counter the capital flight by squeezing detainees and others to surrender assets.

"He has presented the arrests as a campaign against corruption, but his targets call it a shakedown, and he has turned for advice to a former Egyptian security chief who has been pilloried at home for brutality and graft. Prince Mohammed's supporters say he is simply taking the drastic measures needed to turn around the kingdom's graft-ridden and oil-dependent economy while pushing back against Iranian aggression." http://nyti.ms/2AI1yWa

RUSSIA WATCH -- "Secret Finding: 60 Russian Payments 'To Finance Election Campaign Of 2016,'" by BuzzFeed's Jason Leopold, Anthony Cormier and Jessica Garrison: "On Aug. 3 of last year, just as the U.S. presidential election was entering its final, heated phase, the Russian foreign ministry sent nearly $30,000 to its embassy in Washington. The wire transfer, which came from a Kremlin-backed Russian bank, landed in one of the embassy's Citibank accounts and contained a remarkable memo line: 'to finance election campaign of 2016.'That wire transfer is one of more than 60 now being scrutinized by the FBI and other federal agencies investigating Russian involvement in the US election. The transactions, which moved through Citibank accounts and totaled more than $380,000, each came from the Russian foreign ministry and most contained a memo line referencing the financing of the 2016 election."

http://bzfd.it/2AHaPOr

-- HMM: "U.S. Hires Company With K.G.B. Link to Guard Moscow Embassy," by NYT's Andrew Higgins in Moscow: "To make up for the loss of security guards axed in the Russian-mandated staff cuts, Washington has hired a private Russian company that grew out of a security business co-founded by Mr. Putin's former K.G.B. boss, an 82-year-old veteran spy who spent 25 years planting agents in Western security services and hunting down their operatives. Under a $2.8 million no-bid contract awarded by the Office of Acquisitions in Washington, security guards at the American Embassy in Moscow and at consulates in St. Petersburg, Yekaterinburg and Vladivostok will be provided by Elite Security Holdings, a company closely linked to the former top K.G.B. figure, Viktor G. Budanov, a retired general who rose through the ranks to become head of Soviet counterintelligence." http://nyti.ms/2junUqZ

Playbook Reads

PHOTO DU JOUR: President Donald Trump walks off Marine One on the South Lawn of the White House after returning from an 12-day Asia on Nov. 14. | Andrew Harrer/Pool/Getty Images

DATA DU JOUR -- "Donald Trump Has Nominated 480 People So Far in His Presidency. 80% of Them Are Men," by the Daily Beast's Joanna Purpich and Sam Stein: "Since he assumed office, Donald Trump has sent 480 nominations to the U.S. Senate for positions in the judicial branch and executive branches. Of those, The Daily Beast found, 387 were men-constituting just over 80 of all of Trump's nominees. The trend goes across government, though it is truly accentuated in certain fields. For example, Trump has nominated 282 men for high ranking cabinet positions compared to 77 women. He has nominated 55 men for tax, armed forces, veterans claims, district, appellate, and supreme court judgeships compared to 13 women. And he has nominated 50 men to U.S. attorney posts compared to just three women." http://thebea.st/2igQXeb

COREY'S D.C. DIGS -- "Inside the 'Lewandowski embassy," by Theo Meyer, Daniel Lippman, and Josh Dawsey: "Corey Lewandowski has a new base of operations in Washington: an elegant, century-old rowhouse that resembles his own version of the 'Breitbart embassy.' Just as Steve Bannon does at the rowhouse a dozen blocks away where Breitbart sometimes holds meetings and hosts parties, Lewandowski, Donald Trump's former campaign manager, stays upstairs when he's in town, according to five people familiar with the arrangement. The lower floors serve as his workspace, as well as the offices of Turnberry Solutions, a lobbying firm started this summer by another Trump campaign veteran.

"Lewandowski has said he has nothing to do with Turnberry, but the firm lists the

rowhouse's address on all of its lobbying disclosures, and a Turnberry nondisclosure agreement recently sat on a desk in the front room. Signs of Lewandowski's presence also abounded when a POLITICO reporter visited the house last month, including framed copies of articles about Lewandowski in the print editions of POLITICO and The Sun of Lowell, Mass., his hometown. ... Lewandowski [has] held discussions with the BGR Group, a top Washington lobbying firm, about working together ... according to a person familiar with the talks. But it's unclear whether those talks are going anywhere or exactly what Lewandowski's role would be." http://politi.co/2AlkHr0

BUSINESS BURST -- "Airbus, Boeing Seal More Than $75 Billion in Plane Orders," by WSJ's Doug Cameron: "Airbus and Boeing Co. secured more than $75 billion in single-aisle plane commitments Wednesday, demonstrating unrelenting appetite for their most popular planes from discount carriers as the airlines lock in deals to support growth for years to come. Airbus secured what it called one of the biggest aircraft deals in its history with a 430-jet agreement with airlines linked to Indigo Partners LLC, a U.S. private-equity group with stakes in some of the fastest-growing low-cost carriers on three continents." http://on.wsj.com/2zLXncM

POLITICO EXPLAINS ... NET NEUTRALITY 101: The long-running fight over net neutrality, which pits telecom giants against tech companies, is heating up at the Federal Communications Commission. To understand what the fight is all about and where it's headed, check out POLITICO's latest explainer video featuring Technology Reporter Margaret McGill and the artwork of Pulitzer Prize-winning cartoonist, Matt Wuerker. http://politi.co/2zZz4uC

PAGE SIX: "The Mooch shops new book on his 10 days in the White House": "Sources tell Page Six exclusively that the shortest-ever-tenured White House communications director has been meeting with publishers about a planned tome that's being repped by Trident Media Group, the firm whose clients include Jon Stewart, Paris Hilton, Robin Cook and Deepak Chopra. While the Mooch has previously penned finance books, a source tells us of the new project: 'It's about his time at the White House - all 10 days of it!'" http://pge.sx/2ihxZ7a

--"Jeffrey Toobin to Publish Book on Russia Probe," by NYT's Concepción de León "The project [for Doubleday] will cover special counsel Robert Mueller's investigation into alleged collusion between members of the Trump campaign and Russian officials in an attempt to skew election results." http://nyti.ms/2zHUonK

****** **A message from Chevron:** This is a story about DOERS, butterflies, and buckwheat. In '75, the endangered El Segundo Blue butterfly was found near a Chevron refinery. We protected the habitat and planted the only thing they eat-buckwheat. We're still planting and keeping an eye on our littlest neighbor. Watch the video: http://politi.co/2ArlBXv ******

MEDIAWATCH -- "NBC Fires Top Booking Exec for 'Inappropriate Conduct' With Women," by The Wrap's Jon Levine: "NBC Universal fired Senior Vice President for

Booking, News & Entertainment Matt Zimmerman, following accusations of sexual misconduct, the company announced Tuesday. 'We have recently learned that Matt Zimmerman engaged in inappropriate conduct with more than one woman at NBCU, which violated company policy,' a company spokesperson told TheWrap. 'As a result he has been dismissed.' The network declined to comment on the number of accusers or the nature of their accusations; Zimmerman could not be reached for comment." http://bit.ly/2yE4aUk

--@yashar: "Per Insider: NBC Universal policy says that relationships with underlings/direct reports must be reported to human resources...in at least one case, Zimmerman failed to do this."

--"Arianna Huffington Ignored Sexual Misconduct at The Huffington Post," by Melanie Ehrenkranz in Gizmodo: "One former staffer said that on one or two occasions while [Jimmy] Soni was managing editor, he tried to kiss or make-out with her. ... She described Huffington as someone who may value portraying herself as a feminist, but ultimately prioritizes a ruthless work ethic over issues of sexual harassment, or what she believed Huffington viewed as 'the softer side of things.'" http://bit.ly/2jqvfYI

--Kevin Sieff (@ksieff), WaPo Africa bureau chief: "Some personal news: I'm heading to Mexico next year to cover Latin America for the @washingtonpost."

-- NEIL CAVUTO on FOX News last night, discusses why he won't invite Trump on his shows to interview him these days: "I see little to be gained getting him for the customary 10 minutes now or adding my name to the long and impressive list of people who've already interviewed the President, including a lot of great people here." ***4-min. video*** http://bit.ly/2iiQoAp

SPORTS BLINK -- "Fox Sports Bribed Officials, Says Prosecution Witness In FIFA Trial," by BuzzFeed's Ken Bensinger: "A key witness in the FIFA trial testified Tuesday that major media companies - including Fox Sports - bribed officials for soccer broadcasting rights. Alejandro Burzaco, a witness for the prosecution in the case, said in court that he was aware of six media companies involved in bribes, including Fox, O Globo from Brazil, Media Pro from Spain, and Televisa from Mexico. Fox Sports is by far the largest of the group, however, and is owned by 21st Century Fox, the multinational conglomerate controlled by Rupert Murdoch." http://bzfd.it/2hBJ5XI

Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Elevator Safety
Alabama OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Department of Labor adopts regulations under AAC 480-8-5 to establish requirements for elevator safety repair. The rule provides that preexisting escalator emergency stop switches meet specified industry standards. The rule also extends the time for repair/upgrade to two years from the time of the first inspection and specifies that violations will be noted in the inspection report, but will not be certificate-blocking until the two year grace period has elapsed. Comments are due July 10, 2017. Contact: Stephen McCormick; DOL; 334-242-8274

Colorado

WATER
Basic Standards and Methodologies for Surface Water
Colorado WATER

Proposed rule of the Department of Public Health and Environment, Water Quality Control Commission, amends regulations under 5 CCR 1002-31, Section 31.17, regarding surface water nutrient management. The rule delays the effective dates of the phosphorus numeric values for certain downstream waters and nitrogen numeric values to Dec. 31, 2027. The rule also delays the effective date of the chlorophyll a values for certain downstream waters to Dec. 31, 2022. A concurrent proposed rule adds a voluntary incentive program for early nutrient reduction. A hearing is scheduled for Oct. 10, 2017, in Denver. Various deadlines and prehearing conference dates are specified for those seeking party status. Comments are due Sept. 27, 2017. Contact: Nicole Rowan; DPHE, Water Quality Control Commission; 303-692-3692; nicole.rowan@state.co.us

—Colorado Register (06/13/2017)

Regulatory Update

WATER
Nutrients Management Control
Colorado WATER

Proposed rule of the Department of Public Health and Environment, Water Quality Control Commission, amends regulations under 5 CCR 1002-85 regarding nutrients management control. The rule establishes a voluntary early nutrient reduction incentive program for permittees that reduce nitrogen or phosphorus loadings below specified levels before Dec. 31, 2026. The rule also requires program participants to submit a nutrient reduction plan and annual reports to the division. In addition, the rule specifies that participants that make early nutrient discharge reductions will be given additional time to comply with effluent limits based on waste load allocations, numeric nutrient values, or alternate effluent limitations expected to be adopted in 2027 unless their discharged nutrients caused or contributed to harmful algal blooms producing algal toxins or disinfection byproducts that posed an imminent threat to human health. A concurrent proposed rule delays the effective dates of certain phosphorus, nitrogen, and chlorophyll a numeric values. A hearing is scheduled for Oct. 10, 2017, in Denver. Various deadlines and prehearing conference dates are specified for those seeking party status. Comments are due Sept. 27, 2017. Contact: Nicole Rowan; DPHE, Water Quality Control Commission; 303-692-3692; nicole.rowan@state.co.us

Kansas

OCCUPATIONAL SAFETY AND HEALTH
Fire Codes
Kansas OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the State Fire Marshal amends regulations under KAR 22-1-2 through -24-15 (nonconsecutive); adopts regulations under KAR 22-1-8 through -12; and revokes regulations under KAR 22-6-12, -6-16, -11-8, -18-3, and -24-2 through -24-18 regarding fire codes. The rule reorganizes and updates the state fire prevention code and provisions concerning the regional hazardous material response team program. The rule also removes the fees for liquefied petroleum gas licenses and adds a reporting requirement for certified fire investigators when investigating fires that have caused a death. A hearing is scheduled for Aug. 15, 2017, in Topeka. Comments are due Aug. 15, 2017. Contact: Carolyn Lowry; State Fire Marshal; 785-296-8984; carolyn.lowry@ks.gov

Twenty20

Medicare can't be ignored forever

James C. Capretta | Real Clear Health

Over the next 10 years, Washington will spend $10 trillion on Medicare. It is one of three major entitlement programs that is set to drive massive federal deficits in the coming years. What's needed is a sensible long-term vision for the program that maintains its core protections without subsidizing more affluent retirees. Such reform is highly controversial, but with the Republican agenda sputtering, it's the kind of ambitious move that can make a legacy.

The College Board

The tangled world of teacher debt

Jason D. Delisle and Alexander Holt | Education Next

Say you're a third-grade public school teacher with $50,000 in student-loan debt. The federal Stafford Teacher Loan Forgiveness program

sounds like a great idea: Teach for five years while making monthly payments, and the feds will forgive $5,000 of what you owe. Then comes the fine print. Welcome to the world of student loans and debt, a patchwork of contradictory regulations dating back to Dwight Eisenhower.

AEI

Millennials who flourish often follow this sequence

W. Bradford Wilcox and Wendy Wang | AEI and Institute for Family Studies

Millennials are much more likely to flourish financially if they follow the classic "success sequence" — getting at least a high school degree, working full-time, and marrying before having any children, in that order. Yet despite evidence showing that 95 percent of millennials who married first are not poor, compared to 72 percent who had children first, the majority of 28- to 34-year-old parents had their first child before marriage.

Reuters

China just shoved Taiwan. Will America push back?

Michael Mazza | AEIdeas

When push comes to shove, what kind of friend will Trump's America be? This question has been on the minds of US allies since November 8 of last year. There have been encouraging signs, such as Secretary Mattis' visits to Asia,

along with not-so-encouraging signs, including the president's performance at the NATO summit. But with Panama switching diplomatic recognition from Taipei to Beijing, China has forced the question: Will the US push back?

World's Costliest Gas Clouding China's Quest for Bluer Skies
China has promised to make its skies blue again, but having some of the world's most-expensive natural gas isn't helping.

Chesapeake Bay

Maryland Awards $92 Million for Chesapeake Bay-Related Projects

Maryland approved more than $92 million in grants to improve wastewater treatment and reduce Chesapeake Bay pollution, the state's Department of Environmental Protection said July 5.

Climate Policy

China Seen Scaling Back Carbon Market After Trump's Paris Move

China may remove industries including steel from the national carbon market it plans to start this year because President Donald Trump wants to pull the U.S. out of the Paris climate deal.

EPA

Ex-NASA Official, Pipeline Lobbyist Joins EPA's Water Office

A former NASA official and veteran lobbyist whose environmental issues included the Keystone XL and Dakota Access pipeline projects is now the top political appointee in the EPA's water office.

Energy

G-20's Financing of Fossil Fuels Outweighs Renewables, Study Says

Fossil fuels received four times more than clean energy in public financing from Group of 20 member countries, according to a report by environmental groups that urged more financing be directed to renewables to address climate change.

Energy

Germany's Russian Gas Fix Raises Alarm in Merkel's Backyard

Hidden by pine forests near the deserted site of what was once East Germany's biggest nuclear reactor, two shiny pipelines emerge from the Baltic Sea to mark the spot where Chancellor Angela Merkel is trying to secure the country's energy future.

Energy

Merkel's Germany Won't Offer Fast Exit from Dirtiest Fossil Fuel

German Chancellor Angela Merkel ruled out an abrupt phase-out from the dirtiest fossil fuel used to generate power, even as the nation struggles to meet its climate targets.

Mergers and Acquisitions

Halliburton Buys Summit to Fill Hole in Oil-Service Offerings

Halliburton Co. acquired Summit ESP LLC, giving the world's biggest fracking services provider much-needed help in a key area of its oil services portfolio. Terms were not disclosed.

Motor Vehicles

New Zealand Exempts Road Fees for Heavy Electric Vehicles

New Zealand is exempting heavy electric vehicles from road use charges, a move that could save some truck drivers thousands of dollars a year.

Motor Vehicles

Volvo Vaults to Volts, Planning to Pull Plug on Gasoline Engines

As it turns out, news of the death of the internal combustion engine may not be very exaggerated after all.

Oil & Gas

Methane Leak Rule in Effect Can't Be Halted, Lawsuit Says

The Interior Department can't halt measures to reduce methane leaks from oil and gas wells on public lands six months after they took effect, the attorneys general of California and New Mexico said in a lawsuit.

Toxic Substances

EU Food Agency Re-Opens Risk Review of Bisphenol A

European food regulators are taking the unusual step of calling for input ahead of a 2018 toxicity evaluation of the widely used chemical bisphenol A, which may lead to restrictions on food packaging such as can linings.

Subject: BREAKING NEWS: Senate Republicans release new Obamacare repeal bill

Senate Republicans released their revised health care bill Thursday to gut the Affordable Care Act. Unlike their previous bill, which faced stiff GOP resistance, it would maintain some Obamacare taxes on the wealthy, provide new financial support to purchase health insurance and allow health insurers to offer skimpier coverage.

Subject: Morning Energy: Replacing Clean Power Plan could disappoint conservatives — Domenech nomination clears Senate — More regulatory waivers extended after hurricanes

By Anthony Adragna | 09/14/2017 05:41 AM EDT

With help from Eric Wolff

PRUITT'S CARBON TIGHTROPE BALANCING ACT: Leaving the door open to rewrite the Obama administration's Clean Power Plan would help President Donald Trump's administration honor the wishes of power companies looking to avoid years of legal uncertainty but might not satisfy the demands of some conservative activists, Pro's Emily Holden reports. EPA wants to move to collect comments about whether to write a new regulation, and is likely to write a new rule given the agency would be on much shakier legal ground if it simply opted not to regulate carbon dioxide from power plants.

Any replacement rule would be unlikely to take a meaningful bite out of carbon levels and would be based on a much narrower interpretation of EPA's Clean Air Act authority. That may be enough in the interim for some conservatives who would prefer a straight withdrawal of Clean Power Plan but who wouldn't oppose a replacement rule. "Ultimately, the responsibility to fix this mess lies with the Congress, so until they act, the only thing the Administration can do is minimize the damage," said Tom Pyle, a conservative lobbyist with the American Energy Alliance who led Trump's Energy Department transition team. But the details could have political implications for Pruitt, who is widely seen as a potential candidate for the U.S. Senate in his native Oklahoma.

Most utilities assume future regulations or laws will ultimately require them to curb carbon emissions even if the Obama administration's Clean Power Plan goes down and support EPA issuing a replacement rule — albeit a much weaker one. "We think that future regulation of carbon emissions from power production is likely, and could provide additional planning certainty," Tammy Ridout, a spokeswoman with coal-heavy AEP, said. Regardless of the approach Pruitt ultimately selects, environmental groups are sure to vigorously contest his efforts in court.

DOMENECH CLEARS SENATE: Trump's pick for Interior assistant secretary nominee, Douglas Domenech, cleared the Senate by voice vote late Wednesday. The veteran of George W. Bush's Interior Department who was on the Trump transition team's landing team at the agency said during the confirmation process that he still believes that the human contribution to climate change is very small. Domenech also previously served as Virginia's secretary of natural resources.

But others will wait: Efforts to fill out the Trump energy team must wait a few more days again after the Senate Energy and Natural Resources Committee shelved votes slated for today on the nominations of five FERC, DOE and Interior nominees, Pro's Darius Dixon reports. Votes are now slated for next Tuesday.

Democrats threaten to delay Bodine: Two EPW Democrats — Sheldon Whitehouse and Jeff Merkley — threatened to hold up Susan Bodine's nomination to be EPA enforcement chief until she provides details about her advisory role to the administrator and whether she played a role in the agency's decision to enforce its methane rule on a "case by case" basis. They said Bodine's assumption of a role at EPA without being confirmed first may run afoul of federal law.

EPA nominees up next week: Four EPA nominees will get their day at Senate EPW for a hearing next Wednesday. They are: Michael Dourson to run the agency's chemical office; Matt Leopold to be general counsel; David Ross to run the water office; and William Wehrum's contentious bid to be EPA's top air official. The committee also will consider Jeffery Baran's renomination to another five-year NRC term.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and Bracewell's Frank Maisano named Schuyler Colfax and John Nance Garner as the two House speakers that became vice president. For today, and in keeping with the theme: Who is the lone speaker that went on to become president? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

GET PUMPED! POLITICO Pro convenes its first-ever policy summit today (follow along here) with a little something for everyone. Of particular interest to energy fans: a 10:30 a.m. session hosted by Pro's Nick Juliano on the implications of the Trump administration on energy policy. Panelists include: Exelon CEO Chris Crane; Senate Energy staffer Spencer Gray; Business Council for Sustainable Energy President Lisa Jacobson and MWR Strategies' Mike McKenna. Other non-energy speakers throughout the day include: Treasury Secretary Steve Mnuchin, Commerce Secretary Wilbur Ross and top House taxwriters Kevin Brady and Richard Neal.

TEMPORARY REGULATORY WAIVERS GALORE: With Florida and Texas still restoring power and taking stock of damage following Hurricanes Harvey and Irma, federal regulators are temporarily relaxing regulatory requirements to help those states get back online. As POLITICO Florida's Bruce Ritchie reports, the EPA acknowledged in a letter Wednesday it recognized the need to use "flexibility" provided in federal stormwater discharge permits for facilities affected by the storm.

Jones Act waiver extended: Citing "severe disruptions of the oil supply system," DHS announced Wednesday it extended a Jones Act waiver through Sept. 22 to alleviate fuel shortages in the areas affected by the hurricanes. The decision will allow foreign-flagged vessels to deliver fuel from U.S. refineries to Florida and other impacted states, something barred under the 1920 Jones Act.

Texas' too: EPA said late Wednesday it would waive fuel requirements under the Clean Air Act for reformulated gasoline and low volatility gasoline in Texas through Oct. 1 to "help address the emergency circumstances" in the state from the hurricanes. In addition, the agency also continued to allow the use of Texas Low Emission Diesel in 110 Texas counties.

Three's a trend! OMB Chief Mick Mulvaney told CNN's Jake Tapper on Wednesday there's

"plenty of time later" to discuss climate change but said the focus right now should be on helping hurricane victims in Texas and Florida. "I'd be more than happy to have a longer discussion another day about climate change, man-made climate change," he said. Energy Secretary Rick Perry previously said now's "not the time" to discuss climate change, while EPA Administrator Scott Pruitt called such talk " insensitive."

Curbelo fine with climate talk: Back on Capitol Hill after responding to Hurricane Irma's impacts on his district, Rep. Carlos Curbelo said climate change should be a part of post-storm discussion. "It shouldn't be the first thing people talk about — the first concern has to be all the people in the Florida Keys and throughout the state of Florida who are struggling," he told reporters. "[But] it's certainly not irresponsible to highlight how this storm was probably fueled — in part — by conditions that were caused by human-induced climate change."

Backs Nelson's climate comments: Curbelo said he "absolutely" agreed with his state's senior senator, Bill Nelson, that Republicans were "denying reality " if they refused to acknowledge climate change. "I am critical of both the deniers and the alarmists because they don't contribute much to solving this problem," he said. "The deniers deny it so you can't address a problem you don't recognize and the alarmists scare everyone and take credibility away from the issue, and people who are convincible then shy away. People need to talk about this in a sober way, in a rational way."

Be on the lookout: Curbelo said his bipartisan Climate Solutions Caucus should hit 60 members in the near future, which would triple its membership from last Congress. The caucus grew to 56 members on Tuesday with the additions of Republicans Chris Collins and Pat Tiberi and Democrats John Larson and Nydia Velazquez.

HOUSE PANEL TAKES FIRST LOOK AT RELIABILITY: They've split the original hearing into two, but the House Energy and Commerce Energy Subcommittee takes a first look at various issues associated at the reliability of the U.S. electric grid. Making his first congressional appearance since confirmation is FERC Chairman Neil Chatterjee. Also testifying is Gerry Cauley, president of the North American Electric Reliability Corporation, and Patricia Hoffman, an official within DOE's Office of Electricity. The background memo for the hearing, which kicks off at 10 a.m. in Rayburn 2123, is available here.

HERE'S SOMETHING YOU WON'T SEE EVERYDAY: Still looking to drum up momentum for their bipartisan bill boosting carbon capture and sequestration technologies, one of the Senate's most unusual possible quartets — Heidi Heitkamp, Shelley Moore Capito, Sheldon Whitehouse and John Barrasso — participate in an event hosted by the Center for Climate and Energy Solutions on the latest innovations in the technology and efforts to speed its deployment. It kicks off in Hart 902 at 8:30 a.m. Details here.

PARTS OF EPA DISCHARGE RULE DELAYED: EPA issued a final rule Wednesday formally delaying key compliance dates from a 2015 regulation limiting toxic discharges in power plants' wastewater streams, Pro's Alex Guillén reports . Specifically, the agency will delay deadlines related to limits on discharges of flue gas desulfurization wastewater and bottom ash transport water, two waste streams associated with burning coal for electricity, while it

reconsiders those standards. EPA said the delays will provide annualized utility cost savings between $27.5 million and $36.8 million.

Environmental groups vowed to sue: Mary Anne Hitt, director of Sierra Club's Beyond Coal campaign, said in a statement her group would take "immediate action" to fight a decision she called "so unconscionable from a public health — and common sense — perspective, that [Pruitt] couldn't even name a valid legal reason for the delay." Earthjustice Attorney Thomas Cmar called the rule "a bold-faced gift to the coal industry at the expense of the health of families everywhere."

PROBE OF EPA GRANT PROCESS SOUGHT: The Center for American Progress and Union of Concerned Scientists are today asking EPA's inspector general in a letter to investigate the agency's grant review process, rumored cancellation of some grants and allegations of political interference. "We urge your office to begin an investigation of these matters immediately," they write.

REVAMPED FEDERAL LEASING PROGRAM SOUGHT: The Wilderness Society, along with several other petitioners, are asking Interior and BLM this morning to revamp the fiscal terms and management processes regarding oil and gas leasing on federal lands. The petitioners argue their reform proposals would not harm, slow, or stop energy production on public lands. "Analyses of these decades-old [current] policies has shown that they are harming the taxpayers that the BLM is obligated to ensure receive the benefits of leasing and the public lands that BLM is obligated to ensure are managed for multiple use and sustained yield," they write.

HIDDEN DANGER IN OKLAHOMA? Massive oil storage tanks in Cushing, Okla. could be growing more vulnerable by the day as man-made earthquakes stemming from fracking tests their limits, Kathryn Miles reports in POLITICO Magazine. Five of the largest energy companies each said have procedures and protocols for natural disasters, but that they would not comment on the specific designs of their tanks, nor how those tanks would fare in a major earthquake. Read the full thing here.

NRDC SEEKING REHEARING ON REFRIGERANTS CASE: The Natural Resources Defense Council plans to ask the D.C. Circuit for an en banc rehearing of last months' decision striking down an EPA rule limiting use of hydrofluorocarbons, a global warming exacerbating coolant. NRDC believes the majority in the 2-1 decision erred in its determination that the law was clear and did not require agency interpretation, known as Chevron Step 1. "[D.C. Circuit Judge Brett] Kavanagh interprets the law in a way that eviscerates the program," said David Doniger, head of climate programs for NRDC. "Everybody understood to this point that the substitutes for ozone depleting chemicals were replacements ... and when new ones are developed safer than the old ones, the old ones are supposed to give way." HFCs fall out of the atmosphere faster than CO2, but have a far higher global warming potential.

Honeywell, too? "We believe the EPA's regulation is well-supported by the law and was in the best interests of the public, industry and the environment," a spokeswoman for Honeywell International Inc. said in an email to ME. Honeywell makes next generation coolants. "We are closely reviewing the decision and are likely to pursue an appeal, and are already taking steps to

ensure that the accelerated transition to HFC alternatives continues."

FOR YOUR REFERENCE: Advanced Energy Economy today released seven specific issue briefs as policymakers consider ways to modernize the U.S. electric grid. They cover: advanced metering; access to data; optimizing capital expenditures; distributed energy resource ownership; using energy efficiency as a resources; performance-based regulation and designing rates in a distributed energy resource future.

BETTER LUCK NEXT YEAR? Two ambitious bills in California — laying the groundwork for a regional electricity grid and eventually phasing out use of fossil fuels — won't advance this year, a key committee chairman told the Los Angeles Times Wednesday. "There's not a lot of time for the engagement we need to make it work," Assemblyman Chris Holden said, adding they should be considered as part of a "comprehensive conversation" in 2018. The legislative session ends Friday and the deadline for amending legislation was Tuesday night.

REPORT: CLOSING COAL PLANTS MEANS BIG BUCKS: Phasing out inefficient coal plants would save U.S. customers up to $10 billion annually by 2021, a new report from Carbon Tracker finds. Constructing combined cycle gas turbines will be more cost-effective by the mid-2020s than continuing to operate 78 percent of the nation's current coal fleet, the study concludes. "The US power sector remains entirely unprepared for a coal phase-out consistent with a below [2 degree] C outcome," it finds, referring to the goal of the Paris climate agreement to limit global temperature increases.

NEW EDF AD USES HARVEY FOOTAGE: The Environmental Defense Fund is launching a new ad in the Washington area for three weeks using footage from the Arkema plant incident in Texas. The ad warns Congress that cutting the agency's budget could harm disaster response moving forward.

MOVER, SHAKER: Nick Conger starts a new gig as former Vice President Al Gore's communications director in Nashville on Oct. 2. The Obama administration EPA veteran leaves his current post as a press secretary at NRDC on Sept. 22. "I couldn't be more thrilled to join [Gore's] team and help shape his public activities," he writes of his role.

Stories from POLITICO Pro

Repeal and replace approach to EPA climate rule may disappoint Trump base Back

By Emily Holden | 09/14/2017 05:01 AM EDT

The Trump administration is leaving the door open to replace former President Barack Obama's landmark climate regulation for power plants — a move that would fall short of conservatives' calls to erase it all together

A mend-it-don't-end-it approach from the Environmental Protection Agency on Obama's 2015 rule could appease power companies that say they need some kind of EPA regulations — albeit

much weaker ones — to save them from years of legal uncertainty. But it might not satisfy the demands from some conservative activists, who have pressured EPA Administrator Scott Pruitt to reject the entire idea that climate change is a problem requiring federal action.

The agency is aiming by early October to issue a proposal to undo the Clean Power Plan, along with a separate advance notice of its intent to consider a replacement, a source close to the process told POLITICO.

That approach still leaves a wide array of options on the table — including ultimately deciding against a new rule — and it could allow Pruitt to stretch out the process for several more years without ultimately resolving how the agency should address the greenhouse gas emissions from power plants, one of the largest contributors to human-caused climate change.

The Clean Power Plan encouraged the power sector to shift away from coal and toward natural gas and renewable power, an approach that Obama's critics said exceeded EPA's authority under the Clean Air Act. At a minimum, Trump's EPA would likely seek to limit any replacement to require only the negligible carbon emissions reductions that could be achieved at coal plants themselves, without prodding states and utilities to replace those facilities with cleaner generation.

The details about how to begin unraveling Obama's climate regulations could have political implications for Pruitt, who is widely seen as a potential candidate for the U.S. Senate in his native Oklahoma. Repealing the power plant rule was an explicit campaign promise for President Donald Trump, who has dismissed man-made climate change as a "hoax."

For now, conservatives appear willing to give Pruitt the benefit of the doubt because he is walking a legal tightrope and could still decide to take aim at EPA's underlying obligation to regulate carbon emissions. The D.C. Circuit Court of Appeals has agreed to keep litigation over the Clean Power Plan on hold through Oct. 7, but judges warned Pruitt last month that EPA is dodging its legal obligation to regulate carbon by failing to outline its next steps on the rule.

Myron Ebell, the climate skeptic who led EPA's transition team, has pushed for Pruitt to fight the agency's "endangerment finding" that it must address climate change. But he said a replacement rule might be an "adequate stopgap."

He said if the courts ultimately find that a coal-plant focused rule isn't enough to fulfill EPA's legal obligation, then "in order to keep the president's promise that we're going to get rid of these economically destructive rules, the only alternative they will have is to reopen the endangerment finding."

Challenging that finding, which determined that heat-trapping gases like carbon dioxide were a public health threat, would mean fighting climate change science, and most lawyers say it is a losing battle. The Obama administration issued the endangerment finding in 2009, two years after the Supreme Court told EPA to determine its role in fighting climate change.

Tom Pyle, a conservative lobbyist with the American Energy Alliance who led Trump's Energy

Department transition team, said he would prefer a straight withdrawal of the Clean Power Plan but wouldn't oppose a replacement rule.

"Ultimately, the responsibility to fix this mess lies with the Congress, so until they act, the only thing the Administration can do is minimize the damage," Pyle said via email.

But EPA would be on much shakier legal ground if it just refused to regulate carbon dioxide from power plants, the nation's largest source of greenhouse gas pollution.

EPA wants to move to collect comments about whether to write a new regulation, and is likely to write a new rule, multiple sources said.

Any replacement would be based on a narrow interpretation of EPA's authority and is unlikely to make a meaningful dent in carbon levels — unlike Obama's version, which pledged to cut the power industry's carbon pollution as much as 32 percent below 2005 levels by 2030.

Opponents of the Clean Power Plan have also argued that the rule is illegal because EPA had already regulated coal plants under a different section of law. EPA could still make that argument while proposing to withdraw the plan and invite comments on the idea in its notice of a potential replacement.

Environmental groups are expected to sue no matter which path Pruitt and Trump take.

"There would be very intense protests to rescinding the Clean Power Plan and replacing it with nothing indefinitely, which is what this would be," said Sean Donahue, a lawyer at Donahue & Goldberg who represents environmental groups defending the Clean Power Plan in court.

EPA is planning to issue an Advance Notice of Proposed Rulemaking (ANPR), the first step toward issuing a replacement for the Clean Power Plan, according to the source familiar with the process. But that route leaves many options open.

Kevin Poloncarz, a lawyer with the firm Paul Hastings who represents energy companies supporting the Clean Power Plan, said the notice could be "fairly nondescript" and could suggest a replacement rule or ask for feedback on whether EPA can legally regulate power plants under the section of the Clean Air Act that the Obama administration used.

If EPA simply rescinded the Clean Power Plan without announcing plans to consider a replacement, Poloncarz said power companies could face nuisance lawsuits.

Issuing the notice could be a compromise position. While it's in place, "the industry should feel some degree of comfort that they're insulated from those lawsuits," Poloncarz said.

States like New York could still take court action against EPA if the agency is taking too long or questions its own authority on greenhouse gases, he added.

It's not unusual for an agency to take years to follow up on an ANPR. EPA took about six years

to issue its draft Clean Power Plan in 2014.

"The entire point of ANPR is to help agencies decide which course they want to pursue where there are multiple options," said Tom Lorenzen, a partner at Crowell & Moring who represents electric cooperatives challenging the Clean Power Plan.

"I think one purpose of an ANPR would be to send a message to the court that EPA is thinking about what comes next," he added.

Lorenzen said an ANPR could suggest a replacement rule or argue that any regulation is illegal because the agency has already regulated power plants under Section 112 of the Clean Air Act.

Several attorneys noted that Bill Wehrum, the lawyer nominated to run EPA's air office, has represented power industry clients who likely would back a replacement rule because they consider regulation to be inevitable.

Most utilities assume a future regulation or law will require them to curb carbon emissions, even if Trump's EPA rescinds the Clean Power Plan.

Even coal-heavy power companies have said they support EPA issuing a replacement rule.

AEP, a Midwestern power company that gets slightly less than half of its electricity from coal, would back a new proposal "consistent with the EPA's authority under the Clean Air Act," spokeswoman Tammy Ridout said.

In 2005, 70 percent of AEP's power came from coal, but the company has been intentionally shifting toward renewable power and lower-carbon natural gas.

"We think that future regulation of carbon emissions from power production is likely, and could provide additional planning certainty," Ridout said.

Interior nominee Domenech says human role in climate change small Back

By Esther Whieldon | 07/20/2017 01:12 PM EDT

Interior assistant secretary nominee Douglas Domenech told his senators at his confirmation hearing today that he still believes that the human contribution to climate change is very small.

At the Senate Energy and Natural Resources Committee hearing, Sen. Al Franken (D-Minn.) asked Domenech, President Donald Trump's nominee for assistant secretary for insular areas, if he still stood by his December op-ed that said that humankind was impacting the climate in "very

small ways."

Domenech, an Interior veteran who was on the Trump transition team's landing team at the agency this year, said "yes."

The senator asked whether Domenech, given his views on climate change, is the "right person" to help vulnerable island communities that are being impacted by sea level rise.

Domenech said that as Virginia's secretary of natural resources, he helped the fishing community in Tangier Island in Chesapeake Bay deal with erosion and sea level rise.

"We worked with them quite a bit in terms of reinforcing their shoreline and those kinds of activities with the Corps of Engineers, and so I take it very seriously, I don't at all minimize that the climate is changing," Domenech said.

WHAT'S NEXT: Senators will by the end of today send Domenech a list of questions they want answered for the record and the committee will likely wait to schedule a vote on his nomination until the receive his responses.

Senate energy committee delays vote on FERC, DOE and DOI nominees Back

By Darius Dixon | 09/13/2017 06:28 PM EDT

The Senate Energy and Natural Resources Committee announced this evening it postponed a Thursday morning series of votes on President Donald Trump's nominees for FERC and the departments of Energy and Interior.

The panel was slated to consider Kevin McIntyre for chairman of FERC, Richard Glick for FERC commissioner, David Jonas for DOE general counsel, and Ryan Nelson and Joseph Balash for solicitor and assistant secretary for land and minerals management at DOI. The vote will now happen Sept. 19.

A committee spokesperson said the vote was delayed because of "member availability."

WHAT'S NEXT: The Senate energy committee will vote on the nominees on Tuesday at 9:30 a.m.

POLITICO Pro Florida: EPA backs Florida on stormwater permit 'flexibilty' following Irma Back

By Bruce Ritchie | 09/13/2017 07:10 PM EDT

EPA is telling state officials they recognize the need to use "flexibility" provided in federal stormwater discharge permits for facilities affected by Hurricane Irma.

Florida regulations allow for temporary bypass of stormwater systems or unintentional noncompliance in emergency situations, Florida Department of Environmental Protection spokeswoman Dee Ann Miller said.

The state had relayed concerns to the EPA about those provisions relating to Hurricane Irma, said Miller, who added that those bypass provisions will allow ports and other facilities get back into operation as quickly as possible.

In a letter released today, EPA regional administrator Trey Glenn said the agency recognized the need under federal law for "potential flexibility" because of circumstances caused by Hurricane Irma that are "beyond the reasonable control" of permit holders.

"The EPA also recognizes there may be other unforeseen issues that arise as a result of this disaster and we stand ready to work together with our state partners to address these potential issues as they arise," Glenn wrote.

This story first appeared on POLITICO Pro Florida on Sept. 13, 2017.

Florida Sen. Bill Nelson: Republicans 'denying reality' on climate change Back

By Michael Grunwald | 09/12/2017 09:06 PM EDT

Democratic Senator Bill Nelson of Florida, after surveying the damage that Hurricane Irma inflicted across his state, blasted Republican politicians who reject the science and minimize the importance of climate change—including his likely opponent in 2018, Governor Rick Scott.

In an interview Tuesday evening with POLITICO, Nelson said it's clear that manmade global warming made Irma worse by increasing the temperature and the height of the seas that fueled the storm. He said he didn't want to play partisan politics in the aftermath of a hurricane, but then went on to criticize Republicans in general and Scott in particular—though not by name—for opposing climate action. He noted that both the Trump administration in Washington and the Scott administration in Tallahassee have reportedly discouraged government employees from

even talking about climate change.

"It's denying reality," Nelson said. "You can call it politics or whatever, but the Earth is getting hotter. This storm is another reminder of what we're going to have to deal with in the future."

Nelson, a former astronaut, launched into a detailed explanation of the science of climate change and the greenhouse effect, and how it has helped make the waters around Florida higher and warmer in recent decades. He said it would be a crucial issue in his reelection campaign, even as he avoided the words "Rick Scott."

"It's certainly going to be an important issue, and if certain people such as the one you mentioned is my opponent, there's a significant contrast in what we believe," Nelson said.

Florida is a swing state in presidential elections, but its state government and statewide offices tilt heavily Republican; Nelson has been an exception to the red wave, but a well-known, well-funded opponent like Scott would be by far his most difficult challenge to date. He clearly sees climate as a potential wedge issue in a state with a heavily coastal population and increasing vulnerability to Irma-type disasters. Scott did not discuss the issue in his frequent Irma briefings; a spokesperson for the governor, when asked about Nelson's comments, said, "Now is not the time for politics. This storm is not a partisan issue. Now is the time to focus on helping Florida rebuild."

But in the past, he has questioned climate science—or declined to affirm the scientific consensus that it's being cause by humans, often noting, "I am not a scientist"—and fossil-fuel interests have supported his campaigns. In 2015, the Miami Herald reported that Scott's administration had even banned the use of the terms "climate change," "global warming" and "sustainability" in official documents.

Nelson is not known in Washington as a leader on climate issues, but he said he's focused on them since he was Florida's insurance commissioner in the 1990s. He's fought against President Trump's proposed cuts to climate science at agencies like NOAA, NASA and EPA, and said he helped persuade the Obama administration to launch a satellite, first dreamed up by Al Gore, that takes continuous pictures of the Earth from deep space.

But Nelson didn't really argue that he deserved kudos for accepting the conclusions of the scientific community; he argued that Republicans on the other side of the issue need to explain why they think "99.5 percent of climate scientists" are wrong. Several prominent Republicans in South Florida—including Miami-Dade County mayor Carlos Gimenez and Reps. Carlos Curbelo and Ileana Ros-Lehtinen—have made it clear they believe Washington needs to take climate seriously. Nelson pointed out that politicians don't question government scientists when they say a hurricane is coming—but when the same agencies use the same scientific instruments to measure long-term climate trends, opinions suddenly differ.

"It's ironic, isn't it?" Nelson said. "They accept the hurricane information, but deny the climate information ... Look, some people still think the Earth is flat."

EPA delays parts of power plant toxic discharge rule Back

By Alex Guillén | 09/13/2017 03:35 PM EDT

EPA has finalized a rule delaying by two years the key compliance dates for a 2015 regulation limiting toxic discharges in power plants' wastewater streams while it reconsiders those standards.

The delay provides "relief from the existing regulatory deadlines while the agency revisits some of the rule's requirements," EPA Administrator Scott Pruitt said in a statement.

Following industry requests, EPA specifically is delaying deadlines related to limits on discharges of flue gas desulfurization wastewater and bottom ash transport water, two waste streams associated with burning coal for electricity. EPA estimates the two-year delay of those requirements will provide annualized utility cost savings between $27.5 million and $36.8 million.

The agency said it will not revisit new standards for other types of waste streams — including fly ash transport water, flue gas mercury control wastewater and gasification wastewater — and will leave deadlines associated with those streams in place.

The delay will take effect two weeks after it is published in the Federal Register, and is open to court challenges.

The Obama administration said the overall rule, known as effluent limitations guidelines or ELGs, ultimately would curb 1.4 billion pounds of aluminum, lead, mercury, arsenic and other toxic metals from entering waterways via discharge streams each year.

How Man-made Earthquakes Could Cripple the U.S. Economy Back

By Kathryn Miles | 09/14/2017 05:03 AM EDT

When Hurricane Harvey made landfall in Texas, U.S. oil refining plummeted to record lows. Now, two weeks later, six key refineries remain shut down and an additional 11 are either struggling to come back on line or operating at a significantly reduced rate. That slowdown, coupled with predictions of decreased demand in the wake of Irma and the devastating

earthquake that struck Mexico last week, has shifted oil pressures in other places, too. And none may be quite as vulnerable as the tank farms in Cushing, Oklahoma.

Dubbed the "Pipeline Crossroads of the World," Cushing is the nexus of 14 major pipelines, including Keystone, which alone has the potential to transport as much as 600,000 barrels of oil a day. The small Oklahoma town is also home to the world's largest store of oil which sits in hundreds of enormous tanks there. Prior to this recent spate of natural disasters, Cushing oil levels were already high. They've increased nearly a million barrels to nearly 60 million barrels in the two weeks since.

This concentration of oil, about 15 percent of U.S. demand, is one reason the Department of Homeland Security has designated Cushing "critical infrastructure," which it defines as assets that, "whether physical or virtual, are considered so vital to the United States that their incapacitation or destruction would have a debilitating effect on security, national economic security, national public health or safety, or any combination thereof."

The biggest potential cause of that incapacitation? According to Homeland Security, it's not terrorism or mechanical malfunction. It's natural disaster. And here's the problem: When most of the Cushing tanks there were constructed, the most logical cause of any such disaster seemed like a catastrophic tornado. No one anticipated swarms of earthquakes. But that's what began occurring about five years ago, when wastewater injection and other fracking-related activities changed the seismic face of Oklahoma in dramatic fashion. Two hours before that deadly quake in Mexico, for instance, a magnitude 4.3 temblor shook Central Oklahoma, knocking out power for thousands. The earthquake, which had an epicenter just 100 miles northwest of Cushing, was the 186th quake in Oklahoma to register a magnitude 3.0 or higher.

This man-made seismicity has changed the landscape of Oklahoma significantly, from a state with one of the lowest seismic rates in the country to the most seismically active in the lower 48, says Ken Erdmann is Senior Vice President at Matrix Engineering, the firm that designs, fabricates, and builds many of the tanks in places like Cushing. "It's not natural. It's not Mother-nature based."

That's a problem, he says because the statistical analysis used to establish safe environmental loads is based on historical intervals—both the average and maximums of events like snowfall or wind or seismic activity.

"When those levels become man-made induced numbers," says Erdmann, "statistics are no longer really relevant."

But while the number of earthquakes and their intensity has increased in recent years, the strength of the regulatory apparatus in place to ensure their safety hasn't kept pace. Oversight of the tanks has been left to a tiny agency buried inside the Department of Transportation that was never intended to serve this role. And the safety standards, which one earthquake expert calls the weakest permissible, were created by an industry trade group rather than the government agency. For those inclined to contemplate worst-case scenarios the prospect of an earthquake rupturing the Cushing tanks would be an environmental catastrophe far greater than the Exxon Valdez.

***

When most of these tanks were constructed, seismic activity in Oklahoma was negligible. In 2011, the state experienced a 5.6 quake. Last year, they had a 5.8—the same magnitude as the quake that rocked Washington and much of the eastern seaboard six years ago. That Oklahoma event toppled the exteriors of historic buildings and prompted the Pawnee nation to declare a state of emergency. Seismologists at the United States Geological Survey say the area around Cushing is capable of an even stronger quake—maybe even a 7.0. Earthquake magnitude is measured exponentially, which means that a 7.0 quake would be 15 times larger than the biggest one to hit Oklahoma so far. And it would release over 60 times as much energy.

What would it do to the Cushing tanks? I posed that question to each of the five largest oil companies there.

Michael Barnes, senior manager of U.S. Operations and Project Communications at Enbridge, which is holds nearly half the oil at Cushing, says it's the company's policy not to comment on speculative questions such as mine "because by their very nature they are hypothetical." What he would say is that the company regularly participates in safety drills, workshops and other activities. That includes protocols preparing for seismic activity.

"In the event of an earthquake, procedures are in place to respond quickly and confirm Enbridge tanks and other facilities were not impacted and can continue to operate safely," says Barnes. "This includes dispatching technicians and other experts to perform visual inspections and check instrumentation on tanks, pipes, motors and pumps."

I received a similar response from the other energy companies with major Cushing holdings: that they have procedures and protocols for natural disasters, but that they would not comment on the specific designs of their tanks, nor how those tanks would fare in a major earthquake.

Getting an answer out of the government can be just as frustrating. A big part of the problem is the Byzantine system of governmental agencies regulating these tank farms. This oversight varies from state to state. In Oklahoma, most energy concerns are controlled by the Oklahoma Corporation Commission (OCC). But, says their spokesperson Matt Skinner, the OCC only regulates intrastate pipelines and tanks.

"If any part of that oil leaves the state or comes from elsewhere," says Skinner, "it becomes totally outside of our jurisdiction."

Determining that jurisdiction is no easy matter. The EPA regulates "non-transportation-related oil storage tanks," but that excludes farms like Cushing, which are tied to pipelines. The person I talked to there couldn't tell me who regulates Cushing, nor could the spokesperson for the Department of Energy, which oversees our country's petroleum reserve sites. The Department of Transportation regulates oil and gas pipelines, unless they cross federal lands, in which case they are the purview of the Bureau of Land Management, or if they are operated by the military. Gas and oil produced on the outer continental shelf falls under the Department of the Interior, which

works in concert with the Department of Transportation to regulate its movement.

I called those offices as well, asking if they knew what agency regulated tanks like the ones at Cushing. No one I spoke to knew—including at the public affairs office of the Department of Transportation. As it turns out, a tiny office in the DOT known as the Pipeline and Hazardous Materials Safety Administration (PHMSA) regulates the tanks. Established by President George W. Bush in 2004, PHMSA was intended to increase security around the transportation of hazardous fluids like gas and oil. As such, it was never really meant to govern stationary storage. I asked their spokesperson what seismic regulations were in place for tank farms like Cushing. He referred me to Appendix C of the Pipeline Safety Regulations. And it is true that there are seismic considerations there: provisions regarding safety reporting, any "unintended" or "abnormal" movement of a pipeline, or reduced capacity of a pipeline because of seismic activity. But none of these considerations mentions storage tanks per se. I asked that same spokesperson to direct me towards the language relating to tanks. He has yet to respond.

None of this surprises the OCC's Matt Skinner. "I've gone through the standards a bunch of times," he says. "I haven't found any relating to tanks and seismic activity."

***

If the government isn't explicitly regulating the ability of the tanks to withstand an earthquake, then who is? Turns out that what standards do exist are created by the American Petroleum Institute, a national trade organization representing the oil and gas industry. And the standards are not overly rigorous, say seismologists.

Tom Heaton, professor of Geophysics and Director of the Earthquake Engineering Research Laboratory at Caltech says most, if not all, of the tanks in Cushing are built to the weakest industry design standards. He thinks even a moderate quake could be enough to violently push the oil from one side of the tank to another. In geological terms, the phenomenon is known as a seiche: an internal wave or oscillation of a body of water. The more oil is in a tank, the more dangerous that seiche becomes.

That makes tank farms like Cushing particularly vulnerable in the face of other natural disasters like Harvey and Irma as oil and pipeline companies engage in a kind of shell game for oil storage—full tanks do better in high wind conditions like hurricanes and tornadoes; they fare far worse in earthquakes.

And certainly there is precedent for the kind of damage Heaton predicts. In the years after the 1994 Northridge earthquake in California, the National Institute of Standards and Technology (NIST), found evidence of seismically-induced oil tank damage going back as far as the 1930s and as recently as the 1994 quake, some of which was catastrophic.

But Ken Erdman is circumspect about just how much damage a major quake might wreak on the Cushing tank farms. In addition to his role at Matrix, Erdmann also heads up the API committee that creates standards for the tanks. He says it's true that ones in Cushing weren't built for moderate or severe quakes, and that the shaking caused by one would almost certainly be

"beyond allowable limits" for the API standards utilized at the Oklahoma farms. Probably, he says, you'd see buckling and deformation of the tanks rather than full failure.

The real problem, he says, would be the pipelines themselves, says Ron Ripple, Mervin Bovaird Professor of Energy Business and Finance at the University of Tulsa. Ripple estimates that an earthquake or other disaster would have to knock out half those tanks to have a real impact on the market. Of bigger concern to him are the pipelines, which control a larger volume of oil. He points to the October 2016 explosion of the Colonial Pipeline in rural Alabama as a corollary. The resulting fire kept crews from repairing the pipeline proper for six days. During that time, oil commodity prices jumped 60 percent—the highest spike in nearly a decade. Exporters clamored to find work-arounds, including tankers capable of moving the oil by sea. As a consequence, freight cargo rates increased by nearly 40 percent. Meanwhile, motorists in southern states rushed the pumps, elevating prices there, too—forcing the governor of Georgia to issue an executive order warning about price gouging.

It wouldn't be unreasonable, says Ripple, to see a similar scenario were the Cushing pipelines to go down. The Colonial Pipeline moves about 100 million gallons of oil and gasoline a day—about the equivalent of the Seaway Pipeline, just one of the more than dozen that converge on this town. That pipeline was also shut down in late 2016, after authorities in Cushing noticed a spill. The effect of that shutdown had the opposite effect, pushing the price of US oil below $50 a barrel, as international traders worried they wouldn't get their deliveries.

"Prices move through the markets fairly quickly," says Ripple. "We tend to see opportunistic changes in prices right after an event. Some of those look like a pretty close cause-and-effect relationship between supply and demand. Other times, you'll see impacts that leave us all scratching our heads. In the end, you just don't know how the market and consumers will react."

Johnson Bridgwater, director of the Oklahoma Chapter of the Sierra Club, says he's mindful of the economic effects of such a spill, but it's the impact on the landscape and the people who occupy it that most concerns him. Imagine, says Bridgwater, if Ripple's scenario of losing half the tanks came to fruition.

"That's fifty million barrels," he says. "We'd be looking at our own on-land *Exxon Valdez*."

Worse, actually. The *Valdez* was carrying just over a million barrels of oil. A quarter of that spilled. And light crude, the kind of oil stored in Cushing, poses particular challenges to an environment, often killing animals or plants on contact and emitting dangerous fumes that can kill both human and animal residents.

"This would not be a simple cleanup," says Bridgwater. "You'd have an uninhabitable community for a long time."

That shouldn't be acceptable to anyone, says U.S. Representative Bobby Rush, the Chicago area Democrat who serves as the ranking member on the Committee on Commerce and Energy's Subcommittee on Energy.

"Over the past five years or so Oklahoma has become more active as an earthquake zone. PHMSA must account for these changing circumstances and implement appropriate regulations that apply to tank farms located in these more sensitive areas to make them more sturdy and secure. The fact of the matter is that we must ensure that these tanks, which hold vast amounts of oil, are designed to withstand seismic activity in order to protect both the public safety and the local, state, and national economies that rely heavily on this resource."

Court ruling leaves HFC future in hands of EPA, Congress Back

By Eric Wolff | 08/09/2017 05:09 PM EDT

The effort to get the U.S. to comply with a treaty eliminating a heat-trapping chemical now faces a grueling path after a major courtroom setback this week — and it may depend on EPA using its power to regulate chemicals.

The D.C. Circuit Court's ruling Tuesday forced EPA to abandon its plan to use the Clean Air Act to limit use of hydrofluorocarbons, a refrigerant that would be phased down under recent changes to the Montreal Protocol. Proponents of the effort, including environmentalists and the air conditioning industry, will now need the Senate to approve the treaty and Congress to pass a new law authorizing EPA to implement it, or they will have to persuade EPA Administrator Scott Pruitt to act — no small feat considering the EPA chief's disdain for both climate change initiatives and regulations.

The changes to the Montreal Protocol agreed to in Kigali, Rwanda, last year would curtail global use of HFCs, a move that scientists say could prevent up to 0.5 degrees Celsius — 0.9 degrees Fahrenheit — of warming by the end of the century. U.S. industry groups have supported the Kigali agreement and had backed EPA's plan to implement it under the Clean Air Act's Section 612. That section, put in place nearly 30 years ago as authorizing language to implement the initial Montreal Protocol, established a market mechanism that was designed to reduce ozone-damaging chemicals.

But the court's rejection of using Section 612 may require new legal authority to empower EPA to act if the U.S. eventually ratifies the Kigali amendment.

"You'll have a treaty and have Congress look at it and pass implementing legislation," said Stephen Yurek, CEO of the Air Conditioning, Heating, and Refrigeration Institute, whose members are the world's biggest makers of HFCs — and will produce most of the next generation chemicals.

In its ruling, the D.C. court suggested a slew of laws EPA could use to regulate HFCs: The Toxic Substances Control Act, the National Ambient Air Quality Standards, regulating as a hazardous

air pollutant, and regulating HFCs in cars and trucks. But several lawyers said TSCA was the only credible alternative.

"There's a lot of authority under TSCA to regulate chemicals and chemical uses," said Jane Montgomery, a partner with Schiff Hardin who works with power companies. "It's not as straightforward as what they intended to under 612, but there's an environmental harm portion of TSCA. ... For managing the sale and manufacturing and use, TSCA is the most appropriate statute we have."

Yurek said AHRI was still reviewing TSCA as an option, but he feared that it would be a blunt instrument, requiring EPA to issue a rule that immediately limited or banned HFCs, in contrast to the phase-down approach created under Section 612 of the Clean Air Act.

"I'm concerned that it's much more of a command-and-control-type regime, you have different categories, and potentially banning," he said.

Under the TSCA update Congress passed last year, EPA must assess HFCs before regulating them, and then issue a rule, a process that could take about five years, legal experts said. The agency would ultimately have the authority to limit or even prohibit them, Montgomery said. And in its ruling, the D.C. Circuit upheld several of EPA's tools used to assess the global warming impact of HFCs, bolstering the case for a potential TSCA rule.

AHRI and environmental attorneys largely dismissed the court's other suggestions for EPA to comply with the Kigali goals. The NAAQS program focuses on just six pollutants, none of which are HFCs, they said. Congress similarly created a fixed list of pollutants under the hazardous air pollutants rules, limiting that program's broader application, attorneys said. And refrigerants used in car and truck air conditioners make up only a small part of the refrigerants market.

"These authorities are even less congruent with the authority the EPA invoked in this rulemaking to regulate ozone-depleting chemicals and their substitutes down the road," said Brendan Collins, a partner with law firm Ballard Spahr who represents power companies and oil and gas companies.

EPA says it is still reviewing the court decision, but it's not clear whether Pruitt would advance another rule to govern HFCs, even though it is backed by business interests. Proponents of the Kigali treaty could draw a skeptical reception from the Trump administration, which has been dismissive of both multi-party treaties and climate science — though the administration did defend the rule in court in February. The White House would need to submit the treaty amendment to the Senate for ratification.

Kigali advocates have long aimed to keep a low profile and quietly persuade staffers to support the effort as the administration got up to speed. AHRI is now trying to determine whether the court decision will require a change in its strategy, or if it can apply the same pro-U.S. business approach to the more conservative House.

"We have to decide [if] we do a more public push or keep the schedule," Yurek said. "Right now, the plan is that we continue to wait until the end of this year, and continue to educate both House and Senate."

Green groups who back the ban on HFCs may try a more direct route by appealing to the D.C. Circuit for en banc review. There are seven D.C. Circuit judges appointed by Democrats, versus four appointed by Republicans, potentially giving the appeal an edge — though that advantage flips at the Supreme Court, should the case go that far.

"We are exploring the options," said David Doniger, director of climate programs for the Natural Resources Defense Council. "Including rehearing based on the dissent."

Subject: POLITICO's Morning Transportation, presented by the Association of American Railroads: A 'hair-raising' TSA investigation — Crackdown on Cuba travel — Transpo highlights from Election 2017

By Tanya Snyder and Stephanie Beasley | 11/09/2017 10:00 AM EDT

With help from Brianna Gurciullo

'DISTURBING': Following a DHS inspector general briefing on baggage screening vulnerabilities, House Homeland Security Committee Chairman Michael McCaul (R-Texas) said TSA needs to get new computed tomography screening machines in all U.S. airports - ASAP, Stephanie Beasley writes . McCaul, who called the briefing "disturbing," urged committee members to keep details from the IG report classified but said it included a total of eight recommendations that he hoped TSA would quickly adopt. (TSA later agreed with the recommendations said it's "committed to aggressively implementing" them.)

Thompson: Almost doesn't count: Top committee Democrat Bennie Thompson (Miss.) told POLITICO that he found the IG report "hair-raising" and that it did not appear TSA screenings had improved greatly since a 2015 IG audit showing screeners failed 95 percent of covert tests. Thompson said the IG's findings re-energized his desire to stop the diversion of more than $1 billion annually in TSA security fees for deficit reduction. However, he acknowledged his previous attempts to move a proposal through the House tanked due to a lack of GOP support.

On the sunny side of the street: TSA Administrator David Pekoske told reporters after the hearing that TSA would focus on providing additional workforce training and developing a host of new technologies, including CT scanners, biometrics and automated screening lanes.

IT'S THURSDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Tanya steering the ship this week. Send your tips, complaints and fashion advice to tsnyder@politico.com or @TSnyderDC.

"It was out at the crossroads down round Willow bank / Seen a Buick with Ohio plates behind the wheel was Frank / Well I chased him through them county roads till a sign said Canadian border 5 miles from here / I pulled over the side of the highway and watched his taillights disappear."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) that are all about flying, driving, commuting and sailing?

[GUIDE TO TAX REFORM] Easily understand and explain tax reform. Tax reform is complicated, to say the least. Download POLITICO Pro's Guide to Tax Reform and become an expert. Includes six tax-related infographics. GET YOUR GUIDE TO TAX REFORM.

YOU KAN DO IT: The Senate is expected to hold a procedural vote midday today on Derek Kan's nomination to be DOT undersecretary for policy, with a confirmation vote likely to follow

Monday evening. Kan is a former aide to Senate Majority Leader Mitch McConnell. He has been serving as an adviser at DOT since June, when he left his job as the general manager of Lyft. Kan also previously served on Amtrak's board of directors.

BRING 'EM OUT: New rules for Americans traveling to Cuba go into effect today. The highlights: No more "people-to-people" travel except through an organization (with a representative present). The administration put new limitations on some types of educational travel and travel in "support for the Cuban people." The Miami Herald has a thorough breakdown here. Both Airlines for America and Cruise Lines International Association told MT that they and their members are digesting the new regs.

HE SAID, SHE SAID: Republicans in both chambers, amid loud rhetoric about the inadequacy of the Cuban security regime, have been pushing legislation that, among other things, would require TSA to audit all 10 Cuban airports operating flights to the United States. But here's the thing: TSA says it's already doing that. TSA inspectors have visited Cuba several times since regularly scheduled U.S.-Cuba flights resumed last year. New York Republican John Katko, who sponsored the House version of the bill (H.R. 3328 (115)) and was part of a House delegation denied visas to visit Cuba last year to inspect their security, responded to TSA's report: "My thoughts are, it's not enough," he said. Pros get all the details here.

BALLOT DANCE: Tuesday wasn't just a good night for Democrats - it was a good night for transportation ballot measures. Seven were approved with just one being rejected by voters. In Denver, a $431 million general obligation bond for surface transportation was approved 73 percent to 27 percent. Athens-Clarke County, Ga., approved a new one-cent sales and use tax and $95 million bond issuance for transportation, 74 percent to 26 percent. Only Allen County, Ohio, went against the grain, turning down a .025 percent sales and use tax for the Regional Transit Authority. (h/t Jeff Davis , Eno Transportation Weekly)

LOBIONDO-N'T KNOW: Rep. Frank LoBiondo will retire in 2019, but he can't say what he'll do after his last day in Congress. "I have no idea. Have not talked to anybody. Have not looked at anything," he told Brianna on Wednesday. The New Jersey Republican said he arrived at the decision to retire "very quickly."

** **A message from Association of American Railroads**: Moving 54 tons of goods annually for every American takes a lot of muscle, and a lot teamwork. See how intermodal has turned trucks and trains from competitors into collaborators while delivering for U.S. industry and consumers. http://bit.ly/2itLz6q **

PARTY LINES: Raymond Martinez got the nod from the Senate Commerce Committee Wednesday to lead FMCSA - but that was the easy part. Bruce Landsberg's nomination for NTSB's board and former Rep. Leon "Lynn" Westmoreland's nomination to the Amtrak board of directors were done by voice vote, though most Democrats were on record opposing one or both. Diana Furchtgott-Roth, nominee to lead research and technology at DOT, moved forward 14-13 split along party lines - no surprise considering the beating she took from Dems at her nomination hearing.

RPC ON ATC: The Senate Republican Policy Committee Wednesday sent out a primer for members on the House's proposal to separate air traffic control from the FAA. Called "NextGen Delayed, Just Like Your Plane," the policy paper focuses on delays in rolling out the FAA's NextGen program and other arguments that the FAA isn't right for the job. The paper also notes the concerns of general aviation, small airports and Captain "Sully" Sullenberger, and says that a move to spin off the FAA's air traffic control functions would "almost definitely" be met with a constitutional challenge.

Curious: Senate Republicans - especially those on the Commerce Committee, which has jurisdiction over aviation -- have been distinctly uninterested in taking up any large-scale air traffic control overhaul. So the policy paper's bent in favor of the plan is curious, as is the timing, since debate over the bill (H.R. 2997 (115)) went dormant after Congress passed a six-month FAA extension in late September. A Senate Republican source says the document is meant to give members an overview of the issue, in case they're asked about it by constituents or industry - not to sway members one way or another.

STICK TO THE RULES: Fifty-one Democrats (and Dem-leaning Independents), led by Sen. Ben Cardin (D-Md.) and Rep. Earl Blumenauer (D-Ore.), sent a letter Wednesday to DOT Secretary Elaine Chao, expressing their dismay at DOT's proposed rule repealing the greenhouse gas emissions rule, which allows state and local transportation agencies to track vehicle emissions on the National Highway System and set goals for reducing them. The lawmakers note in the letter that the transportation sector is responsible for nearly 30 percent of U.S. emissions.

ATRI-ED AND TRUE METHOD: The American Transportation Research Institute released its recommendations for funding the nation's transportation infrastructure: namely, a gas tax increase, which they call "the only meaningful mechanism" for realizing Trump's $1 trillion infrastructure dream. They say mileage-based user fees and tolling won't cut it, but do support a new federal vehicle registration fee "to fill funding gaps associated with electric vehicle use."

SAFE AND SOUND: Securing America's Future Energy (SAFE) has some ideas for making trucking more fuel-efficient, starting with performance-based standards for commercial vehicles. In the interim, they want Congress to authorize the use of twin 33-foot trailers - a controversial issue. Read the rest here.

MT MAILBAG: The National Governors' Association and a host of other state and local groups sent a letter to Senate Commerce Committee leaders expressing their "deep appreciation" for the approach they took in their self-driving car bill (S. 1885 (115)) to balancing state and federal responsibilities.

THE AUTOBAHN:

- "Uber in deal with NASA to build flying taxi air control software." Reuters.

- Via launch on-demand public transit system as alternative to bus service in two U.S. cities. Via.

- "Construction Industry Pushes Back Against GOP Tax Reform Provisions." For Construction

Subject: [SPAM] Federal Insider: Powerful chairman of federal workforce committee leaves Congress on Friday

Powerful chairman of federal workforce committee leaves Congress on Friday

By Joe Davidson

Rep. Jason Chaffetz (R-Utah) waves after addressing the Utah GOP Convention in Sandy, Utah, on May 20. (Rick Bowmer/AP)

Rep. Jason Chaffetz (R-Utah), chairman of the House Oversight and Government Reform Committee, will leave a legacy when he quits Congress at 10 a.m. Friday, but we might not have his mug to remind us.

If incoming Chairman Trey Gowdy (R-S.C.) does as Chaffetz did, portraits of past chairmen will not decorate the committee's hearing room. Chaffetz ended that long-standing practice, also followed by other committees, when he took over one of the most powerful panels in 2015, opting for photos of everyday Americans instead.

"Now that Trey Gowdy is the chairman, my guess is they're going to put up a mirror," Chaffetz said with a hearty laugh.

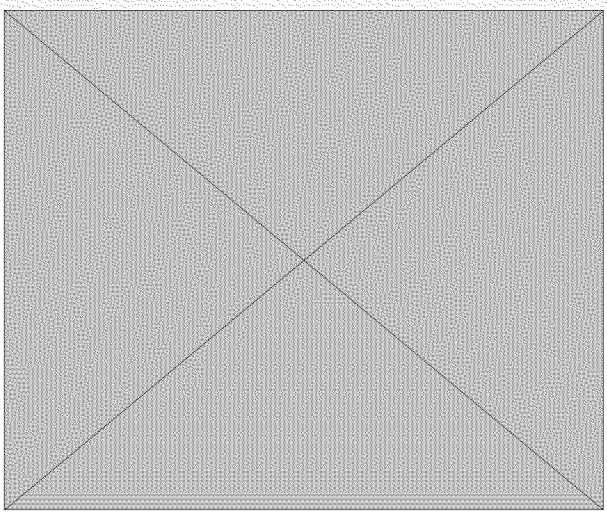
Chaffetz will leave the everyday Americans who are federal employees a legacy that includes a deliberate policy against bashing feds, as had been more common before he took the chair. Yet he promoted a punitive tax measure and other proposals that implicitly did just that. During an interview, he praised cooperation with the ranking Democrat on his committee, expressed frustration with his House Republican leadership and offered a conspiratorial concern about feds in the "deep state." Chaffetz has mixed views on President Trump and was "pleasantly surprised that he is inquisitive and personally engaged" on topics including the federal workforce and U.S. Postal Service reforms.

I spoke with Chaffetz in his spacious Rayburn building office Monday as he prepared for his return to private life, which might be temporary. In addition

ADVERTISEMENT

to the boxes stacked along the wall, it's noticeable what's missing — a big wooden desk, a common Capitol Hill status symbol.

Instead, a circle of black leather chairs dominates the office, facilitating group discussions. A small table along the side is his workspace. He's forged a strong working relationship with top committee Democrat Rep. Elijah E. Cummings (Md.), a passionate defender of the federal workforce, despite their heated differences on some employee issues.



For example, Cummings has fought Chaffetz's repeated attempts to disqualify serious tax delinquents from federal employment, meaning some could be fired. While Chaffetz regularly praises employees, his legislation is a gratuitous swipe at a workforce that statistics show is more diligent at paying taxes than the general population.

Chaffetz, elected to a fifth term in November, recalled his accomplishments, disappointments and views on various topics during the interview.

Secret Service: One of his proudest accomplishments was his work to improve the Secret Service after a series of embarrassing lapses damaged the agency's reputation. "I really think it was probably one of the most effective things we did," Chaffetz said. "I really think we made some major changes in the agency."

Postal reform: After many years of trying, the committee under Chaffetz approved legislation to stabilize faltering Postal Service finances. The bipartisan bill was supported by postal management, unions and industry mailers. This major accomplishment, however, turned to frustration when the Republican leadership did not schedule the bill for a House vote.

That leaves him the "most frustrated and just flat-out disappointed … I'm fairly critical of my own leadership because I see no good reason not to move it. It saves money, it's bipartisan and it's desperately needed … I'm dumbfounded as to why it hasn't been brought up."

Asked why, the offices of House Speaker Paul D. Ryan (R-Wis.) and Republican Majority Leader Kevin McCarthy (Calif.) had no comment.

Civil service reform: At a signing ceremony for a Department of Veterans Affairs employee accountability bill Friday, Trump said federal civil service protections are based on "outdated laws." Chaffetz agrees.

"There needs to be a swifter way to get rid of the bad apples," he said. "There are certain protections that need to be maintained. … Employees ought to have an opportunity to make their case. … When somebody's doing something truly horrific, we got to get rid of them."

Federal unions: "I'm frustrated the unions weren't more willing participants in trying to find that balance to get rid of the truly bad apples. … I wish they had the same vision I have … I wish they could see that one bad apple would truly infect a thousand. I wish they were more concerned about protecting the mass of federal employees by getting rid of the one who is causing all the disruption. … They seem to protect every employee no matter what, and that hurts the whole."

Randy Erwin, president of the National Federation of Federal Employees, strongly disagreed. "Our interest is in preserving due process so that good employees have the protections they need to do their jobs on behalf of the American people without fear of unfair or politically motivated reprisal," he said. "Those protections are essential to the functioning of our democracy. Our union has no interest in rigging the system to insulate genuine problem employees from the possibility of removal. Nobody benefits from that. … It is safe to say that we do not share Representative Chaffetz's vision for the

Deferred resignations: Early outs and buyouts

Federal compensation: On Trump's proposed cuts to federal employee retirement, Chaffetz said that "there needs to be a more comprehensive approach." He favors a defined contribution system instead of the defined benefit that provides federal pensions. In practice, that would result in workers paying more out of pocket toward retirement.

Chaffetz would like to see higher pay for some feds in critical positions, such as information technology. The IT workforce shortage, he said, is "the biggest personnel challenge that we face."

Deep state: Chaffetz blames a poorly defined "deep state" group mentality in the government — "no one specific individual" — with thwarting the work of Congress. "I don't think it's a mystery that by and large the federal workforce leans more to the left than they do to the conservative end of the political spectrum. I think there are a lot of things done to embarrass Donald Trump. There are a lot of things done to protect President Obama."

Of course, Trump does a lot of things to embarrass himself and the nation.

Will Chaffetz again seek public office? "I'm a definite maybe."

How two senators are fueling a GOP health care conundrum

James C. Capretta | National Review

Republican senators Ted Cruz (R-TX) and Mike Lee (R-UT) are pushing for an amendment to the Senate GOP's Better Care Reconciliation Act, which would substantially alter the current landscape of health-insurance regulation. These senators' strong commitment to this amendment, and the insistence on its inclusion in the Senate bill by conservative groups, reveals a broad misunderstanding among conservatives of what is wrong with health care and what is needed to build a market-driven system.

Reuters

Where executive power and national monuments meet

John Yoo and Todd Gaziano | Los Angeles Times

Suppose President Trump declared much of California, Nevada, and Oregon — states that just happened to vote against him — off-limits to economic development and recreational use. According to some environmentalists and legal scholars, we would have to live with this result. They believe a president can permanently designate federal land as a monument and restrict its uses. But a presidential power to create permanent national monuments flies in the face of the plain text of federal law.

Why the outrage over Trump's Warsaw speech is inane

Marc A. Thiessen | AEIdeas

Donald Trump's speech in Warsaw's Krasinski Square was the best of his presidency. If you took Trump's name off of the speech transcript and read it without knowing which American president had delivered these words, almost any objective observer would say it was a magnificent statement of American values. We need more of this from Donald Trump, not less.

Twenty20

Understanding how the poor saves more than the rich for retirement

Andrew G. Biggs | Forbes

Who's better prepared for retirement: a $12,000

worker who saves nothing on top of Social Security or a $100,000 worker who maxes out his 401(k)? The answer may surprise you. You can't know how well Americans are preparing for retirement simply by looking at whether they participate in a 401(k) or how much they contribute due to the mechanics of Social Security.

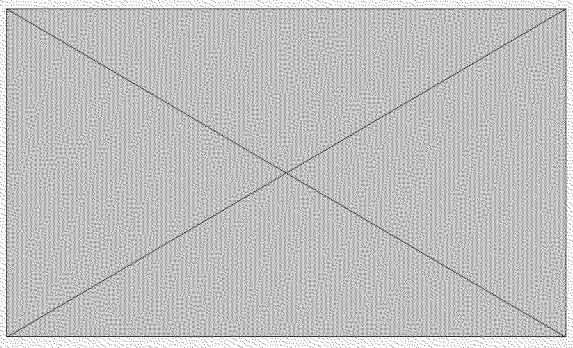
The late Daniel Patrick Moynihan's prescription for building a world-class city?

AEI's daily publication of independent research, insightful analysis, and scholarly debate

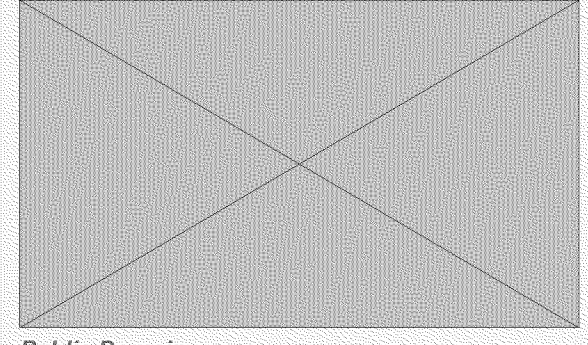


Reuters

5 reasons not to tax college endowments

Michael R. Strain | Bloomberg View

The late Daniel Patrick Moynihan's prescription for building a world-class city? "Build a great university and wait 200 years." Moynihan understood that fruit grows when a few square blocks are seeded with producers and consumers of knowledge. Republicans seem not to share Moynihan's understanding. Their tax proposal would subject private universities with endowments of more than $250,000 per full-time student to a 1.4 percent excise tax.

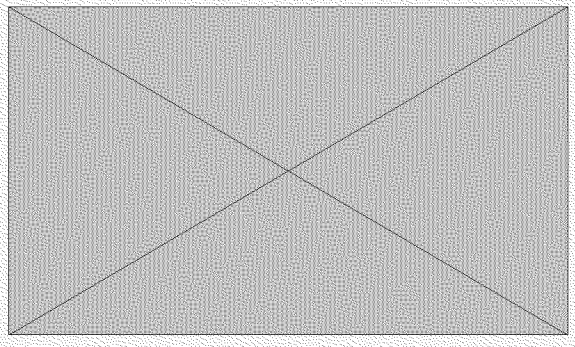


Reuters

Net neutrality comes full circle

Bret Swanson | AEIdeas

Last week, Sen. Al Franken (D-MN) fulfilled a prophecy of net neutrality critics. Be careful what you wish for, many of us warned, when much of Silicon Valley urged regulation of internet service providers. It would be technically, legally, and politically infeasible to regulate just one slice of the internet. Right from the start, one of net neutrality's big conceptual problems was that it was not, in fact, neutral.



Public Domain

America's net

neutrality boomerang comes full circle

Dalibor Rohac | The American Interest

In 1964, Barry Goldwater addressed the Republican National Convention with a famous speech that argued "extremism in defense of liberty [was] no vice" and "moderation in pursuit of justice [was] no virtue." Few understood him as predicting the future of right-wing politics across the English-speaking world. Yet that speech foreboded perfectly the revolutionary zeal that has since spread through conservatism on both sides of the Atlantic.

Energy and Climate Report

May 26, 2017 - Number 101

News

Energy
IRS Sets Tax Credit Values for Captured CO2
The 2017 tax credit for carbon dioxide captured and sequestered in secure geological storage is $22.48, the Internal Revenue Service said.

Energy
Release—Finally—of Appliance Efficiency Standards Applauded
Energy efficiency advocates and industry groups are breathing a sigh of relief after the Trump administration lifted a temporary hold on appliance standards for ceiling fans, pool pumps, air conditioners and refrigeration products.

Enforcement
Bosch Tied to Diesel-Cheating Claims Against Fourth Carmaker
Robert Bosch GmbH, the world's largest auto-parts supplier, was linked to emissions-cheating allegations against a fourth automaker on May 25, raising questions about the German company's role in the scandal gripping the car industry.

Environmental Justice
Exxon Refinery Neighbor Group Scoffs at Texas-EPA Agreement
Environmental groups say a settlement between the Texas state environmental regulator and the EPA over a potential civil rights violation in permitting of an Exxon Mobil Corp. refinery is too little, too late.

General Policy
Week Ahead: Lawmakers May Get Earful on Energy, Environment
Members of Congress holding town hall meetings in their home districts during the week of May 29 are expected to hear about energy and environment concerns as part of the public's reaction to President Donald Trump's new budget proposal.

International Climate
Six to One Against Trump on Climate in 'Honest' Exchange at G-7
German Chancellor Angela Merkel said Donald Trump was isolated on climate change at the Group of Seven, as the president said he's in no rush to decide whether to scrap U.S. involvement in the Paris Agreement.

International Climate
Trump 'Leaning' to Understand Europe View on Climate, Cohn Says
Donald Trump is working to understand the European view on climate change, his chief

economic adviser said, suggesting the U.S. president is sensitive to the diplomatic backlash he'd face in scrapping the Paris Agreement on global warming.

Motor Vehicles

Bipartisan Senate Bill Tweaks Fuel Efficiency Standards

A bipartisan Senate bill meant to standardize the federal government's regulation of fuel efficiency in cars and trucks would effectively loosen the efficiency standards that apply to automakers, allowing them to build and sell larger vehicles, according to environmentalists.

Natural Gas

Florida Pipeline's Legal Battles Persist After Construction

The owners of almost 700 miles of new pipeline into Florida aim to start the flow of natural gas in June—if federal regulators give the go-ahead despite objections and lawsuits from the Sierra Club and others.

Renewable Energy

Energy-Generating Kites Backed by Shell Set for Test in Scotland

Power-generating kites backed by Royal Dutch Shell Plc, Schlumberger Ltd. and EON SE will start tests in the U.K. this summer, with the aim of developing a technology that could eventually replace offshore wind turbines.

Vehicle Fuels

Shell Sees Solution to Energy-System Gaps in 'Hydrogen Grid'

Royal Dutch Shell Plc is looking to build a hydrogen empire in a bid to fix the biggest problem the energy transition faces: the question of how to store power in the long term.

Water Pollution

EPA Seeks Input on Postponing Utility Wastewater Limits

The EPA is moving ahead with its proposal to postpone compliance deadlines for a regulation governing wastewater discharges from steam-generating power plants, giving the power sector and the public 30 days to comment on the plan.

Subject: Playbook Power Briefing, presented by the Coalition for Affordable Prescription Drugs (CAPD): BRENNAN says Russia may have recruited Trump campaign aides -- TOM MACARTHUR resigns as Tuesday Group co-chair -- TRUMP talks Middle East peace; lands in Rome

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)
05/23/2017 01:04 PM EDT

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Happy Tuesday afternoon.

BULLETIN at 10:36 a.m. -- "WASHINGTON (AP) - Former CIA director says he warned Russia against meddling in the 2016 election in Aug. 4 call to Russia intel chief."

-- "Brennan: Russia may have successfully recruited Trump campaign aides," by Austin Wright: "'I encountered and am aware of information and intelligence that revealed contacts and interactions between Russian officials and U.S. persons involved in the Trump campaign that I was concerned about because of known Russian efforts to suborn such individuals,' he told lawmakers. 'And it raised questions in my mind again whether or not the Russians were able to gain the cooperation of those individuals.'

"By the time he stepped down as CIA director on Jan. 20, he added, 'I had unresolved questions in my mind about whether or not the Russians had been successful in getting U.S. persons, involved in the campaign or not, to work on their behalf, again, either in a witting or unwitting fashion.'" http://politi.co/2rdujJl

BREAKING -- "MacArthur resigns as co-chairman of 'clearly divided' Tuesday Group," by POLITICO New Jersey's Katie Jennings: "Rep. Tom MacArthur resigned Tuesday as co-chairman of the caucus of GOP moderates known as the Tuesday Group in the wake of deep divisions among its members over the House Obamacare replacement bill he helped craft."

"'You can't lead people where they don't want to go,' MacArthur said in an interview with POLITICO New Jersey Tuesday morning. 'I think some people in the group just have a different view of what governing is.' MacArthur announced his resignation as co-chairman moments ago during the group's regular Tuesday meeting in Washington. He said he alerted House Speaker Paul Ryan on Monday." http://politi.co/2rdPLyk

PRESIDENT DONALD TRUMP touched down at around 6:25 p.m. local time at Rome's

Fiumicino Airport, per pooler Mike Memoli of the Los Angeles Times. From Mike: "There was a more toned-down arrival in Rome than in the previous two stops. At 6:38 pm POTUS and FLOTUS emerged from the plane and waved from the top of the stairs before descending and working the line of greeters. FLOTUS has changed clothes since the last stop, ditching her white dress for a black dress with cinched by another wide gold belt, and black heels with red soles. Two ceremonially dressed carabinieri stood a few feet in front of the stairs holding silver swords in front of them. They saluted as POTUS walked by." The motorcade is en route to Rome.

THE LATEST ON MANCHESTER -- "Manchester attacker is Salman Abedi," by POLITICO Europe's Giulia Paravicini: "Salman Abedi, a British man of Libyan origin, carried out Monday's suicide-bomb attack in Manchester, Western European security officials told POLITICO on condition of anonymity. Abedi, who was born in 1994, died at the scene after killing 22 others and injuring more than 50 in the attack on concert-goers at the Manchester Arena, one of the officials said." http://politi.co/2qLtLJp ... ***POLITICO Europe's liveblog*** http://politi.co/2rdTR9C

-- "Isis claims responsibility for suicide bombing that killed at least 22 people," by The Independent's Lizzie Dearden: "The terrorist group released statements in several languages through its central media body praising the atrocity, claiming more than 100 'crusaders' were killed or wounded at the 'shameless' concert. 'With Allah's grace and support, a soldier of the Khilafah [caliphate] managed to place explosive devices in the midst of the gatherings of the crusaders in the British city of Manchester,' said the English version. It suggested the atrocity was not a suicide attack, despite police statements saying the perpetrator died at the scene, and did not name him as a 'martyr.'" http://ind.pn/2rdu2Gu

-- THE AP says U.S. intelligence officials have not confirmed ISIS's involvement in the attack.

-- PRIME MINISTER THERESA MAY'S statement: "All acts of terrorism are cowardly attacks on innocent people, but this attack stands out for its appalling, sickening cowardice -deliberately targeting innocent, defenceless children and young people who should have been enjoying one of the most memorable nights of their lives. ... We struggle to comprehend the warped and twisted mind that sees a room packed with young children not as a scene to cherish, but as an opportunity for carnage. ...

"For as so often, while we experienced the worst of humanity in Manchester last night, we also saw the best. The cowardice of the attacker met the bravery of the emergency services and the people of Manchester. The attempt to divide us met countless acts of kindness that brought people closer together. And in the days ahead, those must be the things we remember." ***Full text*** http://bit.ly/2rd5bTs ... ***Video*** http://bit.ly/2rcWmcm

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** As list prices for brand drugs continue to rise, employers are partnering with PBMs to keep drug costs under control. In fact, every dollar an employer invests in a PBM service

returns six dollars in savings. Learn more at www.affordableprescriptiondrugs.org. ******

THE BUDGET IS HERE ... AND THERE ARE NO SURPRISES -- It is worth rereading Andrew Restuccia, Matt Nussbaum and Sarah Ferris' budget story that we highlighted in this morning's Playbook for the broad strokes of the Trump budget. http://politi.co/2rMUjZA Meanwhile, remember that a budget is a blueprint of spending priorities. This won't become law, and is unlikely to ever get a vote in either chamber. ***The White House's budget rollout site*** http://bit.ly/2rMAhOC

-- WAPO'S ANALYSIS: "How Trump's budget helps the rich at the expense of the poor," by Max Ehrenfreund: "Trump announced a tax overhaul that would reduce or eliminate trillions of dollars in taxes that are paid primarily by the wealthy, including the estate tax and the marginal rate on ordinary income paid by the richest taxpayers. He would lessen spending on Medicaid, the federal program that provides health insurance to the poor, by $1.4 trillion over a decade, and he would allow states to impose strict limits on other major anti-poverty benefits such as food stamps.

"The budget also called for repealing President Obama's health-care reform, which helped cover poor and middle-class households with funds raised in part through greater taxes on the rich. Republicans argue that Obama's emphasis on the differences between rich and poor was misguided, and that policymakers should instead try to improve the fortunes of Americans across the board." http://wapo.st/2rMzU6O

TRUMP TALKS MIDDLE EAST PEACE -- "Trump: Israelis and Palestinians are 'ready to reach for peace'," by Annie Karni in Jerusalem: "In a brief speech at the Israel Museum, President Donald Trump on Tuesday said he feels confident, after two days of meetings, that the Israelis and the Palestinians are eager for a peace deal. 'Palestinians are ready to reach for peace,' Trump proclaimed, after a morning meeting in Bethlehem with Mahmoud Abbas, president of the Palestinian Authority. 'I know you heard it before. I'm telling you, that's what I do, they are ready to reach for peace.' He added that 'my very good friend Benjamin.... Benjamin Netanyahu wants peace.'

"But it is unclear if either side actually shares Trump's confidence. During a meeting in the Oval Office with Trump earlier this month, Abbas -- an 82-year-old leader who is in succession mode and lacks an electoral mandate -- threw his hands up in the air and shrugged when Trump expressed confidence about a renewed peace process. And while introducing Trump on Tuesday, Netanyahu took a dig at Abbas, who would have to be his partner in any peace deal.

"The Israeli prime minister expressed skepticism that Abbas would have condemned the Manchester terrorist attack that killed 22 if it had been perpetrated, instead, by a Palestinian suicide bomber on Israeli victims. More likely, Netanyahu said, that bomber 'would have received a stipend from the Palestinian Authority.' Israeli journalists covering Trump's visit also noted that Netanyahu, an embattled politician who is dependent on his far-right coalition government here, has tried to avoid talking about peace since the 2015 election." http://politi.co/2rOJ5mk

-- THE PRESIDENT'S NOTE in the book of remembrance at Yad Va'shem, Israel's Holocaust memorial, per the Times of Israel's Raoul Wootliff: "It is a great honor to be here with all of my friends -- so amazing & will never forget!" ***See Trump's note*** http://bit.ly/2rdkhs8 ... ***President Obama's note during his 2013 visit*** http://bit.ly/2qcEOJc

-- TRUMP'S NEW COVER PHOTO on Twitter is a picture of him visiting the Western Wall. http://bit.ly/2rdGwhk

FOR YOUR RADAR -- "Burr says new steps coming to get Flynn to comply with subpoena," by Burgess Everett: "The Senate Intelligence Committee will likely take new actions Tuesday to force President Donald Trump's former national security adviser Michael Flynn to comply with a subpoena, Chairman Richard Burr said in an interview.

"The committee served Flynn with a subpoena to compel him to turn over documents regarding his contacts with Russian officials, but Flynn has asserted his right not to incriminate himself. The committee is mulling compelling him to appear before the panel and perhaps subsequently holding Flynn in contempt of Congress, among other options designed to make him produce the documents. Burr, a North Carolina Republican, said he's made a decision on how he'll try to force Flynn to turn over the documents and will likely make it public Tuesday afternoon after discussing it with top committee Democrat Mark Warner of Virginia. The committee will hold a regular meeting on Tuesday afternoon." http://politi.co/2rdFoKI

PROTECTING THE FIRST FAMILY -- "NYPD expects to shell out $42.5M protecting Trump family by end of June," by the N.Y. Daily News' Erin Durkin: "The NYPD expects to shell out $42.5 million by the end of June protecting President Trump, his namesake tower and his family, officials said Monday. Trump's one-day trip back to the city earlier this month, his first since taking office, cost the city $1.2 million, deputy commissioner Vincent Grippo told the City Council at a budget hearing.

"Meanwhile, the city racked up $7.3 million in overtime bills from inauguration day through the end of March protecting Trump Tower, where Melania Trump and son Barron continue to live, even though President Trump has not been back since taking office. That's on top of the $23.8 million spent guarding the tower between Election Day and the inauguration." http://nydn.us/2rdcJ8E

HAPPENING TONIGHT -- The 5th annual Capital Soccer Classic is tonight at RFK Stadium. The embassy tournament starts at 5 p.m., the congressional game at 6:30 p.m. and the staffer tournament at 7:30 p.m. Members of Congress participating: Reps. Don Bacon (R-Neb.), Gus Bilirakis (R-Fla.), Suzanne Bonamici (D-Ore.), Kathy Castor (D-Fla.), Ruben Kihuen (D-Nev.), Steve Knight (R-Calif.), Darin LaHood (R-Ill.), Rick Larsen (D-Wash.), Erik Paulsen (R-Minn.) and David Valadao (R-Calif.). Others attending include Danish ambassador Lars Gert Lose, CNN's Chris Cillizza and Roger Bennett, part of the popular Men in Blazers soccer commentary duo. ***Free tickets***

http://bit.ly/2rMaQwu

REMEMBERING ROGER MOORE -- "Roger Moore - Saint, Persuader and the suavest James Bond - dies aged 89," by The Guardian's Benjamin Lee: "He was the epitome of the suave English gent, quipping sweatlessly in a bespoke three-piece suit, who enjoyed an acting career spanning eight decades. On Tuesday, Roger Moore's children announced his death at the age of 89 in Switzerland, saying: 'he passed away today ... after a short but brave battle with cancer.'" http://bit.ly/2rdhqiH

MEDIAWATCH -- "CNN Taps Politico's Tara Palmeri As Political Analyst," by The Hollywood Reporter's Rebecca Sun: "She also has signed with WME in all areas." http://bit.ly/2rd2Pnh ***Tara's role at CNN is in addition to her work here.***

-- Kate Sullivan starts on June 5th as a news assistant at CNN. She was previously chief of staff at TEDxGeorgetown and communications director for Georgetown's OWN IT Summit. Sullivan graduated from Georgetown this past weekend after spending 14 years abroad with her parents in Tokyo, Mexico and London.

AFTERNOON READ -- "This Secretive Billionaire Makes The Cheese For Pizza Hut, Domino's And Papa John's," by Forbes' Chloe Sorvino: "Two floors above this dairy deluge, in a dark-wood-paneled office with white marble floors, Corinthian columns and gold accents, sits James Leprino, the Willy Wonka of cheese. 'It's hard for me to believe I agreed to this,' the 79-year-old billionaire says. 'I really like to keep my privacy.' ... But after nearly 60 years running the business and more than a decade on Forbes' list of billionaires, Leprino, worth an estimated $3 billion, is finally willing to be interviewed about how his family's grocery in Denver's Little Italy became the world's top producer of pizza cheese--the slightly derisive term competitors use to describe its mozzarella. In all, Leprino Foods sells more than a billion pounds of cheese a year, to the tune of $3 billion in revenue." http://bit.ly/2rMY5SA

PLAYBOOK METRO SECTION -- "Hirshhorn to host solo show by Chinese dissident artist Ai Weiwei," by WaPo's Peggy McGlone http://wapo.st/2rdRweU

TRANSITIONS -- Nicole Cornish is joining Subject Matter as its first president and chief operating officer. She most recently was U.S. chief operating officer of Burson-Marsteller. http://politi.co/2rdbztU

SPOTTED: John Kerry flying from DCA to Boston today on an American Airlines flight.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** One in two Americans rely on their employers to provide health care benefits. So, employers partner with PBMs to provide access to effective medications at the most affordable price. PBMs drive savings in part by using clinical expertise to identify generic alternatives that achieve the same health outcomes for a lower price. With generics accounting for 89 percent of prescriptions filled in 2015, but only 27 percent of drug costs, that represents a savings of $227 billion across the U.S. health care system in

just one year. Learn more at www.affordableprescriptiondrugs.org. ******

AIR

Texas/Alternative Emissions Limitations for Ground Flares

AIR

Notice of the EPA announces the approval of two requests from Chevron Phillips Chemical Co., of The Woodlands, Texas, for alternative means of emission limitation (AMEL) for the use of a multipoint ground flare (MPGF) at certain new facilities in Texas. The approval allows for the operation of an MPGF during limited high-pressure maintenance, startup, and shutdown events and during upset events at an ethylene plant in Baytown. The approval also allows for the operation of an MPGF during the first two stages of routine operations and periods of maintenance, startup, shutdown, and upset at a polyethylene plant in Old Ocean. The notice specifies the operating conditions and monitoring, recordkeeping, and reporting requirements necessary to achieve volatile organic compound and hazardous air pollutant emissions reductions that are at least equivalent to those required under the applicable emissions standards at 40 CFR 60, 61, and 63. The approval is effective June 19, 2017. Contact: Andrew Bouchard; EPA, Office of Air Quality Planning and Standards; 919-541-4036; bouchard.andrew@epa.gov

Serious Injury Reporting Using the Model Minimum Uniform Crash Criteria
HAZARDOUS MATERIALS TRANSPORTATION

Notice announces the intention of the Federal Highway Administration to seek OMB approval for a new information collection request regarding state compliance with serious injury reporting using the Model Minimum Uniform Crash Criteria (MMUCC) 4th edition. The MMUCC is a collaborative effort to generate uniform crash data that are accurate, reliable, and credible for data-driven highway safety decisions within a state, between states, and at the national level. The collection concerns the ability of states to report serious injuries using the new federal definition of "suspected serious injury," including states' maintenance of a statewide crash database capable of aggregating each injury status attribute for suspected serious injury, use of verbatim terminology and definitions for the injury status attribute, and ensuring the seven serious injury

types are not included in any other attributes in the states' injury status data elements. Comments are due Aug. 18, 2017. Contact: Keith Williams; FHWA, Office of Safety Programs; 202-366-9212

Oregon and Washington State/NPDES Permit for Offshore Seafood Processors
WATER

Notice of the EPA announces the availability of proposed revisions to a draft National Pollutant Discharge Elimination System general permit (WAG520000) for offshore seafood processors in federal waters off the coasts of Oregon and Washington. The agency is re-proposing the draft general permit issued Aug. 24, 2015 (80 FR 51253) and the associated fact sheet and biological evaluation based on comments received. The agency seeks comments on revised permit conditions, including a seasonal prohibition on wastewater discharges in waters shallower than 100 meters and a year-round discharge prohibition over the Heceta/Stonewall Banks complex. The revisions also clarify the jurisdiction of the permit, add a best management practice that vessels be moving while discharging to aid dispersion of the discharge, and clarify sea surface monitoring requirements. In addition, the revisions add provisions to mitigate impact to seabirds, update standard NPDES language and conditions, and modify the notice of intent for permit coverage and the annual report. Comments and hearing requests are due Aug. 3, 2017. Contact: Catherine Gockel; EPA Region 10, Office of Water and Watersheds; 206-553-0325; gockel.catherine@epa.gov

Subject: Morning Media: The White House vs. ESPN's Jemele Hill -- Bill O'Reilly's back -- Following up on fake news

By Alex Weprin | 09/14/2017 05:37 AM EDT

W.H. PRESS SECRETARY: JEMELE HILL COMMENTS A 'FIREABLE OFFENSE': "I'm not sure if he's aware, but I think that's one of the more outrageous comments that anyone could make, and certainly something that I think is a fireable offense by ESPN." So said White House press secretary Sarah Huckabee Sanders, at the White House press briefing on Wednesday afternoon. Her comments came after ESPN "SportsCenter" anchor Jemele Hill called President Trump "a white supremacist who has largely surrounded himself w/ other white supremacists."

-Hill released a new statement on Twitter late last night addressing the controversy: "My comments on Twitter expressed my personal beliefs. My regret is that my comments and the public way I made them painted ESPN in an unfair light. My respect for the company and my colleagues remains unconditional."

-ESPN, meanwhile, released a statement of its own: "Jemele has a right to her personal opinions, but not to publicly share them on a platform that implies that she was in any way speaking on behalf of ESPN. She has acknowledged that her tweets crossed that line and has apologized for doing so. We accept her apology."

-Hill received plenty of support after her comments took hold in the conservative media. The National Association of Black Journalists said it "supports Hill's First Amendment rights on all matters of discussion, within and outside the world of sports, as they do not impinge on her duties as a host and commentator." Meanwhile, outlets like Deadspin weighed in with more colorful support.

-She has never shied away from politics, as this excellent and timely story in The Ringer shows, but it has never defined who she was as a sports broadcaster. In recent months, ESPN has found itself a target from conservatives, claiming that a "liberal bias" is causing viewers to flee, with much of the blame heaped on outspoken staffers such as Hill.

-So what happens next? The statements from Hill and ESPN seem to be part of an effort to put the controversy to rest. ESPN's public editor Jim Brady says he plans to address the matter.

Good morning and welcome to Morning Media. I always want to improve Morning Media and make it more useful to you, so please send me tips, ideas and feedback! I'm on Twitter **@alexweprin** and on email at **alexweprin@gmail.com**. Morning Media is produced with help from **Cristiano Lima (clima@politico.com / @ludacristiano)**. **Archives**. **Subscribe.**

FOLLOWING UP ON FAKE NEWS: Two important stories about fake news and easterun european propaganda worth reading. First, The New York Times' Jim Rutenberg travels to

Moscow to talk to Vladimir Putin's press secretary, Dmitri Peskov. The whole piece is worth reading, but this paragraph stuck out to me:

"By way of example, he pointed to 'this girl, from show business, Kim Kardashian.' Kardashian is among the most popular people in all of social media, with 55 million Twitter followers, nearly 18 million more than President Trump. 'Let's imagine that one day she says, 'My supporters - do this,' ' Peskov said. 'This will be a signal that will be accepted by millions and millions of people. And she's got no intelligence, no interior ministry, no defense ministry, no K.G.B.' This, he said, was the new reality: the global proliferation of the kinds of reach and influence that were once reserved for the great powers and, more recently, great media conglomerates. Even Peskov sounded slightly amazed considering the possibilities. 'The new reality creates a perfect opportunity for mass disturbances,' he said, 'or for initiating mass support or mass disapproval.'"

-Then there is this excellent CNN investigation, which sees a correspondent travel to a Macedonian town where the big business is making fake news in the U.S. and elsewhere. One operator is already gearing up for the 2020 presidential election.

MUST WATCH: Sean Spicer, in his first TV interview since leaving the White House, on ABC's Jimmy Kimmel Live." Spicer talks his infamous inauguration crowd briefing, his relationship to the press, and how President Trump would give feedback after briefings. Among other things, Spicer says a free press is "paramount to democracy." More from Cristiano, here.

BILL O'REILLY'S BACK: As part of a book tour for the latest book in his "Killing" series, former Fox News host Bill O'Reilly spoke to The Hollywood Reporter's Marisa Guthrie. The most newsy bits:

-He will decide next month where he goes from here career-wise: "I'm waiting to see very specific details of the projects that people have pitched to us. And there have been many. I think by early October, we should have a pretty good vision of what we're going to do."

-His Billoreilly.com paid subscription service has "hundreds of thousands" of subscribers.

-He was happy when President Trump came to his defense, even as he faced sexual harassment allegations that led to his departure from Fox. "He's very loyal to his friends. I think he understands that no one was mistreated on my watch, because that's the truth. He knows the politics of it because he has been in the same circumstance - accused - and the press will take any allegation and make it a conviction."

-He was not happy with how he was let go: "They made a decision. It was purely a business decision. But the way it was done, I'm over in Rome [on vacation]. My [legal] team was caught by surprise because we had an amazing amount of exculpatory stuff that we had presented. And it just - it was sad. That's the word, sad."

STORMY WEATHER WITH SINCLAIR-TRIBUNE TIE-UP? An advocacy group is using the recent hurricanes to fight the proposed Sinclair-Tribune merger, suggesting that Sinclair's

history of cutting local weather reporting reporting puts local communities at risk. The group, Save Local Media, plans to launch its new campaign today. It will highlight how Sinclair let go of veteran weather reporters, or downsized weather teams, after acquiring new stations. "Too often we think in abstract or ideological terms about these huge media mergers," said former FCC Commissioner and Common Cause Special Adviser Michael Copps in a statement. "Harvey and Irma bring it into real-life terms- people's' safety and people's' lives. Let's hope the FCC can think about in in these terms, too." Save Local Media is made up of organizations like the American Cable Association, Dish, Common Cause and Public Knowledge, and it opposes Sinclair's proposed takeover of Tribune, which would make the company the largest owner of local broadcast stations in the U.S.

UNIVISION TO DEFEND 'DREAMER' STAFF: Univision's chief legal and corporate affairs officer Jonathan Schwartz sent a memo to staff at the company Wednesday, explaining what the company was doing to support DACA and defend DREAMers that work for the company. The memo outlines the public-facing actions the company is taking, including PSAs and letters to congress, and what the company will do for its own employees affected. "We stand by the DREAMers across the nation and we will continue to take extensive steps to respond to the Administration's proposed action given the enormous negative impact on the communities we serve," Schwartz wrote. "We also are very mindful that our own DREAMer employees face the prospect of both losing their work authorization and their protection from the risk of deportation."

-To that end, the company is planning to reimburse employees that are part covered by DACA for the biannual fee, and it will "provide individual legal support, at the Company's expense, for any of our DREAMer employees with respect to DACA matters, including if they are subjected to deportation proceedings."

SPOTTED: At the Magic Hour rooftop lounge at the Moxy Hotel in New York, for the premiere party for "Page Six TV." New York Post publisher Jesse Angelo, Fox News co-president and Fox TV stations chief Jack Abernethy, NBC "Today" host Hoda Kotb, "Page Six TV" hosts John Fugelsang, Elizabeth Wagmeister, Bevy Smith and Carlos Greer. "When Rupert Murdoch had the idea for Page Six forty years ago, it was about what are the secrets that CEOs and their mistresses have, what really is happening behind the velvet rope at amazing nightclubs like this, what are people listening to in the halls of power, and of course what are the big stories," Angelo told the crowd. "When we went about creating this show we knew when we had to make the same thing."

MUST READS:

-This Esquire piece on London Evening Standard editor George Osborne, who was sacked as chancellor of the exchequer by Prime Minister Theresa May following Brexit. And this Newsweek piece on Hans A. von Spakovsky, the newest member of President Trump's election integrity commission.

REVOLVING DOOR:

-Tom LoBianco is rejoining the AP's D.C. bureau, after a stint at CNN.

-The New York Times has named Jia Lynn Yang deputy national editor. She joins from The Washington Post, where she was deputy national security editor. Also joining the Times from WaPo: Thomas Gibbons-Neff.

EXTRAS:

-For the first time in six years, MTV's ratings are on the rebound, according to Reuters.

-The FCC has been inundated with complaints about CNN, despite the fact that the regulatory agency does not weigh in on cable content.

-The New York Times is folding its product suggestion site The Sweethome into sister site The Wirecutter, and rebranding both as "Wirecutter."

-Anthony Scaramucci will serve as guest co-host of TMZ's syndicated TV show on Monday, and will also appear on a webcast hosted by Harvey Levin.

-Vice is casting for a D.C.-based political reality show, according to THR's Jeremy Barr.

-21st Century Fox executive chairman Lachlan Murdoch said that his company's core brands were FX, Fox News, Fox Sports, Nat Geo and India's Star TV. Notably missing from that group, the Fox broadcast network, which started the whole company.

-WFAN morning show host Craig Carton has resigned, after he was indicted on fraud charges.

Subject: POLITICO's Morning Score: Virginia fallout — GOP's suburban nightmare — The Trump conundrum

By Kevin Robillard | 11/09/2017 10:00 AM EDT

With Zach Montellaro and Elena Schneider

THE FALLOUT - "Republicans have a serious suburban problem in 2018," by Campaign Pro's Scott Bland: "Republicans thought Donald Trump's 2016 performance in the suburbs was as low as the GOP could go. Then Ed Gillespie went even lower. The Republican nominee for Virginia governor underperformed the unpopular president in a toxic political environment for the GOP - losing by landslide margins even in some territory where, just three years prior, he had nearly broken even in a run for Senate. ... The GOP started the year seeing a silver lining in Trump's bad suburban 2016 results. He didn't drag other Republicans down with him, they said, and if the party could figure out how to pair its traditional suburban strength with Trump's rural enthusiasm, it would be unbeatable. But in the past 24 hours, that ambition has given way to alarm. Republican strategists described Gillespie's 9-point loss and other election results around the country as a massive early warning signal for the 2018 elections, when House Republicans must defend 23 mostly suburban districts that Trump lost last year. 'If it were just Virginia, we could put it down to federal workers and contractors, but it happened in Pennsylvania and elsewhere, too,' Chris Wilson, a GOP strategist, wrote in an email. 'If you're a GOP incumbent in a heavily suburban, college educated district, I think you're worried today and rightfully so.'" **Full story.**

- "GOP faces wrenching call: Running with or away from Trump," by POLITICO's Alex Isenstadt: "With Trump's approval ratings cratering in swing states across the country, some senior party strategists are imploring lawmakers to abandon the president. Others argue that shunning Trump and his populist base is simply out of the question and that anything other than a full embrace of the president would spell electoral disaster. ... White House advisers spent Wednesday combing through the election results and fuming about Gillespie's have-it-both-ways approach. By keeping Trump at arm's length, they said, Gillespie squandered an opportunity to motivate conservatives whose support he needed. ... The dilemma is expected to be a major topic of discussion next week at the Republican Governors Association annual meeting in Austin, Texas. And top House GOP campaign strategists, trying to preserve their now-tenuous majority, said they wanted to look more deeply into the Virginia results before drawing conclusions. 'It's quite a predicament,' said Tony Fabrizio, a longtime GOP pollster who worked on the Trump campaign. 'You can't be the anti-Trump guy in the primary. But you don't want to be the 100-percent-for-Trump guy in the general,' he added. 'When you go to one extreme or the other, that's when you fall short.' ... In the end, Gillespie released about $500,000 worth of mailers highlighting the president's endorsement of him." **Full story.**

- "House GOP faces its fears after Virginia election," by Elena Schneider: "Virginia's elections set off a wave of panic inside the House GOP Tuesday night, increasing worries that the party's majority is in jeopardy in 2018 and that more incumbents may decide to retire rather

than run for reelection next year. ... Paul Shumaker, a Republican strategist based in North Carolina, talked to several of his political clients Wednesday morning, warning them: 'First of all, you have to run the race of your life. Second, you have to carve out a unique set of issues for yourself, which is very hard to do for down-ballot races, and localize issues to overcome concerns voters might have about Trump.' 'That's a tall order,' Shumaker said. ... 'What terrifies Republicans most about losing the majority is having more of these retirements, which could speed up after Virginia,' said a Republican fundraiser. 'The number of swing district retirements - [Reps. Martha] McSally, [Dave] Reichert, [Charlie] Dent, and we're expecting five or six more - could be the true measure of Democratic ability to flip the House.'" **Full story.**

- "Battered by Trump, Obamacare triumphs at the polls," by POLITICO's Rachana Pradhan: "A remarkable 4 out of 10 Virginians in early exit polls said health care was their top issue in a race that saw Democrat Ralph Northam, the current lieutenant governor, handily defeat Republican Ed Gillespie to become Virginia's next governor. And in Maine, voters in a landslide backed Obamacare Medicaid expansion, which their governor had vetoed on five separate occasions. ... 'We have an opportunity to send a very clear signal to anyone who is spending time and money opposing the ACA,' said Jonathan Schleifer of the Fairness Project, which poured funding into the Maine ballot measure campaign and is trying to boost lookalike Medicaid initiatives in states such as Utah and Idaho." **Full story.**

- "Democratic women sweep into office in state elections," by Campaign Pro's Maggie Severns: "Women running for office for the first time may have wrested control of the Virginia House of Delegates from Republicans, who held the chamber since the 20th century. Another female Democrat flipped the Washington state Senate to her party's control, alongside Democratic women who picked up state legislative seats in Georgia and Michigan, while Manchester, N.H. elected its first Democratic mayor in decades in Joyce Craig - who is also the city's first-ever female mayor. ... Tuesday's elections will at least double the share of women represented in Virginia's House of Delegates. They also represented close to half of the candidates this year, and two thirds of the candidates running in the crucial 17 House of Delegates districts won by Hillary Clinton in 2016." **Full story.**

- THE KIDS ARE ALL WOKE - Estimates show Northam winning 69 percent of young voters, turnout spiking: Estimates from the Center for Information and Research on Civic Learning and Engagement at Tufts University has 34 percent of registered voters age 18-29 turning out for the governor's race, up from 18 percent in 2009 and 26 percent in 2013. And while Gov. Terry McAuliffe won these voters 45 percent to 40 percent over Republican Ken Cuccinelli, Northam won them 69 percent to 30 percent over Gillespie. There was no similar turnout surge in New Jersey, where 18 percent of voters age 18-29 turned out, essentially the same as in 2009 and 2013. **Full story.**

- THE NUMBERS - NGP VAN sees 5.5 million door knocks: NGP VAN, which is used by basically every Democrat running for office and major progressive organization, logged 5.5 million door knocks and 5.1 million phone calls using their software to contact Virginia voters since January 2017.

- Memo Moment: Here's polling data and memos from Latino Decisions, Women's Voices

Women Vote Action Fund, and Planned Parenthood Action Fund.

RECRUITING UPDATE - Democrats push Bredesen in Tennessee Senate, per The New York Times' Alexander Burns and Jonathan Martin: "In the Senate, too, Democrats are seeking to expand the map. Facing a narrow path to a majority, they are strenuously wooing Phil Bredesen, a former Tennessee governor, to run for the seat that Sen. Bob Corker is vacating. Mr. Bredesen has been courted personally by Sen. Chuck Schumer of New York, the minority leader, as well as several former governors who now serve in the Senate, including Mark Warner of Virginia, according to Democrats briefed on the overtures. And the Democratic Senatorial Campaign Committee commissioned a poll aimed at coaxing Mr. Bredesen to run. Mr. Bredesen is in Washington this week for meetings and is said to be nearing a decision." **Full story.**

Days until the 2018 election: 362.

ENDORSEMENT WATCH - FIRST IN SCORE - "End Citizens United endorses 5 House challengers," by Campaign Pro's Elena Schneider: "The group is now backing Democrats Ann Kirkpatrick (AZ-02), Brendan Kelly (IL-12), Elissa Slotkin (MI-08), Dan McCready (NC-09), and Mikie Sherrill (NJ-11). Sherrill is in a crowded primary and Kirkpatrick, a former congresswoman, has challengers as well, but the other three have clearer paths to the Democratic nomination in their Republican-held districts." **Full story.**

- FIRST IN SCORE - EMILY's List endorses Kim Schrier in WA-08: EMILY's List is backing pediatrician Kim Schrier in Washington's 8th Congressional District, the seat held by the retiring Reichert. The endorsement could give Schrier a leg-up in the crowded all-party primary. "At a time when congressional Republicans continue to sabotage health care for millions of families, Kim's perspective as a doctor and a patient with a pre-existing condition is needed in Washington now more than ever," EMILY's List President Stephanie Schriock said.

PRIMARY CONCERNS - "This Megadonor Has Spent Millions On Republicans. Now He's Thinking About Running Against One," by BuzzFeed News' Tarini Parti: "Republican megadonor Foster Friess was busy writing checks to GOP candidates, contemplating the future of health care, and getting coffee with liberals for his campaign to 'restore civility' in politics last month, when he got an unexpected call from President Trump adviser and provocateur Steve Bannon. 'I get this call, 'Foster would you consider running against [Wyoming Sen. John] Barrasso ?' And I said, 'What's your name?' 'Steve Bannon?' Because we're pretty much strangers, it kind of struck me as how did he even get my name or my number?' Friess, a multimillionaire investor, is now launching a 'listening tour' to help him decide whether he should challenge Barrasso - his 'personal friend' and 'hero' - in a GOP primary, he told BuzzFeed News in a 90-minute, wide-ranging interview this week. ... Friess says he has aired his policy

frustrations with elected officials, including Barrasso, with no tangible outcomes. He now plans to decide in the next three to four months if he should mount a Senate bid himself." **Full story.**

- "In shake-up, Pennsylvania GOP Senate candidate to run for lieutenant governor, join Wagner ticket," by the Philadelphia Inquirer's Jonathan Tamari and Chris Brennan: "In a shake-up for two statewide races, Main Line Republican Jeff Bartos is dropping out of Pennsylvania's U.S. Senate race and joining the gubernatorial ticket of state Sen. Scott Wagner, according to three Pennsylvania GOP sources. A formal announcement is expected Thursday. Bartos will run as Wagner's lieutenant governor candidate. His decision removes the main obstacle for U.S. Rep. Lou Barletta on his path to the Republican nomination for the Senate." **Full story.**

2018 WATCH - "Cynthia Coffman is running for governor of Colorado, adding to long list of GOP primary candidates," by the Denver Post's Jesse Paul and John Frank: "Colorado Attorney General Cynthia Coffman will enter the crowded, messy Republican race for governor Wednesday, saying she is the candidate that can bridge the prosperity divide between urban and rural Colorado. ... The one-term top prosecutor faces a difficult path to victory in a race against a handful of candidates with big names and more campaign cash, particularly given her more moderate approach on social issues." **Full story.**

- "George Brauchler mulling jump from crowded governor's race to open GOP attorney general primary," by the Denver Post's Mark K. Matthews and Jesse Paul: "Republican gubernatorial candidate George Brauchler is weighing a run for attorney general now that Cynthia Coffman, currently in the post, has entered the governor's race, according to his campaign and several GOP sources. Brauchler already has reached out to some of his potential rivals - notably U.S. Rep. Ken Buck , R-Windsor, who said earlier this year that he might seek Coffman's job if she left the post. Buck said in an interview Wednesday that he was staying put in Congress." **Full story.**

AIR WARS - 45Committee pressures Heitkamp, Manchin, Donnelly on tax reform: GOP outside group 45Committee is out with ads pressuring Democratic Sens. Joe Manchin of West Virginia, Heidi Heitkamp of North Dakota and Indiana Sen. Joe Donnelly to vote for tax reform. 45Committee, which is partially funded by Sheldon Adelson, uses footage from each senator's most well-known ad in the 30-second spots. **Watch the ads here, here and here.**

WEB WARS - FIRST IN SCORE - GOP outside group targets Brown with new site: Senate Leadership Fund, the super PAC controlled by allies of Senate Majority Leader Mitch McConnell, is out with a new website targeting Democratic Sen. Sherrod Brown, www.sherrodfiles.com . The group will have paid digital ads directing voters to the site. "This website is the latest installment in our substantial paid digital campaign against our 2018 Democrat targets," SLF spokesman Chris Pack said. "We look forward to exposing Sherrod Brown's extremely liberal record that is out of touch with the people of Ohio." The site attacks Brown as a "hippie liberal."

AROUND THE MAP - Quick takes from across the country:

SENATE

Alabama: A poll conducted by Strategy Research has Republican Roy Moore leading Democrat Doug Jones 51-40, WBRC reported.

Nebraska: Susan B. Anthony List endorsed Sen. Deb Fischer, per a statement from the group.

Ohio: Rev 18, a super PAC founded by controversial Trump supporters and whose first endorsement was Josh Mandel, is shutting down, Cleveland.com reports.

HOUSE

CO-06: Republican Roger Edwards told Colorado Politics that he plans to challenge Rep. Mike Coffman in the GOP primary.

IL-06: All eight Democrats vying for the nomination will hold a public forum on Dec. 12, via Patch.com.

MN-08: Republican Stewart Mills, who has narrowly lost twice to Rep. Rick Nolan (D-Minn.), said he will not run in 2018, via The Ely Echo.

NV-03: Republican Michelle Mortensen, a consumer advocate for the local CBS affiliate, launched her bid for the open seat, per a statement from her campaign.

TX-05: Dallas County Republican Party Chairman Phillip Huffines passes on a bid, via The Dallas Morning News.

WV-03: State GOP Chairman Conrad Lucas is running for the seat, via the Charleston Gazette-Mail.

GOVERNOR

Alabama: Jason Childs, a Democrat and founder for Center for Progress in Alabama, announced his run, via The Alabama Reporter.

Nevada: Attorney General Adam Laxalt has hired veteran GOP operatives Kristin Davison and Stephen Puetz to help run his campaign, the Nevada Independent reports.

South Carolina: Democrat Marguerite Willis, an attorney, said she is considering a run, via The State.

Wisconsin: Wisconsin Gov. Scott Walker, running for a third term, has flip-flopped and now says governors should be able to serve more than three terms in office, the Associated Press reports.

CODA - QUOTE OF THE DAY: "There is a reverse story here that could be written, about

how people should be spending more time thinking about the commemoration or the one-year anniversary, the birthday, of Trump shocking everyone. That, to me, is a much more significant moment than Virginia." - Breitbart Editor-in-Chief Alex Marlow, explaining why some conservative media outlets didn't extensively cover Tuesday's election results.

Subject: Morning Energy, presented by Chevron: Mixed signals from U.S. as world leaders arrive in Bonn — More shots fired in RFS fight — Senate panel votes on ANWR measure today

By Anthony Adragna | 11/15/2017 05:44 AM EDT

With help from Sara Stefanini, Eric Wolff and Alex Guillén

POLITICAL COPS HIT THE CLIMATE BEAT: Politicians roll into Bonn, Germany, today to take over the final three days of the COP23. The opening ceremony will include German Chancellor Angela Merkel, French President Emmanuel Macron, and U.N. Secretary General António Guterres around 10 a.m. EST. The goal over the remaining days of the summit is to make as much progress as possible on the complex rules supporting the Paris climate agreement.

No Bonn voyage: Citing "a family emergency," career State Department diplomat Tom Shannon will no longer arrive in Bonn today to lead the U.S. delegation to the climate talks, Pro's Emily Holden reports. Other delegations had been anxiously waiting to see what tone and direction he'd set for the U.S. at the talks. Leading the delegation in his place will be Judith Garber, acting assistant secretary of State for oceans and international environmental and scientific affairs.

Optimism among other diplomats: Career U.S. diplomats negotiating technical elements of the deal with their foreign counterparts have stuck to many of the same stances they did under the Obama administration and that's raising hopes the Paris accord will survive the presidency of Donald Trump, POLITICO's Emily Holden, Kalina Oroschakoff and David Siders report. Christiana Figueres, a former United Nations climate envoy who helped orchestrate the Paris climate agreement's adoption two years ago, said that in the long-term effort to reduce greenhouse gas emissions, Trump is "going to be a blip" in history.

Walking the line: Dave Banks, Trump's energy adviser, argued the U.S. policy on fossil fuels is totally separate from what American diplomats are discussing in negotiation halls. The administration hasn't made any effort to start renegotiating the agreement, which would have set off an immediate diplomatic fray. And Banks said Shannon would not have pushed the administration's coal efforts if he made the trip. "So you think he's going to say, 'We're going to promote coal'? No, that's a policy discussion. It's not a negotiation," Banks said.

How one senior African negotiator summed up the situation for career State diplomats: "I think the mandate is not to be a blocker. They engage, but in the end they're not the ones calling the shots," he said.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and ME led you astray with an imprecise trivia question. Alaska has the most federal land by acreage and Nevada has the greatest percentage federal land within its border. Sorry! For today: Which former congressman was convicted of voter fraud by forging ballots at a nursing home? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

NET NEUTRALITY 101: The long-running fight over net neutrality, which pits telecom giants against tech companies, is heating up at the Federal Communications Commission. To understand what the fight is all about and where it's headed, check out POLITICO's latest explainer video featuring technology reporter Margaret Harding McGill and the artwork of Pulitzer Prize-winning cartoonist Matt Wuerker. Click HERE to watch.

New for Pros! The Pro app brings real-time policy intelligence and customizable notifications to your smartphone and tablet. Download the Pro app for iPhone and iPad | Get the Pro app on Google Play.

ANWR SET TO CLEAR COMMITTEE: The Senate Energy Committee convenes at 9 a.m. to consider reconciliation legislation offered by Chairman Lisa Murkowski that would open a small part of the Arctic National Wildlife Refuge to oil and gas development. The CBO estimates the package would raise $1.092 billion over the 10-year budget window, though Democrats and public lands groups say that overestimates how much lease sales could raise. Expect the package to pass on a largely party-line vote with West Virginia Democratic Sen. Joe Manchin likely to vote in favor.

ME first — New ad blitz launched: The League of Conservation Voters is unveiling a $550,000 television ad campaign in the districts of Republican Reps. Erik Paulsen, Bruce Poliquin, John Katko and Washington today opposing the effort to open ANWR to drilling. Watch it here.

BISHOP: SOMETHING'S GOTTA GIVE: Don't expect Congress to send tens of billions in relief funds to Puerto Rico until the island's government and a congressionally created independent financial oversight board are able to work together, House Natural Resources Chairman Rob Bishop told reporters. "If they don't do that, then it's going to be a very difficult ask to ask this body to appropriate a whole bunch of money without some kind of guarantee that things will be different," he said. "The power struggle has got to stop if they expect Congress to actually come up with the money." Bishop said he doesn't think additional legislation is necessary to improve that relationship, but he's willing to insert language into forthcoming spending packages if necessary.

What about Whitefish? Bishop's not worried about the details of the now-cancelled contract, but wants to ensure the process that led to it is never replicated. "The details of Whitefish and PREPA are insignificant — that's history," he said. "The process that created Whitefish cannot happen again and cannot be replicated. This is what's bothersome to me." He declined to say whether Ricardo Ramos, the head of the utility who inked the Whitefish deal, should be fired.

That comes as documents showed the utility ignored advice from its law firm of Greenberg Traurig to include language in the contract that would cap the amount of money Whitefish Energy could charge, allow PREPA to terminate the agreement for any breach of contract and make Whitefish responsible for paying Puerto Rican taxes, Pro's Ben Lefebvre reports.

CRUZ TO IOWA: COME TO THE TABLE OR NORTHEY GETS IT: Sen. Ted Cruz,

having seemingly failed to secure a meeting with Midwestern senators brokered by the White House, has turned to newly fledged Iowa Gov. Kim Reynolds to try and bring corn-staters to the table. Cruz wrote to Reynolds Tuesday to explain why he has put a hold on the nomination of Iowan Bill Northey to become an undersecretary for the Department of Agriculture. He cites high costs of biofuel credits in the Renewable Fuel Standard that refiners in Texas and elsewhere say is hurting their bottom line (Reuters reported yesterday that at least one refinery is selling off high priced credits to meet debt payments). "Both sides of the debate must negotiate in good faith to find a mutually agreeable solution to secure the fate of liquid fuels in America," Cruz wrote.

You started it! Cruz said Iowa Sens. Joni Ernst and Chuck Grassley blocked "multiple EPA nominations (and threatened to do the same to judicial nominations)" to protect the RFS from EPA interference. Ernst blocked only EPA air chief Bill Wehrum. The rumor that Grassley, who chairs the Senate Judiciary committee, threatened to block judicial nominations has circulated for months. A spokesman told ME that the Iowa Republican "did not place a hold on any EPA nominee and has not threatened to place a hold on any judicial nominee."

What about that meeting? Cruz and eight colleagues wrote to Trump last month asking the White House to broker a meeting with the Midwestern senators within three weeks. Three weeks is up today, and as of Monday, aides to two Midwestern Senators said they had received no outreach from the White House to set up a meeting.

** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://politi.co/2yQ8q7z **

PAGING GRASSLEY: It's not just Cruz you have to worry about. Sen. Lamar Alexander, one of the chamber's top wind energy critics, took aim at the production tax credit in a floor speech Tuesday. The Senate Finance Committee is expected to beginning processing amendments today to its tax bill, and Alexander said the wind incentive should go on the chopping block. "I'm here today to challenge my colleagues to be willing to consider all energy subsidies for mature technologies - wind, solar, oil and gas - as candidates for elimination in a tax reform bill," he said. "These dollars could be better spent to lower rates for taxpayers." Senate tax-writers did not follow the lead of their House counterparts and left the PTC alone in their tax bill, and Grassley, a senior Finance Committee member, is likely to make sure it stays that way after the markup.

Green group targets bill: The Sierra Club launched a digital ad campaign urging 29 House Republicans to oppose the chamber's tax package H.R. 1 (115). "The GOP's plan even manages to raise taxes on the middle class, while sneaking in an outrageous attack on the Arctic Refuge by opening it up for drilling," Melinda Pierce, the group's legislative director, said in a statement.

FOR YOUR RADAR: Vice President Mike Pence joins Energy Secretary Rick Perry, FEMA Administrator Brock Long and Texas Gov. Greg Abbott in Austin for a briefing on recovery efforts from Hurricane Harvey today at 1:40 p.m. EST.

VOTE EXPECTED ON MINE SAFETY PICK: A final vote is scheduled for noon today to

confirm David Zatezalo to be assistant secretary of Labor for Mine Safety and Health. Majority Leader Mitch McConnell hailed his "keen understanding of the challenges and risks sometimes associated with mining" on the floor Tuesday and said "this firsthand experience will serve him well in his new role." The cloture vote was 52 to 45.

House clears flood insurance, final NDAA bills: Lawmakers cleared by a 237-189 vote legislation H.R. 2874 (115) would reauthorize and overhaul the National Flood Insurance Program, which has struggled to meet its obligations to policyholders in the midst of a string of hurricanes, Pro Financial Services' Zachary Warmbrodt reports. The House also passed a compromise defense policy bill H.R. 2810 (115) that includes language requiring a study of the threats posed by climate change to military installations by a 356-70 vote, Pro Defense's Connor O'Brien reports.

SASC CLEARS ARMY CORPS NOM, EPW UP NEXT: The Senate Armed Services Committee on Tuesday gave the green light to R.D. James' nomination to run the Army Corps of Engineers, but thanks to the Corps' dual role in water policy, he also has to clear the Environment and Public Works Committee before he can hit the floor. An EPW spokesman said the hearing for James will happen sometime in December, though that timeline means a committee vote may not happen until the new year.

HEARING ROUNDUP — E&C SUBPANEL VOTES ON AIR BILLS: The House Energy and Commerce Environment Subcommittee today marks up legislation on the brick MACT H.R. 1917 (115), wood heaters H.R. 453 (115), racing vehicles H.R. 350 (115) and a bill H.R. 1119 (115) meant to help waste coal-to-energy power plants cope with the Cross-State Air Pollution Rule and the mercury rule. That vote takes place at 10 a.m. in Rayburn 2123.

Science panel tackles research bills: The full House Science Committee marks up a series of bills today, including one H.R. 4376 (115) making upgrades to DOE research capacities and another H.R. 4378 (115) boosting nuclear energy research infrastructure. The session convenes at 10 a.m. in Rayburn 2318.

EPW looks at reducing emissions: Senate EPW holds a hearing entitled "Promoting American Leadership in Reducing Air Emissions Through Innovation" at 10 a.m. in Dirksen 406. Look for the National Association of Manufacturers to call for Congress to "work with the EPA to fix [the New Source Review program] so that it functions properly and does not stand in the way of efficiency." Watch here.

MAIL CALL! RESTORE CLIMATE WEBPAGES: Seven members of the Senate Democratic caucus asked EPA Administrator Scott Pruitt in a letter to restore a series of removed webpages on climate change and for explanations of modifications. "These latest website alterations are part of a sequence of disturbing EPA actions that appear designed to censor dialogue about climate change in the United States," the group, led by Cory Booker, wrote.

WHAT A WASTE: The Environmental Defense Fund is out with a new report finding wide discrepancies between flaring rates among the top 15 oil and gas producers working in the Texas

Permian Basin and concluding the industry continues to struggle to tamp down on natural gas waste.

NEW LIFE FOR OLD MINES? The Rocky Mountain Institute released new research on how to evaluate old mining sites for potential renewable energy siting opportunities. Link here.

TAKE A GLANCE! The Federalist Society launched the Regulatory Transparency Project, which it aims to "foster a national discussion about where government regulation seems to be doing more harm than good."

MOVERS, SHAKERS: Members of New Jersey Gov.-elect Phil Murphy's transition team on environmental and energy issues include: former NRG Energy CEO David Crane, former John Kerry senior advisor Kathleen Frangione, Earthjustice VP Lisa Garcia and former state Board of Public Utilities President Jeanne Fox, according to NJ.com.

Stories from POLITICO Pro

State Department: Shannon to miss climate talks Back

By Emily Holden | 11/14/2017 03:43 PM EDT

BONN, Germany — Tom Shannon, the State Department career diplomat who was set to head the U.S. delegation at international climate talks here, will not attend, according to the State Department.

Delegations from other countries had been waiting to see what tone and direction Shannon would set at the talks for the U.S. He was to be the top politically appointed U.S. diplomat at COP23.

Acting Assistant Secretary of State for Oceans and International Environmental and Scientific Affairs Judith Garber will travel to Bonn on Wednesday to lead the delegation.

House Natural Resources: Puerto Rico utility ignored lawyers' advice in hiring Whitefish Energy Back

By Ben Lefebvre | 11/14/2017 05:12 PM EDT

Puerto Rico's electric utility ignored advice from its own lawyers when it signed a contract with Whitefish Energy in the aftermath of Hurricane Maria, according to documents released ahead of a House Natural Resources Committee hearing today.

Law firm Greenberg Traurig advised Puerto Rico Electric Power Authority to include language in the contract that would cap the amount of money Whitefish Energy could charge, allow PREPA to terminate the agreement for any breach of contract and make Whitefish responsible for paying Puerto Rican taxes, among other requirements. But none were included, the committee said in its summary of the documents.

PREPA last month canceled the $300 million contract with Whitefish, a relatively unknown, two-man operation based in Montana.

Puerto Rico Gov. Ricardo Rossello reiterated to lawmakers that he has launched two investigations into how the contract came about, but Natural Resources Chairman Rob Bishop (R-Utah) said the governor would have to do more if he wants Congress to support his request for disaster assistance.

"You have a credibility gap," Bishop said of PREPA's behavior. "You're asking for $90 billion. Simply telling me you've launched two investigations isn't sufficient."

PREPA Director Ricardo Ramos, who declined to attend the House hearing, told the Senate Energy and Natural Resources Committee earlier today that he ultimately chose Whitefish Energy because no other companies would work with the bankrupt territory. In response to questions from Ranking Democrat Maria Cantwell (D-Wash.), Ramos said he was not aware of anyone with PREPA receiving kickbacks from the company.

House passes flood insurance renewal in wake of massive storms Back

By Zachary Warmbrodt | 11/14/2017 07:23 PM EDT

House Republicans overcame bipartisan opposition Tuesday to pass a bill that would reauthorize and overhaul the National Flood Insurance Program, which has strained to pay out billions of dollars to policyholders after this year's run of devastating hurricanes.

The House passed the bill in a 237-189 vote following months of debate and dealmaking over how much to scale back the primary tool that millions of homeowners rely on to protect themselves from the financial risks of flooding.

The bill, H.R. 2874 (115), would reauthorize the NFIP for five years and enact several operational changes championed by Financial Services Chairman Jeb Hensarling (R-Texas), the fiscal conservative who led an effort to pare back the program as part of the reauthorization bill.

During the process, Hensarling clashed with influential business groups and coastal Republicans who argued that his committee's proposals threatened homeowners and local economies.

After agreeing to a series of concessions going back to this summer, Republicans secured the votes they needed. The bill the House passed Tuesday retained measures sought by Hensarling that would make it easier for private companies to compete with the NFIP in the flood insurance market and prohibit the government from offering coverage to certain homes that flood over and over again.

"It is a bankrupt program," Hensarling said on the House floor. "It is unsustainable."

The vote marked Congress' first attempt this year to pass a long-term renewal of the flood insurance program before it expires on Dec. 8. The Senate, where negotiations are ongoing, was not expected to take up the House package.

The debate in the House this week underscored why progress has been so slow on the issue.

Hensarling and other lawmakers who helped draft the House bill argued that the changes they were seeking in the program would help protect taxpayers while giving consumers the opportunity to find more affordable options beyond what the government offers.

"A federal program that conceals actual risk through artificially low rates is neither compassionate nor responsible," Rep. Dennis Ross (R-Fla.) said.

But Republicans representing coastal districts urged their colleagues to vote against the bill, warning that it would make flood insurance less affordable for their constituents and threaten the solvency of the NFIP. They were unpersuaded by sections of the bill that would limit premium increases and allow states to create programs that would identify homeowners who need financial assistance. Other sections of the bill would escalate premium increases and charge homeowners more to fill a reserve fund.

Critics argued that the nascent private flood insurance market championed by Hensarling would not necessarily be a boon for homeowners, and that insurers would likely cherry pick the least risky properties while leaving behind the rest for the government to cover.

Califronia Rep. Maxine Waters, the top Democrat on the Financial Services Committee, fought the legislation. House Minority Whip Steny Hoyer (D-Md.) also tried to rally opposition, a spokeswoman said.

Until two weeks ago, House Majority Whip Steve Scalise, who represents a southern Louisiana district, had also withheld support for the bill. Scalise, the No. 3 House Republican, came around after Hensarling agreed to ease proposed penalties for properties that repeatedly flood.

Still unsatisfied, Rep. Frank LoBiondo (R-N.J.) spoke out against the legislation on the House floor Tuesday, questioning why the concerns of his constituents and others in the Northeast didn't have more sway in the debate.

"I'm angry and disappointed I have to fight with my own party on these issues," said LoBiondo, who last week announced his plans to retire.

In the end, 14 Republicans and 175 Democrats voted against the bill. Fifteen Democrats voted for it. The White House on Monday said it supported the bill, despite wanting to see additional changes to the flood program.

The House Financial Services Committee drafted the legislation well before hurricanes Harvey, Irma and Maria ravaged the southern coast of the United States and its territories. As the proposal lingered for months, the monster storms added a new sense of urgency behind efforts to update the flood insurance program.

An earlier series of devastating hurricanes had overwhelmed the program's financial resources, forcing it to borrow money from Treasury that it could not repay.

A new set of claims piled up this fall, and the program hit its roughly $30 billion borrowing limit. In response, Congress agreed in October to forgive $16 billion of the NFIP's debt.

The program borrowed another $6.1 billion on Nov. 9, FEMA said Tuesday, bringing its debt to more than $20.5 billion.

"No legislation currently pending before the 115th Congress addresses the underlying, core challenge facing the NFIP — the reality that the NFIP was not designed to address catastrophic losses," said Tom Glassic, a consultant who previously served as senior insurance counsel to the Financial Services Committee.

"This makes it likely we'll be dealing with many of the same issues in five or six years or whenever the NFIP is next up for reauthorization."

Meanwhile, senators from both parties oppose the proposals in the House package and are pushing their own competing bills. One would freeze interest payments that the NFIP pays on its debt — an issue the House bill does not address directly.

Sen. John Kennedy (R-La.) said the House proposal failed to strike the right balance between "the integrity of the program, the financial stability of the program and the affordability." Sen. Bob Menendez (D-N.J.) said it was "Republicans' first concrete step towards dismantling a critical program that more than 200,000 New Jersey families rely on."

"It doesn't resolve all of the issues that we have in the Senate," Banking Chairman Mike Crapo (R-Idaho) said in an interview Tuesday.

House passes $700B compromise defense bill Back

By Connor O'Brien | 11/14/2017 05:29 PM EDT

The House on Tuesday overwhelmingly passed a $700 billion compromise defense policy bill that would authorize a military buildup beyond that proposed by President Donald Trump, but vastly exceed the cap on defense spending to fund it.

The vote was 356-70.

The Senate will debate the fiscal 2018 National Defense Authorization Act after Thanksgiving and is expected to handily approve it and send it to the president for his signature.

With fewer contentious issues than in previous years, the annual legislation was hammered out by House and Senate Armed Services leaders in just a few weeks.

In all, the measure would authorize nearly $700 billion in national defense spending. Within that, the bill endorses $626.4 billion in base spending, including $20.6 billion for nuclear national security programs under the Energy Department. And it would authorize $65.7 billion for a separate Pentagon war account.

The legislation, which tallies billions of dollars more than Trump's $603 billion budget request, would authorize more spending for missile defense technology to counter North Korea, more ships and fighters, and would continue to rebuild the Army.

On the floor Tuesday, House Armed Services Chairman Mac Thornberry (R-Texas) called the bill a down payment on a yearslong military buildup.

"We will not rebuild and fix our problems in one year or one bill ... but we can head in the right direction," Thornberry said. "That's what this conference report does."

But the final NDAA is also tens of billions of dollars above the $549 billion cap on national defense spending set by the Budget Control Act for the current 2018 fiscal year.

House and Senate leaders must strike a budget deal that increases the caps in order to boost defense spending as prescribed by the bill, approved on Tuesday by the House.

"It goes $80 billion, roughly, over the budget caps, and the bill can't do that on its own," said House Armed Services ranking Democrat Adam Smith of Washington state.

"Unless the budget caps are lifted and the appropriators pass the appropriations bill, that doesn't happen," Smith said. "And we haven't made a lot of progress on that."

The final measure includes a 2.4 percent troop pay raise, higher than the 2.1 percent sought by the Pentagon.

It would authorize 90 F-35 Joint Strike Fighters, 20 more than the Pentagon requested, and 24 Navy F/A-18 Super Hornets, 10 more than requested. And it would boost Navy shipbuilding by authorizing 13 new ships, five more than requested, including an extra Littoral Combat Ship, destroyer and amphibious ship.

The bill would also authorize more personnel in the active-duty military services and Reserves.

Notably, the Army would grow by 7,500 active-duty soldiers and the active-duty Marine Corps would increase by 1,000. The Air Force would grow by 4,100 active-duty personnel. And the Navy would increase by 4,000 active-duty personnel.

The legislation also continues efforts, spearheaded by Senate Armed Services Chairman John McCain (R-Ariz.), to shake up the Pentagon's senior leadership ranks.

It would establish the Pentagon's newly created chief management officer as the third most

senior post and give it more information technology functions performed by the chief information officer.

The final NDAA compromise would also eliminate one assistant secretary of Defense and limit the total number of deputy assistant secretaries to 48.

Additionally, the bill includes a series of provisions aimed at streamlining the Pentagon's acquisition process, including a proposal pushed by Thornberry to set up an online marketplace for purchasing commercial products.

Lawmakers, however, dropped a House-backed proposal to create a new Space Corps under the Air Force.

Instead, the final bill would require an independent plan to establish a separate service responsible for space as well as a slew of changes to streamline national security space acquisitions and operations.

Today on Climate Beat . . .

. . . we went abroad, as our daily news roundup previewed likely climate conversations that will occur among G7 leaders at their summit today and tomorrow. White House economic adviser Gary Cohn said Trump "wants to clearly hear what the European leaders have to say" on the Paris Agreement, from which President Donald Trump is still weighing an exit.

But some observers say Trump could put off a decision on the Paris deal for years, until 2019, and they suggest Trump has won his first negotiating battle on the agreement by forcing foreign leaders and environmentalists to accept he can lower the U.S. emissions target.

Back home, environmental, labor and other groups are appealing to EPA Administrator Scott Pruitt to reverse his plan to pause certain requirements of the Obama-era methane emissions rule for new oil and gas drilling, just one day after EPA appears to have sent for White House review a proposal to implement the stay.

The Department of Energy, meanwhile, is moving forward with implementing several Obama-era appliance efficiency standards after previously delaying their effective dates – including an efficiency standard for ceiling fans over which environmentalists and several states had sued.

Speaking of the courts, an environmental law group is urging a federal court not to let industry intervenors abandon a landmark constitutional climate case brought by youth plaintiffs. The group charges industry groups' attempts to leave the case are due in part to fear they'll have to release data demonstrating their potential liability as part of discovery proceedings.

And, last but certainly not least, don't miss some of our must-read stories from this past week to send you into the holiday weekend.

Subject: House panel approves bipartisan update to Safe Drinking Water Act

By Annie Snider

07/13/2017 11:49 AM EDT

A House measure to update the Safe Drinking Water Act is gaining bipartisan momentum after lawmakers approved a slate of amendments during subcommittee markup this morning.

Among the changes made to the Drinking Water System Improvement Act by the House Energy and Commerce Committee's environment subpanel is a boost to the popular Drinking Water State Revolving Fund's authorization, allowing $8 billion in spending over five years. Also approved were amendments supported by Democrats to require states to spend a minimum share of federal dollars on disadvantaged communities, encourage removal of lead service lines and require projects supported with federal funds to use American-made iron and steel.

Rep. Paul Tonko (D-N.Y.), the top Democrat on the subcommittee, said the measure that will now go to the full committee was a compromise after his party pushed for major increases in federal funding and changes to the process EPA must follow in order to set new drinking water standards.

"This bill reflects compromise. It is not the bill Democrats would have written on our own," Tonko said. "We have met halfway to get this bill on the path to being able to be supported by every or nearly every member of this committee."

WHAT'S NEXT: The measure heads to the full House Energy and Commerce Committee for consideration.

Subject: First Move: Progress in Bonn? • Energy Regulator's Almost-Full Slate • Parks' Visibility

What you need to know to start your day.

Progress in Bonn? • Energy Regulator's Almost-Full Slate • Parks' Visibility

By Chuck McCutcheon

Much of the U.N. climate gathering in Bonn has focused on high-level public gatherings. Behind closed doors, though, negotiators appear to be making headway in at least one area: the international trading of emissions credits.

Talks have begun in earnest on working out rules about how countries can avoid double-counting of emissions credits and ensure transparency, as well as whether the U.N. climate secretariat should oversee the system, Dean Scott reports.

Negotiators say a clear sign of progress in Bonn was an agreement to have a U.N. technical group start drafting the first text of the market-mechanism rulebook. Some negotiators hope that by spring 2018, more than 190 countries would get to look at the text.

FERC's monthly meeting today could be the last one it has without a full slate.

It's currently got three out of its five members. Incoming Republican Chairman Kevin McIntyre and Democratic Commissioner Richard Glick are expected to be sworn in any day now after winning Senate confirmation earlier this month.

The independent energy regulator hasn't had five sitting commissioners since October 2015. But having three commissioners is at least a quorum—something the agency had lacked for much of this year.

Commissioners, including Chairman Neil Chatterjee, are expected to talk during and after the meeting about goals for how the agency will act on the Energy Department's contentious grid resiliency proposal. Rebecca Kern is covering.

Federal appeals judges in Washington, D.C., today will hear arguments in a case involving an Obama-era rule aimed at improving visibility at national parks and wilderness areas.

At issue is a 2012 EPA regulation that allowed states to use emissions trading

under the Cross-State Air Pollution Rule to fulfill Clean Air Act requirements under the regional haze program. That program requires power plants to install pollution controls to improve the visibility at parks and other federally protected areas. Jennifer Lu is covering.

Other Stories We're Covering

- Drilling in Alaska's Arctic National Wildlife Refuge is now, politically, closer than ever to reality. But even after the Senate's energy panel approved a measure that would grant the go-ahead, the bill still faces a test on the Senate floor as part of the Republican tax overhaul.
- The EPA official in charge of environmental enforcement will discuss the Trump administration's priorities. Renee Schoof is covering.
- The National Clean Water Law Seminar wraps up today in Savannah, Ga., looking at the clean water sector's legal and regulatory challenges. Among the topics is the rewriting of a regulation clarifying the Clean Water Act's geographic reach; an agency official said the EPA "will do our best" to meet its end-of-2018 goal to do so. Amena H. Saiyid is covering
- Bloomberg's Sustainable Business Summit ends a two-day meeting in London Ali Qassim is following.
- Senate Republicans have been urging President Trump to send them nominations; the president said he'll nominate two for the Energy Department: a private equity firm senior adviser for the agency's chief financial officer and a Nuclear Energy Institute official to head congressional and intergovernmental affairs.

Quote of the Day

"Don't be lulled into a false sense of safety that it can't or won't happen here."
—Chemical Safety Board Chairwoman Vanessa Sutherland, imploring chemical facilities to reassess their operations plans and worst-case scenario assumptions in the wake of recent Gulf Coast disasters.

An Oregon State University bee researcher collects bees in a hive in 2014.
Photographer: Natalie Behring/Getty Images

Around the Web

- One of Trump's nominees for the EPA might be in trouble: Both of North Carolina's Republican senators say they won't support Michael Dourson to lead the agency's chemicals office.
- New research shows how fungicides, particularly one often found in bumblebee and honeybee hives, may hurt the bees' health.
- Few national issues divide as sharply by education as climate change, an analysis of opinion polls shows.
- More than 60 EPA employees left the agency's Chicago-based Region 5 office between Trump's inauguration and mid-October.

Today's Events

- **9 a.m. • Clean Water Act** • Association of Clean Water Administrators starts two-day workshop on Clean Water Act variances.
- **10 a.m. • Carbon Emissions** • Virginia's Air Pollution Control Board meets to discuss the Clean Energy Virginia carbon-reduction standard.
- **12 p.m • Efficient Buildings** • Alliance to Save Energy sponsors discussion on grid-interactive efficient buildings.
- **All Day • Law** • Federalist Society's National Lawyers Convention starts three-day conference on administrative agencies and regulation.

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

EPA Methane Regulations Officially on Hold

Posted May 31, 2017, 03:11 P.M. ET

By David Schultz

An Obama-era EPA rule designed to limit methane leaks from oil and gas wells is officially on hold, as the agency's new leadership begins the formal process of weighing whether to repeal it altogether.

The Environmental Protection Agency is reconsidering the methane rule because it says the final version of the rule, which came out last summer, diverged too far from a draft version, preventing the public from fully weighing in, according to a notice scheduled to be published in an issue of the Federal Register. The Obama administration had included this rule as a part of its Climate Action Plan because methane is a potent greenhouse gas.

In addition to beginning the reconsideration process, the EPA is pushing back some of the rule's upcoming compliance deadlines by 90 days. Had the agency not done this, oil and gas drillers would have had to start complying on June 3 with these parts of the rule, which deal with gas leak monitoring and pneumatic pump standards.

Within hours after the EPA announced its move, both the Natural Resources Defense Council and the Environmental Defense Fund said they would file lawsuits against the agency to try to stop it from rolling back the methane rule.

Exelon: Still Time for Pennsylvania to Help Three Mile Island

Posted May 31, 2017, 03:00 P.M. ET

By Rebecca Kern

Pennsylvania's Legislature still has time to help keep Exelon Corp.'s financially struggling Three Mile Island nuclear plant operating, Exelon's Joseph Dominguez told Bloomberg BNA.

"We're continuing the discussion with policymakers that we really began six or seven months ago: Talking about the value proposition of nuclear, both from an environmental standpoint, as well as from fuel diversity and grid resilience standpoint," Dominguez, Exelon's vice president of

governmental and regulatory affairs and public policy, told Bloomberg BNA May 31.

"We'll see if there's interest among policymakers to do the things that Illinois and New York were able to do," he said. "We still have some time to have this discussion, but there is a sense of urgency in terms of starting to introduce policymakers to the subject."

Exelon announced May 30 that it plans to prematurely close Three Mile Island, located about 90 miles west of Philadelphia, by Sept. 30, 2019, due to financial losses at the plant. It was the scene of the worst nuclear accident in U.S. history in 1979.

Last year, the Illinois Legislature approved a $235 million-a-year lifeline for Exelon's Quad Cities and Clinton reactors after the company announced they would close. Also, New York's Public Service Commission's Clean Energy Standard—passed last summer—will issue credits for zero-emitting resources, such as nuclear plants, starting this June.

'Hundreds of Millions' in Losses

Dominguez told Bloomberg BNA that the plant has lost "hundreds of millions of dollars" over the past six years.

Dominguez said even though the company has announced the closure of the plant, "it's not too late" for the plant to be saved by legislation or action from the Pennsylvania Public Utility Commission. "Generally speaking, about a year before the shutdown date is a critical date," he said.

The plant has not cleared the regional grid operator PJM Interconnection LLC's annual capacity market for the past three years. PJM's capacity auctions are held annually ensure enough power generation resources are available to meet demand in the region covering 13 states and the District of Columbia.

In New York and Illinois, both of the Exelon-related policies triggered lawsuits, as well as complaints to Federal Energy Regulatory Commission, but FERC has been hamstrung in addressing them because of its lack of a quorum since February.

"It's a sad reality that policymakers really need to see the potential loss of these facilities, given their otherwise busy agenda, to really take note sand start figuring out solutions," he said.

Dominguez said that Exelon would like to see the Legislature introduce a bill to amend Pennsylvania's Alternative Energy Portfolio Standard to include nuclear energy as a carbon-free energy resource. The standard was signed into law in 2004 and provides credits on tiered level for "alternative energy" sources, including solar, wind, hydropower, geothermal, biomass, biologically derived methane gas coal-mine methane and fuel cell resources.

Currently, there is no legislation introduced in the Pennsylvania Legislature. However, Dominguez said a bicameral Nuclear Energy Caucus, with nearly 80 members, was formed in May by state Sens. Ryan Aument (R) and John Yudichak (D) and Reps. Becky Corbin (R) and Rob Matzie (D).

Governor: Let's Talk

Pennsylvania Gov. Tom Wolf (D) said through spokesman J.J. Abbott that he is willing to talk with lawmakers about the issue.

"Pennsylvania is a major supplier of energy and we need a diverse energy sector," Abbott said, according to PennLive.com. "Governor Wolf is concerned about potential layoffs and empathizes with these employees.

"As we move forward, we expect a robust conversation about the state's energy sector. Governor Wolf is open to these conversations and looks forward to engaging with the General Assembly about what direction Pennsylvania will go in regards to its energy sector, including the future of nuclear power."

Environmentalists Revive Lawsuit Against Federal Coal Leasing Program

Posted May 31, 2017, 03:55 P.M. ET

By Tripp Baltz

One of the litigants in an on-hold lawsuit over the Interior Department's coal leasing program said it's necessary to restart the case in light of the department's decision to begin processing coal lease applications again.

The focus of the unopposed motion is to challenge Interior Secretary Ryan Zinke's March 29 revocation of an order by his predecessor, Sally Jewell, to pause the issuance of new federal thermal coal leases until an environmental analysis could be done on the environmental impact—including the climate change effects—of coal mining, Bob LaResche, a rancher in Clearmont, Wyo., told Bloomberg BNA May 31 (W. Org. of Res. Councils v. Zinke, D.C. Cir. App., No. 15-5294, motion filed 5/26/17).

Jewell in January 2016 said the halt in coal leases would continue at least until the Bureau of Land Management had prepared and issued a Programmatic Environmental Impact Statement analyzing the effects of coal mining on the climate.

"Now that Zinke has cancelled the PEIS, it's time to reactivate our litigation to force it to be done," said LaResche, chair of the Powder River Basin Resource Council, one of the eight organizations in the Western Organization of Resource Councils that sued the Interior Department in October 2015.

An Interior Department spokeswoman referred Bloomberg BNA's request for comment to the Justice Department, which declined to comment. Travis Deti, executive director of the Wyoming Mining Association, a defendant-intervenor in the case, did not immediately respond to Bloomberg BNA's request for comment.

NEPA Violation Alleged

The environmental groups alleged the department's failure to conduct an analysis of the environmental effects of coal mining violated the National Environmental Policy Act. When Jewell ordered the PEIS to be done, the groups said they had essentially received "all the relief" they were seeking. They joined with the defendants in seeking an abeyance in the case pending the completion of the analysis.

Zinke's issuing an immediate halt to the analysis "makes it necessary for us to restart the case again" to address "numerous and varied concerns," LaResche said.

"The coal leasing program has evolved from what it once was to being run by industry," he said. "Bids are generally non-competitive; most leases don't have more than one bidder. There's not

enough transparency there."

LaResche said the groups are concerned that coal mining companies "continue to lease millions and billions of tons of coal when they shouldn't be leasing any." Companies have 20 years worth of projects already leased, he said.

In addition to the reality of climate change, LaResche said, the coal companies are facing shrinking markets, and scientific evidence has emerged that coal threatens public health and safety. "For a federal agency to ignore the huge new body of knowledge acquired since 1979 is just whistling past the graveyard," he said in a statement emailed to Bloomberg BNA. "This is not how a responsible nation operates."

Friends of the Earth also is a plaintiff in the litigation.

Trump Said to Still Be Mulling Whether to Leave Paris Accord

Posted May 31, 2017, 12:50 P.M. ET

By Jennifer A. Dlouhy, Jennifer Jacobs and Margaret Talev

President Donald Trump hasn't yet decided whether to keep the U.S. in the landmark Paris agreement on climate change but is leaning toward exiting the accord, according to two people familiar with the matter.

The administration is preparing for several different outcomes and is lining up experts to speak to the media when an announcement is made, according to another person familiar with the discussions who, like the others, requested anonymity ahead of a decision.

Top administration officials are divided on what to do, with some, including Ivanka Trump and Secretary of State Rex Tillerson, urging Trump to stay in the deal. Others, including Environmental Protection Agency Administrator Scott Pruitt and White House Chief Strategist Steve Bannon, lead a faction that wants a U.S. exit.

There is consensus in the administration that the terms of the Paris deal must change, and it's exploring whether that requires a full exit or a scaled-back U.S. commitment to cut emissions, according to one of the people. Trump is scheduled to meet with Tillerson at the White House on May 31, and the president said he'd declare an outcome soon.

"I will be announcing my decision on the Paris Accord over the next few days," Trump tweeted on May 31.

Highly Anticipated Decision

Trump's decision is highly anticipated, and leaders of the six other nations in the Group of Seven heavily lobbied him at a summit in Sicily last week to keep the U.S. in the pact. But Trump has called climate change a "hoax" and criticized the deal as "one-sided" against the U.S. White House legal advisers have warned that staying in the accord could undercut Trump's efforts to rescind rules on power-plant emissions and methane leaks.

Axios reported earlier May 31 that the president would exit the Paris deal, and the New York Times followed with a report that he is likely to pull the U.S. out of the accord. Several administration

officials contacted by Bloomberg said that a decision hadn't yet been made, and Trump has a record of shifting course on major decisions up until the last moment.

The move to leave would have significant environmental and diplomatic consequences. As the richest nation and the second-largest emitter of carbon dioxide, the U.S. is central to efforts to address global warming. The Vatican and companies as diverse as Exxon Mobil Corp. and Apple Inc. had urged the president to remain in the pact.

The Paris accord is broader than any previous climate agreement. It calls for reducing carbon dioxide emissions in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above temperatures at the outset of the Industrial Revolution. That's the upper limit scientists have set to keep climate change from hitting an irreversible tipping point, unleashing catastrophic floods, droughts and storms.

With an exit, Trump would make a clean break from his predecessor, Barack Obama, who made the Paris accord a top priority of his second term and pledged the U.S. would slash carbon dioxide emissions 26 percent by 2025. Withdrawal would put the U.S. in league with just two other nations -- Syria and Nicaragua -- that aren't participating in the agreement.

Trump has already moved to dismantle programs to fight global warming. He ordered a review of fuel-economy standards for cars and light trucks, which along with other vehicles are the U.S.'s largest source of greenhouse gases. And he set in motion a process to scrap the Clean Power Plan, which would have required utilities to slash their carbon dioxide emissions. EPA is also moving to rescind rules to prevent methane leaks.

Post-Leave Options

If he decides to leave, Trump has two options for jettisoning U.S. involvement.

The first—withdrawing from the Paris agreement—can't happen immediately. Under the deal's terms, he must wait until November 2019 to formally submit his bid to quit. It would take another year after that before the U.S. is actually out, under this process.

The other option—exiting the United Nations Framework Convention on Climate Change—goes beyond simply walking away from the Paris accord. The treaty, unanimously adopted by the U.S. Senate and signed by President George H.W. Bush, has been the foundation of 25 years of global climate talks. Scrapping the 1990s-era treaty would be a clear signal that this administration has no interest in cooperating with other nations on efforts to address global warming.

U.S. climate efforts won't completely cease if Trump walks away from Paris.

States including California, New York and Massachusetts continue to move forward with aggressive policies to cut carbon emissions. Anheuser-Busch InBev NV, Apple, Amazon.com Inc., Alphabet Inc.'s Google and other companies continue their push to power their facilities with wind and solar energy. Low-carbon wind, solar and natural gas are so cheap that the Department of Energy is studying what it can do to help ailing, older coal and nuclear plants.

EU, China to Reaffirm Paris Agreement Commitment, as U.S. Wavers

Posted May 31, 2017, 01:14 P.M. ET

By Stephen Gardner

The European Union and China will reaffirm their commitment to the United Nations Paris Agreement on climate change during a June 1–2 summit in Brussels, despite uncertainty about continued U.S. participation in the deal.

An EU official who asked not to be named told Bloomberg BNA May 31 that one of the main conclusions of the summit will be a statement setting out the intention of the two major economic powers to implement their pledges under the Paris Agreement, which was agreed at the end of 2015 and is intended to keep global warming to no more than 2 degrees Celsius (3.6 degrees Fahrenheit) above pre-industrial levels.

"This agreement stands whether another major emitter pulls out or not," the official said. The EU-China summit will emphasize the "global responsibility" of the two powers in the context of the lack of clarify about the US's intentions, the official added.

China and the EU both have ratified the Paris Agreement and pledged to tackle greenhouse gas emissions in line with nationally determined contributions, or promises submitted to the U.N. The EU said it will reduce emissions by 40 percent by 2030 compared to 1990, while China said its emissions will peak by 2030 at the latest, and has made pledges on renewable energy and afforestation.

There is "much stronger expectation" from countries around the world that "Europe should assume leadership" in the effort to tackle global warming, and the EU was ready to lead, said Maros Sefcovic, European Commission vice president for Energy Union. The commission is the EU's executive arm.

Detail on Cooperation

The EU official said the summit statement will give "considerable detail" on how the EU and China will work together to fulfill their Paris pledges, for example by cooperating on renewable energy. It also will emphasize implementing existing pledges, rather than offering new pledges to deepen emissions cuts, according to the official.

"One of the new qualities of our relationship is that we don't just comment together, but we act together," the official said, adding that clean energy for Chinese cities would be "a key area of cooperation between us."

President Donald Trump has caused consternation in the EU about possible U.S. withdrawal from the Paris Agreement. EU leaders at a Group of Seven summit in Italy May 26–27 pushed Trump to respect the Paris deal on climate change, but concluded the U.S. was "not in a position to join in the consensus" on the implementation of the global deal.

During the June 1–2 summit, the EU will be represented by Donald Tusk, president of the European Council, and by Jean-Claude Juncker, president of European Commission. State Council Premier Li Keqiang will head the Chinese delegation.

Solar Stocks Fall on Reports That U.S. May Exit Paris Agreement

Posted May 31, 2017, 03:04 P.M. ET

By Brian Eckhouse

Solar manufacturers fell sharply on reports May 31 that President Donald Trump is leaning toward withdrawing the U.S. from the landmark 2015 Paris climate accord.

JinkoSolar Holding Co., the biggest solar manufacturer, dropped 3.2 percent to $18.23 at 11:01 a.m. in New York, after sliding as much as 8 percent. Canadian Solar Inc., the largest North American panel producer, slid as much as 6.5 percent, while First Solar Inc., the top U.S. company, fell as much as 4.4 percent and rival SunPower Corp. was down as much as 4.2 percent.

Trump said in a tweet May 31 that he will announce "over the next few days" whether he will pull the U.S out of the global climate pact, and according to reports from publications including Axios, he's already decided to do so.

"The stocks are reacting to headlines, and the U.S. potentially pulling out of Paris is a big headline," Gordon Johnson, a New York-based analyst at Axiom Capital Management, said in an interview May 31. "With Trump in office, the pressure for utilities and others to do solar is going to decline. That will negatively affect demand."

It's not just solar manufacturers that were affected. Sunrun Inc., the biggest independent U.S. rooftop solar company, was down as much as 3 percent. NRG Energy Inc., the largest U.S. independent power producer and the owner of almost 5 gigawatts of renewable energy, fell as much as 1.5 percent.

While solar isn't driven primarily by a carbon price, "it does suggest that the U.S. may subsidize coal, which would be bad for U.S. manufacturers like First Solar and SunPower," said Jenny Chase, a Zurich-based solar analyst at Bloomberg New Energy Finance.

EU Proposes Truck Monitoring as Preparation for Emissions Standard

Posted May 31, 2017, 02:38 P.M. ET

By Stephen Gardner

Manufacturers of trucks and other heavy-duty vehicles sold in the European Union would be required to monitor and report their vehicles' carbon dioxide emissions and fuel economy performance, under a long-delayed proposal published by the European Commission May 31.

The commission, the EU's executive arm, announced in May 2014 that it would propose the measure in 2015, but then said "further analysis" was needed. The lack of a harmonized measure for truck carbon dioxide emissions puts the EU at odds with the U.S., which has had an emissions standard for heavy-duty vehicles since 2011.

Commission vice president for Energy Union, Maros Sefcovic, conceded that the EU was "the last major economy" that does not "have this very important sector covered."

Road freight was "developing in such a way that it is one of the main contributors of greenhouse gas emissions and air pollution in Europe," and collecting data about truck emissions would give the commission the evidence it needed to propose the emissions standard, Sefcovic said.

The requirement for manufacturers to monitor and report their trucks' emissions will be followed up in 2018 with a proposal for a carbon emissions standard for trucks, Sefcovic said.

The proposal on truck emissions was put forward as part of a package of transportation-related measures that the commission issued May 31.

Road-Use Charging Plan

According to the proposal, truck manufacturers would be required from Jan. 1, 2019, to use a common methodology to calculate the emissions of vehicles above 7.5 metric tons. The data would be made public from 2020.

The plan moved "in the right direction, but the real test of the EU's intentions will be the ambition of the CO2 standards" when they are proposed in 2018, the nongovernmental organization Transport & Environment said.

The EU already has fuel economy and carbon standards for passenger cars and light vans. The commission said it would make proposals within 12 months to update these standards for the post-2020 period.

In a related move May 31, the commission proposed amending a 1999 directive to update rules EU countries must follow when levying road use charges on heavy vehicles. Currently, 24 of the EU's 28 member nations impose charges on trucks crossing their territory.

It would require countries with road charges for trucks to introduce differentiated pricing based on trucks' carbon emissions. This would "incentivize the use of the cleanest and most efficient" heavy vehicles, the commission said.

Both the proposed requirement on the monitoring of truck emissions and the road-charging directive require the approval of the European Parliament and the Council of the EU, which represents the governments of EU countries.

Exxon Investors to Company: Make Climate Curb Fallout Public

Posted May 31, 2017, 03:31 P.M. ET

By Joe Carroll

Exxon Mobil Corp. investors, in a split with the company, urged the explorer to publish a detailed analysis next year on how carbon curbs could affect the value of its oil fields, refineries and pipelines.

The non-binding measure, backed by investors including the California Public Employees' Retirement System and the Church of England investment fund, comes amid reports President Donald Trump may soon abandon the 2015 Paris Climate Accord. More than 60 percent of voters approved the resolution during Exxon's annual general meeting in Dallas.

While Exxon's management opposed the measure, Chief Executive Officer Darren Woods said he remains committed to the Paris pact's goals and methods. Even with that agreement in place, he said, oil demand will grow in the coming decades, particularly in underdeveloped regions of the world.

"Energy needs are a function of population and living standards," Woods said in his first annual meeting since becoming chief executive officer on Jan. 1. "When it comes to policy, the goal should be to reduce emissions at the lowest cost to society."

Population growth and a desire for higher living standards will increase usage of petroleum-derived fuels, especially for transportation, because there are few widely-available alternatives, according to Woods. There's a huge untapped energy market among the 1 billion people who currently have no access to electricity and the 3 billion who don't use modern cooking fuels, he said.

Exxon shares fell 0.6 percent to $80.61 at 2:15 p.m. in New York trading.

"It's going to take a global solution" to limit greenhouse gas emissions that contribute to climate change, Woods said.

The remarks come amid news reports that Trump is on the verge of pulling the U.S. out of the Paris agreement. On May 31, Trump tweeted he would announce his decision within days.

Woods said his forecast assumes governments adhere to the strictures of the Paris pact, which calls for limiting emissions to prevent global temperatures from exceeding pre-industrial levels by 2 degrees Celsius.

Woods has been a staunch advocate for keeping the U.S. in the Paris group, as was his predecessor Rex Tillerson, who is now Trump's secretary of state. In his first blog post after becoming CEO, Woods advocated low-emission fuels, carbon capture and biofuels as tools for meeting the goals of the Paris agreement.

In May 2016, the proposal received a 38 percent "yes" vote after the company said it already disclosed ample data about emissions and risk management. As a result of this year's 62 percent "yes" vote, the board will reconsider its opposition.

Energy and Climate Report

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Energy
Sent: Thur 11/9/2017 3:01:37 PM
Subject: POLITICO's Morning Energy, presented by ExxonMobil: Senate expected to send Pruitt an air chief today — Senate Energy slots in Nov. 15 ANWR markup as text released — East vs. West coal battle heats up — New hurdle for nuclear waste bill

By Anthony Adragna | 11/09/2017 09:59 AM EDT

With help from Emily Holden and Eric Wolff

HELP'S ON THE WAY: The Senate is expected to confirm William Wehrum today at 11:30 a.m. to run EPA's air office, sending Administrator Scott Pruitt a key, if controversial, lieutenant as he embarks on a sweeping agenda to roll back a host of Obama-era air regulations. Barring any huge surprises (the cloture vote was along party-lines), Wehrum is expected to receive unanimous Republican backing and universal Democratic opposition.

Al Franken made a candid hot mic comment during the cloture vote. Watch here.

Pressure to testify ramps up: With help on the way to the agency, look for Congress to further lean on Pruitt to return for oversight hearings. House Energy and Commerce Environment Subcommittee Chairman John Shimkus told reporters he's personally told Pruitt within the past two weeks that he needs to appear before the committee. "I know that I said, 'You know you're eventually going to have to come before the committee, and the sooner you do it the better,'" he said. "He was quiet." House Science Chairman Lamar Smith said in a letter his staff was working on finding "a mutually convenient time" for Pruitt to come. From ME's perspective, Hill Republicans may have to do more than nicely ask for Pruitt to appear.

Speaking of Pruitt, a tipster tells ME they spotted the administrator in first class on a flight from D.C. to Detroit on Wednesday morning. An agency spokeswoman wouldn't say where he was going or what he was doing once he arrived.

Hey, EPA: That's not how this works. Pruitt is a Cabinet official, not a private citizen. His responsibilities include testifying before Congress regularly, and the public has a right to know where he is on a given day. Unlike Pruitt, other Cabinet officials - including Secretary of State Rex Tillerson, Defense Secretary Jim Mattis, Agriculture Secretary Sonny Perdue, Commerce Secretary Wilbur Ross (even President Donald Trump himself) - regularly provide their daily schedules in advance.

So where is he today? Pruitt's slated to meet with the American Chemistry Council's board of directors for 2-1/2 hours on Kiawah Island, S.C.

IF IT'S THURSDAY, ME'S HERE FOR YOU! I'm your host Anthony Adragna, and EPA deputy nominee Andrew Wheeler was first (on the morning of his confirmation hearing!) to identify that Sen. Shelley Moore Capito's father, Arch Moore, served three terms as West Virginia governor before legal troubles ended his career. For today: Which former lawmaker left the House to become a public works commissioner? Send your tips, energy gossip and comments

to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

ANWR LEGISLATION RELEASED: Senate Energy Chairman Lisa Murkowski released a four-page reconciliation package late Wednesday that would open Arctic National Wildlife Refuge in Alaska to oil and gas drilling. According to the CBO, the measure would net $1.092 billion over the 10-year budget while limiting development to 2,000 acres of federal land. The release allows the committee to move on to a markup on Nov. 15. Efforts to open ANWR to drilling are staunchly opposed by Democrats, including Ranking Member Maria Cantwell, and environmental advocates. Remember instructions in the budget resolution, H. Con. Res. 71, require Murkowski's committee to raise $1 billion in revenue over the next decade.

Hot docs: Text of the chairman's mark here. Summary of the mark here. Map of the area under consideration here.

NEW EAST V. WEST BEEF: Energy Secretary Rick Perry's grid resiliency push to boost the coal and nuclear sectors is casting a brighter light on the ever-expanding divide between the coal industry's Appalachian mines and Wyoming's Powder River Basin, Pro's Alex Guillén reports. And though the Trump administration has paid close attention to boosting the fortunes of Appalachia in its early months, experts say the industry's future appears brighter out West. "The industry recognizes it's just a fact of geology and Mother Nature and economics," said analyst Michael Dudas of Vertical Research Partners. "Over the past decades, the mix has certainly gone away from Appalachia towards the Powder River Basin."

Eastern and Western coal states have been on different trajectories for decades, with 56 percent of U.S. coal production in 2015 coming from the Western region and just 25 percent from Appalachia. Western coal is easier to access and reserves are so abundant that companies were able to absorb an Obama-era moratorium on new leases largely unfazed. "In the grand scheme of things, economically, we're the better bet for a utility," Travis Deti, executive director of the Wyoming Mining Association, said.

But the nostalgia factor: Appalachia is the nation's sole producer of metallurgical coal, high-grade fuel used to make steel and other metals and is better-positioned to export its coal. But beyond those factors, it continues to occupy an overwhelming cultural and political presence in parts of the country. "Our advantage is we have the best coal miners in the world and we got probably some of the best coal in the world right here. The Lord blessed us in that standpoint," Bill Raney, president of the West Virginia Coal Association, said.

NUCLEAR WASTE BILL HITS NEW HURDLE: A dispute between Shimkus and House Appropriators over how money from the Nuclear Waste Fund is spent must be resolved before a bipartisan nuclear waste bill can hit the floor, Pro's Darius Dixon reports. At issue is mandatory spending in the Shimkus bill that would go to operating costs related to Yucca Mountain and additional payments through a "benefits agreement" with the state of Nevada. Current law has Congress dole out monies from the fund during the annual appropriations process and lawmakers on that panel don't want to cede that power. "My frustration is that we are serious but the appropriators, right now, are still wedded to a year-to-year process," Shimkus told Darius.

It's a pile-on! Even if the bill gets out of the House, there's been little appetite to move on the issue in the Senate where leadership doesn't want to put vulnerable Nevada Republican Sen. Dean Heller in a tough spot. "Senate Republicans have made it clear they don't want to move forward on Yucca Mountain because it could hurt Sen. Heller," a senior Senate aide said. Heller said in an interview - with a smile - he'd been pushing Majority Leader Mitch McConnell to keep Yucca funding out of the next spending package. "I think we'll get there," he added.

** **Presented by ExxonMobil:** We're collaborating with FuelCell Energy on a novel idea to use fuel cells to capture carbon at natural gas power plants, and in the process reduce emissions and increase electrical output. This technology could be a game changer in addressing the world's growing need for energy, while also reducing the impact on the environment. Learn more. **

HOW ABOUT A MEETING? The Senate's number two Democrat has no plans to lift his hold on multiple Interior nominees until Secretary Ryan Zinke meets with his office about his review of national monument designations, your ME host reports. "A meeting, how about that for a radical idea?" Sen. Dick Durbin told ME when asked what it would take to lift the holds. "We asked the secretary to meet with us and he won't do it." Zinke demanded the senators "lift the random and senseless holds" in a tweet late Wednesday.

ROUGH WATERS FOR CORPS NOMINEE? Rickey Dale "R.D." James, Trump's pick to run the Army Corps of Engineers, is likely to face scrutiny today before the Armed Services Committee over what critics say are his conflicts of interests, Pro's Alex Guillén reports . His thousands of acres of valuable Missouri farmland lie within the New Madrid floodway, a relief-valve channel that can be used to divert floodwaters from the Mississippi and Ohio rivers. James, a long-time member of the powerful Mississippi River Commission, has admitted to being conflicted about flooding the area because of his ties there. "I could not displace from my mind what the decision would mean to my friends and neighbors," James told the Defense Media Network in 2012.

His defenders include both of Mississippi's senators - Thad Cochran and Roger Wicker - and major waterways groups. Once he clears the Armed Services Committee, he will go through another hearing and vote before the Senate Environment and Public Works Committee. The session gavels in at 10 a.m. in Dirksen G-50.

OLD KING COAL: Michael Bloomberg and Bloomberg Philanthropies today will announce a $50 million cash infusion to launch the Europe Beyond Coal campaign to reduce the continent's dependence on coal energy. Done in partnership with the European Climate Foundation and a sister campaign on ongoing U.S efforts, both groups plan a Nov. 11 event on the sidelines of the UN's COP23 to discuss their new push.

Taking stock: As the climate confab in Bonn continues, a new analysis from Data-Driven Yale finds nearly 15,000 subnational and non-state actors have set close to 100,000 goals to curb climate change. The researchers synthesized information from 17 platforms and organizations, finding that more than 7,000 cities representing 17 percent of the world's population have climate targets. Most (5,831) are in Europe, and 554 are in North America. The study identified

climate commitments from about 6,225 companies and investors with $36.5 trillion in revenue, and from 34 of the world's 57 largest banks, as well as 700 U.S. colleges and universities

HYDROPOWERING THROUGH: The House voted 257 to 166 on Wednesday to approve the Hydropower Policy Modernization Act H.R. 3043 (115) revamping the permitting process for hydropower projects. "This bill won't change outcomes or environmental standards. Instead, it will speed up the relicensing process and save time and money," bill sponsor Rep. Cathy McMorris Rodgers said in a statement. Twenty-six Democrats backed the measure, while three Republicans voted against it.

BISHOP'S 'DISAPPOINTED' BY PREPA'S ABSENCE: House Natural Resources Chairman Rob Bishop told ME he's "disappointed" but not surprised the head of Puerto Rico's utility backed out of a congressional hearing earlier this week. "They would have had to face all the questions about Whitefish, so I kind of understand why they didn't necessarily want to be there," he said. "If we're trying to solve the problem, spending a lot of time on Whitefish would be fun but not necessarily essential with moving forward."

FIGURE IT OUT: Democratic Sens. Sheldon Whitehouse and Michael Bennet asked FERC in a Wednesday letter to reverse course and include the social cost of carbon as part of its review of pipeline projects. They included a point-by-point rebuttal of a recent draft FERC analysis in which the commission said it would not include the figure estimating societal costs of carbon pollution in its analyses.

ATLANTIC SUNRISE CAN PROCEED: A three-judge panel of the D.C. Circuit denied a request Wednesday from community and environmental groups to halt construction of the Atlantic Sunrise natural gas pipeline while a broader challenge to FERC approval of the project proceeds, Pro's Darius Dixon reports. "Petitioners have not satisfied the stringent requirements for a stay pending court review," the court said in its order.

MAIL CALL! THANKS, MR. PRESIDENT! A group of advanced biofuel producers, including ethanol giants Archer Daniels Midland and POET, sent a letter to Trump thanking him for past support of the ethanol industry and asking him to make sure advanced biofuel volumes are raised from proposed levels. "Mr. President, we very much appreciate your ongoing commitment to the biofuels industry and the Americans who work every day to produce biofuels and other bio-based, agricultural products," the letter says.

Hey, House, lay off our wind tax credit: Rhode Island Gov. Gina Raimando and South Dakota Gov. Dennis Daugaard are asking House tax writers to lay off changes to the wind tax credit. In a letter to Ways & Means Chairman Kevin Brady and ranking member Richard Neal , the pair, who are also the current and past chairmen of the Governors Wind and Solar Energy Coalition, say the bill should drop its provisions that change how wind projects qualify and that eliminate an inflation adjustment. Fifteen House members, led by Rep. David Young, made a similar plea in their own letter Wednesday.

Not sold: A group of 17 environmental and public health groups sent a letter to the House on Wednesday strongly opposing the chamber's tax package, H.R. 1 (115) . "The plan puts at risk

our clean energy future by preserving tax breaks for dirty energy sources while slashing them for cleaner forms of energy," the letter, signed by groups like the Center for Biological Diversity, Sierra Club and Oil Change International, says. "And if the tax plan itself weren't harmful enough, it is also being packaged in the Senate with unrelated, controversial legislation that hands over the pristine and sacred Arctic National Wildlife Refuge to exploitation by Big Oil."

Energy research can be fun(ded)! A group of business leaders sent a letter to top House and Senate appropriators urging robust energy research funding. "Ensuring America stays at the forefront of global energy technology research is both an economic and security imperative," the letter, signed by leaders including Southern Co's Tom Fanning, ClearPath's Jay Faison and the U.S. Chamber's Thomas Donohue, says.

GOOD YEAR FOR PARKS: The Trust for Public Land ran the numbers and voters around the country approved $1.5 billion in local and state ballot measures for parks and conservation. Twenty-six of the 30 local park and open space measures passed. "At a time when Americans seem to be increasingly divided, one thing we all agree on is that we love our parks, whatever our political party," Will Rogers, the group's president, said in a statement.

TAKE A GLANCE! Energy In Depth, a research program of the Independent Petroleum Association of America, is launching a website today pushing back on claims made by the #ExxonKnew campaign.

Subject: DOJ environment nominee tussles with Feinstein on climate change

By Alex Guillén

06/28/2017 11:15 AM EDT

Jeffrey Bossert Clark, President Donald Trump's pick to run the Justice Department's environmental division, declined multiple times today to say whether he thinks greenhouse gases pose a threat to human health or welfare.

At a confirmation hearing today, Clark told Sen. Dianne Feinstein (D-Calif.) that he stands by his past criticism of EPA's 2009 endangerment finding on economic grounds, and he noted that the Supreme Court put the Clean Power Plan on hold last year in part "because it would have worked a fundamental transformation of how the power sector is regulated."

However, Clark declined to answer Feinstein's questions about whether he agrees with the scientific consensus that human activity is the main driver of climate change. Clark said his "personal views aren't relevant" and such issues are a matter for EPA and other agencies.

"I want to know what your beliefs are and I think we're entitled to it before I cast my vote," replied Feinstein, the top Democrat on the Judiciary Committee.

"What my beliefs are is fidelity to the law and then respect for the facts as they're found by the agency," Clark said. "If an agency makes a decision that's within the bounds of the Constitution and within the bounds of statutory law ... then that's owed a defense."

Feinstein then asked whether Clark believes climate change poses economic risks.

"I have seen economic studies that indicate that climate change could cause negative effects, yes," he replied.

WHAT'S NEXT: The Judiciary Committee will vote on Clark's nomination sometime after it returns from next week's Independence Day recess.

Subject: Morning Media: Posties praise Dan Balz -- DOJ's dozens of leak investigations -- Bannon's 'second thoughts' on Moore -- Tina Brown's advice

By Michael Calderone | 11/15/2017 05:34 AM EDT

"THE STORY WE REPORT ON TODAY is the most important story that most of us will cover in our lifetimes," The Washington Post's chief political correspondent, Dan Balz, said Tuesday upon accepting the John Chancellor award at Columbia University. "And we have to get it right in every way possible. Seeking truth, getting as close to it as we can every day, is more essential than ever."

- In nearly four decades at the Washington Post, Balz has covered every major political story, including 21 national conventions and down-to-the-wire election nights. ESPN's Kevin Merida, a former colleague, said The Post even assembled a book in 2011 of Balz's election-night deadline writing - "Campaign Crescendos" - that the paper's management had an up-and-coming political reporter, Phil Rucker, fly to Michigan and hand-deliver to a vacationing Balz in hopes of persuading him to turn down a competing offer from Reuters. Though Balz stayed at the paper, Merida recalled that the idea of a "Post institution walking out the door made for some restless nights."

- There was a this-is-your-life quality to the award luncheon, with POLITICO's Roger Simon telling stories of the pair's college newspaper days in Illinois, and former Post national political editor Maralee Schwartz recalling how Balz, known for his seemingly unflappable demeanor, continued bringing up an edit she made to a Clinton impeachment story more than a decade after it ran. "I thought, hmm, maybe he is like the rest of us," she said, "except, of course, he's better." Journalism luminaries, like Tom Brokaw, were in attendance, as well as Post stars of the past (Len Downie, Steve Coll, and Liz Spayd) and present (Marty Baron, Steven Ginsberg, Bob Costa, and Rucker).

- "You'd think that during the current administration, you'd finally see Dan ruffled by the disruptor in chief," said Baron, the paper's executive editor. "And maybe I did see that, because once or twice I saw Dan gently shake his head. That's about it. Lose his temper? I never saw it. Use some profanity? He must have, but I didn't hear it." These days, Baron said, Balz's voice is the type "we most need, a voice rooted in constant reporting and rooted in an amazing even temperament."

Good morning and welcome to Morning Media. Please send tips to mcalderone@politico.com and @mlcalderone. Jason Schwartz (@JasonSchwartz) and Daniel Lippman (@dlippman) contributed to the newsletter. Archives. Subscribe.

STEVE BANNON SAYS MEDIA 'USED' MICHELLE FIELDS INCIDENT: In a new book, the Breitbart chief accused the news media of having a "meltdown" after then-Trump campaign manager Corey Lewandowski manhandled Fields, a former Breitbart reporter. "This was all about getting Corey out as campaign manager because they wanted to destroy Trump,"

Bannon said.

- My recollection is different. Though the March 2016 episode certainly got media coverage at the time, including Fields appearing on Megyn Kelly's old primetime Fox News show, TV news hosts didn't appear to be trying to "destroy" Trump over Lewandowski - in fact, they didn't even bring it up in interviews. As I wrote at the time, Trump did more than a dozen TV interviews shortly after Fields filed a police report alleging assault, appearing for more than two and a half hours across ABC, CBS, NBC, FOX, Fox News, MSNBC and CNN, and no interviewer asked about his campaign manager's behavior.

27 LEAK INVESTIGATIONS: Attorney General Jeff Sessions announced at Tuesday's House oversight hearing that the Justice Department has over two dozen ongoing investigations. Sessions' tough talk on leaks in recent months, and unwillingness to commit to not jailing journalists in the course of such investigations, has raised concerns among press advocates. The Obama administration aggressively investigated leaks, though stopped short of prosecuting journalists. POLITICO's Josh Gerstein wrote in August that Sessions' "broad attack on leaks aimed at an audience of one: Trump."

IMPERSONATING THE POST: The Washington Post has already been attacked for its meticulously reported Friday piece on Roy Moore, with the Republican Senate candidate dismissing it as "fake news," sympathetic, right-wing sites like Breitbart and Gateway Pundit trying to discredit the story, and a bogus conspiracy theory spread on the internet that the paper offered to pay for accusations against Moore. On Tuesday, WKRG reported that someone, presumably trying to tarnish the paper's reporting in the eyes of Alabama residents, is making robocalls using a Jewish-sounding name and claiming to be a Post reporter willing to pay for "damaging remarks" about Moore.

- "The Post has just learned that at least one person in Alabama has received a call from someone falsely claiming to be from The Washington Post," executive editor Marty Baron said in a statement. "The call's description of our reporting methods bears no relationship to reality. We are shocked and appalled that anyone would stoop to this level to discredit real journalism."

BANNON'S 'SECOND THOUGHTS' ON MOORE? Steve Bannon has been one of Roy Moore's most vocal supporters for months, and his site has continued to go to bat for the Senate hopeful even as accusations mount regarding inappropriate behavior with teenage girls while he was in his 30s. But The Daily Beast's Lachlan Markay and Asawin Suebsaeng report that "Bannon has begun privately taking the temperature of those in his inner circle to see what they think of the Moore allegations and to get their sense of how to proceed." Some of Bannon's allies, they report, have "warned that the time is rapidly approaching when he would have to disavow Moore before it appeared as though he was simply caving to political pressure."

MICHAEL WOLFF IN THE WHITE HOUSE: The longtime media chronicler appears to have received unprecedented access to the president and his inner circle for "Fire and Fury: Inside the Trump White House," which will be published on Jan. 9 by Henry Holt. "Based on more than 200 interviews with the president, most members of his senior staff and many of the people they in turn spoke to, Wolff shows how Trump and his team careened from one crisis to

the next during the administration's first nine months," Holt said in a release.

- "The United States is in the midst of the most intense political storm since Watergate, and my aim in reporting and writing this book was to see life inside White House through the eyes of the people who are closest to the center of this hurricane," Wolff said. "Perhaps not since the Tudors has palace intrigue been so corrosive and lethal, nor the king so volatile and so in need of instant gratification."

MUST-READ: Sexual harassment on Capitol Hill. CNN's MJ Lee, Sunlen Serfaty, Sara Ganim and Juana Summers "spoke with more than 50 lawmakers, current and former Hill aides and political veterans who have worked in Congress, the majority of whom spoke anonymously to be candid and avoid potential repercussions," they report. "With few exceptions, every person said they have personally experienced sexual harassment on the Hill or know of others who have." There's even an informal "creep list" of male offenders that's shared among women by word of mouth.

NET NEUTRALITY 101: The long-running fight over net neutrality, which pits telecom giants against tech companies, is heating up at the Federal Communications Commission. To understand what the fight is all about and where it's headed, check out POLITICO's latest explainer video featuring technology reporter Margaret McGill and the artwork of Pulitzer Prize-winning cartoonist Matt Wuerker. Click HERE to watch.

TINA BROWN SUGGESTS RIPPING UP VANITY FAIR: In a Time interview, the former editor offered some advice to incoming editor Radhika Jones: "Oh, completely rip it up, and start again if you want. I'm a huge believer in reinvention. And we put out amazing DNA that lasted for, good lord from '84 to where we are now. It's time for it to be rethought. I don't think you want to stay in template left by your predecessor."

NEIL CAVUTO WANTS OFF TRUMP INTERVIEW LIST: As president, Trump has given his TV interviews almost exclusively to Fox News and Fox Business Network - it's almost a better question who hasn't interviewed him there than who has. Well, Neil Cavuto won't be anytime soon. He finished his Fox Business show Tuesday with a monologue on why he had no interest in having the president on. "I see little to be gained getting him for the customary 10 minutes now or adding my name to the long and impressive list of people who've already interviewed the 'resident, including a lot of great people here," the anchor said.

- POLITICO recently looked at how Fox, especially in mornings and primetime, has aligned itself even more closely to Trump. During the segment, Cavuto played clips in which he both criticized and praised Trump, to suggest he's been more independent. The host said he didn't want to talk to Trump, "again, not because I don't cover the president, maybe because I can just as effectively do that without interviewing the president."

WATCH: Fox News anchor Shep Smith debunked the "Uranium One" pseudo-scandal being pushed by pro-Trump hosts on the network. (via Mediaite)

REMEMBERING EDWARD HERMAN: The professor and media critic, best known for co-

authoring "Manufacturing Consent" with Noam Chomsky, died this week at age 92. Rolling Stone's Matt Taibbi recalls that classic work: "'Manufacturing Consent' was a kind of bible of media criticism for a generation of dissident thinkers. The book described with great clarity how the system of private commercial media in America cooperates with state power to generate propaganda."

REVOLVING DOOR

Erica Werner, The Associated Press's chief congressional correspondent, is joining The Washington Post as congressional economic policy correspondent. The Post's announcement described the hire as part of an "expanding commitment to covering the most important economic policy stories unfolding in Washington and the ways they affect voters and companies"

Kevin Sieff, The Post's African bureau chief, is heading to Mexico to cover Latin America. "It's a real privilege to work for a newspaper that continues to invest in foreign coverage," he tweeted.

EXTRAS

- Axios co-founder (and previously POLITICO co-founder) Jim VandeHei looks at "how American politics went batshit crazy."

- ESPN chief John Skipper gets a contract extension through 2021.

- Peter Beinart reflects on how white, Ivy-educated men thrived at The New Republic.

- NBC fired veteran booker Matt Zimmerman over allegations of inappropriate conduct with women.

- Reporters covering sexual harassment allegations talk to Nieman Reports about the challenges.

-Forbes has a new "30 under 30" media list (but don't feel bad if you're not on it).

Trump `Leaning' to Understand Europe View on Climate, Cohn Says

Posted May 26, 2017, 8:37 A.M. ET

By Margaret Talev

Donald Trump is working to understand the European view on climate change, his chief economic adviser said, suggesting the U.S. president is sensitive to the diplomatic backlash he'd face in scrapping the Paris Agreement on global warming.

"I think he's leaning to understand the European position," Gary Cohn, director of the National Economic Council, said on the sidelines of a Group of Seven summit in Sicily, Italy.

Climate is one of the most contentious issues facing leaders at the two-day G-7 meeting in the resort town of Taormina, where Angela Merkel of Germany and France's Emmanuel Macron are among those advocating a commitment to the landmark Paris accord. Trump has derided climate change as a hoax, and members of his administration are deadlocked about whether the U.S. should uphold the pact, brokered by nearly 200 nations in 2015.

"Look as you know from the U.S., there's very strong views on both sides," said Cohn. "Both sides are running ads. So he knows that in the U.S. there's very strong opinions on both sides but he also knows that Paris has important meaning to many of the European leaders. And he wants to clearly hear what the European leaders have to say."

Shell Sees Solution to Energy-System Gaps in `Hydrogen Grid'

Posted May 26, 2017, 8:57 A.M. ET

By Anna Hirtenstein and Rakteem Katakey

Royal Dutch Shell Plc is looking to build a hydrogen empire in a bid to fix the biggest problem the energy transition faces: the question of how to store power in the long term.

"Hydrogen can sit there as a storage medium, similar to batteries," said John Abbott, downstream director at Shell. "I can see a world where there's even a hydrogen grid. You use it for your car, you heat your home, your electricity, through that network."

Shell has begun to use the lightest element at its retail stations, starting with Germany and the U.K. It entered a joint venture with partners such as Daimler AG to dispense hydrogen from its filling stations in Germany, aiming to roll this out at 400 locations by the early 2020s. The first station in the U.K. was introduced in February on the outskirts of London. Shell is aiming to add another 10 before the end of the year.

Hydrogen can be derived from natural gas or from water by splitting the molecules, a process which uses energy. The supply chain has been criticized for being overly energy-intensive. However, if the energy that is used to make the gas is renewable, it can be seen as a form of green power storage. Technically, it can be stored almost indefinitely.

"Hydrogen has the potential to be a form of long-term seasonal energy storage. It can store power from days to months at a time, compared to batteries which are typically limited to a few hours," said Logan Goldie-Scot, energy-storage analyst at Bloomberg New Energy Finance. "Globally, current markets neither incentivize the use of hydrogen nor highly value the long-duration flexibility that it offers."

Long-term Storage

Storage of different lengths will be needed to wean the energy system off fossil fuels. Plugging the short-term gaps between wind and solar generation may be able to be covered by batteries, but the peaks between seasons requires huge amounts of energy to be stored for months at a time.

Shell has previously said that it sees hydrogen as a solution for shipping, aviation and trucks -- heavier machinery that's unlikely to be powered by batteries, which still face questions on energy density. Now Abbott expands the vision to include heating houses, providing electricity to the grid and storing power.

Shell's views contrast with those of BP Plc. The British oil major doesn't believe that the gas will play a major role for fueling passenger vehicles or trucks, according to chief economist Spencer Dale. The company expects that natural gas in the form of LNG will instead be used for long-distance trucking and shipping instead of diesel and bunker fuel.

It's adding charging points for electric vehicles at some of its retail units. It has sold some hydrogen at a station outside London, but volumes are not high.

"It's a question of the chicken and egg, what's coming first," said Istvan Kapitany, executive vice president of Shell Retail. "Right now the number of fuel-cell cars is very low, but we need to be putting down the facilities to have a chance for the customers buy a fuel cell car, so when they buy it they can drive it properly."

Six to One Against Trump on Climate in 'Honest' Exchange at G-7

Posted May 26, 2017, 03:58 P.M. ET

By Arne Delfs and Margaret Talev

German Chancellor Angela Merkel said Donald Trump was isolated on climate change at the Group of Seven, as the president said he's in no rush to decide whether to scrap U.S. involvement in the Paris Agreement.

A closed-door session on the first day of the G-7 summit in Sicily found unity on stepping up efforts to combat terrorism, but entered stormier waters on trade and on climate, Merkel said. At that stage it was six against one as leaders pressed Trump to hold to U.S. agreements made under the landmark Paris climate accord.

"We made it clear that we want the U.S. to stick to its commitments," Merkel told reporters after the meeting on May 26. "There were very different arguments from us all urging the president to hold to the climate accord." She said the discussion was conducted in a very "honest" atmosphere, leading to a "very intense exchange."

After deriding climate change as a hoax and pledging to pull out of the Paris deal during his election campaign, Trump has sidestepped the issue and passed up a number of opportunities to outline his international stance toward global warming. Members of his administration are deadlocked about whether the U.S. should uphold the pact.

Merkel said that the U.S. side made clear that it hasn't yet taken a decision on whether to scrap Paris "and won't make a decision here" at the G-7.

Taking Time

In the meeting, G-7 leaders asked Trump his timeframe for making a decision, according to a briefing by his top economic adviser, Gary Cohn. Trump said, "I'd rather take my time" and get to the right decision, Cohn told reporters traveling with Trump in Sicily.

Trump also expressed concerns that other countries that had tried to dial back their climate emissions like China and India had seen job growth suffer—and made clear he was not prepared to live with that trade-off, Cohn said.

Trump told the leaders, "he didn't want to be in second place," Cohn said, especially because he ran on a platform of job creation and improving working-and middle-class opportunities and is committed to keeping that promise, Cohn said.

Italian Prime Minister Paolo Gentiloni, the summit's host, said separately that there was "no agreement" on the Paris accord.

"President Trump will take time to reflect on it, and the other countries are taking note of that," Gentiloni said.

"His views are evolving," Cohn said, but Trump's decision will be based on what's best for the United States. The president "is thinking about what his options are." Trump "feels much more knowledgeable on the topic now," said Cohn.

Top Oregon Official Urges Pruitt To Stay Course On Portland Cleanup Site

Oregon's top environmental official is pressing EPA Administrator Scott Pruitt to stay committed to the $1 billion cleanup decision reached by his predecessor earlier this year at the high-profile Portland Harbor Superfund site, signaling concern that Pruitt may seek to revise the plan as part of his effort to streamline remedy design and selection at contaminated sediment sites.

EPA Seeks Seven-Year Deadline To Complete Overdue Air Toxics Reviews

EPA is asking a federal district court to set a seven-year deadline for completing overdue air toxics rule reviews for nine industrial sectors, conceding that it has missed Clean Air Act deadlines for the reviews but arguing that separate court-imposed deadlines for reviewing other rules are limiting resources and justify the seven-year target.

OMB Questions Need For EPA CWA Rule Over State Regulation Of Waters

White House officials in recent meetings with supporters of the Obama EPA's Clean Water Act (CWA) jurisdiction rule questioned the attendees about why the agency needs to be regulating waters and whether states could adequately oversee them, suggesting a possible justification for the Trump EPA's pending plan to repeal the rule.

Industries Call On Trump EPA To Pursue 'Clean' Repeal Of 2015 CWA Rule

Groups representing the mining, agriculture, energy and other sectors are calling on the Trump EPA to pursue a "clean" rule repealing the Obama administration's Clean Water Act (CWA) jurisdiction regulation and swiftly reinstate CWA policies established in 2008, rather than trying to use the repeal rule to also fix flaws in the 2008 policies.

EPA Toxics Director Seeks 'New Chemicals' Program Fixes Beyond Backlog

EPA toxics managers are working on a series of fixes to the agency's new chemicals

program, which are intended to address the backlog of applications to commence production, prevent a similar backlog, and address related issues.

Environmentalists, Water Utilities Seek Changes In TSCA Framework Rules

Environmental groups and water utility officials are looking for changes in the framework rules due for finalization June 22 that will implement the reforms to the Toxic Substances Control Act (TSCA) as signed into law last summer, with environmentalists fearing industry influence and utilities looking for EPA to describe an approach to prioritization.

Environmentalists Seek Scaled-Back RFS Due To Land, Species Concerns

Environmentalists in a meeting with EPA and the White House Office of Management & Budget (OMB) over the pending 2018 renewable fuel standard (RFS) targets called for scaling back the program's fuel production goals due to concerns about its alleged negative impacts on land use and potential harm to various species.

Daily Feed

Environmentalists challenge EPA's RMP rule delay

Environmentalists say the 20-month delay violates a Clean Air Act requirement that EPA implement rules “as expeditiously as possible.”

Key California Republican presses Pruitt to defend vehicle waiver

A top GOP appropriator cautioned that the state has been receiving Clean Air Act vehicle waivers “for over 50 years.”

EPA commits to weighing new glyphosate data

Administrator Scott Pruitt told lawmakers the agency will consider federal health data showing that exposure to the widely used pesticide does not cause cancer in its registration review.

Former ADEQ head joining EPA as assistant deputy chief

Arizona's top environmental regulator, an advocate of flexible compliance with EPA rules, will be the agency's next assistant deputy administrator.

House appropriators blast Trump's FY18 EPA budget plan

After ticking off administration plans to slash funding for diesel engine emissions, targeted airsheds and Superfund cleanups, Rep. Ken Calvert (R-CA), EPA's top Republican appropriator, told Administrator Scott Pruitt: “These are all proposals that we are unlikely to entertain.”

Pruitt faces more questions over email accounts

From today's Ewire: New emails create more problems for Pruitt. Plus, EPA's methane rule rollback, GHG endangerment finding and more.

Farmworkers detail suit to stop delay of EPA applicators rule

Farmworker advocates say the delay of EPA's applicator rule failed to follow proper procedure and put applicators at risk.

Latest News

States Fault EPA's 'Optimistic' Ozone Data, Seek New Air Transport Policy

Northeastern and Mid-Atlantic states in the Ozone Transport Commission (OTC) area are faulting what they see as EPA's overly optimistic projections that no areas outside California are likely to exceed the 2008 ozone air standard in 2023, calling on the agency to instead pursue a "full remedy" policy to curb interstate ozone transport.

Dourson's EPA Nomination In Doubt With Two GOP Senators' Opposition

Michael Dourson's controversial nomination to head EPA's toxics office appears in doubt after GOP North Carolina Sens. Richard Burr and Thom Tillis announced late Nov. 15 that they would oppose him, because along with Sen. Susan Collins (R-ME) as a likely no vote, Democrats can kill the nomination if they all vote against Dourson.

CSB Backs Parts Of Obama EPA RMP Rule To Address Facility Flood Risks

The U.S. Chemical Safety Board (CSB) is backing parts of the Obama EPA's facility safety prevention rule to help facilities better prepare for worsening risks from flooding, saying companies should reassess their emergency planning and coordination with first responders and communities to ensure adequate planning for extreme weather.

Manufacturers Push NSR Reform To Promote Lower-Emitting Technology

Manufacturers are calling for an overhaul to ease EPA's Clean Air Act new source review (NSR) permitting program to help promote technologies that can improve facilities' efficiency and reduce emissions of greenhouse gases and conventional pollutants, arguing that NSR discourages installation of such technology.

EPA Outlines Options To Prioritize Chemicals For TSCA Risk Analyses

EPA is proposing for public comment multiple approaches to prioritize existing chemicals to enter the pipeline for high- or low-priority designation and potential risk evaluation as part of its new responsibilities under the revised Toxic Substances Control Act (TSCA), with some of the proposals reflecting ideas that have enjoyed

industry support in the past.

EPA Brownfields Grants To States Face Cuts Despite Increased Demand

An EPA brownfields official is warning state officials of expected cuts to the grants the agency gives states annually to support brownfields programs -- even if Congress restores some of the funding the Trump administration proposed to eliminate -- noting the likely reductions come as demand among states and tribes for the grants continues to rise.

Senate Democrats Float EPA Asbestos Ban Bill Due To Fears Over Dourson

Eight Senate Democrats have introduced a bill seeking to ban asbestos -- even as EPA is working on a precedential risk evaluation of the substance under new responsibilities in the reformed Toxic Substances Control Act (TSCA) -- in part because of concerns that President Donald Trump's nominee to lead the agency's toxics office wouldn't ban its use.

Daily Feed

House brownfields bill cleared for floor consideration

A House brownfields bill has moved closer to a floor vote, but it appears highly unlikely lawmakers will attach a “good Samaritan” measure suggested by a Trump EPA official.

Final defense authorization bill requires national PFAS study

The House and Senate have agreed to require a national study on the health effects of perfluorinated substances, focusing on at least eight military facilities.

EPA working to tighten contracting policies after IG report

EPA is crafting an array of new internal guidances for release in early 2018 designed to cut back on contracts that do not guarantee a fixed price for the services the agency receives.

Quote-Unquote: For and against EPA's new advisory policy

Plus key quotes on Superfund reform, international climate talks, and former EPA officials on the Trump administration's rollback agenda.

Ewire: At climate talks, Trump officials not undermining Paris deal

In today's news roundup: United States negotiators at the international climate talks aren't undermining implementation of the Paris Agreement, to the relief of some who worried about President Donald Trump.

EPA, industry groups defend 'exceptional events' air rule

EPA and industry groups are defending the agency's Obama-era rule on “exceptional events,” saying the agency's definition of “natural event” is reasonable and due deference by courts.

EPA Methane Regulations Officially on Hold

Posted May 31, 2017, 03:11 P.M. ET

By David Schultz

An Obama-era EPA rule designed to limit methane leaks from oil and gas wells is officially on hold, as the agency's new leadership begins the formal process of weighing whether to repeal it altogether.

The Environmental Protection Agency is reconsidering the methane rule because it says the final version of the rule, which came out last summer, diverged too far from a draft version, preventing the public from fully weighing in, according to a notice scheduled to be published in an issue of the Federal Register. The Obama administration had included this rule as a part of its Climate Action Plan because methane is a potent greenhouse gas.

In addition to beginning the reconsideration process, the EPA is pushing back some of the rule's upcoming compliance deadlines by 90 days. Had the agency not done this, oil and gas drillers would have had to start complying on June 3 with these parts of the rule, which deal with gas leak monitoring and pneumatic pump standards.

Within hours after the EPA announced its move, both the Natural Resources Defense Council and the Environmental Defense Fund said they would file lawsuits against the agency to try to stop it from rolling back the methane rule.

Exelon: Still Time for Pennsylvania to Help Three Mile Island

Posted May 31, 2017, 03:00 P.M. ET

By Rebecca Kern

Pennsylvania's Legislature still has time to help keep Exelon Corp.'s financially struggling Three Mile Island nuclear plant operating, Exelon's Joseph Dominguez told Bloomberg BNA.

"We're continuing the discussion with policymakers that we really began six or seven months ago: Talking about the value proposition of nuclear, both from an environmental standpoint, as well as from fuel diversity and grid resilience standpoint," Dominguez, Exelon's vice president of governmental and regulatory affairs and public policy, told Bloomberg BNA May 31.

"We'll see if there's interest among policymakers to do the things that Illinois and New York were able to do," he said. "We still have some time to have this discussion, but there is a sense of urgency in terms of starting to introduce policymakers to the subject."

Exelon announced May 30 that it plans to prematurely close Three Mile Island, located about 90 miles west of Philadelphia, by Sept. 30, 2019, due to financial losses at the plant. It was the scene of the worst nuclear accident in U.S. history in 1979.

Last year, the Illinois Legislature approved a $235 million-a-year lifeline for Exelon's Quad Cities and Clinton reactors after the company announced they would close. Also, New York's Public Service Commission's Clean Energy Standard—passed last summer—will issue credits for zero-emitting resources, such as nuclear plants, starting this June.

'Hundreds of Millions' in Losses

Dominguez told Bloomberg BNA that the plant has lost "hundreds of millions of dollars" over the past six years.

Dominguez said even though the company has announced the closure of the plant, "it's not too late" for the plant to be saved by legislation or action from the Pennsylvania Public Utility Commission. "Generally speaking, about a year before the shutdown date is a critical date," he said.

The plant has not cleared the regional grid operator PJM Interconnection LLC's annual capacity market for the past three years. PJM's capacity auctions are held annually ensure enough power generation resources are available to meet demand in the region covering 13 states and the District of Columbia.

In New York and Illinois, both of the Exelon-related policies triggered lawsuits, as well as complaints to Federal Energy Regulatory Commission, but FERC has been hamstrung in addressing them because of its lack of a quorum since February.

"It's a sad reality that policymakers really need to see the potential loss of these facilities, given their otherwise busy agenda, to really take note sand start figuring out solutions," he said.

Dominguez said that Exelon would like to see the Legislature introduce a bill to amend Pennsylvania's Alternative Energy Portfolio Standard to include nuclear energy as a carbon-free energy resource. The standard was signed into law in 2004 and provides credits on tiered level for "alternative energy" sources, including solar, wind, hydropower, geothermal, biomass, biologically derived methane gas coal-mine methane and fuel cell resources.

Currently, there is no legislation introduced in the Pennsylvania Legislature. However, Dominguez said a bicameral Nuclear Energy Caucus, with nearly 80 members, was formed in May by state Sens. Ryan Aument (R) and John Yudichak (D) and Reps. Becky Corbin (R) and Rob Matzie (D).

Governor: Let's Talk

Pennsylvania Gov. Tom Wolf (D) said through spokesman J.J. Abbott that he is willing to talk with lawmakers about the issue.

"Pennsylvania is a major supplier of energy and we need a diverse energy sector," Abbott said, according to PennLive.com. "Governor Wolf is concerned about potential layoffs and empathizes with these employees.

"As we move forward, we expect a robust conversation about the state's energy sector. Governor Wolf is open to these conversations and looks forward to engaging with the General Assembly about what direction Pennsylvania will go in regards to its energy sector, including the future of nuclear power."

EPA Failed to Justify Nanosilver Pesticide Approval, Court Says

Posted May 31, 2017, 9:05 A.M. ET

By Pat Rizzuto

The EPA failed to prove its registration of a nanosilver antibacterial additive would be in the public interest, a federal appeals court ruled May 30. The court vacated the fast-tracked or "conditional," registration, meaning the antibacterial product made by Nanosilva LLC may not be added to trash cans, mops, toilet seats and other products where it was intended to suppress the growth of bacteria, algae, fungus, mold and mildew.

The EPA could have, but failed, to prove the fast-tracked process it used to allow the pesticide's use in 2015 was in the public's interest as required by the Federal Insecticide, Fungicide, and Rodenticide Act, the U.S. Court of Appeals for the Ninth Circuit said in the case, Natural Res. Def. Council v. Envtl. Prot. Ag., No. 15-72308.

The court said it was unaware of any previous court ruling based on the public-interest requirement FIFRA provides for fast tracked or "conditional" pesticide registrations.

Occidental Didn't Report Asbestos Imports, Groups to Claim in Suit

Posted May 31, 2017, 8:02 A.M. ET

By Pat Rizzuto

Three public health organizations are threatening to sue the Occidental Chemical Corp. for allegedly failing to report to the Environmental Protection Agency its importation and use of nearly 900,000 pounds of asbestos.

The company, a subsidiary of Occidental Petroleum Corp., failed to report its importation and use of asbestos in 2013, 2014 and 2015 as required by the EPA's Chemical Data Reporting rule, the coalition said in May 30 letters to the chemical corporation and to EPA. The letters were sent by the Asbestos Disease Awareness Organization; Safer Chemicals, Healthy Families; and the Environmental Health Strategy Center.

Occidental denied any wrongdoing.

"The claim has no merit. OxyChem complied with environmental regulations that allow reporting exemptions for some naturally occurring chemical substances ("NOCS")," Occidental said in a statement emailed to Bloomberg BNA. The Chemical Data Reporting rule includes an exemption for naturally occurring chemical substances, it said.

The primary commercial chemicals law in the U.S., the Toxic Substances Control Act (TSCA), authorizes citizens to file civil actions aimed at compelling a company, organization or the EPA to comply with the statute. Section 20 of TSCA requires citizens to give the parties they intend to sue and the agency 60 days notice of their intent to litigate, Robert Sussman, an attorney working for the coalition, told Blomberg BNA. The coalition's letters constitute that 60-day notice, he said.

An EPA spokesman declined to comment, citing the agency's longstanding policy of not discussing ongoing or potential litigation with the media.

Making Chlorine, Other Chemicals

Occidental Chemical Corp., or OxyChem, manufactures chloralkali products such as chlorine and caustic soda, commodity chemicals used for water treatment, paper production, and other purposes. The chloralkali industry uses a wet process to transform the dry asbestos shipments it receives into a diaphragm. That diaphragm is designed to prevent dangerous chemical reactions during the chlorine and caustic soda manufacturing process.

The U.S. Geological Survey estimated U.S. usage of asbestos in 2016 to be about 340 tons. The chloralkali industry's use "likely accounted" for 100 percent of that total asbestos imported, USGS said in its 2017 Mineral Commodity Summaries.

Occidental's alleged failure to report its asbestos use to the EPA deprived the agency of information it needs as it prepares to assess the risks of asbestos, the coalition wrote in a press release announcing its threatened lawsuits. Asbestos is among the first 10 chemicals the EPA is evaluating under the 2016 overhaul of TSCA.

Two other companies—Axiall Corp. and Olin Corp.—reported their imports of asbestos to the EPA during its 2016 Chemical Data Reporting submission period, the EPA said in a Preliminary Information on Manufacturing, Processing, Distribution, Use, and Disposal report issued in February.

"The imported amounts cannot be disclosed due to company claims of Confidential Business Information (CBI)," EPA said.

EPA will combine Chemical Data Reporting rule and data from many other sources in a risk assessment of asbestos it has undertaken. The 2016 TSCA amendments direct the agency to publish the scope of that risk assessment, and those for nine other chemicals it is assessing by June 19.

Trump Said to Still Be Mulling Whether to Leave Paris Accord

Posted May 31, 2017, 12:50 P.M. ET

By Jennifer A. Dlouhy, Jennifer Jacobs and Margaret Talev

President Donald Trump hasn't yet decided whether to keep the U.S. in the landmark Paris agreement on climate change but is leaning toward exiting the accord, according to two people

familiar with the matter.

The administration is preparing for several different outcomes and is lining up experts to speak to the media when an announcement is made, according to another person familiar with the discussions who, like the others, requested anonymity ahead of a decision.

Top administration officials are divided on what to do, with some, including Ivanka Trump and Secretary of State Rex Tillerson, urging Trump to stay in the deal. Others, including Environmental Protection Agency Administrator Scott Pruitt and White House Chief Strategist Steve Bannon, lead a faction that wants a U.S. exit.

There is consensus in the administration that the terms of the Paris deal must change, and it's exploring whether that requires a full exit or a scaled-back U.S. commitment to cut emissions, according to one of the people. Trump is scheduled to meet with Tillerson at the White House on May 31, and the president said he'd declare an outcome soon.

"I will be announcing my decision on the Paris Accord over the next few days," Trump tweeted on May 31.

Highly Anticipated Decision

Trump's decision is highly anticipated, and leaders of the six other nations in the Group of Seven heavily lobbied him at a summit in Sicily last week to keep the U.S. in the pact. But Trump has called climate change a "hoax" and criticized the deal as "one-sided" against the U.S. White House legal advisers have warned that staying in the accord could undercut Trump's efforts to rescind rules on power-plant emissions and methane leaks.

Axios reported earlier May 31 that the president would exit the Paris deal, and the New York Times followed with a report that he is likely to pull the U.S. out of the accord. Several administration officials contacted by Bloomberg said that a decision hadn't yet been made, and Trump has a record of shifting course on major decisions up until the last moment.

The move to leave would have significant environmental and diplomatic consequences. As the richest nation and the second-largest emitter of carbon dioxide, the U.S. is central to efforts to address global warming. The Vatican and companies as diverse as Exxon Mobil Corp. and Apple Inc. had urged the president to remain in the pact.

The Paris accord is broader than any previous climate agreement. It calls for reducing carbon dioxide emissions in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above temperatures at the outset of the Industrial Revolution. That's the upper limit scientists have set to keep climate change from hitting an irreversible tipping point, unleashing catastrophic floods, droughts and storms.

With an exit, Trump would make a clean break from his predecessor, Barack Obama, who made the Paris accord a top priority of his second term and pledged the U.S. would slash carbon dioxide emissions 26 percent by 2025. Withdrawal would put the U.S. in league with just two other nations -- Syria and Nicaragua -- that aren't participating in the agreement.

Trump has already moved to dismantle programs to fight global warming. He ordered a review of fuel-economy standards for cars and light trucks, which along with other vehicles are the U.S.'s largest source of greenhouse gases. And he set in motion a process to scrap the Clean Power Plan, which would have required utilities to slash their carbon dioxide emissions. EPA is also moving to rescind rules to prevent methane leaks.

Post-Leave Options

If he decides to leave, Trump has two options for jettisoning U.S. involvement.

The first—withdrawing from the Paris agreement—can't happen immediately. Under the deal's terms, he must wait until November 2019 to formally submit his bid to quit. It would take another year after that before the U.S. is actually out, under this process.

The other option—exiting the United Nations Framework Convention on Climate Change—goes beyond simply walking away from the Paris accord. The treaty, unanimously adopted by the U.S. Senate and signed by President George H.W. Bush, has been the foundation of 25 years of global climate talks. Scrapping the 1990s-era treaty would be a clear signal that this administration has no interest in cooperating with other nations on efforts to address global warming.

U.S. climate efforts won't completely cease if Trump walks away from Paris.

States including California, New York and Massachusetts continue to move forward with aggressive policies to cut carbon emissions. Anheuser-Busch InBev NV, Apple, Amazon.com Inc., Alphabet Inc.'s Google and other companies continue their push to power their facilities with wind and solar energy. Low-carbon wind, solar and natural gas are so cheap that the Department of Energy is studying what it can do to help ailing, older coal and nuclear plants.

EU, China to Reaffirm Paris Agreement Commitment, as U.S. Wavers

Posted May 31, 2017, 01:14 P.M. ET

By Stephen Gardner

The European Union and China will reaffirm their commitment to the United Nations Paris Agreement on climate change during a June 1–2 summit in Brussels, despite uncertainty about continued U.S. participation in the deal.

An EU official who asked not to be named told Bloomberg BNA May 31 that one of the main conclusions of the summit will be a statement setting out the intention of the two major economic powers to implement their pledges under the Paris Agreement, which was agreed at the end of 2015 and is intended to keep global warming to no more than 2 degrees Celsius (3.6 degrees Fahrenheit) above pre-industrial levels.

"This agreement stands whether another major emitter pulls out or not," the official said. The EU-China summit will emphasize the "global responsibility" of the two powers in the context of the lack of clarify about the US's intentions, the official added.

China and the EU both have ratified the Paris Agreement and pledged to tackle greenhouse gas emissions in line with nationally determined contributions, or promises submitted to the U.N. The EU said it will reduce emissions by 40 percent by 2030 compared to 1990, while China said its emissions will peak by 2030 at the latest, and has made pledges on renewable energy and afforestation.

There is "much stronger expectation" from countries around the world that "Europe should assume

leadership" in the effort to tackle global warming, and the EU was ready to lead, said Maros Sefcovic, European Commission vice president for Energy Union. The commission is the EU's executive arm.

Detail on Cooperation

The EU official said the summit statement will give "considerable detail" on how the EU and China will work together to fulfill their Paris pledges, for example by cooperating on renewable energy. It also will emphasize implementing existing pledges, rather than offering new pledges to deepen emissions cuts, according to the official.

"One of the new qualities of our relationship is that we don't just comment together, but we act together," the official said, adding that clean energy for Chinese cities would be "a key area of cooperation between us."

President Donald Trump has caused consternation in the EU about possible U.S. withdrawal from the Paris Agreement. EU leaders at a Group of Seven summit in Italy May 26–27 pushed Trump to respect the Paris deal on climate change, but concluded the U.S. was "not in a position to join in the consensus" on the implementation of the global deal.

During the June 1–2 summit, the EU will be represented by Donald Tusk, president of the European Council, and by Jean-Claude Juncker, president of European Commission. State Council Premier Li Keqiang will head the Chinese delegation.

Solar Stocks Fall on Reports That U.S. May Exit Paris Agreement

Posted May 31, 2017, 03:04 P.M. ET

By Brian Eckhouse

Solar manufacturers fell sharply on reports May 31 that President Donald Trump is leaning toward withdrawing the U.S. from the landmark 2015 Paris climate accord.

JinkoSolar Holding Co., the biggest solar manufacturer, dropped 3.2 percent to $18.23 at 11:01 a.m. in New York, after sliding as much as 8 percent. Canadian Solar Inc., the largest North American panel producer, slid as much as 6.5 percent, while First Solar Inc., the top U.S. company, fell as much as 4.4 percent and rival SunPower Corp. was down as much as 4.2 percent.

Trump said in a tweet May 31 that he will announce "over the next few days" whether he will pull the U.S out of the global climate pact, and according to reports from publications including Axios, he's already decided to do so.

"The stocks are reacting to headlines, and the U.S. potentially pulling out of Paris is a big headline," Gordon Johnson, a New York-based analyst at Axiom Capital Management, said in an interview May 31. "With Trump in office, the pressure for utilities and others to do solar is going to decline. That will negatively affect demand."

It's not just solar manufacturers that were affected. Sunrun Inc., the biggest independent U.S. rooftop solar company, was down as much as 3 percent. NRG Energy Inc., the largest U.S. independent power producer and the owner of almost 5 gigawatts of renewable energy, fell as much as 1.5 percent.

While solar isn't driven primarily by a carbon price, "it does suggest that the U.S. may subsidize coal, which would be bad for U.S. manufacturers like First Solar and SunPower," said Jenny Chase,

a Zurich-based solar analyst at Bloomberg New Energy Finance.

Environmentalists Revive Lawsuit Against Federal Coal Leasing Program

Posted May 31, 2017, 03:55 P.M. ET

By Tripp Baltz

One of the litigants in an on-hold lawsuit over the Interior Department's coal leasing program said it's necessary to restart the case in light of the department's decision to begin processing coal lease applications again.

The focus of the unopposed motion is to challenge Interior Secretary Ryan Zinke's March 29 revocation of an order by his predecessor, Sally Jewell, to pause the issuance of new federal thermal coal leases until an environmental analysis could be done on the environmental impact—including the climate change effects—of coal mining, Bob LaResche, a rancher in Clearmont, Wyo., told Bloomberg BNA May 31 (W. Org. of Res. Councils v. Zinke, D.C. Cir. App., No. 15-5294, motion filed 5/26/17).

Jewell in January 2016 said the halt in coal leases would continue at least until the Bureau of Land Management had prepared and issued a Programmatic Environmental Impact Statement analyzing the effects of coal mining on the climate.

"Now that Zinke has cancelled the PEIS, it's time to reactivate our litigation to force it to be done," said LaResche, chair of the Powder River Basin Resource Council, one of the eight organizations in the Western Organization of Resource Councils that sued the Interior Department in October 2015.

An Interior Department spokeswoman referred Bloomberg BNA's request for comment to the Justice Department, which declined to comment. Travis Deti, executive director of the Wyoming Mining Association, a defendant-intervenor in the case, did not immediately respond to Bloomberg BNA's request for comment.

NEPA Violation Alleged

The environmental groups alleged the department's failure to conduct an analysis of the environmental effects of coal mining violated the National Environmental Policy Act. When Jewell ordered the PEIS to be done, the groups said they had essentially received "all the relief" they were seeking. They joined with the defendants in seeking an abeyance in the case pending the completion of the analysis.

Zinke's issuing an immediate halt to the analysis "makes it necessary for us to restart the case again" to address "numerous and varied concerns," LaResche said.

"The coal leasing program has evolved from what it once was to being run by industry," he said. "Bids are generally non-competitive; most leases don't have more than one bidder. There's not enough transparency there."

LaResche said the groups are concerned that coal mining companies "continue to lease millions and billions of tons of coal when they shouldn't be leasing any." Companies have 20 years worth of projects already leased, he said.

In addition to the reality of climate change, LaResche said, the coal companies are facing shrinking

markets, and scientific evidence has emerged that coal threatens public health and safety. "For a federal agency to ignore the huge new body of knowledge acquired since 1979 is just whistling past the graveyard," he said in a statement emailed to Bloomberg BNA. "This is not how a responsible nation operates."

Friends of the Earth also is a plaintiff in the litigation.

EU Proposes Truck Monitoring as Preparation for Emissions Standard

Posted May 31, 2017, 02:38 P.M. ET

By Stephen Gardner

Manufacturers of trucks and other heavy-duty vehicles sold in the European Union would be required to monitor and report their vehicles' carbon dioxide emissions and fuel economy performance, under a long-delayed proposal published by the European Commission May 31.

The commission, the EU's executive arm, announced in May 2014 that it would propose the measure in 2015, but then said "further analysis" was needed. The lack of a harmonized measure for truck carbon dioxide emissions puts the EU at odds with the U.S., which has had an emissions standard for heavy-duty vehicles since 2011.

Commission vice president for Energy Union, Maros Sefcovic, conceded that the EU was "the last major economy" that does not "have this very important sector covered."

Road freight was "developing in such a way that it is one of the main contributors of greenhouse gas emissions and air pollution in Europe," and collecting data about truck emissions would give the commission the evidence it needed to propose the emissions standard, Sefcovic said.

The requirement for manufacturers to monitor and report their trucks' emissions will be followed up in 2018 with a proposal for a carbon emissions standard for trucks, Sefcovic said.

The proposal on truck emissions was put forward as part of a package of transportation-related measures that the commission issued May 31.

Road-Use Charging Plan

According to the proposal, truck manufacturers would be required from Jan. 1, 2019, to use a common methodology to calculate the emissions of vehicles above 7.5 metric tons. The data would be made public from 2020.

The plan moved "in the right direction, but the real test of the EU's intentions will be the ambition of the CO2 standards" when they are proposed in 2018, the nongovernmental organization Transport & Environment said.

The EU already has fuel economy and carbon standards for passenger cars and light vans. The commission said it would make proposals within 12 months to update these standards for the post-2020 period.

In a related move May 31, the commission proposed amending a 1999 directive to update rules EU countries must follow when levying road use charges on heavy vehicles. Currently, 24 of the EU's 28 member nations impose charges on trucks crossing their territory.

It would require countries with road charges for trucks to introduce differentiated pricing based on

trucks' carbon emissions. This would "incentivize the use of the cleanest and most efficient" heavy vehicles, the commission said.

Both the proposed requirement on the monitoring of truck emissions and the road-charging directive require the approval of the European Parliament and the Council of the EU, which represents the governments of EU countries.

U.S. Colleges, With $500 Billion to Invest, Seek Green Deals

Posted May 31, 2017, 8:52 A.M. ET

By Janet Lorin

If you guessed that the University of California system would champion "sustainable" investing, you'd be correct. The catch is, the shelves in the sustainable investing aisle aren't especially well-stocked with opportunities.

U.S. college endowments altogether hold more than $500 -billion in assets, a growing part of which they've allocated to sustainable or "impact" investing. Yet they also face something of a paradox: Where, exactly, does one invest that money? The easy answer, and one popular among smaller endowments, is to buy funds of stocks deemed green.

Another option is real assets, says Jagdeep Bachher, who oversees the University of California's $100 billion portfolio, which includes retirement funds for one of the country's largest public university systems in addition to the school's $10 billion endowment, the 12th largest in the U.S.

"Institutions are lazy at some level," he says. "We wait for pitch books to show up." But that isn't satisfactory for the Regents of the University of California. The reason: Staving off the worst effects of global warming will require much more investment than is being deployed—trillions of dollars more in coming years, according to estimates from the International Energy Agency. That's why the system has become prominent in a group of institutional investors deploying money to green projects.

The group has committed to putting more than $1 billion into clean energy- and water-related projects that the Obama White House promoted two years ago. In addition, the investors helped create an advisory group called Aligned Intermediary Inc., which functions like a co-op for them, sourcing investments.

The deals Aligned Intermediary identifies are big: They range from $50 million to $500 million, according to co-founder and Chief Executive Officer Peter Davidson. Its members, which also include the Ontario Public Service Employees Union Trust and the New Zealand Superannuation Fund, seek real returns from direct investments in infrastructure—renewable energy, water, even garbage—as well as from loans to projects that help reduce greenhouse gas emissions. "The economic returns are there," Davidson says. "The responsible investing idea is there. It's a market imperfection that we need to solve."

The University of California has committed $500 million to these types of projects. While the group's first transaction, an investment of about $50 million involving water infrastructure in the Western U.S., is on the books, details haven't been disclosed.

For endowments, these types of direct investments have advantages. They skirt private equity and hedge funds' controversial 2-and-20 fees, and the projects' timetables run into the decades, substantially longer than a typical fund life of up to 10 years.

Endowments such as Yale's helped start the trend toward illiquid, alternative investments three decades ago, with a move into private equity and hedge funds. Yale and Harvard—the wealthiest college funds, with more than $60 billion collectively—were also pioneers in buying real assets, particularly timberland. Yale has even invested directly in a 22-turbine wind farm in Maine. The school's endowment in a 2009 report extolled four green investments that have partly turned out to be duds. One solar company, for example, went bankrupt. Meanwhile, green funds that bet on clean energy and technology, launched in the past decade, have underperformed.

While there's demand for investments that help address global climate challenges, opportunities aren't especially easy to find—and most endowments, especially private schools, operate in opacity, so it's difficult to identify case studies. Williams—the richest U.S. liberal arts college, with a $2.3 billion endowment—provides an interesting glimpse into the difficulties.

In September 2015, the Massachusetts school said it wouldn't divest from fossil fuel holdings, despite pressure from students. (Protests calling for endowments to divest from fossil fuels have been a campus constant in recent years.) Instead the college said it would seek investments with the condition that they can be measured to show an impact in reducing greenhouse gas emissions. A year later, Williams officials recommended an alternative energy fund to its investment committee, which approved the proposal, according to the alumni magazine.

"We are working hard to look for these types of investments, but they are not easy to find," says Collette Chilton, the chief investment officer. "We're not giving up, because this is important to the Williams community."

It's also been laborious for the University of California to find the right deal—even with the staff of Aligned Intermediary on the case. Aligned was structured as a benefit corporation, and its operational funding was provided by philanthropic groups, led by the Planet Heritage, William and Flora Hewlett, and John D. and Catherine T. MacArthur foundations. The organization provides expertise to find deals, perform due diligence, and, if necessary, help oversee the managers running projects. The University of California sifted through 90 proposals before finding the water deal that closed late last year. "You need flexibility and you need patience—and we have these things," Bachher says. The university will act only when it sees an opportunity that meets all of its requirements, he says.

In addition to the deal the University of California inked, others are in the pipeline, Davidson says. They include an investment in a solar power developer in North America, expected to close in June, and a mezzanine loan to a large-scale private wind, solar, and biomass company that operates globally.

The Ontario pension plan, a partner, has experience with these sorts of investments. It's put money in Ararat, a 75-turbine wind farm that opened earlier this year, becoming one of Australia's largest, and in Toronto-based Firelight Infrastructure Partners LP, which focuses on wind, hydroelectric, and solar projects. Both are expected to generate double-digit returns, says Hugh O'Reilly, president and CEO of the Ontario-based pension fund, which has C$19 billion ($14 billion) under management. "We do this to make money," he says. "We have an expertise in energy and renewable energy."

Caisse de Dépôt et Placement du Québec—which, with C$271 billion under management, is Canada's second-largest public pension fund manager—found a triple whammy with its investment in an electric train project in Montreal: a real asset that's long term and will reduce emissions by taking cars off the road. "We're a long-term investor," Michael Sabia, president and CEO, said at a Bloomberg New Energy Finance conference in April. "It's not the next quarter, it's the next quarter

century."

Laurence Siegel, director of research at the CFA Institute Research Foundation, is bullish on clean water and air and alternative energy. The horizon for the return on investment is unclear, though. "In the very long run we're not going to use that much oil," says Siegel, who worked for 15 years at the Ford Foundation in an investment capacity. "These other alternative sources of energy are going to have a larger and larger market share, so you want to be invested. Is it 20 years? Is it 100 years? If it's 100 years, the rate of return isn't competitive. If it's 20 years, it's probably fabulous.''

Endowments have historically invested in energy through their outside managers, who buy public and private oil and gas companies. "The endowments have done a remarkably good job in picking managers," says Ashby Monk, executive director of Stanford's Global Projects Center and chairman and co-founder of Aligned Intermediary. "That will inevitably shoehorn them into the types of strategies where that access point is the most efficient. To invest in these kinds of innovative assets, you have to be innovative in your investment organization."

That appears to be the case for the University of California. In fact, Bachher says he feels like he's in a "lonely spot" with his endowment colleagues. He's optimistic, nonetheless. "With time, we will see more endowments involved," he says. "It takes time for people to see the risk-adjusted returns."

Exxon Investors to Company: Make Climate Curb Fallout Public

Posted May 31, 2017, 03:31 P.M. ET

By Joe Carroll

Exxon Mobil Corp. investors, in a split with the company, urged the explorer to publish a detailed analysis next year on how carbon curbs could affect the value of its oil fields, refineries and pipelines.

The non-binding measure, backed by investors including the California Public Employees' Retirement System and the Church of England investment fund, comes amid reports President Donald Trump may soon abandon the 2015 Paris Climate Accord. More than 60 percent of voters approved the resolution during Exxon's annual general meeting in Dallas.

While Exxon's management opposed the measure, Chief Executive Officer Darren Woods said he remains committed to the Paris pact's goals and methods. Even with that agreement in place, he said, oil demand will grow in the coming decades, particularly in underdeveloped regions of the world.

"Energy needs are a function of population and living standards," Woods said in his first annual meeting since becoming chief executive officer on Jan. 1. "When it comes to policy, the goal should be to reduce emissions at the lowest cost to society."

Population growth and a desire for higher living standards will increase usage of petroleum-derived fuels, especially for transportation, because there are few widely-available alternatives, according to Woods. There's a huge untapped energy market among the 1 billion people who currently have no access to electricity and the 3 billion who don't use modern cooking fuels, he said.

Exxon shares fell 0.6 percent to $80.61 at 2:15 p.m. in New York trading.

"It's going to take a global solution" to limit greenhouse gas emissions that contribute to climate change, Woods said.

The remarks come amid news reports that Trump is on the verge of pulling the U.S. out of the Paris agreement. On May 31, Trump tweeted he would announce his decision within days.

Woods said his forecast assumes governments adhere to the strictures of the Paris pact, which calls for limiting emissions to prevent global temperatures from exceeding pre-industrial levels by 2 degrees Celsius.

Woods has been a staunch advocate for keeping the U.S. in the Paris group, as was his predecessor Rex Tillerson, who is now Trump's secretary of state. In his first blog post after becoming CEO, Woods advocated low-emission fuels, carbon capture and biofuels as tools for meeting the goals of the Paris agreement.

In May 2016, the proposal received a 38 percent "yes" vote after the company said it already disclosed ample data about emissions and risk management. As a result of this year's 62 percent "yes" vote, the board will reconsider its opposition.

Firms Must Provide Financial Info for Utah Site Cleanup, EPA Says

Posted May 31, 2017, 03:24 P.M. ET

By Lars-Eric Hedberg

Mining and financial services companies failed to respond to the EPA's request for information regarding their ability to pay for or perform a cleanup at a contaminated Utah site, the Justice Department alleged.

United Park City Mines and Talisker Finance LLC's failure to respond violates Section 104(e) of the Comprehensive Environmental Response, Compensation and Liability Act, the U.S. wrote in its May 30 complaint filed in the U.S. District Court for the District of Utah (United States v. United Park City Mines, D. Utah, No. 2:17-cv-00482, 5/30/17).

United and others conducted mining operations at the Richardson Flat Superfund Site near Park City until 1969, according to the Environmental Protection Agency. Talisker, a real estate and recreation business, now owns United.

Heavy metals such as arsenic, cadmium, copper, lead, mercury, silver, and zinc are among the hazardous substances found at the site, according to the EPA. Mine tailings containing these substances are sinking into Silver Creek and a nearby diversion.

United, the EPA, and other federal and state agencies have entered into administrative orders on consent for engineering, cost analysis, removal, and wetlands restoration, with the most recent agreement finalized in March 2014. This assessment work was meant to determine cleanup costs and requirements for the site, such as excavation of contaminated soil and tailings, as well as the removal of Silver Creek sediments, according to the agency.

The U.S. asked the court for an order directing the companies to respond to the Sep. 12, 2016, information request and enter civil penalties not to exceed $54,789 per day of noncompliance with the request.

Firm Offering 'Peer-To-Peer' Power Network in New York Rollout

Posted May 31, 2017, 9:08 A.M. ET

By Mark Chediak

A Seattle-based energy startup is offering consumers and businesses a way to power their homes with energy from their neighbors' rooftop solar systems, nearby wind farms and other sources of clean electricity.

Drift Marketplace Inc. is rolling out the service now in New York and plans to expand to other markets this year, according to Chief Executive Officer Greg Robinson.

The company charges customers a flat fee, and then uses artificial intelligence and machine learning to predict how much energy customers will need. It gets the power a day ahead from nearby solar plants, wind farms and other resources, and if demand exceeds supply, will use a high-frequency wholesale power-trading system to cover any shortages. Robinson said customers will typically save money compared to their regular utility bills.

Robinson said he wanted to build a service that lets people gain control over their energy supply, in the same way that big corporations like Amazon.com Inc. and Microsoft Corp. are already doing.

"We thought if they can see the value, we can build a software platform that helps everyone have that same value," he said.

Drift calls itself a peer-to-peer energy company, and has raised $2.1 million in funding from investors including First Round Capital, Lerer Hippeau Ventures, SV Angel, Liquid 2 Ventures, Third Kind Venture Capital and Acequia Capital.

The retail electricity market can be brutally competitive as companies work with thin margins and jostle to add customers. In the U.S., 17 states and the District of Columbia offer retail choice programs the let consumers buy power from competitive retail suppliers, according to the U.S. Department of Energy. Falling prices for solar and wind are making those offerings more attractive.

Drift said its software lets it reduce administrative and billing costs that typically flow through to utility customers. Customers pay weekly and have an option to get all of their power from emission-free sources.

Is Three Mile Island the Canary in Nuclear's Coal Mine?

Posted May 31, 2017, 8:43 A.M. ET

By Peter Coy

In 1979, Three Mile Island managed to survive the worst nuclear accident in U.S. history. Almost four decades later, the Pennsylvania power plant can't seem to withstand cheap natural gas. And the Nuclear Energy Institute, which represents commercial nuclear operators in the U.S., is warning that lots of other U.S. reactors are equally imperiled.

"There are 10 to 15 plants still at risk of premature closure," in addition to Three Mile Island and several others whose owners have recently announced tentative closure plans, institute spokesman

John Keeley said in an interview on May 30.

Nuclear plants generate about two-thirds of America's carbon-free electricity, Bloomberg's Paul Barrett reported in December. The NEI argues that government should do more to help these plants because they produce electricity without byproducts such as greenhouse gases or other air pollutants. Keeley points to New York and Illinois as two states that have begun to help plant operators keep their heads above water by issuing them zero emission credits.

"Policymakers there do not want to lose them [the plants] because of their environmental and economic advantages," says Keeley. Lawmakers in Pennsylvania, Connecticut, Ohio, and New Jersey are "beginning to talk" about doing something similar, he says.

"When they surrender that license, it's final. The gate gets locked. You can't just turn a key and restart a nuclear reactor."

Opponents of nuclear power, meanwhile, say the zero emission credits amount to corporate welfare.

"Nuclear power has failed dismally in the marketplace, and that's what will doom Three Mile Island," Eric Epstein, chairman of Three Mile Island Alert, a Harrisburg, Pennsylvania, group, told Barrett.

As reported by Bloomberg, Exelon Corp., which owns Three Mile Island, submitted a filing on May 30 that it would shut the plant down in 2019 in the absence of state aid. Pennsylvania "has an opportunity to take a leadership role by implementing a policy solution to preserve its nuclear energy facilities," Exelon Chief Executive Christopher Crane said in a statement.

Shahriar Pourreza, a New York-based analyst for Guggenheim Securities, told Bloomberg that Exelon's announcement smacks of "posturing." But the NEI's Keeley says this was no trial balloon. "They have to give advance notice" because it takes grid operators time to plan for the withdrawal of generating capacity, he says.

Sun-Blessed Chile May Target 100% Renewable as Prices Slump

Posted May 31, 2017, 9:22 A.M. ET

By Brian Parkin, Laura Millan Lombrana and Vanessa Dezem

Chile may speed up its switch to clean power amid falling prices and expected improvements in storage, helping to squeeze out fossil-fuel generation more quickly than forecast, according to the country's National Energy Commission.

Discussion is likely over the next few years on whether Chile should bump up its mid-century target for renewables in the power mix to as much as 100 percent from 70 percent, said NEC Executive Secretary Andres Romero Celedon in Berlin. Chile's President Michelle Bachelet approved the current target in 2015, a year before an auction in which solar power undercut coal and gas-fired plants.

"Over the next four years we'll probably ask ourselves why 70 percent?" Celedon said in an interview

Chile has tremendous potential to develop clean power. Rainwater pours off the Andes mountains

for hydro-electric plants, the Atacama desert has some of the highest solar radiation rates in the world, and the 4,000 kilometers (2,486 miles) of coast has plentiful wind. As a result, Chile has an eye on reducing dependence on conventional fuel imports like coal and liquid natural gas faster as the price of clean technology undercuts conventional power.

The nation may reach its 2025 renewable power target of 20 percent, excluding hydro power, five years early, Celedon said.

Still, the government is cautious on predicting the trajectory of falling solar and wind prices, while becoming increasingly confident on the scope of storage technology to accommodate solar and wind power growth, said Celedon.

Falling Prices

Solarpack Corp. won the right to build 120 megawatts of solar capacity in last August's auction of 12.43 gigawatts of capacity after the Spanish developer bid $29.1 a megawatt-hour, at the time the cheapest in the world. The average price at the tender was $47.59 a megawatt-hour.

"Prices will drop steadily from auction averages, but it's not safe to wager beyond that," Celedon said.

"For us, it's very expensive to import fuel," said Rodrigo Castillo, Executive Director of Chile's Empresas Electricas AG power utilities federation, who was also in Berlin. "It makes sense to assess alternatives."

In 2016, renewables represented 12 percent of energy generated in Chile, according to Bloomberg New Energy Finance. Biomass led the way, representing 4 percent of the total generation. Solar and wind contributed 3 percent each, and small hydro supplied 2 percent. Coal represented 44 percent followed by large hydro at 24 percent, gas at 17 percent and oil at 3 percent. From the 22 gigawatts of the total capacity added by 2016, wind and solar plants combined to contribute 9 percent.

Chile received the most new clean energy investment in South America in 2016, according to BNEF. Of the $1.8 billion, deployed in the region, 40 percent went to Chile. Estimates for 2017, however, show a drop in investment. Bottlenecks in Chile's transmission system continue to plague the country's power market and the situation is not expected to be resolved any sooner than a year from now.

"Chile will add less capacity of renewables from now to 2021," said Ana Verena Lima, a Bloomberg New Energy Finance analyst in Sao Paulo. "Chile still lacks infrastructure and the country's demand for electricity is slowing down in the next couple of years."

BNEF estimates that Chile's addition of capacity will resume growing by 2021, when more transmission lines will be added to the system and declining prices of clean power technology will improve the competitiveness of projects.

Swiss Pickles Set to Benefit from First Carbon Capture Plant

Posted May 31, 2017, 8:51 A.M. ET

By Brian Parkin

Climeworks AG, the Swiss company that captures carbon from the air, opened its first commercial facility at a farm outside of Zurich.

Carbon dioxide extracted by Climeworks' direct air capture plant will be pumped into greenhouses owned by Gebrueder Meier Primanatura AG in Hinwil, according to a statement from the company. The greenhouse gas will be used as a fertilizer to boost the growth of tomatoes and cucumbers -- the fruits used to make pickles.

"It's our ambition to capture one percent of global CO2 emissions in 2025," Climeworks co-Chief Executive Officer and founder Jan Wurzbacher, said in a video. Climeworks, which employs about 45 workers, is counting on the "one-step" simplicity and scalability of its carbon capture technology to win customers, co-CEO Christoph Gebald said by phone.

Enhancing the growth of tomatoes and cucumbers is a first step to a far more formidable plan for Climeworks that will require the support of industries and governments to capture carbon dioxide as part of their commitments under the Paris climate accord. The Climeworks plant produces 900 tons of carbon dioxide a year -- equivalent to the annual volume of greenhouse gases emitted by 190 passenger vehicles.

Climeworks is targeting carbon capture and storage as its main business model, supplemented by carbon offset deals with companies and applications such as the greenhouse and clean fuel partnerships. It forged a partnership with German carmaker Audi AG in 2013 to use the Swiss company's technology to produce synthetic fuels, Gebald said.

The company has won financial support from the Swiss government, Zurich Cantonal Bank and European Union. Climeworks can currently make 150 air capture units a year.

Vietnam Steps into the Sun With Policy Fixing Solar Power Price

Posted May 31, 2017, 7:01 A.M. ET

By Lien Hoang

People in Vietnam will soon have the power to convert sun rays into not just electricity—but also cash—with the arrival of solar policies that are being welcomed by big energy users such as Intel and Coca-Cola.

Starting June 1, producers will be able to sell solar energy for 9.35 U.S. cents per kWh to the state utility, which is sprinting to keep pace with the country's economic growth of 6 percent. Government Decision 11 also rewards household use of solar power and sets quality standards for panels, but will omit an item high on industry's wish list: the right to buy power from one another, rather than the state.

"Certainly, the price is the key," Do Duc Tuong, clean energy adviser at the U.S. Agency for International Development, told Bloomberg BNA by phone from Hanoi. "I think it's vital, not just for investors, but also others, banks, finance, even the developer itself."

World Solar Map

While the feed-in tariff of 9.35 cents could attract solar farms and other major generators, they also worry about the wide discretion left to Electricity Vietnam (EVN), the country's largest power company. The utility is not required to buy electricity when it's doing repairs, upgrades or

inspections, or when a problem occurs in the grid, according to Decision 11.

"They can say, 'OK, we have to do maintenance,' and shut down the power grid for hours, even days," Andy Nguyen, founder of renewable energy firm Vietnam Eco-Solutions, told Bloomberg BNA. "Then that is money lost."

Nguyen said regulations should limit how much time EVN can spend offline.

A World Bank map shows solar potential of more than 2,000 kWh per square meter annually along Vietnam's south-central coast, near Cam Ranh Bay. That's less solar power than what is usually seen in Africa or South America, but more than in Europe or Japan.

Coal, Nuclear, Hydropower

Vietnam's issues with pricing and financing have kept renewables from getting off the ground. At the same time, the Southeast Asian nation of 92 million is seeking alternatives, as environmental complaints have slowed projects to secure power from more coal and nuclear sources. They have also tapped out most locations for its traditional energy source: hydropower dams.

Large manufacturers in Vietnam are gradually tacking solar panels onto their factory roofs, including Samsung, Intel, Coca-Cola, and Nike. Nike, for example, aims to source 100 percent of electricity at its own facilities from renewables, while Coke is working to bring Vietnam to the same level as neighboring Cambodia, where it has a factory powered entirely by solar.

Decision 11 allows for net-metering, so that when panel owners generate more electricity from sunlight than they consume, they'll get a credit from EVN. The state-owned enterprise applies credits toward future billing, or adds them up by year-end for a lump-sum payout at the 9.35-cent rate.

But some of these private companies, especially in industrial parks, say they can't hit their renewables targets without "direct power purchase agreements." Under these contracts, they could buy energy straight from a solar farm, rather than through EVN—currently the single buyer recognized by the law.

Tuong does expect that to change, saying it's a matter less of political will, and more of the legal legwork needed to dilute the EVN monopoly.

"I think it will be very challenging," he said. "That's why we have been working very closely and intensely with regulators."

Two-Year Period

Hanoi will reassess the landscape for renewables by the time Decision 11's two-year trial period expires June 30, 2019. By that time, investors hope the government will clear up some of the murky accounting they say plagues many state-owned firms and makes it risky to do business with EVN.

Vietnam does not give "any form of government guarantee, assurance or support to enhance the creditworthiness of EVN," partners at Vietnam offices of Baker McKenzie, a multinational law firm, said in a client alert this month.

The law firm also noted Decision 11 does not tackle "how to balance cheaper land rental and use costs in relatively unpopulated areas, against the greater costs of running transmission lines over longer distances."

'Obsolete Technology'

But the decision does specify that, to qualify for the feed-in tariff, solar cells must have an efficiency greater than 16 percent, and modules greater than 15 percent. This refers to the portion of energy the equipment can convert into useful electricity.

Nguyen disagreed with those who saw this as a move to avert the flood of cheap panels across the border with China.

"That is a technical requirement of the system to make sure people don't use obsolete technology," he said.

The ink is barely dry on Decision 11 but Vietnam already has supporting legislation in the pipeline. A draft circular out now shows companies what kind of power purchase agreement they need to sell solar energy to EVN, and describes how to resolve disputes.

Subject: Morning Energy: Methane rule delay gets public spotlight today at EPA — U.S. lone climate holdout at G-20 — Tillerson gets oil industry award

View online version

07/10/2017 05:42 AM EDT

By ANTHONY ADRAGNA (aadragna@politico.com; @AnthonyAdragna)

With help from Annie Snider

FEEDBACK WELCOME! EPA Administrator Scott Pruitt's proposal to delay key methane leak detection and repair requirements for new oil and gas wells for two years is the subject of hours of public comment today. A list of speakers scheduled to show up at agency headquarters shows a bevvy of appearances on behalf of green groups with the Sierra Club and Moms Clean Air Force especially well-represented. "Most of the land where our children live, learn, and play is leased to the natural gas industry," Patrice Tomcik, a mother of two from Butler County, Pa., plans to say at the hearing. "The prospect of future operations unleashing harmful air pollution in proximity to children — among the most vulnerable to the impacts of air pollution — is a totally unacceptable risk for any family." ME is also curious to hear from the creatively-named Patriots From The Oil & Gas Shales.

Look for oil and gas representatives to tout their successes at reducing methane emissions even as production has surged over the past decade, while voicing strong support for Pruitt's two-year pause as the agency reconsiders the regulation. "We're doing our part and these trends are indicative of what our industry, when given the freedom to innovate, can achieve to improve the environment while protecting our nation's energy security," Howard Feldman, the American Petroleum Institute's senior director for regulatory and scientific affairs, says in his prepared remarks. "And progress will continue." Companies would, of course, not have to comply with the rule's requirements if Pruitt moves forward with the two-year pause on implementation.

The public hearing comes after a federal court rebuked Pruitt for trying to immediately pause the rule without taking public comment. As Pro's Ben Lefebvre reports, EPA on Friday asked the D.C. Circuit Court of Appeals to delay its decision from earlier in the week requiring the agency immediately resume enforcing the methane rule. The filing argues that immediate mandate deprived the EPA sufficient time to consider a rehearing.

LAST CALL FOR MONUMENT COMMENTS! Today's the last day to weigh in on the Trump administration's review of nearly two dozen monuments designated since 1996 under the Antiquities Act. As ME went to bed, more than 1.2 million comments have already poured in for Interior Secretary Ryan Zinke to mull over. It'll be a tight

turnaround: He's due to deliver his final recommendations to Trump on Aug. 24. Comments on a separate, but related, review of national marine monuments are still being accepted until July 26 by NOAA.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and we're unveiling a new, cleaner version of our ME selves here. What do ya think? Bracewell's Frank Maisano was first on Friday to name the four state capitals with city in their names (Salt Lake City, Carson City, Jefferson City and Oklahoma City). For today: What was the first college to go co-ed in the U.S.? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy , and @POLITICOPro.

President Donald Trump talks with German Chancellor Angela Merkel during the G-20 in Hamburg | AP Photo

ONE IS THE LONELIEST NUMBER: It was 19 versus an increasingly isolated U.S. at the end of the G-20 summit in Germany Saturday as world leaders took "note" in the final declaration of Trump's decision to leave the Paris climate agreement but declared the 2015 landmark accord to be "irreversible" and vowed to continue "moving swiftly towards its full implementation." As POLITICO's Andrew Restuccia reports, last-minute negotiations arose after several countries, including France, objected to U.S. insistence on mentioning fossil fuels in the final document, though the final version maintained the reference while pairing it with a call to use renewable energy. As POLITICO Europe's Matthew Karnitschnig reports , German Chancellor Angela Merkel acknowledged Europe's frustration with the U.S. withdrawal ran deep. "Everyone was against the United States of America," on climate policy, Merkel said at her closing press conference. "The dissent wasn't plastered over, but made clear."

Look no further than French President Emmanuel Macron for visible signs of the frustration with the Trump administration's climate posture. He announced plans to hold a climate summit this December on the two-year anniversary of the Paris accord and tweeted Saturday his country and China were united on climate action, provocatively adding in English the hashtag #MakeOurPlanetGreatAgain. British Prime Minister Theresa May added during a press conference Saturday she was "dismayed" by the U.S. decision and personally urged Trump to rejoin the agreement, while pronouncing her own country's commitment to climate action "as strong as ever." (Also worth watching: Turkish President Recep Tayyip Erdoğan warned the U.S. withdrawal made his country less likely to ratify the climate deal, Reuters reports.)

Trump officials tried to downplay differences with Trump chief economic adviser Gary Cohn telling reporters on the flight back that the declaration "came together pretty reasonably" given the various perspectives present. "We do go out of our way to say in there that that doesn't mean that we don't support environment, and we're still working for the environment," he said. "It was not a situation where there was contentious discussion going on."

GETTING REAL ON RUSSIA NUCLEAR THREAT: With government officials confirming to The Washington Post over the weekend that Russian hackers got into the business systems of U.S. nuclear power and other energy companies, the calls for Congress and the White House to bolster cyber defenses for the energy sector and the electric grid are bound to get louder still. Sens. Maria Cantwell and Angus King sounded the alarm Friday, based on earlier reports that pegged Russia as the top suspect. As POLITICO's Eric Geller, Darius Dixon and Martin Matishak report, a hard connection to Russia to the hacks would mark the latest evidence of Moscow's wide-ranging digital aggression and highlight the broad threats the Kremlin-backed digital army pose to the U.S.

Utility industry officials argued the power grid is ready for such threats and said their most sensitive systems are selectively disconnected from the internet. "This is not viewed as an escalation," said Marty Coyne, a spokesman for the North American Electric Reliability Corp. "Power utilities are routinely targeted by these types of actors." But past Obama cyber officials warn the threat is only likely to intensify. "It is probably the single greatest national security threat to the United States right now," one former official said. **Eric's tweetstorm here is worth your time.** And former Energy Secretary Ernest Moniz offers his own here.

Speaking of Russia, House Republicans are mulling whether to change a Senate-passed sanctions bill to give U.S. energy companies a greater chance to stay in oil and gas projects involving Russian companies, Pro's Ben Lefebvre reports. Energy interests have warned the the bill could force them out of projects around the world where Rosneft, Lukoil or other Russian oil companies may have as little as a 5 percent stake.

TAKING STOCK OF ZINKE'S SAGE GROUSE TEAM: Among the four Interior political appointees tasked with potentially revamping the sage grouse land-use management plans put in place in 2015 is Kathleen Benedetto, a former House staffer who worked to increase access for minerals production on federal lands and pressed to give local communities more control over endangered species, Pro's Esther Whieldon reports. Other political appointees on the team include: Casey Hammond, also a former House Natural Resources Committee staffer, who was on the Trump administration's landing team at BLM; Timothy Williams of the Interior Department's Office of External Affairs and Vincent DeVito, a political ally of Zinke's who is now counselor to the secretary for energy policy. Zinke has asked for recommendations on the plans by Aug. 6, including how to encourage energy development on public lands.

ON THE HILL

CALIFORNIA DROUGHT LEGISLATION, ROUND 2: The historic drought in California is officially over, but the state's water woes aren't — and neither is House Republicans' bid to push some of their more controversial ideas, including many that got dropped from last year's compromise legislation. Rep. David Valadao's H.R. 23 is slated to come

to the floor this week with a hearing Tuesday evening before the House Rules Committee. The measure would grease the skids for permitting new dams across the West, attempt to rebalance water rights within the Golden State and block the federal permits from touching on issues related to water rights.

LET THERE BE MARKUPS! House appropriators are marking up their $37.56 billion fiscal 2018 energy and water spending bill Wednesday at 10:30 a.m. ME readers likely remember the package zeroes out the late-stage research Advanced Research Projects Agency-Energy and prevents DOE from issuing new loan-guarantees, while also cutting spending on energy efficiency and renewables almost in half. Look to see if efforts to restore funding for those programs, some of which enjoy significant bipartisan support, are successful. Later that afternoon, an Appropriations subpanel takes up the as-yet unreleased Interior spending bill.

THIRD TIME'S THE CHARM? After two previous attempts were shelved, the Senate Environment and Public Works Committee on Wednesday at 9:45 a.m. intends to vote on the nominations of Annie Caputo and David Wright to the NRC as well as the selection to Susan Bodine to be EPA's top enforcement official. Lawmakers also intend to vote on legislation reauthorizing popular Brownfields and diesel engine retrofitting programs. Details here.

Secretary of State Rex Tillerson accepts an award at the World Petroleum Congress in Istanbul | AP Photo

PETROLEUM GROUP GIVES TILLERSON AWARD: Secretary of State Rex Tillerson dropped by Istanbul Sunday where he accepted the World Petroleum Council's Dewhurst Award for what the group described as "outstanding contribution to the oil and gas industry" through his decade-long run running Exxon Mobil Corp. "I have to share [the award] with the men and women of ExxonMobil, because I'm here because of what they did, not because of what I did," Tillerson said. "I miss you as colleagues, I miss you as partners, I miss you as competitors. I miss the healthy debates, the collaboration, the breakthroughs that were achieved that I witnessed during that 41 and a half years that have continued to deliver energy on a massive scale and a reliable way."

The award was announced before Trump picked Tillerson for his current position, though it is still raising eyebrows: "Secretary Tillerson's warped notion that it's appropriate to attend and accept an award at an oil industry conference proves yet again that he has no idea how to be the United States' chief diplomat," Greenpeace's Naomi Ages said in a statement. Tillerson is just the 10th person — past recipients have included heads of Shell and Chevron — to receive the "distinguished lifetime achievement award," according to the World Petroleum Council.

MAILBAG

ME FIRST — GROUPS RALLY AGAINST SENATE ENERGY BILL: More than 350 groups, including Food & Water Watch, League of Women Voters, Our Revolution and the Center for Biological Diversity, are sending a letter to Senate leadership urging them to oppose the Senate's energy bill (S. 1460). The bill largely resembles legislation that virtually all Democrats backed last year despite objections from environmentalists over issues like liquefied natural gas exports. "No energy legislation is better than bad energy legislation that serves to increase our dependence on dirty fossil fuel production instead of building on successful policies to expand clean energy sources," they write. "We find it astounding that any energy bill could contain a 'Renewables' subtitle but not include provisions on solar and wind energy."

HERE'S... A NEW ONE: Two senior House Science Republicans — Chairman Lamar Smith and Rep. Randy Weber — released a letter Friday in which they asked Treasury Secretary Steven Mnuchin to investigate whether Russia has been funneling money to U.S. environmental groups in an effort to influence the domestic market. The lawmakers argue Russian interests may be trying to stymie domestic fracking as a way to bolster their energy sector. "If the above allegations are true, Russian entities have funneled money through shell corporations to U.S. environmental activist organizations to influence U.S. energy policy," they wrote.

WEIRD FOURSOME! Vice President Mike Pence, Zinke, Sen. Roy Blunt and Medicaid chief Seema Verma walk into a park. On horseback. On Friday. Here's the pic.

$16 Billion Fine Sought for Fugitive Fish in Puget Sound

A $16 billion fine for escaped salmon might be "astronomical," but that's the penalty one conservation group is seeking for 305,000 nonnative species that escaped from a fish farm into Puget Sound.

Oil & Gas

Safety Board Drops Interior Department From Oil Rig Oversight Push

An Interior Department unit that regulates offshore oil platforms is the wrong entity to put in place new regulations for whistleblower protections and corporate governance, the Chemical Safety Board said Nov. 14.

Oil & Gas

With Arctic Drilling Under Attack, Norway Oil Minister Hits Back

The man overseeing western Europe's biggest crude spigot is fighting back against the oil doubters.

Pesticides

Two Extra Years Sought to Assess Pesticides' Effect on Species

The Trump administration asked a federal court to extend by two years a deadline to complete final assessments on the effects of three pesticides on endangered or threatened species.

Renewable Energy

Cheap Battery Forecasts Kill India's Long-Term Power Deals

India's power distributors are balking at traditional 25-year thermal-power purchase contracts, avoiding lengthy entanglements so they can benefit as costs for batteries and renewable energy slide. Now in vogue: agreements that last 10 years or even less.

Renewable Energy

China Plans Renewable-Energy Quota System to Ease Idle Capacity

China is introducing a clean-energy quota system to enforce provincial targets and ease its idle-capacity problem.

Vehicle Fuels

China Could Consider Resuming New Electric Car Permits

China's government is considering a resumption of new permits to make electric vehicles as early as the first half of 2018, a move that would clear the way for Ford Motor Co. and Tesla Inc. as well as a string of local manufacturers to start production, people with knowledge of the matter said.

EPA to Clear Backlog of New Chemical Approvals by July

Posted May 26, 2017, 12:19 P.M. ET

By Pat Rizzuto

The backlog of new chemicals being reviewed by the Environmental Protection Agency is expected to be cleared by July due to staffing, policy and procedural changes the agency has made.

Jeffery Morris, director of EPA's Office of Pollution Prevention and Toxics (OPPT), spoke with Bloomberg BNA about adjustments the agency has made that have cut the backlog of manufacturers' new chemicals requests. The backlog is of pre-manufacture notices (PMNs) the agency is reviewing that currently exceeds its normal volume of about 300 pending requests.

The backlog peaked at about 600 PMNs at the end of 2016 following the overhaul Congress made to the 1976 Toxic Substances Control Act (TSCA) last June, Morris said. The backlog is now less than 150, EPA said.

Getting new chemicals to market helps industry and consumers because the new molecules typically enhance the performance of the products the chemicals make, Morris said in his first interview about the agency's efforts to speed its new chemical reviews. New chemicals often have a better environmental footprint by cutting energy consumption, hazardous waste, water pollution or other environmental benefits when compared to the chemicals they replace, he said.

Critical Change

The biggest change that the EPA's new chemicals office had to adjust to, Morris said, was the amended law's requirement that the agency make a specific conclusion about the risk each new chemical could pose.

Original TSCA did not require the agency to make specific conclusions about a new chemical's risks. If the agency did nothing during the 90 days the statute gives it to complete new chemical reviews, the molecule could be made or imported for any TSCA-regulated use under the 1976

statute. The amended law retains the 90-day review period, but requires the agency to make "affirmative findings" for each chemical.

The new requirement improved the law, because it enhances public confidence in the government's chemical oversight, Morris said.

The new procedures and policies the agency is implementing also should improve regulatory certainty, he said. An agency website lists possible conclusions the EPA can make including that a new chemical:

• Is "not likely to present an unreasonable risk" to the environment or people—including vulnerable or highly exposed populations;

• May pose an unreasonable risk that would be controlled before the chemical could be made or imported; or

• Has insufficient information to allow the agency to make "a reasoned evaluation" of its health and environmental effects.

Morris described the first six months after amended TSCA as a "real learning curve" as staff figured out how to make those determinations and explain them in ways diverse audiences could understand.

"It was a heavy lift," he said. But, "I'm very happy to say we're confident that by the end of July we will have eliminated the backlog."

Industry Describes Problem

In early April, Cal Dooley, chief executive officer for the American Chemistry Council, described in an Insights article for Bloomberg BNA the problems the agency's initial new chemical delays were causing. New chemical evaluations had "become mired in inefficiencies, causing significant delay for manufacturers," Dooley, whose trade association represents companies including the BASF Corp., the Dow Chemical Co., and Honeywell, wrote.

Arkema Inc., which produces acrylic monomers, additives, hydrogen peroxide, coating compounds and other chemicals, is among the manufacturers that discussed its concerns about the new chemicals program as it met with Congressional lawmakers during the first quarter of 2017.

Arkema urged lawmakers to give the EPA sufficient resources for timely implementation of the amended TSCA's changes, including the new chemical provisions, the company said in a statement provided to Bloomberg BNA.

Giving sufficient EPA resources "can help the agency to evaluate and process the approval of pre-manufacture notices, to allow companies like Arkema to innovate and bring to market new materials that better meet the needs of users and consumers, or that deliver benefits such as enhanced sustainability," the company said.

EPA's Staffing Solutions

The chemicals office tripled the amount of time its scientists focused on new chemicals, Morris said. About 70 scientists work in the program's Risk Assessment Division, he said.

"At any given time about half of those people are involved in some way or other in new chemicals," Morris said. The rest of the time the risk assessors focus on existing chemicals and questions arising in the agency that call for their particular expertise.

The chemical's office could boost risk assessors time on new chemicals, because it hadn't fully ramped up to begin the risk analyses amended TSCA requires it to undertake for chemicals on the U.S. market, he said.

Having reduced the new chemicals backlog, those same scientists are now focused on developing the scope of risk assessments the agency will conduct for 10 existing chemicals, including solvents. flame retardants and one dye. The scoping documents will describe what health and environmental concerns, exposures and other issues the agency's risk analyses will examine. Amended TSCA requires EPA to complete those scoping documents by June 19.

The agency also temporarily transferred to the new chemicals program about 15 individuals who manage each chemical's review, Morris said. Those individuals work with the agency's scientists, manufacturers and importers who've submitted new chemical requests. The managerial staff will shift back to other duties once the new chemicals backlog is cleared in July, Morris said.

First Major Policy Change

"We've made policy changes that not only reduce the backlog, but make sure a backlog doesn't occur again," he said.

A critical change the agency has made is to approve a new chemical for a particular use or uses its manufacturer or importer intended, along with reasonably foreseeable uses, he said.

If the agency has concerns because the new chemical could be made, used or released into the environment in ways other than what its original manufacturer intended, it will restrict those uses through significant new uses rules, called SNURs, Morris said.

Chemical manufacturers have urged the agency to use this mechanism, commonly called a "non-5(e) SNUR," as it implements amended TSCA just as it had under the original law. That specific provision refers to the section of TSCA that gives EPA oversight of new chemicals and a type of regulation it can issue. The term also refers to the EPA's conclusion that intended or reasonably foreseen uses of a new chemical would not likely present an unreasonable risk, but that other manufacturing methods or uses might, leaving the door open in case other firms employ them.

Initially, the EPA needed time to make sure it could make a legally supportable argument that the amended law allowed it to continue making such findings, Morris said.

"We determined it's legally supportable," provided needed restrictions would be in place before the new chemical was made or imported and that those restrictions protect human health and the environment, Morris said.

Being able to issue non-5(e) SNURs will allow a significant number of new chemicals that had been part of the backlog to get to market, he said.

Two Agency Actions Must Align

Before a new chemical could be made or imported, however, the EPA must align two coupled

activities.

First, the agency must work with each manufacturer or importer to determine the manufacturing methods for, environmental releases of, and uses of, the new chemical that would not be likely to pose an unreasonable risk. A consent order negotiated between the agency and the original manufacturer or importer then binds that specific company to the agreed upon manufacturing and use conditions.

Second, the conditions that the EPA concludes would result in the chemical being unlikely to pose an unreasonable risk must be applied to any subsequent manufacturer or importer that could make the chemicals, Morris said. The agency does that through SNURs.

The chemicals office is developing a strategy to align the two related actions: approving the original manufacturer's request to make a new chemical and issuing a rule that would require subsequent manufacturers to meet any restrictions the original company agreed to, he said.

The goal, Morris said, is to allow the original manufacturer to get a "not likely to pose an unreasonable risk" finding, while making sure restrictions are in place to prevent risks that might occur if other companies made or used the chemical in different ways.

Polymers

Similarly, the EPA is allowing certain polymers to get to market quicker than it did in the initial months after TSCA was amended when they are unlikely to cause health or environmental concerns due to their large size and other characteristics.

Under the original and amended TSCA, EPA has allowed such polymers to be made under what was called a "polymer exemption." That means the company could make the new polymer without filing a new chemicals notice provided the chemical met specified criteria. The EPA's rationale is that that the polymer exemption encourages the manufacture of safer polymers by reducing industry's reporting burden for these types of chemicals. The reduced burden allows the EPA to concentrate its new chemical resources on substances that could pose higher risk, an EPA website explains.

Yet sometimes polymer manufacturers choose to submit new chemical notices. Or perhaps the molecule's characteristics show it could raise concerns if it were made in ways that produced smaller chemicals, called monomers, which could enter and interact with biological systems

The EPA has determined it can allow polymers, which could qualify for the exemption, into commerce with a proviso, Morris said. When the new polymer is added to the TSCA inventory—which lists chemicals that are or have been in U.S. commerce—it will have a flag saying the chemical must be made in ways so that it couldn't be biologically available, Morris said. The EPA announced its first such conditional approval on May 12.

Useful Data For EPA to Get

Another change Morris described has been requested by many chemical makers and the attorneys and trade associations that represent them.

The agency will publicize information manufacturers could submit with their pre-manufacture notices to speed the agency's reviews, he said.

Neither original nor amended TSCA requires manufacturers to submit specific toxicity, exposure or other data when they ask the agency to allow them to make a new chemical.

Faced with a lack of information about use conditions—such as the amount of a chemical that would be released to water, whether workers would be shielded from exposure because the new chemical would be made in a closed system, or whether workers would be required to wear protective gear—the agency makes assumptions. Those "default assumptions" are contained in software the agency uses, for example, to model how much of a chemical may be released in the workplace or what could happen to fish and the bugs they eat if the chemical got into water. To be protective, the agency assumes a new chemical would be released in greater quantities or that exposure is higher than it may be.

The consequence, Morris said, is that the EPA, manufacturers and importers spend time going back and forth working out more realistic use conditions. Depending on how confident a manufacturer is about its potential market for a new chemical, it may chose to pay to generate exposure or other data to prove to the agency that a chemical is less toxic or that exposure to it would be less than the agency assumes. Agency concerns and the cost of generating new data may also prompt a manufacturer to withdraw its new chemical notice rather than face potential controls.

Alerting firms about data needs means "we'll have a much greater chance of receiving information that will allow us to run scientific analyses one time and get companies on the road to commercialization," Morris said.

The EPA also is encouraging chemical makers to meet with agency staff before they submit a pre-manufacture notice, to spotlight data the agency needs before a new chemical's review begins, Morris said.

EPA Seeks Input on Postponing Utility Wastewater Limits

Posted May 26, 2017, 9:52 A.M. ET

By Amena H. Saiyid

The EPA is moving ahead with its proposal to postpone compliance deadlines for a regulation governing wastewater discharges from steam-generating power plants, giving the power sector and the public 30 days to comment on the plan.

The Environmental Protection Agency said it wants to postpone the compliance date of Nov. 1, 2018, while it reconsiders parts of the rule in response to petitions filed by several power sector and business groups, including subsidiaries of Ameren Corp. and American Electric Power. The power industry said the EPA underestimated the time, cost and equipment needed to treat wastewater.

The move to delay the wastewater effluent rule has drawn the wrath of some environmental groups, which sued the agency May 3 for indefinitely postponing the compliance dates.

"The mere fact that EPA is now seeking comment on the illegal stay doesn't make it any less illegal. Scott Pruitt lacks the authority to arbitrary roll back public health protections with the stroke of a pen," Earthjustice attorney Thomas Cmar told Bloomberg BNA in an email. Cmar is representing Clean Water Action, the Sierra Club and Waterkeeper Alliance in the lawsuit against the EPA.

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

The 2015 effluent rule, which is currently stayed until Aug 12, would require about 1,080 power plants—more than half of which are fueled by coal—to use the best available technology that is economically achievable to regulate waste streams that are generated by the use of air pollution controls and coal gasification techniques. The EPA is proposing to postpone deadlines for fly ash transport water, bottom ash transport water, flue gas desulfurization wastewater, flue gas mercury control wastewater, and gasification wastewater.

The 30-day clock would start ticking once the Federal Register publishes the notice, which the EPA administrator signed May 25.

Week Ahead: Lawmakers May Get Earful on Energy, Environment

Posted May 26, 2017, 04:11 P.M. ET

By Chuck McCutcheon

Members of Congress holding town hall meetings in their home districts during the week of May 29 are expected to hear about energy and environment concerns as part of the public's reaction to President Donald Trump's new budget proposal.

Severe cuts proposed in the Trump administration's budget blueprint for fiscal year 2018, released May 23, has led lawmakers of both parties to predict money will be restored to at least some programs, including those suggested for the Environmental Protection Agency and Department of Energy. The blueprint fleshed out earlier details on Trump's call to slash EPA's funding by 31 percent as well as a variety of Energy Department programs dealing with energy efficiency and renewable energy.

The Indivisible Project, a citizens' group formed to oppose Trump administration policies, urged its supporters to confront lawmakers about the budget at town hall meetings during the Memorial Day recess.

Indivisible spokeswoman Sarah Dohl said Trump's overall budget is one of the group's four main focuses at upcoming town halls, but not specifically its energy/environment components.

"That said, it's a critical issue that is raised at almost every town hall in questions from constituents (usually a climate change angle)," Dohl told Bloomberg BNA in an email.

The Trump administration has defended proposed cutbacks at EPA and other agencies, saying it seeks to spare taxpayers from footing the bill for programs that the administration deems unnecessary or wasteful.

As Bloomberg BNA's Rachel Leven has reported, Republican members of Congress were booed during the April recess within and outside of district town hall meetings for questioning whether the climate is changing, for supporting the proposed EPA cuts, and for other related issues.

One new issue that could surface at town halls is the Trump budget proposal's call for boosting government revenues by allowing oil drilling in a portion of Alaska's Arctic National Wildlife Refuge.

The debate over drilling in ANWR has divided lawmakers and pitted environmental advocates against oil companies and Alaska officials for several decades.

Other groups also plan to discuss the budget proposal during the Memorial Day recess. The Waterways Council, which advocates for upgrading inland waterways infrastructure, will hold a June 1 media briefing in Washington covering the budget blueprint, the U.S. Army Corps of Engineers' work plan for fiscal year 2017 and other issues. Alan Kovski will cover.

Also coming up the week of May 29:

Pruitt Goes Home: EPA Administrator Scott Pruitt—who grew up in Lexington, Ky., before becoming Oklahoma's attorney general—is scheduled to return to his hometown to speak May 31 at the Kentucky Association of Manufacturers' 2017 Conference and Trade Show.

Zinke Goes North: Interior Secretary Ryan Zinke is taking a weeklong trip around the Arctic Circle, joining Senate Energy and Natural Resources Committee Chairman Lisa Murkowski (R-Alaska) and other members of Congress for a trip to Norway, Greenland, and Alaska.

New Requirements for Nanoscale Materials under TSCA: Jim Alwood, a new chemicals program manager with EPA, will discuss during a June 1 webinar new Toxic Substances Control Act (TSCA) reporting and record-keeping requirements for nanoscale materials. Manufacturers, processors, and end-users of substances, chemicals, formulations, and mixtures that the rule defines as nanoscale materials by EPA are affected by the regulation, which is effective Aug. 17. SEMI, a trade association serving the micro- and nano-electronics industries manufacturing supply chain, hosts the free webinar. Pat Rizzuto will cover.

Air Pollution: An EPA advisory committee that examines air pollution from cars and other vehicles meets May 31. The committee will be discussing how new gasoline additives as well as new car-sharing options are affecting air pollution levels. David Schultz will monitor.

—With assistance from Rachel Leven, Alan Kovski, Pat Rizzuto and David Schultz.

Permit Should Cover Stormwater Pollutants, Not Flow, Builders Say

Posted May 26, 2017, 04:04 P.M. ET

By Amena H. Saiyid

A new EPA permit for storm runoff in New Hampshire goes too far and actually regulates stormwater flow as opposed to the pollutants found in it, homebuilders' groups say in a lawsuit.

The National Association of Home Builders and the New Hampshire Home Builders Association sued the Environmental Protection Agency May 25 in the U.S. Court of Appeals for the District of Columbia Circuit over a Clean Water Act permit for small municipal separate storm sewers, or MS4s (Nat'l. Ass'n of Home Builders v. EPA, D.C. Cir., No. 17-1138, 5/25/17).

A year ago, the homebuilders filed a similar suit over an identical National Pollutant Discharge Elimination System permit issued for stormwater systems in Massachusetts, Jeffrey Longsworth, a Barnes & Thornburg LLP attorney who is representing the association, told Bloomberg BNA May 26.

The groups say the EPA is trying to regulate impervious surface and mandate stormwater retention

standards based on volume and flow. Neither are considered pollutants under the Clean Water Act, Longsworth added.

Unpublished Permit

The agency's regional office in Boston issued a revised general permit for New Hampshire's municipal separate storm sewer systems on Jan. 18, but it was never published because of the hold that the incoming Trump administration placed on all notices for publication pending a review. The permit takes effect July 1, 2018, but became available for legal challenges on Feb. 1.

The revised permit establishes notice of intent requirements for the small municipal systems that include prohibitions and more stringent management practices for stormwater discharges, according to Longsworth.

Aside from the homebuilders, the Center for Regulatory Reasonableness filed its own challenge against the New Hampshire permit in the D.C. Circuit, while the Conservation Law Foundation sued in the First Circuit Conservation Law Found. v. EPA, 1st Cir., No. 17-1130, 2/2/17; Ctr. for Regulatory Reasonableness v. EPA, D.C. Cir., No. 17-01060, 2/22/17).

The EPA asked the First Circuit in March to transfer the foundation's challenge to the D.C. Circuit and consolidate it with the one filed by the center.

The D.C. Circuit already is hearing the challenges to the Massachusetts permit, and has stayed the proceedings until the First Circuit decides to approve or reject EPA's motion to transfer and consolidate the New Hampshire permit lawsuits that revolve around the same issues.

Six to One Against Trump on Climate in 'Honest' Exchange at G-7

Posted May 26, 2017, 03:58 P.M. ET

By Arne Delfs and Margaret Talev

German Chancellor Angela Merkel said Donald Trump was isolated on climate change at the Group of Seven, as the president said he's in no rush to decide whether to scrap U.S. involvement in the Paris Agreement.

A closed-door session on the first day of the G-7 summit in Sicily found unity on stepping up efforts to combat terrorism, but entered stormier waters on trade and on climate, Merkel said. At that stage it was six against one as leaders pressed Trump to hold to U.S. agreements made under the landmark Paris climate accord.

"We made it clear that we want the U.S. to stick to its commitments," Merkel told reporters after the meeting on May 26. "There were very different arguments from us all urging the president to hold to the climate accord." She said the discussion was conducted in a very "honest" atmosphere, leading to a "very intense exchange."

After deriding climate change as a hoax and pledging to pull out of the Paris deal during his election campaign, Trump has sidestepped the issue and passed up a number of opportunities to outline his international stance toward global warming. Members of his administration are deadlocked about whether the U.S. should uphold the pact.

Merkel said that the U.S. side made clear that it hasn't yet taken a decision on whether to scrap Paris "and won't make a decision here" at the G-7.

Taking Time

In the meeting, G-7 leaders asked Trump his timeframe for making a decision, according to a briefing by his top economic adviser, Gary Cohn. Trump said, "I'd rather take my time" and get to the right decision, Cohn told reporters traveling with Trump in Sicily.

Trump also expressed concerns that other countries that had tried to dial back their climate emissions like China and India had seen job growth suffer—and made clear he was not prepared to live with that trade-off, Cohn said.

Trump told the leaders, "he didn't want to be in second place," Cohn said, especially because he ran on a platform of job creation and improving working-and middle-class opportunities and is committed to keeping that promise, Cohn said.

Italian Prime Minister Paolo Gentiloni, the summit's host, said separately that there was "no agreement" on the Paris accord.

"President Trump will take time to reflect on it, and the other countries are taking note of that," Gentiloni said.

"His views are evolving," Cohn said, but Trump's decision will be based on what's best for the United States. The president "is thinking about what his options are." Trump "feels much more knowledgeable on the topic now," said Cohn.

Shell Sees Solution to Energy-System Gaps in `Hydrogen Grid'

Posted May 26, 2017, 8:57 A.M. ET

By Anna Hirtenstein and Rakteem Katakey

Royal Dutch Shell Plc is looking to build a hydrogen empire in a bid to fix the biggest problem the energy transition faces: the question of how to store power in the long term.

"Hydrogen can sit there as a storage medium, similar to batteries,'' said John Abbott, downstream director at Shell. "I can see a world where there's even a hydrogen grid. You use it for your car, you heat your home, your electricity, through that network.''

Shell has begun to use the lightest element at its retail stations, starting with Germany and the U.K. It entered a joint venture with partners such as Daimler AG to dispense hydrogen from its filling stations in Germany, aiming to roll this out at 400 locations by the early 2020s. The first station in the U.K. was introduced in February on the outskirts of London. Shell is aiming to add another 10 before the end of the year.

Hydrogen can be derived from natural gas or from water by splitting the molecules, a process which

uses energy. The supply chain has been criticized for being overly energy-intensive. However, if the energy that is used to make the gas is renewable, it can be seen as a form of green power storage. Technically, it can be stored almost indefinitely.

"Hydrogen has the potential to be a form of long-term seasonal energy storage. It can store power from days to months at a time, compared to batteries which are typically limited to a few hours," said Logan Goldie-Scot, energy-storage analyst at Bloomberg New Energy Finance. "Globally, current markets neither incentivize the use of hydrogen nor highly value the long-duration flexibility that it offers."

Long-term Storage

Storage of different lengths will be needed to wean the energy system off fossil fuels. Plugging the short-term gaps between wind and solar generation may be able to be covered by batteries, but the peaks between seasons requires huge amounts of energy to be stored for months at a time.

Shell has previously said that it sees hydrogen as a solution for shipping, aviation and trucks -- heavier machinery that's unlikely to be powered by batteries, which still face questions on energy density. Now Abbott expands the vision to include heating houses, providing electricity to the grid and storing power.

Shell's views contrast with those of BP Plc. The British oil major doesn't believe that the gas will play a major role for fueling passenger vehicles or trucks, according to chief economist Spencer Dale. The company expects that natural gas in the form of LNG will instead be used for long-distance trucking and shipping instead of diesel and bunker fuel.

It's adding charging points for electric vehicles at some of its retail units. It has sold some hydrogen at a station outside London, but volumes are not high.

"It's a question of the chicken and egg, what's coming first," said Istvan Kapitany, executive vice president of Shell Retail. "Right now the number of fuel-cell cars is very low, but we need to be putting down the facilities to have a chance for the customers buy a fuel cell car, so when they buy it they can drive it properly."

Trump `Leaning' to Understand Europe View on Climate, Cohn Says

Posted May 26, 2017, 8:37 A.M. ET

By Margaret Talev

Donald Trump is working to understand the European view on climate change, his chief economic adviser said, suggesting the U.S. president is sensitive to the diplomatic backlash he'd face in scrapping the Paris Agreement on global warming.

"I think he's leaning to understand the European position," Gary Cohn, director of the National Economic Council, said on the sidelines of a Group of Seven summit in Sicily, Italy.

Climate is one of the most contentious issues facing leaders at the two-day G-7 meeting in the resort town of Taormina, where Angela Merkel of Germany and France's Emmanuel Macron are

among those advocating a commitment to the landmark Paris accord. Trump has derided climate change as a hoax, and members of his administration are deadlocked about whether the U.S. should uphold the pact, brokered by nearly 200 nations in 2015.

"Look as you know from the U.S., there's very strong views on both sides," said Cohn. "Both sides are running ads. So he knows that in the U.S. there's very strong opinions on both sides but he also knows that Paris has important meaning to many of the European leaders. And he wants to clearly hear what the European leaders have to say."

Bosch Tied to Diesel-Cheating Claims Against Fourth Carmaker

Posted May 26, 2017, 8:28 A.M. ET

By Ryan Beene and Kartikay Mehrotra

Robert Bosch GmbH, the world's largest auto-parts supplier, was linked to emissions-cheating allegations against a fourth automaker on May 25, raising questions about the German company's role in the scandal gripping the car industry.

Bosch and General Motors Co. are co-defendants in a lawsuit filed May 25 by owners of diesel-powered pickups who accused the automaker of using illegal software, known as a defeat device, to pass U.S. emissions tests. Bosch "participated not just in the development of the defeat device, but in the scheme to prevent U.S. regulators from uncovering the device's true functionality," according to the lawsuit filed in Detroit federal court.

"We believe Bosch was the enabler," said attorney Steve Berman, a managing partner at Hagens Berman who's represented vehicle owners in lawsuits against all four carmakers and Bosch over diesel cheating. "They provided the software in a format where manufacturers and Bosch could work together to calibrate their engines to cheat emissions tests."

The technology was so sophisticated that it could recognize when a car was being tested in a lab or smog station to feign clean emissions and compliance with pollution standards, according to U.S. regulators.

"Bosch takes the allegations of manipulation of the diesel software very seriously," the Stuttgart-based parts supplier said in an emailed statement. "Bosch is cooperating with the continuing investigations in various jurisdictions, and is defending its interests in the litigation.

It's the fourth time in less than two years that automakers using Bosch's diesel engine software have been accused in court by regulators or vehicle owners of cheating on emissions tests. On May 23, the U.S. Justice Department accused Fiat Chrysler Automobiles NV -- which also uses Bosch engine software -- of rigging its cars to pass emissions tests.

GM spokesman Pat Morrissey said the May 25th suit is "baseless" and its vehicles comply with environmental standards. Fiat Chrysler said on May 23 that it "intends to defend itself" in the Justice Department lawsuit and denied any willful wrongdoing.

Another Bosch user, Volkswagen AG, admitted in 2015 to flouting pollution rules and has committed to spending more than $24.5 billion paying fines and penalties, including buybacks, across North America. Car owners also alleged in a 2016 lawsuit that Daimler AG's Mercedes-Benz used defeat devices. That lawsuit was thrown out but then amended and re-filed in December, adding Bosch as a defendant.

Mercedes-Benz has denied any wrongdoing, but earlier this year suspended seeking certification for 2017 diesel vehicles citing the "significant increase in effort" needed to win approval from the U.S. Environmental Protection Agency.

In each case, the vehicles used Bosch's EDC-17 control unit, a computer used to regulate the diesel engine's operation and control emissions, according to the GM lawsuit. That chip is "a good enabler for manufacturers to employ defeat devices as it enables the software to detect conditions when emissions controls can be detected," according to the lawsuit.

"Although this case is not about Volkswagen, Bosch's history with Volkswagen provides background and support for its participation" in the racketeering "of which Bosch and GM were participants," the GM truck owners claimed.

In the VW case, vehicle owners accused Bosch of being "an active participant in a massive, decade-long conspiracy with VW," according to court filings. Bosch didn't admit wrongdoing but agreed to pay $327.5 million to end the class-action in February.

"After diligently balancing all aspects, we decided to settle in this case," Bosch Chief Executive Volkmar Denner said at the time in a statement. "Bosch is in the middle of the biggest transformation of the company's history. We want to devote all our attention and resources to that change."

Bosch faces an investigation by the U.S. Justice Department into possible criminal charges, people familiar with the matter said in September. German prosecutors are looking into whether Bosch employees helped VW rig software. Stuttgart prosecutors said May 26 that they're also investigating Bosch in relation to a probe of Daimler, which was the subject of police raids across Germany earlier this week, and a spokesman at the supplier said the company is cooperating.

In the Fiat Chrysler lawsuit, now before a San Francisco federal court, Bosch and the carmaker are alleged to have installed software to manipulate the emissions control systems when the car was in testing.

"Rather than finding a way to improve performance while maintaining the emissions control system," the companies conspired to hide the actual level of pollutants, according to one of the 20 pending complaints against Fiat Chrysler, many of which also name Bosch as a defendent.

Fiat Chrysler has proposed a software update to the EPA which attorneys say is capable of resolving the dispute "in a matter of weeks." It would minimize or eliminate any need for payment of monetary damages to plaintiffs, the company said. Bosch has yet to issue a written reply to the claims, but supported the carmaker's efforts to produce a fix.

Energy-Generating Kites Backed by Shell Set for Test in Scotland

Posted May 26, 2017, 01:13 P.M. ET

By Anna Hirtenstein

Power-generating kites backed by Royal Dutch Shell Plc, Schlumberger Ltd. and EON SE will start tests in the U.K. this summer, with the aim of developing a technology that could eventually replace offshore wind turbines.

Kite Power Systems, known as KPS, is working on a 17-meter device that flies on air currents high above the ground and generates power by pulling at a cable. It raised 5 million pounds ($6.4 million) from the three energy giants last December.

"The reason we are interested in something like this is that it has potential to reduce the cost of offshore wind in the future," said Geert van de Wouw, managing director of Shell Technology Ventures BV. "Fundamentally, looking at the science, flying the kite at high altitudes so there's lots of wind, and the cost of materials is quite a lot lower than a normal offshore wind turbine."

Alternatives to traditional wind turbines are in the works at multiple start-ups, some backed by corporations in energy and tech such as Alphabet Inc. German utility EON has also invested in a test site in Ireland for drones that are designed to fly at high altitudes and generate energy.

The kites work by sending aloft a wing to fly in a circular looping path much like the tip of a wind turbine blade. The machines harness aerodynamic lift from the wind exerted against the tether linked to the ground. Tension in that tether causes the line to rapidly spool out from a drum, which is connected to a generator.

Kite Power Systems will start testing its machines in July or August at a site in Scotland. Offshore wind farms could someday be re-powered with the technology, according to David Ainsworth, interim chief executive officer.

"There's 3 gigawatts of offshore wind coming to the end of life in the 2020s," Ainsworth said. "It'll have to be decommissioned, but you'll still have the infrastructure there, the grid. There's an opportunity to re-power with kites."

Kite Power Systems believes that its system could generate electricity between 55 and 58 percent of the time, a capacity factor that's higher than a conventional wind farm. It has made a 500-kilowatt kite and is working on a 3-megawatt version. Ainsworth expects that the company's technology could eventually reach as much as 6 megawatts from each machine.

Subject: Mulvaney: No more 'crazy' climate spending

By Alex Guillén

05/23/2017 11:54 AM EDT

Office of Management and Budget Director Mick Mulvaney said the White House's 2018 budget proposal reduces spending on climate change science to correct for too much "crazy stuff" under the Obama administration.

"What I think you saw happen during the previous administration is the pendulum went too far to one side, where we were spending too much of your money on climate change and not very efficiently," Mulvaney told reporters at a budget briefing.

Asked about climate science spending, Mulvaney specifically pointed to a controversial 2010 National Science Foundation grant of $700,000 for a climate change musical.

"Do you think that's a waste of your money?" he asked.

Mulvaney went on to say the budget doesn't completely toss all climate science activities.

"Do we target it? Sure. Do a lot of the EPA reductions aim at reducing the focus on climate science? Yes. Does it mean that we are anti-science? Absolutely not," he said. "We're simply trying to get things back in order to where we can look at the folks who pay taxes and say, 'Look, we want to do some climate science, but we're not going to do the crazy stuff the previous administration did.'"

Subject: Morning Media, presented by American Optometric Association: 'High marks' for Megyn Kelly — The ink-stained friendship of Baron and Baquet — The 'billionaire bromance' of Murdoch and Trump

By Joe Pompeo | 06/19/2017 06:10 AM EDT

With Alex Weprin

SO WHAT'D YOU THINK OF MEGYN KELLY'S ALEX JONES FEATURE LAST NIGHT? Putting aside the fiery debate about whether Kelly and NBC News were right to give such primo airtime to a man who has spread dangerous conspiracy theories like Pizzagate and the Sandy Hook hoax nonsense, the question for many journalists ahead of last night's highly-anticipated "Sunday Night with Megyn Kelly" segment was all about how tough Kelly would prove to be in grilling her controversial subject -- just three weeks into her new program, at that. Given how high the stakes were as a result of last week's public outcry, one assumes the editors at NBC News were working overtime to make sure the piece was as tough as possible. And given the favorable reviews, one assumes the network is happy with the end result.

A few moments worth mentioning....

-- **The Infowars boss downplayed his relationship with President Trump:** "I think my influence on Trump is way way lower than what MSM has said." Kelly: "Well what kind of access do you have?" Jones: "He's just called sometimes and, you know, talked about politics or thanked me, stuff like that. That's it."

-- **Ridiculous statement:** "The media never covers all the evil wars it's promoted." Kelly responded, "That doesn't excuse what you said about Newtown, and you know it." But really, she coulda/shoulda nailed him on the "media doesn't cover wars" part.

-- **This is more like it:** "You misstated facts about Chobani and its owner which, you could've found out if you just had a reporter do a little shoe-leather reporting -- pick up the phone, check out the facts. You never would have had to retract that or apologize."

-- **"Do you think of yourself as a journalist?"** Jones: "I have some journalists that work for me and I do journalistic work and I've broken a lot of big stories and I understand the basics of it."

If you missed it last night, you can watch the full clip here.

Veteran CNN TV critic Brian Lowry: "[T]he piece that aired Sunday credibly justified covering the Infowars phenomenon, which was the bar that "Sunday Night With Megyn Kelly" ultimately had to clear. ... Moving into a prosecutorial mode that was frequently her strength on Fox, Kelly did press him, enlisting a Newtown parent and MSNBC contributor Charlie Sykes to help contextualize the 'toxic paranoia' that he spreads among his listeners. ... Kelly's handling of the interview should calm some nerves [at NBC News], even if it won't quiet all the dissenting voices."

Our own Jack Shafer: "[S]he took the mendacious Jones apart in such a textbook manner you had to wonder what all the shouting had been about. ... Short of waterboarding him, I don't know what more Kelly could have done to expose Jones' dark methods."

** **A message from the American Optometric Association:** More than 5,000 Doctors of Optometry and students from all 50 states are in DC to spotlight Optometry's expanding role in the health care system and key advancements in patient-centered care. For more information on the essential primary care being provided by optometrists -- America's family eye doctors - in communities across the country, visit www.aoa.org. **

EXCERPT - From my feature this morning, "The Not-So-Bitter Rivalry of Dean Baquet and Marty Baron," over at POLITICO Magazine: "Baron and Baquet are the two most important newspaper editors in America right now, at a time when the media is tackling the most epic and consequential story of the past 40 years. ... Many news organizations have been moving the needle on the Trump story in different ways ... But when it comes to inside reports from intelligence and national security agencies, the Times and the Post, with their expanding rosters of veteran correspondents, have the greatest institutional advantages. In particular, the investigations into whether the Trump team colluded with Russia in the 2016 election have played to the historic strengths of both newspapers. ... The result has been a resurgence of ink-stained combat that makes NYT v. WaPo the most compelling journalistic rivalry since the days of Baquet and Baron's respective forefathers, Abe Rosenthal and Ben Bradlee. The other thing that makes the rivalry compelling is that unlike Rosenthal and Bradlee, who were cordial at most, Baron and Baquet are legit pals. ...

"And yet, looking back on their journeys to the ivory towers of American journalism , it's equally clear that Baron and Baquet have been formidable competitors, if collegial ones, over the course of their professional lives. Perhaps no two editors' careers have overlapped and shadowed one another so closely. In the past, they've each contended to be the top editor at The New York Times and to have all the power and influence that goes along with it. After decades of ups and downs for both men, Baquet eventually got that job, but at the same time, Baron got the glory and fame that only the most Herculanean journalistic achievements can confer. Now, their competition defines not only their careers but, to no small degree, the fate of the Trump administration. Every morning, each goes to work knowing that part of what he needs to do that day is to be better and faster than the other."

That's the nut graph, in a nutshell. You can read the rest here. (It's long, so I won't be offended if you bookmark and save for later.)

SIDENOTE: SOME POST NUMBERS THAT SURFACED IN MY REPORTING - "A person with knowledge of company finances said the Post now has more than 900,000 digital-only subscribers at three monthly access levels - $3.99, $9.99 and $14.99 - with the majority of

its customers registered at the higher two tiers. Based on those numbers, digital subscriptions could theoretically be in the ballpark of $100 million at this point. (In 2016, digital circulation at the Times was $232.8 million.) ... Digital advertising this year, according to the person with knowledge of company finances, is projected to be at least $120 million, up from roughly $100 million in 2016. (Digital ad revenue at the Times in 2016 was $208.8 million.) Since the Post, as opposed to the Times, is a private company and does not make its finances public, it wouldn't hurt to take these subscription and revenue numbers with a grain of salt."

SOUND BITES:

-- ".@megynkelly scored high marks with Alex Jones interview. Nailed the scumbug." [Tina Brown]

-- "Watching @megynkelly interview with Alex Jones, I'm even more convinced that her piece wasn't just ok to do, but important journalism." [Dan Abrams]

-- "Bottom line on NBC's Alex Jones piece: Strong editing gave it an edge & made him look like a kook. Still a win for him; boosts his profile." [Margaret Sullivan]

-- "If you're unfamiliar with Alex Jones, and are watching this Megyn Kelly report, hard to imagine you walk away believing anything he says. And fwiw, I think she's done about as good as anyone can do on TV taking him to task on many of his conspiracies." [Kyle Blaine]

-- "You could see the producers cutting and re-cutting it to meet various points of objection." [Jay Rosen]

BILL O'REILLY TEASES POSSIBLE 'NEW NETWORK' - via Newsday : "Making the first stop at his 'The Spin Stops Here' tour, O'Reilly ... made some news during the question-and-answer period ... Asked whether he planned to start his own network, he said 'there could be a new network' that will compete directly with Fox News. 'A bunch of people are looking to compete with Fox because there's a perception' of decline, he said. ... "But I am starting my own operation. We are going to do that ... where we will go into a studio and here it will look like 'The Factor.' . . . It's basically an experiment to see how many people are going to want this service. That's coming and will be here before September in a robust form. But I suspect there will be another network maybe merging with us. There will be a network that rises up because the numbers for Fox are going down."

DONALD TRUMP AND RUPERT MURDOCH, A HISTORY - From The Guardian over the weekend : "The alliance between Donald Trump and Rupert Murdoch has never been stronger. ... Now, with a reported criminal investigation in connection with sexual harassment allegations into Fox News, the stakes are higher than ever for the two friends. ... As Trump's 'inevitability' grew and it became clear he was going to win the Republican nomination, the two men grew closer still, uniting around what is perhaps the biggest thing they have in common: both men love to win, and suddenly they were in a position to use one another to do just that." Sid Blumenthal: "His entire empire's at stake - that's why Murdoch is talking to him every day. It's not because he enjoys the sparkling conversation of Donald Trump." More: "Donald Trump

and Rupert Murdoch: inside the billionaire bromance"

ERIC BOLLING FOR SENATE? My colleague Hadas Gold reports this morning : "Fox News anchor Eric Bolling may have just signed a new multi-year contract, but he's also eyeing a possible career change: A future run for Senate. For now, Bolling is secure in his job as co-host of the new show 'The Fox News Specialists.' But In a recent telephone interview from Fox News headquarters in New York City, Bolling said that 'when the lights go down on the TV career' he wants to make a primary challenge against a sitting Republican senator in the South. 'A lot of Republicans run as conservatives only to be elected, and we find out they're not conservative at all.' ... Bolling ... declined to specify which state in the South he'd run, which senator he would challenge or even when it would happen."

BIG UNIVISION FEATURE FROM JIM RUTENBERG - In today's Times : "By now you've probably heard that this is a golden age for journalism -- how The New York Times and The Washington Post are warring for scoops in ways reminiscent of the Watergate era; how an information-hungry public is sending subscriptions and television news ratings soaring, reinvigorating journalists and reaffirming their mission ... But the story isn't complete if it doesn't include Univision News, one of the most striking examples I've seen all year of a news organization that is meeting the moment. It is the leading news source for Hispanics in the United States, citizen and noncitizen alike -- a core audience that has an almost existential stake in the Trump administration's policies." More: "A Newsroom and a Lifeline: Univision's Urgent Sense of Purpose"

REVOLVING DOOR: via Poynter: "Emma Carmichael, the editor in chief of Jezebel, announced on Friday that she's stepping down from that position next month. 'This has been the hardest decision of my professional life, but it's one I feel clear-headed about - I'm simply a little burnt out and ready to take a break from running a website,' she wrote in a memo to her staff. ... Carmichael becomes the third woman in a leadership position to leave Gizmodo Media Group in as many months. ... But the company has also made increasing gender diversity a priority."

** **A message from the American Optometric Association:** Through the delivery of personalized care and comprehensive eye exams, doctors of optometry help ensure precise and healthy vision, identify and treat glaucoma and serious infections and provide early diagnosis of threats to overall health, including hypertension, stroke and diabetes, which may have no obvious symptoms. The doctor-patient relationship is at the heart of optometry practices serving thousands of communities across the country. With health care legislation a priority, AOA member doctors and students are asking Senators and House members to:
· Co-sponsor the AOA & ADA-backed bi-partisan Dental and Optometric Care Access Act (HR 1606).
· Vote to eliminate the health insurance industry's anti-trust exemption (bi-partisan HR 372, passed the House 416-7, March 22nd).
· Demand that Federal bureaucrats withdraw their scheme to impose costly mandates targeting eye doctors.
· Keep primary eye health and vision care a priority for the VA.
· Require patient health safeguards and quality care standards on remotely attempted care.

Driving the Day

Good Thursday morning. BIG DAY -- HOUSE REPUBLICANS have their tax bill on the floor. **PRESIDENT DONALD TRUMP** heads to HC-5 -- their Capitol basement meeting room -- to hold a rally, of sorts, for the House tax bill. He's scheduled to talk around 11:30 a.m. **SPOILER ALERT:** the House will pass their bill quite easily. Democrats won't vote for it. The ease with which this is getting through has surprised some House Republicans. We don't expect Trump to appear publicly with any lawmakers at the Capitol, though. **OUR QUESTION:** Will Trump have Republicans to the White House to celebrate like he did with the health care bill before it exploded in the Senate? ... ***Rachael Bade and Heather Caygle with more on the state of play in the House*** http://politi.co/2juEqXW

-- FOR WHAT IT'S WORTH: This is a big internal victory for Speaker Paul Ryan, House Majority Leader Kevin McCarthy, House Majority Whip Steve Scalise, Rep. Patrick McHenry, the chief deputy whip, and Ways and Means Chairman Kevin Brady. But it's just the first step. Reconciling this bill with whatever comes out of the Senate will be another tricky test.

BUT ... IN THE SENATE

-- "Republican Sen. Ron Johnson Opposes GOP Senate Tax Package," by WSJ's Siobhan Hughes: "Sen. Ron Johnson (R., Wis.) said he opposes the Senate Republican tax package, becoming the first GOP voice of dissent that, if it gains momentum, could force significant changes or jeopardize the party's goal to pass the bill before the end of the year. 'If they can pass it without me, let them,' Mr. Johnson said in an interview Wednesday, adding that the plan unfairly benefits corporations more than other types of businesses. 'I'm not going to vote for this tax package.'" http://on.wsj.com/2zGwOlj

-- GOP SENATORS TO WATCH ... John McCain of Arizona, Lisa Murkowski of Alaska, Susan Collins of Maine, Bob Corker of Tennessee

THE BACKSTORY -- "How Cotton brought Obamacare repeal back from the dead," by Seung Min Kim and Jen Haberkorn: "Sen. Tom Cotton was about to enter the White House early this month to discuss immigration policy when he got an unexpected call from President Donald Trump to talk about a different topic. For days, the Arkansas senator had been working behind the scenes to persuade Republicans that reigniting a battle over repealing Obamacare in the tax fight wasn't as crazy as it seemed. But Trump, still smarting from GOP's failures to dismantle the law whom Cotton had first pitched on the idea four days prior, needed little persuading.

"'I am with you 1,000 percent on this,' Trump told Cotton over the phone. Trump tweeted twice that Republicans should repeal the mandate, putting pressure on the GOP to tuck it into tax reform despite widespread dismissiveness the idea was greeted by at the time. That Nov. 2 conversation illustrated how the GOP rank-and-file methodically coaxed their leadership to embark on what seemed - and could still become - a fool's errand to try again to take down Obamacare. In a surprise move, Senate Republicans said Tuesday that they would repeal Obamacare's individual mandate in their tax plan, using the savings to plow into more tax cuts." http://politi.co/2AJTeFq

THE BIG QUESTION... HOW LONG CAN THIS LAST? -- "Conservative outside groups hold fire on tax bill ahead of first vote," by Nancy Cook: "As Congress rushes to pass the biggest tax reform legislation in three decades, high-powered business and conservative groups are holding fire on provisions they don't like in order to avoid derailing the vote. The kumbaya attitude emanates in large part from a sense of desperation among Republicans who believe the party needs to show voters and donors a concrete victory ahead of the 2018 midterms or risk losing control of one or both chambers of Congress, say strategists and conservative activists. 'It is kind of unreal,' said one Republican lobbyist. 'People know this is a freight train coming, and they are doing everything they can to get their stuff on it rather than stand in front of it.'" http://politi.co/2jvctiO

IVANKA SPEAKS -- "Ivanka Trump says child tax credit 'not a pet project'," by AP's Catherine Lucey: "Trump says she and husband Jared Kushner, a fellow White House adviser, have no plans to return to their old New York City life any time soon. 'It's definitely not short-term,' Trump said." http://bit.ly/2A2qfR3

-- LOOKING TO 2018: "Tax reform may doom Trump infrastructure plan," by Colin Wilhelm: "The tax reform bill set to be voted on Thursday by the House of Representatives could kill any chance of the Trump administration's trillion-dollar infrastructure plan ever happening. At best, House support for the plan would signal lukewarm backing among Republicans for President Donald Trump's ambitions. At worst, the bill would effectively end the funding structure that the administration touts as

a way to reach its $1 trillion target and minimize the burden on taxpayers. The House bill ends tax breaks for private activity bonds, a key part of public-private partnerships in projects ranging from roads to low-income housing. The administration has said it wants to leverage those partnerships to reduce the direct cost of the president's building plan." ***For Pros*** http://politico.pro/2hwszo8

COMING ATTRACTIONS ... THE END OF THE YEAR FIGHT -- "Republicans stall budget talks for tax reform," by Rachael Bade and John Bresnahan: "Hill Republican leaders are slow-walking negotiations for a year-end budget deal with Democrats, adamant that tax reform must come first - even if the spending battle drags out until year's end. Top aides to the 'Big Four' - Speaker Paul Ryan, Senate Majority Leader Mitch McConnell, House Minority Leader Nancy Pelosi and Senate Minority Leader Chuck Schumer - have been engaged in tightly held discussions for weeks, but they remain unable to reach an agreement on a 'topline' number for government funding bills for the next year.

"Democrats insist on 'parity' in any spending deal; they won't agree to raise strict budget caps for defense spending without an equal boost to domestic funding. Republicans, so far, refuse to cave on the issue. Pelosi accused Republican leaders of dragging their heels on the matter, suggesting they were trying to push a $5 trillion-plus tax cut package through Congress before they reach a spending agreement, multiple sources said.

"Pelosi also told her colleagues on Wednesday that she won't sign off on any funding bill that doesn't increase both domestic and Pentagon funding by the same amount. The California Democrat said she and Schumer have both rejected the latest GOP positions during the leadership-only discussions." http://politi.co/2z758wR

****** **A message from Chevron:** Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://politi.co/2zydcU4 ******

QUOTE OF THE DAY -- CORRY BLISS, executive director of the Congressional Leadership Fund, to Elena Schneider: "There are certainly incumbent members out there who need to work harder and raise more money if they want to win. They're fundamentally not prepared for how they're about to be attacked." http://politi.co/2iZg7xb

2020 WATCH -- SPOTTED last night at the Fringetree restaurant at the Westin: Sen. Chris Coons (D-Del.), Martin O'Malley and Pete Buttigieg.

SIREN -- "Hope Hicks may hold the keys to Mueller's Russia puzzle," by Darren Samuelsohn: "Special counsel Robert Mueller's team is preparing to interview the woman who's seen it all: Hope Hicks. She's been part of Donald Trump's inner circle for years, first at Trump Tower and then as an omnipresent gatekeeper and fixer who could get emails or other communications directly to the boss during the 2016 campaign. As a senior White House adviser and now as communications director, she's been in the

room for moments critical to Mueller's probe, which has grown to include the president's response to the Russia investigation itself.

"Hicks' history with Trump makes her one of the more useful witnesses for Mueller as he looks for insights into the president's habits and moods. She also is one of the few people well positioned to recount the president's reactions at various moments as the Russia scandal has sidetracked his presidency - including the Mueller appointment itself. Mueller's decision to request an interview with Hicks - who hasn't been named in any criminal wrongdoing - also indicates he's reached a critical point in the overall investigation, according to former prosecutors and veterans of past White House investigations. Typically, conversations with such senior level aides are saved for near the end of a probe." http://politi.co/2mwKekL

TRUMP INC. -- "Taxpayers pay legal bill to protect Trump business profits," by USA Today's Nick Penzenstadler: "Taxpayers are footing the legal bill for at least 10 Justice Department lawyers and paralegals to work on lawsuits related to President Trump's private businesses. Neither the White House nor the Justice Department will say how much it is costing taxpayers, but federal payroll records show the salaries of the government lawyers assigned to the cases range from about $133,000 to $185,000. The government legal team is defending President Trump in four lawsuits stemming from his unusual decision not to divest himself from hundreds of his companies that are entangled with customers that include foreign governments and officials." https://usat.ly/2jv0TnG

S.O.S. ... THE LATEST ON MOORE -- "GOP leaders weigh drastic plan to save Alabama Senate seat," by Alex Isenstadt and Eliana Johnson: "Republican leaders are exploring a dramatic remedy to salvage the Alabama Senate seat as fresh polling shows Roy Moore's prospects fading fast. With less than four weeks until the special election and no sign that the party's besieged nominee will exit the race, Senate Majority Leader Mitch McConnell and his top advisers are discussing the legal feasibility of asking appointed Sen. Luther Strange to resign from his seat in order to trigger a new special election. McConnell aides express caution, saying they're uncertain whether such a move, one of several options being discussed, is even possible. ...

"New GOP polling obtained by POLITICO suggests that Moore is cratering. A survey conducted by the [NRSC] after allegations emerged that Moore had engaged in sexual misconduct with teenagers showed him trailing Democratic candidate Doug Jones by 12 points. Other recent polling has the race closer." http://politi.co/2iZeWxM

M.I.A. -- Republicans expected Trump to address the Moore situation Wednesday, hoping he would exert some pressure on the Alabama Republican to drop out of the race. So far, he's stayed mum.

-- IS HANNITY CHANNELING TRUMP'S THINKING? ... @seanhannity at 11:12 p.m.: "I lived in Alabama-love the people. THEY will sort through the issues before them and decide. Not DC, McConnell, or Commentators, THE PEOPLE!"

DOWN BALLOT IMPACT -- "Republican Governors Seek to Avoid 2018 Damage From Trump, Moore," by Bloomberg's John McCormick: "Republican governors and their donors -- still reeling from GOP losses last week in New Jersey and Virginia -- are trying to distance themselves from their party's problems and plot a 2018 strategy to protect their state-level dominance. At the annual Republican Governors Association meeting in Austin, Texas, party officeholders downplayed those defeats and dismissed the political fallout of President Donald Trump's historically low approval ratings and lack of legislative accomplishments. They brushed aside questions about the potential long-term consequences from growing sexual misconduct allegations that have engulfed Republican U.S. Senate nominee Roy Moore in Alabama. ...

"Thirty-six states will hold gubernatorial elections in 2018, with 26 of those now controlled by Republicans. In those races, which often have trickle-down effects on legislative and local elections, Republican candidates will have to decide just how closely to embrace Trump and distance themselves from an unpopular Washington." https://bloom.bg/2ATPv9i

DRIP DRIP -- "Two more women describe unwanted overtures by Roy Moore at Alabama mall," by WaPo's Stephanie McCrummen, Beth Reinhard and Alice Crites: "Gena Richardson says she was a high school senior working in the men's department of Sears at the Gadsden Mall when a man approached her and introduced himself as Roy Moore. ... His overtures caused one store manager to tell new hires to 'watch out for this guy,' another young woman to complain to her supervisor and Richardson to eventually hide from him when he came in Sears, the women say. Richardson says Moore - now a candidate for U.S. Senate - asked her where she went to school, and then for her phone number, which she says she declined to give ...

"A few days later, she says, she was in trigonometry class at Gadsden High when she was summoned to the principal's office over the intercom in her classroom. She had a phone call. 'I said "Hello?"' Richardson recalls. 'And the male on the other line said, "Gena, this is Roy Moore." I was like, "What?!" He said, "What are you doing?" I said, "I'm in trig class."'

"Richardson says Moore asked her out again on the call . A few days later, after he asked her out at Sears, she relented and agreed, feeling both nervous and flattered. They met that night at a movie theater in the mall after she got off work, a date that ended with Moore driving her to her car in a dark parking lot behind Sears and giving her what she called an unwanted, 'forceful' kiss that left her scared. ... Moore's campaign did not directly address the new allegations. In a statement, a campaign spokesman cast the growing number of allegations against Moore as politically motivated. 'If you are a liberal and hate Judge Moore, apparently he groped you,' the statement said. 'If you are a conservative and love Judge Moore, you know these allegations are a political farce.'" http://wapo.st/2jtXgyn

-- AND MORE .... "New Roy Moore accuser: 'He didn't pinch it; he grabbed it,'" by

Anna Claire Vollers in AL.com: "A Gadsden woman says Roy Moore groped her while she was in his law office on legal business with her mother in 1991. Moore was married at that time. ... According to [Tina] Johnson, he asked questions about her young daughters, including what color eyes they had and if they were as pretty as she was. She said that made her feel uncomfortable, too. Once [legal] papers were signed, she and her mother got up to leave. After her mother walked through the door first, she said, Moore came up behind her. It was at that point, she recalled, he grabbed her buttocks. 'He didn't pinch it; he grabbed it,' said Johnson. She was so surprised she didn't say anything. She didn't tell her mother. ...

"In 1982, Kelly Harrison Thorp was working as a hostess at the Red Lobster restaurant in Gadsden. She was 17 years old and a high school senior. One day Roy Moore came into t Fringetree Bar & Restaurant at the Westin he restaurant, and she recognized him. ... Thorp said Moore asked her if she'd go out with him sometime. 'I just kind of said, "Do you know how old I am?"' she recalled. 'And he said, "Yeah. I go out with girls your age all the time."' http://bit.ly/2AMW7oV

-- @MooreSenate: "An Open Letter to @seanhannity" http://bit.ly/2yL0sZ2 ...
@VaughnHillyard: "New--> The Alabama GOP is maintaining its support for Roy Moore. In its steering committee meeting tonight, the prospect of removing Moore as the party's candidate did not reach the point of a vote."

SHOT -- @MooreSenate: "Dear Mitch McConnell, Bring. It. On."

CHASER -- NRSC executive director Chris Hansen (@tankcat) replies: "Bring It On is a movie about high school cheerleaders".

DEPT. OF ODD BEDFELLOWS -- "Senators forge deal to improve gun background database," by Seung Min Kim: "A bipartisan group of senators has struck a deal to bolster a federal database used to check the backgrounds of gun buyers in the aftermath of several recent mass shootings. The new legislative push is led by Senate Majority Whip John Cornyn (R-Texas) and Sen. Chris Murphy (D-Conn.), two powerful figures in their respective parties when it comes to gun policy. Though their bill has not been formally released, it targets the National Instant Criminal Background Check System, which both senators have said is deeply flawed.

"Their plan is twofold, according to two sources familiar with it: One is to incentivize states to send more information about criminal histories to the system, known as NICS. States usually aren't required to do so, unless their own laws mandate it or they have to do so to receive federal funding. It would also make sure that federal agencies follow through on their own requirement that they send information to the database. The new plan would beef up the federal mandate and include punishments for agencies that don't comply, according to one of the sources." http://politi.co/2hyYJit

CLINTON WORLD -- "'What About Bill?' Sexual Misconduct Debate Revives Questions About Clinton," by NYT's Peter Baker: "The cultural conversation about

women, power and sexual misconduct that has consumed the United States in recent weeks has now raised a question that is eagerly promoted by those on the political right just as it discomfits those on the political left: What about Bill? While Fox News and other conservative outlets revive years-old charges against Mr. Clinton to accuse Mr. Moore's critics of hypocrisy, some liberals say it may be time to rethink their defense of the 42nd president. Matthew Yglesias ... wrote on Vox.com on Wednesday that 'I think we got it wrong' by defending Mr. Clinton in the 1990s and that he should have resigned. Chris Hayes, the liberal MSNBC host, said on Twitter that 'Democrats and the center left are overdue for a real reckoning with the allegations against him.'" http://nyti.ms/2hDQ2r5

-- "Clinton hits back at possibility of Uranium One special counsel," by Brent D. Griffiths: "Former Secretary of State Hillary Clinton has slammed President Donald Trump for suggesting that a special prosecutor investigate her role in the Uranium One deal, a current cause célèbre among conservative commentators and some House Republican lawmakers. 'Taking myself out of it, this is such an abuse of power and it goes right at the rule of law,' Clinton told Mother Jones in an interview posted Wednesday night. 'As secretary of state, I went around the world bragging about America's rule of law. ... If they send a signal that we are going to be like some dictatorship, some authoritarian regime where political opponents are going to be unfairly, fraudulently investigated, that rips at the fabric of the contract that we have that we can trust our justice system.'" http://politi.co/2ALzTnj

WHO MIGHT REPLACE CORDRAY -- per Lorraine Woellert, Zach Warmbrodt, and Daniel Strauss: "Republicans are floating a handful of agency critics as contenders for the post, including Cordray's biggest foe, House Financial Services Chairman Jeb Hensarling (R-Texas. ... Keith Noreika, the outgoing acting head of the Office of the Comptroller of the Currency, has also been mentioned, along with Todd Zywicki, a law professor at George Mason University. Both have fiercely opposed the bureau's approach to regulation and enforcement and would face long odds of being confirmed, but could serve as interim directors without Senate approval. Brian Brooks, an executive vice president and general counsel at Fannie Mae who worked with Mnuchin at OneWest Bank, and former Florida Attorney General Bill McCollum are also mentioned as candidates to lead the bureau." http://politi.co/2iZP7Or

CLICKER -- @WardDPatrick: "President Trump stops his speech to search for water cc: @marcorubio" http://bit.ly/2zOlrM8 ... **@marcorubio:** "Similar, but needs work on his form. Has to be done in one single motion & eyes should never leave the camera. But not bad for his 1st time".

SPORTS BLINK -- "NEW YORK (AP) - Max Scherzer of the Washington Nationals wins third Cy Young Award and second straight in National League."

MICHAEL GRUNWALD in POLITICO Magazine, **"The IRS Is Building a Safe to Hold Trump's Tax Returns:** Departed tax chief John Koskinen explains why even he can't see Trump's taxes-and why we should 'beware the collapse of the IRS'": "Koskinen doesn't share those concerns-not because of his faith in Trump, but because of his faith in the IRS staff and the strict rules governing the integrity of its audits and investigations. Koskinen basically believes the IRS and its professional culture are virtually impregnable to political agendas. He hasn't spoken to Trump or anyone in the White House in 2017, even though he's known the president since they negotiated the sale of the Commodore Hotel in New York City in 1975. He's never looked up Trump's tax returns-legally, he can't, and neither can any other IRS employee who isn't working on them-and says the agency not only keeps them in a locked cabinet in a locked room, but is replacing the cabinet with a safe." http://politi.co/2hDbk8h

SUSAN GLASSER in the New Yorker: **"Karl Rove Has Seen the Enemy and He Is Steve Bannon":** "Yet Bannon, clearly, has got under Rove's skin. Rove ticked off a list of candidates whom he said showed Bannon's amazing 'bad judgment' and constituted what, to his mind, amounts to a parade of horribles: Grimm, that 'convicted felon' from New York; the 'despicable' Tom Tancredo for governor in Colorado; the 'hapless' Danny Tarkanian, a five-time failed candidate running against Senator Dean Heller in Nevada. 'These are the people he's backing and thinks can both win and then govern?' ... The Republican war is on, and Rove is quite clear on just who is the enemy. 'Bannon is a side show,' Rove replied after one too many questions about the strategist trying to claim his mantle. 'Trump is the real issue.'" http://bit.ly/2zMAdTD

BUSINESS BURST -- Fortune has named Nvidia CEO Jensen Huang its 2017 Fortune Businessperson of the Year. Also on the list -- 2: JPMorgan Chase CEO Jamie Dimon ... 3. Salesforce CEO Marc Benioff ... 4. Amazon CEO Jeff Bezos ... 5. Ulta Beauty CEO Mary Dillon. http://for.tn/2hDiA3U

DESSERT -- "Leonardo da Vinci Painting Sells for $450.3 Million, Shattering Auction Highs," by NYT's Robin Pogrebin and Scott Reyburn: "After 19 minutes of dueling, with four bidders on the telephone and one in the room, Leonardo da Vinci's 'Salvator Mundi' sold on Wednesday night for $450.3 million with fees, shattering the high for any work of art sold at auction. It far surpassed Picasso's 'Women of Algiers,' which fetched $179.4 million at Christie's in May 2015. The buyer was not immediately

disclosed. There were gasps throughout the sale, as the bids climbed by tens of millions up to $225 million, by fives up to $260 million, and then by twos." http://nyti.ms/2A2w1Cd

-- NYMag art critic Jerry Saltz: "I'm no art historian or any kind of expert in old masters. But I've looked at art for almost 50 years and one look at this painting tells me it's no Leonardo. The painting is absolutely dead. Its surface is inert, varnished, lurid, scrubbed over, and repainted so many times that it looks simultaneously new and old. ... Why else do I think this is a sham? Experts estimate that there are only 15 to 20 existing da Vinci paintings. Not a single one of them pictures a person straight on like this one." http://bit.ly/2zJFo8X

MEDIAWATCH -- "Koch Brothers Said to Back Time Inc. Deal Talks With Meredith," by NYT's Sydney Ember and Andrew Ross Sorkin: "Time Inc. is said to be in talks to sell itself to the Meredith Corporation, in a deal backed by Charles G. and David H. Koch, the billionaire brothers known for supporting conservative causes. Talks between Time Inc., the publisher of Time and People, and Meredith, the publisher of Family Circle and Better Homes and Gardens, fizzled this year. The new round of negotiations, motivated by the surprise entry of the Kochs, could lead to a quick deal, according to people involved in the discussions. The Kochs have tentatively agreed to back Meredith's offer with an equity injection of more than $500 million." http://nyti.ms/2hAXB1C

-- "Matt Drudge jabs Bannon over Roy Moore, prompting internal Breitbart fury," by CNN's Oliver Darcy: "In a tweet, Drudge linked to a Daily Beast story that said Bannon recently had second thoughts about supporting Moore. 'A lesson on leaving politics to the professionals,' Drudge wrote. ... [S]taffers at Breitbart ... were seemingly taken aback by Drudge's jab. 'Wow,' wrote Breitbart White House correspondent Charlie Spiering, linking to Drudge's tweet in an internal Slack message obtained by CNN. 'Is that accurate?' 'FACTUALLY INACCURATE,' replied Matthew Boyle, Breitbart's Washington editor. 'FAKE NEWS. MATT DRUDGE IS PEDDLING FAKE NEWS.' ... 'Not true. Bannon is not turning on judge moore. Bulls***.'" http://cnnmon.ie/2ildQx2

Congress

House Votes to Bar Methane Rule, Carbon Cost in EPA Funding Bill

The EPA would be barred from enforcing limits on methane gas emitted by fossil fuel operations and from considering in its regulations the costs to society of carbon emissions under amendments the House passed Sept. 13.

Endangered Species

Expanded Gun Rights on Federal Land Approved by House Panel

Hunters and gun enthusiasts would face fewer restrictions on using their weapons on federal land under a broad legislative package the House Natural Resources Committee approved Sept. 13, despite unanimous Democratic opposition.

Water Pollution

Power Plants Get Two-Year Reprieve for Parts of Wastewater Rule

Power plants won't have to meet new limits until 2020 on toxic wastewater that comes from using air pollution control systems and transporting bottom furnace ash, the EPA announced Sept. 13.

News

Biotechnology

Dow Soybeans Opposed in EU; Monsanto Corn Wins in Italy

The European Union could stop importing Dow AgroSciences' genetically-modified soybean products because it encourages greater use of hazardous herbicides in non-EU countries, the European Parliament said Sept. 13.

Climate Change

Net Zero Plan for Carbon Sink Emissions Moves Ahead in EU

European Union governments and landowners would have to make sure that net greenhouse gas emissions from forests and other carbon sinks remain at or below zero through 2030, under a draft regulation European Parliament approved Sept. 13.

Climate Change

UN Says Hurricane Irma Shows Trump Needs to Re-Engage on Climate

President Donald Trump or his successor will likely re-engage with the global fight against climate change because of the weight of scientific evidence, the head of the United Nations Environment Program said.

Emissions Trading

Carbon Rally Hits Brick Wall as Lawmakers Wrestle Glut Fix

After the biggest jump this year, European carbon price gains are unlikely to stick.

Emissions Trading

Long Flights' Emissions Exemption Approved in European Parliament

The European Union's exemption on emissions trading for intercontinental flights to and from the EU should continue through to the end of 2020, according to a draft regulation European Parliament lawmakers approved Sept. 13.

Energy

Energy Laboratory Awards Provide $20 Million for Technology Transfer

Nearly $20 million awarded across 12 national energy laboratories aims to spur commercialization partnerships with businesses as part of an Energy Department technology transfer effort.

Enforcement

Encana Subsidiary Fined for Oil, Gas Spill on Colorado Game Ranch

An Encana Corp. subsidiary agreed to pay a $225,000 fine for spilling oil and gas waste on a game ranch in western Colorado.

Enforcement

Prison Sentence Upheld for 3,000 Containers of Paint in Yard

An Idaho man convicted of storing thousands of paint containers in his yard without a required hazardous waste permit won't get a new trial, a federal appeals court ruled Sept. 13 (United States v. Spatig, 9th Cir., No. 15-cv-30322, 9/13/17).

Insurance

Hurricanes Highlight Failure to Enforce Flood Insurance Rules

As the floodwaters of Hurricanes Harvey and Irma recede, they may reveal more than moldy drywall and fetid trash. They could lay bare the federal government's failure to police a basic tenet of its own disaster policy: that properties with -government-backed mortgages in risky areas carry flood insurance. The government has known for decades that homeowners in flood zones often don't have the insurance they should. Just two years ago, the Federal Emergency Management Agency ...

Renewable Energy

Ab Inbev Buys Enough Wind Power to Brew 20 Billion Beers

Anheuser-Busch InBev NV, the world's largest brewer, agreed to buy 152.5 megawatts from a wind farm Enel SpA is building in Oklahoma. That's enough power to make 20 billion 12-ounce (355-milliliter) bottles of beers a year.

Renewable Energy

China Plans to Expand Ethanol Use in Vehicles Nationwide by 2020

China plans to expand the use of ethanol gasoline for vehicles nationwide by 2020 from only 11 provinces now to improve the environment and accelerate reform in the agricultural sector.

Water Pollution

Cities Swimming in Raw Sewage as Hurricanes Overwhelm Systems

Hurricane Harvey took aim at one of the nation's most industrial regions, releasing a stream of toxic pollutants from chemical plants, refineries and Superfund sites in Texas. But when its bigger sister Irma slammed into Florida, environmental alarms rang over a different kind of discharge: raw sewage.

Practitioner Insights

Energy

Practitioner Insights: ACER and Cross-Border Harmonization

How do you realize the goal of a single EU-wide energy market work when the transmission networks within each member state and their interconnections are owned by dozens of operators that are regulated by 28 separate national regulatory authorities (NRAs)? And how do you accommodate new energy-generation patterns or cross-border power flows while dealing with the physical constraints that existing transmission infrastructure imposes?

Daily Environment Report for EPA

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Energy
Sent: Wed 6/28/2017 2:07:48 PM
Subject: POLITICO's Morning Energy, presented by Exelon: Tribes gather at White House — House looks at DOE budget — Yucca and more on the move at E&C

By Ben Lefebvre | 06/28/2017 10:00 AM EDT

With help from Nick Juliano, Alex Guillen and Eric Wolff

TRIBAL ENERGY FRONT AND CENTER: The White House is inviting state officials and Native American tribal leaders to discuss local energy issues with Trump administration officials in today's chapter of Energy Week. ME expects part of the topic du jour will be promoting energy development on tribal land, something Interior Secretary Ryan Zinke has floated in budget hearing talks and actually worked on during his time in Congress.

At least one of the attendees - Navajo Nation Speaker Lorenzo Bates - could bring up a topic close to Trump's heart. The tribe is working to save a coal-fired power plant and associated mine that employ hundreds of its members. The Navajo Nation voted Tuesday to extend a lease for two more years on the 2.25-gigawatt Navajo Generating Station, one of the largest coal-fired plants in the country. The Navajo lease the station from Arizona utility Salt River Project, and Interior owns about a quarter of the plant.

Despite the lease renewal meaning the plant will continue burning coal through 2019, its long-term future is still in doubt. The plant's coal-fired electricity is too expensive compared to gas, no one wants to buy the site to update it, and it will need more than $100 million in maintenance done by the end of this decade. We'll see what comes out of today's meeting.

Guest list: Expected attendees include three Republican governors - Iowa's Kim Reynolds, Nebraska's Pete Ricketts, Maine's Paul LePage - and Alaska Gov. Bill Walker, an independent, among other state officials. Other tribes anticipated to send a representative include the Crow Nation Reservation in Montana, Chickasaw Nation in Oklahoma and Sault Ste. Marie Tribe of Chippewa in Michigan, among others.

Otherwise, we're halfway done with Energy Week. Things seem to be par for the course so far with the White House's theme-weeks. DOE Secretary Rick Perry tried bravely to keep on topic during a White House briefing while TV screens flashed the latest news on the Senate bill, which seems headed to the ER, POLITICO's Andrew Restuccia reports. "Perry's remarks made for a bizarre split-screen moment, underscoring the disconnect between the policy themes selected by the White House - this week's focus is energy - and the news cycle, which this week has been dominated by the health care bill," Andrew writes.

Welcome to Morning Energy! I'm your host Ben Lefebvre, filling in for Anthony Adragna. Anthony will be back tomorrow, newly married and relatively safe from a life of sin. Send your tips, confetti and uneaten wedding cake to aadragna@politico.com, or follow us on Twitter @bjlefebvre, @aadragna, @Morning_Energy and @POLITICOPro.

FIRST UP ON THE CHOPPING BLOCK: House Republicans are willing to go along with at least some of Trump's proposals to eliminate Energy Department programs designed to foster new clean energy technologies. And their energy and water spending bill begins its journey through the legislative process today with a House Appropriations subcommittee markup. The bill appropriators released Monday would eliminate the Advanced Research Projects Agency-Energy, prevent DOE from issuing new clean energy loan guarantees and cut nearly $1 billion from the Energy Efficiency and Renewable Energy Office, effectively halving its budget, Pro's Nick Juliano reports. What's not having such a hard time is the DOE's Office of Fossil Energy, which will get a mere $33 million trim for a total budget of about $635 million. Nuclear programs would see $969 million, a $48 million reduction.

If you go: The fun starts at 11 a.m. at Rayburn 2362-B.

More approps fun: Over on the other side of Capitol Hill, the Senate Appropriations energy and water subcommittee will hear from representatives of the Army Corps of Engineers and Bureau of Reclamation about their budget request. That hearing starts at 2:30 p.m. in Dirksen 138.

** **A message from Exelon:** Innovation always begins with the spirit of discovery-the search for new ideas and answers to our biggest questions. As America's largest clean energy provider, what happens when 34,000 Exelon engineers, analysts, and innovators put their heads together to tackle the energy industry's biggest challenges? Find out here: http://bit.ly/2szvZN4 **

OZONE, YUCCA, BROWNFIELDS AND MORE!: The Energy and Commerce Committee meets this morning to vote on eight bills, including nuclear waste legislation aimed at advancing Yucca Mountain, a reauthorization of EPA's brownfields program and a bill to delay tighter ozone standards. The markup also will include bills that would ease hydropower permitting, make it easier to build energy infrastructure across the border and promote new natural gas pipelines.

If you go: The markup begins at 10 a.m. in 2123 Rayburn. A full agenda is here.

DOJ ENVIRO NOMINEE IN HOT SEAT: Jeffrey Bossert Clark, the president's pick to run the Justice Department's Environment and Natural Resources Division, is scheduled to testify at a Senate Judiciary Committee hearing today, alongside several other nominees. Nominated earlier this month, Pros will recall that Clark has been an attorney at Kirkland & Ellis for years, and previously served as ENRD's deputy under George W. Bush. Clark is also connected to the Clean Power Plan lawsuits, where he represented a consumer group that filed a "friend of the court" brief urging the court to strike down the rule. That could require him to recuse himself from litigation over the rule. The Judiciary Committee hearing starts at 9:30 a.m. in Dirksen 226.

NOMINATIONS ON HOLD AT EPW: The Environment and Public Works Committee has postponed a vote that had been planned for this morning on Nuclear Regulatory Commission nominees Annie Caputo and David Wright and Susan Parker Bodine, who has been nominated as assistant administrator of the EPA's office of enforcement and compliance assurance. The committee has not said when it will reschedule the business meeting.

GROUP SUES FOR ICAHN, PRUITT DOCS: American Oversight, a liberal-leaning policy group said it is suing the EPA to turn over emails between Administrator Scott Pruitt and billionaire Carl Icahn, or representatives of the refinery he owns, Pro's Eric Wolff reports. The group says in its complaint that it has submitted two requests under the Freedom of Information Act, but it has not yet received any materials. The group wants Pruitt's calendars, phone logs and emails to examine whether he was in communication with Icahn or other officials. As Icahn runs CVR Energy, that could put him in conflict of interest depending on what comes up in Pruitt's records.

EPA STAFF FOUND IN MEMO: An internal EPA memo sent Tuesday listing political appointees at the agency includes at least eight previously unknown names, Pro's Alex Guillen reports. It also reveals one possible departure: Missing from the list is J.P. Freire, formerly the associate administrator for public affairs. That spot is filled in an acting capacity by Liz Bowman, formerly Freire's deputy, according to the memo. Neither Freire nor EPA immediately responded to questions about his apparent departure. Of the eight new names, the highest-ranking is Erik Baptist, the senior deputy general counsel. Baptist was an attorney with the American Petroleum Institute since 2011. Before that, he was an attorney for FERC for two years and an associate at the law firm McDermott Will & Emery, according to his LinkedIn profile.

MARK YOUR CALENDARS: The 10th Circuit has scheduled oral arguments over Interior's Obama-era fracking rule for July 27 in Denver. The appeal deals solely with whether Interior has the authority to regulate fracking on federal lands. A lower court judge previously struck down Interior's fracking rule as unconstitutional, saying it was a power delegated explicitly to the states. The Trump administration tried (apparently unsuccessfully) to pause the case while it rethinks and presumably repeals the rule. It's not clear what DOJ lawyers will do on July 27, but environmental groups have signed up to defend the rule at least. A loss for the Trump administration here could eventually lead to some type of federal control over fracking on public lands.

ZINKE A COLD ONE IN MONTANA: It turns out Zinke didn't have any big announcements for the Western Governors' Association annual meeting Tuesday in Montana, but an Interior source assures ME something is coming later this week. Zinke may have been upstaged by beverage makers, however. The official WGA account dedicated six Tweets to Zinke's presentation, compared to a whopping 14 Tweets dedicated to a round table on craft brewers that followed him.

YOU WOULDN'T LIKE HIM WHEN HE'S ANGRY: Newly elected Montana Rep. Greg Gianforte will join the House Natural Resources Committee, Chairman Rob Bishop announced Monday. He will sit on its subcommittees on federal lands and water, power and oceans. Gianforte won Zinke's old seat earlier this year, after he infamously assaulted a reporter just before the special election.

DEMS DEMAND DOE FIRING: Sens. Mazie Hirono and Maria Cantwell are calling on DOE to fire a Trump appointee over racially insensitive remarks on social media. William Bradford, who was recently appointed to lead the DOE's Office of Indian Energy, referred to President

Obama a "Kenyan creampuff," and called the internment of Japanese-Americans during World War II "necessary" in Twitter posts he has since deleted, according to press reports. In a letter to Perry the senators call it "disturbing" how someone with Bradford's history of offensive comments got through the administration's vetting process and ask DOE to explain what role it played in the hiring.

THE 47 PERCENT AT THE BLM: Oil and gas companies are not operating on nearly half of the onshore land they've leased from the federal government, The Wilderness Society points out via BLM data . How much the drilling should be done on public land is an argument almost as old as Spindle Top. But what's new is how low operating levels have fallen. Drills working on only 53 percent of leased land is the lowest level since BLM started keeping records in 1998, according to some ME napkin-math. Another sign of the times: Drillers only spudded 847 new wells last year, half of what they drilled the year before and a third of what they did in 2014, BLM data shows. "There is no reason oil, gas, and coal companies need more public land," The Wilderness Society said in a memo flagging the BLM data.

The API chalks up the decline to excessive regulations. "Federal acreage has been mired in excessive red tape for years, and this has effectively discouraged investment in oil and gas projects on BLM managed lands," spokeswoman Brooke Sammon tells ME via email, although did not mention of the steep decline in oil prices that occurred in the past several years.

PROPOSITIONAL POLITICS: Shareholders at public companies are currently offering more environment-related proposals than any other type, a Manhattan Institute-sponsored study finds. ExxonMobil shareholders pushing through a "2-degree scenario stress test" proposal earlier this year garnered most of the attention, but environmental proposals now beat out those touching upon lobbying disclosure, executive compensation and other issues, according to the study. And it found that support is rising among shareholders for the environmental proposals, which averaged 27 percent approval so far this year, up from 13 percent at the beginning of the decade.

MOVER/SHAKER: James M. Owendoff has been named DOE's Principal Deputy Assistant Secretary in the Office of Environmental Management. He had been senior adviser to the assistant secretary in the Office of Environmental Management since January 2010.

QUICK HITS:

- In disaster's wake, BP doubles down on deepwater despite surging shale, Reuters.

- Wanted In Saudi Arabia: An Extremely Careful Drive, Bloomberg.

- Kinder Morgan secures financial backing for Canadian pipeline, Fuel Fix.

- Saudi Aramco called on to improve data disclosure ahead of IPO, Financial Times.

- This Shipping Magnate Is Calling a Bottom in the Oil Rout, Wall Street Journal.

THAT'S ALL FOR ME! Anthony takes charge tomorrow.

** **A message from Exelon:** Innovation always begins with the spirit of discovery-the search for new ideas and answers to our biggest questions. As Washington, D.C.'s energy provider and America's largest source of clean energy, we're committed to continual investment in innovation. Every day, Exelon's engineers, analysts, and innovators are revolutionizing the way energy is generated, sold, and delivered across the United States and around the world. So, what happens when 34,000 Exelon employees come together at our annual Innovation Expo in Washington, D.C. this week to tackle the energy industry's biggest challenges? Find out here: http://bit.ly/2szvZN4 **

Subject: EPA science board chairwoman 'concerned' about lack of members

By Annie Snider

05/23/2017 11:24 AM EDT
Updated 05/23/2017 11:46 AM EDT

The chairwoman of the EPA scientific advisory board that has been targeted by the Trump administration said she is concerned about the board's ability to function with so few members.

Deborah Swackhamer, chair of EPA's Board of Scientific Counselors and a University of Minnesota professor, told the House Science Committee's environment panel that her board is down to just five members since EPA Administrator Scott Pruitt declined to renominate nine of the board's 18 members. Four members have rotated off after their second terms and two subcommittee members also resigned in protest.

"I'm obviously concerned. My committee is no longer populated. I'm anxious that it gets repopulated as quickly as possible," she said.

An EPA spokesman has said the agency is reopening the nomination process and indicated Pruitt is looking to increase industry voices on the panel.

Rep. Brian Babin (R-Texas) defended the move, arguing there was no reason to "rubber stamp" renominations when there is a pool of other interested scientists, and he questioned why "such an open and honest process" would be an issue.

But the panel's Democrats argued the move is part of a pattern of trying to undermine science, including by removing references to climate change from agency websites and deciding not to ban the pesticide chlorpyrifos despite the recommendation of EPA's scientists.

"I'm concerned that today the Trump administration is attempting to silence federal scientists and offer alternative facts rather than scientific evidence," said the panel's top Democrat, Rep. Eddie Bernice Johnson (D-Texas).

Twenty20

Advancing dignity through humility

Andy Smarick | AEIdeas

How do we approach social issues, economic issues, and public policy issues so a deep respect for human dignity is our default setting? That is, instead of listing some laws and regulations that might be changed, how do we take a philosophical approach. It won't provide an answer to every question, and it will, actually, be quite lousy at addressing tactical issues — such as what the right tax is for this or that. But how can we create a framework for engaging with the big idea of governing with dignity?

Reuters

Why inflation needs to

rise in recessions

Ramesh Ponnuru | Bloomberg View

Those who favor a new monetary regime, in which the Fed would stop setting a target level for inflation and start targeting nominal spending instead, can rejoice at having apparently made an influential convert: Lawrence Summers. Summers — who was an architect of economic policy in the Clinton and Obama administrations — announced his shift in thinking in a recent op-ed, and says he will explain his reasoning in more detail soon. He makes a powerful case. But it's worth lingering over one argument in it.

Reuters

Amazon, Whole Foods, and the power of big tech

James Pethokoukis | AEIdeas

The business and consumer implications of the $14 billion Amazon–Whole Foods deal are myriad. But there is also a political implication that goes beyond politics. An alarmist outlook of big tech — including Facebook and Google — seems to be growing more common on the left, a view that the platform companies' huge concentrations of wealth and data mean that they have captured the economy.

Reuters

Uncertainty surrounds the future of special forces

Phillip Lohaus | US News & World Report

President Donald Trump has made much fanfare over reversing course on his predecessor's policies and priorities. From health care to climate change, the president has relished taking the inverse of former President Barack Obama's positions. But this has not proved to be the case with respect to national security. That trend is not good news for America's special operations forces.

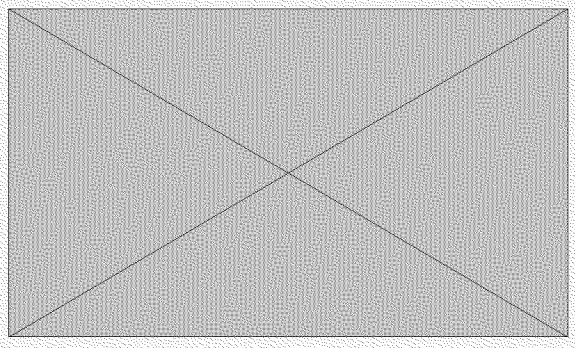
Applying the adjective "reasonable" to North Korea is, well, not reasonable.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



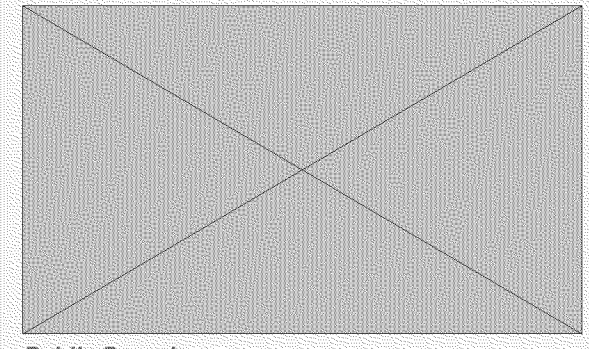
Reuters

A brutal, but reasonable, response to North Korea

Thomas Donnelly | Strategika

Applying the adjective "reasonable" to North Korea is, well, not reasonable. It's not that the Pyongyang regime is entirely irrational, but it is certainly differently rational in a way that is nearly impossible for consent-of-the-people democracies to comprehend. In imagining conventional military options to change the Kim regime or eliminate its offensive capabilities, effectiveness is a better measure. This is a case where

brutality looks reasonable.



Reuters

A new energy milestone, thanks to natural gas

Mark J. Perry | Washington Examiner

The opening of a liquefied natural gas (LNG) export terminal in southern Maryland normally wouldn't draw much attention. But to politicians, the Cove Point LNG facility has one huge advantage that outweighs any potential problems: It was built on time and within budget. It sends a strong signal to our allies and trading partners that America is committed to its role as a global energy leader. There are few energy issues more important today than LNG.

Subject: Playbook Power Briefing: TRUMP claims states not sending data to voter fraud commission are hiding something -- SEAN SPICER speaks to CBN -- POTUS' last-ditch lunch to save Obamacare repeal

View online version | Add politicoplaybook@politico.com to your address book.

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BULLETIN -- "WASHINGTON (AP) - Trump says senators shouldn't leave town for August recess without action on health care overhaul."

Good Wednesday afternoon. PRESIDENT TRUMP dropped in on the first meeting of the presidential advisory commission on election integrity. Trump slammed states that aren't sending data. The president addressing the commission: "If any state does not want to share this information, one has to wonder what they are worried about. And I ask the vice president, I ask the commission, what are they worried about? There's something. There always is."

-- @MatthewNussbaum: "The voter fraud commission will cost $500,000 -- $250K this year and next, per VP's office." ***Matt's story*** http://politi.co/2vCRETh

THE PRESIDENT, AND HIS POLICY -- **"Trump's wall: The inside story of how the president crafts immigration policy,"** by WaPo's Ashley Parker, David Nakamura and Phil Rucker: "Trump is torn over how to address the status of the younger immigrants who were brought to the country illegally by their parents, colloquially known as 'Dreamers,' who were protected by President Barack Obama's administration. Debate about the Deferred Action for Childhood Arrivals (DACA) policy aimed at this group has been among the most robust - and inconclusive -- in Trump's White House.

"By contrast, Trump is far more certain about the wall. The structure could change in design or function -- he vowed to build a much longer and higher wall during the campaign -- but his security argument for it has remained constant." http://wapo.st/2vjvMwR

DEPT. OF POLITICS -- "Criticize Trump at your peril, Republican candidates. Just ask Kim Guadagno," by the Star Ledger's Matt Arco and Claude Brodesser-Akner: "Already trailing badly in the polls, Republican gubernatorial candidate Kim Guadagno has been hit with another devastating 1-2 punch: She's lost the confidence of a pair of deep-pocketed GOP groups that spend big on governor's races, NJ Advance Media has learned.

"The Republican National Committee, which is controlled by President Donald Trump, views the lieutenant governor as someone who hasn't been loyal to the president and officials there see her race as a losing cause, according to two sources familiar with the RNC's plans. The sources requested anonymity because they were not authorized to speak publicly. The Republican Governors Association, a nationwide group formed with the sole purpose of electing GOP governors, has invested minimally in New Jersey and currently has no plans to change course, sources say.

"The other hit for Guadagno comes right here in New Jersey, where Gov. Chris Christie's top fundraisers privately say they are sitting out the race because, in part, she's been deemed disloyal to the governor after criticizing him on several issues, including his stay at the governor's beach house during the state shutdown." http://bit.ly/2tfDk2k

SNEAK PEEK -- FROM THE WHITE HOUSE -- @realDonaldTrump at 8:30 a.m.: "I will be having lunch at the White House today with Republican Senators concerning healthcare. They MUST keep their promise to America!" ... **at 8:46 a.m.:** "The Republicans never discuss how good their healthcare bill is, & it will get even better at lunchtime. The Dems scream death as OCare dies!"

-- FOR THE RECORD: Senate Republicans don't expect much to happen at this meeting.

HEAD SNAP -- TRUMP IS ALL OVER THE PLACE -- In the past few days, Trump has suggested several different tactics to deal with the health care law. He said to repeal it now, replace it later. After it failed, he said Republicans should let Obamacare fail and force Democrats to the negotiating table. Today he's signaling he will get with Republicans to make the bill better over lunch.

-- "Top Trump campaign aides met with Lee on health care," by Burgess Everett: "Former Trump campaign aides Corey Lewandowski and David Bossie met with Sen. Mike Lee to talk health care on Tuesday, a source familiar with the conversations confirmed. The two former top Trump campaign officials tried to convince the conservative Utah Republican to reverse course on his opposition to the latest Obamacare replacement bill written by Senate Majority Leader Mitch McConnell. Lee restated his opposition to the current draft of the bill and his support for his amendment, the Consumer Freedom Act, which was not included. But the conversation was productive, the source said." http://politi.co/2u9SVDg

DAVID BRODY'S NEW SHOW: CBN's "FAITH NATION" -- SEAN SPICER SPEAKS! -- BRODY: "Sean, I want to ask you about the press briefings. Do you want to set the record straight a little bit? You were must-see TV. You're like the Seinfeld of TV news, or TV politics. Give us the sense of how you decide there what's going to be on-camera and off-camera. What's the mechanism there?"

SPICER: "There's a lot of factors that go into it every day, David. Obviously, one of the

things that gets overblown as you know, you're here quite often, is that we brief every day. And the question is, I think for some individuals, they want everything on camera every day. As you know today the president is going to have several events on camera. He's going to have the pool involved. So on days he's going to be doing a big event and making major policy initiatives, it's obviously much more important to have the president's voice carry the day. So, we'll engage with reporters throughout the day. One of the things that sometimes people don't appreciate the way that they get it is we are here very early in the morning, we stay very late at night.

"We stay very engaged with the press all day long doing interviews like this, communicating with the press. And we do a briefing every single day. I think for a lot of folks, they're more interested in getting the clip to put on the internet, to put on their news and we're interested in making sure that we communicate with the American people, that we give the press an opportunity to get their questions answered but we're not here to make it a spectacle either. We want to make sure that we do things that are informative and helpful to get the president's message out, to answer the key questions. So on days that he's talking in particular we're going to make sure that we let his voice carry the day." ***Link*** http://bit.ly/2uJaUSP

THE CLUB FOR GROWTH announced that it will make the Senate's upcoming vote on advancing the 2015 repeal bill a key vote for its scorecard and launched a website with Tea Party Patriots slamming Republican senators not backing the bill as "Obamacare repeal traitors." http://bit.ly/2vCABAM

CONSEQUENCES? -- "GOP repeal foes face blowback," by Alex Isenstadt and Gabe Debenedetti: "Senior GOP officials spent much of Tuesday surveying the anger and frustration within their own party and taking calls from bitterly disappointed contributors, some of whom threatened to turn off the cash spigot. Senators who refused to support the bill, the party officials predicted, would see their fundraising take an immediate hit. Texas businessman Doug Deason, a Trump backer and the son of billionaire Darwin Deason, said he and other major GOP donors were warming to the idea of funding primary challenges to senators who had opposed the health care bill. There was growing frustration, he said, over the failure to advance the president's agenda.

"In a text message referring to three senators - Sens. Susan Collins, Jeff Flake and Shelley Moore Capito - who played a role in sinking the bill, Deason ripped 'the spineless Republican members from Maine, Arizona and West Virginia who seem to believe that Obamacare is actually succeeding.' He added: 'It will be disappointing to see these three lose their reelection campaigns to Democrats - unless we can find better candidates to run in the primary races against them.'" http://politi.co/2vCffDn

THIS IS UNUSUAL -- @ericawerner: "Sen Rubio currently has a three-member security detail. This is not normally the case."

ATTENTION TRAVELERS -- "Mexico says electronic device checks on U.S. flights start today," by CNN's Euan McKirdy and Daniel Silva Fernandez: "Passengers on

flights from Mexico to the United States can expect longer security checks starting Wednesday -- part of a larger U.S. push for extra scrutiny for inbound flights worldwide. Airlines in Mexico will now subject passengers on direct U.S.-bound flights to extra security checks for portable electronic devices larger than a phone, Mexico's civil aviation authority said. ... Devices that passengers take with them into the cabin will be subjected to safety checks and should be presented separately from the rest of the luggage, and without a cover or any other protection, the authority said." http://cnn.it/2vCfvm5

SWAMP CHECK -- "Trump's stark priorities in funding and cutting are keenly felt by federal workforce," by WaPo's Lisa Rein: "Where Trump is putting resources and priorities, many employees describe a sense of validation and optimism. Where he is dismissive of their mission and their value as public servants, they are anxious, discouraged and sometimes hostile. And in offices where the White House envisions severe budget cuts and has set in motion buyouts, early-retirement offers and possible layoffs, civil servants are ill at ease, their futures uncertain. Amid this upheaval, employees have kept the government humming. Social Security checks are still going out, and the Labor Department is still enforcing wage and hourly pay laws. But in some offices, employees say there is little direction from above and few initiatives underway.

"After just six months, it is too early to gauge the impact of the Trump administration's zeal to shrink the size and reach of government. Congress controls not only spending, but also in many cases whether the White House actually can eliminate agencies and programs. But this much seems clear: Across the far flung bureaucracy, employees are either on edge or waiting with high expectations for the change Trump promised, with few, it seems, weighing in at neutral." http://wapo.st/2vC6wRJ

POLITICO EUROPE -- "Moscow spooks return to Hungary, raising NATO hackles," by Lili Bayer: "[O]fficials from allied countries say Russia increasingly sees Hungary as an operational backdoor into Europe. 'There is tremendous concern that Russia is basically using Hungary as an intel forward operating base in NATO and the EU,' said a former official at the U.S. Embassy in Budapest, who spoke on condition of anonymity. Western officials say Russian intelligence agencies have boosted their presence over the past few years in Hungary, which is a member of Europe's border-free Schengen zone, to launch a variety of intelligence and sabotage operations in the EU. 'Back in 2014-2015 [the Russians] went from maybe 50-100 intelligence officers up to 300 plus' in Hungary, said the former embassy official." http://politi.co/2uHP6qA

TODAY'S BEYOND THE BELTWAY -- The most competitive California congressional races -- Rahm Emanuel is in Europe http://politi.co/2vCdfuR

OUT MAGAZINE has its Power 50 list out, highlighting "individuals who are working to make a positive impact on LGBTQ culture, beyond simply being at the pinnacle of their field/professions." Jared Polis (D-Colo.), David Cicilline (D-R.I.) and Mark Takano (D-Calif.), Glenn Greenwald, HRC

president Chad Griffin, Don Lemon and more all make the list http://bit.ly/2uCKpNK

NEW SCALIA BOOK -- Crown Forum announced that they're publishing a collection of the late Supreme Court Justice Antonin Scalia's speeches, edited by his youngest son, Christopher Scalia, and Edward Whelan, one of his former clerks. The book is scheduled to be released Oct. 3 and has a foreword from Justice Ruth Bader Ginsburg. ***The release*** http://politi.co/2uCMjxT ... ***The cover*** http://bit.ly/2uCqsXy

HISTORY LESSON -- CARLOS LOZADA in WaPo, "Samuel Huntington, a prophet for the Trump era": "Huntington, like Trump, wanted America to be great, and came to long for a restoration of values and identity that he believed made the country not just great but a nation apart. However, if that path involves closing ourselves off, demonizing newcomers and demanding cultural fealty, then how different are we, really, from anywhere else? The central agony of the Trump era is that rather than becoming great, America is becoming unexceptional. And that's not a clash of civilizations. It's a civilization crashing." http://wapo.st/2vBWJer

MEDIAWATCH -- Wendy Benjaminson has been named the national news editor for beats at the AP. She was most recently interim bureau chief for the AP in D.C.

Energy and Climate Report

September 13, 2017 - Number 177

News

Climate Change
Net Zero Plan for Carbon Sink Emissions Moves Ahead in EU
European Union governments and landowners would have to make sure that net greenhouse gas emissions from forests and other carbon sinks remain at or below zero through 2030, under a draft regulation European Parliament approved Sept. 13.

Climate Change
UN Says Hurricane Irma Shows Trump Needs to Re-Engage on Climate
President Donald Trump or his successor will likely re-engage with the global fight against climate change because of the weight of scientific evidence, the head of the United Nations Environment Program said.

Congress
House Votes to Bar Methane Rule, Carbon Cost in EPA Funding Bill
The EPA would be barred from enforcing limits on methane gas emitted by fossil fuel operations and from considering in its regulations the costs to society of carbon emissions under amendments the House passed Sept. 13.

Emissions Trading
Carbon Rally Hits Brick Wall as Lawmakers Wrestle Glut Fix
After the biggest jump this year, European carbon price gains are unlikely to stick.

Emissions Trading
Long Flights' Emissions Exemption Approved in European Parliament
The European Union's exemption on emissions trading for intercontinental flights to and from the EU should continue through to the end of 2020, according to a draft regulation European Parliament lawmakers approved Sept. 13.

Energy
Energy Laboratory Awards Provide $20 Million for Technology Transfer
Nearly $20 million awarded across 12 national energy laboratories aims to spur commercialization partnerships with businesses as part of an Energy Department technology transfer effort.

Enforcement
Encana Subsidiary Fined for Oil, Gas Spill on Colorado Game Ranch
An Encana Corp. subsidiary agreed to pay a $225,000 fine for spilling oil and gas waste on a game ranch in western Colorado.

Renewable Energy

Ab Inbev Buys Enough Wind Power to Brew 20 Billion Beers

Anheuser-Busch InBev NV, the world's largest brewer, agreed to buy 152.5 megawatts from a wind farm Enel SpA is building in Oklahoma. That's enough power to make 20 billion 12-ounce (355-milliliter) bottles of beers a year.

Renewable Energy

China Plans to Expand Ethanol Use in Vehicles Nationwide by 2020

China plans to expand the use of ethanol gasoline for vehicles nationwide by 2020 from only 11 provinces now to improve the environment and accelerate reform in the agricultural sector.

Water Pollution

Power Plants Get Two-Year Reprieve for Parts of Wastewater Rule

Power plants won't have to meet new limits until 2020 on toxic wastewater that comes from using air pollution control systems and transporting bottom furnace ash, the EPA announced Sept. 13.

Practitioner Insights

Energy

Practitioner Insights: ACER and Cross-Border Harmonization

How do you realize the goal of a single EU-wide energy market work when the transmission networks within each member state and their interconnections are owned by dozens of operators that are regulated by 28 separate national regulatory authorities (NRAs)? And how do you accommodate new energy-generation patterns or cross-border power flows while dealing with the physical constraints that existing transmission infrastructure imposes?

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

VOTE DELAY - "Republicans delay Obamacare repeal vote until after recess," by POLITICO's Jennifer Haberkorn and Burgess Everett: "Senate Republicans have delayed their plans to vote on repealing Obamacare this week, amid strong resistance from moderate and conservative Republicans to even beginning debate, GOP sources familiar with internal party discussions said. Republicans plan to re-write their health bill over the July 4th recess and get a new analysis from the Congressional Budget Office." **Full story.**

- MORE - "Inside the GOP's surprise health care flop," by POLITICO's Burgess Everett, Jennifer Haberkorn and Josh Dawsey: "...Senators left the meeting perplexed at what will come next, and people close to McConnell don't fully comprehend how his strategy will play out, according to interviews with senators, aides and Republican operatives." **Full story.**

BEST LAID PLANS... - "Senate GOP seethes at Trump impulsiveness," by POLITICO's Alex Isenstadt and Josh Dawsey: "Top GOP officials and senators say White House chaos and impulsiveness are crippling efforts to expand the Republican Senate majority in 2018, unraveling long-laid plans and needlessly jeopardizing incumbents. ... The most recent flash point involves Nevada Sen. Dean Heller, who was attacked by a White House-sanctioned outside group after announcing his opposition to the now stalled Obamacare repeal bill. Heller, the most endangered GOP incumbent up for reelection in 2018, was initially targeted with a surprise $1 million digital, TV, and radio assault ... By Tuesday evening, after several senators directly complained to the president today about the anti-Heller ads in a meeting at the White House, the group decided to stop airing the spots. Heller himself brought up the commercials during the meeting, a spokesman for the senator confirmed."

- "... McConnell has also been stewing about another race: the Alabama Senate primary ... For weeks, McConnell and top political aides had been asking the Republican National Committee to release coordinated funding to help newly-appointed Sen. Luther Strange, who is trying to fend off a large field of GOP primary opponents in a late summer special election. The NRSC and another McConnell-allied group, Senate Leadership Fund, are already aggressively boosting the Alabama senator. Yet after weeks of requests, no RNC expenditures have been granted, and Senate Republican strategists began to wonder whether if it had simply been lost in a

bureaucratic logjam - or worse, whether the anti-establishment president was reluctant to have the national party wade into a contested primary. The lack of commitment caused so much consternation that McConnell and Strange brought the matter directly to the White House, asking for the administration to approve of the funding. Strange has talked directly to Trump about it, according to two sources briefed on the matter. McConnell personally lobbied Chief of Staff Reince Priebus ... As of Tuesday morning, however according to an RNC official, the national party still hadn't given final approval." **Full story.**

POLLING DATA - "AMA polls of 7 states show GOP health bill unpopular," by Campaign Pro's Kevin Robillard: "New American Medical Association polls of seven states with Republican senators show that the party's health care packages are deeply unpopular. GOP firm Public Opinion Strategies conducted the surveys of registered voters in Alaska, Arkansas, Colorado, Nevada, Ohio, and Tennessee, while Voter Consumer Research conducted the West Virginia poll. In all of the states, no more than 26 percent of voters support the House health care bill, which is similar but not identical to the Senate GOP proposal rolled out last week. In Nevada, the home of vulnerable GOP Sen. Dean Heller, only 18 percent of voters say the GOP legislation is a good idea, while 52 percent say it's a bad idea. For Obamacare, those numbers are 45 percent and 37 percent. Fifty-eight percent of Nevada voters view the state's Medicaid program favorably, while just 14 percent view it unfavorably. And of proposed changes to Obamacare, only one proposal - allowing the sale of health insurance across state lines - attracts more than 50 percent support." **Full story.**

- Save My Care releases rapid poll: The Democratic group wrote in a polling memo that "support for the repeal bill has hit rock bottom," finding that after the CBO report, 26 percent of voters supported the repeal. **Read the full polling memo here.**

- "GOP prospects to challenge Sen. Tammy Baldwin mostly mum on Obamacare repeal," by The Milwaukee Journal Sentinel's Jason Stein and Lillian Price: "Most of the potential GOP challengers to U.S. Sen. Tammy Baldwin aren't saying yet whether they support a U.S. Senate proposal to repeal Obamacare." **Full story.**

Days until the 2017 election: 132.

Days until the 2018 election: 496.

MASS GENERAL - "WBUR Poll: Warren And Baker In Strong Positions For Re-Election": 55 percent of Massachusetts voters view Democratic Sen. Elizabeth Warren

favorably and 34 percent view her unfavorably, according to the poll, while 64 percent view GOP Gov. Charlie Baker favorably and just 15 percent view him unfavorably. Their challengers are essentially unknown, with at least 61 percent of voters saying they had never heard of them. Warren cleared 60 percent in two matchups with Republicans Geoff Diehl and Shiva Ayyadurai, while Baker got 53 and 55 percent against Democrats Setti Warren and Bob Massie. (The poll also tested him against Attorney General Maura Healey, with a 48-36 result in favor of the Republican incumbent.) **Full story.** See the poll **here**.

LIFE OF THE PARTY - Holcomb and state GOP launch joint fundraising committee ahead of Senate race against Donnelly: Indiana Gov. Eric Holcomb launched a joint fundraising committee with the state Republican party last night - and defeating sitting Democratic Sen. Joe Donnelly will be its first and foremost task heading into 2018, state party chairman Kyle Hupfer tells Morning Score. The committee, which recently filed a statement of organization with the FEC, will distribute 70 percent of the money raised to Holcomb's reelection efforts and 30 percent to the state party. It's the first committee of its kind that Hupfer could recall and other state party chairs have expressed interest, Hupfer said, adding that "this could really be a model that many of them are envious of."

2018 WATCH - "Nicole Schneider won't run for Senate against Tammy Baldwin," by the Milwaukee Journal Sentinel's Jason Stein: "Schneider is the daughter-in-law of the late Donald Schneider, who built Schneider National Inc., and was a notable potential candidate because she has the potential to self-fund a campaign. A Republican source familiar with Schneider's decision said she had decided that a run for Senate would have left her with no time for her children. ... Schneider had faced some questions about her credentials as a conservative but was watched closely because of her family's wealth." **Full story .**

- IN NY-22... - Democratic state Assemblyman Anthony Brindisi "plans to announce Wednesday that he will challenge U.S. Rep. Claudia Tenney in the 2018 election, according to two Democratic sources familiar with his decision," the Syracuse Post-Standard's Mark Weiner reports. **Full story.**

- IN MONTANA... - Judge Russ Fagg, a Republican district judge from Billings, launched an exploratory committee to challenge Democratic Sen. Jon Tester, The Helena Independent Record reported.

- IN FL-27... - Democratic state Sen. Jose Javier Rodriguez is announcing his campaign for retiring GOP Rep. Ileana Ros-Lehtinen's increasingly blue-tinted seat on Wednesday.

MORE HEALTH CARE ADS - Association for Community Affiliated Plans airing spots attacking Medicaid cuts: "The Association for Community Action Plans, which represents safety net health care plans, is out with new television ads attacking the Medicaid cuts included in the Senate GOP health care proposal. The seven-figure digital and television ad buy is airing in West Virginia, Ohio, Colorado, Arizona and Nevada - home to Sens. Shelley Moore Capito, Rob Portman and Cory Gardner , plus vulnerable 2018 incumbents Jeff Flake and Dean Heller. The 30-second spot is targeted toward Republicans, and links Medicaid to job creation, aiming to show Trump supporters the program isn't welfare." Watch the ad here. **Full story.**

- PCCC releases a new TV ad in West Virginia: The PCCC is out with a spot to pressure Sen. Shelley Moore Capito into not supporting the Republican health care bill, calling any cuts to Medicaid "immoral." The ad features a mother, Priscilla, who says in the ad that she won't be able to afford her daughter's cerebral palsy medication under the new legislation, adding that her "daughter could die from seizures." **Watch the ad here.**

FEC FILINGS - Gianforte raised $3.2M, spent $4.5M in Montana special: "Montana Republican Greg Gianforte, who recently won a special election to become the state's at-large member of Congress, raised a total of $3.19 million and spent $4.48 million during this year's special election, according to a new FEC filing . ...Over $490,000 of his haul in that time - which was when Gianforte assaulted a reporter covering his campaign - came from small donors, a sharp increase from the approximately $180,000 that came in from small donors (under $200) from April 2 through May 5, which was the previous filing period." **Full story.**

TRANSITIONS - GOP firm Go BIG Media announced adding two staffers: Video editor Jared Solomon, formerly of the RNC, and graphic designer Nicole Fryling.

CODA - QUOTE OF THE DAY: "I may not be able to sue a member of Congress but I sure as hell can sue the f--- out of Podesta," Roger Stone, longtime Trump associate, wrote to POLITICO in an email about his closed hearing before the House Intelligence Committee.

Subject: [SPAM] Federal Insider: Special Counsel Lerner leaves office as Trump rejects highly praised whistleblower advocate

Special Counsel Lerner leaves office as Trump rejects highly praised whistleblower advocate

By Joe Davidson

Shirine Moazed and Elizabeth McMurray (L-R) look on as Special Counsel Carolyn Lerner hands whistleblower James Parsons an honorary award in 2012. Parsons works at the Dover Mortuary. The whistleblowers' case resulted in major changes in the way soldiers' remains are treated at the Dover Air Force Base mortuary. (Photo by Daniel C. Britt / The Washington Post)

The defining moment for the Office of Special Counsel (OSC) after Carolyn Lerner became head of the agency was a gruesome one about body parts and a dismembered Marine.

It's not the usual fare for the office on M Street NW that deals with Hatch Act violations and prohibited personnel practices. But protecting whistleblowers is where OSC makes its reputation — as in the 2011 case involving the Defense Department's Port Mortuary in Dover, Del.

Soon this little but powerful office will have a new special counsel. Rejecting the advice of Republicans and Democrats to keep Lerner, President Trump has nominated Henry Kerner to take her place. He is a former Republican congressional staffer and currently assistant vice president at the Cause of Action Institute, a small-government advocacy organization.

Lerner, who leaves office on June 14, had been on the job only a few months when she revealed reports by federal employees of grisly transgressions at the morgue operated by the Air Force. Body parts were lost in two cases, and in another, the office reported that the mangled body of a Marine "was dismembered with a saw in order to make the body fit inside a military uniform, without the consent or notification of the family."

With a staff that wouldn't begin to fill one Pentagon hallway, Lerner humbled and embarrassed the Defense Department, the government's largest agency. Lawmakers were appalled. The Air Force secretary at the time

expressed his sincere “regret” for “lapses in our standards at Dover,” a non-apologetic understatement.

The action of the Office of Special Counsel — no relation to a special prosecutor or to Robert S. Mueller III, the special counsel investigating Russian meddling in the 2016 presidential election — secured mortuary reforms and protected the employees who were targets of Air Force retaliation.

“I think that we have sent the federal community a message that whistleblowers should be valued,” Lerner said Monday in her office overlooking St. Matthew’s Cathedral. “Whistleblowers now feel comfortable coming forward, and that is helping our government.”

Will VA chief be voice of reason on climate change and

The Port Mortuary case really helped the federal community understand that OSC was robust enforcer of whistleblower laws,” she added.

Considering the widespread retaliation against federal whistleblowers, her assessment of their comfort might be optimistic, but there is no doubt that the Office of Special Counsel is a more robust agency than the moribund place they found before she got there.

It moved “from last-resort option to first choice for getting relief for whistleblowers,” said Tom Devine, legal director of the Government Accountability Project, a whistleblower advocacy organization.

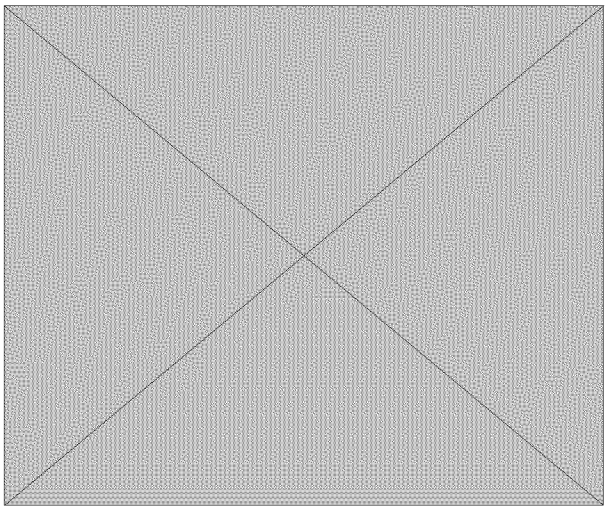
Relief for individual whistleblowers also can mean systemic improvements for federal agencies and taxpayers. The Department of Veterans Affairs is the obvious example. Congress approved VA improvements following a 2014 scandal over the coverup of long patient wait times, which was revealed by whistleblowers. Whistleblower disclosures also led to a new overtime pay system for Border Patrol agents. Lerner’s office was instrumental in both.

Devine’s strong praise for OSC is not unqualified. “The bad news is they operate at a molasses pace” in some instances, he said. He added that he would like Lerner to be more aggressive about taking legal action against federal agencies that violate whistleblower rights.

Despite the slow pace, agency statistics show impressive gains. There were 276 favorable actions for whistleblowers and other victims of PPPs.

Ironic criticism comes from James J. Wilson, the agency’s chief human capital officer. He filed a whistleblower retaliation complaint against Lerner with the Merit Systems Protection Board after failing to find success before the Council of the Inspectors General on Integrity and Efficiency. Regarding his complaints to the council, Wilson, who previously filed grievances against former employers at two other agencies, signed an affidavit saying, “I received final decisions closing these four matters with no further action being taken.”

Whatever the criticism of Lerner, it is outweighed by praise from whistleblowers and members of Congress.



“She’s fearless,” Robert MacLean, an air marshal whistleblower, told me earlier this year. His was the first federal whistleblower case heard by the Supreme Court and MacLean credits his victory largely to work done by OSC.

Unusual in this era of hyper-polarization, she is lauded by both sides of the aisle.

“Leading the Office of Special Counsel requires a deep appreciation for the patriotic work that whistleblowers do to shine a light on fraud or misconduct in government. Carolyn Lerner has been a steadfast advocate for government whistleblowers, and I am grateful for her service at OSC,” said

[prohibited personnel practices] this past year, more than double the annual average," the office said in its budget justification to Congress. "In the last two years, OSC has achieved *five* times the number of favorable actions in whistleblower retaliation complaints than in any prior two-year period in agency history…. In FY 2016, for the second straight year, OSC received upwards of 6,000 new matters, a 25 percent increase over the prior two-year period."

Sen. Charles E. Grassley (R-Iowa), chairman of the Senate Judiciary Committee. "Her leadership should be a road map for future leaders of this office."

The Senate Whistleblower Protection Caucus, founded by Grassley and Sen. Ron Wyden (D-Ore.), had urged the Trump administration to retain Lerner.

"I am disappointed the president chose not to take Sen. Grassley's and my recommendation to renominate Carolyn Lerner, who is an experienced leader with bipartisan support," said Wyden.

It's also bicameral. Before Trump's decision, Rep. Rod Blum (Iowa), Republican chairman of the House Whistleblower Protection Caucus, led a bipartisan House letter saying Lerner deserved another term. Among those who signed was Rep. Elijah Cummings (Md.), the ranking Democrat on the House Oversight and Government Reform Committee.

Lerner turned the Office of Special Counsel "into a model agency and set the bar as the head of that office," Cummings said by email Monday. "She

Subject: Morning Energy: Zinke, Perry play defense on budget requests this week — Examining Trump's energy holdings — Checking in on coal country

By Anthony Adragna | 06/19/2017 05:52 AM EDT

With assistance from Annie Snider

KINGS OF THE HILL: Interior Secretary Ryan Zinke and Energy Secretary Rick Perry are barnstorming Capitol Hill this week, hitting multiple committees to defend the administration's requests for steep budget cuts. Expect lawmakers to be cool to the call to slash Interior's budget by $1.1 billion, or ten percent, from last year's spending levels, and similar skepticism for the proposed 18 percent cut to DOE's non-nuclear security work. EPA Administrator Scott Pruitt drew some hostile questioning from both Democrats and Republicans during a similar budget hearing last week.

Zinke heads first to the Senate Energy and Natural Resources Committee at 10 a.m. Tuesday, followed by a 9:30 a.m. trip to Senate Appropriators the following day (Sen. Lisa Murkowski will chair both hearings). And then he'll get some face time with House Natural Resources Chairman Rob Bishop on Thursday for similar treatment. Look for intense questioning on Zinke's ongoing review of dozens national monument designations that were made under the Antiquities Act, as well his plans to shuffle several senior department staff. And ME would be shocked if House Natural Resources' top Democrat Raul Grijalva didn't push for some promise from Zinke to respond to his bevy of oversight letter requests.

Perry's turn in the hot seat kicks off Tuesday at 1 p.m. in a visit with House Appropriators, followed by a 2:30 p.m. hearing the following day with Senate energy spending cardinals. ME expects the former Texas governor (who tweeted about everything from live music to college baseball over the weekend) to get lots of questions about funding for clean energy research programs and national laboratories, both of which are targeted for deep cuts under Trump's budget. And look for climate hawks to press Perry to justify closing the Office of International Climate and Technology within DOE.

HITTING THE HOUSE FLOOR: Lawmakers are expected to consider legislation on the floor this week that backers say will improve grid reliability and reduce the risks of wildfires by making it easier to remove trees and other vegetation near electric equipment on federal lands. The Electricity Reliability and Forest Protection Act (H.R. 1873) cleared the House Natural Resources Committee by a 24 to 14 vote in late April. Also expected to get a vote is the Water Supply Permitting Coordination Act (H.R. 1654) (more on that below.) The House Rules Committee takes up both measures Tuesday at 5 p.m.

WELCOME TO A NEW WEEK! I'm your host Anthony Adragna, and I'm only with you for part of this week, as I'm off to get married at the end of it! But in the meantime, Christopher Pearcey was first to identify Philadelphia as the site of the First Continental Congress. For today: Who was the person who infamously asked Sen. Joseph McCarthy "Have you no sense of

decency?" Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

GLANCING INTO TRUMP'S ENERGY PORTFOLIO: President Donald Trump made between $149,719 and $401,000 from holdings in the energy sector, according to his latest financial disclosure covering the 2016 calendar year and the early months of 2017. Trump reported energy holdings in GE, Halliburton, Kinder Morgan, Phillips 66, NextEra Energy, Chevron, Exxon Mobil and Shell, among others. Theodoric Meyer and Matthew Nussbaum have a closer look at the disclosure form here.

ON THE WATER DOCKET: After winning a relaxing of environmental restrictions on pumping in California's water hub last year, the state's House Republicans are this week poised to move on Rep. Tom McClintock 's "Water Supply Permitting Coordination Act," which would change the way new water storage projects are permitted and put the Bureau of Reclamation in the driver's seat for approving new dams and reservoirs. The measure, which is slated to hit the House floor Thursday, passed the House Natural Resources Committee earlier this month over Democratic objections that it could short-circuit environmental review and arguments that the real challenge to new reservoirs is not permitting, but economics.

Not to be outdone, the Senate has its own full water agenda this week, with an Environment and Public Works Committee subpanel considering innovative financing options for addressing the country's water infrastructure woes Tuesday morning and the Energy and Natural Resources Committee holding a hearing that afternoon on federal and state partnerships aimed at restoring watersheds and other large scale restoration projects.

WHAT'S GOING ON IN COAL COUNTRY? James Higdon checks in on Eastern Kentucky for POLITICO Magazine and finds job losses continue in the coal industry there, but there's increased optimism that the bleeding has been staunched. There's also been surprise demand from Silicon Valley for the rare earth elements and a type of metallurgic coal needed to make silicon, the basic material for computer chips and solar panels. But the overall sense remains the federal government is not a benevolent force for the region: There's "a perception in communities like this that we're being done wrong. People around here get the feeling that the government is not being reputable with them." Pat White, the County Judge Executive for Whitley County, told James.

KLOBUCHAR: WHERE ARE THE PICKS? Asked on "Fox News Sunday" whether Democrats shared some of the blame for Trump's swath of unfilled federal agency positions, Minnesota Sen. Amy Klobuchar correctly pointed out the White House had yet to send over hundreds of nominees for the Senate to consider. "I'm not saying we are perfect throughout time, but I do know that all of his cabinet nominees are now in place, that they have been voted on, some with significant Democratic support," she said. And they "haven't put people up for a lot of those positions."

TAKING STOCK OF TEXAS SHALE: The Academy of Medicine, Engineering & Science of Texas is today releasing a report examining the environmental and community impacts of shale production in that state. Key findings: Texas produced more oil in 2015 than all but six

countries, oil and natural gas generated $1.7 billion in property tax revenue for Texas schools, and earthquakes in the state jumped from around two a year before 2008 to between 12 and 15 since then. In addition, Texas ranks 11th in the country for at-risk species though the fact that 95 percent of state's land is privately owned limits study of land impacts, five percent of emitters account for about half all emissions and fracking accounts for less than one percent of statewide water usage. The group will hold a webinar at 11 a.m. EST today to discuss its findings.

EPA PULLS, RESENDS COAL ASH GUIDANCE: Last week, EPA withdrew from OMB its original draft guidance for states on setting up coal ash permitting programs, but promptly swapped in a new version, Pro's Alex Guillén reports in Energy Regulation Watch. It's not yet clear why EPA had to pull its first version just three weeks after it sent the document over to the White House for regulatory reform.

WHAT'S HOLDING BACK CLEAN ENERGY? The Joint Economic Committee Democrats are out with a report today identifying the impediments they say are holding back the speedier deployment of clean energy technologies. Some of the holdups they highlight: "Implicit and explicit" subsidies that benefit fossil fuels and make it harder for clean energy to compete; underinvestment from the private sector in new energy sources; existing energy infrastructure that's built to accommodate fossil fuels and "inconsistent or unclear policy directions" that make it hard for investors to feel comfortable investing in new clean technologies.

OIL SECTOR DEFENDS NAFTA: Maintaining the current basic contours of NAFTA is crucial if the U.S. hopes to achieve energy independence, the American Petroleum Institute wrote in a letter to the U.S. Trade Representative. As Ben Lefebvre reports , the group's priorities in negotiations include prohibiting tariffs, protecting intellectual property rights, ensuring mobility of labor and adding more flexible language for diluents, the light oil that Canadian oil sands producers mix into bitumen to make it easier to process and send through pipelines. "The overall functionality of the current NAFTA agreement works for the oil and natural gas industry," API said.

HOUSE DEMS: REVERSE COURSE ON PARIS: Nearly 90 percent of House Democrats, led by Rep. Brad Schneider, introduced a resolution Friday saying that they "strongly disapprove" of Trump's decision to pull out of the Paris climate accord and urging him to reverse that decision.

MARKEY TO PERRY: DON'T CLOSE CLIMATE OFFICE: Avowed climate hawk Sen. Ed Markey sent a letter to Perry Friday urging him to reverse course on his plans to shutter the Energy Department's Office of International Climate and Technology.

KAINE SCREENS SEA-LEVEL RISE DOCUMENTARY: Virginia Sen. Tim Kaine today delivers opening remarks and hosts a screening of a new documentary, *Tidewater*, exploring the impacts of sea-level rise on the Hampton Roads region. It kicks off at 6 p.m. in the Congressional Meeting Room North of the Capitol Visitors Center.

LAWMAKERS TO PRUITT: KEEP WAIVER ABILITY INTACT: More than 75 House members urged Pruitt in a Friday letter to keep intact the ability for states like California and

others to set tougher vehicle emissions standards than federal ones. "If the administration is unwilling to support stronger fuel efficiency and emissions standards, it is more important than ever that states be allowed to continue driving innovation, consumer choice and environmental and public health improvements through strong state standards," they wrote. Pruitt told House Appropriators last week California's current waiver is " not under review." Republicans Carlos Curbelo and Mike Coffman joined dozens of Democrats in signing the letter.

RENEWABLE CREDIT EXTENSION SIGNED IN FLORIDA: Among the 13 bills signed into law by Florida Gov. Rick Scott Friday was one that extended a property tax break from residential to commercial for renewable energy source devices, POLITICO Florida's Bruce Ritchie reports. The bill, which implements a 2016 constitutional amendment, won the backing of environmental groups and solar panel installers even though the Florida House added some consumer protection measures.

POWERING THE NEXT GENERATION GRID: Eight national renewable energy groups released a vision statement today calling for correctly valuing both new and existing technologies, tax policy that protects existing credits for renewables and "expansion and modernization of the power grid." Signatories include the American Council on Renewable Energy, the American Wind Energy Association, American Biogas Council, Biomass Power Association, Energy Recovery Council, Geothermal Energy Association, National Hydropower Association and Solar Energy Industries Association.

MOVER, SHAKER: Jim Jones has joined Consumer Specialty Products Association as the executive vice president of strategic alliances and industry relations; he was previously the top chemicals official at EPA and played a key role in ushering through the bipartisan overhaul of the Toxic Substances Control Act.

ENERGY GROUP ADDS BOARD MEMBERS: Sen. Lamar Alexander and Rep. Dave Reichert are among the seven new members of the Alliance to Save Energy's Board of Directors. Also joining: Paula R. Glover, president of the American Association of Blacks in Energy; Microsoft's Bert Van Hoof; Andreas Schierenbeck, CEO of Thyssenkrupp Elevator AG; Maryrose Sylvester, president of Current; and Steve Wright, general manager of the Chelan Public Utility District.

HAPPENING THIS WEEK

MONDAY

3:30 p.m. — "Naftogaz and the Future of Ukraine's Energy Sector," The Atlantic Council, 1030 15th Street NW, 12th Floor,

TUESDAY

8:30 a.m. — U.S. Chamber of Commerce's Institute for 21st Century Energy host events w/ Scott Pruitt and Ryan Zinke, 1615 H Street, NW

10:00 a.m. — House Science, Space and Technology Committee Democrats discussion on climate change, 2360 Rayburn

10:00 a.m. — "Hearing to examine the President's budget request for the Department of the Interior for Fiscal Year 2018," Senate Energy and Natural Resources Committee, 366 Dirksen

12:00 p.m. — "Oil Pollution Act Update 2017," Environmental Law Institute, 1730 M Street, NW, Suite 700

1:00 p.m. — Budget hearing for Department of Energy, House Appropriations Subcommittee on Energy and Water Development, and Related Agencies, 2359 Rayburn

2:30 p.m. — "Subcommittee oversight hearing to examine collaborative initiatives on restoring watersheds and large landscapes across boundaries through state and federal partnerships," Senate Energy and Natural Resources Subcommittee on Public Lands, Forests and Mining, 366 Dirksen

2:30 p.m. — "Innovative Financing and Funding: Addressing America's Crumbling Water Infrastructure," Senate Committee on Environment and Public Works Subcommittee on Fisheries, Water, and Wildlife, 406 Dirksen

3:00 p.m. — "Partners in Ingenuity: Inventing the Future w/ Sen. Lamar Alexander," Bipartisan Policy Center with the American Energy Innovation Council, 430 Dirksen

5:45 p.m. — "Litigation Roundtable and Wine & Cheese Reception," Women's Council on Energy and the Environment, Wright & Talisman PC, 1200 G Street NW, Suite 600

WEDNESDAY

8:30 a.m. — "Day 1: The Wilson Center-Arctic Circle Forum," Ronald Reagan Building, Amphitheatre, 1300 Pennsylvania Ave. NW

9:30 a.m. — Senate Appropriations Committee hearing on Interior Department budget w/ Ryan Zinke, 124 Dirksen

10:00 a.m. — National Press Club Headliner Newsmaker with Former Sec. of Energy Ernest Moniz, 529 14th St. NW, 13th Floor

10:00 a.m. — "Legislative Hearing on Discussion Draft of Helium Extraction Act of 2017," House Natural Resources Subcommittee on Energy and Mineral Resources, 1324 Longworth

10:00 a.m. — "Leading the Way: Examining Advances in Environmental Technologies," House Science, Space, and Technology Committee's Environment Subcommittee, 2318 Rayburn

10:00 a.m. — Continuation of the Markup of H.R. 1422, H.R. 1558, H.R. 2246, H.R. 2565, H.R. 2868, H.R. 2875, and H.R. 2874, House Financial Services Committee, 2128 Rayburn

10:00 a.m. — Bloomberg New Energy Finance's New Energy Outlook 2017, Center for Strategic and International Studies, 1616 Rhode Island Avenue, NW

2:30 p.m. — Hearing to examine DOE's FY2018 budget, Senate Appropriations Energy-Water Subcommittee, 138 Dirksen

3:00 p.m. — "Addressing Climate Change Through Innovation," Carnegie Endowment for International Peace, 1779 Massachusetts Ave. NW

THURSDAY

8:30 a.m. — "Day 2: The Wilson Center-Arctic Circle Forum," Ronald Reagan Building, 6th Floor, 1300 Pennsylvania Ave. NW

9:30 a.m. — FERC meeting on policy issues related to Bulk-Power System, 888 First Street NE, Commission Meeting Room

9:30 a.m. — "Examining the Department of the Interior's Spending Priorities and the President's FY2018 Budget Proposal," House Natural Resources Committee, 1324 Longworth

10:00 a.m. — "Marine Debris: Efforts on Marine Debris in the Oceans and Great Lakes," Senate Commerce, Science and Transportation Oceans, Atmosphere, Fisheries, and Coast Guard Subcommittee, 253 Russell

10:00 a.m. — "Hearing to examine the President's budget request for the Department of Energy for Fiscal Year 2018," Senate Energy and Natural Resources, 366 Dirksen

1:00 p.m. — "Statoil Energy Perspectives 2017," Center for Strategic and International Studies,

1616 Rhode Island Avenue, NW

Stories from POLITICO Pro

Trump seeks 10 percent cut to Interior budget Back

By Ben Lefebvre | 05/23/2017 11:38 AM EDT

President Donald Trump's fiscal 2018 budget requests $11.7 billion for the Interior Department, a $1.1 billion or 10 percent decrease from the 2017 annualized CR level.

BLM would receive $963 million for activities like managing energy development and grazing on federal lands, down 10 percent from this year. The only part of BLM's budget to increase would be for energy and minerals management.

BOEM would see its budget to offer offshore drilling and wind development leases remain flat at $171 million, and the Office of Surface Mining budget would fall 11 percent to $109 million.

The proposal follows up on Trump's promises to slash clean energy and climate change programs launched under the Obama administration and to unwind regulations hampering fossil fuel development such as Interior's coal leasing moratorium.

Congress is unlikely to go along with the deep cuts, however. Any final spending bill would have to secure 60 votes in the Senate to overcome a Democratic filibuster.

Few DOE programs spared cuts in full Trump budget Back

By Darius Dixon | 05/23/2017 11:47 AM EDT

The Energy Department's budget would be cut by more than 9 percent to $28 billion under President Donald Trump's fiscal 2018 budget proposal released today.

DOE's Fossil Energy and Energy Efficiency and Renewable Energy offices would be cut by more than half under the White House proposal. The nuclear energy office would see a cut of about 30 percent.

DOE's Office of Science would be cut from $5.4 billion to $4.8 billion. The budget proposes to cut some programs entirely, including ARPA-E, and the controversial loan operation.

The proposal includes $90 million to restart licensing activities for the long-stalled Yucca Mountain nuclear waste repository and to initiate an interim storage program.

Trump's full budget would keep the DOE at the level the White House targeted in its "skinny" budget released in March, but Congress provided the agency with a funding increase for the rest of fiscal 2017 to put the agency's budget at $30.8 billion.

Trump's topline DOE reduction is a relatively modest 9.1 percent compared to other federal agencies, partly because DOE's National Nuclear Security Administration would see a $1 billion increase.

Still, many Republicans in Congress have opposed several aspects of Trump's budget and any final spending bill would need 60 votes in the Senate to overcome a Democratic filibuster.

DOE intends to release additional agency-specific budget materials later today.

GOP tells Pruitt he will get bigger budget than requested Back

By Alex Guillén | 06/15/2017 02:42 PM EDT

Republican lawmakers made it clear today that EPA is not going to get the budget it asked for — it's going to get a whole lot more.

Multiple GOP members of the Appropriations committee overseeing EPA said they will not come close to enacting the administration's proposed 31 percent cut.

"I can assure you you're going to be the first EPA administrator that's come before this committee in eight years that actually gets more money than they asked for," Rep. Tom Cole (R-Okla.) told EPA Administrator Scott Pruitt. "That doesn't mean you'll get as much as you've had,

but you'll do better than you asked for."

Rep. Mark Amodei (R-Nev.) noted that Congress has already cut EPA's budget by more than $2 billion since 2010. "No one's standing on the rooftops begging for dirty air and dirty water," he said in calling for no more than moderate spending reductions.

Other Republicans on the panel made sure to defend specific programs they favor.

House Appropriations Chairman Rodney Frelinghuysen (R-N.J) told Pruitt that his state is home to more than 100 of the nation's 1,300 Superfund sites. "I think it's good to move with precaution before you take too many dramatic steps," he warned about EPA's 31 percent cut to that program.

Subcommittee chairman Ken Calvert (R-Calif.) criticized steep cuts to a popular diesel engine refit program and lamented the complete deletion of targeted air shed grants.

And Rep. Dave Joyce (R-Ohio) criticized the budget for killing the $300 million Great Lakes Restoration Initiative.

WHAT'S NEXT: Appropriators will write EPA's spending bill for next year, expected to be released later this summer.

Zinke to shuffle top Interior Department career staff Back

By Ben Lefebvre | 06/16/2017 03:15 PM EDT

Interior Secretary Ryan Zinke is shuffling dozens of senior department staff to new positions, reassigning as many as one-quarter of the top career people into new jobs.

A spokeswoman for the agency confirmed the changes were taking place, which Jason Briefel, executive director of Senior Executive Services, told POLITICO could involve as many as 50 people.

That would be "a very large number" compared to the previous shakeups that occur when new administrations take power, Briefel said, and could require some staffers to change jobs in as little as 15 days.

A former Fish and Wildlife Service member told POLITICO a move of that breadth of the staff changes would be "unprecedented," and said the shakeup was rumored to move many of the people between DOI's various agencies.

DOI defended the moves.

"Personnel moves are being conducted to better serve the taxpayer and the department's operations through matching senior executive skill sets with mission and operational requirements," said DOI spokeswoman Heather Swift said. "The president signed an executive order to reorganize the federal government for the future and the secretary has been absolutely out front on that issue."

She decline to give details of the planned job changes.

According to The Washington Post, which obtained a copy of one the letters sent to Interior staff on Thursday, officials who received notices include Interior's top climate policy official, Joel Clement, who directs the Office of Policy Analysis, as well as at least five senior FWS officials.

Among the Fish and Wildlife officials are the assistant director for international affairs, Bryan Arroyo; the southwest regional director, Benjamin Tuggle; and the southeast regional director, Cindy Dohner, according to the paper. BLM New Mexico state director Amy Lueders would move to FWS, while Bureau of Indian Affairs Director Weldon "Bruce" Loudermilk, acting Assistant Secretary of Indian Affairs Michael S. Black and acting Special Trustee for American Indians Debra L. DuMontier would all be reassigned, the paper said.

NYT: Staff of DOE international climate office told to pack their bags Back

By Eric Wolff | 06/15/2017 01:48 PM EDT

The Department of Energy will shutter its Office of International Climate and Technology, its staff was told this month, according to The New York Times, which cited current and former DOE employees.

The department has been in the crosshairs since it was marked for elimination in President Donald Trump's budget request. Its workers played an essential role in planning Energy Secretary Rick Perry's visit to Beijing last week as part of the Clean Energy Ministerial.

The office is the only unit at DOE to have climate in its name.

The office last made headlines in February when a supervisor told staff not to use the term "climate change," "Paris Agreement" or "emissions reduction" in written communications, as POLITICO reported at the time.

Trump reports assets of at least $1.4 billion in financial disclosure Back

By Theodoric Meyer and Matthew Nussbaum | 06/16/2017 05:20 PM EDT

The campaign and the early months of President Donald Trump's presidency have been good for Donald Trump.

The Trump International Hotel, which opened last year just blocks from the White House in a building leased from the federal government, brought in nearly $20 million in revenue for the president, according to Trump's latest financial disclosure, released by the U.S. Office of Government Ethics on Friday.

Trump's Mar-a-Lago resort, which he visited often in the early months of his presidency, raked in $37 million - up from $30 million in the report Trump filed last year and about $16 million in the report filed two years ago.

Sales of Trump's "The Art of the Deal" brought in as much as $1 million for Trump, compared to the less than $100,000 in royalties that Trump reported in his 2016 filing. And sales of Trump's book "Crippled America" brought in up to another $5 million.

Trump reported assets of at least $1.4 billion and income of at least $596.3 million in the 2016 calendar year and the early months of 2017. He reported owing at least $310 million to various financial institutions, including at least $130 million to Deutsche Bank.

It's difficult to say how beneficial the presidency has been overall for Trump's sprawling business empire. Most of the figures detailing Trump's income, assets and debt are reported in brackets, and the highest brackets do not include an upper bound. And the reports for different years don't cover exactly the same time periods.

The 98-page document, which Trump filed voluntarily, does not provide an exact picture of his net worth. Trump has claimed he is worth in "excess of $10 billion" but Fortune put the number at less than $4 billion late last year.

The report also doesn't reveal how much Trump paid in taxes last year, but it still provides a snapshot into his range of investments. The White House said last month that Trump would voluntarily release his financial disclosure from the 2016 calendar year.

Trump has taken steps to reduce his conflicts of interest, stepping back from the Trump Organization and turning over daily control to his adult sons, Donald Trump Jr. and Eric Trump. However, he has maintained his financial interest, and his sons give him updates on the financial condition of the company.

Trump sold off all of his stocks, as his aides said he had, with the exception of some private

funds over which he has no control — a typical practice for elected officials. Trump also apparently maintains a small investment in a private, New Jersey-based apparel company, Eco Tek 360, Inc.

Trump also collected $84,292 in pension payments from the Screen Actors Guild.

"President Trump welcomed the opportunity to voluntarily file his personal financial disclosure form; while this filing is voluntary (as no report was due until May 2018), it has been certified by the Office of Government Ethics pursuant to its normal procedures," press secretary Sean Spicer said in a statement on Friday evening.

POLITICO Magazine: Why this part of coal country loves solar power Back

By James Higdon | 06/18/2017 02:05 PM EDT

WILLLIAMSBURG, Kentucky—The first few months of 2017 haven't been especially kind to the coal miners of Kentucky. Eighty-eight of them lost their jobs when a single company, Mountainside Coal, laid off its entire work force.

Deb Moses was one of them. "I volunteered for the layoff because somebody had to go," she told POLITICO Magazine. "I was the one that could handle it because I didn't have a mortgage."

Whitley County, in the Appalachian foothills, was one of the hardest hit counties in a state that saw an overall loss of 216 coal jobs during the first quarter, according to the Kentucky Energy and Environment Cabinet. In a region where coal still dominates a sagging economy, even small fluctuations like this are parsed for signs of larger trends.

But there is a surprising amount of optimism in Appalachia these days. The recent job losses weren't nearly as painful as the relentless declines the industry has felt over the past six years, which in itself was a kind of good news. Then, six days after I spoke to Moses in Whitley County, President Trump announced that he would pull the United States out of the Paris climate accord, honoring a campaign pledge to revive the coal industry by removing the yoke of environmental regulations. The announcement, met largely with anger and frustration in America's coastal cities, was cheered in this part of Kentucky.

"Hopefully it signals the beginning of the end to the war on our local economy from federal regulations," Pat White, the County Judge Executive for Whitley County, told me by email two days after the president's announcement.

But perhaps the best reason for an out-of-work miner in Whitley County to think she'll be back underground before long has little to do with the regulations Trump has stripped away.

Interestingly, it has more to do with the demands of the new economy driven by Silicon Valley.

The coal under the hills of Whitley County, like about a third of the coal in central Appalachia, is metallurgic coal, a higher grade of coal that burns hotter and cleaner than the power plant-fueling thermal coal that has been demonized by environmentalists in debates over carbon emissions and climate change. Used to forge steel and other metals, metallurgic coal will be essential for any future infrastructure project boom, and Kentucky's mountains have an estimated 35-year supply. But the seam in Whitley County is an even more valuable variety of metallurgic coal known as "blue gem." It burns even hotter with a low ash content, making it useful to produce silicon, the basic material for computer chips and solar panels.

"You need the blue gem to make the solar panels, and that's what people don't know," Moses told me, articulating a simple truth: Without Coal Valley, there's no Silicon Valley.

Here in Appalachia, the new and old economies remain linked in inextricable ways often ignored in partisan debates that cast fossil fuels and renewable energy in a zero sum battle. In early June on MSNBC, reporter Willie Geist asked EPA Administrator Scott Pruitt, "It's true is it not that there are more jobs created by solar energy, by the next wave of energy in this country, than by the coal jobs that you have cited?" Pruitt responded that "all jobs matter," but he could have gone further. He could have told Geist there's a seam of coal in Whitley County that is in high demand by American industry, but 88 people lost their jobs because of the Army Corps of Engineers' permitting restrictions caused a coal company to go dark.

"One of the biggest headaches we have in the U.S. is getting permits," said Dr. Rick Honaker, chair of the Department of Mining at the University of Kentucky's College of Engineering. "If you go to Canada, you can up there and get started in two or three years, but in the U.S., it's a five to 10-year process."

***

Eastern Kentucky coal miners were once a key Democratic Party constituency on the front lines of the labor movement. Then, in 1980—just three years after the documentary film Harlan County, U.S.A. about striking coal workers won an Oscar—Hal Rogers was elected to Congress as an Appalachian Republican. Four years later, Mitch McConnell won statewide in his first race for U.S. Senate. Still, Democrats continued to hold their own in Kentucky, especially in the mountains, until the first term of the Obama administration.

In 2011, two things happened nearly simultaneously: Obama's EPA announced its mercury and air toxins standards at about the same time that the price of natural gas fell below the price of coal for the first time in history, resulting in power plants converting from coal to gas. The market for thermal coal cratered. Republicans wasted no time blaming the job losses on Obama's regulations. Though some said this was roughly the equivalent of blaming the president for the price of gasoline at the pump, the "War on Coal" became a convenient political weapon with which Republicans cudgeled Democrats. And when Republicans weren't beating Democrats over the head, Democrats were doing it to themselves, as evidenced by Hillary Clinton's campaign gaffe about "putting lots of coal miners out of work." In November, a region of the country that

had been reliably Democratic a generation or two ago voted for Trump in overwhelming numbers.

The "War on Coal" rhetoric loses some steam when confronted with the reality that 21 gigawatts of coal-fired power plants are scheduled to be shut down over the next four years. The coal firing those plants will likely be replaced by natural gas and renewables, according to the American Public Power Association. But that hasn't made regulation bashing any less popular in this part of the country, which is why Trump's popularity remains so high. Trump, to the delight of his supporters, has followed through on several major campaign promises on coal. Even before the much-touted retreat from the Paris Accords, Trump had dumped the Stream Protection Rule and pulled the plug on Obama's Clean Power Plan.

In March, Fox News put a camera crew down a long-wall mine outside of Hazard in Perry County. Miners were back at work there and this news seemed to endorse the notion that onerous regulations really were the thing holding back the coal industry. Perry was one of the lucky counties in the region, recording a gain of 54 jobs in the first quarter. But overall, Kentucky's job numbers were down by more than 200. Only in a region as bruised by job losses as this one would that be seen as good news. But that's what it looked like to Tyler White, president of the Kentucky Coal Association, who observed that any number that wasn't a four-digit loss suggested "that maybe the bleeding has stopped."

***

Back in October 2015, Mountainside Coal began applying for permits to mine the blue gem in Whitley County. Like all coal operations, it required permits from an array of state and federal agencies, including the Army Corps of Engineers, which claims jurisdiction over all waterways in America. The Army Corps granted a permit to Mountainside in April 2017, but Mountainside had been laying people off since July 2016**.**

"I can tell you that if we had gotten that permit in a timely manner, we could have mined that coal while we had a contract to sell it," Moses told me.

When I asked the Army Corps if it slow-walked coal mining permits, as many in coal country believe, a spokesman for the Corps pushed back: "If use of the term 'slow-walks' is meant to imply that we intentionally drag our feet or delay processing of applications related to coal mining proposals—that is simply not true."

Stories like this one, confirm for the people of eastern Kentucky that the federal government is not a benevolent force, says Judge White. There's "a perception in communities like this that we're being done wrong. People around here get the feeling that the government is not being reputable with them."

Regulations, big environmental ones or just the plodding bureaucracy, define the federal government in this region and will remain a fixation for the residents of coal country for the foreseeable future.

"If the regulations level out and they get that worked out, that's going open up more jobs and help with the blue gem market, and maybe extend that market," said former exploration foreman Kent Sears, who, like Deb Moses, was also laid off from Mountainside Coal in the first quarter of 2017.

As of 2012, eastern Kentucky had 5.5 billion tons of metallurgic coal remaining inside its mountains, enough for 35 years, according to a report from the University of Kentucky. That's the good news. The bad news is that only 17 percent of those reserves are greater than 42 inches thick. Anything narrower than that requires cutting out additional rock, which raises production costs.

In addition to metallurgic coal, another bright spot in the future of eastern Kentucky is a reserve of coal near Hazard called the Fire Clay seam, which yields a surprising byproduct during the coal cleaning process: large quantities of rare earth elements (REEs)—vital to the production of smart phones, tablets, electricity-generating windmills and military hardware. Experts say there's enough to meet U.S. demand for 20 years.

Currently, the world's largest reserves of rare earth elements is in China, which is keeping the price for the elements low because its REE reserves are the first step of the Chinese smart-phone supply chain. Consequently, China is keeping the costs of its REEs low, according to Dr. Rick Honaker, the chairman of the the University of Kentucky's Department of Mining.

At the Fire Clay seam near Hazard, Dr. Honaker and his team have demonstrated they can extract industrial amounts of REE's during the coal-cleaning process from the clay immediately adjacent to the coal — a substance that is normally a waste product.

"What was the environmental headache of coal could be an economic gem," Dr. Honaker told me by telephone. "We can do it today. The problem today is that China controls the market and keeps the REE prices suppressed."

So if Silicon Valley were ever interested in repatriating its smart phone supply chain, the first thing it would need is a reliable domestic supply of REE's, and according to Dr. Honaker, there's a 20-year supply in eastern Kentucky. One might think that a domestic supply of REE's would be a big deal to Silicon Valley companies like Apple that rely heavily on REE's for its smart phones and tablets. But earlier this year, Apple pledged to work towards a zero-mining future, envisioning its primary source for its aluminum, silicon, and REE's to come from recycling instead of China or eastern Kentucky.

Apple chose not to respond to a request for comment for this story, when I asked them about the company's reliance on metallurgic coal for its computer chips and for the 50-megawatt solar array it just built in Arizona to power its data center there.

"They think about coal as being dirty or whatever, but you have certain things that are a necessity. You're going to have to get it somewhere," Kent Sears told me. "If you look at all the regulations we have, maybe we got too many. Maybe consolidate a few, or streamline them. We're not their enemy."

API: NAFTA critical for North American energy independence Back

By Ben Lefebvre | 06/16/2017 05:51 PM EDT

The American Petroleum Institute is warning the Trump administration that if it wants North American energy independence, it should not make a mess of NAFTA.

"The overall functionality of the current NAFTA agreement works for the oil and natural gas industry," the trade association wrote this week in a letter to the U.S. Trade Representative. "API and its industry members therefore wish to ensure that as NAFTA is modernized, the provisions of the current agreement remain in place in a new NAFTA."

USTR asked for comments on issues that could play into the development of negotiations for a modernization of NAFTA.

API outlined its priorities for any NAFTA negotiations, including no tariffs, intellectual property rights protection, mobility of labor and more flexible language when it comes to diluents, the light oil that Canadian oil sands producers mix into bitumen to make it easier to process and send through pipelines.

As long as the free energy trade continues — and is expanded to Mexico, which wasn't a party to NAFTA's original energy provisions — North America's energy production will continue to grow faster than demand, API writes in its letter.

"This allows supply to overtake demand, offering North America the opportunity to be self-sufficient, provided open trade flows — especially between the U.S. and Canada," API's June 12 letter states. "Taken together, the U.S., Canada and Mexico are on the cusp of North American self-sufficiency."

What's Next: API asked to testify at a June 27 public hearing on NAFTA.

Pruitt: EPA not reviewing California car emissions waiver Back

By Alex Guillén | 06/15/2017 12:30 PM EDT

EPA is not reviewing a key waiver that allows California to set stricter emissions limits for cars than the federal government, EPA Administrator Scott Pruitt said today.

"Currently the waiver is not under review ... by EPA," Pruitt said at an appropriations hearing.

"It's important we recognize the role of states in achieving good air quality standards," Pruitt added, noting California's early role in environmental regulation.

EPA's decision to re-open a review of auto standards for model year 2022-2025 cars also raised concerns that EPA would consider revoking the California waiver. The Clean Air Act allows EPA to give waivers to California on air quality issues because of the state's historic and chronic pollution problems.

The state and environmentalists argued that the law does not allow EPA to revoke such waivers once granted, and California officials said they would fight the Trump administration if it attempted to revoke it.

The waiver in question was granted by the Obama administration in 2009. EPA and the Transportation Department later set the first greenhouse gas emissions standards for cars, but California said that any cars complying with the federal standard would also be deemed to have met the state's standards so as to avoid a patchwork of regulations.

WHAT'S NEXT: EPA is continuing its review of the nationwide emissions rules for model year 2022-2025 vehicles.

Summaries

AIR
California SIP/Great Basin Unified Air Pollution Control District, Mammoth Lakes
AIR

Direct final rule of the EPA approves revisions to the Great Basin Unified Air Pollution Control District and Mammoth Lakes, Calif., portion of the California SIP. The revisions address particulate matter emissions from wood burning devices and road dust in Mammoth Lakes. The rule is effective Aug. 29, 2017, unless adverse comments are received by July 31, 2017. Contact: Christine Vineyard; EPA Region 9; 415-947-4125; vineyard.christine@epa.gov. Citations: 40 CFR 52.220

82 FR 29762 (06/30/2017)

Regulatory Update

AIR
California SIP/Great Basin Unified Air Pollution Control District, Mammoth Lakes
AIR

Proposed rule of the EPA would approve revisions to the Great Basin Unified Air Pollution Control District and Mammoth Lakes, Calif., portion of the California SIP. The revisions address particulate matter emissions from wood burning devices and road dust in Mammoth Lakes. A concurrent direct final rule adopts the revisions, effective Aug. 29, 2017. Comments are due July 31, 2017. Contact: Christine Vineyard; EPA Region 9; 415-947-4125; vineyard.christine@epa.gov. Citations: 40 CFR 52.220

Regulatory Update

AIR

Illinois SIP/Revised Format for Materials Incorporated by Reference
AIR

Final rule of the EPA revises the format of materials incorporated by reference into the Illinois SIP. The revisions add information to the "identification of plan" section regarding EPA-approved regulations, source specific requirements, and nonregulatory and quasi-regulatory provisions to clarify enforceable elements of the SIP. The revisions also relocate provisions concerning carbon monoxide and lead control strategies and infrastructure requirements into tables. The rule is effective June 30, 2017. Contact: Christos Panos; EPA Region 5, Air Programs Branch; 312-353-8328; panos.christos@epa.gov. Citations: 40 CFR 52.720, 52.729, 52.745, 52.746, 52.750

ENDANGERED SPECIES
California Tiger Salamander Incidental Take Permit
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of an application from Betteravia Farms LLC, of Santa Maria, Calif., for an incidental take permit for the California tiger salamander in connection with activities associated with the draft Curletti Farm Employee Housing Project Habitat Conservation Plan. The potential taking would occur as a result of activities associated with the construction of the farm labor camp in suitable habitat for the species. The notice also announces the agency's preliminary determination that the project is "low-effect" and is eligible for a categorical exclusion under the National Environmental Policy Act. Comments are due July 31, 2017. Contact: Rachel Henry; USFWS, Ventura Fish and Wildlife Office; 805-644-1766

82 FR 29916 (06/30/2017)

Regulatory Update

ENDANGERED SPECIES
Endangered or Threatened Status Reviews
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces five-year status reviews of 22 endangered animal or plant species and one threatened animal species from the southeastern U.S. to determine if the current listing classifications are still accurate. The species include the Florida panther, various darters, the Pygmy madtom, and the Ozark cavefish. The species also include the Cumberland rosemary, the Deltoid spurge, Ruth's golden aster, and various plants with no common name. The agency requests scientific and commercial information since the last status review of each species. Comments are due Aug. 29, 2017. Contact: Mike Oetker; USFWS; 404-679-7138

ENDANGERED SPECIES
Endangered/Threatened Species Recovery Plan Guidelines
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service extends the comment period for a notice of proposed revisions to guidelines for prioritizing development and implementation of recovery plans for listed threatened and endangered species (82 FR 24944; 05/31/2017). The revisions, which modify the Recovery Plan Preparation and Implementation Priorities and Recovery Plans contained in the 1990 Listing and Recovery Priority Guidelines, are intended to prioritize agency resources to advance recovery based on the immediacy of the species' overall extinction risk, the extent of information regarding major threats, and certainty that management and protective actions can be implemented successfully. Comments now are due Aug. 28, 2017. Contact: Therese Conant; National Marine Fisheries Service; 301-427-8456; therese.conant@noaa.gov

ENDANGERED SPECIES
Greater Yellowstone Ecosystem Population Grizzly Bear Delisting
ENDANGERED SPECIES

Final rule of the U.S. Fish and Wildlife Service establishes a Greater Yellowstone Ecosystem (GYE) grizzly bear distinct population segment (DPS) in portions of Idaho, Montana, and Wyoming and removes the GYE grizzly bear DPS from the list of endangered and threatened wildlife. The agency also announces the availability of revised demographic recovery criteria in the final Grizzly Bear Recovery Plan Supplement and recognizes that the states of Idaho, Montana, and Wyoming have signed a tri-state memorandum of agreement and finalized regulatory mechanisms to manage grizzly bear mortality limits consistent with the criteria. The rule does affect the threatened status of grizzly bear populations in other portions of the lower-48 states. The rule is effective July 31, 2017. Contact: Hilary Cooley; USFWS; 406-243-4903. Citation: 50 CFR 17.11

82 FR 30502 (06/30/2017)

Regulatory Update

ENDANGERED SPECIES
Louisiana Pinesnake Candidate Conservation Agreement
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of an enhancement of survival permit application and a proposed programmatic candidate conservation agreement with assurances (CCAA) for the Louisiana pinesnake from the Louisiana Department of Wildlife and Fisheries. The proposed CCAA describes conservation measures designed to protect and enhance pinesnake habitat on private and nonfederal public lands enrolled under the agreement and provides enrolled landowners who implement these measures with assurances against take liability if the species is listed under the Endangered Species Act in the future. The applicant requests permission to enter into conservation management agreements with eligible nonfederal landowners in Allen, Bienville, Beauregard, Grant, Jackson, Natchitoches, Rapides, Sabine, Vernon, and Winn parishes and issue certificates of inclusion to enrollees for a 99-year agreement term. Comments are due July 31, 2017. Contact: Michael Harris; USFWS, Southeast Regional Office; 404-679-7066; michael_harris@fws.gov

Atlantic Fleet Training and Testing Study Area
GENERAL ENVIRONMENT AND SAFETY

Notice of the Department of the Navy, in cooperation with the National Marine Fisheries Service, announces the availability of a draft environmental impact statement/overseas EIS regarding the Atlantic fleet training and testing study area. The study area consists of approximately 2.6 million square nautical miles of ocean and includes designated Navy operating areas and special use airspace. Training activities include the use of active sonar and explosives within existing range complexes and testing ranges and additional areas in the Atlantic Ocean along the eastern coast of North America, in portions of the Caribbean Sea, the Gulf of Mexico, at Navy pierside locations and port transit channels, near civilian ports, and in bays, harbors, and inland waterways. Meetings are scheduled for July 19, 25, and 26, and Aug. 1 and 3, 2017, in Providence, R.I.; Morehead, N.C.; Norfolk, Va.; Jacksonville, Fla.; and Panama City, Fla., respectively. Comments are due Aug. 29, 2017. Contact: Department of the Navy, Naval Facilities Engineering Command Atlantic; 757-322-8005

HAZARDOUS MATERIALS TRANSPORTATION
Railroad Operating Rules/Track Safety Standards
HAZARDOUS MATERIALS TRANSPORTATION

Notice announces the intention of the Federal Railroad Administration to seek OMB approval for one continuing and one revised information collection request concerning railroad operating rules and track safety standards. The continuing collection concerns requirements for Class I and Class II railroads to file with the FRA copies of their operating rules, timetables, and timetable special instructions, and subsequent amendments, and for Class III railroads to retain copies of these documents at their systems headquarters. The collection also addresses requirements for railroads to retain one copy of their current operating rules regarding radio communications and one copy of each subsequent amendment and make these documents available to FRA upon request. The revised collection addresses railroad operations over track constructed with concrete crossties and the requirement for automated track inspections to be conducted to supplement visual inspections by Class I and Class II railroads, intercity passenger railroads, and commuter railroads or certain small government jurisdictions. The revision updates estimates for rule requirements. Comments are due Aug. 29, 2017. Contact: Robert Brogan; FRA, Office of Railroad Safety; 202-493-6292; Robert.Brogan@dot.gov. Subject: EPW hearing Sept. 20 on EPA, NRC nominees

By Alex Guillén

09/13/2017 07:16 PM EDT

The Senate Environment and Public Works Committee will hold a hearing on four EPA nominees and one Nuclear Regulatory Commission nominee next Wednesday, according to a notice on the committee's website.

The panel will consider Michael Dourson to be EPA's assistant administrator for Chemical Safety and Pollution Prevention; David Ross to run the Office of Water; Bill Wehrum to head EPA's Office of Air and Radiation; and Matthew Leopold to be general counsel. The committee will also consider Jeffery Baran's re-nomination to the NRC.

The hearing will take place on Sept. 20 at 10 a.m.

Subject: POLITICO's Morning Transportation, presented by Airlines for America: House FAA bill advances — First fireworks, then DHS authorization — Locked out of driverless car legislation

By Tanya Snyder and Brianna Gurciullo | 06/28/2017 10:00 AM EDT

With help from Stephanie Beasley and Lauren Gardner

FAA HEADS TO THE FLOOR: House Transportation Chairman Bill Shuster's FAA bill has now made it as far as it did last year, with the committee again approving the bill (H.R. 2997) almost entirely along party lines. Shuster has said that House leadership could bring the bill to the floor for debate in July.

Rokita stays in the 'no' column: Shuster (R-Pa.) was pretty much overjoyed when he could say last week that Rep. Sam Graves(R-Mo.) would support his legislation (even though the work Graves did hasn't pushed general aviation groups to come to Shuster's side). But the other Republican committee member who opposed Shuster's bill last year, Indiana Rep. Todd Rokita, indicated Tuesday that he won't budge . "I'm finding it difficult to support this bill at this time," Rokita said, calling the legislation "fundamentally flawed." He then voted "no."

Hurdles remain: The markup is an expected win, but appropriators and taxwriters are still key to the bill's success on the floor. But first, watch for the Senate Commerce to mark up its FAA bill on Thursday. Stay tuned.

Amendment roundup: Our Lauren Gardner was at Tuesday's nearly 10-hour markup (bless her) tracking every one of the dozens of amendment that lawmakers voted on or withdrew. Here are the ones you need to know:

- The committee shot down an amendment by committee ranking member Peter DeFazio (D-Ore.) that would have cut Shuster's air traffic control proposal from the bill.

- It also voted down an amendment by Del. Eleanor Holmes Norton (D-D.C.) to spell out that among the ATC nonprofit corporation's board members, those picked by the government need to "act in the public interest." In addition, the amendment would have tweaked the board's composition. Instead of two seats going to "at-large" members, those spots would go to representatives of consumer protection interests.

- It approved Rep. Paul Mitchell's (R-Mich.) amendment to limit the terms of board members to four years. (Shuster had proposed five.)

- The committee killed a Rep. Jerry Nadler (D-N.Y.) amendment to require that the corporation buy ATC government assets at fair market value.

- Rep. Mike Capuano (D-Mass.) withdrew his amendment to make sure that the FAA would keep handling noise complaints if air traffic control operations were separated from the agency.

- The panel OK'd an amendment aimed at preventing DOT from letting a foreign airline conduct flights to the United States if it has attempted to sidestep the labor standards of the country where its parent company is headquartered. The amendment, which took language from a bill by DeFazio and Rep. Frank LoBiondo (R-N.J.), is a clear shot at Norwegian Air International.

- It approved an amendment by Norton to include e-cigarettes in the federal ban on smoking aboard commercial airplanes.

- It OK'd on amendment by Rep. André Carson (D-Ind.) and Nadler to mandate that newly made aircraft be equipped with secondary cockpit barriers.

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren is back today sharing MT with Tanya, so send your tips, feedback and lyrics to tsnyder@politico.com or @TSnyderDC and lgardner@politico.com or @Gardner_LM.

"At the center of the Earth in the parking lot of the 7-11 where I was taught, the motto was just a lie. It says, 'Home is where your heart is,' but what a shame 'cause everyone's heart doesn't beat the same. It's beating out of time. City of the dead at the end of another lost highway - signs misleading to nowhere."

Want to keep up with MT's song picks? Our Spotify playlist has over 100 followers - you can get listening, too!

LAST-MINUTE FLIGHT HOURS AMENDMENT: Before the final roll call votes were taken, Graves offered and then withdrew an amendment meant to address what regional airlines say are damaging consequences of stricter pilot training requirements put into place after the fatal 2009 crash of Colgan Air Flight 3407 near Buffalo, N.Y. Regionals want to see FAA allow more training programs (namely those backed by airlines) counted toward restricted flight certificates even when someone has less than 1,500 hours of flight time. The agency currently allows pilots with military backgrounds or academic experience at certain accredited schools to obtain those restricted certificates.

Quality vs. quantity: Graves, a pilot, said he respects the grieving families of the Colgan crash who have become fixtures on Capitol Hill, but that he wants to ensure prospective pilots get quality instruction, rather than "drilling holes in the sky" for the sake of accumulating hours. "I've been flying a long time - a long time - and there are people out there with 20,000 hours that I would not get in the cockpit with to save my life," Graves said.

FIRST FIREWORKS, THEN DHS AUTHORIZATION: Rep. Michael McCaul (R-Texas) confirmed to our Stephanie Beasley what many may have suspected after they looked at the House calendar. A bill (H.R. 2825) to reauthorize the Department of Homeland Security will not get any floor time this week. McCaul, the chairman of the House Homeland Security Committee, said the bill has been held up by disagreements over some provisions, including several related to immigration. Now the new goal is to get it on the suspension calendar in July, possibly as

soon as the week after the Fourth of July recess, he said.

Bipartisanship is the name of the game: "I think we're very close to cutting a bipartisan deal," McCaul said. And he emphasized that the bill's popularity (or lack thereof) in the House would determine whether it reached the Senate. The upper chamber won't touch the bill if it's "a rule vote and it's just a partisan vote," McCaul said.

And just in case you forgot: The House bill would reauthorize DHS for the first time in its 15-year history. It also includes several provisions that would block President Donald Trump's proposals to eliminate or reduce TSA programs, like the Visible Intermodal Prevention and Response Team and a grant program that reimburses airports that hire local law enforcement.

FEELING LEFT OUT: Democrats including Reps. Frank Pallone (D-N.J.) and Doris Matsui (D-Calif.) at Tuesday's House Energy and Commerce hearing on driverless cars groused that they hadn't been included in crafting the draft legislation under discussion. But later, Michigan Democrat Debbie Dingell said that accusation was unfair. "The draft bill was circulated to everybody," Dingell said. That's the problem, subcommittee ranking member Jan Schakowsky (D-Ill.) told MT - they should have brought Dems in to help develop the package instead of just to present it once it was finished: "Explaining is different than actually negotiating."

Preemption reception: California Democrats Rep. Anna Eshoo and Doris Matsui complained about the federal government stepping in front of state and local laws and regulations on driverless cars, which some believe is necessary to avoid a confusing patchwork of laws that change at the state line. Matsui said it was especially dangerous to keep California from exercising its own oversight over self-driving cars without "giving NHTSA the tools to fill the void."

Movin' along: Rep. Bob Latta (R-Ohio) said he's spoken only briefly with his colleagues working on similar measures on the Senate side and that he hopes to mark up the legislation - which has not yet been formally introduced - by the end of July. "We've got to keep moving. This technology is moving away from us," he said. "We'd really like to see this moving forward in the next month."

** **A message from Airlines for America:** America invented aviation, yet our global leadership is at risk. Passing FAA reauthorization and modernizing our air traffic control system will bring us into the 21st century. We need reforms without increasing costs for travelers. Ask Congress to support ATC Reform and reject an unnecessary Airport Tax increase. - www.stopairtaxnow.com **

WAIT 'TIL YOU GET A LOAD OF THIS: A National Academies of Sciences panel concluded that the method of FMCSA's Safety Measurement System is "defensible," but that the agency could switch to a model that's often used to rank hospitals and schools. FMCSA uses the system to single out carriers it deems are at a greater risk of being in a crash. The trucking industry has attacked SMS for using an allegedly faulty methodology.

tl;dr: "We have found, for the most part, that the current SMS implementation is defensible as

being fair and not overtly biased against various types of carriers," the committee said. "However, much of what is now done is ad hoc and based on subject-matter expertise that has not been sufficiently empirically validated." Your MT co-host has more for Pros.

ATA A-OK: The American Trucking Associations reacted to the study's release by saying its findings "substantiated many of the concerns" the industry has with SMS. "We strongly agree with the National Academies' conclusion that [the Compliance, Safety, Accountability program] should be based less on the 'subject-matter expertise' of enforcement and more on the empirically validated data," said Sean Garney, the organization's director of safety policy.

Follow up: Norton, the top Democrat on the House Transportation highways and transit subcommittee, now wants a hearing on the report.

SMILE IF YOU WANT TO BOARD: Houston's George Bush Intercontinental Airport will become the third U.S. airport to participate in a federal pilot program to test facial recognition technology, Steph reports for Pros. The equipment can confirm a traveler's identity by comparing photos on travel documents with a live photo taken at the airport. Customs and Border Protection has already introduced the technology at Hartsfield-Jackson in Atlanta and Washington Dulles. And the agency is expected to expand to additional airports over the summer.

If you are what you say you are, then have no fear: Congress has issued several mandates for CBP to implement biometric exit technology at airports and improve how it tracks the comings and goings of non-U.S. citizens. Worried about privacy? CBP says live photos of U.S. citizens would be discarded shortly after their identities had been confirmed.

SO LONG FASTLANE? The Trump administration is changing the name of the FASTLANE grant program to INFRA, for Infrastructure for Rebuilding America. The FASTLANE program was created by the FAST Act to fund freight and highway projects and authorized at $4.5 billion for fiscal years 2016 through 2020. No word yet on whether there's more behind the shift than a simple name change.

FRESH MEAT: Rep. Ron Estes (R-Kan.) has joined the House Homeland Security Committee. He'll sit on two subcommittees: transportation and protective security, and oversight and management efficiency. Estes was the winner of an April special election to replace now-CIA Director Mike Pompeo.

REPORT ROUNDUP: The National Safety Council says all 50 states and the District of Columbia fail to do enough to protect their residents from "accidents" of all kinds, including traffic crashes. None of the states earned an "A" for overall safety in their new state-by-state ranking ... And transportation research group TRIP's new report found that 48 percent of rural roads are in good condition, with 15 percent being in poor condition. And 10 percent of U.S. rural bridges are considered structurally deficient, which is just a hair worse than the national average of 9.1 percent.

SHIFTING GEARS: Former Sen. Mark Kirk (R-Ill.), who was the head of the Senate Banking Committee, is joining the board of advisors of the public transit and infrastructure research firm
